

KONICA MINOLTA

SERVICE MANUAL

bizhub **C554/C454**

Date: 2013/01/25

KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.

Table of Contents

Revision history.....	1
A SAFETY AND IMPORTANT WARNING ITEMS.....	A-1
1. IMPORTANT NOTICE.....	A-2
2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION.....	A-3
2.1 Description items in this Service Manual.....	A-3
2.2 Description items for safety and important warning items.....	A-3
3. SAFETY WARNINGS.....	A-4
3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.....	A-4
3.1.1 Actions requiring special attention.....	A-4
3.2 POWER PLUG SELECTION.....	A-5
3.2.1 Power Cord Set or Power Plug.....	A-5
3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE.....	A-6
3.3.1 Power Supply.....	A-7
3.3.2 Installation Requirements.....	A-11
3.3.3 After Service.....	A-13
3.4 FUSE.....	A-18
3.5 Used Batteries Precautions.....	A-19
3.5.1 ALL Areas.....	A-19
3.5.2 Germany.....	A-19
3.5.3 France.....	A-19
3.5.4 Denmark.....	A-19
3.5.5 Finland, Sweden.....	A-19
3.5.6 Norway.....	A-19
3.6 Laser Safety.....	A-20
3.6.1 Laser Safety.....	A-20
3.6.2 Internal Laser Radiation.....	A-20
3.6.3 Laser Safety Label.....	A-23
3.6.4 Laser Caution Label.....	A-23
3.6.5 PRECAUTIONS FOR HANDLING THE LASER EQUIPMENT.....	A-24
4. WARNING INDICATIONS ON THE MACHINE.....	A-25
4.1 Warning indications inside the machine.....	A-25
4.2 Warning indications on the boards.....	A-26
4.2.1 C554.....	A-26
4.2.2 C454.....	A-27
5. MEASURES TO TAKE IN CASE OF AN ACCIDENT.....	A-28
B NOTATION OF THE CONTENTS.....	B-1
1. PRECAUTION ON HANDLING THIS MANUAL.....	B-1
2. PRODUCT NAME	B-2
3. BRAND NAME.....	B-3
3.1 TRADEMARKS OF OTHER COMPANIES.....	B-3
3.2 OWN TRADEMARKS.....	B-3
4. FEEDING DIRECTION.....	B-4
C PRODUCT SPECIFICATIONS.....	C-1
1. bizhub C554/C454.....	C-1
1.1 Type.....	C-1
1.2 Functions.....	C-1
1.3 Paper.....	C-2
1.4 Materials.....	C-3
1.4.1 Conditions for defining the life value for the field standard yield.....	C-4
1.5 Print volume.....	C-4
1.6 Machine specifications.....	C-4
1.7 Operating environment.....	C-4
1.8 Print functions.....	C-5
1.9 Scan functions.....	C-5
1.10 Note.....	C-6
2. DF-701.....	C-7
2.1 Type.....	C-7
2.2 Functions.....	C-7
2.3 Paper.....	C-7
2.4 Particular originals.....	C-7
2.5 Prohibited originals.....	C-7
2.6 Mixed original feed chart.....	C-8
2.7 Machine specifications.....	C-8

2.8 Operating environment.....	C-8
2.9 Note.....	C-8
3. PC-210/PC-110.....	C-9
3.1 Type.....	C-9
3.2 Paper.....	C-9
3.3 Machine specifications.....	C-9
3.4 Operating environment.....	C-9
3.5 Note.....	C-9
4. PC-410.....	C-10
4.1 Type.....	C-10
4.2 Paper.....	C-10
4.3 Machine specifications.....	C-10
4.4 Operating environment.....	C-10
4.5 Note.....	C-10
5. LU-204.....	C-11
5.1 Type.....	C-11
5.2 Paper.....	C-11
5.3 Machine specifications.....	C-11
5.4 Operating environment.....	C-11
5.5 Note.....	C-11
6. LU-301.....	C-12
6.1 Type.....	C-12
6.2 Paper.....	C-12
6.3 Machine specifications.....	C-12
6.4 Operating environment.....	C-12
6.5 Note.....	C-12
7. JS-506.....	C-13
7.1 Type.....	C-13
7.2 Functions.....	C-13
7.3 Paper.....	C-13
7.4 Offset function.....	C-13
7.5 Machine specifications.....	C-13
7.6 Operating environment.....	C-14
7.7 Note.....	C-14
8. FS-533.....	C-15
8.1 Type.....	C-15
8.2 Functions.....	C-15
8.3 Paper process ability.....	C-15
8.3.1 Non sort/sort/group.....	C-15
8.3.2 Sort offset/group offset.....	C-15
8.3.3 Sort staple.....	C-16
8.4 Machine specifications.....	C-17
8.5 Operating environment.....	C-17
8.6 Note.....	C-17
9. PK-519.....	C-18
9.1 Type.....	C-18
9.2 Functions.....	C-18
9.3 Paper.....	C-18
9.4 Machine specifications.....	C-18
9.5 Operating environment.....	C-18
9.6 Note.....	C-18
10. FS-534.....	C-19
10.1 Type.....	C-19
10.2 Functions.....	C-19
10.3 Paper process ability.....	C-19
10.3.1 Non sort/sort/group.....	C-19
10.3.2 Sort offset/group offset.....	C-21
10.3.3 Sort staple.....	C-21
10.4 Machine specifications.....	C-22
10.5 Operating environment.....	C-22
10.6 Note.....	C-22
11. PK-520.....	C-23
11.1 Type.....	C-23
11.2 Functions.....	C-23
11.3 Paper.....	C-23
11.4 Machine specifications.....	C-23
11.5 Operating environment.....	C-23
11.6 Note.....	C-23

12. SD-511.....	C-24
12.1 Type.....	C-24
12.2 Paper.....	C-24
12.2.1 Saddle stitching/folding.....	C-24
12.2.2 Tri-folding.....	C-24
12.3 Machine specifications.....	C-24
12.4 Consumables.....	C-24
12.5 Operating environment.....	C-25
12.6 Note.....	C-25
13. FS-535.....	C-26
13.1 Type.....	C-26
13.2 Functions.....	C-26
13.3 Staple.....	C-26
13.4 Max. paper capacity.....	C-27
13.5 Machine specifications.....	C-27
13.6 Operating environment.....	C-28
13.7 Note.....	C-28
14. PK-521.....	C-29
14.1 Type.....	C-29
14.2 Functions.....	C-29
14.3 Paper.....	C-29
14.4 Machine specifications.....	C-29
14.5 Operating environment.....	C-29
14.6 Note.....	C-29
15. SD-512.....	C-30
15.1 Type.....	C-30
15.2 Paper.....	C-30
15.2.1 Saddle stitching.....	C-30
15.2.2 Folding.....	C-30
15.2.3 Tri-folding.....	C-30
15.3 Machine specifications.....	C-30
15.4 Consumables.....	C-30
15.5 Operating environment.....	C-30
15.6 Note.....	C-31
16. JS-602.....	C-32
16.1 Type.....	C-32
16.2 Functions.....	C-32
16.3 Paper.....	C-32
16.4 Machine specifications.....	C-32
16.5 Operating environment.....	C-32
16.6 Note.....	C-32
17. PI-505.....	C-33
17.1 Type.....	C-33
17.2 Functions.....	C-33
17.3 Paper.....	C-33
17.4 Machine specifications.....	C-33
17.5 Operating environment.....	C-33
17.6 Note.....	C-33
18. ZU-606.....	C-34
18.1 Type.....	C-34
18.2 Functions.....	C-34
18.3 Paper.....	C-35
18.4 Maintenance.....	C-35
18.5 Machine specifications.....	C-35
18.6 Operating environment.....	C-36
18.7 Note.....	C-36
19. i-Option LK-101 v3/102 v2/104 v3/105 v3/106/107/108.....	C-37
19.1 Available function for i-Option.....	C-37
19.1.1 List of advanced functions.....	C-37
19.1.2 Types of advanced functions.....	C-37
19.1.3 Activation procedures of i-Option.....	C-38
19.2 Web browser function.....	C-38
20. FK-511.....	C-39
20.1 Basic specifications.....	C-39
20.1.1 General specifications.....	C-39
20.1.2 Scanning section.....	C-39
20.1.3 Recording section.....	C-40
20.1.4 Line connecting section.....	C-40

20.1.5 Operation panel.....	C-40
20.2 Functional specifications.....	C-41
20.2.1 Dial functions.....	C-41
20.2.2 Transmission.....	C-41
20.2.3 Polling.....	C-43
20.2.4 Line seizure mode and telephone function.....	C-43
20.2.5 Message reception and record.....	C-43
20.2.6 Memory function.....	C-44
20.2.7 Various communication function.....	C-44
20.2.8 User lists / reports.....	C-44
20.2.9 Other user functions.....	C-45
20.3 Network fax specifications.....	C-45
20.3.1 Internet fax.....	C-45
20.3.2 IP address fax.....	C-45
D OVERALL COMPOSITION.....	D-1
1. SYSTEM CONFIGURATION.....	D-1
1.1 System front view.....	D-1
1.2 System rear view.....	D-2
2. SECTION CONFIGURATION.....	D-3
3. PAPER PATH.....	D-4
4. CONTROL BLOCK DIAGRAM.....	D-5
5. IMAGE CREATION PROCESS.....	D-6
6. IMAGE FORMING CONTROL.....	D-7
7 PROCESS SPEED.....	D-8
E SERVICE TOOL.....	E-1
1. bizhub C554/C454.....	E-1
1.1 Service material list.....	E-1
1.2 CE tool list.....	E-1
1.3 Utility tool.....	E-1
1.3.1 IC card information setting tool of AU-201/AU-202H/SCL-010 card reader.....	E-1
2. DF-701.....	E-4
2.1 CE tool list.....	E-4
F PERIODICAL MAINTENANCE.....	F-1
1. Concept of periodical maintenance.....	F-1
2. Periodical maintenance items.....	F-2
2.1 bizhub C554/C454.....	F-2
2.1.1 bizhub C554.....	F-2
2.1.2 bizhub C454.....	F-2
2.1.3 Dual Scan Document Feeder (DF-701).....	F-3
2.2 Option.....	F-4
2.2.1 PC-110/PC-410.....	F-4
2.2.2 PC-210.....	F-4
2.2.3 LU-204/LU-301.....	F-4
2.2.4 FS-535.....	F-4
2.2.5 SD-512.....	F-4
2.2.6 JS-602.....	F-5
2.2.7 PI-505.....	F-5
2.2.8 ZU-606.....	F-5
2.2.9 FS-534.....	F-6
2.2.10 SD-511.....	F-6
2.2.11 FS-533.....	F-6
3. Periodical replacement parts list.....	F-7
3.1 bizhub C554/C454.....	F-7
3.2 Option.....	F-8
3.2.1 PC-110.....	F-8
3.2.2 PC-210.....	F-8
3.2.3 PC-410.....	F-8
3.2.4 LU-204.....	F-8
3.2.5 LU-301.....	F-8
3.2.6 FS-535.....	F-9
3.2.7 SD-512.....	F-9
3.2.8 PI-505.....	F-9
3.2.9 ZU-606.....	F-9
3.2.10 FS-534.....	F-9
3.2.11 SD-511.....	F-9

3.2.12 FS-533.....	F-10
4. Periodical cleaning parts list.....	F-11
4.1 Main unit.....	F-11
4.2 FS-535.....	F-11
4.3 SD-512.....	F-11
4.4 JS-602.....	F-11
4.5 PI-505.....	F-11
4.6 ZU-606.....	F-12
4.7 FS-534.....	F-12
4.8 SD-511.....	F-12
4.9 FS-533.....	F-12
5. Concept of parts life.....	F-13
5.1 Life value of consumables and parts.....	F-13
5.1.1 Specified conditions of field standard yield.....	F-13
5.2 Details of the life specifications.....	F-13
5.3 Control causing inhibited printing for one part when an inhibited-printing event occurs in another part.....	F-14
5.3.1 Target parts.....	F-14
5.3.2 Threshold value.....	F-14
6. Periodical maintenance procedure bizhub C554/C454.....	F-15
6.1 Housing section.....	F-15
6.1.1 Replacing the ozone filter.....	F-15
6.1.2 Replacing the toner filter.....	F-15
6.2 Photo conductor section.....	F-15
6.2.1 Replacing the drum unit.....	F-15
6.3 Charging section.....	F-17
6.3.1 Cleaning of the charger wire.....	F-17
6.4 Developing section.....	F-17
6.4.1 Replacing the developing unit.....	F-17
6.5 Toner supply section.....	F-18
6.5.1 Replacing the toner cartridge.....	F-18
6.6 1st transfer section.....	F-19
6.6.1 Cleaning of the image transfer entrance guide.....	F-19
6.6.2 Cleaning of the IDC sensor window.....	F-19
6.6.3 Replacing the transfer belt unit.....	F-20
6.7 2nd transfer/separation section.....	F-22
6.7.1 Replacing the transfer roller unit.....	F-22
6.8 Toner collection section.....	F-23
6.8.1 Replacing the waste toner box.....	F-23
6.8.2 Cleaning of the area around the waste toner collecting port.....	F-23
6.9 Paper feed section.....	F-24
6.9.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller.....	F-24
6.9.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller.....	F-24
6.9.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy.....	F-24
6.10 Registration section.....	F-26
6.10.1 Cleaning of the registration roller.....	F-26
6.11 Fusing section.....	F-26
6.11.1 Replacing the fusing unit (C554).....	F-26
6.11.2 Replacing the fusing unit (C454).....	F-28
6.11.3 Cleaning of the IH coil (C554).....	F-29
6.12 Duplex section.....	F-30
6.12.1 Cleaning of the duplex transport rollers.....	F-30
7. Periodical maintenance procedure DF-701.....	F-31
7.1 Take-up section.....	F-31
7.1.1 Cleaning of the pick-up roller/feed roller.....	F-31
7.1.2 Cleaning of the separation roller.....	F-31
7.1.3 Replacing the pick-up roller/feed roller.....	F-32
7.1.4 Replacing the separation roller assy.....	F-33
7.2 Transport section.....	F-34
7.2.1 Cleaning of the miscellaneous rolls.....	F-34
7.2.2 Cleaning of the miscellaneous rollers.....	F-35
7.3 Scanning section.....	F-37
7.3.1 Cleaning of the front side scanning guide.....	F-37
7.3.2 Cleaning of the reflective sensor section.....	F-37
8. Periodical maintenance procedure PC-210/PC-110.....	F-39
8.1 Paper feed section.....	F-39
8.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller.....	F-39
8.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller.....	F-39
9. Periodical maintenance procedure PC-410.....	F-41
9.1 Paper feed section.....	F-41

9.1.1 Replacing the feed roller, pick-up roller, separation roller.....	F-41
10. Periodical maintenance procedure LU-204.....	F-42
10.1 Paper feed section.....	F-42
10.1.1 Replacing the pick-up roller.....	F-42
10.1.2 Replacing the feed roller.....	F-42
10.1.3 Replacing the separation roller.....	F-43
11. Periodical maintenance procedure LU-301.....	F-45
11.1 Paper feed section.....	F-45
11.1.1 Replacing the pick-up roller.....	F-45
11.1.2 Replacing the feed roller.....	F-45
11.1.3 Replacing the separation roller.....	F-46
12. Periodical maintenance procedure FS-535.....	F-48
12.1 Paper exit section.....	F-48
12.1.1 Cleaning procedure for each rollers/each rolls.....	F-48
12.1.2 Cleaning of the paddle/3.....	F-48
12.1.3 Replacing the paddle/1 unit, paddle/2 unit.....	F-48
12.1.4 Replacing the paper exit roller/A.....	F-49
13. Periodical maintenance procedure SD-512.....	F-51
13.1 Paper exit section.....	F-51
13.1.1 Cleaning procedure for each rollers/each rolls.....	F-51
13.1.2 Cleaning of the exit tray transport belt.....	F-51
13.1.3 Cleaning of the upper paddle.....	F-51
13.1.4 Cleaning of the lower paddle.....	F-52
13.1.5 Replacing the upper paddle assy.....	F-52
13.1.6 Replacing the lower paddle unit.....	F-53
14. Periodical maintenance procedure JS-602.....	F-55
14.1 Paper exit section.....	F-55
14.1.1 Cleaning of the transport rollers/exit rollers.....	F-55
15. Periodical maintenance procedure PI-505.....	F-56
15.1 Paper feed section.....	F-56
15.1.1 Replacing the pick-up roller /Up and the feed roller /Up.....	F-56
15.1.2 Replacing the pick-up roller /Lw and the feed roller /Lw.....	F-57
15.1.3 Replacing the separation roller /Up and the torque limiter /Up.....	F-57
15.1.4 Replacing the separation roller /Lw and the torque limiter /Lw.....	F-58
16. Periodical maintenance procedure ZU-606.....	F-59
16.1 Punch section.....	F-59
16.1.1 Replacing the punch scraps conveyance motor (M7).....	F-59
16.1.2 Replacing the punch clutch (CL1).....	F-59
17. Periodical maintenance procedure FS-534.....	F-61
17.1 Paper exit section.....	F-61
17.1.1 Cleaning procedure for each rollers/each rolls.....	F-61
17.1.2 Cleaning the paddles.....	F-61
17.1.3 Replacing the paddle units.....	F-61
18. Periodical maintenance procedure SD-511.....	F-64
18.1 Paper exit section.....	F-64
18.1.1 Cleaning procedure for each rollers/each rolls.....	F-64
18.1.2 Cleaning the upper paddle.....	F-64
18.1.3 Cleaning the lower paddle.....	F-65
18.1.4 Replacing the upper paddle assy.....	F-65
18.1.5 Replacing the lower paddle unit.....	F-66
19. Periodical maintenance procedure FS-533.....	F-67
19.1 Paper exit section.....	F-67
19.1.1 Cleaning procedure for each parts.....	F-67
19.1.2 Cleaning the paper exit paddle.....	F-67
19.2 Alignment section.....	F-67
19.2.1 Replacing the alignment roller assy F/R.....	F-67
G DISASSEMBLY/REASSEMBLY.....	G-1
1. Disassembly/adjustment prohibited items.....	G-1
1.1 Paint-locked screws.....	G-1
1.2 Red-painted screws.....	G-1
1.3 Variable resistors on board.....	G-1
1.4 Warnings for disassembly.....	G-1
1.5 Warnings / Precautions during setup or transportation.....	G-1
1.6 Parts not allowed to be removed.....	G-2
1.6.1 ZU-606.....	G-2
2. Units from which removing is prohibited.....	G-4

2.1	CCD board.....	G-4
2.1.1	Reason for prohibition.....	G-4
2.2	PH unit.....	G-4
2.2.1	Reason for prohibition.....	G-4
2.3	Fusing unit.....	G-4
2.3.1	Reason for prohibition.....	G-4
3.	Disassembly/assembly warning/caution items.....	G-5
3.1	Removal/installing of PWBs.....	G-5
3.2	Use a special screw.....	G-5
3.2.1	C554.....	G-6
3.2.2	C454.....	G-7
4.	Notes when transporting the machine.....	G-8
4.1	Protective materials.....	G-8
4.1.1	Protective materials for the photo conductors.....	G-8
4.1.2	Scanner packing bracket.....	G-8
5.	bizhub C554/C454.....	G-9
5.1	Disassembly/reassembly parts list.....	G-9
5.1.1	Exterior parts.....	G-9
5.1.2	Units.....	G-9
5.1.3	Boards.....	G-9
5.1.4	Motors.....	G-10
5.1.5	Clutches.....	G-10
5.1.6	etc.....	G-10
5.2	Disassembly/reassembly procedure (Exterior parts).....	G-11
5.2.1	Scanner rear cover.....	G-11
5.2.2	Scanner right cover.....	G-11
5.2.3	Scanner front cover.....	G-11
5.2.4	Scanner left cover.....	G-12
5.2.5	Scanner upper rear cover.....	G-12
5.2.6	Control panel left cover/1.....	G-12
5.2.7	Control panel left cover/2.....	G-12
5.2.8	Control panel right cover.....	G-13
5.2.9	Control panel upper cover.....	G-13
5.2.10	Control panel front cover.....	G-13
5.2.11	Control panel lower cover.....	G-14
5.2.12	Control panel unit.....	G-14
5.2.13	Original glass.....	G-15
5.2.14	Upper front door.....	G-16
5.2.15	Lower front door.....	G-16
5.2.16	Lower front cover.....	G-17
5.2.17	Front cover.....	G-17
5.2.18	Left cover.....	G-17
5.2.19	Paper exit cover.....	G-18
5.2.20	Paper exit rear cover.....	G-18
5.2.21	Rear right cover.....	G-19
5.2.22	Upper right cover.....	G-19
5.2.23	Lower rear cover/1.....	G-20
5.2.24	Lower rear cover/2.....	G-20
5.2.25	DF cable cover.....	G-20
5.2.26	Upper rear cover.....	G-20
5.2.27	Tray 1.....	G-21
5.2.28	Tray 2.....	G-22
5.3	Disassembly/reassembly procedure (Units).....	G-22
5.3.1	LED exposure unit.....	G-22
5.3.2	Paper feed unit.....	G-23
5.3.3	PH unit.....	G-24
5.3.4	Sub hopper unit.....	G-26
5.3.5	Right door unit.....	G-27
5.3.6	Manual bypass tray unit.....	G-29
5.3.7	Regist unit.....	G-30
5.3.8	Hard disk.....	G-31
5.3.9	How to open the PWB box/1.....	G-32
5.3.10	PWB box/2 (C554).....	G-33
5.3.11	Main drive unit.....	G-35
5.3.12	Transport unit.....	G-38
5.3.13	IH coil (IHC) (C554).....	G-38
5.3.14	Fusing drive unit (C554).....	G-40
5.3.15	Fusing drive unit (C454).....	G-42

1. DIGITAL MFP COLOR (bizhub C454).....	QB-4
DIAGRAMS OF MAIN PARTS SECTION.....	QB-4
1.1 EXTERNAL PARTS.....	QB-5
1.2 PAPER FEED TRAY SECTION.....	QB-7
1.3 PAPER TAKE-UP SECTION.....	QB-8
1.4 PAPER TRANSPORT SECTION.....	QB-11
1.5 CIS SECTION.....	QB-17
1.6 EXTERNAL PARTS.....	QB-21
1.7 INNER COVER SECTION.....	QB-23
1.8 OPERATION PANEL SECTION.....	QB-24
1.9 IR COVER SECTION.....	QB-25
1.10 SCANNER SECTION.....	QB-26
1.11 PH UNIT.....	QB-29
1.12 TONER SUPPLY SECTION.....	QB-30
1.13 WASTE TONER BOX SECTION.....	QB-32
1.14 ERASE LAMP SECTION.....	QB-33
1.15 DV LOCK LEVER SECTION.....	QB-34
1.16 TRANSFER UNIT.....	QB-35
1.17 PAPER FEED SECTION.....	QB-36
1.18 1ST PAPER FEED SECTION.....	QB-37
1.19 2ND PAPER FEED SECTION.....	QB-39
1.20 CASSETTE RAIL SECTION.....	QB-41
1.21 PAPER SIZE DETECTION SECTION.....	QB-42
1.22 1ST CASSETTE SECTION.....	QB-43
1.23 2ND CASSETTE SECTION.....	QB-45
1.24 CONVEYANCE SECTION.....	QB-47
1.25 VERTICAL TRANSPORT SECTION.....	QB-48
1.26 VERTICAL CONVEYANCE DOOR SECTION.....	QB-51

1.27	BYPASS TRAY SECTION.....	QB-52
1.28	REVERSAL UNIT.....	QB-55
1.29	FUSING SECTION.....	QB-57
1.30	PAPER EXIT SECTION.....	QB-58
1.31	MAIN DRIVE/ PAPER FEED DRIVE SECTION.....	QB-60
1.32	TONER BOTTLE DRIVE SECTION.....	QB-61
1.33	FUSING DRIVE SECTION.....	QB-62
1.34	OZONE DUCT SECTION.....	QB-64
1.35	HIGH VOLTAGE SECTION.....	QB-65
1.36	MAIN POWER SUPPLY SECTION.....	QB-66
1.37	ELECTRICAL COMPONENTS.....	QB-67
1.38	WIRING.....	QB-69
1.39	WIRING ACCESSORIES AND JIGS.....	QB-70
1.40	ACCESSORY PARTS.....	QB-71
1.41	MAINTENANCE LIST.....	QB-72
1.42	DESTINATION.....	QB-72
2.	SORTER/FINISHER (FS-533).....	QB-74
2.1	FRAME SECTION.....	QB-74
2.2	EXTERNAL PARTS.....	QB-75
2.3	ELEVATE SECTION.....	QB-76
2.4	PAPER FEED/TRANSPORT SECTION.....	QB-77
2.5	ADJUSTMENT SECTION.....	QB-84
2.6	STAPLER SECTION.....	QB-86
2.7	DRIVE SECTION.....	QB-87
2.8	ELECTRICAL COMPONENTS.....	QB-88
2.9	WIRING ACCESSORIES AND JIGS.....	QB-89
2.10	DESTINATION.....	QB-89
3.	SORTER/FINISHER (FS-534).....	QB-91
3.1	EXTERNAL PARTS.....	QB-91
3.2	FRAME SECTION.....	QB-92
3.3	PAPER TRANSPORT SECTION.....	QB-93
3.4	ELEVATE SECTION.....	QB-98
3.5	STAPLER SECTION.....	QB-100
3.6	PAPER EXIT SECTION.....	QB-102
3.7	COMPILE SECTION.....	QB-105
3.8	HORIZONTAL TRANSPORT SECTION.....	QB-107
3.9	WIRING.....	QB-110
3.10	WIRING ACCESSORIES AND JIGS.....	QB-112
3.11	ACCESSORY PARTS.....	QB-113
3.12	DESTINATION.....	QB-113
4.	SORTER/FINISHER (SD-511).....	QB-115
4.1	EXTERNAL PARTS.....	QB-115
4.2	FRAME SECTION.....	QB-116
4.3	REAR FRAME SECTION.....	QB-117
4.4	PAPER CEASE SECTION.....	QB-118
4.5	PAPER TRANSPORT SECTION.....	QB-122
4.6	STAPLER SECTION.....	QB-123
4.7	ALIGNMENT SECTION.....	QB-124
4.8	PAPER EXIT TRAY SECTION.....	QB-126
4.9	WIRING.....	QB-127
4.10	WIRING ACCESSORIES AND JIGS.....	QB-129
4.11	ACCESSORY PARTS.....	QB-130
4.12	MAINTENANCE LIST.....	QB-130
4.13	DESTINATION.....	QB-130
5.	OTHER OPTION (JS-506).....	QB-132
5.1	SEPARATOR SECTION.....	QB-132
5.2	TRAY SECTION.....	QB-133
5.3	WIRING ACCESSORIES AND JIGS.....	QB-134
5.4	DESTINATION.....	QB-134
6.	PUNCH UNIT (PK-519).....	QB-136
6.1	PUNCH UNIT.....	QB-136
6.2	WIRING ACCESSORIES AND JIGS.....	QB-139
6.3	DESTINATION.....	QB-139
7.	PUNCH UNIT (PK-520).....	QB-141
7.1	PUNCH UNIT.....	QB-141
7.2	WIRING ACCESSORIES AND JIGS.....	QB-142
7.3	ACCESSORY PARTS.....	QB-143
7.4	DESTINATION.....	QB-143

8. OTHER OPTION (OT-506).....	QB-145
8.1 OT-506.....	QB-145
8.2 DESTINATION.....	QB-145
9. PAPER FEEDER (PC-110).....	QB-147
9.1 EXTERNAL PARTS.....	QB-147
9.2 FRAME SECTION.....	QB-148
9.3 PAPER FEED DRIVE SECTION.....	QB-149
9.4 CASSETTE SIZE SECTION.....	QB-150
9.5 PAPER TRANSPORT SECTION.....	QB-151
9.6 PAPER TAKE-UP SECTION.....	QB-152
9.7 3rd PAPER TRAY UNIT.....	QB-155
9.8 RECEIPT TRAY.....	QB-157
9.9 WIRING ACCESSORIES AND JIGS.....	QB-158
9.10 ACCESSORY PARTS.....	QB-159
9.11 MAINTENANCE LIST.....	QB-159
9.12 DESTINATION.....	QB-159
10. PAPER FEEDER (PC-210).....	QB-161
10.1 EXTERNAL PARTS.....	QB-161
10.2 FRAME SECTION.....	QB-162
10.3 PAPER FEED DRIVE SECTION.....	QB-163
10.4 CASSETTE SIZE SECTION.....	QB-164
10.5 PAPER TRANSPORT SECTION.....	QB-165
10.6 PAPER TAKE-UP SECTION.....	QB-166
10.7 3rd PAPER TRAY UNIT.....	QB-169
10.8 4th PAPER TRAY UNIT.....	QB-171
10.9 WIRING ACCESSORIES AND JIGS.....	QB-173
10.10 ACCESSORY PARTS.....	QB-174
10.11 MAINTENANCE LIST.....	QB-174
10.12 DESTINATION.....	QB-174
11. PAPER FEEDER (PC-410).....	QB-176
11.1 EXTERNAL PARTS.....	QB-176
11.2 FRAME SECTION.....	QB-177
11.3 PAPER FEED DRIVE SECTION.....	QB-178
11.4 PAPER TRANSPORT SECTION.....	QB-179
11.5 PAPER TAKE-UP SECTION.....	QB-180
11.6 PAPER TRAY UNIT.....	QB-183
11.7 WIRING ACCESSORIES AND JIGS.....	QB-187
11.8 ACCESSORY PARTS.....	QB-188
11.9 MAINTENANCE LIST.....	QB-188
11.10 DESTINATION.....	QB-188
12. PAPER FEEDER (LU-204).....	QB-190
12.1 EXTERNAL PARTS.....	QB-190
12.2 FRAME SECTION.....	QB-191
12.3 LIFT-UP TRAY SECTION.....	QB-192
12.4 FRONT LIFT WIRE SECTION.....	QB-193
12.5 PAPER FEED SECTION.....	QB-194
12.6 PAPER TRANSPORT SECTION.....	QB-196
12.7 REAR LIFT WIRE SECTION.....	QB-197
12.8 DRIVE SECTION.....	QB-198
12.9 WIRING.....	QB-199
12.10 WIRING ACCESSORIES AND JIGS.....	QB-200
12.11 ACCESSORY PARTS.....	QB-201
12.12 MAINTENANCE LIST.....	QB-201
12.13 DESTINATION.....	QB-201
13. PAPER FEEDER (LU-301).....	QB-203
13.1 EXTERNAL PARTS.....	QB-203
13.2 FRAME SECTION.....	QB-204
13.3 LIFT-UP TRAY SECTION.....	QB-205
13.4 FRONT LIFT WIRE SECTION.....	QB-206
13.5 PAPER FEED SECTION.....	QB-207
13.6 PAPER TRANSPORT SECTION.....	QB-209
13.7 REAR LIFT WIRE SECTION.....	QB-210
13.8 DRIVE SECTION.....	QB-211
13.9 WIRING.....	QB-212
13.10 WIRING ACCESSORIES AND JIGS.....	QB-213
13.11 ACCESSORY PARTS.....	QB-214
13.12 MAINTENANCE LIST.....	QB-214
13.13 DESTINATION.....	QB-214
14. OTHER OPTION (MK-730).....	QB-216

14.1 MK-730.....	QB-216
14.2 DESTINATION.....	QB-216
15. OTHER OPTION (HT-510).....	QB-218
15.1 HT-510.....	QB-218
15.2 WIRING ACCESSORIES AND JIGS.....	QB-219
15.3 DESTINATION.....	QB-219
16. OTHER OPTION (IC-414).....	QB-220
16.1 IC-414.....	QB-220
16.2 DESTINATION.....	QB-220
17. OTHER OPTION (VI-506).....	QB-222
17.1 VI-506.....	QB-222
17.2 DESTINATION.....	QB-222
18. FAX CONTROLLER (FK-511).....	QB-224
18.1 FK-511.....	QB-224
18.2 DESTINATION.....	QB-224
19. OTHER OPTION (EK-606).....	QB-226
19.1 EK-606.....	QB-226
19.2 WIRING ACCESSORIES AND JIGS.....	QB-227
19.3 DESTINATION.....	QB-227
20. OTHER OPTION (EK-607).....	QB-229
20.1 EK-607.....	QB-229
20.2 WIRING ACCESSORIES AND JIGS.....	QB-230
20.3 DESTINATION.....	QB-230

R TROUBLESHOOTING GUIDE BASED ON REPORTS FROM THE FIELD.....R-1

1. PAPER JAM.....	R-1
1.1 Main body.....	R-1
1.1.1 When the image stabilization setting is actuated, sometimes J99-01 occurs.....	R-1
1.2 Optional finisher.....	R-1
1.2.1 In the condition that FS-534 has been attached, J72-19 (FS conveyance section JAM) occurs.....	R-1
1.2.2 In the condition that FS-535 has been attached, J72-19 or C1103 occurs.....	R-1
1.2.3 In the condition that SD-511/SD-512 has been attached, J72-86 (Saddle entrance JAM) occurs.....	R-2
2. ERROR MESSAGE/ABNORMAL DISPLAY.....	R-3
2.1 Operation panel is not activated (1).....	R-3
Symptom.....	R-3
Cause.....	R-3
Countermeasures.....	R-3
2.2 Operation panel is not activated (2).....	R-3
Symptom.....	R-3
Cause.....	R-3
Countermeasures.....	R-3
2.3 In the condition that FS-534 and SD-511 have been installed, the front door open indicator is displayed.....	R-3
Symptom.....	R-3
Cause.....	R-3
Countermeasures.....	R-3
2.4 Keep C4802 after replacing the PRCB when FS-533, FS-534, FS-535 or JS-506 is attached.....	R-4
Symptom.....	R-4
Cause.....	R-4
Countermeasures.....	R-4
3. MALFUNCTION.....	R-6
3.1 Reading malfunction of scanner.....	R-6
Symptom.....	R-6
Cause.....	R-6
Countermeasures 1.....	R-6
Countermeasures 2.....	R-6
.....	R-7
4. FINISHING.....	R-8
4.1 In the condition that FS-534 is attached, the 2nd sheet is displaced at the stapling process.....	R-8
4.1.1 Symptom.....	R-8
4.1.2 Cause.....	R-8
4.1.3 Countermeasures.....	R-8
5. PARTS.....	R-9
5.1 Dual Scan Document Feeder left cover open indication does not disappear.....	R-9
Symptom.....	R-9
Cause.....	R-9
Countermeasures.....	R-9
5.2 Operation panel is mounted at an angle.....	R-9

Symptom.....	R-9
Cause.....	R-9
Action.....	R-9

A SAFETY AND IMPORTANT WARNING ITEMS

Read carefully the safety and important warning items described below to understand them before doing service work.

1. IMPORTANT NOTICE

- Because of possible hazards to an inexperienced person servicing this product as well as the risk of damage to the product, KONICA MINOLTA BUSINESS TECHNOLOGIES, INC. (hereafter called KMBT) strongly recommends that all servicing be performed only by KMBT-trained service technicians.
- Changes may have been made to this product to improve its performance after this Service Manual was printed. Accordingly, KMBT does not warrant, either explicitly or implicitly, that the information contained in this service manual is complete and accurate.
- The user of this service manual must assume all risks of personal injury and/or damage to the product while servicing the product for which this service manual is intended. Therefore, this service manual must be carefully read before doing service work both in the course of technical training and even after that, for performing maintenance and control of the product properly.
- Keep this service manual also for future service.

2. DESCRIPTION ITEMS FOR DANGER, WARNING AND CAUTION

2.1 Description items in this Service Manual

In this Service Manual, each of three expressions “⚠DANGER”, “⚠WARNING”, and “⚠CAUTION” are defined as follows.

When servicing the product, the relevant works (disassembling, reassembling, adjustment, repair, maintenance, etc.) need to be conducted with utmost care.

 DANGER	: Action having a high possibility of suffering death or serious injury
 WARNING	: Action having a possibility of suffering death or serious injury
 CAUTION	: Action having a possibility of suffering a slight wound and property damage

2.2 Description items for safety and important warning items

Symbols used for safety and important warning items are defined as follows:

 : Precaution when servicing the product.	 General precaution	 Electric hazard	 High temperature
 : Prohibition when servicing the product.	 General prohibition	 Do not touch with wet hand	 Do not disassemble
 : Direction when servicing the product.	 General instruction	 Unplug	 Ground/Earth

Illustrations representing the power plug and wall outlet used in the following descriptions are only typical. Their shapes differ depending on the country or region.

3. SAFETY WARNINGS

3.1 MODIFICATIONS NOT AUTHORIZED BY KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.

KONICA MINOLTA brand products are renowned for their high reliability. This reliability is achieved through high-quality design and a solid service network.

Product design is a highly complicated and delicate process where numerous mechanical, physical, and electrical aspects have to be taken into consideration, with the aim of arriving at proper tolerances and safety factors. For this reason, unauthorized modifications involve a high risk of degradation in performance and safety. Such modifications are therefore strictly prohibited. The points listed below are not exhaustive, but they illustrate the reasoning behind this policy.

3.1.1 Actions requiring special attention

WARNING

- Do not make any modifications to the product unless otherwise instructed by KMBT.

- Do not use any part not specified by KMBT.

- Do not use any power cord or power plug not specified by KMBT.

- Use only the protective fuses specified by KMBT.

Use of any type of fuse or related part not specified by KMBT makes safety devices inoperative which may result in a fire from high heat.

- Do not disable fuse functions or use a wire, metal clip, solder, or other conductor in place of the fuse.

Fire may result from high heat.

- Do not disable relay functions (for example, inserting a piece of paper between relay contacts to hamper circuit action.)

Fire may result from high heat.

WARNING

- Do not disable safety functions (for example, interlocks and safety circuits).

Safety devices become inoperative, resulting in fire from high heat, electric shock, or injury.

3.2 POWER PLUG SELECTION

In some countries or areas, the power plug provided with the product may not fit the wall outlet used in the area. In that case, it is the obligation of the customer engineer (hereafter called the CE) to attach the appropriate power plug or power cord set in order to connect the product to the supply.

3.2.1 Power Cord Set or Power Plug

WARNING

- Use a power supply cord set which meets the following criteria:
 - provided with a plug having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
 - the plug has pin/terminal(s) for grounding, and
 - provided with three-conductor cable having enough current capacity, and
 - the cord set meets regulatory requirements for the area.

Use of inadequate cord set leads to fire or electric shock.

WARNING

- Attach power plug which meets the following criteria:
 - having configuration intended for the connection to wall outlet appropriate for the product's rated voltage and current, and
 - the plug has pin/terminal(s) for grounding, and
 - meets regulatory requirements for the area.

Use of inadequate cord set leads to the product connecting to inadequate power supply (voltage, current capacity, grounding), and may result in fire or electric shock.

- The wires in the power supply cord shall be connected to the terminals of the plug in accordance with the following:

Color of the wire		Terminal of the plug
Brown	Black	Marked with "L", "A" or "W" or colored RED
Light Blue	White	Marked with "N" or colored BLACK
Green-and-Yellow		Marked with "E", "PE" or "  " or colored GREEN or GREEN-AND-YELLOW

- Wrong connection may cancel safeguards within the product, and results in fire or electric shock.

3.3 CHECKPOINTS WHEN PERFORMING ON-SITE SERVICE

KONICA MINOLTA brand products are extensively tested before shipping, to ensure that all applicable safety standards are met, in order to protect the customer and customer engineer (hereafter called the CE) from the risk of injury. However, in daily use, any electrical equipment may be subject to parts wear and eventual failure. In order to maintain safety and reliability, the CE must perform regular safety checks.

3.3.1 Power Supply

(1) Connection to Power Supply

WARNING

- The power outlet should have a capacity of at least the maximum power consumption and be dedicated only to the product.

The current that can be passed through the outlet is limited and any current exceeding the limit could result in fire.

- If the wall outlet has two or more receptacles and the product and another electrical appliance are plugged into this wall outlet, make sure that the total load does not exceed the rating of the wall outlet. The current that can be passed through the outlet is limited and any current exceeding the limit could result in a fire.

- Do not use any conversion plug adapter even if the power plug shape does not match your wall outlet.

The shapes of the power plug and the wall outlet are set according to the voltage and allowable current. Use of a conversion plug adapter could result in an abnormal voltage or insufficient current capacity, leading to a fire. It may also result in an electric shock due to a grounding failure.

If the plug shape does not match the wall outlet, request the user to perform power source installation work.

WARNING

- Make sure the power cord is plugged into the wall outlet securely.

If the power plug is left loose in the wall outlet, contact failure may occur, leading to abnormal heating of the power plug and a risk of fire.

(2) Ground Connection

WARNING

- Check whether the product is grounded properly.

If current leakage occurs in an ungrounded product, you may suffer electric shock while operating the product.

Connect power plug to grounded wall outlet.

- Make sure of correct ground connection.
If the grounding wire is connected to an inappropriate part, there is a risk of explosion or electric shock. Do not connect the grounding wire to any of the following parts:

- a. Gas pipe: Gas explosion or fire may result.
- b. Lightning rod: Risk of electric shock or fire during lightning.
- c. Grounding wire for telephone line: Risk of electric shock or fire during lightning.
- d. Water pipe and faucet: These parts do not serve as a ground connection because of a plastic part that is very often installed midway within the water pipe.

(3) Power Plug and Cord

WARNING

- When using the power cord set (inlet type) that came with this product, make sure the connector is securely inserted in the inlet of the product.

When a securing measure is provided, secure the cord with the fixture properly. If the power cord (inlet type) is not connected to the product securely, a contact problem may lead to increased resistance, overheating, and risk of fire.

- Do not allow the power cord to be stepped on or pinched. Overheating may occur there, leading to a risk of fire.

- Check whether the power cord is damaged. Check whether the sheath is damaged. If the power plug, cord, or sheath is damaged, replace with a new power cord (with plug and connector on each end) specified by KMBT. Using the damaged power cord may result in fire or electric shock.

- Do not bundle or tie the power cord. Overheating may occur there, leading to a risk of fire.

- Check whether dust is collected around the power plug and wall outlet. Using the power plug and wall outlet without removing dust may result in fire.

- Do not insert the power plug into the wall outlet with a wet hand. The risk of electric shock exists.

WARNING

- When unplugging the power cord, grasp the plug, not the cable.
The cable may be broken, leading to a risk of fire and electric shock.

(4) Wiring

WARNING

- Never use multi-plug adapters to plug multiple power cords in the same outlet.
If used, the risk of fire exists.

- When an extension cord is required, use one that meets the rated current, rated voltage, and the relevant safety standards of the country.

Current that can be passed through the extension cable is limited and fire may result from the use of an inappropriate type of an extension cable.
Do not use an extension cable reel with the cable taken up. Fire may result.

3.3.2 Installation Requirements

(1) Prohibited Installation Places

WARNING

- Do not place the product near flammable materials or volatile materials that may catch fire.

A risk of fire exists.

- Do not place the product in a place exposed to water such as rain.

A risk of fire and electric shock exists.

(2) When not Using the Product for a long time

WARNING

- When the product is not to be used for an extended period of time (for holidays, for example), instruct the user to turn OFF the power switch and unplug the power cord from the power outlet.

Dust collected around the power plug and outlet may cause fire.

(3) Ventilation

CAUTION

- The product generates ozone gas during operation.

If the smell of ozone is present in the following cases, ventilate the room.

- a. When the product is used in a poorly ventilated room
- b. When making a lot of copies
- c. When using multiple products at the same time

(4) Stability

CAUTION

- Be sure to lock the caster stoppers.
In the case of an earthquake, the product may slide, leading to an injury.

3.3.3 After Service

(1) Inspection before Servicing

WARNING

- Before conducting an inspection, read all relevant documentation (service manual, technical notices, etc.) and proceed with the inspection following the prescribed procedure using the recommended personal safety equipment and using only the prescribed tools.

Do not make any adjustment not described in the documentation.

If the prescribed procedure or tool is not used, the product may break and a risk of injury or fire exists.

- Before conducting an inspection, be sure to disconnect the power plugs from the Main Body and Accessories (Options).

When the power plug is inserted into the wall outlet, some units are still powered even if the POWER switch is turned OFF. A risk of electric shock exists.

CAUTION

- The area around the fixing unit is hot. You may get burned.

CAUTION

- Do not leave the machine unattended during transportation, installation, and/or inspection.
If the machine is left unattended, face protrusions toward the wall or take other necessary precautions to prevent a user or other person in the area from stumbling over a protrusion of the machine or being caught by a cable, possibly causing a fall to the floor or other personal injury.

(2) Work Performed with the Product Powered On

WARNING

- Take every care when making adjustments or performing an operation check with the product powered.
If you make adjustments or perform an operation check with the external cover detached, you may touch live or high-voltage parts or you may be caught in moving gears or the timing belt, leading to a risk of injury.

- Take every care when servicing with the external cover detached.
High-voltage exists around the drum unit. A risk of electric shock exists.

- If it is absolutely necessary to service the machine with the door open or external covers removed, always be attentive to the motion of the internal parts.
A normally protected part may cause unexpected hazards.

CAUTION

- Do not keep gazing at a lamp light during the service procedure with the product powered ON.

Eyestrain may result.

(3) Safety Checkpoints

WARNING

- When a product fault is reported from a user, check parts and repair the fault appropriately with safety in mind.

A damaged product, personal injury, or fire may result.

- Whenever mounting an option on the machine, be attentive to the motion of the other workers performing the task.

Another worker may be injured by a pinch point between the machine and the option.

- When mounting an option on the machine, be careful about the clearance between the machine and the option.

You may be injured with your finger or hand pinched between the machine and the option.

- When removing a part that secures a motor, gear, or other moving part, disassembling a unit, or reinstalling any of such parts and units, be careful about moving parts and use care not to drop any part or unit. During the service procedure, give sufficient support for any heavy unit.

You may be injured by a falling part or unit.

WARNING

- Check the external covers and frame for possible sharp edges, burrs, and damage.
They can be a cause of injury during use or servicing.

- When accessing a hard-to-view or narrow spot, be careful about sharp edges and burrs on the frame and parts.
They may injure your hands or fingers.

- Do not allow any metal parts such as clips, staples, and screws to fall into the product.
They can short internal circuits and cause electric shock or spark bursting into flame.

- Check wiring for pinched and any other damage.
Current can leak, leading to a risk of electric shock or fire.

- Check high-voltage cables and sheaths for any damage.
Damage may lead to product failure and/or the risk of fire.

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.
The laser light can enter your eye, leading to a risk of loss of eyesight.

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.
The laser light can enter your eye, leading to a risk of loss of eyesight.

- After replacing a part to which AC voltage is applied (e.g., optical lamp and fixing lamp), be sure to check the installation state.
A risk of fire exists.

WARNING

- Check the interlock switch and actuator for loosening and check whether the interlock functions properly.

If the interlock does not function, you may receive an electric shock or be injured when you insert your hand in the product (e.g., for clearing paper jam).

- Make sure the wiring cannot come into contact with sharp edges, burrs, or other pointed parts.

Damage may lead to the risk of electric shock or fire.

- Make sure that all screws, components, wiring, connectors, etc. that were removed for safety check and maintenance have been reinstalled in the original location. (Pay special attention to forgotten connectors, pinched cables, forgotten screws, etc.)

A risk of product trouble, personal injury, electric shock, and fire exists.

- Never use any flammable or combustible spray, fluid, gas, or similar substance in and around the product.

Do not use any flammable or combustible dust spray, in particular, to clean the interior of the product.

Fire or explosion may result.

CAUTION

- Carefully remove all toner remnants and dust from electrical parts and electrode units such as a charging corona unit.

Toner remnants and dust may lead to product failure and/or the risk of fire.

CAUTION

- Check electrode units such as a charging corona unit for deterioration and signs of leakage.
Damage may lead to product failure and/or the risk of fire.

- When replacing a battery, replace it with a new one as specified.
Dispose of the used battery as instructed on its packaging or by local ordinance.
There is a risk of explosion if the battery is replaced with an incorrect type.

(4) Handling of Consumables

WARNING

- For handling of consumables (toner, developer, photoconductor, etc.) and their storage precautions, see MSDS.

(5) Handling of Service Materials

CAUTION

- Handle with care according to MSDS.
Use of solvent may involve explosion, fire, or personal injury.

3.4 FUSE

CAUTION

Double pole / neutral fusing

ATTENTION

Double pôle / fusible sur le neutre.

3.5 Used Batteries Precautions

3.5.1 ALL Areas

CAUTION

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer's instructions.

3.5.2 Germany

VORSICHT!

Explosionsgefahr bei unsachgemäßem Austausch der Batterie.
Ersatz nur durch denselben oder einen vom Hersteller empfohlenen gleichwertigen Typ.
Entsorgung gebrauchter Batterien nach Angaben des Herstellers.

3.5.3 France

ATTENTION

Il y a danger d'explosion s'il y a remplacement incorrect de la batterie.
Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux instructions du fabricant.

3.5.4 Denmark

ADVARSEL!

Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering.
Udskiftning må kun ske med batteri af samme fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

3.5.5 Finland, Sweden

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt fabrikantens instruktion.

3.5.6 Norway

ADVARSEL

Eksplosjonsfare ved feilaktig skifte av batteri.
Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten.
Brukte batterier kasseres i henhold til fabrikantens instruksjoner.

3.6 Laser Safety

3.6.1 Laser Safety

This is a digital machine certified as a Class 1 laser product. There is no possibility of danger from a laser, provided the machine is serviced according to the instruction in this manual.

3.6.2 Internal Laser Radiation

- This product employs a Class 3B laser diode that emits an invisible laser beam. The laser diode and the scanning polygon mirror are incorporated in the print head unit.
- The print head unit is NOT A FIELD SERVICEABLE ITEM. Therefore, the print head unit should not be opened under any circumstances.

semiconductor laser		
Maximum power of the laser diode		15mW
Maximum average radiation power (*)	bizhub C554	11.2μW
	bizhub C454	9.4μW
Wavelength		770 to 800 nm

*at laser aperture of the Print Head Unit

[1] Laser Aperture of the Print Head Unit	[2] Print Head Unit
---	---------------------

(1) U.S.A., Canada (CDRH Regulation)

- This machine is certified as a Class 1 Laser product under Radiation Performance Standard according to the Food, Drug and Cosmetic Act of 1990. Compliance is mandatory for Laser products marketed in the United States and is reported to the Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration of the U.S. Department of Health and Human Services (DHHS). This means that the device does not produce hazardous laser radiation.
- The label shown on "[A.3.6.3 Laser Safety Label](#)" indicates compliance with the CDRH regulations and must be attached to laser products marketed in the United States.

Use of controls, adjustments or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

semiconductor laser	
Maximum power of the laser diode	15 mW
Wavelength	770 to 800 nm

(2) All Areas

Use of controls, adjustments or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

semiconductor laser	
Maximum power of the laser diode	15 mW
Wavelength	770 to 800 nm

(3) Denmark

Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling. Klasse 1 laser produkt der opfylder IEC60825-1 sikkerheds kravene.

Den maximala effekten för laserdioden

15 mW

våglängden

770 to 800 nm

VARO!

Avattaessa ja suojalukitus ohitettaessa olet alttiina näkymättömälle lasersäteilylle. Älä katso säteeseen.

VARNING!

Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. Betrakta ej strålen.

(5) Norway

ADVERSEL

Dersom apparatet brukes på annen måte enn spesifisert i denne bruksanvisning, kan brukeren utsettes for usynlig laserstråling, som overskrider grensen for laser klass 1.

halvleder laser	
Maksimal effekt till laserdiode	15 mW
bølgelengde	770 to 800 nm

3.6.3 Laser Safety Label

A laser safety label is attached to the outside of the machine as shown below.

3.6.4 Laser Caution Label

A laser caution label is attached to the inside of the machine as shown below.

3.6.5 PRECAUTIONS FOR HANDLING THE LASER EQUIPMENT

- Be sure to unplug the power cord whenever performing a service job in the laser beam path (around the PH unit).
- If it is absolutely unavoidable to perform a service job with the power cord plugged in, strictly observe the following precautions:
 1. Before starting the service job, take off your watch, ring, and other reflective articles and be sure to wear laser protective goggles.
 2. Keep other personnel away from the work site.
 3. Do not bring any highly reflective tool into the laser beam path during the service procedure.

4. WARNING INDICATIONS ON THE MACHINE

Caution labels shown are attached in some areas on/in the machine.

When accessing these areas for maintenance, repair, or adjustment, special care should be taken to avoid burns and electric shock.

4.1 Warning indications inside the machine

⚠ CAUTION

You may be burned or injured if you touch any area that you are advised not to touch by any caution label. Do not remove caution labels. If any caution label has come off or soiled and therefore the caution cannot be read, contact our service office.

⚠ CAUTION

The area around the fusing unit is extremely hot. Touching any part other than those indicated may result in burns.

4.2 Warning indications on the boards

⚠ WARNING

- To avoid electric shock, after turning OFF the power switch, do not touch the DC power supply unit for 240 minutes.
If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

4.2.1 C554

4.2.2 C454

5. MEASURES TO TAKE IN CASE OF AN ACCIDENT

1. If an accident has occurred, the distributor who has been notified first must immediately take emergency measures to provide relief to affected persons and to prevent further damage.
2. If a report of a serious accident has been received from a customer, an on-site evaluation must be carried out quickly and KMBT must be notified.
3. To determine the cause of the accident, conditions and materials must be recorded through direct on-site checks, in accordance with instructions issued by KMBT.
4. For reports and measures concerning serious accidents, follow the regulations specified by every distributor.

B NOTATION OF THE CONTENTS

1. PRECAUTION ON HANDLING THIS MANUAL

CAUTION

- Use of this manual should be strictly supervised to avoid disclosure of confidential information.

2. PRODUCT NAME

In this manual, each of the products is described as follows:

1	bizhub C554/C454: Main body	
2	Microsoft Windows XP: Windows XP	
3	Microsoft Windows Vista: Windows Vista	
4	Microsoft Windows 7: Windows 7	
5	When the description is made in combination of the OS's mentioned above:	Windows XP/Vista/7

3. BRAND NAME

3.1 TRADEMARKS OF OTHER COMPANIES

- The company names and product names mentioned in this manual are the brand name or the registered trademark of each company.

3.2 OWN TRADEMARKS

- KONICA MINOLTA and KONICA MINOLTA logo are the registered trademarks of KONICA MINOLTA HOLDINGS, INC.
- bizhub and PageScope are the registered trademarks of KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.
- © 2012 KONICA MINOLTA BUSINESS TECHNOLOGIES, INC.

4. FEEDING DIRECTION

- When the long side of the paper is parallel with the feeding direction, it is called short edge feeding. The feeding direction which is perpendicular to the short edge feeding is called the long edge feeding.
- Short edge feeding will be identified with [S (abbreviation for Short edge feeding)] on the paper size. No specific notation is added for the long edge feeding. When the size has only the short edge feeding with no long edge feeding, [S] will not be added to the paper size.

Sample notation

Paper size	Feeding direction	Notation
A4	Long edge feeding	A4
	Short edge feeding	A4S
A3	Short edge feeding	A3

C PRODUCT SPECIFICATIONS

1. bizhub C554/C454

1.1 Type

Type	Desktop/console * scanner/printer
Printing process	Laser electrostatic printing system
PC drum type	OPC drum: KM-922
Scanning density	600 dpi
Exposure lamp	LED light (10W or under)
Platen	Stationary (mirror scan)
Original scanning	• Mirror scanning CCD optical system • Sheet through system when DF is used
Registration	Rear left edge
Paper feeding separation system (Manual bypass)	Small roller separation system with torque limiter
Paper feeding separation system (Tray 1)	Roller separation system with pick-up mechanism
Paper feeding separation system (Tray 2)	Roller separation system with pick-up mechanism
Exposure system (exposing system)	2 beam LD exposing system
Exposure system (scan system)	Polygon mirror scan system
Exposure density (main scanning direction)	1200 dpi
Exposure density (sub scanning direction)	1200 dpi
Developing system	Dry 2 components developing method, HMT developing system
Charging system	Serrate electrode scorotron system
Neutralizing system	Red LED system
Image transfer system	Belt image transfer system (1st)/roller image transfer system (2nd)
Paper separating system	Combination of curvature, separating claws, and bias needle system
Fusing system	• bizhub C554: IH fusing • bizhub C454: Belt fusing
Heating system	• bizhub C554: IH heating • bizhub C454: Halogen lamp

*: Only when the optional paper feed cabinet/desk is installed.

1.2 Functions

Types of original	• Sheets • Books • Three-dimensional objects	
Max. original size	A3 or 11 x 17	
Max. original weight	Max. 2 kg	
Multiple copies	1 to 9999	
Warm-up time (at ambient temperature of 23° C/73.4° F and rated source voltage)	Period from the time Main Power Switch was turned on to the time this machine is ready for printing.	
	bizhub C554	• 22 sec. or less • Japan, Taiwan only: Black print: 23 sec., Color print: 25 sec.
	bizhub C454	• 25 sec. or less
Image loss	Copy	• Leading edge: 4.2 mm (3/16 inch) • Trailing edge: 3 mm (1/8 inch) • Rear edge: 3 mm (1/8 inch) • Front edge: 3 mm (1/8 inch)
	PC print	• Leading edge: 4.2 mm (3/16 inch) • Trailing edge: 4.2 mm (3/16 inch) • Rear edge: 4.2 mm (3/16 inch) • Front edge: 4.2 mm (3/16 inch)
First copy time (Tray1/2 A4 or 8 1/2 x 11, full size)	bizhub C554	• 4.1 sec. or less (Black print) • 4.6 sec. or less (Color print)
	bizhub C454	• 4.6 sec. or less (Black print) • 5.5 sec. or less (Color print)
Processing speed	Plain paper (Black print, Color print),	bizhub C554: 252.2 mm/s
		bizhub C454: 211.8 mm/s
Copying speed for multi-copy cycle (A4 or 8 1/2 x 11, plain paper)	Black print, Color print	bizhub C554: 1-sided: 55 copies/min, 2-sided: 55 copies/min
		bizhub C454: 1-sided: 45 copies/min, 2-sided: 45 copies/min

Fixed zoom ratios	Full size	x1.000	
	Reduction	Metric area	• x0.500 • x0.707 • x0.816 • x0.866
		Inch area	• x0.500 • x0.647 • x0.733 • x0.785
	Enlargement	Metric area	• x1.154 • x1.224 • x1.414 • x2.000
		Inch area	• x1.214 • x1.294 • x1.545 • x2.000
	Zoom ratios memory	3 memories	
Variable zoom ratios	x0.250 to x4.000	in 0.001 increments	
Paper size	Tray 1	Metric area	• A3 to B5/B5S • A5S • 16K • 8K
		Inch area	• 11 x 17 to 8 1/2 x 11 • 8 1/2 x 11S • 5 1/2 x 8 1/2S • 8 x 13
	Tray 2	Metric area	• A3 to B5/B5S • A3Wide • SRA3 • 16K • 8K
		Inch area	• 12 1/4 x 12 to 8 1/2 x 11 • 8 1/2 x 11S • 5 1/2 x 8 1/2S • 8 x 13
	Manual bypass tray	Metric area	• A3 to A6S • A5 • A3Wide • SRA3 • 16K/16KS • 8K
		Inch area	• 12 1/4 x 18 to 5 1/2 x 8 1/2 • 5 1/2 x 8 1/2S • 4 x 6S • 8 x 13
Copy exit tray capacity	Plain paper	250 sheets	
	Thick paper	10 sheets	
	OHP film	1 sheet	
	Thin paper	100 sheets	
External memory function	Supported external memory devices	• USB flash memory compatible with the USB (1.1/2.0) interface • FAT32-formatted memory device	
Memory capacity	Main memory	• 2GB	
	HDD	• 250GB	

1.3 Paper

Type		Paper source (maximum tray capacity)		
		Tray 1	Tray 2	Manual bypass tray
Copy paper type	Thin paper *1 *2 (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb)	○(500 sheets)	○(500 sheets)	-
	Plain paper (60 to 90 g/m ² , 16 to 24 lb)	○(500 sheets)	○(500 sheets)	○(150 sheets)
	Translucent paper	-	-	-
	OHP film *3	-	-	○(20 sheets)

	Thick paper 1 (91 to 120 g/m ² , 24 1/4 to 32 lb)	○(150 sheets)	○(150 sheets)	
	Thick paper 1+ (121 to 157 g/m ² , 32 1/4 to 41 3/4 lb)			
	Thick paper 2 (158 to 209 g/m ² , 42 to 55 1/2 lb)			
	Thick paper 3 (210 to 256 g/m ² , 55 3/4 to 68 lb) *2			
	Thick paper 4 (257 to 300 g/m ² , 68 1/4 lb to 79 3/4 lb) *2 *4	-	-	
	Postcards	-	-	
	Envelopes	-	-	○(10 sheets)
	Label sheets	-	-	○(20 sheets)
	Index paper	-	-	○(20 sheets)
	Long size paper (127 to 210 g/m ² , 33 3/4 to 55 3/4 lb)	-	-	○(10 sheets) *5
Copy paper dimensions	Width	139.7 to 297 mm 5 1/2 to 11 3/4 inch	139.7 to 320 mm 5 1/2 to 12 5/8 inch	90 to 320 mm 3 1/2 to 12 5/8 inch
	Length	182 to 431.8 mm 7 1/4 to 17 inch	182 to 457.2 mm 7 1/4 to 18 inch	139.7 to 1200 mm 5 1/2 to 47 1/4 inch
	Long size paper (Width x Length)	-	-	210 to 297 mm x 457.3 to 1200 mm or less 8 1/4 to 11 11/16 inch x 18 to 47 1/4 inch or less *5

*1: Thin paper smaller than A5 size cannot be conveyed.

*2: Images are out of guarantee.

*3: Black print only.

*4: Only for feeding landscape oriented A4/ Letter paper and A3/ Ledger

*5: MK-730 is necessary

NOTE

- OHP film, thick paper 4, envelope, label sheets, index paper and long size paper cannot be fed for duplex printing.

1.4 Materials

Parts name		Number of prints (Field standard yield)		Type name
		US	EU	
Toner cartridge/C	bizhub C554	26,000 sheets		TN512C
	bizhub C454	26,000 sheets		
Toner cartridge/M	bizhub C554	26,000 sheets		TN512M
	bizhub C454	26,000 sheets		
Toner cartridge/Y	bizhub C554	26,000 sheets		TN512Y
	bizhub C454	26,000 sheets

Power requirements	Voltage:	• AC 100 V • AC 110V • AC 120 V • AC 220-240 V	
	Current:	100 V	15 A
		110 V	15 A
		120 V	16 A
		230 V	9 A
	Frequency:	50/60 Hz	
Max power consumption		100 V	1,500 W or less
		110 V	1,650 W or less
		120 V	1,920 W or less
		230 V	2,000 W or less
Dimensions	• 615 mm *1 (W) x 685 mm (D) x 921 mm (H) *2 • 24 ³/₁₆ inch *1 (W) x 26 ¹⁵/₁₆ inch (D) x 36 ¹/₄ inch (H) *2		
Space requirements	• 937 mm *2 (W) x 1,246 mm *2 (D) x 1,307 mm (H) *3 • 36 ⁷/₈ inch *2 (W) x 49 ¹/₁₆ inch *2 (D) x 51 ⁷/₁₆ inch (H) *3		
Weight	Machine + DF	• Approx. 101 kg (Machine 89 kg + DF 12 kg, without toner cartridge) • Approx. 222 ³/₄ lb (Machine 196 ¹/₄ lb + DF 26 ¹/₂ lb, without toner cartridge)	

*1: Width when the manual bypass tray is closed

*2: Height to top of DF

*3: Manual bypass tray and the tray are pulled out

1.7 Operating environment

Temperature	10 to 30° C / 50 to 86° F (with a fluctuation of 10° C / 18° F or less per hour)
-------------	--

Humidity	15 to 85% (Relative humidity with a fluctuation of 10%/h)
Levelness	Difference between front and back, right and left should be 1 degree or under.

1.8 Print functions

First print time (Tray1/2 A4 or 8 1/2 x 11, full size)	bizhub C554	• 4.1sec. or less (Black print) • 4.6 sec. or less (Color print)
	bizhub C454	• 4.6 sec. or less (Black print) • 5.5 sec. or less (Color print)
Printing speed for multi-print cycle (A4 or 8 1/2 x 11, plain paper, excluding manual bypass tray)	Black print, Color print	bizhub C554: 1-sided: 55 copies/min, 2-sided: 55 copies/min
		bizhub C454: 1-sided: 45 copies/min, 2-sided: 45 copies/min
Print resolution	• Multivalued: Equivalent to 1,800 dpi in main scanning direction x 600 dpi in sub scanning direction • Binary: Equivalent to 1,200 dpi in main scanning direction x 1,200 dpi in sub scanning direction	
Printer language	• PCL5c/e Emulation, PCL 6 (XL version 3.0) Emulation • PostScript 3 Emulation (3016) • XPS ver.1.0	
Supported operating systems (server)	• Windows 2003, Windows 2003 x64bit, Windows 2003 R2, Windows 2003 R2 x64bit • Windows 2008, Windows 2008 x64bit, Windows 2008 R2	
Supported operating systems (client)	• Windows XP, Windows XP x64bit • Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit • Mac OS 9.2, Mac OS X 10.2, Mac OS X 10.3, Mac OS X 10.4, Mac OS X 10.5 • Mac OS X 10.5 Intel edition, Mac OS X 10.6, Mac OS X 10.7, Mac OS X 10.8 • Linux	
Printer driver (PCL6)	• Windows XP, Windows XP x64bit • Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit • Windows Server 2003, Windows Server 2003 x64bit, Windows Server 2003 R2, Windows Server 2003 R2 x64bit • Windows Server 2008, Windows Server 2008 x64bit, Windows Server 2008 R2	
Printer driver (PostScript 3)	• Windows XP, Windows XP x64bit • Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit • Windows Server 2003, Windows Server 2003 x64bit, Windows Server 2003 R2, Windows Server 2003 R2 x64bit • Windows Server 2008, Windows Server 2008 x64bit, Windows Server 2008 R2 • Macintosh OS9.2 PPD, Macintosh OS X 10.2 PPD+PDE, Macintosh OS X 10.3 PPD+PDE, Macintosh OS X 10.4 PPD+PDE, Macintosh OS X 10.5 PPD+PDE • Macintosh OS X 10.5 Intel edition PPD+PDE, Macintosh OS X 10.6 Intel edition PPD+PDE, Macintosh OS X 10.7 Intel edition PPD+PDE, Macintosh OS X 10.8 Intel edition PPD+PDE • Linux PPD	
Printer driver (XPS)	• Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit • Windows Server 2008, Windows Server 2008 x64bit, Windows Server 2008 R2	
Work memory	2GB	
Host interface	Ethernet 10Base-T, 100Base-TX, 1000Base-T • USB2.0/1.1 • USB_Host	
Built-in fonts (PCL)	• European 80 fonts	
Built-in fonts (PostScript 3 Emulation)	• European 137 fonts	

1.9 Scan functions

Scanner	Scannable range	Same as the copier(Max. 11 x 17: inch area, A3: metric area)
	Scan speed (A4 or 8 1/2 x 11, DF scan, 1-side original Resolution 300 dpi)	• 80 pages/min *1
	Functions	• Scan to E-mail • Scan to FTP, Scan to SMB, Scan to WebDAV, Devices Profile for Web Services (DPWS) • Scan to Box/USB memory • Scan server sending, Scan to Me, Scan to Home, Scan to Web service (WSD scan)
	Scanning resolution	• Push: 200 dpi/300 dpi/400 dpi/600 dpi • Pull: 100 dpi/200 dpi/300 dpi/400 dpi/600 dpi

TWAIN	Driver		• TWAIN Driver • HDD TWAIN Driver
	Supported operating systems		• Windows XP, Windows XP x64bit • Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit
	PC		Conform to the specification of operating system
	Required memory		Conform to the specification of operating system
	Network		Computer to which TCP/IP protocol is correctly set
	Hard disk		Required 20 MB or more disk space
SMB	Supported operating systems	Windows	• Windows XP, Windows XP x64bit • Windows Vista, Windows Vista x64bit • Windows 7, Windows 7 x64bit • Windows Server 2003, Windows Server 2003 x64bit, Windows Server 2003 R2, Windows Server 2003 R2 x64bit • Windows Server 2008, Windows Server 2008 x64bit, Windows Server 2008 R2 DFS function is supported only in the environment that structured with the following Windows server operating systems. • Windows Server 2003 • Windows Server 2008, Windows Server 2008 R2 Direct hosting function apply to the following operating systems. • Windows XP • Windows Vista • Windows 7 (IPv6 function is available only when the Windows Vista and Windows 7 are installed.)
		Samba	• 2.2.x • 3.x
		Novell Netware	Netware 6.5 (SP6 or later)

- *1: When an optional unit is installed

1.10 Note

- These specifications are subject to change without notice.

2. DF-701

2.1 Type

Name	Dual scan document feeder	
Type	Paper feed section	Paper feed from top of stack
	Image reading section	• Front side: Sheet-through system • Back side: Reading by CIS
	Exit section	Straight exit system
Installation	Screw clamp to the main body	
Document alignment	Center	
Document loading	Face up	
Option	Stamp Unit (SP-501)	

2.2 Functions

Modes	Standard mode/ Mixed original (same width/different width) detection mode/ Scan mode/ FAX mode
-------	--

2.3 Paper

Type of document	Standard mode (Plain paper)	1-sided mode: 35 g/m ² to 163 g/m ² (9.25 lb to 43.25 lb)	
		2-sided mode: 50 g/m ² to 163 g/m ² (13.25 lb to 43.25 lb)	
	Mixed original detection mode (Plain paper) *1	1-sided / 2-sided mode: 50 g/m ² to 128 g/m ² (13.25 lb to 34 lb)	
	Scan mode/ FAX mode (Plain paper)	1-sided mode: 35 g/m ² to 163 g/m ² (9.25 lb to 43.25 lb)	
Document size	Standard mode/ Scan mode/ FAX mode	Metric area	B6S to A3
		Inch area	5 1/2 x 8 1/2 to 11 x 17
Capacity	Standard mode	130 sheets (64 g/m ² (17lb)) or stack of 12 mm and below (including paper curl)	
	Mixed original detection mode/ Scan mode/ FAX mode	100 sheets (64 g/m ² (17lb)) or stack of 12 mm and below (including paper curl)	

- *1: For the mixed original detection mode, refer to the mixed original feed chart.

2.4 Particular originals

- If fed, paper feed will be possible to some extent but trouble occurrence will be possible.

Type of original	Possible trouble
Sheets lightly curled (Curled amount: 10 to 15 mm) *1	Dog-eared, exit failure, transport failure
Thermal paper (Heat sensitive paper)	Edge folded, exit failure, transport failure
Paper immediately after paper exit from the main body	Paper feed failure, transport failure
Paper with many punched holes (e.g., loose leaf *2, CF paper *3)	Multi-page feed due to flashes from holes
Folded original (including half-folded and Z-folded originals) *4	Paper feed failure, transport failure, image distortion
Sheets with 2 to 4 holes	Transport failure
Coated paper (including inkjet paper)	Paper feed failure, transport failure

- *1: When the original is less than 10mm in vertical and 20mm in horizontal direction and the amount of float of the folded original is less than 10mm, the feed and the image are guaranteed.

*2: Limited to vertical feeding

*3: No crease on perforation

*4: Creases must be smoothed out. (amount of float: 15 mm or less)

2.5 Prohibited originals

- Prohibited originals that cause trouble

Type of original
Sheets stapled or clipped together
Book original
Sheets with paper attached

Type of original
Sheets clipped or notched
Torn paper
Original weighing less than 35 g/m ² (9.25 lb) or 163 g/m ² (43.25 lb) or more
Significantly curled original (amount of curl exceeding 15 mm)
OHP film
Label paper
Offset master paper
Glossy photographic paper or glossy enamel paper

2.6 Mixed original feed chart

- For metric

Max. original size		297 mm		257 mm		210 mm		182 mm	148 mm

NG	No. mixed original feed
-	Can not set original

2.7 Machine specifications

Power requirements	Power supply	DC 24 V, DC 5 V (for recovering from the sleep mode), DC 12 V (for CIS)
	Supplying method	Supplied from the main body
Max. power consumption	74.5 W or less	
Dimensions	• 611.2 mm (W) x 503.6 mm (D) x 142.1 mm (H) • 24 1/16 inch (W) x 19 13/16 inch (D) x 5 5/8 inch (H)	
Weight	Approx. 12.0 kg (26 7/16 lb)	

2.8 Operating environment

- Conforms to the operating environment of the main body.

2.9 Note

- These specifications are subject to change without notice.

3. PC-210/PC-110

3.1 Type

Name	• 1 way paper feed cabinet (PC-110) • 2 way paper feed cabinet (PC-210)
Type	Front loading type • 1 way paper feed device (PC-110) • 2 way paper feed device (PC-210)
Installation	Desk type
Document alignment	Center

3.2 Paper

Type	Size	Capacity	
		Tray 3	Tray 4
Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb) *1	• A5S (Metric area only) • B5 • B5S • A4 • A4S • B4 • A3	500 sheets	500 sheets
Plain paper (60 to 90 g/m ² , 16 to 24 lb)			
Recycled paper (60 to 90 g/m ² , 16 to 24 lb)			
Thick paper 1 (91 to 120 g/m ² , 24 1/4 to 32 lb)		150 sheets	150 sheets
Thick paper 1+ (121 to 157 g/m ² , 32 1/4 to 41 3/4 lb)			
Thick paper 2 (158 to 209 g/m ² , 42 to 55 1/2 lb)			
Thick paper 3 (210 to 256 g/m ² , 55 3/4 to 68 lb) *1			
Copy paper dimensions	Width • 139.7 (5.5") to 297.0 (A3) mm • 5 1/2 (5.5") to 11 11/16 (A3) inch Length • 182.0 (B5) to 431.8 (17") mm • 7 3/16 (B5) to 17 (17") inch		

*1: Images are out of guarantee.

*2: There are 6 types to be selected from for the service mode; 8x13, 8.25x13, 8.5x13, 8.5x13.5, 8.125x13.25, 220x330mm.

3.3 Machine specifications

Power requirements	Supplied from the main body	
Max. power consumption	15 W or less	
Dimensions	• 615 mm (W) x 653 mm (D) x 304.1 mm (H) • 24 3/16 inch (W) x 25 11/16 inch (D) x 12 inch (H)	
Weight	PC-110	Approx. 22 kg (48 1/2 lb)
	PC-210	Approx. 24 kg (53 lb)

3.4 Operating environment

- Conforms to the operating environment of the main body.

3.5 Note

- These specifications are subject to change without notice.

4. PC-410

4.1 Type

Name	Large capacity cabinet
Type	Front loading type LCC
Installation	Desk type
Document alignment	Center

4.2 Paper

Type	Size	Capacity
Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb) *1	- Metric area: A4 - Inch area: 8 1/2 x 11	2,500 sheets
Plain paper (60 to 90 g/m ² , 16 to 24 lb)		
Recycled paper (60 to 90 g/m ² , 16 to 24 lb)		
Thick paper 1 (91 to 120 g/m ² , 24 1/4 to 32 lb)		1,000 sheets
Thick paper 1+ (121 to 157 g/m ² , 32 1/4 to 41 3/4 lb)		
Thick paper 2 (158 to 209 g/m ² , 42 to 55 1/2 lb)		
Thick paper 3 (210 to 256 g/m ² , 55 3/4 to 68 lb) *1		

*1: Images are out of guarantee.

4.3 Machine specifications

Power requirements	Supplied from the main body
Max. power consumption	45 W or less
Dimensions	615 mm (W) x 653 mm (D) x 304.1 mm (H) 24 3/16 inch (W) x 25 11/16 inch (D) x 12 inch (H)
Weight	Approx. 23 kg (61 3/4 lb)

4.4 Operating environment

- Conforms to the operating environment of the main body.

4.5 Note

- These specifications are subject to change without notice.

5. LU-204

5.1 Type

Name	2,500 sheets Large Capacity Unit
Type	External option attached to the right side of the main body
Document alignment	Center

5.2 Paper

Type	Size	Basis weight	Capacity
Plain paper	- A3, B4, A4S, A4, A3, A3 Wide (12 ¹/₄ x 18), SRA3 11 x 17, 8 ¹/₂ x 14, 8 ¹/₂ x 11S, 8 ¹/₂ x 11, 12 x 18	52 g/m ² to 90 g/m ² / 13 ¹³ / ₁₆ lb to 23 ¹⁵ / ₁₆ lb	2,500 sheets
Thick 1		91 g/m ² to 120 g/m ² / 24 ³ / ₁₆ lb to 31 ¹⁵ / ₁₆ lb	2,000 sheets *2
Thick 1+		121 g/m ² to 157 g/m ² / 32 ³ / ₁₆ lb to 41 ³ / ₄ lb	1,450 sheets *2
Thick 2		158 g/m ² to 209 g/m ² / 42 lb to 55 ⁵ / ₈ lb	1,250 sheets *2
Thick 3		210 to 256 g/m ² / 55 ⁷ / ₈ lb to 68 ¹ / ₈ lb	1,000 sheets *1, *2

- *1: Images are out of guarantee.
- *2: Excluding damp paper, curled paper, and recycled paper.

5.3 Machine specifications

Power requirements	DC 24 V, DC 5 V, DC 3.3 V (supplied from the main body)
Max. power consumption	22 W or less
Dimensions	629 mm (W) x 556 mm (D) x 405 mm (H) 24.76 inch (W) x 21.89 inch (D) x 15.94 inch (H)
Weight	25.0 kg (55.12 lb)

5.4 Operating environment

- Conforms to the operating environment of the main body.

5.5 Note

- These specifications are subject to change without notice.

6. LU-301

6.1 Type

Name	3,000 sheets Large Capacity Unit
Type	External option attached to the right side of the main body
Document alignment	Center

6.2 Paper

Type	Size	Basis weight	Capacity
Plain paper	A4, 8 1/2 x 11	52 g/m ² to 90 g/m ² / 13 13/16 lb to 23 15/16 lb	3,000 sheets
Thick 1		91 g/m ² to 120 g/m ² / 24 3/16 lb to 31 15/16 lb	2,500 sheets *2
Thick 1+		121 g/m ² to 157 g/m ² / 32 3/16 lb to 41 3/4 lb	1,750 sheets *2
Thick 2		158 g/m ² to 209 g/m ² / 42 lb to 55 5/8 lb	1,550 sheets *2
Thick 3		210 to 256 g/m ² / 55 7/8 lb to 68 1/8 lb	1,300 sheets *1 *2

- *1: Images are out of guarantee.
- *2: Excluding damp paper, curled paper, and recycled paper.

6.3 Machine specifications

Power requirements	DC 24 V, DC 5 V, DC 3.3 V (supplied from the main body)
Max. power consumption	23 W or less
Dimensions	• 367 mm (W) x 528 mm (D) x 405 mm (H) • 14.45 inch (W) x 20.79 inch (D) x 15.94 inch (H)
Weight	18.0 kg (39.68 lb)

6.4 Operating environment

- Conforms to the operating environment of the main body.

6.5 Note

- These specifications are subject to change without notice.

7. JS-506

7.1 Type

Type	Job separator with movable tray
Installation	Fixed at the exit section of the main body
Document alignment	Center

7.2 Functions

Modes	Non sort, sort, group, sort offset, group offset
-------	--

7.3 Paper

Exit tray	Modes	Size	Type	Capacity
Tray1 *1	Non sort, sort, group	- A6S, A5S, A5, B5S, B5, A4S, A4, B4, A3, A3Wide - InvoiceS, Invoice, LetterS, Letter, Legal, Ledger, ExectiveS, Exective, 16KS, 16K, 8K, SRA3 - Custom size paper (Width: 90 mm to 320 mm / Length: 139.7 mm to 457.2 mm)	Plain paper, Recycled paper (60 to 90 g/m ² , 16 to 24 lb)	100 sheets
			Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb)	50 sheets
			Thick paper (91 to 300 g/m ² , 24 1/4 to 79 3/4 lb)	10 sheets *3
			Special paper	
Tray2 *2	Non sort, sort, group	- A6S, A5S, A5, B5S, B5, A4S, A4, B4, A3, A3Wide - InvoiceS, Invoice, LetterS, Letter, Legal, Ledger, ExectiveS, Exective, 16KS, 16K, 8K, SRA3 - Postcards, Long size paper - Custom size paper (Width: 90 mm to 320 mm / Length: 139.7 mm to 1200 mm)	Plain paper, Recycled paper (60 to 90 g/m ² , 16 to 24 lb)	150 sheets
			Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb)	20 sheets
			Thick paper (91 to 300 g/m ² , 24 1/4 to 79 3/4 lb)	
			Special paper	
			Label sheets	
			OHP	
			Letterhead	
			Index paper	
			Envelopes	10 sheets
			Long size paper	Not specified *4
	Sort offset, group offset	- B5S, B5, A4S, A4, B4, A3 - LetterS, Letter, Legal, Ledger, ExectiveS, Exective, 16KS, 16K, 8K - Custom size paper (Width: 182 mm to 297 mm / Length: 182 mm to 431.8 mm)	Plain paper, Recycled paper (60 to 90 g/m ² , 16 to 24 lb)	150 sheets
			Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb)	
			Thick paper (91 to 300 g/m ² , 24 1/4 to 79 3/4 lb)	20 sheets *3

- *1: 22.5 mm in stack height
- *2: 49.9 mm in stack height
- *3: Available to the loading height
- *4: Includes falling off the tray

7.4 Offset function

Exit tray	Tray 2
Shift amount	30 mm
Types of paper to be used	Plain paper/ Recycled paper (60 to 90 g/m ² , 16 to 24 lb), Thin paper (52 to 59 g/m ² , 13 13/16 to 15 3/4 lb), Thick paper (91 to 300 g/m ² , 24 1/4 to 79 3/4 lb)
Paper size	- B5S, B5, A4S, A4, B4, A3 - LetterS, Letter, Legal, Ledger, ExectiveS, Exective, 16KS, 16K, 8K

7.5 Machine specifications

Power requirements	DC 24 V ± 10 % (supplied from the main body)
Max. power consumption	24 W or less
Dimensions	491.9 mm (W) x 469.5 mm (D) x 226.5 mm (H) 19 3/8 inch (W) x 18 1/2 inch (D) x 8 15/16 inch (H)

Weight	1.5 kg (3 1/4 lb)
--------	-------------------

7.6 Operating environment

- Conforms to the operating environment of the main body.

7.7 Note

- These specifications are subject to change without notice.

8. FS-533

8.1 Type

Type	Multi staple finisher built into the main body
Installation	Installed in main body
Document alignment	Center
Consumables	Staples(5,000 staples / cartridge)

8.2 Functions

Modes	Non sort, Sort, Group, Sort offset, group offset, Sort staple
-------	---

8.3 Paper process ability

8.3.1 Non sort/sort/group

(1) Max. capacity

Type	Basis weight	Paper capacity (Number of stacked sheets/ Height of stacked sheets) *	
		• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
Thin paper	52 to 90 g/m ² , 13 13/16 to 24 lb	500 sheets / 73 mm	250 sheets / 36 mm
Plain paper			
Recycled paper			
Thick paper 1	91 to 120 g/m ² , 24 1/4 to 32 lb	10 sheets / 73 mm	10 sheets / 36 mm
Thick paper 1+	121 to 157 g/m ² , 32 1/4 to 41 3/4 lb		
Thick paper 2	158 to 209 g/m ² , 42 to 55 1/2 lb		
Thick paper 3	210 to 256 g/m ² , 55 3/4 to 68 lb		
Thick paper 4	257 to 300 g/m ² , 68 1/4 lb to 79 3/4 lb		
Postcards	190 g/m ² , 50 1/2lb		
OHP film	-		
Envelope	-		
Label sheets	-		
Letterhead	-		
Tab paper	-		
Long size paper	-	Not specified	

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(2) Paper size

Type	Size
Regular size paper	A6S, A5S, A5, B6S, B5S, B5, A4S, A4, B4, A3, A3Wide, SRA3, Post card S, Long size paper, 16KS, 16K, 8KS, 8K
Custom size paper	- Max.: Width 320 mm x Length 1,200 mm - Min.: Width 90 mm x Length 139.7 mm

8.3.2 Sort offset/group offset

(1) Max. capacity

Type	Basis weight	Paper capacity (Number of stacked sheets/ Height of stacked sheets) *	
		• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
Thin paper	52 to 90 g/m ² , 13 13/16 to 24 lb	500 sheets / 73 mm	250 sheets / 36 mm
Plain paper			
Recycled paper			

Type	Basis weight	Paper capacity (Number of stacked sheets/ Height of stacked sheets) *	
		• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
Thick paper 1	91 to 120 g/m ² , 24 1/4 to 32 lb	10 sheets / 73 mm	10 sheets / 36 mm
Thick paper 1+	121 to 157 g/m ² , 32 1/4 to 41 3/4 lb		
Thick paper 2	158 to 209 g/m ² , 42 to 55 1/2 lb		
Thick paper 3	210 to 256 g/m ² , 55 3/4 to 68 lb		
Thick paper 4	257 to 300 g/m ² , 68 1/4 lb to 79 3/4 lb		

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(2) Paper size

Type	Size
Regular size paper	B5, A4S, A4, B4, A3, 16K, 8K
Custom size paper	- Max.: Width 297 mm x Length 431.8 mm - Min.: Width 210 mm x Length 182 mm

8.3.3 Sort staple

(1) Paper capacity

Type	Basis weight	Max. capacity (Number of stacked sheets / Height of stacked sheets) * ₁	
		• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
Thin paper	52 to 90 g/m ² , 13 13/16 to 24 lb	500 sheets 50 copies 73 mm	250 sheets 50 copies 36 mm
Plain paper			
Recycled paper			
Thick paper 1 * ₂	91 to 120 g/m ² , 24 1/4 to 32 lb	Not specified	
Thick paper 1+ * ₂	121 to 157 g/m ² , 32 1/4 to 41 3/4 lb		
Thick paper 2 * ₂	158 to 209 g/m ² , 42 to 55 1/2 lb		

- *₁: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- *₂: Thick papers can be used only in "Front Cover/ Back Cover" in Cover sheet mode.

(2) Basis weight

Mode	Basis weight
Normal mode	52 to 90 g/m ² , 13 13/16 to 24 lb
Cover sheet mode	52 to 209 g/m ² , 13 13/16 to 55 1/2 lb (2 sheets or under for thick paper)

(3) Paper size

Type	Size
Regular size paper	B5, A4S, A4, B4, A3, 16K, 8K
Custom size paper	- Max.: Width 297 mm x Length 431.8 mm - Min.: Width 210 mm x Length 182 mm

(4) Max. No. of sheets to be stapled

Mode	Max. No. of sheets to be stapled	
	• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
Normal mode	50 sheets	30 sheets
Cover sheet mode *	48 sheets (Thin paper/ Plain paper / Recycled paper) + 2 sheets (Thick paper)	28 sheets (Thin paper/ Plain paper / Recycled paper) + 2 sheets (Thick paper)

- *: Thick paper can be used only in "Front Cover/ Back Cover".

(5) Stapling position

Stapling position	Back of the corner (Parallel), Front of the corner (Parallel), Center two points (Parallel)
-------------------	---

8.4 Machine specifications

Power requirements	DC 24 V $\pm$ 10% (supplied from the main body)
Max. power consumption	40 W or less
Dimensions	• 472.5 mm * (W) x 583.5 mm * (D) x 194.7 mm (H) • 18 ⁵/₈ inch * (W) x 23 inch * (D) x 7 ¹¹/₁₆ inch (H)
Weight	12.0 kg (26 1/2 lb)

- *: Includes mounting part

8.5 Operating environment

- Conforms to the operating environment of the main body.

8.6 Note

- **These specifications are subject to change without notice.**

9. PK-519

9.1 Type

Name	Punch kit
Type	FS-integrated type punching operation device

9.2 Functions

Punching method	Stops and punches every paper
No. of holes	• 2-3 holes • 2-4 holes • Sweden 4 holes
Hole diameter	• 2 holes / ϕ 8.0 mm - 3 holes / ϕ 8.0 mm • 2 holes / ϕ 6.5 mm - 4 holes / ϕ 6.5 mm • Sweden 4 holes / ϕ 6.5 mm
Hole pitch	80 mm
Supported mode	Punch mode
Applicable post processing mode	Sort, Group, Staple

9.3 Paper

Size	• 2 holes • Sweden 4 holes	A3, B4, A4, A4S, B5, B5S, 11 x 17, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 7 1/4 x 10 1/2, 7 1/4 x 10 1/2S, 8K, 16K, 16KS
	• 3 holes • 4 holes	A3, B4, A4, B5, 11 x 17, 8 1/2 x 11, 7 1/4 x 10 1/2, 8K, 16K
Supported paper	Thin paper (52 to 59 g/m ² / 13 13/16 to 15 11/16 lb), Plain paper (60 to 90 g/m ² / 15 15/16 to 23 15/16 lb), Thick 1 (91 to 120 g/m ² / 24 3/16 to 31 15/16 lb), Thick 1+ (121 to 157 g/m ² / 32 3/16 to 41 3/4 lb)	
Punch prohibited paper	Label paper, Tab paper, OHP film, 2nd base paper, Holed paper, Other paper that may interfere with the operation of the punch kit or the punch blade	

9.4 Machine specifications

Power requirements	DC 24 V (supplied from the finisher)
	DC 5 V (supplied from the finisher)
Max. power consumption	Included in the max. power consumption of finisher
Dimensions	• 110.2 mm (W) x 483.5 mm (D) x 203.2 mm (H) • 4 5/16 inch (W) x 19 1/16 inch (D) x 8 inch (H)
Weight	Approx. 3.2 kg (7 lb)

9.5 Operating environment

- Conforms to the operating environment of the main body.

9.6 Note

- These specifications are subject to change without notice.

10. FS-534

10.1 Type

Name	Multi staple finisher
Type	Freestanding
Document alignment	Center
Consumables	Staples (5,000 staples / cartridge)

10.2 Functions

Modes	Sort, Group, Sort offset, Group offset, Sort staple
-------	---

10.3 Paper process ability

10.3.1 Non sort/sort/group

(1) Main tray

NOTE

- If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(a) Max. capacity

Type	Basis weight	Max. number of stacked sheets		
		• A5/A5S or less • 8 1/2 x 11S or less	• A4/A4S greater to B4 less • 8 1/2 x 11S greater to 8 1/2 x 14 less	• B5S • B4 or greater • 8 1/2 x 14 or greater
Thin paper	52 to 90 g/m ² (13 13/16 to 24 lb)	500 sheets	• 3,000 sheets • 2,000 sheets (when saddle stitcher is mounted)	1,500 sheets
Plain paper				
Recycled paper				
Thick paper 1	91 to 120 g/m ² (24 1/4 to 32 lb)	20 sheets		
Thick paper 1+	121 to 157 g/m ² (32 1/4 to 41 3/4 lb)			
Thick paper 2	158 to 209 g/m ² (42 to 55 1/2 lb)			
Thick paper 3	210 to 256 g/m ² (55 3/4 to 68 lb)			
Thick paper 4	257 to 300 g/m ² (68 1/4 lb to 79 3/4 lb)			
OHP film	-			
Envelope	-			
Label	-			
Letterhead	-			

(b) Height of stacked sheets

State	Max. height of stacked sheets	
	• Paper length is A4S or less • Paper length is 8 1/2 x 11S or less	• Paper length is B4 or greater • Paper length is 8 1/2 x 14 or greater
Standard (saddle stitcher is not mounted)	375 mm	187.5 mm
Saddle stitcher is mounted	250 mm	

(c) Paper size

Type	Size
Regular size paper	A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3Wide, Post card S, 5 1/2 x 8 1/2S, 5 1/2 x 8 1/2, 7 1/4 x 10 1/2S, 7 1/4 x 10 1/2, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17, 12 1/4 x 18, 16K S, 16K, 8K
Custom size paper	• Max.: Width 320 mm x Length 457.2 mm • Min.: Width 130 mm x Length 139.7 mm

(2) Sub tray**(a) Max. capacity**

Type	Basis weight	Max. capacity (Number of stacked sheets / Height of stacked sheets)
Thin paper	52 to 90 g/m ² (13 13/16 to 24 lb)	200 sheets/ 35 mm*
Plain paper		
Recycled paper		
Thick paper 1	91 to 120 g/m ² (24 1/4 to 32 lb)	20 sheets
Thick paper 1+	121 to 157 g/m ² (32 1/4 to 41 3/4 lb)	
Thick paper 2	158 to 209 g/m ² (42 to 55 1/2 lb)	
Thick paper 3	210 to 256 g/m ² (55 3/4 to 68 lb)	
Thick paper 4	257 to 300 g/m ² (68 1/4 lb to 79 3/4 lb)	
Post paper	190 g/m ² (50 lb)	
OHP film	-	
Envelope	-	
Label	-	
Letterhead	-	
Index paper	-	
Long size paper	-	

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(b) Paper size

Type	Size
Regular size paper	A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3Wide, Post card S, 5 1/2 x 8 1/2S, 5 1/2 x 8 1/2, 7 1/4 x 10 1/2S, 7 1/4 x 10 1/2, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17, 12 1/4 x 18, 16K S, 16K, 8K
Custom size paper	• Max.: Width 320 mm x Length 1,200 mm • Min.: Width 90 mm x Length 139.7 mm

(3) Tray 3**(a) Max. capacity**

Type	Basis weight	Max. capacity (Number of stacked sheets / Height of stacked sheets) *
Thin paper	52 to 90 g/m ² (13 13/16 to 24 lb)	100 sheets/ 22.5 mm
Plain paper		
Recycled paper		
Thick paper 1	91 to 120 g/m ² (24 1/4 to 32 lb)	20 sheets/ 22.5 mm
Thick paper 1+	121 to 157 g/m ² (32 1/4 to 41 3/4 lb)	
Thick paper 2	158 to 209 g/m ² (42 to 55 1/2 lb)	
Thick paper 3	210 to 256 g/m ² (55 3/4 to 68 lb)	
Thick paper 4	257 to 300 g/m ² (68 1/4 lb to 79 3/4 lb)	
Post paper	190 g/m ² (50 lb)	
OHP film	-	
Envelope	-	
Label	-	
Letterhead	-	
Index paper	-	

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(b) Paper size

Type	Size
Regular size paper	A6S, A5S, A5, B5S, B5, B6S, A4S, A4, B4, A3, SRA3, A3Wide, Post card S, 5 1/2 x 8 1/2S, 5 1/2 x 8 1/2, 7 1/4 x 10 1/2S, 7 1/4 x 10 1/2, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17, 12 1/4 x 18, 16K S, 16K, 8K
Custom size paper	• Max.: Width 320 mm x Length 1,200 mm • Min.: Width 90 mm x Length 139.7 mm

10.3.2 Sort offset/group offset

(1) Main tray

NOTE

- If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(a) Number of stacked sheets

Type	Basis weight	Max. number of stacked sheets		
		B5 or less	A5/A5S, B5	B4 or greater
Thin paper	52 to 90 g/m ² (13 13/16 to 24 lb)	500 sheets	• 3,000 sheets • 2,000 sheets (when S Saddle stitcher is mounted)	1,500 sheets
Plain paper				
Recycled paper				
Thick paper 1	91 to 120 g/m ² (24 1/4 to 32 lb)	20 sheets		
Thick paper 1+	121 to 157 g/m ² (32 1/4 to 41 3/4 lb)			
Thick paper 2	158 to 209 g/m ² (42 to 55 1/2 lb)			
Thick paper 3	210 to 256 g/m ² (55 3/4 to 68 lb)			
Thick paper 4	257 to 300 g/m ² (68 1/4 lb to 79 3/4 lb)			

(b) Height of stacked sheets

Paper length	Max. height of stacked sheets
• A4S or less • 8 1/2 x 11S or less	375 mm
• B4 or greater • 8 1/2 x 14 or greater	187.5 mm

(c) Paper size

Type	Size
Regular size paper	A5, B5S, B5, A4S, A4, B4, A3, SRA3, A3Wide, 7 1/4 x 10 1/2S, 7 1/4 x 10 1/2, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17, 12 1/4 x 18, 16K S, 16K, 8K
Custom size paper	• Max.: Width 320 mm x Length 457.2 mm • Min.: Width 182 mm x Length 148.5 mm

10.3.3 Sort staple

(1) Main tray

(a) Paper capacity

Type	Basis weight	No. of sheets to be stapled	Max. capacity (Number of stacked sheets / Height of stacked sheets)*	
			• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
• Thin paper • Plain paper • Recycled paper	52 to 90 g/m ² (13 13/16 to 24 lb)	2 sheets to 9 sheets	100 copies / 375mm	100 copies / 187.5mm
		10 sheets to 20 sheets	50 copies / 375mm	50 copies / 187.5mm
		21 sheets to 30 sheets	30 copies / 375mm	30 copies / 187.5mm
		31 sheets to 40 sheets	25 copies / 375mm	25 copies / 187.5mm
		41 sheets or greater	20 copies / 375mm	20 copies / 187.5mm
Thick 1	91 to 120 g/m ² (24 1/4 to 32 lb)	30 sheets or less	20 copies / 375mm	20 copies / 187.5mm
Thick 1+	121 to 157 g/m ² (32 1/4 to 41 3/4 lb)	15 sheets or less	20 copies / 375mm	20 copies / 187.5mm
Thick 2	158 to 209 g/m ² (42 to 55 1/2 lb)	15 sheets or less	20 copies / 375mm	20 copies / 187.5mm
Thick 3	210 to 256 g/m ² (55 3/4 to 68 lb)	-	-	-
Thick 4	257 to 300 g/m ² (68 1/4 lb to 79 3/4 lb)	-	-	-

- *: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.

(b) Paper size

Type	Size
Regular size paper	A5, B5S, B5, A4S, A4, B4, A3, 7 1/4 x 10 1/2S, 7 1/4 x 10 1/2, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17, 16K S, 16K, 8K
Custom size paper	- Max.: Width 297 mm x 431.8 mm - Min.: Width 182 mm x 148.5 mm

(c) Max. No. of sheets to be stapled

Mode	Max. No. of sheets to be stapled
Normal mode*	Thin paper/ Plain paper / Recycled paper: 50 sheets
	Thick paper 1: 30 sheets
	Thick paper 1+ / Thick paper 2: 15 sheets
Cover sheet mode	48 sheets (Thin paper/ Plain paper / Recycled paper) + 2 sheets (Thick paper)

- *: Maximum stapling sheets/ copies for printing high image density is 20 x 20 copies.

(d) Stapling position

Stapling position	Paper size
Back/Front of the corner (45 degree)	A4, A3, B5, B4, 8 1/2 x 11, 11 x 17
Back/Front of the corner (Parallel)	A4S, B5S, A5, 8 1/2 x 11S, 8 1/2 x 14
Side: Parallel 2 point	A4S, A4, A3, B5S, B5, B4, A5, 8 1/2 x 11S, 8 1/2 x 11, 8 1/2 x 14, 11 x 17,

10.4 Machine specifications

Power requirements	DC 24 V ± 10% (supplied from the main body)
Max. power consumption	56 W or less *1
Dimensions	528 mm (W) x 641 mm (D) x 1,023 mm (H) 20.79 inch (W) x 25.24 inch (D) x 40.28 inch (H)
	658 mm (W) x 641 mm (D) x 1,065 mm (H) *2 25.91 inch (W) x 25.24 inch (D) x 41.9 inch (H) *2
Weight	40.0 kg / 88.19 lb

- *1: When it is installed to bizhub C554/C454/C364/C284/C224. If it is installed to bizhub C754/C654, maximum power consumption is 105 W or less.
- *2: Size when the paper output tray is pulled out

10.5 Operating environment

- Conforms to the operating environment of the main body.

10.6 Note

- These specifications are subject to change without notice.

11. PK-520

11.1 Type

Name	Punch kit
Type	FS-integrated type punching operation device

11.2 Functions

Punching method	Stops and punches every paper
No. of holes	• 2-3 holes • 2-4 holes • Sweden 4 holes
Hole diameter	• 2 holes / ϕ 8.0 mm - 3 holes / ϕ 8.0 mm • 2 holes / ϕ 6.5 mm - 4 holes / ϕ 6.5 mm • Sweden 4 holes / ϕ 6.5 mm
Hole pitch	• 2 holes / 70 mm pitch - 3 holes / 108 mm pitch • 2 holes / 80 mm pitch - 4 holes / 80 mm pitch • Sweden 4 holes / 70 mm, 21 mm pitch
Supported mode	Punch mode
Applicable post processing mode	Sort, Group, Staple

11.3 Paper

Size	2-3 holes punch unit	• 2 holes punch setting: 11 x 17, 8 1/2 x 14, 8 1/2 x 11/8 1/2 x 11S • 3 holes punch setting: 11 x 17, 8 1/2 x 11
	2-4 holes punch unit	2-4 holes punch setting: A3, B4, A4, B5
	Sweden 4 holes punch unit	4 holes punch setting: A3, B4, A4/A4S, B5
Supported paper	Conforms to the main body. Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb), Thick 1 (91 g/m ² to 120 g/m ² / 24 3/16 lb to 31 15/16 lb), Thick 1+ (121 g/m ² to 157 g/m ² / 32 3/16 lb to 41 3/4 lb), Thick 2 (158 g/m ² to 209 g/m ² / 42 lb to 55 5/8 lb), Thick 3 (210 g/m ² to 256 g/m ² / 55 7/8 lb to 68 1/8 lb), Thick 4 (257 g/m ² to 300 g/m ² / 68 3/8 lb to 79 13/16 lb)	
Punch prohibited paper	Label paper, Tab paper, OHP film, 2nd base paper, Holed paper, Other paper that may interfere with the operation of the punch kit or the punch blade	

11.4 Machine specifications

Power requirements	• DC 24 V (supplied from the finisher)
	• DC 5 V (supplied from the finisher)
Max. power consumption	• Included in the max. power consumption of finisher
Dimensions	• 61 mm (W) x 492 mm (D) x 142 mm (H) • 2.4 inch (W) x 19.37 inch (D) x 5.59 inch (H)
Weight	Approx. 1.8 kg (3.97 lb)

11.5 Operating environment

- Conforms to the operating environment of the main body.

11.6 Note

- These specifications are subject to change without notice.

12. SD-511

12.1 Type

Name	Center-staple and tri-fold device SD-511	
Type	Finisher-contained center-staple and tri-fold device	
Document alignment	Center	
Stapling function	Center parallel two points using a fixed stapler	
Paper exit tray	Saddle tray	
Mode	Saddle stitching	Normal mode, Cover mode, Thick paper mode
	Folding	Normal mode, Thick paper mode
	Tri-folding	

12.2 Paper

12.2.1 Saddle stitching/folding

Supported paper in saddle stitching/folding	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb), Thick 1 (91 g/m ² to 120 g/m ² / 24 3/16 lb to 31 15/16 lb) *1, *2, Thick 1+ (121 g/m ² to 157 g/m ² / 32 3/16 lb to 41 3/4 lb) *1, *2, Thick 2 (158 g/m ² to 209 g/m ² / 42 lb to 55 5/8 lb) *1, *2	
Supported paper sizes	- A4S, B4, A3, A3 wide, LetterS, Legal, Ledger, 8K - Custom size paper (Width: 210mm to 311.2mm, length: 279.4 mm to 457.2 mm)	
Supported mode and basis weight	Normal mode: 52 g/m ² to 90 g/m ² / 13 13/16 lb to 23 15/16 lb	
	Cover mode: 52 g/m ² to 209 g/m ² / 13 13/16 lb to 55 5/8 lb *3	
	Thick paper mode: 91 g/m ² to 209 g/m ² / 24 3/16 lb to 55 5/8 lb	
Number of sheets stacked on the saddle tray	1 sheet to 3 sheets: 20 copies	
	4 sheets to 10 sheets: 10 copies	
	11 sheets to 20 sheets: 5 copies	
Number of stitching sheets	Normal mode: 2 sheets to 20 sheets (maximum 80 pages)	
	Cover mode: 2 sheets to 20 sheets (maximum 80 pages) *4	
Number of folding sheets	Normal mode: 5 sheets	
	Thick paper mode: 1 sheet	

- *1: For saddle stitching, available only with 1 cover sheet of cover mode
- *2: For folding, available only with 1 cover sheet
- *3: Use only 1 sheet as a cover sheet for cover mode
- *4: Cover sheet : 1 sheet (52 g/m² to 209 g/m² / 13 13/16 lb to 55 5/8 lb) + body page: 19 sheets (52 g/m² to 90 g/m² / 13 13/16 lb to 23 15/16 lb)

12.2.2 Tri-folding

Supported paper in tri-folding	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)	
Supported paper sizes	A4S, 8 1/2 x 11S, 16KS	
Number of tri-folding sheets and copies *	1 sheet folding	30 copies
	2 sheets folding	10 copies
	3 sheets folding	

- *: Up to 3 sheets in tri-folding

12.3 Machine specifications

Power requirements	DC 24 V (supplied from the finisher)
	DC 5 V (supplied from the finisher)
Max. power consumption	Included in the max. power consumption of FS-534
Dimensions	210 mm (W) x 556 mm (D) x 547 mm (H) 8.27 inch (W) x 21.89 inch (D) x 21.54 inch (H)
Weight	Approx. 24 kg (52.91 lb)

12.4 Consumables

- 5,000 staples / cartridge

12.5 Operating environment

- Conforms to the operating environment of the main body.

12.6 Note

- **These specifications are subject to change without notice.**

13. FS-535

13.1 Type

Name	FS-535
Type	Staple finisher attached to the side of MFP with built-in horizontal transport unit (RU)
Document alignment	Center
Consumables	Staples (5,000 staples / cartridge)

13.2 Functions

Modes	Non-sort, sort, offset, group offset, sort staple
-------	---

13.3 Staple

Paper exit tray	Main tray			
Supported paper sizes in stapling	A5, B5S/B5, B6S, A4S/A4, B4, A3 LetterS/Letter, Legal, Ledger, ExecutiveS/Executive, 16KS/16K, 8K Custom size paper (Width: 182 mm to 304.8 mm / length: 148.5 mm to 457.2 mm)			
Number of sheets stapled by paper type and size	Defined condition			Number of sheets stapled
	Paper type	Paper size	Paper passage conditions	
	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb)	A4 and more	All	100 sheets
	Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)	All size	All	100 sheets
	Recycled paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)	B5	1-sided	70 sheets
	Other than thick paper	B4, Legal Length: 389 mm or less	All	65 sheets
	Other than thick paper	A5/Invoice/A3/Ledger Length: 150 mm or less/390 mm and more	All	50 sheets
	Special paper (52 g/m ² to 80 g/m ² / 13 13/16 lb to 17 11/16 lb)	All size	All	35 sheets *
	52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb	B5/B5S	All	50 sheets
	81 g/m ² to 90 g/m ² / 17 15/16 lb to 23 15/16 lb	All size	All	30 sheets
	Cover mode (maximum)			98 sheets (80 g/m ² / 13 13/16 lb: plain paper) + 2 sheets (209 g/m ² / 55 5/8 lb)
Staple positions	Front/back of the corner (45 degrees)	A4, A3, B4, B5, Letter, Ledger		
	Front/back of the corner (parallel)	A4S, B5S, A5, A5, LetterS, Legal		
	Center staple two points	A4S/A4, A3, B5S/B5, B4, A5, LetterS/Letter, Legal, Ledger		

- *: Guaranteed in recommended paper

13.4 Max. paper capacity

Paper exit tray	Type of paper ejection	Paper type		Paper size	Number of sheets stacked	
Sub tray *1	Normal ejection	Plain paper/recycled paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)		All size	200 sheets	
		Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb)			50 sheets	
		Special paper	Post card		20 sheets	
			Envelope			
			OHP film			
			Label			
Thick paper (91 g/m ² to 300 g/m ² / 24 3/16 to 79 13/16 lb)						
Main tray *2	Normal ejection	Plain paper/recycled paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)		A4S/LetterS or less *2	3000 sheets	
				B4/ Legal and more	1500 sheets *3	
				A5S/Invoice or less	500 sheets	
		Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb)		A4 and more	3000 sheets	
		Thick paper (91 g/m ² to 300 g/m ² / 24 3/16 to 79 13/16 lb)		All size	100 sheets	
	Non-sort, sort, offset, group offset,	Plain paper/recycled paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)		A4S/LetterS or less	3000 sheets	
				B4/ Legal and more	1500 sheets *3	
				Less than B5	500 sheets	
		Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb)		A4 and more	3000 sheets	
		Thick paper (91 g/m ² to 300 g/m ² / 24 3/16 to 79 13/16 lb)		All size	100 sheets	
	Staple	Paper type	Number of sheets stapled	Paper Size	Number of sets stacked	
		Plain paper/recycled paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)	2 to 9 sheets	A4S/LetterS or less	200 sets	
			Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb)	10 to 20 sheets	B4/ Legal and more	50 sets *3
				21 to 30 sheets	All size	50 sets
				31 to 40 sheets		30 sets
		41 to 50 sheets		25 sets		
		51 to 60 sheets		20 sets		
		61 to 100 sheets		15 sets		
		Thick paper (91 g/m ² to 300 g/m ² / 24 3/16 to 79 13/16 lb)		All size	10 sets	
				All size	Not specified	

- *1: 38 mm in stack height
- *2: 369 mm in stack height (A4S, LetterS, or smaller sizes)
- *3: Protection used depending on the stacked number for B4 or larger sizes

13.5 Machine specifications

Power requirements	DC 24 V (supplied from the main body)
	DC 5 V (supplied from the main body)
Max. power consumption	77 W or less
Dimensions	724 mm (W) x 709.5 mm (D) x 1,025 mm (H) 28.50 inch (W) x 27.88 inch (D) x 40.28 (H) inch
	881 mm (W) x 709.5 mm (D) x 1,025 mm (H) * 34.69 inch (W) x 27.88 inch (D) x 40.28 inch (H) *
Weight	59 kg / 130 lb (FS-535)
	4.5 kg / 9.9 lb (horizontal transport unit)

- *: Size when the paper output tray is pulled out

13.6 Operating environment

- Conforms to the operating environment of the main body.

13.7 Note

- **These specifications are subject to change without notice.**

14. PK-521

14.1 Type

Name	PK-521
Type	Finisher-contained hole punch device with auto paper alignment mechanism

14.2 Functions

Punching method	Slide cam method by DC brushless motor
No. of holes	• 2-3 holes • 2-4 holes • 4 holes
Hole diameter	• 2 holes /ϕ8.0 mm - 3 holes /ϕ8.0 mm • 2 holes /ϕ6.5 mm - 4 holes /ϕ6.5 mm • 4 holes /ϕ6.5 mm
Hole pitch	• 2 holes / 70 mm pitch - 3 holes / 108 mm pitch • 2 holes / 80 mm pitch - 4 holes / 80 mm pitch • 4 holes / 70 mm, 21 mm pitch
Supported mode	Punch mode, through mode
Applicable post processing mode	Sort, Group, Staple

14.3 Paper

Size	2 hole/Sweden 4 hole punch setting	• A3, B4, A4/A4S, B5/B5S, A5/A5S • 8 x 13, 8 x 13S, 8 $\frac{1}{4}$ x 13, 8 $\frac{1}{2}$ x 13, 8 $\frac{1}{8}$ x 13 $\frac{1}{4}$, 11 x 17, 8 $\frac{1}{2}$ x 14, 8 $\frac{1}{2}$ x 11/8 $\frac{1}{2}$ x 11S, 5 $\frac{1}{2}$ x 8 $\frac{1}{2}$, 5 $\frac{1}{2}$ x 8 $\frac{1}{2}$S, 8K, 16K/16KS, 7 $\frac{1}{4}$ x 10 $\frac{1}{2}$, 7 $\frac{1}{4}$ x 10 $\frac{1}{2}$S, 8 $\frac{2}{3}$ x 13S, 8 $\frac{1}{2}$ x 13S, 8 $\frac{1}{4}$ x 13S, 8 $\frac{1}{8}$ x 13 $\frac{1}{4}$S, 8 $\frac{1}{2}$ x 13 $\frac{1}{2}$S
	3 hole/4 hole punch setting	• A3, B4, A4, B5 • 11 x 17, 8 $\frac{1}{2}$ x 11, 7 $\frac{1}{4}$ x 10 $\frac{1}{2}$, 8K, 16K
Supported paper	• Plain paper (60 g/m² to 90 g/m² / 15 $\frac{15}{16}$ lb to 23 $\frac{15}{16}$ lb) • Thin paper (52 g/m² to 59 g/m² / 13 $\frac{13}{16}$ lb to 15 $\frac{11}{16}$ lb) • Thick 1 (91 g/m² to 120 g/m² / 24 $\frac{3}{16}$ lb to 31 $\frac{15}{16}$ lb) • Thick 1+ (121 g/m² to 157 g/m² / 32 $\frac{3}{16}$ lb to 41 $\frac{3}{4}$ lb) • Thick 2 (158 g/m² to 209 g/m² / 42 lb to 55 $\frac{5}{8}$ lb) • Thick 3 (210 to 256 g/m² / 55 $\frac{7}{8}$ lb to 68 $\frac{1}{8}$ lb) • Thick 4 (257 g/m² to 300 g/m² / 68 $\frac{3}{8}$ lb to 79 $\frac{13}{16}$ lb)	
Weight	52 g/m ² to 300 g/m ² / 13 $\frac{13}{16}$ lb to 79 $\frac{13}{16}$ lb	
Punch prohibited paper	Long size paper, post card (190 g/m ²), envelope, OHP film, label, letter head, index paper, and the other paper that may interfere with the operation of the punch unit or the punch blade	

14.4 Machine specifications

Power requirements	DC 24 V (supplied from the FS-535)
	DC 5 V (supplied from the FS-535)
Max. power consumption	17 W or less
Dimensions	• 146.2 mm (W) x 639.2 mm (D) x 233.8 mm (H) • 5.76 inch (W) x 25.17 inch (D) x 9.2 inch (H)
Weight	4.5 kg (9.92 lb)

14.5 Operating environment

- Conforms to the operating environment of the main body.

14.6 Note

- These specifications are subject to change without notice.

15. SD-512

15.1 Type

Name	SD-512
Type	Finisher-contained center-staple and tri-fold device
Document alignment	Center
Stapling function	Center 2-point stapling method by fixed stapler
Paper exit tray	Movable tray conveyed by belt

15.2 Paper

15.2.1 Saddle stitching

Supported paper in center stapling	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb), Thick 1 (91 g/m ² to 120 g/m ² / 24 3/16 lb to 31 15/16 lb) *, Thick 1+ (121 g/m ² to 157 g/m ² / 32 3/16 lb to 41 3/4 lb) *, Thick 2 (158 g/m ² to 209 g/m ² / 42 lb to 55 5/8 lb)*		
Supported paper sizes	- A4S, B4, A3, A3 wide (12 1/4 x 18), LetterS, Legal, Ledger, 8K - Custom size paper (Width: 210mm to 320mm, length: 279.4 mm to 457.2 mm)		
Number of sheets stacked on the exit tray by paper type and size		Small size (Length: less than 330 mm)	Large size (Length: 330 mm and more)
	2~5 sheets stitching	35 sets	
	6~10 sheets stitching	25 sets	30 sets
	11~20 sheets stitching	15 sets	

- *: Available only with 1 sheet

15.2.2 Folding

Supported paper in center folding	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb), Thick 1 (91 g/m ² to 120 g/m ² / 24 3/16 lb to 31 15/16 lb) * ¹ , Thick 1+ (121 g/m ² to 157 g/m ² / 32 3/16 lb to 41 3/4 lb) * ¹ , Thick 2 (158 g/m ² to 209 g/m ² / 42 lb to 55 5/8 lb)* ¹		
Supported paper sizes	- A4S, B4, A3, A3 wide (12 1/4 x 18), LetterS, Legal, Ledger, 8K - Custom size paper (Width: 210mm to 320mm, length: 279.4 mm to 457.2 mm)		
Number of sets stacked on the exit tray by paper type and size	1~5 sheets folding * ²	All sizes of supported paper: 35 sets	

- *¹: Available only with 1 sheet
- *²: Up to 5 sheets in center folding

15.2.3 Tri-folding

Supported paper in tri-folding	Thin paper (52 g/m ² to 59 g/m ² / 13 13/16 lb to 15 11/16 lb), Plain paper (60 g/m ² to 90 g/m ² / 15 15/16 lb to 23 15/16 lb)		
Supported paper sizes	A4S, LetterS, 16KS		
Number of sets stacked on the exit tray by paper type and size *	1 sheet folding	50 sets	
	2 sheets folding	40 sets	
	3 sheets folding	30 sets	

- *: Up to 3 sheets in tri-folding

15.3 Machine specifications

Power requirements	DC 24 V (supplied from the finisher)		
	DC 5 V (supplied from the finisher)		
Max. power consumption	31 W or less		
Dimensions	239 mm (W) x 579 mm (D) x 534 mm (H) 9.41 inch (W) x 22.8 inch (D) x 21.02 inch (H)		
Weight	- Approx. 22.5 kg + 3.2 kg (Exit tray) - Approx. 49.6lb + 7.1 lb (Exit tray)		

15.4 Consumables

- 5,000 staples / cartridge

15.5 Operating environment

- Conforms to the operating environment of the main body.

15.6 Note

- These specifications are subject to change without notice.

16. JS-602

16.1 Type

Name	Job separator
Type	Add-on finishing device externally mounted on top of finisher
Installation	Fixed to finisher
Document alignment	Center

16.2 Functions

Modes	Group, Sort (during copy, print, or fax mode)
-------	---

16.3 Paper

Type	Size	Weight	Tray capacity	
Plain paper	- A5S to A3 5 1/2 x 8 1/2S to 11 x 17	64 to 90 g/m² 17 to 24 lb	100 sheets	A4, 8 1/2 x 11 (80 g/m², 21.25 lb)
			50 sheets	Except A4, 8 1/2 x 11 (80 g/m², 21.25 lb) (Height: up to 28 mm, 1.1 inch)

16.4 Machine specifications

Power requirements	DC 24 V (supplied from the main body)
	DC5 V (supplied from the main body)
Dimensions	341 mm (W) x 537 mm (D) x 149 mm (H) 13.43 inch (W) x 21.14 inch (D) x 5.87 inch (H)
Weight	1.75 kg (3.86 lb)

16.5 Operating environment

- Conforms to the operating environment of the main body.

16.6 Note

- These specifications are subject to change without notice.

17. PI-505

17.1 Type

Name	Post inserter unit
Type	Torque limiter separation type sheet feeding device

17.2 Functions

Auto sheet feeding (online operation)	Feeds the sheet to finisher automatically under the instruction from the main body.
Manual sheet feeding (offline operation)	Feeds the sheet to finisher under the instruction from the operation panel of PI.
	You can select the following 5 post processing modes.
	• 1 staple/back mode • 2 staples (flat-stapling) mode • Punch mode (when PK-521 is installed on finisher) • Saddle stitching mode (when installed on SD-512) • Tri-folding mode (when installed on SD-512)

17.3 Paper

Size	Tray /Up	• A4/A4S, B5/B5S, A5 • 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, 7 1/4 x 10 1/2S, 16K, 16KS • Custom paper (Max. 311.1 x 297 mm, Min. 182 x 139 mm)
	Tray /Lw	• A3, B4, A4/A4S, B5/B5S, A5 • 8 x 13S, 8 1/4 x 13S, 8 1/2 x 13S, 8 1/8 x 13 1/4S, SRA4S, 12 x 18, 11 x 17, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, 8K, 16K, 16KS, 7 1/4 x 10 1/2, 7 1/4 x 10 1/2S • Custom paper (Max. 311.1 x 457.2 mm, Min. 182 x 139 mm)
Type	Plain paper, recycle paper, color paper, special paper, coated paper, high-quality paper	
Weight	64 g/m ² to 209 g/m ²	
Capacity	Tray /Up	200 sheets (80 g/m ²) or 30 mm or less in height
	Tray /Lw	200 sheets (80 g/m ²) or 30 mm or less in height

17.4 Machine specifications

Power requirements	DC 24 V (supplied from the main body)
	DC5 V (supplied from the main body)
Max. power consumption	30 W or less
Dimensions	• 511 mm (W) x 635 mm (D) x 220 mm (H) • 20 inch (W) x 25 inch (D) x 8.75 inch (H)
Weight	10.5 kg (23.25 lb)

17.5 Operating environment

- Conforms to the operating environment of the main body.

17.6 Note

- These specifications are subject to change without notice.

18. ZU-606

18.1 Type

Type	Z-folding multi punching device
------	---------------------------------

18.2 Functions

Punch	Punching method	Reciprocal punching method (punching each paper)												
	No. of holes	- Metric area: 2 holes/4 holes (switched automatically) - Inch area: 2 holes/3 holes (switched automatically)												
	Hole diameter	- Metric area: 6.5 mm ± 0.5 mm - Inch area: 8.0 mm ± 0.5 mm												
	Hole position	Metric area : 11.0 mm± 5 mm Inch area : 9.5 mm± 5 mm  Hole pitch Metric area : 80 mm± 0.5 mm Inch area : 108 mm± 0.5 mm Inch area : 9.5 mm± 5 mm  Hole pitch 108 mm± 0.5 mm Metric area : 11.0 mm± 5 mm  Hole pitch 21 mm± 0.5 mm Hole pitch 70 mm± 0.5 mm Hole pitch 21 mm± 0.5 mm												
Folding method		Buckle folding method with the roller pair												
Z-folding	Folding length	 <table><thead><tr><th>Paper size</th><th>L (mm)</th><th>a (mm)</th></tr></thead><tbody><tr><td>A3</td><td>209 or less</td><td rowspan="4">4 ± 2</td></tr><tr><td>B4</td><td>181 or less</td></tr><tr><td>11 x 17</td><td>215 or less</td></tr><tr><td>8K *1</td><td>194 or less</td></tr></tbody></table> *1: Only for the Taiwan market	Paper size	L (mm)	a (mm)	A3	209 or less	4 ± 2	B4	181 or less	11 x 17	215 or less	8K *1	194 or less
Paper size	L (mm)	a (mm)												
A3	209 or less	4 ± 2												
B4	181 or less													
11 x 17	215 or less													
8K *1	194 or less													
	Folding precision	2 mm or less  1st folding 2 mm or less  2nd folding												
Folding	Folding length	 <table><thead><tr><th>Paper size</th><th>L (mm)</th></tr></thead><tbody><tr><td>8 1/2 x 14</td><td>263 or less</td></tr></tbody></table>	Paper size	L (mm)	8 1/2 x 14	263 or less								
Paper size	L (mm)													
8 1/2 x 14	263 or less													

	Folding precision	2 mm or less 																											
Maximum tray capacity (80 g/m ²)	The maximum number of sheets for the FS main tray at the Z-folding operation	Z-folding continuous	Max. 30 sheets																										
		Z-folding/stapling	<table><tr><th colspan="2">No. of sheets per staple</th><th rowspan="2">No. of set on the main tray</th></tr><tr><th>No. of fold sheets</th><th>No. of unfold sheets</th></tr><tr><td rowspan="2">1 sheet</td><td>1 to 40 sheets</td><td>20 set</td></tr><tr><td>41 to 90 sheets</td><td>10 set</td></tr><tr><td>2 sheets</td><td>1 to 80 sheets</td><td>10 set</td></tr><tr><td>3 sheets</td><td>1 to 70 sheets</td><td>4 set</td></tr><tr><td>4 sheets</td><td>1 to 60 sheets</td><td>3 set</td></tr><tr><td>5 sheets</td><td>1 to 50 sheets</td><td>2 set</td></tr><tr><td>6 sheets or greater</td><td colspan="2">Not guaranteed</td></tr></table>		No. of sheets per staple		No. of set on the main tray	No. of fold sheets	No. of unfold sheets	1 sheet	1 to 40 sheets	20 set	41 to 90 sheets	10 set	2 sheets	1 to 80 sheets	10 set	3 sheets	1 to 70 sheets	4 set	4 sheets	1 to 60 sheets	3 set	5 sheets	1 to 50 sheets	2 set	6 sheets or greater	Not guaranteed	
		No. of sheets per staple		No. of set on the main tray																									
No. of fold sheets	No. of unfold sheets																												
1 sheet	1 to 40 sheets	20 set																											
	41 to 90 sheets	10 set																											
2 sheets	1 to 80 sheets	10 set																											
3 sheets	1 to 70 sheets	4 set																											
4 sheets	1 to 60 sheets	3 set																											
5 sheets	1 to 50 sheets	2 set																											
6 sheets or greater	Not guaranteed																												

18.3 Paper

No punch mode	Same as the main body			
Punch mode	Paper size	Combination with the folding/saddle stitching mode is not available.		
		Metric area	2holes	A3, B4, A4, A4S, B5, B5S, A5, A5S, 8K *1, 16K *1, 16KS *1, 8 x 13, 8 1/2 x 13, 8 1/4 x 13, 8 1/8 x 13 1/4
			4holes	A3, B4, A4, B5, 8K *1, 16K *1
		Inch area	2holes	11 x 17, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 5 1/2 x 8 1/2, 5 1/2 x 8 1/2S, 7 1/4 x 10 1/2, 7 1/4 x 10 1/2S
			3holes	11 x 17, 8 1/2 x 11
	Type of paper	• 64 g/m² to 90 g/m² of the high-quality paper and the plain paper • Special paper is not guaranteed. The punching of label paper, tab paper, OHP paper, blueprint master and binding-holed paper are not allowed.		
Z-folding mode	Paper size	• A3, B4, 11 x 17, 8 1/2 x 14, 8K • For B4 paper (including the mix of the paper), the combination with the stapling mode is not available.		
	Type of paper	• 64 g/m² to 90 g/m² of the high-quality paper and the plain paper • Special paper is not supported. Label paper, tab paper, transparency film, paper, holed paper, and low stiffness paper are not supported in Z-folding mode.		
Folding mode	Paper size	8 1/2 x 14		
	Type of paper	• 64 to 90 g/m² of the high-quality paper and the plain paper • Special paper is not supported. Label paper, tab paper, transparency film, paper, holed paper, and low stiffness paper are not supported in folding mode.		
Paper curling				
	a	• Excluding the OHP paper: Amount of curl: 15 mm or less • OHP paper: Amount of curl: 10 mm or less		

• *1: Only for the Taiwan market

18.4 Maintenance

Maintenance	Same as the main body
Machine service life	Same as the main body

18.5 Machine specifications

Power requirements	100 to 240 VAC (automatic switching)
	DC5 V (supplied from the main body)
Max. power consumption	120 W or less

Dimensions	• 169 mm (W) x 660 mm (D) x 1027.5 mm (H) • 6.65 inch (W) x 25.98 inch (D) x 40.45 inch (H)
Weight	45 kg (99.21 lb)

18.6 Operating environment

- Conforms to the operating environment of the main body.

18.7 Note

- These specifications are subject to change without notice.

19. i-Option LK-101 v3/102 v2/104 v3/105 v3/106/107/108

19.1 Available function for i-Option

- The functions available for i-Option are as follows.

⚠ CAUTION

- Using the web browser function available with this machine, the contents on the Internet can be accessed from the control panel. Users are responsible for the contents that they access, download, or upload as well as the contents of other communication. Users shall follow the rules of their company and laws of their country. Konica Minolta Business Technologies, Inc. and its group companies accept no responsibility for the users' use of the Internet.

19.1.1 List of advanced functions

Function	Overview
Web browser	You can access contents on the Internet or corporate networks through this machine connected to the network to enable page viewing or file printing. You can also access other MFP connected to the network to use a User Box in the MFP via Web Connection.
Voice guidance	This function also helps people who have difficulty viewing the screen to carry out operations more smoothly via voice guidance. It is available on the Enlarge Display screen, Guidance screen, or Accessibility Settings screen. English and Japanese are available.
PDF processing	Allows you to use features such as encryption of a PDF file, addition of an electronic signature, addition of file properties, creation of a PDF/A-based PDF file, and PDF linearization when sending a PDF file.
Searchable PDF	Allows you to paste transparent text data into a PDF file when converting scanned original data into PDF files, and create a searchable PDF file. This function automatically creates text information from scanned images using OCR character recognition technology.
Barcode font	Allows you to generate a bar code based on data sent to this machine from the ERP (Enterprise Resource Planning) system, and print it from this machine. You can directly print data without using the printer driver.
Unicode font	Allows you to print text information (unicode) of multiple languages sent to this machine from the ERP (Enterprise Resource Planning) system. You can directly print data without using the printer driver.
OCR font	OCR font can be used on this machine.
My Panel	Allows you to use the touch panel, which is customized only for you, through any MFP connected to the network. The touch panel customization settings are stored on the My Panel Manager server. If necessary, they can be changed on My Panel Manager.
My Address	Allows you to use a dedicated address book through any MFP connected to the network. The dedicated address book is stored on the My Panel Manager server. If necessary, it can be edited on My Panel Manager.

- *1: OCR font is standardized font that enables text to be appropriately recognized when the OCR (Optical Character Recognition) is used.

19.1.2 Types of advanced functions

NOTE

- To use i-Option functions, the upgrade kit UK-204 must be installed.
- To use web browser function, it is necessary to rewrite the firmware to MFP card version: A2XK0Y0-F000-G20-58, set switch No. 150 to [00000001] at Bit assignment/[01] at HEX assignment in [Service Mode] -> [System 2] -> [Software Switch Setting], then activate the i-Option license(LK-101 v3).

(1) Table 1

Function	Kit name				
	Upgrade kit	i-Option			
	UK-204	LK-101 v3	LK-102 v3	LK-104 v3	LK-105 v3
Web browser	○	○	-	-	-
PDF processing	○	-	○	-	-
Voice guidance *1	○	-	-	○	-
Searchable PDF	○	-	-	-	○

- *1: To use voice guidance, in addition to the LK-104 license activation, the optional local interface kit EK-606 or EK-607 must be installed.

(2) Table 2

Function	Kit name			
	Upgrade kit	i-Option		
	UK-204	LK-106	LK-107	LK-108
Barcode font	○	○	-	-
Unicode font	○	-	○	-

Function	Kit name			
	Upgrade kit	i-Option		
	UK-204	LK-106	LK-107	LK-108
OCR font	○	-	-	○

(3) Table 3

Function	Kit name		
	Upgrade kit	My Panel Manager	
	UK-204	Application license	Device license
My Panel	○	○	○
My Address	○	○	○

19.1.3 Activation procedures of i-Option

For details of the activation procedures, refer to the followings.

- Activation via Administrator Settings: [1.7.94 License Settings](#)
- Activation via Service Mode: [1.13.3.10 License management - Activation](#)

19.2 Web browser function

- Main specifications of the web browser installed are as follows.

Browser engine	Webkit
Supported protocols	HTTP (HTTP 0.9/1.0/1.1), HTTPS, TCP/IP
Supported markup languages	HTML 4.01, a part of HTML 5.0, XHTML 1.1/Basic
Style sheet	CSS1, CSS2, CSS3
Script language	JavaScript 1.7, ECMAScript 3rd Edition, Ajax *1
DOM	Level 1, Level 2
File formats	JPEG, BMP, PNG, GIF, Animation GIF, PDF, Flash 8 and earlier
Supported SSL/TLS versions	SSL3.0, TLS1.0
Supported character codes	Japanese (Shift_JIS), Japanese (ISO-2022-JP), Japanese (EUC-JP), Chinese Simplified (GB2312), Chinese Traditional (Big5), Western European (ISO-8859-1), Unicode (UTF-8)
PDF viewer	Adobe ^R Reader ^R LE
Flash player	Adobe ^R Flash ^R Player 8

- *1: Limited to the JavaScript-supported range only.

NOTE

The Flash player installed on the MFP does not support the following:

- The function to trigger an event caused by a key operation.
- The function to paste or acquire data such as character strings from the clipboard.
- The context menu.
- The Flash printing function.
- The function to execute JavaScript from Flash or to operate Flash by JavaScript.
- A screen that has no window (pop-up).
- The Flash bookmark function.
- The function to send/receive data in real time using the Flash Media Server.
- The function to communicate via the XMLSocket.

NOTE

- When using a web browser function, 26 dots from the perimeter of the touch panel area is not sensitive area. It is possible to narrow the non-sensitive area by using [\[Software Switch Setting\]](#) in Service Mode as with followings. However, the touch panel cannot detect touch operation correctly.
 - Switch No.143 [00000000] at Bit assignment/[00] at HEX assignment non-sensitive area: 26 dots from the perimeter of the touch panel
 - Switch No.143 [00000001] at Bit assignment/[01] at HEX assignment non-sensitive area: 16 dots from the perimeter of the touch panel
 - Switch No.143 [00000010] at Bit assignment/[02] at HEX assignment non-sensitive area: 9 dots from the perimeter of the touch panel

20. FK-511

20.1 Basic specifications

20.1.1 General specifications

Applicable lines	PSTN, PBX	
Protocol	Group 3 (compliant to ITU-T T.30) • ECM • F-code communication • Konica Minolta non-standard protocol: No • Group 4: No	
Maximum data rate	33,600 bps	
Coding method	MH, MR, MMR, JBIG	
Modulation method	V27ter, V29, (V.33): V.33 is for reception only., V17, V8, V34	
Communication resolution	Normal	8 x 3.85 lines / mm
	Fine	• 8 x 7.7 lines / mm • 200 x 200 pixels / inch
	Super fine	• 8 x 15.4 lines / mm (Reception only) • 16 x 15.4 lines / mm • 400 x 400 pixels / inch
	Ultra fine	600 x 600 pixels / inch
	• Fixed to mm at transmission (except 600 dpi) • mm and inch are available at reception. • Selection by using the [Resolution] key. • You can not change settings on every page.	
Fax memory size	• 128 GB (128 GB in the main body HDD 250 GB is used as a memory.) • 10000 pages can be stored including all Scan/Box/Printer/Fax documents.	
FAX memory backup	Image data is saved in HDD.	
Multiple line connection	Two lines can be connected by installing two fax kit.	
Communication time	Level of 3 seconds (Konica Minolta standard A4 chart, 33,600 bps)	
Resolution conversion	At sending: • Scanner: inch • Density conversion: inch -> mm • Communication: mm / inch (600 dpi only)	
	At receiving (mm): • Density conversion: mm -> inch • Print: inch	
	At receiving (inch): • Density conversion: inch • Print: inch	

20.1.2 Scanning section

Scanning method	Platen documents	Impossible to scan book documents (book mode)
	DF book documents	• Scanning mode: 1-Sided, 2-Sided and cover + 2-Sided • Possible to scan the DF mixed size documents.
Scanning resolution	Normal	8 x 3.85 lines/mm
	Fine	8 x 7.7 lines/mm
	Super fine	16 x 15.4 lines /mm
	Ultra Super fine	600 x 600 dpi
	• Selection by using the [Resolution] key. • You can not change settings on each page.	
Mixed original	Possible to mix documents of different sizes. • After rotation of images, sizes are changed by EOM every time the length of the scan line is changed at sending. • Possible to mix sizes (A and B).	
Density selection	Selection by using the [Density] key. [Light] / [Standard] / [Dark] • You can not change settings on each page.	
Maximum scanning document width	297 mm (A3 width) both for DF and Platen	
Maximum scanning document length	Regular mode	431.8 mm / 17 inches
	Long original mode	1000 mm
Effective scanning range	When a document is smaller than the effective scanning area, the area outside the document is erased. • DF scanning: left, right, head and bottom mask of 3mm each (0 to 5mm) • Platen scanning: left, right and head mask of 2mm each (fixed)	
Automatic reduction at sending	A3 -> B4, A3 -> A4 and B4 -> A4 • Automatically reduced and sent in accordance with the recording paper size of remote station.	

Rotation transmission	A4 / Letter size only. LEF documents are rotated by 90 degrees at sending to send it in SEF direction.
Page division at sending	No
Halftone	256 level error diffusion • Users can change settings by using the [Text], [Text/Photo, Printed] , [Text/Photo, PhotoPaper], [Photo, Printed] , [Photo, PhotoPaper], [Dot Matrix Original] or [Copied Paper] key.
Automatic background control (ABC)	Yes
Finished stamp	Yes
Scanning time	80 sheets/min. (At letter (8 1/2 x 11) or A4 scanning, 300 dpi)

20.1.3 Recording section

Recording	Laser electrostatic printing system
Recording paper size	• All sizes except for B6 and Postcard (See the copier basic specifications.) • Auto recording paper selection • Note: A5 and B5 paper is used only for A5 and B5 reception respectively
Recording paper cassette	Tray 1 to Tray 4, Bypass Tray, LCT
Staple	No
Recording speed	Compliant to the copier standards
Recording size	A3 size maximum • A3 fix as reception record ability declaration in protocol.
Maximum reception length	1000 mm • In case of being larger than the maximum reception length, a communication error occurs. • When the memory over occurs during reception, the received data is printed.
Reduction record	When the received image information is larger than the recording paper, it is automatically reduced to the recording paper size and recorded.
Page separation record	Yes
Offset output at each communication	Yes (Job unit reception only)
Rotation reception	Yes • Images are rotated by 90 degrees and recorded on the recording paper in LEF direction.
Two-sided reception	Yes (Utility Mode)
2-in-1 reception	No
Smoothing	Yes (at converting the resolution)
Print/Fax output settings	Yes
Bypass print	Possible to use as an active tray in auto selection mode.
Total page counter	Yes
Monitor print	No (copy at sending)

20.1.4 Line connecting section

NCU type	A-A~, line control by silicon DAA
Connecting terminal	RJ11
Modem	Matsushita MMD-5020
Modem sending level	-10 to -15 dBm (Country spec)
DTMF sending level	-10 to -15 dBm (Country spec)
Receiving sensitivity	• G3 reception: up to -48 dB • Tone reception: up to -52 dB
Dialing signal	DP (10pps) and DTMF

20.1.5 Operation panel

FAX / copy / scan / box	Mode switching	by panel key selection • Possible to change modes during an operation of each mode. • No mode return by the auto reset.
	Initial screen after power-on	Screen at power off or facsimile screen. (depending on parameter setting)
Interruption during scanning	When pressing the interrupt key while scanning documents to be transmitted, INTERRUPT LED blinks. Copy screen appears after scanning is completed.	
Interruption during recording in the FAX mode screen	Operations by using the interrupt key are invalid.	
FAX start	by using the start key.	
Stop	by using the stop key. • Possible to appoint to stop from the job list so as to stop during operations of the multi jobs.	
FAX free memory display	RDH memory • % indication on LCD during scanning, recording and stand-by. File memory (RAM disk/HDD)	

	• Display in the JOB LIST screen
File existence indication	In the following cases, the data Indicator (LED) on the control panel lights up. • Upon reception of FAX • When a document is saved in the bulletin board box, polling TX box, and memory RX user box.
Display during the FAX communications	Icons are not displayed on the FAX waiting screen and the FAX operation screen.
Error display	Displayed by LCD panel
Time display	Date and time displayed. • Present time is displayed on the sub-area.
Remote station ID display	Yes • The TSI/CSI display during communications
Other operation keys	[Application] key: Moves to the FAX application function setting screen. • Check Setting key: Valid • */# button: Yes • Help button: Yes

20.2 Functional specifications

20.2.1 Dial functions

Abbreviated dial	Yes • Possible to register 2000 stations. (1000 with no HDD installed) • 38 digits maximum • Possible to search the remote station list in the order of abbreviation numbers and Indexes. • The registration names must be 24 digits or less. • Registration name auto registration function: No • Second FAX No. registration function: No • Impossible to register the communication mode. • Possible to register Line Setting (Overseas TX, ECM Off, V.34 OFF, check destination, line selection (Only with two fax kit installed)). • There is no registration function provided of [Scan Setting], [Comm. Setting] except the line setting.
Program dial	400 dials (200 with no HDD installed)
Key pad dial	38 digits maximum
Group dial	Up to 100 groups. Possible to register group names. up to 500 remote stations per each group by abbreviated numbers only.
Dialing of multiple remote stations	605 remote stations maximum (abbreviated 500 + key pad 100 + manual input e-mail destination 5)
Manual redial	Yes • Possible to select from five latest histories.
Automatic redial	Yes • Automatically redial when remote stations are busy or return no responses or transmission errors occur at the memory transmission • Possible to receive during redial waiting. • Another call is possible. (Not possible when there are two redial waiting jobs.)
JOB LIST redial	No
Pulse/tone switching	Possible to switch by using the [*] key on the key pad or [Tone] key on the Direct Input screen.
PBX mode setting	Yes • Possible to turn ON or OFF the PBX connection and to register the external access code. • There is the automatic removal function of external access code to registered abbreviated remote station No. Nothing is automatic addition function.
Pseudo off-hook	Yes • The manual start is possible by using the pseudo off-hook. • [Off-Hook] key on LCD
Call progress detection	DC loop (Depends on country spec). • Dial tone (Ditto) • Busy tone (Ditto) • Second dial tone (Ditto)
Dial parameters	Dialing signals DP (10 pps) and DTMF (Depends on country spec) • Pause between digits 1 to 7 seconds (Users cannot set.) • Pause between digits 3 seconds (fixed)
Phone book dial (Abbr)	Yes • After appointing character to search, use up and down cursor keys.
External phone connection jack	Yes • Depends on specifications of each country.

20.2.2 Transmission

Timer transmission	24-hour (max.) timer setting is possible. (one station, sequential multi-stations transmission)
Batch transmission	No
Timer polling	24-hour (max.) timer setting is possible. (one remote station polling and sequential polling reception)

No. of timers	• 21 transmissions and pollings in total. • The number of sequential pollings is one.		
Memory transmission reservation	The memory transmission reservation is possible during communications. (memory registration of the DF memory transmission and platen memory transmission documents)		
DF transmission reservation	No		
Fold erase transmission	No		
Frame erase transmission	Yes • Platen documents and book documents • DF documents are possible as well. • The regular mode only		
Automatic layout transmission (Outside documents are erased.)	No		
Reverse-image transmission	No		
2-in-1 transmission	No		
Book transmission	No		
Scanning size appointment	Yes • Scans documents in the appointed size irrelevant to document sizes and sends them. Transmits documents in the appointed scanning width and length at the platen transmission and the DF transmission. • The effective image area is based on the center in the DF transmission. (Corner-base scanning in mixed-size document mode.)		
Document image quality appointment	Yes • Selected from [Text], [Text/Photo, Printed], [Text/Photo, PhotoPaper], [Photo, Printed], [Photo, PhotoPaper], [Dot Matrix Original] or [Copied Paper].		
Multi-stations	605 stations maximum (Abbr dial x 500 stations, keypad dial x 100 stations and E-Mail x 5) The timer appointment is possible.		
Memory transmission	Yes		
	Quick memory transmission	DF transmission	Varies depending on models.
		Platen transmission	One page only
		Mixture of DF/platen documents	No
		Advanced communication function	Partly Yes (Only the communication mode is possible)
		Manual transmission	Yes
		Transmission when the printer is active	No
	Memory transmission	DF transmission	Yes
		Platen transmission	Yes After the Separate Scan setting, the setting is read with the [Start] key and the communication is started up with the [Finish] key.
		Mixture of DF/platen documents	Yes After the Separate Scan setting, the setting is read with the [Start] key and the communication is started up with the [Finish] key.
		Advanced communication function	Yes
		Manual transmission	No
		Transmission when the printer is active	Yes
Forwarding transmission	Yes • Automatic forward: Automatic forward of received documents to remote stations registered in advance. • Manual forward: No		
Interruption transmission	Single station transmission reservation automatically interrupts between stations of multiple station communications.		
International communication	Yes • When the remote station is V17, communications start at TCM 7,200 bps. When the remote station is V34, they start at 28,800 bps.		
V34-off transmission	Transmitted without V34 mode. The V34-off appointment can be registered in the abbreviated / program dials. This is used when the transmission error code related to V34 occurs frequently.		
Long original transmission	Yes		
DF irregular-size transmission	Possible to transmit irregular-size originals from DF. The main scanning is the max. document width set on DF, and the sub scanning depends on document length. • Width: 297 mm/11.69 inch at the maximum • Length: 1000 mm/39.37 inch at the maximum		
Incomplete TX hold	Yes		

Instant batch transmission (Bundled transmission)	No
Confidential transmission	Transmission to the confidential BOX of a remote station by using the F code (SUB/SID). Appoints the confidential BOX No. by using SUB. Set the communication password using SID as required.
Relay request	The relay request by using the F-code (SUB/SID). Appoints the relay BOX No. by using SUB.
Relay transmission	No
Transmission error prevention	- Check destination: When transmitting, compares the FAX No. specified with the FAX No. information (CSI) of the remote station and transmits only when both numbers are the same. - Destination check display function: When transmitting, displays the list of addresses to allow to check the address again and then transmit. - Restrict FAX broadcasting: Prohibits to specify multiple addresses for FAX transmission.
Confirm Address (at calling and registration)	During direct dialing, call is initiated only if the destination number inputted a first time matches with that inputted a second time.

20.2.3 Polling

Polled transmission	- There is one documents which allows the transmission setting. - Documents are deleted after transmission. - No additional scanning of documents - No DF polled transmission reservation
Polling reception	The sequential polling is possible. 600 stations maximum (abbreviated dial x 500 stations and key pad dialing x 100 stations)
Call turnaround polling	No
Called turnaround polling	Yes
Closed polling transmission	No
Selective polling	- Transmission and reception. - The selective polling by using the F-code (SEP). There is a bulletin board BOX polling reception. - No confidential BOX polling transmission

20.2.4 Line seizure mode and telephone function

Line seizure mode switching	Possible to set the automatic reception and the manual reception. - When the memory is full and there are no polling transmission reservations, the automatic reception mode is cancelled. - No switching of the auto / manual mode by appointing data and time
Ans. Machine mode	Yes At the time of the CNG detection with the external phone off hook, a line is caught to start reception.
Automatic reception mode	Time and the number of rings. - No. of rings: 0 to 15 times (country spec) - Time: 0 to 15 secs (country spec)
Hold	No
Handset	No
One-piece phone	Country spec
Call to external telephone	No
Conversation reservation	No

20.2.5 Message reception and record

Confidential reception	Reception at the confidential BOX appointed at the F-code (SUB). When a transmission password (SID) has been set for the confidential box, the SID should be specified as the communication password. At the time of printing documents received at the confidential BOX, a password to access to the confidential BOX is required.
Closed reception	Closed reception by using the SID (PWD) (Junk FAX)
Adaptive (automatic) reduction	87 to 96 % in steps of 1 % Becomes the adaptive reduction when "Print Separate Fax Pages = OFF" is selected. In case of the adaptive reduction, if the reception image size is a little bigger than recording paper, the size is automatically reduced so that it becomes within the recording paper size and is recorded.
Fixed reduction	No
Page separation record	Does not overlap at the division.
Equal size recording	Records the received image at an equal size. When the reception size is larger than A3 form, excessive image is destructed.
Cassette selection	Appropriate paper size auto selection - When paper is running out, paper is provided from another cassette with the same size of paper. - Tray-fix mode available
2-in-1 reception	No

20.2.6 Memory function

Display of used memory space	Yes (Fax screen: RDH memory)
Memory RX	A password is required for printing received files. The password (up to 8 digits) is set when the memory RX mode is set in the utility mode. First page can be printed.
Memory substitute reception	Yes (when there is no paper / no toner)

20.2.7 Various communication function

Short protocol	No
ECM	Yes • Frame size: 64 byte / 256 byte
Communication timer	Yes • 24 hours maximum. 21 including one for sequential polling timer.
Redial waiting	Five redial timers maximum
Error page resending	No (becomes the error page redial.)
Error page redial	Effective to both quick memory transmission and memory transmission. Redial and retransmission in case of RTN or comm error. • Redial interval: follows the busy redial interval. • Num. of redials: 0 to 7 times (different counter from the busy redial)
Total page number print	Yes • Automatic print to the TTI in memory transmission. • Added when the number of document pages is appointed for quick memory transmission.
Header memo	No
TTI (Transmitting terminal ID)	Yes • 30 characters maximum • Added not to the original read image, but to the top of the transmission image while in the image rotation being specified. • The registration of up to 20 sender names is available. • It is possible to make a selection to decide whether or not the address is printed at the header position.
RTI (Receiving terminal ID)	Yes • After processing the enlargement and/or reduction operations, a record is made at the bottom position specified before conducting an image rotation. • Date, time and page no. are recorded.
Fax remote diagnosis	Yes
MH fix	Yes. Setting can be made from the service mode.
Document insertion after dialing	Yes • Document insertion is possible after dialing. Starts calling by using the [Start] button.
Communication history	Yes • The last 700 communication histories are recorded in the communication journal.
Electronic key counter	Yes • The number of transmitted pages to each user. Limit control is not done.
Key counter	Yes
Coin vendor	Yes. (Support timing varies depending on models.) • It is possible to use with FAX.

20.2.8 User lists / reports

Activity report	The total of 700 communications (sending and reception) can be recorded. • Automatic output: Daily / Every 100 Comm. / 100/ Daily • Manual output: Yes
Timer reservation TX report	Automatic output Users can turn ON/OFF.
TX result report	• Automatic output (ON / If TX Fails / OFF) • Possible to output with images
Sync transmit reservation report	Automatic output: Users can turn ON / OFF.
Broadcast result report	Automatic output: Users can select All Destination, 1 Destination at a time.
Polled Tx reserve report	Automatic output: Users can turn ON / OFF.
Polled Tx result report	
Polled Rx result report	
Sequential poll, Rx reservation report	
Sequential poll, Rx result report	
An address polling Rx reserved report	
Relay TX result report	
Relay request report	
PC-Fax TX error report	
Address book list	Manual output (numeric order: output to be produced for each destination type)

Program list	Manual output
Group address list	
Fax setting list	
Bulletin TX report	Automatic output: Users can turn ON / OFF.
Confidential RX report	• Auto output at the F code confidential reception. • Automatic output: Users can turn ON / OFF.
Subject/Text list	Manual output

20.2.9 Other user functions

Fax ID	Number ID: 20 digits (max.)
Header note	No
Language selection	Yes

20.3 Network fax specifications

20.3.1 Internet fax

- Main product specifications relating to internet fax functions are indicated below.
- Specifications are subject to change without notice.

Image memory capacity	128 GB (128 GB of 250 GB of the hard disk is used as a memory.)	
Max. no. of stored pages	Approx. 10000 pages (numbers of pages in the case of storing standard A4-size pages containing approximately 700 characters at "fine" resolution)	
Scanning line density	Ultra fine	600 dpi x 600 dpi
	Super fine	400 dpi x 400 dpi
	Fine	200 dpi x 200 dpi
	Normal	200 dpi x 100 dpi
Transmission mode (File type)	monochrome (TIFF-FX)	
Transmission coding methods	• TIFF-S (MH) • TIFF-F (MR/MMR)	
Max. scanning size	• 420 mm x 297 mm (A3 size) • Width: 297 mm • Length: 1000 mm at the maximum	
Max. recording size	• 420 mm x 297 mm (A3 size) • Length: 1000 mm at the maximum • When receiving the data of an original that is longer than the paper sizes set in the paper trays, the data is printed according to the setting of [Print Separate Fax Pages].	
Treatment of transmission error	Mail transmitted again.	None
	Internet fax Rx error report	When documents cannot be sent to the SMTP server, transmission error report to be printed/not printed can be set.
		When MDN/DSN response is received, to be printed/not to be printed can be set.
		When MDN/DSN response is received, transmission result is indicated on the transmission control report.
Mail reception	MDN/DSN response monitoring time can be set in the range from 0 to 99 hours.	
	Mail acquisition interval	Can be set to 1 to 60 minutes.
	Manual POP reception	Possible
	Reception by specifying a box	Not Available (except Memory RX)
	Received document size	width: A4 / B4 / A3
List/report	Reception coding system	TIFF-S (MH), TIFF-F (MR/MMR)
	Print DSN message	Output can be produced
	Print MDN message	Output can be produced
	Print receipt mail text	Output can be produced
	Network fax relay result report	Output can be produced
	Network fax activity report	• During automatic output: Shared with Fax Activity Report. Max. 100. • During manual output: Shared with Fax Activity Report. Max. 700.
	Network fax Rx error report	Output can be produced

20.3.2 IP address fax

- Main product specifications relating to IP Address Fax functions are indicated below.
- Specifications are subject to change without notice.

Image memory capacity	128 GB (128 GB of 250 GB of the hard disk is used as a memory.)
-----------------------	---

Max. no. of stored pages	Approx. 10000 pages (numbers of pages in the case of storing standard A4-size pages containing approximately 700 characters at "fine" resolution)	
Scanning line density	Ultra fine	600 dpi x 600 dpi
	Super fine	400 dpi x 400 dpi
	Fine	200 dpi x 200 dpi 300 dpi x 300 dpi (Color: Compact PDF only)
	Normal (Monochrome only)	200 dpi x 100 dpi
Transmission mode (File type)	• Color (PDF, Compact PDF, TIFF-C) / Monochrome (TIFF) • Capable of transmitting TIFF-C (JPEG); • Incapable of receiving TIFF-C (JPEG) (any receiving TIFF-C jobs are discarded)	
Coding methods	• MH (applicable only to monochrome format) • MR (applicable only to monochrome format) • MMR (applicable only to monochrome format)	
Max. scanning size	• A3 (420 mm x 297 mm) • Width: 297 mm • Length: Max. 1000 mm.	
Max. recording size	• A3 (420 mm x 297 mm) • 1000 mm in the maximum recording size • Originals in excess of 1000 mm cannot be received. • In the color mode, the reception of an original in excess of 432 mm in length is unavailable. • When receiving originals longer than the paper size in the paper trays, printing is made according to the setting of [Print Separate Fax Pages].	
Treatment of transmission error	Retry	Error codes subject to retry: • N10 • N12 • N15 to 17 only
	TX error report	• TX error report printing ON/OFF can be set. • A TX error report is printed when a TX error occurs and the TX error is recorded in the activity.
Reception	Received document size	Max. document width to be received: A3
	Reception coding system	TIFF-S (MH), TIFF-F (MR/MMR), PDF, Compact PDF, TIFF-C
	Received file size	• Unlimited (depends on the space available for use in the HDD) • The file is not received, if the space available for use in the HDD is 107 MB or less. • If the space available for use in the HDD runs out during reception, the session is abnormally terminated and the received file is deleted.
Report	Print receipt mail text	Possible

D OVERALL COMPOSITION

1. SYSTEM CONFIGURATION

1.1 System front view

[1]	Stamp Unit SP-501	[2]	bizhub C554/C454
[3]	Authentication Unit AU-102	[4]	Authentication Unit AU-201
[5]	Working Table WT-506	[6]	Local Interface Kit EK-606
[7]	Local Interface Kit EK-607	[8]	Mount Kit MK-730
[9]	Large Capacity Unit LU-301*3	[10]	Large Capacity Unit LU-204*3
[11]	Desk DK-510 *1	[12]	Power Supply BOX MK-734
[13]	Paper Feed Cabinet PC-410	[14]	Heater HT-509
[15]	Paper Feed Cabinet PC-210	[16]	Paper Feed Cabinet PC-110
[17]	Desk DK-705 *1	[18]	Saddle Stitcher SD-511
[19]	Finisher FS-534*5	[20]	Punch Kit PK-520
[21]	Saddle Stitcher SD-512 *3	[22]	Finisher FS-535 *3*5
[23]	Punch Kit PK-521 *3	[24]	Z Folding Unit ZU-606 *3*5
[25]	Job Separator JS-602 *3	[26]	Post Inserter PI-505 *3
[27]	Output Tray OT-506	[28]	Finisher FS-533
[29]	Punch Kit PK-519	[30]	Job Separator JS-506
-	Assist Handle AH-101 *2	-	Keyboard Holder KH-102 *2

*1: Except for Europe area.

*2: This option is not shown in the figure above.

*3: For bizhub C554 only.

*4: LU-204/301 can be installed with PC-110, PC-210 or PC-410.

*5: FS-534/535 and ZU-606 can be installed with PC-110, PC-210, PC-410 or DK705.

NOTE

- Use the desk or the paper feed cabinet without fail when installing on the floor in order to keep the function and quality of the unit.

1.2 System rear view

[1]	Security Kit SC-508	[2]	Video Interface Kit VI-506
[3]	Image Controller IC-414	[4]	Fax Kit FK-511

[11]	Developing section	[12]	Transfer section
[13]	Toner supply section	[14]	Paper exit/switchback section

3. PAPER PATH

4. CONTROL BLOCK DIAGRAM

5. IMAGE CREATION PROCESS

[1]	Photoelectric conversion	The light reflected off the surface of the original is separated into different colors using the color filters (R, G, and B); CCD then converts it into a corresponding electric signal and outputs the signal to the IR imaging processing section.
[2]	Printer image processing	The electric signal is converted to digital image signals. After going through some corrections, video signals (C, M, Y, and K) are output to the printer image processing section. D/A conversion will be performed after the VIDEO signals (Y, M, C, k) are corrected. This data will control the emission of the laser diode.
[3]	Photo conductor	The image of the original projected onto the surface of the photo conductor is changed to a corresponding electrostatic latent image.
[4]	Photo conductor charging	Supply DC (-) charge on the photo conductor.
[5]	Laser exposure	Expose photo conductor to a laser beam to develop electrostatic latent image.
[6]	Developing	The toner, agitated and negatively charged in the developer mixing chamber, is attracted onto the electrostatic latent image formed on the surface of the photo conductor. It is thereby changed to a visible, developed image. AC and DC negative bias voltages are applied to the developing roller, thereby preventing toner from sticking to the background image portion.
[7]	1st image transfer	A DC positive voltage is applied to the backside of the transfer belt, thereby allowing the visible, developed image on the surface of each of the photo conductors (Y, M, C, and K) to be transferred onto the transfer belt.
[8]	2nd image transfer	A DC positive voltage is applied to the backside of the paper, thereby allowing the visible, developed image on the surface of the transfer belt to be transferred onto the paper.
[9]	Paper separation	The paper, which has undergone the 2nd image transfer process, is neutralized so that it can be properly separated from the transfer belt by the paper separator claws.
[10]	Transfer belt cleaning	Residual toner on the surface of the transfer belt is collected for cleaning by cleaning blade.
[11]	Main erase	The surface of the photo conductor is irradiated with light, which neutralizes any surface potential remaining on the surface of the photo conductor.
[12]	Photo conductor cleaning	The residual toner left on the surface of the photo conductor is scraped off.
[13]	Fusing	The visible toner image transferred onto the surface of the paper is melted by the heat of the fusing belt and fixed to the paper by pressure.

6. IMAGE FORMING CONTROL

7 PROCESS SPEED

Paper type/Mode	bizhub C554	bizhub C454
• Plain paper • Thin paper	252.2 mm/s	211.8 mm/s
• Thick 1 • Thick 1+	126.1 mm/s	136.1 mm/s
• Thick 2 • Thick 3 • Thick 4 • Envelopes • Postcards	126.1 mm/s	105.9 mm/s
• OHP film *1	126.1 mm/s	211.8 mm/s
• Glossy mode	126.1 mm/s	105.9 mm/s

- *1: Black print only.

E SERVICE TOOL

1. bizhub C554/C454

1.1 Service material list

Name	Shape	Material No.	Remarks
Cleaning pad		000V-18-1	10pcs/1pack
Isopropyl alcohol		-	
Hydro-wipe	 8050fs3005	65AA-9920	10pcs/1 pack

1.2 CE tool list

Tool name	Shape	Quantity	Parts No.	Remarks
Color chart		1	9J06 PJG1 ##	A3
			9J06 PJP2 ##	11 x 17

1.3 Utility tool

1.3.1 IC card information setting tool of AU-201/AU-202H/SCL-010 card reader

(1) Outline

- Before connecting the AU-201/AU-202H/SCL-010 card reader to the MFP, it is necessary to prepare an IC card information setting file with the loadable driver. To prepare this file, a tool is used for preparing the IC card information setting file for use in each card reader.

(2) IC card information setting file preparation tool

(a) Tool names

Tools for CE

- For AU-201: Auth Device Tool Advanced for AU-201
- For SCL-010: Auth Device Tool Advanced for SCL-010
- For AU-202H: Auth Device Tool Advanced for AU-202H

Tool for user administrators

- For AU-201: Auth Device Tool for AU-201

(b) System requirement

OS	- Windows XP Professional (SP3 or later) - Windows Vista Enterprise (SP2 or later) - Windows Vista Business (SP2 or later) - Windows Vista Ultimate (SP2 or later) - Windows 7 Enterprise (SP1 or later) - Windows 7 Professional (SP1 or later) - Windows 7 Ultimate (SP1 or later) Support both 32-bit (x86) and 64-bit (x64) editions
Library (Any of these needs to be installed)	- Microsoft .Net Framework2.0 SP2 - Microsoft .Net Framework3.0 SP2 - Microsoft .Net Framework3.5 SP1 - Microsoft .Net Framework3.5.1
HDD	3 MB or more free space is required
Display	800 x 600 pixels, 16 bit full color

(3) IC card information setting procedures

(a) Preparations

- Using the PageScope Data Administrator, register the target MFP in advance.
- Set the MFP into a state in which it can communicate over the network.

- Accessing PageScope Web Connection -> [Administrator mode] -> [Security Settings], issue a self-signed certificate from [Device Certificate Setting] and install it.
- Accessing PageScope Web Connection -> [Administrator mode] -> [Network Settings], set use of [SSL/TLS] in [OpenAPI] to "SSL Only".

NOTE

- **Only one loadable device driver must be stored in the USB memory, and please do not save any other data in the USB memory**

(b) Auth Device Tool Advanced for AU-201 (Setting IC card information in the loadable driver in advance)

1. Obtain the [loadable driver \(ICC_LDR.tar\)](#) for use in AU-201 that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for AU-201.
3. Select [Import Loadable Driver] from [File] and select the loadable driver.
4. Select card type.
5. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
6. Input the necessary extended data. (For details, ask the IC card administrator.)
7. Select Loadable Driver in [Export Format] and click [Export].
8. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
9. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

NOTE

- **Please do not save any other data in the USB memory.**

10. Call the Service Mode to the screen of the MFP.
11. Select [System 2] -> [Driver Install].
12. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
13. Select [SET] and press the Start key to install the loadable driver.
14. Remove the USB memory and, accessing [Billing Settings] -> [Management Function Choice] -> [Authentication Device 2], select [Card].
15. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
16. Set the authentication user.

(c) Auth Device Tool Advanced for AU-201 (Installing IC card information setting only in the MFP afterward)

1. Install the [loadable driver](#) to the MFP.
2. Start the Auth Device Tool Advanced for AU-201.
3. Select card type.
4. If the card is good for detailed settings, click [Detail Setting/Extra Data Setting].
5. Input the necessary extended data. (For details, ask the IC card administrator.)
6. Select IC card information setting file in [Export Format] and click [Export].
7. Set the encrypted password.
8. Save the file (iccConfig.bin).
9. Start the PageScope Data Administrator, and select the target MFP.
10. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
11. Using [Browse], select the file saved in step 8.
12. Click [Open] and type the encrypted password set in step 7.
13. Click [Next] and select the device to be imported.
14. Click [Start] and write the file in the MFP.
15. Check that "Normal" is shown in [Status].
16. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
17. Set the authentication user.

(d) Auth Device Tool Advanced for SCL-010 (Setting IC card information in the loadable driver in advance)

1. Obtain the [loadable driver \(ICC_LDR.tar\)](#) for use in SCL-010 that is compatible with the type of card used.
2. Start the Auth Device Tool Advanced for SCL-010.
3. Select card type.
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

NOTE

- **Please do not save any other data in the USB memory.**

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [SET] and press the Start key to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Management Function Choice] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
13. Set the authentication user.

(e) Auth Device Tool Advanced for SCL-010 (Installing IC card information setting only in the MFP afterward)

1. Install the [loadable driver](#) for SCL-010 to the MFP.
2. Start the Auth Device Tool Advanced for SCL-010.
3. Select card type.
4. Select IC card information setting file in [Export Format] and click [Export].
5. Set the encrypted password.
6. Save the file (iccConfig.bin).

7. Start the PageScope Data Administrator, and select the target MFP.
8. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
9. Using [Browse], select the file saved in step 6.
10. Click [Open] and type the encrypted password set in step 5.
11. Click [Next] and select the device to be imported.
12. Click [Start] and write the file in the MFP.
13. Check that "Normal" is shown in [Status].
14. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
15. Set the authentication user.

(f) Auth Device Tool Advanced for AU-202H (Setting IC card information in the loadable driver in advance)

1. Obtain the [loadable driver \(ICC_LDR.tar\)](#) for use in AU-202H that is compatible with the type of card used
2. Start the Auth Device Tool Advanced for AU-202H.
3. Set the card ID length.
4. Select Loadable Driver in [Export Format] and click [Export].
5. Select the loadable driver to be updated and the output location of the loadable driver and click [OK].
6. Copy the output loadable driver (ICC_LDR.tar) to the root directory of the USB memory.

NOTE

- Please do not save any other data in the USB memory.

7. Call the Service Mode to the screen of the MFP.
8. Select [System 2] -> [Driver Install].
9. Connect the USB memory in which the loadable driver has been saved to the USB port on the side of the control panel.
10. Select [SET] and press the Start key to install the loadable driver.
11. Remove the USB memory and, accessing [Billing Settings] -> [Management Function Choice] -> [Authentication Device 2], select [Card].
12. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
13. Set the authentication user.

(g) Auth Device Tool Advanced for AU-202H (Installing IC card information setting only in the MFP afterward)

1. Install the [loadable driver](#) for AU-202H to the MFP.
2. Start the Auth Device Tool Advanced for AU-202H.
3. Set the card ID length.
4. Select IC card information setting file in [Export Format] and click [Export].
5. Set the encrypted password.
6. Save the file (iccConfig.bin).
7. Start the PageScope Data Administrator, and select the target MFP.
8. In the [Settings for multiple device] tab, click [Batch setting of IC Card Information].
9. Using [Browse], select the file saved in step 6.
10. Click [Open] and type the encrypted password set in step 5.
11. Click [Next] and select the device to be imported.
12. Click [Start] and write the file in the MFP.
13. Check that "Normal" is shown in [Status].
14. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
15. Set the authentication user.

F PERIODICAL MAINTENANCE

1. Concept of periodical maintenance

- Cleaning/replacement cycle for each maintenance item of main body/options can be evaluated with the total counter or each life counter value of [\[Service Mode\]](#) -> [\[Counter\]](#) -> [\[Life\]](#).

2. Periodical maintenance items

2.1 bizhub C554/C454

2.1.1 bizhub C554

(1) Periodical maintenance 1 (Total counter; every 60,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Registration roller	-	●				
4	Image transfer section	Around waste toner port	-	●				
5	Duplex section	Duplex transport roller	-	●				

(2) Periodical maintenance 2 (Field standard yield; every 95,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Drum unit/Y,M,C	1				●	

(3) Periodical maintenance 3 (Field standard yield; every 135,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Drum unit/K	1				●	

(4) Periodical maintenance 4 (Life counter; every 200,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Manual bypass tray feed roller	1				●	
2		Manual bypass tray separation roller assy	1				●	

(5) Periodical maintenance 5 (Life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Tray 1 pick-up roller	1				●	
2		Tray 1 feed roller	1				●	
3		Tray 1 separation roller assy	1				●	
4		Tray 2 pick-up roller	1				●	
5		Tray 2 feed roller	1				●	
6		Tray 2 separation roller assy	1				●	

(6) Periodical maintenance 6 (Field standard yield; every 300,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Ozone filter	1				●	*1
2		Toner filter	1				●	*1
3	Image transfer section	Transfer belt unit	1				●	
4		Transfer roller unit	1				●	*1

*1: Replace it when replacing transfer belt unit.

(7) Periodical maintenance 7 (Field standard yield; every 590,000 sheets (US)/600,000 sheets (EU))

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Developing unit/Y,M,C,K	1				●	

(8) Periodical maintenance 8 (Field standard yield; every 1,157,000 sheets (US)/1,200,000 sheets (EU))

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Fusing section	Fusing unit	1				●	
2		IH coil unit	1	●				*1

*1: When the fusing unit is replaced.

2.1.2 bizhub C454

(1) Periodical maintenance 1 (Total counter; every 60,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
3	Conveyance section	Registration roller	-	●				
4	Image transfer section	Around waste toner port	-	●				
5	Duplex section	Duplex transport roller	-	●				

(2) Periodical maintenance 2 (Field standard yield; every 95,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Drum unit/Y,M,C	1				●	

(3) Periodical maintenance 3 (Field standard yield; every 130,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Drum unit/K	1				●	

(4) Periodical maintenance 4 (Life counter; every 200,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Manual bypass tray feed roller	1				●	
2		Manual bypass tray separation roller assy	1				●	

(5) Periodical maintenance 5 (Life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Tray 1 pick-up roller	1				●	
2		Tray 1 feed roller	1				●	
3		Tray 1 separation roller assy	1				●	
4		Tray 2 pick-up roller	1				●	
5		Tray 2 feed roller	1				●	
6		Tray 2 separation roller assy	1				●	

(6) Periodical maintenance 6 (Field standard yield; every 300,000 sheets)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Ozone filter	1				●	*1
2		Toner filter	1				●	*1
3	Image transfer section	Transfer belt unit	1				●	
4		Transfer roller unit	1				●	*1

*1: Replace it when replacing transfer belt unit.

(7) Periodical maintenance 7 (Field standard yield; every 590,000 sheets (US)/600,000 sheets (EU))

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Processing section	Developing unit/Y,M,C,K	1				●	
2	Fusing section	Fusing unit	1				●	

2.1.3 Dual Scan Document Feeder (DF-701)**(1) Periodical maintenance 1 (total counter; every 50,000 counts)**

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Paper feed section	Pick-up roller	-	●				
4		Feed roller	-	●				
5		Separation roller	-	●				
6	Conveyance section	Roller and rolls	-	●				
7	Scanning section	Front side scanning guide	-	●				
8	Paper feed section	Reflective sensor section	-	●				

(2) Periodical maintenance 2 (life counter; every 200,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Pick-up roller	2				●	*1

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
2		Feed roller	1				●	
3		Separation roller assy	1				●	

- *1: Replace those three parts at the same time.

2.2 Option

2.2.1 PC-110/PC-410

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			*1
2		Appearance	-	●	●			
3	Paper feed section	Pick-up roller	1				●	
4		Feed roller	1				●	
5		Separation roller	1				●	

- *1: Replace those three parts at the same time.

2.2.2 PC-210

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			*1
2		Appearance	-	●	●			
3	Paper feed section	Pick-up roller	2				●	
4		Feed roller	2				●	
5		Separation roller	2				●	

- *1: Replace those three parts at the same time.

2.2.3 LU-204/LU-301

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Pick-up roller	1				●	*1
2		Feed roller	1				●	
3		Separation roller	1				●	

- *1: Replace those three parts at the same time.

2.2.4 FS-535

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Paddle/3	9	●				
4		Conveyance roller	-	●				
5		Main drive section	-		●	●		
6		Main tray section	-		●	●		
7		Alignment drive section	-		●	●		
8		Paper exit drive section	-		●	●		

(2) Periodical maintenance 2 (life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Conveyance section	Paddle/1 unit	1				●	
2		Paddle/2 unit	2				●	
3		Paper exit roller/A	6				●	

2.2.5 SD-512

(1) Periodical maintenance 1 (life counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
3	Conveyance section	Conveyance roller	-	●				
4		Upper paddle	4	●				
5		Lower paddle	8	●				
6	Folding section	Folding roller	-	●				
7	Paper exit section	Exit tray transport belt	2	●				

(2) Periodical maintenance 2 (life counter ; every 2,000,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Conveyance section	Upper paddle assy	1				●	
2		Lower paddle unit	4				●	

2.2.6 JS-602

(1) Periodical maintenance 1 (total counter; every 100,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Conveyance roller	-	●				
4	Paper exit section	Exit roller	-	●				

2.2.7 PI-505

(1) Periodical maintenance 1 (total counter; every 100,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Paper feed section	Feed roller	-	●				
4		Separation roller	-	●				
5		Pick-up roller	-	●				
6	Conveyance section	Exit roller	-	●				

(2) Periodical maintenance 2 (fixed parts counter; every 100,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Feed roller/Up	-				●	
2		Feed roller/Lw	-				●	
3		Separation roller/Up	-				●	
4		Separation roller/Lw	-				●	

(3) Periodical maintenance 3 (fixed parts counter; every 200,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Pick-up roller/Up	-				●	
2		Pick-up roller/Lw	-				●	

(4) Periodical maintenance 4 (fixed parts counter; every 600,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Paper feed section	Torque limiter/Up	-				●	
2		Torque limiter/Lw	-				●	

2.2.8 ZU-606

(1) Periodical maintenance 1 (total counter; every 100,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Punch section	Punch edge	-	●				
4	Conveyance section	Entrance guide plate	-	●				
5		Conveyance guide plate	-	●				
6		Registration roller	-	●				

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
7	Z folding section	Conveyance roller	-	●				
8		Exit guide plate	-	●				
9		Folding roller	-	●				
10		Folding guide plate	-	●				
11	Punch scraps conveyance section	Punch scraps box	-	●				

(2) Periodical maintenance 2 (fixed parts counter; every 1,000,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Punch scraps conveyance section	Punch scraps conveyance motor	1				●	
2		Punch clutch	1				●	

2.2.9 FS-534

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Roller and rolls	-	●				
4		Paddle	9	●				

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Conveyance section	Paddle unit	3				●	

2.2.10 SD-511

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Conveyance roller	-	●				
4		Upper paddle	4	●				
5		Lower paddle	8	●				
6	Folding section	Folding roller	-	●				

(2) Periodical maintenance 2 (life counter; every 2,000,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Conveyance section	Upper paddle assy	1				●	
2		Lower paddle unit	4				●	

2.2.11 FS-533

(1) Periodical maintenance 1 (total counter; every 300,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Overall	Paper feed and image conditions	-		●			
2		Appearance	-	●	●			
3	Conveyance section	Roller and rolls	-	●				
4	Paper exit section	Paddle	4	●				

(2) Periodical maintenance 2 (life counter; every 1,000,000 counts)

No.	Section	Description/part name	Qt.	Clean	Check	Lubrication	Replace	Descriptions
1	Alignment section	Alignment roller assy/ F	1				●	*1
2		Alignment roller assy/ R	1				●	

- *1: Replace those parts at the same time.

3. Periodical replacement parts list

- To ensure that the machine produces good copies and to extend its service life, it is recommended that the maintenance jobs described in this schedule be carried out as instructed.
- Replace with reference to the numeric values displayed on the total counter, the life counter or the messages displayed on the control panel.
- Maintenance conditions are based on the case of A4 or 8 1/2 x 11, standard mode and low power mode OFF.

5. Concept of parts life

5.1 Life value of consumables and parts

- The life counter value of each material and parts is available from [Service Mode] -> [Counter] -> [Life].
- Life specification value means an actual life terminated when prints are made under the conditions as defined in the next section, "Conditions for life specifications values."
The actual life may vary greatly depending on how the machine has been used and other factors.
- "M" refers to the rotation time of each unit.

Cosumables/parts name	Target model	Field standard yeild *1		Near life	Life	Life stop
Drum unit (C/M/Y)	C554	95,000 sheets		-	4113M	4487M
	C454	95,000 sheets		-	4912M	5359M
Drum unit (K)	C554	135,000 sheets		-	4113M	4487M
	C454	130,000 sheets		-	4912M	5359M
Developing unit	C554	US	590,000 sheets	-	600,000 counts	610,000 counts

- *: For details of conditions of field standard yield, see "F.5.1.1 Specified conditions of field standard yield".

5.1.1 Specified conditions of field standard yield

	bizhub C554	bizhub C454
Printing	3 P/J (Color) 6 P/J (Black)	2 P/J (Color) 5 P/J (Black)
Paper size	LEF: 93% SEF: 7%	LEF: 93 % SEF: 7%
Color ratio	25 %	25 %
Original density	B/W = 5 % for each color, 5 % for black	
Average print volume/month	13,500 prints/month (US) 17,200 prints/month (EU)	8,900 prints/month (US) 11,100 prints/month (EU)

5.2 Details of the life specifications

Item	Description
Waste toner box	The waste toner full sensor detects near full for the toner replenishment level of the waste toner box. When the waste toner near full is detected, the waste toner counter starts counting, and the waste toner full is detected when the life threshold is reached.
Fusing unit	When the number of printed pages *1 reaches the set life value, the end of unit life is detected.
Transfer belt unit	Number of prints *1 and rotation time of the transfer belt are counted, and detected when one of those two reaches to the life value.

Item	Description
Transfer roller unit	Rotation time of the transfer belt is counted, and detected when it reaches to the set life value. *2
Ozone filter	Rotation time of the transfer belt is counted, and detected when it reaches to the set life value. *2
Toner filter	Counts how many sheets have been printed for color printing *1 and black printing *1. For the life counter, value based on the calculation below is displayed. Value (1) or (2) below whichever is larger than the other one (1) Number of prints for black printing (2) Number of prints for color printing ÷ 150,000 x 300,000
Drum unit/ Y,M,C	Rotation time of the photo conductor and number of prints *1 are counted, and detected when one of those values reaches to the set life value. However, only the photo conductor rotation time is available from the life counter.
Drum unit/K	
Developing unit/Y,M,C	When the number of printed pages *1 reaches the set life value, the end of unit life is detected.
Developing unit/K	

*1: For counting with number of prints, the paper size in the sub scan direction is accumulated and counts one when it reaches to 216.0 mm. For the paper with sub scan size of less than 216.0mm, it is accumulated with the size of 216.0 mm.

*2: As the transfer roller unit, toner filter and the ozone filter are included in the transfer belt unit, they are replaced all together. When the transfer belt unit is replaced and New Release is performed, the life counter value is reset.

5.3 Control causing inhibited printing for one part when an inhibited-printing event occurs in another part

- In order to reduce the maintenance call times: when printing prohibiting is reached for any of the following parts, make printing prohibited also for other parts whose life value is reached, and replace those parts at the same time.

NOTE

- This control can be disabled by changing the setting in switch No. 14 in [\[Service Mode\] -> \[Enhanced Security\] -> \[Engine FW DipSW\]](#).

5.3.1 Target parts

- Drum unit with all colors are subjected. Other consumables are exempt.

5.3.2 Threshold value

- The one which has reached its value are judged as "printing prohibited" regardless of the difference with its maximum life value.

6. Periodical maintenance procedure bizhub C554/C454

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

6.1 Housing section

6.1.1 Replacing the ozone filter

(1) Periodically replacing parts/cycle

- Ozone filter: Every 300,000 sheets (bizhub C554)
- Ozone filter: Every 300,000 sheets (bizhub C454)

* The ozone filter is supplied with the transfer belt unit, and these are replaced at the same time.

(2) Procedure

1. Grip the handle on the ozone filter [1] and slide it out of the machine.

2. To reinstall, reverse the order of removal.

6.1.2 Replacing the toner filter

(1) Periodically replacing parts/cycle

- Toner filter: Every 300,000 sheets (bizhub C554)
- Toner filter: Every 300,000 sheets (bizhub C454)

* The toner filter is supplied with the transfer belt unit, and these are replaced at the same time.

(2) Procedure

1. Grip the handle on the toner filter [1] and slide it out of the machine.

2. To reinstall, reverse the order of removal.

6.2 Photo conductor section

6.2.1 Replacing the drum unit

(1) Periodically replacing parts/cycle

- Drum unit/Y,M,C: Every 95,000 sheets (bizhub C554)
- Drum unit/Y,M,C: Every 95,000 sheets (bizhub C454)
- Drum unit/K: Every 135,000 sheets (bizhub C554)
- Drum unit/K: Every 130,000 sheets (bizhub C454)

NOTE

- The following shows the procedure for replacing the drum unit/M, but take the same procedure for the drum unit/Y, C, K.

(2) Removal procedure

1. Open the lower front door.
2. Remove the waste toner box.
[F.6.8.1 Replacing the waste toner box](#)

3. Turn the drum unit lock lever [1] and release the lock..

4. Pull the drum unit [1] to you and remove it from the machine.

(3) Reinstall procedure

1. Remove the drum unit [1] from its package.
2. Remove the drum unit [1] from the plastic bag.

3. Remove the tape and packing material [1].

NOTE

- Do not hold the drum unit by the upper part. Holding it by the upper part can cause scratches on the surface of the photo conductor, resulting in the deterioration of image quality.

4. Put the label. (Drum unit/Y,M,C only)
5. Align the "▲" mark on the drum unit with the "▼" mark on the machine and insert the drum unit [1] into the machine.

6. Remove the photo conductor protective sheet [1].

7. Completely insert the drum unit [1].

8. Turn the drum unit lock lever [1] and lock the drum unit.

NOTE

- If the lock lever is hard to rotate, turn the lever while pushing the drum unit to the rear.

9. Reinstall the waste toner box.

10. Close the lower front door.

11. Select [\[Service Mode\]](#) -> [\[Imaging Process Adjustment\]](#) -> [\[Gradation Adjust\]](#) and carry out gradation adjust.

6.3 Charging section

6.3.1 Cleaning of the charger wire

(1) Periodically cleaning parts/cycle

- Charger wire: when toner cartridge/Y,M,C,K is replaced

(2) Procedure

1. Open the lower front door.

[1]

2. Slowly pull out the charger-cleaning tool [1] as far as possible. Next, slowly push in the charger-cleaning tool as far as possible. Repeat the above operations three times.

NOTE

- Every time when replacing any one of toner cartridge/Y,M,C,K, clean the charger wire of the all colors.
- Move the charger-cleaning tool slowly all the way to the end of either way.

6.4 Developing section

6.4.1 Replacing the developing unit

(1) Periodically replacing parts/cycle

- Developing unit : Every 590,000 sheets (US)/600,000 sheets (EU) (bizhub C554)
- Developing unit : Every 590,000 sheets (US)/600,000 sheets (EU) (bizhub C454)

NOTE

- Although the procedure shown below is for the replacement of the developing unit/Y, use the same procedure to replace other developing units.

(2) Procedure

1. Open the lower front door.
2. Remove the waste toner box.
[F.6.8.1 Replacing the waste toner box](#)
3. Remove the lower front cover.
[G.5.2.16 Lower front cover](#)
4. Remove the drum unit/Y.
[F.6.2.1 Replacing the drum unit](#)

5. Remove the harness from the wire saddle [1], and disconnect the connector [2].

6. Remove two screws [1], and remove the developing unit [2].

7. To reinstall, reverse the order of removal.

NOTE

- To install the two screws in the developing unit, press the position [1] with your finger as shown in the illustration.

8. Carry out the [\[Service Mode\] -> \[Image Process Adjustment\] -> \[Gradation Adjust\]](#).

6.5 Toner supply section

6.5.1 Replacing the toner cartridge

(1) Periodically replacing parts/cycle

- Toner cartridge/Y,M,C : Every 26,000 prints (bizhub C554)
- Toner cartridge/Y,M,C : Every 26,000 prints (bizhub C454)
- Toner cartridge/K : Every 27,500 prints (bizhub C554)
- Toner cartridge/K : Every 27,500 prints (bizhub C454)

(2) Removal procedure

1. Open the upper front door.

2. Turn the toner cartridge [1] in the direction [2] as shown in the illustration to release the lock.
3. Remove the toner cartridge [1].

(3) Reinstall procedure

1. Remove the new toner cartridge [1] from its packaging, and the shake the cartridge side to side 5 to 10 times.

NOTE

- Shake the toner cartridge well.
- If shaking is not enough, that may cause trouble.

2. Insert the toner cartridge [1] into the machine.

NOTE

- Make sure that the toner cartridge is the same color as the label in the cartridge compartment.
- Make sure that the blue label position of the toner cartridge is matched with the one of the machine side.

3. Completely insert the toner cartridge into the machine and turn it in the direction as shown in the illustration in order to fix the toner cartridge.

4. When any one of toner cartridge/Y,M,C,K is replaced, clean the charger wire.

[F.6.3.1 Cleaning of the charger wire](#)

6.6 1st transfer section**6.6.1 Cleaning of the image transfer entrance guide****(1) Periodically cleaning parts/cycle**

- Image transfer entrance guide: Every 240,000 counts or when the transfer belt unit is replaced.

(2) Procedure

1. Remove the transfer belt unit.

[F.6.6.3 Replacing the transfer belt unit](#)

2. Wipe the image transfer entrance guide [1] clean of spilled toner and dirt using a cleaning pad with water or alcohol.

6.6.2 Cleaning of the IDC sensor window**(1) Periodically cleaning parts/cycle**

- IDC sensor window: Every 240,000 counts or when the transfer belt unit is replaced.

(2) Procedure

1. Remove the transfer belt unit.
F.6.6.3 Replacing the transfer belt unit

2. Wipe the surface of the IDC sensor window [1] clean of spilled toner and dirt.

6.6.3 Replacing the transfer belt unit**(1) Periodically replacing parts/cycle**

- Transfer belt unit : Every 300,000 sheets (bizhub C554)
- Transfer belt unit : Every 300,000 sheets (bizhub C454)

NOTE

- Before replacement operations of the transfer belt unit, make sure to turn OFF the main power switch.

(2) Removal procedure

1. Remove the screw [1], and remove the right door stopper (upper section) [2].

2. Remove the screw [1], and remove the right door stopper (lower section) [2].

3. Remove the screw [1], and remove the connector cover [2].

4. Open the right door and the regist unit.

5. Remove the screw [1] and two tabs [2], and remove the 2nd transfer paper winding prevention guide [3].

6. Remove the screw [1], and remove the stopper [2].

7. Remove two screws [1] and unlock the transfer belt unit [2].

8. Hold the both sides and lift it to take out the transfer belt unit [1] a little.

9. Hold the position [1] and remove the transfer belt unit [2].

NOTE

- Do not touch the surface of the Image transfer belt unit.
- Cover the image transfer belt unit with something such shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99##). Do not clean with alcohol or water.

(3) Reinstall procedure

1. Insert the transfer belt unit [1].

NOTE

- Insert the transfer belt unit with care not to allow its docking gear to be damaged by hitting it against the rail or associated part.
- Do not touch the surface of the image transfer belt unit.
- Cover the image transfer belt unit with something such as shade cloth to protect its surface from dust or foreign matter.
- If accidentally touched the surface of the transfer belt, lightly wipe it using the Hydro-wipe (65AA-99##). Do not clean with alcohol or water.

2. Install the transfer belt unit [2] with two screws [1].

NOTE

- Replace the ozone filter, toner filter and the transfer roller unit, which are supplied with the transfer belt unit, at the same time.

3. To reinstall, reverse the order of removal.
4. Turn ON the main power switch.
5. Carry out the [\[Service Mode\] -> \[Counter\] -> \[Life\] -> \[New Release\]](#).
6. Select [\[Service Mode\] -> \[Imaging Process Adjustment\] -> \[Gradation Adjust\]](#) and carry out gradation adjust.

6.7 2nd transfer/separation section**6.7.1 Replacing the transfer roller unit****(1) Periodically replacing parts/cycle**

- Transfer belt unit : Every 300,000 sheets (bizhub C554)
- Transfer belt unit : Every 300,000 sheets (bizhub C454)

* The transfer roller unit is supplied with the transfer belt unit, and these are replaced at the same time.

(2) Removal procedure

1. Open the right door and the regist unit.

2. Unlock the lock levers [1] of the transfer roller unit (at two places).
3. Holding onto the lock levers [1] (at two places), remove the transfer roller unit [2].

(3) Reinstall procedure

1. Holding onto the lock levers [1] (at two places), mount the new transfer roller unit [2].
2. Lock the lock levers [1] (at two places).

NOTE

- Make sure that the levers are locked in position both at front and rear.

3. Close the right door.

6.8 Toner collection section

6.8.1 Replacing the waste toner box

(1) Periodically replacing parts/cycle

- Waste toner box: Every 40,000 counts

(2) Removal procedure

- Open the lower front door.

- Unhook the waste toner box fixing levers [1] and remove the waste toner box [2].

- Clean the surface around the waste toner collecting port.

F.6.8.2 Cleaning of the area around the waste toner collecting port

- Take out the cap [1] from the new waste toner box package, and attach it to the old waste toner box.

(3) Reinstall procedure

- Remove the brand new waste toner box from its package and remove the packing material.
- Set the waste toner box [1].

- Close the lower front door.

6.8.2 Cleaning of the area around the waste toner collecting port

(1) Periodically cleaning parts/cycle

- Area around the waste toner collecting port: Every 60,000 counts (upon each call)

(2) Procedure

- Remove the waste toner box.

F.6.8.1 Replacing the waste toner box

- Wipe the areas around the waste toner collecting port clean of spilled toner and dirt using a cleaning pad with water or alcohol.

6.9 Paper feed section

6.9.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller

(1) Periodically replacing parts/cycle

- Tray 1 feed roller: Every 300,000 counts
- Tray 1 pick-up roller: Every 300,000 counts
- Tray 1 separation roller: Every 300,000 counts

(2) Procedure

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Remove the C-clip [1] each, and remove the tray 1 feed roller [2], tray 1 pick-up roller [3] and tray 1 separation roller [4].

4. To reinstall, reverse the order of removal.
5. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [1st.].
[I.11.16.2 Life](#)

6.9.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller

(1) Periodically replacing parts/cycle

- Tray 2 feed roller: Every 300,000 counts
- Tray 2 pick-up roller: Every 300,000 counts
- Tray 2 separation roller: Every 300,000 counts

(2) Procedure

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Remove the C-clip [1] each, and remove the tray 2 feed roller [2], tray 2 pick-up roller [3] and tray 2 separation roller [4].

4. To reinstall, reverse the order of removal.
5. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [2nd.].
[I.11.16.2 Life](#)

6.9.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy

(1) Periodically replacing parts/cycle

- Manual bypass tray feed roller: Every 200,000 counts
- Manual bypass tray separation roller assy: Every 200,000 counts

(2) Procedure

1. Open the right door.

2. Remove the screw [1], and remove the feed roller cover [2].

3. Remove the screw [1], and remove the bearing [2] and the metal plate [3].

4. Remove the manual bypass tray feed roller [1].

5. Remove the screw [1], and remove the cover [2].

6. Remove the manual bypass tray separation roller unit [1].

7. Remove the C-ring [1], and remove the manual bypass tray separation roller assy [2].

8. To reinstall, reverse the order of removal.
9. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [Manual Tray].
[I.11.16.2 Life](#)

6.10 Registration section

6.10.1 Cleaning of the registration roller

(1) Periodically replacing parts/cycle

- Registration roller: Every 60,000 counts (upon each call)

(2) Procedure

1. Open the right door and the regist unit.

2. Using a cleaning pad with alcohol, wipe the registration roller [1] clean of dirt.

6.11 Fusing section

6.11.1 Replacing the fusing unit (C554)

- The temperature gets high in the vicinity of the fusing unit. You may get burned when you come into contact with the area. Before replacement operations, make sure that more than 20 minutes have elapsed since the main power switch was turned off.

(1) Periodically replacing parts/cycle

- Fusing unit: Every 1,175,000 sheets (US)/1,200,000 sheets (EU)

(2) Procedure

1. Remove the screw [1], and remove the right door stopper (upper section) [2].

2. Remove the screw [1], and remove the right door stopper (lower section) [2].

3. Remove the screw [1], and remove the connector cover [2].

4. Open the right door and the regist unit.

5. Remove the screw [1], and remove the connector protective cover [2].

6. Remove the harnesses from the wire saddle [1].
7. Disconnect three connectors [2].

8. Remove two screws [1], and remove the fusing unit [2].

NOTE

- When removing the fusing unit, hold the parts [3] shown on the picture so that it would not fall.
- Removing the fusing unit may be difficult when it is firmly fixed. This may occur if the main power switch is turned OFF while the fusing pressure roller is in the pressure condition.

In this case, to make the fusing pressure roller retracted, turn the main power switch ON and then turn it OFF again after a warm-up operation is finished.

9. Clean the IH coil unit.

10. To reinstall, reverse the order of removal.

11. Carry out the [\[Service Mode\]](#) -> [\[Counter\]](#) -> [\[Life\]](#) -> [\[New Release\]](#).

6.11.2 Replacing the fusing unit (C454)

- The temperature gets high in the vicinity of the fusing unit. You may get burned when you come into contact with the area. Before replacement operations, make sure that more than 20 minutes have elapsed since the main power switch was turned off.

(1) Periodically replacing parts/cycle

- Fusing unit: Every 590,000 sheets (US)/600,000 sheets (EU)

(2) Procedure

1. Remove the screw [1], and remove the right door stopper (upper section) [2].

2. Remove the screw [1], and remove the right door stopper (lower section) [2].

3. Remove the screw [1], and remove the connector cover [2].

4. Open the right door and the regist unit.

5. Remove the screw [1] each, and remove the two connector protective covers [2].

6. Remove the harnesses from the wire saddle [1].
7. Disconnect four connectors [2].

8. Remove two screws [1], and remove the fusing unit [2].

NOTE

- When removing the fusing unit, hold the parts [3] shown on the picture so that it would not fall.

9. To reinstall, reverse the order of removal.

10. Carry out the [\[Service Mode\]](#) -> [\[Counter\]](#) -> [\[Life\]](#) -> [\[New Release\]](#).

6.11.3 Cleaning of the IH coil (C554)

(1) Periodically cleaning parts/cycle

- IH coil unit: Every 1,175,000 sheets (US)/1,200,000 sheets (EU) (When the fusing unit is replaced)

NOTE

- If a machine is used without cleaning the IH coil continually, image quality problem such as streaks and uneven glossiness in feeding direction may occur by coagulations of toners or paper dusts on the IH coil.

(2) Procedure

1. Remove the fusing unit.

[F.6.11.1 Replacing the fusing unit \(C554\)](#)

2. Using a cleaning pad dampened with alcohol, wipe the IH coil unit [1] clean of dirt.

NOTE

- When cleaning the IH coil, do not touch the heating roller temperature sensor or do not get the heating roller temperature sensor dirty.
If a mount position of the heating roller temperature sensor is out of alignment, the heating roller temperature sensor is damaged or dirty, the heating roller temperature sensor cannot detect temperature of heating roller correctly and the warning code "P-32" or the trouble code will be occurred.

6.12 Duplex section**6.12.1 Cleaning of the duplex transport rollers****(1) Periodically cleaning parts/cycle**

- Duplex transport rollers: Every 60,000 counts (upon each call)

(2) Procedure

1. Open the right door.

2. Using a cleaning pad with water or alcohol, wipe the duplex transport rollers [1] clean of dirt.

7. Periodical maintenance procedure DF-701

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

7.1 Take-up section

7.1.1 Cleaning of the pick-up roller/feed roller

(1) Periodically cleaning parts/cycle

- Pick-up roller: Every 50,000 counts
- Feed roller: Every 50,000 counts

(2) Procedure

1. Open the left cover [1].

2. Using a cleaning pad with alcohol, wipe the pick-up roller [1] / feed roller [2] clean of dirt.

7.1.2 Cleaning of the separation roller

(1) Periodically cleaning parts/cycle

- Separation roller: Every 50,000 counts

(2) Procedure

1. Open the left cover [1].

2. Using a cleaning pad with alcohol, wipe the separation roller [1] clean of dirt.

7.1.3 Replacing the pick-up roller/feed roller

(1) Periodically replaced parts/cycle

- Pick-up roller: Every 200,000 counts
- Feed roller: Every 200,000 counts

(2) Procedure

1. Open the left cover [1].

2. Remove the E-ring [1] and the gear assy [2].

NOTE

- When reinstalling the gear assy [2], push the gear assy [2] into position while rotating it.

3. Remove the pin [1].

NOTE

- Be careful not to lose the pin [1].

4. Remove the screw [2] and remove the bearing [3].

5. Remove the C-clip [1] and slide the bushing [2] in the direction of the arrow.

6. Remove the pick-up roller/feed roller assy [3].

NOTE

- When installing the pick-up roller/feed roller assy, insert the shaft to the spring [1].

7. Remove two C-rings [1].
8. Remove the arm [2] and the pin [3].

NOTE

- Be careful not to lose the pin [3].

9. Remove the C-ring [4] and the belt [5], and remove the pick-up roller assy [6].

10. Remove two levers [1].

11. Remove two C-rings [1] and two pins [2], and remove two pick-up rollers [3].

NOTE

- Be careful not to lose the pin [2].

12. Remove the C-ring [1] and the pin [2], and remove the arm [3].

NOTE

- Be careful not to lose the pin [2].

13. Remove the C-ring [1], the pulley [2] and the gear [3].

14. Remove two pins [4], and remove the feed roller [5].

NOTE

- Be careful not to lose the pin [4].

15. Reinstall the above parts following the removal steps in reverse.

7.1.4 Replacing the separation roller assy

(1) Periodically replaced parts/cycle

- Separation roller assy: Every 200,000 counts

(2) Procedure

1. Open the left cover [1].

2. Grip both sides [1] of the holder and remove the cover [2].

3. Remove the separation roller assy [1].

NOTE

- Do not lose the spring [2] at the lower part of the separation roller assy [1].

4. Reinstall the above parts following the removal steps in reverse.

7.2 Transport section**7.2.1 Cleaning of the miscellaneous rolls****(1) Periodically cleaning parts/cycle**

- Miscellaneous rolls: Every 50,000 counts

(2) Procedure

1. Lift up the document feed tray.

2. Using a cleaning pad dampened with alcohol, wipe the roll [1].

3. Open the left cover [1].

4. Using a cleaning pad dampened with alcohol, wipe the roll [1].

5. Open the opening and closing guide [1].

6. Using a cleaning pad dampened with alcohol, wipe the roll [1].

7.2.2 Cleaning of the miscellaneous rollers

(1) Periodically cleaning parts/cycle

- Miscellaneous rollers: Every 50,000 counts

(2) Procedure

1. Lift up the document feed tray.

2. Using a cleaning pad dampened with alcohol, wipe the roller [1].

3. Open the left cover [1].

4. Using a cleaning pad dampened with alcohol, wipe the roller [1].

5. Remove the front cover.
G.6.2.1 Front cover (DF-701)
6. Remove the rear cover.
G.6.2.2 Rear cover (DF-701)

7. Lift up the document feed tray [1].
8. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.

9. Remove 10 screws [1], and remove the transport guide [2].

NOTE

- Use care when mounting the screw [1] in the dashed circle (one on the left when looking from the front) since it is different from other nine screws [1].

10. Using a cleaning pad dampened with alcohol, wipe the roller [1].

11. Open the opening and closing guide [1].

12. Using a cleaning pad dampened with alcohol, wipe the roller [1].

7.3 Scanning section

7.3.1 Cleaning of the front side scanning guide

(1) Periodically cleaning parts/cycle

- Front side scanning guide: Every 50,000 counts

(2) Procedure

1. Open the dual scan document feeder.

2. Using a cleaning pad dampened with alcohol, wipe the front side scanning guide [1] clean of dirt.

NOTE

- Be careful not to damage the sheet.

7.3.2 Cleaning of the reflective sensor section

(1) Periodically cleaning parts/cycle

- Reflective sensor section: Every 50,000 counts

(2) Procedure

1. Clean the sensor [1] using a brush or other similar tools.

2. Open the dual scan document feeder.

3. Clean the reflective part [1] using a brush or other similar tools.

8. Periodical maintenance procedure PC-210/PC-110

8.1 Paper feed section

8.1.1 Replacing the tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller

(1) Periodically replacing parts/cycle

- Tray 3 feed roller: Every 300,000 counts
- Tray 3 pick-up roller: Every 300,000 counts
- Tray 3 separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the tray 3 feed roller, tray 3 pick-up roller and tray 3 separation roller at the same time.

(2) Procedure

1. Open the right door.
2. Remove the tray 3.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)
3. Remove the tray 4 or storage box.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

4. Remove the C-clip [1] each, and remove the tray 3 feed roller [2], tray 3 pick-up roller [3] and tray 3 separation roller [4].

NOTE

- When replacing the tray 3 separation roller, replace the torque limiter [5] at the same time.

5. To reinstall, reverse the order of removal.
6. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd].
[I.11.16.2 Life](#)

8.1.2 Replacing the tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller

(1) Periodically replacing parts/cycle

- Tray 4 feed roller: Every 300,000 counts
- Tray 4 pick-up roller: Every 300,000 counts
- Tray 4 separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the tray 4 feed roller, tray 4 pick-up roller and tray 4 separation roller at the same time.

(2) Procedure

1. Open the right door.
2. Remove the tray 3 and tray 4.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

3. Remove the C-clip [1] each, and remove the tray 4 feed roller [2], tray 4 pick-up roller [3] and tray 4 separation roller [4].

NOTE

- When replacing the tray 4 separation roller, replace the torque limiter [5] at the same time.

4. To reinstall, reverse the order of removal.

5. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [4th.].
[I.11.16.2 Life](#)

9. Periodical maintenance procedure PC-410

9.1 Paper feed section

9.1.1 Replacing the feed roller, pick-up roller, separation roller

(1) Periodically replacing parts/cycle

- Feed roller: Every 300,000 counts
- Pick-up roller: Every 300,000 counts
- Separation roller + torque limiter: Every 300,000 counts

NOTE

- Replace the feed roller, pick-up roller and separation roller at the same time.

(2) Procedure

1. Slide out the paper feed tray.
2. Remove the right door.

[G.7.3.1 Right door \(PC-410\)](#)

3. Remove the C-clip [1], and remove the separation roller [2].

NOTE

- When replacing the separation roller, replace the torque limiter [3] at the same time.

4. Remove the C-clip [1], and remove the feed roller [2].

5. Remove the C-clip [1], and remove the pick-up roller [2].

6. To reinstall, reverse the order of removal.
7. Select [Service Mode] -> [Counter] -> [Life] and clear the count of [3rd].
[I.11.16.2 Life](#)

10. Periodical maintenance procedure LU-204

10.1 Paper feed section

10.1.1 Replacing the pick-up roller

(1) Periodically replaced parts/cycle

- Pick-up roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

[1]

[1]

[1]

2. Move the feed roller [1] up.

3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].

4. Remove two C-clips [1], the actuator [2] and remove the pick-up roller [3].

5. Reinstall the above parts following the removal steps in reverse.

10.1.2 Replacing the feed roller

(1) Periodically replaced parts/cycle

- Feed roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

[1]

2. Move the feed roller [1] up.

3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].

4. Remove three C-clips [1], the actuator [2] and remove the feed roller [3].

5. Reinstall the above parts following the removal steps in reverse.

10.1.3 Replacing the separation roller

(1) Periodically replaced parts/cycle

- Separation roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

2. Move the feed roller [1] up.

3. Remove four screws [1] and remove the sheet metal [2].

4. Remove the C-clip [1] while pressing the separation roller down to remove the separation roller [2].

5. Reinstall the above parts following the removal steps in reverse.

11. Periodical maintenance procedure LU-301

11.1 Paper feed section

11.1.1 Replacing the pick-up roller

(1) Periodically replaced parts/cycle

- Pick-up roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

[1]

2. Move the feed roller [1] up.

[1]

3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].

[1]

4. Remove two C-clips [1], the actuator [2] and remove the pick-up roller [3].
5. Reinstall the above parts following the removal steps in reverse.

11.1.2 Replacing the feed roller

(1) Periodically replaced parts/cycle

- Feed roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

[1]

2. Move the feed roller [1] up.

3. Remove two C-clips [1], the bushing [2] and remove the feed roller assy [3].

4. Remove three C-clips [1], the actuator [2] and remove the feed roller [3].

5. Reinstall the above parts following the removal steps in reverse.

11.1.3 Replacing the separation roller

(1) Periodically replaced parts/cycle

- Separation roller: Every 300,000 counts

(2) Procedure

1. Open the upper door.

2. Move the feed roller [1] up.

3. Remove four screws [1] and remove the sheet metal [2].

4. Remove the C-clip [1] while pressing the separation roller down to remove the separation roller [2].

5. Reinstall the above parts following the removal steps in reverse.

12. Periodical maintenance procedure FS-535

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

12.1 Paper exit section

12.1.1 Cleaning procedure for each rollers/each rolls

(1) Periodical cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 prints

(2) Cleaning point

12.1.2 Cleaning of the paddle/3

(1) Periodically cleaning parts/cycle

- Paddle/3: Every 300,000 counts

(2) Procedure

- Using a cleaning pad dampened with alcohol, wipe the paddle/3 [1].

12.1.3 Replacing the paddle/1 unit, paddle/2 unit

(1) Periodically replaced parts/cycle

- Paddle/1 unit, Paddle/2 unit: Every 300,000 prints

(2) Procedure

- Open the finisher front door.

- Remove four screws [1], and remove the staple unit cover [2].

3. Move the stapler unit [1] to the rear of the finisher.

4. Remove the C-clip [1], and remove the paddle/1 unit [2].
5. Remove two C-clips [1], and remove two paddle/2 unit [3].

NOTE

- When reinstalling the paddle/1 unit and paddle/2 unit, they must be placed in the same orientation and the end of their paddles must be aligned in a straight line.

6. Reinstall the above parts following the removal steps in reverse.

12.1.4 Replacing the paper exit roller/A**(1) Periodically replaced parts/cycle**

- Paper exit roller/A: Every 300,000 prints

NOTE

- When replacing the paper exit rollers, be sure to replace all 3 pairs of rollers (6 rollers in all).

(2) Procedure

1. Turn ON the main power switch of the main body.

2. Push up the actuator [1] of the main tray top surface sensor (PS4) with your finger, and then lower the finishing main tray [2].
3. In the state of the finishing main tray being lowered, turn OFF the main and sub power switches and unplug the power cord from the power outlet.

4. Insert a driver into the groove [1] of the paper exit roller and remove the paper exit roller/A [2] by prizing it open.

5. With each of the depressions [1] of a new paper exit roller and the shaft brought together, press the paper exit roller until it clicks to fit it in securely.

13. Periodical maintenance procedure SD-512

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

13.1 Paper exit section

13.1.1 Cleaning procedure for each rollers/each rolls

(1) Periodical cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 counts

(2) Cleaning point

13.1.2 Cleaning of the exit tray transport belt

(1) Periodical cleaning parts/cycle

- Exit tray transport belt: Every 300,000 counts

(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the exit tray transport belt [1].

13.1.3 Cleaning of the upper paddle

(1) Periodical cleaning parts/cycle

- Upper paddle: Every 300,000 counts

(2) Procedure

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove three screws [1], and remove the tri-fold guide motor assy [2].

4. Remove four screws [1], and remove the conveyance assy [2].

5. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

13.1.4 Cleaning of the lower paddle

(1) Periodical cleaning parts/cycle

- Lower paddle: Every 300,000 counts

(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

13.1.5 Replacing the upper paddle assy

(1) Periodically replaced parts/cycle

- Upper paddle assy: Every 2,000,000 counts

(2) Procedure

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.

G.7.9.1 Front cover (SD-512)

12. To reinstall, reverse the order of removal.

13.1.6 Replacing the lower paddle unit

(1) Periodically replaced parts/cycle

- Lower paddle unit: Every 2,000,000 counts

3. Disconnect two connectors [1].
4. Remove the E-ring [2].
5. Remove the gear [3] and the belt [4].
6. Remove four screws [5], and remove the center fold change motor assy [6].

NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

7. Remove the upper paddle assy [1].

8. Remove the bushing [1].
9. Remove the E-ring [2], and remove the bushing [3].
10. Remove two E-rings [4].
11. Replace the upper paddle assy [5].

(2) Procedure

1. Replace four lower paddle units [1].

14. Periodical maintenance procedure JS-602

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

14.1 Paper exit section

14.1.1 Cleaning of the transport rollers/exit rollers

(1) Periodically cleaning parts/cycle

- Transport roller: Every 100,000 counts
- Exit roller: Every 100,000 counts

(2) Procedure

1. Open the cover.

2. Using a cleaning pad with alcohol, wipe the transport rollers [1] clean of dirt.

3. Using a cleaning pad with alcohol, wipe the exit rollers [1] clean of dirt.

15. Periodical maintenance procedure PI-505

15.1 Paper feed section

15.1.1 Replacing the pick-up roller /Up and the feed roller /Up

(1) Periodically replaced parts/cycle

- Pick-up roller /Up: Every 200,000 counts
- Feed roller /Up: Every 100,000 counts

(2) Replacing procedure

1. Remove the upper cover.

[G.7.11.1 Upper cover \(PI-505\)](#)

2. Remove two C-clips [1], and then slide two bearings [2] at the both sides and remove the feed roller assy /Up [3].

3. Remove the bearing [1] and remove the actuator [2].

4. Remove two C-clips [1] and remove two bearings [2].

5. Remove the C-clip [1].
6. Slide two roller shafts [2] to the arrow-marked direction to remove the pick-up roller /Up [3] and the feed roller /Up [4].

NOTE

- Reinstalling the pick-up roller and the feed roller with the blue faces of the one-way clutches of the pick-up roller and the feed roller face to the front.

7. Remove the pick-up roller [1] and the feed roller [2] from the one-way clutches [3] and [4].

NOTE

- When reinstalling the pick-up roller [1], be sure to insert its cutout [5] over the protrusion [6] of the one-way clutch [3].
- When reinstalling the feed roller [2], be sure to insert its cutout [7] over the protrusion [8] of the one-way clutch [4].

8. To reinstall, reverse the order of removal.

15.1.2 Replacing the pick-up roller /Lw and the feed roller /Lw**(1) Periodically replaced parts/cycle**

- Pick-up roller /Lw: Every 200,000 counts
- Feed roller /Lw: Every 100,000 counts

(2) Replacing procedure

1. Pull the release lever [1] and open the upper door [2].

2. Take steps 2 to 7 in the replacement procedure of the pick-up roller /Up and feed roller /Up.
[F.15.1.1 Replacing the pick-up roller /Up and the feed roller /Up](#)
3. To reinstall, reverse the order of removal.

15.1.3 Replacing the separation roller /Up and the torque limiter /Up**(1) Periodically replaced parts/cycle**

- Separation roller /Up: Every 100,000 counts
- Torque limiter /Up: Every 600,000 counts

(2) Replacing procedure

1. Remove the upper cover.
[G.7.11.1 Upper cover \(PI-505\)](#)

2. Remove two C-clips [1], and then slide two bearings [2] at the both sides and remove the feed roller assy /Up [3].

3. Release hooks [1] at the both sides, and then lift up and remove the separation roller assy /Up [2].

4. Remove the C-clip [1] and remove the separation roller /Up [2] and the torque limiter /Up [3].

NOTE

- Install the separation roller with two notches [4] face to the front and be aligned with the prong [5].

5. To reinstall, reverse the order of removal.

15.1.4 Replacing the separation roller /Lw and the torque limiter /Lw**(1) Periodically replaced parts/cycle**

- Separation roller /Lw: Every 100,000 counts
- Torque limiter /Lw: Every 600,000 counts

(2) Replacing procedure

1. Pull the release lever [1] and open the upper door [2].

2. Take steps 2 to 4 in the replacement procedure of the separation roller /Up and torque limiter /Up.

[F.15.1.3 Replacing the separation roller /Up and the torque limiter /Up](#)

3. To reinstall, reverse the order of removal.

16. Periodical maintenance procedure ZU-606

16.1 Punch section

16.1.1 Replacing the punch scraps conveyance motor (M7)

(1) Periodical replaced parts/cycle

- Punch scraps conveyance motor: Every 1,000,000 counts

(2) Procedure

1. Remove the Z folding unit.

[G.7.12.5 Z folding unit \(ZU-606\)](#)

2. Disconnect the connector [1] and remove two screws [2], and remove the punch scraps conveyance motor assy [3].

3. Remove two screws [1], and remove the punch scraps conveyance motor [2].

4. Reinstall the above parts following the removal steps in reverse.

16.1.2 Replacing the punch clutch (CL1)

(1) Periodical replaced parts/cycle

- Punch clutch: Every 1,000,000 counts

(2) Procedure

1. Remove the Z folding unit.

[G.7.12.5 Z folding unit \(ZU-606\)](#)

2. Remove the punch unit.

[G.7.12.6 Punch unit \(ZU-606\)](#)

3. Cut three wiring harness bands [1].

**NOTE**

- When bind the wiring harness band [1], face them to the arrow-marked direction [2] to avoid the contact with the conveyance section of the main body.

4. Remove two screws [1], and remove the punch motor assy [2].

NOTE

- When reinstalling the punch motor assy [2], press the punch motor gear [3] to the gear [4]. Be sure to check that the gears rotate smoothly and there is appropriate backlash.

5. Remove the C-clip [1], and remove the punch clutch [2].

NOTE

- When reinstalling punch clutch [2], be sure to check the stopper [3] is engaged with a projection [4] of metal plate.

6. Reinstall the above parts following the removal steps in reverse.

17. Periodical maintenance procedure FS-534

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

17.1 Paper exit section

17.1.1 Cleaning procedure for each rollers/each rolls

(1) Periodically cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 counts

(2) Cleaning point

17.1.2 Cleaning the paddles

(1) Periodically cleaning parts/cycle

- Paddles: Every 300,000 counts

(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

17.1.3 Replacing the paddle units

(1) Periodically replacing parts/cycle

- Paddle units: Every 2,000,000 counts

(2) Procedure

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the front door of the finisher.
[G.7.13.2 Front door \(FS-534\)](#)
3. Remove the front upper cover of the finisher.
[G.7.13.3 Front upper cover \(FS-534\)](#)
4. Remove the rear cover of the finisher.
[G.7.13.1 Rear cover \(FS-534\)](#)

5. Remove the paper exit tray [1].

6. Remove two tabs [1], and remove the cover [2].

7. Release the tab [1], and remove the main tray upper position detect switch [2].

8. Remove four screws [1], and remove the cover [2].

9. Remove three paddle units [1].

NOTE

- When reinstalling the paddle units, be careful not to attach them at an incorrect location or in an incorrect orientation.
Length: [4] > [2] > [3]

10. Reinstall the above parts following the removal steps in reverse.

18. Periodical maintenance procedure SD-511

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

18.1 Paper exit section

18.1.1 Cleaning procedure for each rollers/each rolls

(1) Periodically cleaning parts/cycle

- Each rollers/Each rolls: Every 300,000 prints

(2) Cleaning point

18.1.2 Cleaning the upper paddle

(1) Periodically cleaning parts/cycle

- Upper paddle: Every 300,000 counts

(2) Procedure

- Remove the saddle unit.

[G.7.15.2 Saddle unit \(SD-511\)](#)

- Remove the front cover.

[G.7.15.1 Front cover \(SD-511\)](#)

- Remove three screws [1], and remove the tri-fold guide motor assy [2].

- Remove four screws [1], and remove the conveyance assy [2].

5. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

18.1.3 Cleaning the lower paddle

(1) Periodically cleaning parts/cycle

- Lower paddle: Every 300,000 counts

(2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paddle [1].

18.1.4 Replacing the upper paddle assy

(1) Periodically replacing parts/cycle

- Upper paddle assy: Every 2,000,000 counts

(2) Procedure

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Disconnect two connectors [1].
4. Remove the E-ring [2].
5. Remove the gear [3] and the belt [4].
6. Remove four screws [5], and remove the center fold guide motor assy [6].

**NOTE**

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

7. Remove the upper paddle assy [1].

8. Remove the bushing [1].
9. Remove the E-ring [2], and remove the bushing [3].
10. Remove two E-rings [4].
11. Replace the upper paddle assy [5].

12. Reinstall the above parts following the removal steps in reverse.

18.1.5 Replacing the lower paddle unit

(1) Periodically replacing parts/cycle

- Lower paddle unit: Every 2,000,000 counts

(2) Procedure

1. Remove four lower paddle units [1].

19. Periodical maintenance procedure FS-533

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

19.1 Paper exit section

19.1.1 Cleaning procedure for each parts

- (1) Periodically cleaning parts/cycle
 - Each rollers/Each rolls: Every 300,000 counts
- (2) Cleaning point

NOTE

- Do not clean the alignment roller F/R.

19.1.2 Cleaning the paper exit paddle

- (1) Periodically cleaning parts/cycle
 - Paper exit paddle: Every 300,000 counts
- (2) Procedure

1. Using a cleaning pad dampened with alcohol, wipe the paper exit paddle [1].

[1]

19.2 Alignment section

19.2.1 Replacing the alignment roller assy F/R

- (1) Periodically replacing parts/cycle
 - Alignment roller assy F/R: Every 1,000,000 counts

[1]

[2]

[1] Alignment roller assy R

[2] Alignment roller assy F

(2) Procedure

1. Remove the front cover.

G.7.16.1 Front cover (FS-533)

2. Remove the C-clip [1].
3. Move the bushing [2] to the right.

4. Pull the paper stopper [1] and remove the alignment roller assy /F [2].

5. Remove the C-clip [1].
6. Move the bearing [2] to the left.

7. Press the paper stopper [1] to the rear and remove the alignment roller assy /R [2].

8. Reinstall the above parts following the removal steps in reverse.

G DISASSEMBLY/REASSEMBLY

1. Disassembly/adjustment prohibited items

1.1 Paint-locked screws

NOTE

- To prevent loose screws, a screw lock in blue or green series color is applied to the screws.
- The screw lock is applied to the screws that may get loose due to the vibrations and loads created by the use of machine or due to the vibrations created during transportation.
- If the screw lock coated screws are loosened or removed, be sure to apply a screw lock after the screws are tightened.

1.2 Red-painted screws

NOTE

- The screws which are difficult to be adjusted in the field are painted in red in order to prevent them from being removed by mistake.
- Do not remove or loosen any of the red-painted screws in the field. It should also be noted that, when two or more screws are used for a single part, only one representative screw may be marked with the red paint.

1.3 Variable resistors on board

NOTE

- Do not turn the variable resistors on boards for which no adjusting instructions are given in Adjustment/Setting.

1.4 Warnings for disassembly

- When accessing a hard-to-view or narrow spot, be careful about sharp edges and burrs on the frame and parts.
They may injure your hands or fingers.
- If it is absolutely necessary to service the machine with the door open or external covers removed, always be attentive to the motion of the internal parts.
A normally protected part may cause unexpected hazards.
- When removing a part that secures a motor, gear, or other moving part, disassembling a unit, or reinstalling any of such parts and units, be careful about moving parts and use care not to drop any part or unit. During the service procedure, give sufficient support for any heavy unit.
You may be injured by a falling part or unit.

1.5 Warnings / Precautions during setup or transportation

- Whenever mounting an option on the machine, be attentive to the motion of the other workers performing the task.
Another worker may be injured by a pinch point between the machine and the option.

WARNING

- When mounting an option on the machine, be careful about the clearance between the machine and the option.
You may be injured with your finger or hand pinched between the machine and the option.

CAUTION

- Do not leave the machine unattended during transportation, installation, and/or inspection.
If the machine is left unattended, face protrusions toward the wall or take other necessary precautions to prevent a user or other person in the area from stumbling over a protrusion of the machine or being caught by a cable, possibly causing a fall to the floor or other personal injury.

1.6 Parts not allowed to be removed

1.6.1 ZU-606

(1) Punch section

- The precision of the punch edges is ensured in the punch unit. The normal punch operation may be affected if it is disassembled. Never loosen or remove these screws and retaining rings.

[1]	Screws not allowed to be removed	-	-
-----	----------------------------------	---	---

(2) Z-folding section

- The screws position the clearance of the conveyance guide plate. The precision of the Z-folding may be affected if it is disassembled. Never loosen or remove these screws.

[1]	Screws not allowed to be removed	[2]	Conveyance guide plate
-----	----------------------------------	-----	------------------------

2. Units from which removing is prohibited

2.1 CCD board

2.1.1 Reason for prohibition

- Since the accuracy of the CCD board is guaranteed as a unit, no accuracy is guaranteed if it is disassembled. Therefore, screws that lead to the disassembly of the CCD board must not be removed.

2.2 PH unit

2.2.1 Reason for prohibition

- The laser runs inside the PH unit. Opening the cover may cause dust to enter and interrupt the laser. Do not remove any screw which may disassemble the PH unit.

2.3 Fusing unit

2.3.1 Reason for prohibition

- Inner part of the fusing unit and the position of the fusing belt are adjusted prior to shipping. Do not remove any screw which may disassemble the fusing unit.

3. Disassembly/assembly warning/caution items

3.1 Removal/installing of PWBs

WARNING

- To avoid electric shock, after turning OFF the power switch, do not touch **the hazards area on DC power supply unit** for 240 minutes.
If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

CAUTION

- When removing or installing a circuit board or other electrical component, refer to “Handling of PWBs” and follow the corresponding removal or installing procedures.
- The removal procedures given in the following omit the removal of connectors and screws securing the circuit board support or circuit board.
- Where it is absolutely necessary to touch the ICs and other electrical components on the board, be sure to ground your body.

3.2 Use a special screw

- To prevent the customers from injury, the special screws are used at following positions of the machine.
- When removing and reinstalling a part or unit at following positions, make sure to use the special screws that is used to secure the part or unit.

3.2.1 C554

3.2.2 C454

4. Notes when transporting the machine

NOTE

- When transporting a machine to reinstall it in another location, attach the following protective materials to the machine in order to prevent the machine from being damaged or spilling out by vibration during transportation.
- The protective materials are removed when the machine is set up. However, be sure to keep the protective materials after finishing the set-up.

4.1 Protective materials

4.1.1 Protective materials for the photo conductors

(1) Reinstall procedure

1. Open the front door.
2. Remove the waste toner box.
[F.6.8.1 Replacing the waste toner box](#)
3. Insert the protective materials for the photo conductors [1] in the indicated position and push it as far as it will go.

4.1.2 Scanner packing bracket

1. Check that the exposure unit is at the home position.
2. Remove four caps.
3. Attach the scanner packing brackets [1] to fix the scanner.

2. Remove the control panel left cover/2.
[G.5.2.7 Control panel left cover/2](#)
3. Remove the control panel right cover.
[G.5.2.8 Control panel right cover](#)
4. Remove the control panel upper cover.
[G.5.2.9 Control panel upper cover](#)
5. Remove the control panel front cover.
[G.5.2.10 Control panel front cover](#)
6. Remove the control panel lower cover.
[G.5.2.11 Control panel lower cover](#)

7. Remove two screws [1], and remove the speaker cover [2].

8. Disconnect the connector [1].

9. Remove three screws [1], and remove the control panel unit [2].

10. To reinstall, reverse the order of removal.

11. Carry out the touch panel calibration.

[G.5.2.12.\(1\) Touch panel calibration](#)

12. Carry out the [\[Accessibility\] -> \[Touch Panel Adjustment\]](#).

(1) Touch panel calibration

- After replacing the control panel unit, you must perform the touch panel calibration. Perform one of the calibration procedures described below.

(a) Panel Calibration by using USB memory

- Connect the USB memory containing the MFP firmware data to the service port.
For information on how to store the firmware data into a USB memory, refer to "[J.2. USB memory](#)".
- While pressing the 'Reset' key, turn the main power switch ON.
- As the calibration screen appears, press the Start key, perform calibration and wait for a while.
- Confirm that the completion message. Touch [Close].
- Turn OFF the main power switch, and remove the USB memory.

NOTE

- Once the panel calibration has been completed, panel screen transit to the firmware writing mode and start to update automatically after 30 seconds.

(b) Panel Calibration by manual operation

- Press [Menu] and touch [Counter].
- Press Stop -> Clear -> 1 -> 1 -> 6 -> 6 -> Start key, then calibration starts.
- After 30 seconds, turn OFF the main power switch.

5.2.13 Original glass

- Remove the scanner right cover.

[G.5.2.2 Scanner right cover](#)

2. Remove the screw [1] each, and remove two original glass fixing brackets [2].

3. Remove the original glass [1].

4. To reinstall, reverse the order of removal.

5. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Scan Area\] -> \[Scanner Image Centering\]](#).

6. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Scan Area\] -> \[Image Position: Leading Edge\]](#).

5.2.14 Upper front door

1. Open the upper front door.

2. Remove two C-clips [1].

3. Slide out the upper front door [1] to the right direction with the door halfway open, and then remove the upper front door [1].

4. To reinstall, reverse the order of removal.

5.2.15 Lower front door

1. Open the lower front door.

2. Remove the screw [1], and remove the stopper [2].

3. Remove the C-clip [1].
4. Slide out the lower front door [1] to the right direction, and then remove the lower front door [1].

5. To reinstall, reverse the order of removal.

5.2.16 Lower front cover

1. Remove the waste toner box.

[F.6.8.1 Replacing the waste toner box](#)

2. Remove three screws [1], and remove the lower front cover [2].

3. To reinstall, reverse the order of removal.

5.2.17 Front cover

1. Remove the upper front door.

[G.5.2.14 Upper front door](#)

2. Remove the lower front door.

[G.5.2.15 Lower front door](#)

3. Remove the lower front cover.

[G.5.2.16 Lower front cover](#)

4. Remove 11 screws [1], and remove the front cover [2].

5. To reinstall, reverse the order of removal.

5.2.18 Left cover

1. Open the upper front door.

2. Open the lower front door.

3. Remove three screws [1], and remove the left cover [2].

4. To reinstall, reverse the order of removal.

5.2.19 Paper exit cover

1. Open the upper front door.
2. Open the lower front door.
3. Remove the left cover.

[G.5.2.18 Left cover](#)

4. Remove the paper exit cover [1].

5. To reinstall, reverse the order of removal.

5.2.20 Paper exit rear cover

1. Remove three screws [1], and remove the rear left cover [2].

2. Remove the screw [1], and remove the cover [2].

3. Remove two screws [1], and remove the paper exit rear cover [2] with sliding out the paper exit rear cover [2] to the left direction.

4. To reinstall, reverse the order of removal.

5.2.21 Rear right cover

1. Remove the screw [1], and remove the right door stopper (upper section) [2].

2. Disconnect the connector [1], and remove the harness from the harness guide.

3. Remove four screws [1], and remove the rear right cover [2].

4. To reinstall, reverse the order of removal.

5.2.22 Upper right cover

1. Remove the scanner right cover.

[G.5.2.2 Scanner right cover](#)

2. Remove two screws [1], and remove the upper right cover [2].

3. To reinstall, reverse the order of removal.

5.2.23 Lower rear cover/1

1. Remove 10 screws [1], and remove the lower rear cover/1 [2].

2. To reinstall, reverse the order of removal.

5.2.24 Lower rear cover/2

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the ozone filter.
[F.6.1.1 Replacing the ozone filter](#)
3. Remove the toner filter.
[F.6.1.2 Replacing the toner filter](#)

4. Remove six screws [1], and remove the lower rear cover/2 [2].

5. To reinstall, reverse the order of removal.

5.2.25 DF cable cover

1. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

2. To reinstall, reverse the order of removal.

5.2.26 Upper rear cover

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)

2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
3. Remove the scanner rear cover.
[G.5.2.1 Scanner rear cover](#)
4. Remove the DF cable cover.
[G.5.2.25 DF cable cover](#)

5. Disconnect the cable [1], and remove it from the cable guide.

6. Remove the banding band [1], and disconnect three connectors [2].

7. Remove two screws [1] and three tabs [2], and remove upper rear cover [3].

8. To reinstall, reverse the order of removal.

5.2.27 Tray 1

1. Slide out the tray 1.

2. Remove the screw [1], and remove the stopper [2].

3. Hold up the tray 1 [1] to remove it.

4. To reinstall, reverse the order of removal.

5.2.28 Tray 2

1. Slide out the tray 2.

2. Remove the screw [1], and remove the stopper [2].

3. Hold up the tray 2 [1] to remove it.

4. To reinstall, reverse the order of removal.

5.3 Disassembly/reassembly procedure (Units)

5.3.1 LED exposure unit

1. Remove the original glass.

[G.5.2.13 Original glass](#)

2. Remove four screws [1] of the LED exposure unit [2].

3. Disconnect the flat cable [1], and remove the LED exposure unit [2].

4. To reinstall, reverse the order of removal.

NOTE

- When replacing the LED exposure unit with a brand-new one, peel the protective film from the unit after attaching it.

5.3.2 Paper feed unit

1. Slide out the tray 1 and tray 2.

2. Remove the screw [1], and remove the right door stopper (upper section) [2].

3. Remove the screw [1], and remove the right door stopper (lower section) [2].

4. Remove the screw [1], and remove the connector cover [2].

5. Open the right door and the regist unit.

6. Remove the screw [1] and the tab [2], and remove the connector cover [3].

7. Disconnect five connectors [1].

8. Remove five screws [1], and remove the paper feed unit [2].

9. To reinstall, reverse the order of removal.

5.3.3 PH unit

CAUTION

- Do not supply power with the write unit (PH unit) shifted from the specified mounting position.
The laser light can enter your eye, leading to a risk of loss of eyesight.

- Do not disassemble or adjust the write unit (PH unit) incorporating a laser.
The laser light can enter your eye, leading to a risk of loss of eyesight.

(1) Removal procedure

1. Remove the lower front cover.
[G.5.2.16 Lower front cover](#)
2. Remove the DC power supply.
[G.5.4.6 DC power supply \(DCPU\)](#)
3. Remove the PH relay board.
[G.5.4.7 PH relay board \(PHRYB\)](#)

4. Disconnect three connectors [1] on the front side board.

5. Remove the harness from the wire saddle [1].

6. Remove the cable holder [1] of the flat cable.

7. Remove the screw [1], and remove the metal plate [2].

8. Disconnect two connectors [1].

9. Remove seven screws [1], and remove the metal plate [2].

10. Remove two screws [1], and remove the set pin [2] for the PH unit.

11. Remove the PH unit [1].

12. To reinstall, reverse the order of removal.

13. Carry out the [\[print head skew reset\]](#) after selecting [\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[Skew adjustment\]](#).

14. Carry out the [\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[Printer Area\]](#) -> [\[Leading Edge Adjustment\]](#).

15. Carry out the [\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[Printer Area\]](#) -> [\[Printer Image Centering Side 1\]](#).

5.3.4 Sub hopper unit

1. Remove the front cover.

[G.5.2.17 Front cover](#)

2. Remove the toner cartridge/Y,M,C,K.

[F.6.5.1 Replacing the toner cartridge](#)

3. Remove the drum unit/Y,M,C,K.

[F.6.2.1 Replacing the drum unit](#)

4. Remove the developing unit/Y,M,C,K.

[F.6.4.1 Replacing the developing unit](#)

5. Remove the paper exit cover.

[G.5.2.19 Paper exit cover](#)

6. Remove five screws [1] of the sub hopper unit.

7. Disconnect three connectors [1], and remove the sub hopper unit [2].

8. To reinstall, reverse the order of removal.

5.3.5 Right door unit

1. Remove the rear right cover.

[G.5.2.21 Rear right cover](#)

2. Remove the screw [1], and remove the right door stopper (upper section) [2].

3. Remove the screw [1], and remove the right door stopper (lower section) [2].

4. Remove the screw [1], and remove the connector cover [2].

5. Open the right door.

6. Remove two screws [1], and remove the connector cover/1 [2].

7. Disconnect the connector [1].

8. Remove the screw [2], and remove the ground terminal [3].

9. Remove the screw [1], and remove the connector cover/2 [2].

10. Disconnect three connectors [1], and remove the harness from the wire saddle [2].

11. Remove the screw [1], and remove the ground terminal [2].

12. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.

13. Remove three screws [1], and remove the hinge (upper section) [2].

14. Hold up the right door unit [1] to remove it.

15. To reinstall, reverse the order of removal.

NOTE

- When installing the right door unit, align it with the guide lines drawn on the scales indicated on the machine frame. Open and close the right door to check for any interference and correct if necessary.

5.3.6 Manual bypass tray unit

1. Remove the right door unit.

[G.5.3.5 Right door unit](#)

2. Remove two screws [1], and remove the shaft holder/1 [2].

3. Remove 12 screws [1], and remove the vertical transport roll assy [2].

4. Remove four screws [1], and remove the shaft holder/2 [2].

5. Remove two screws [1], and remove the shaft holder/3 [2].

6. Remove three screws [1], and remove the right door lever assy [2].

7. Remove 12 screws [2] of the manual bypass tray unit [1].

8. Remove the manual bypass tray unit [1].

9. To reinstall, reverse the order of removal.

5.3.7 Regist unit

1. Remove the right door unit.
[G.5.3.5 Right door unit](#)

2. Disconnect the connector [1], and remove the harness from the wire saddle [2].

3. Draw the gauge line to the hinge mounting part [1] along the cutout of the hinge on the frame of the main body.

4. Remove two screws [1], and remove the hinge [2].

5. Hold up the register unit [1] to remove it.

6. To reinstall, reverse the order of removal.

5.3.8 Hard disk

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)

2. Disconnect two connectors [1].
3. Remove the harness from two wire saddles [2].

4. Remove four screws [1], and remove the hard disk assy [2].

5. Remove four screws [1], and remove the metal plate [2].

6. To reinstall, reverse the order of removal.

7. Carry out the [\[Service Mode\]](#) -> [\[State Confirmation\]](#) -> [\[Memory/HDD Adj.\]](#) -> [\[HDD Format\]](#) for logical format.

8. Carry out the [\[Service Mode\]](#) -> [\[State Confirmation\]](#) -> [\[Memory/HDD Adj.\]](#) -> [\[HDD R/W Check\]](#) and check the HDD operations.

5.3.9 How to open the PWB box/1

1. Remove the rear right cover.

[G.5.2.21 Rear right cover](#)

2. Remove the lower rear cover/1.

[G.5.2.23 Lower rear cover/1](#)

3. Remove the lower rear cover/2.

[G.5.2.24 Lower rear cover/2](#)

4. Remove the screw [1], and remove the connector cover [2].

5. Remove 11 screws [1] of the PWB box.

6. Remove the harness from three wire saddles [1].

7. Disconnect three connectors [1].

8. Open the PWB box/1.

NOTE

- When open the PWB box/1, make sure that the connector (CN3) [1] of the expansion control board is not disconnected.

5.3.10 PWB box/2 (C554)

CAUTION

- The lead wire terminal must not be placed on the projections located at the four corners of the terminal block of the IH power supply. Securely tighten the screw so that the lead wire is routed to the directions that are illustrated.
The terminal leakage may cause fire.

CAUTION

1. Remove the rear right cover.
[G.5.2.21 Rear right cover](#)
2. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
3. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
4. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
5. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)

6. Remove seven screws [1], and remove the IH power supply protective shield [2].

7. Disconnect the connector [1], and remove the harness from the edge cover [2] and two wire saddles [3].
8. Disconnect the connector [4], and remove the harness from the edge cover [5].

9. Disconnect all connectors of the expansion control board [1].
10. Remove the harness [3] from two wire saddles [2].

11. Disconnect the connector [1].
12. Disconnect two solderless terminals [2].
13. Remove two screws [3], and remove the harness from the wire saddle [4].
14. Remove the harness from the harness guide [5] and the edge cover [6].

15. Remove five screws [1], and remove the PWB box/2.

16. To reinstall, reverse the order of removal.

5.3.11 Main drive unit

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
3. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
4. Remove the expansion control board.
[G.5.4.14 Expansion control board \(EXCB\)](#)

6. Remove the registration motor.
[G.5.5.19 Registration motor \(M24\)](#)
7. Remove the high voltage unit.
[G.5.4.12 High voltage unit \(HV\)](#)
8. Remove the transport motor.
[G.5.5.1 Transport motor \(M1\)](#)
9. Remove the PC motor.
[G.5.5.2 PC motor \(M2\)](#)
10. Remove the developing motor.
[G.5.5.16 Developing motor \(M21\)](#)

11. Remove the screw [1].
12. Remove the harness guide [2] as clearing the harness.

13. Disconnect the connector [1].

14. Remove four screws [1], and remove the metal plate [2].

15. Remove four screws [1], and remove the metal plate [2].

16. Remove the harness from the eight wire saddles [1] and four edge covers [2].

17. Disconnect the connector [3].

18. Remove four screws [1].

19. Remove the reinforcing plate [2] as clearing the harness.

20. Remove two solderless terminals [1].

21. Remove two screws [1], and remove the harness guide [2].

22. Remove two screws [1], and remove the bracket [2].

23. Open the right door.

24. Remove the screw [1].

25. Remove the harness from three harness guide [1].
 26. Remove the harness from two wire saddles [2].
 27. Remove four screws [3], and remove the harness from the harness guide.

28. Remove nine screws [1], and remove the main drive unit [2].

29. To reinstall, reverse the order of removal.

5.3.12 Transport unit

1. Remove the main drive unit.
[G.5.3.11 Main drive unit](#)
2. Remove the lower front cover.
[G.5.2.16 Lower front cover](#)

3. Remove the harness from four wire saddles [1].
4. Disconnect two connectors (CN8, CN11) [2] on the front side board.

5. Open the right door and the regist unit.

6. Remove three screws [1], and remove the transport unit [2].

NOTE

- When removing the transport unit [2], be careful not to damage or deform the guide sheet of the tray 1 paper feed unit.

7. To reinstall, reverse the order of removal.

5.3.13 IH coil (IHC) (C554)

CAUTION

- The lead wire terminal must not be placed on the projections located at the four corners of the terminal block of the IH power supply. Securely tighten the screw so that the lead wire is routed to the directions that are illustrated.
The terminal leakage may cause fire.

CAUTION

1. Remove the fusing unit.
[F.6.11.1 Replacing the fusing unit \(C554\)](#)
2. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
3. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
4. Remove the upper rear cover.

24. Remove the connector [1] to move the harness out of the working area.

25. Remove three screws [1], and remove the hopper drive unit [2].

26. To reinstall, reverse the order of removal.

5.4 Disassembly/reassembly procedure (Boards)

5.4.1 CCD board (CCDB)

(1) Removal procedure

1. Remove the original glass.

[G.5.2.13 Original glass](#)

2. Remove five screws [1], and remove the CCD board protective shield [2].

3. Disconnect three connectors [1].

4. Remove the screw [1] each, and remove two retainer plates [2].
5. Remove the CCD board [3].

(2) Reinstall procedure

1. Check the mark [1] on lens of the CCD board.

NOTE

- The mark is be “-”, “0”, or “+”.

2. Install the CCD board [1] to the main body.
3. Set the scale [2] of the CCD board to the same position as the mark checked on step 1, and secure it with two retainer plates [3] and the screw [4] at two points.

4. For the rest of the mounting procedure, reverse the order of removal.
5. Reinstall the original glass.
6. Turn ON the main power switch.
7. Carry out the [\[Service Mode\] -> \[System 2\] -> \[CCD Calibration\]](#).
8. Carry out the [\[Service Mode\] -> \[System 2\] -> \[Line Mag Setting\]](#).
9. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Printer Area\] -> \[Paper Feed Direction Adj.\]](#).
10. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Scan Area\] -> \[Main Scan Zoom Adj.\]](#). If the specifications are not met, loosen the CCD board mounting screws and move the CCD board in the sub scan direction as necessary.

NOTE

- Hold the CCD board by hand when moving it. NEVER use a screwdriver or similar tool to tap to move it, as a varied distance between the CCD sensor and lens results.

11. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Scan Area\] -> \[Scanner Image Centering\]](#).

5.4.2 Scanner drive board (SCDB)

1. Remove the scanner upper rear cover.
[G.5.2.5 Scanner upper rear cover](#)

2. Disconnect all connectors on the scanner drive board.

3. Remove three screws [1], and remove the scanner drive board [2].

4. To reinstall, reverse the order of removal.

5.4.3 Machine condition monitor board (MCMB)

1. Remove the control panel left cover/2.

[G.5.2.7 Control panel left cover/2](#)

2. Remove two screws [1]. Disconnect the connector [2], and remove the machine condition monitor board [3].

3. To reinstall, reverse the order of removal.

5.4.4 USB board (USBB)

1. Remove the control panel right cover.

[G.5.2.8 Control panel right cover](#)

2. Remove two screws [1]. Disconnect the connector [2], and remove the USB board [3].

3. To reinstall, reverse the order of removal.

5.4.5 Front side board (FRB)

1. Remove the front cover.

[G.5.2.17 Front cover](#)

2. Disconnect all connectors on the front side board.

3. Remove six screws [1], and remove the front side board [2].

4. To reinstall, reverse the order of removal.

5.4.6 DC power supply (DCPU)

WARNING

- To avoid electric shock, after turning OFF the power switch, do not touch the hazards area on DC power supply unit for 240 minutes.
If the DC power supply unit is faulty, it may take time before its voltage drops sufficiently.

- Remove the left cover.
[G.5.2.18 Left cover](#)
- Remove the paper exit cover.
[G.5.2.19 Paper exit cover](#)

3. Remove six screws [1], and remove the DC power supply protective shield [2].

4. Disconnect the connector [1].
5. Remove two screws [2], and remove the power supply cooling fan assy [3].

6. Remove the harness from three wire saddles [1].

7. Disconnect all connectors on the DC power supply.

8. Remove four screws [1], and remove the DC power supply [2].

9. To reinstall, reverse the order of removal.

5.4.7 PH relay board (PHRYB)

1. Remove the DC power supply.
[G.5.4.6 DC power supply \(DCPU\)](#)

2. Disconnect all flat cables on the PH relay board.

3. Remove two screws [1], and remove the PH relay board [2].

4. To reinstall, reverse the order of removal.

5.4.8 Printer control board (PRCB)

NOTE

- Do not replace the printer control board and the SSD board with new ones at the same time. The backup data is lost and image failure may be caused.
 - Do not replace the printer control board and the MFP board with new ones at the same time.
1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
 2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)

3. Remove the harness from six wire saddles [1].

4. Disconnect all connectors on the printer control board.

5. Remove eight screws [1], and remove the printer control board [2].

6. To reinstall, reverse the order of removal.
7. [Install the firmware.](#)
 8. Turn OFF the main power switch.
 9. Disconnect the finisher or job separator.
 10. Turn ON the main power switch.
 11. C-4802 code will appear. (C-4802 is normal operation when replacing the PRCB.)
 12. [Call the Service Mode to the screen.](#)
 13. Select [Enhanced Security] -> [Engine Data Backup].
 14. Select [Engine Data Reflect Mode] and press the Start key.
 15. Select [Yes] and press the Start key again.
 16. Turn OFF the main power switch after 'OK' status is appeared.

17. Connect the finisher or job separator.
18. Turn ON the main power switch.

5.4.9 SSD board (SSDB)

NOTE

- **Never use the combination of the used SSD board removed from another machine and the original MFP board. This combination causes corruption of stored data.**
Note that the combination of the original SSD board and the used MFP board removed from another machine also causes the same problem.
- **Do not replace the printer control board and the SSD board with new ones at the same time. The backup data is lost and image failure may be caused.**
- **Do not replace the MFP board and the SSD board with new ones at the same time.**

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the hard disk.
[G.5.3.8 Hard disk](#)

3. Remove the screw [1], and remove the SSD board [2].

4. To reinstall, reverse the order of removal.
5. [Install the firmware.](#)

5.4.10 Memory board/1 (MEMB/1)

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)

2. Remove the memory board/1 [1] on the MFP board.

NOTE

- **When the optional upgrade kit UK-204 is installed, the memory board/2 can be removed in the same steps.**

3. To reinstall, reverse the order of removal.

5.4.11 MFP board (MFPB)

NOTE

- **Never use the combination of the used MFP board removed from another machine and the original SSD board. This combination causes corruption of stored data.**
Note that the combination of the original MFP board and the used SSD board removed from another machine also causes the same problem.
- **Do not replace the MFP board and the SSD board with new ones at the same time.**
- **Do not replace the MFP board and the printer control board with new ones at the same time.**

1. Remove the hard disk.
[G.5.3.8 Hard disk](#)
2. Remove the SSD board.
[G.5.4.9 SSD board \(SSDB\)](#)
3. Remove the memory board/1 and memory board/2.
[G.5.4.10 Memory board/1 \(MEMB/1\)](#)
4. Remove the dual scan image processing board.
[G.5.4.15 Dual scan image processing board \(DSIPB\)](#)
5. If an optional security kit SC-508 is mounted, remove the DSC board/1 and DSC board/2.
6. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)

7. Remove the screw [1], and remove the cover [2].

8. Remove all connectors and flat cables on the MFP board. (The connector for the CPU cooling fan is excluded.)

9. Remove the screw [1] and two bolts [2] of the MFP board.

10. Remove five screws [1] and two bolts [2], and remove the metal plate [3].

11. Remove six screws [1] and five screws [2], and remove the MFP board [3].

12. To reinstall, reverse the order of removal.
13. Put the USB memory includes firmware into service port, turn the main power switch ON.

14. Wait 2 minutes, Firmware update screen appears, touch [Machine Type Select].

15. Enter [Machine] and [Type], then touch [Fix].

NOTE

- bizhub C554 [Machine]:1, [Type]:A
- bizhub C454 [Machine]:1, [Type]:0

16. Touch [OK].
17. Install the firmware.
18. Turn OFF the main power switch and remove the USB memory.

19. Wait 10 seconds, turn ON the main power switch and wait 2 minutes until boot up the machine completely.
20. C-D390 code will appear. (C-D390 is normal operation when replacing the MFPB with a NEW MFPB.)

[1]

21. Wait until [Recover Data] [1] appears. (MFP will reboot maximum 2 times by itself, it may take 5 minutes.)

22. Touch [Recover Data] and [Yes].
23. Turn OFF the main power switch, wait 10 seconds, then turn ON the main power switch, after "Turn the main switch OFF and ON." message is appeared.

5.4.12 High voltage unit (HV)

1. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)

2. Disconnect all connectors and solderless terminals on the high voltage unit.

3. Remove the harness from the two wire saddles [1].

4. Remove four screws [1] of the high voltage unit.

5. Unhook the tab [1], and remove the high voltage unit [2].

NOTE

- When mounting the high voltage unit, the terminal contact point must be contacted without fail. The claw also must be firmly hooked.

6. To reinstall, reverse the order of removal.

5.4.13 ERP board (ERPB)

1. Remove the upper rear cover.

[G.5.2.26 Upper rear cover](#)

2. Remove two screws [1]. Disconnect two connectors [2], and remove the ERP board [3].

3. To reinstall, reverse the order of removal.

5.4.14 Expansion control board (EXCB)

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
3. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)

4. Disconnect all connectors on the expansion control board.
5. Remove four screws [1], and remove the expansion control board [2].

6. To reinstall, reverse the order of removal.

5.4.15 Dual scan image processing board (DSIPB)

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)

2. Remove the screw [1], and remove the PWB support [2].

NOTE

- When the optional security kit SC-508 (for back side) is installed, remove the DSC board/2 following steps 2 and 3 described below.

3. Remove the DSC board/2 [3].

4. Disconnect the connector [1].
5. Open the connector [2] and disconnect the flat cable [3].
6. Remove three screws [4], and remove the dual scan image processing board [5].

7. Reinstall the above parts following the removal steps in reverse.

5.4.16 IH magnetic erasing board (IHMEB) (C554)

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
3. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)

4. Remove seven screws [1], and remove the IH power supply protective shield [2].

5. Disconnect two solderless terminals [1] of the IH magnetic erasing board.

6. Disconnect the connector [1].

7. Remove three PWB supports [1], and remove the IH magnetic erasing board [2].

8. To reinstall, reverse the order of removal.

5.4.17 IH power supply (IHPU) (C554)

WARNING

- The lead wire terminal must not be placed on the projections located at the four corners of the terminal block of the IH power supply. Securely tighten the screw so that the lead wire is routed to the directions that are illustrated.
The terminal leakage may cause fire.

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)

2. Remove the lower rear cover/2.

[G.5.2.24 Lower rear cover/2](#)

3. Remove the upper rear cover.

[G.5.2.26 Upper rear cover](#)

4. Remove seven screws [1], and remove the IH power supply protective shield [2].

5. Remove two screws [1] and remove the terminals [2] of each harness.

6. Disconnect three connectors [1].

7. Remove six screws [1], and remove the IH power supply [2].

8. To reinstall, reverse the order of removal.

5.4.18 NF board (NFB) (C554)

1. Remove the lower rear cover/1.

[G.5.2.23 Lower rear cover/1](#)

2. Remove the lower rear cover/2.

[G.5.2.24 Lower rear cover/2](#)

3. Remove the upper rear cover.

[G.5.2.26 Upper rear cover](#)

4. Remove seven screws [1], and remove the IH power supply protective shield [2].

5. Remove the harness from the wire saddle [1] and the edge cover [2].
6. Disconnect three connectors [3].

7. Remove four screws [1], and remove the NF board [2].

8. To reinstall, reverse the order of removal.

5.4.19 Fusing power supply (FUPU) (C454)

1. Remove the lower rear cover/1.
[G.5.2.23 Lower rear cover/1](#)
2. Remove the lower rear cover/2.
[G.5.2.24 Lower rear cover/2](#)
3. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)

4. Remove four screws [1], and remove the fusing power supply protective shield [2].

5. Disconnect three connectors [1].
6. Remove four screws [2], and remove the fusing power supply [3].

7. To reinstall, reverse the order of removal.

5.4.20 Tray 1 FD paper size board (FDPSB/1), tray 2 FD paper size board (FDPSB/2)

NOTE

- The tray 1 FD paper size board and the tray 2 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 FD paper size board.

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Disconnect the connector [1].
4. Remove the screw [2] and three tabs [3], and remove the tray 1 FD paper size board assy [4].

5. Remove the screw [1] and the tab [2], and remove the tray 1 FD paper size board [3].

6. To reinstall, reverse the order of removal.

5.4.21 Tray 1 CD paper size board (CDPSB/1), tray 2 CD paper size board (CDPSB/2)

NOTE

- The tray 1 CD paper size board and the tray 2 CD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 1 CD paper size board.

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Disconnect the connector [1], and remove the harness from the harness guide.

4. Remove three screws [1], and remove the tray 1 lift-up motor assy [2].

5. Disconnect the connector [1].
6. Remove two screws [2], and remove the tray 1 CD paper size board [3].

7. To reinstall, reverse the order of removal.

5.4.22 Tray 1 empty indicator board (PEIB/1), tray 2 empty indicator board (PEIB/2)

1. Slide out the tray 1 and the tray 2.

2. Remove two screws [1], and remove the tray right cover [2].

3. Unhook two tabs [1] each. Disconnect the connector [2] each, and remove the tray 1 empty indicator board [3] and the tray 2 empty indicator board [4].

4. To reinstall, reverse the order of removal.

5.5 Disassembly/reassembly procedure (Motors)

5.5.1 Transport motor (M1)

1. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)

2. Remove four screws [1]. Disconnect the connector [2], and remove the transport motor [3].

3. To reinstall, reverse the order of removal.

5.5.2 PC motor (M2)

1. Open the PWB box/1.

[G.5.3.9 How to open the PWB box/1](#)

2. Remove four screws [1]. Disconnect the connector [2], and remove the PC motor [3].

3. To reinstall, reverse the order of removal.

5.5.3 Fusing motor (M3)

1. Remove the upper rear cover.

[G.5.2.26 Upper rear cover](#)

2. Remove the harness from the harness guide [1].

3. Remove the screw [1], and remove the harness guide [2].

4. Remove four screws [1]. Disconnect the connector [2], and remove the fusing motor [3].

5. To reinstall, reverse the order of removal.

5.5.4 Switchback motor (M4)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Remove the rear right cover.
[G.5.2.21 Rear right cover](#)
3. If an optional FAX kit FK-511 is mounted, remove the FAX board.
[G.7.18.1 FAX kit \(line 1\), FAX kit \(line 2\) \(FK-511\)](#)

4. Remove four screws [1].

NOTE

- When the optional FAX kit FK-511 is installed, the quantity of the screws differs.

5. Remove the harness from the wire saddle [1].
6. Remove the harness guide assy [2] as clearing the harness.

7. Remove two screws [1]. Disconnect the connector [2], and remove the switchback motor [3].

8. To reinstall, reverse the order of removal.

5.5.5 ADU transport motor (M5)

1. Remove the screw [1], and remove the right door stopper (upper section) [2].

2. Remove the screw [1], and remove the right door stopper (lower section) [2].

3. Remove the screw [1], and remove the connector cover [2].

4. Open the right door.

5. Remove two screws [1], and remove the gear cover [2].

6. Disconnect the connector [1].
7. Remove the screw [2], and remove the ground terminal [3].

8. Remove eight screws [1], and remove the ADU transport assy [2].

9. Remove five screws [1], and remove the guide [2].

10. Remove three screws [1] to release the ADU transport motor assy [2].

11. Remove two screws [1]. Disconnect the connector [2], and remove the ADU transport motor [3].

12. To reinstall, reverse the order of removal.

5.5.6 Toner supply motor/K (M6)

1. Remove the sub hopper unit.

[G.5.3.4 Sub hopper unit](#)

2. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/K [3].

3. To reinstall, reverse the order of removal.

5.5.7 Toner supply motor/C (M7)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the PWB box/2.
[G.5.3.10 PWB box/2 \(C554\)](#)

4. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/C [3].

5. To reinstall, reverse the order of removal.

5.5.8 Toner supply motor/M (M8)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the PWB box/2.
[G.5.3.10 PWB box/2 \(C554\)](#)

4. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/M [3].

5. To reinstall, reverse the order of removal.

5.5.9 Toner supply motor/Y (M9) (C554)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the PWB box/2.
[G.5.3.10 PWB box/2 \(C554\)](#)

4. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/Y [3].

5. To reinstall, reverse the order of removal.

5.5.10 Toner supply motor/Y (M9) (C454)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the expansion control board.
[G.5.4.14 Expansion control board \(EXCB\)](#)

4. Remove four screws [1], and remove the metal plate [2].

5. Remove the screw [1]. Disconnect the connector [2], and remove the toner supply motor/Y [3].

6. To reinstall, reverse the order of removal.

5.5.11 Toner bottle motor (M10) (C554)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the PWB box/2.
[G.5.3.10 PWB box/2 \(C554\)](#)

4. Disconnect the connector [1], and remove the harness from the harness guide [2].

5. Remove the screw [1], and remove the toner bottle motor [2].

6. To reinstall, reverse the order of removal.

5.5.12 Toner bottle motor (M10) (C454)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)
2. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)
3. Remove the expansion control board.
[G.5.4.14 Expansion control board \(EXCB\)](#)

4. Remove four screws [1], and remove the metal plate [2].

5. Disconnect the connector [1], and remove the harness from the harness guide [2].

6. Remove the screw [1], and remove the toner bottle motor [2].

7. To reinstall, reverse the order of removal.

5.5.13 Fusing pressure motor (M11)

1. Remove the upper rear cover.
[G.5.2.26 Upper rear cover](#)

2. Disconnect the connector [1].
3. Remove the harness from the wire saddle [2] and edge cover [3].

4. Remove two screws [1], and remove the fusing pressure motor [2].

5. To reinstall, reverse the order of removal.

5.5.14 Tray 1 lift-up motor (M12)

1. Remove the high voltage unit.
[G.5.4.12 High voltage unit \(HV\)](#)
2. Slide out the tray 1.

3. Remove three screws [1]. Disconnect the connector [2], and remove the tray 1 lift-up motor [3].

4. To reinstall, reverse the order of removal.

5.5.15 Tray 2 lift-up motor (M13)

1. Remove the high voltage unit.
[G.5.4.12 High voltage unit \(HV\)](#)
2. Slide out the tray 2.

3. Remove three screws [1]. Disconnect the connector [2], and remove the tray 2 lift-up motor [3].

4. To reinstall, reverse the order of removal.

5.5.16 Developing motor (M21)

1. Open the PWB box/1.
[G.5.3.9 How to open the PWB box/1](#)

2. Remove four screws [1]. Disconnect the connector [2], and remove the developing motor [3].

3. To reinstall, reverse the order of removal.

5.5.17 Paper feed motor (M22)

1. Open the PWB box/1.

[G.5.3.9 How to open the PWB box/1](#)

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the paper feed motor assy [3].

4. Remove two screws [1], and remove the paper feed motor [2].

5. To reinstall, reverse the order of removal.

5.5.18 Tray 2 vertical transport motor (M23)

1. Open the PWB box/1.

[G.5.3.9 How to open the PWB box/1](#)

2. Disconnect the connector [1].
3. Remove three screws [2], and remove the metal plate [3].

4. Remove three screws [1], and remove the tray 2 vertical transport motor assy [2].

5. Remove three screws [1], and remove the tray 2 vertical transport motor [2].

6. To reinstall, reverse the order of removal.

5.5.19 Registration motor (M24)

1. Open the PWB box/1.

[G.5.3.9 How to open the PWB box/1](#)

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the registration motor assy [3].

4. Remove two screws [1], and remove the registration motor [2].

5. To reinstall, reverse the order of removal.

5.5.20 Scanner motor (M201)

(1) Removal procedure

1. Remove the scanner rear cover.
[G.5.2.1 Scanner rear cover](#)
2. Remove the scanner upper rear cover.
[G.5.2.5 Scanner upper rear cover](#)

3. Disconnect the connector [1], and remove three screws [2].

4. Remove the spring [1] and the belt [2], and remove the scanner motor assy [3].

5. Remove two screws [1], and remove the scanner motor [2].

(2) Reinstall procedure

1. Attach the spring to the scanner motor assy [1].
2. Temporarily secure the scanner motor assy [1] with three screws [2].

NOTE

- The screws [2] should be temporarily tightened to a degree that the position of the motor can be adjusted by the spring force

3. Attach the drive belt [1] to the pulley and make sure that the belt deflection is not excessive and the belt tension is not too tight.

NOTE

- Make sure that the drive belt [1] is properly kept tight by the spring [2] force.
- If the deflection or tension of the drive belt [1] is excessive, the scanner unit does not work correctly. This may result in trouble.

4. Turn the pulley and make sure that the belt does not ride over the pulley's teeth.

5. Tighten the screw [1] of the scanner motor assy.
6. Tighten two screws [2] of the scanner motor assy and fix it.

NOTE

- After securing the scanner motor assy, check again that the deflection and tension of the drive belt [3] are not excessive.

7. Carry out the [\[Service Mode\] -> \[Machine\] -> \[Scan Area\] -> \[Main Scan Zoom Adj.\]](#).

5.6 Disassembly/reassembly procedure (Clutches)

5.6.1 Tray 2 paper feed clutch (CL1)

1. Remove the paper feed unit.

[G.5.3.2 Paper feed unit](#)

2. Remove the E-ring [1].

3. Remove two screws [1], and remove the gear cover [2].

4. Remove the gear [1].

5. Disconnect the connector [1], and remove the harness from two wire saddles [2].

6. Remove the E-ring [1], and remove the tray 2 paper feed clutch [2].

NOTE

- When mounting the tray 2 paper feed clutch, set the convex part of the stopper into the concave part of the tray 2 paper feed clutch.

7. To reinstall, reverse the order of removal.

5.6.2 Tray 1 paper feed clutch (CL3)

1. Remove the paper feed unit.

[G.5.3.2 Paper feed unit](#)

2. Remove two screws [1], and remove the cover [2].

3. Disconnect the connector [1], and remove the harness from two wire saddles [2].

4. Remove the E-ring [1], and remove the tray 1 paper feed clutch [2].

NOTE

- When mounting the tray 1 paper feed clutch, set the convex part of the stopper into the concave part of the tray 1 paper feed clutch.

5. To reinstall, reverse the order of removal.

5.6.3 1st transfer pressure clutch (CL5)

1. Remove the fusing drive unit.

[G.5.3.14 Fusing drive unit \(C554\)](#)

[G.5.3.15 Fusing drive unit \(C454\)](#)

2. Remove the harness from the wire saddle [1] and the edge cover [2].
3. Remove the E-ring [3] and the bearing [4], and remove the 1st transfer pressure clutch [6] while pulling out the shaft [5].

NOTE

- When mounting the 1st transfer pressure clutch [6], set the convex part of the stopper into the concave part of the 1st transfer pressure clutch.

4. To reinstall, reverse the order of removal.

5.6.4 ADU transport clutch (CL6)

1. Open the PWB box/1.

[G.5.3.9 How to open the PWB box/1](#)

2. Disconnect the connector [1].

3. Remove four screws [1], and remove the metal plate [2].

4. Remove two solderless terminals [1].

5. Remove two screws [1], and remove the harness guide [2].

6. Remove the E-ring [1].
7. Remove two screw [2], and remove the metal plate [3].

8. Remove the ADU transport clutch [1].

9. To reinstall, reverse the order of removal.

5.6.5 Bypass paper feed clutch (CL7)

1. Remove the rear right cover.

[G.5.2.21 Rear right cover](#)

2. Remove the screw [1], and remove the right door stopper (upper section) [2].

3. Remove the screw [1], and remove the right door stopper (lower section) [2].

4. Remove the screw [1], and remove the connector cover [2].
5. Open the right door.

6. Remove the screw [1], and remove the connector cover [2].

7. Disconnect the connector [1], and remove the harness from two wire saddles [2] and the edge cover [3].

8. Remove the E-ring [1], and remove the bypass paper feed clutch [2].

NOTE

- When mounting the bypass paper feed clutch, set the convex part of the stopper into the concave part of the bypass paper feed clutch.

9. To reinstall, reverse the order of removal.

5.6.6 Paper exit clutch (CL8)

1. Remove the fusing drive unit.

[G.5.3.14 Fusing drive unit \(C554\)](#)

[G.5.3.15 Fusing drive unit \(C454\)](#)

2. Remove the harness from the edge cover [1].
3. Remove the E-ring [2] and the bearing [3], and remove the 1st transfer pressure clutch [5] while pulling out the shaft [4].

NOTE

- When mounting the paper exit clutch [5], set the convex part of the stopper into the concave part of the paper exit clutch.

4. To reinstall, reverse the order of removal.

5.7 Disassembly/reassembly procedure (etc.)

5.7.1 Bypass pick-up solenoid (SD1)

1. Remove the right door unit.

[G.5.3.5 Right door unit](#)

2. Remove the E-ring [1], and remove the actuator [2].

3. Remove three screws [1], and remove the solenoid cover [2].

4. Remove the screw [1], and remove the cover [2].

5. Disconnect the connector [1], and remove the harness from two wire saddles [2].

6. Remove the screw [1], and remove the bypass pick-up solenoid [2].

7. To reinstall, reverse the order of removal.

5.7.2 IDC sensor shutter solenoid (SD2)

1. Remove the transport unit.

G.5.3.12 Transport unit

2. Disconnect the connector [2], and remove the harness from two wire saddles [1].

3. Remove the screw [1], and remove the IDC sensor shutter solenoid [2].

4. To reinstall, reverse the order of removal.

5.7.3 Gate switch solenoid (SD3) (C554)

1. Remove the fusing unit.
[F.6.11.1 Replacing the fusing unit \(C554\)](#)
2. Remove the IH coil.
[G.5.3.13 IH coil \(IHC\) \(C554\)](#)
3. Remove the control panel front cover.
[G.5.2.10 Control panel front cover](#)
4. Remove the upper right cover.
[G.5.2.22 Upper right cover](#)

5. Remove the screw [1], and remove the right door stopper (upper section) [2].

6. Remove the screw [1], and remove the right door stopper (lower section) [2].

7. Remove the screw [1], and remove the connector cover [2].

8. Open the right door and regist unit.

9. Remove three screws [1] and the tab [2], and remove the cover [3].

10. Remove the screw [1], and remove the cover [2].

11. Remove four screws [2] of the gate switch unit [1].

12. Disconnect the connector [1].
13. Remove the harness from the wire saddle [2] and the edge cover [3].

14. Remove the gate switch unit [2] as clearing two belts [1].

15. Remove the screw [1].
16. Remove the harness from the edge cover [2].
17. Remove the gate switch solenoid [4] as clearing the actuator [3].

18. To reinstall, reverse the order of removal.

5.7.4 Gate switch solenoid (SD3) (C454)

1. Remove the fusing unit.
[F.6.11.2 Replacing the fusing unit \(C454\)](#)
2. Remove the control panel front cover.
[G.5.2.10 Control panel front cover](#)
3. Remove the upper right cover.
[G.5.2.22 Upper right cover](#)

4. Remove the screw [1], and remove the right door stopper (upper section) [2].

5. Remove the screw [1], and remove the right door stopper (lower section) [2].

6. Remove the screw [1], and remove the connector cover [2].

7. Open the right door and regist unit.

8. Remove three screws [1] and the tab [2], and remove the cover [3].

9. Remove the screw [1], and remove the cover [2].

10. Remove four screws [2] of the gate switch unit [1].

11. Disconnect the connector [1].

12. Remove the harness from the wire saddle [2] and the edge cover [3].

13. Remove the gate switch unit [2] as clearing two belts [1].

14. Remove the screw [1].

15. Remove the harness from the edge cover [2].

16. Remove the gate switch solenoid [4] as clearing the actuator [3].

17. To reinstall, reverse the order of removal.

5.7.5 Developing solenoid (SD4)

1. Remove the developing motor.

[G.5.5.16 Developing motor \(M21\)](#)

2. Disconnect the connector [1], and remove the harness from the edge cover [2] and the wire saddle [3].
3. Remove the screw [4], and remove the developing solenoid [5].

4. To reinstall, reverse the order of removal.

5.7.6 Bypass CD paper size VR (VR1)

1. Remove the manual bypass tray unit.

[G.5.3.6 Manual bypass tray unit](#)

2. Remove the E-ring [1], and remove the actuator [2].

3. Remove three screws [1], and remove the solenoid cover [2].

4. Remove three screws [1].

5. Remove the screw [1], and remove the hinge [2].

6. Remove two screws [1].

7. Disconnect the connector [1], and remove the harness from six wire saddles [2] and three edge covers [3].

8. Remove eight screws [1], and remove the cover [2].

9. Disconnect the connector [1].

10. Remove the tab [1], and remove the gear [2].

11. Remove two screws [1], and remove the bypass CD paper size VR [2].

12. To reinstall, reverse the order of removal.

9	Spare TX Marker Stamp 2	G.6.2.18 Stamp (SP-501)

6.2 Disassembly/reassembly procedure (DF-701/SP-501)

6.2.1 Front cover (DF-701)

1. Open the dual scan document feeder.
2. Remove two screws [1] and remove the front cover [2].

3. Reinstall the above parts following the removal steps in reverse.

6.2.2 Rear cover (DF-701)

1. Open the dual scan document feeder.

2. Remove three screws [1].
3. While peeling off the mat, remove the screw [2].

NOTE

- If the dual scan document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the dual scan document feeder can be opened completely.

4. Open the left cover [1].

5. Remove the rear cover [1].

NOTE

- For mounting the rear cover, mount it so that the protrusion [2] of the document feed tray will fit to the groove [3] on the rear cover.

6. Reinstall the above parts following the removal steps in reverse.

6.2.3 Dual scan document feeder (DF-701)

1. Remove two hinge covers [1].

2. Remove the screws [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

3. Remove 10 screws [1], and remove the left lower cover [2] from the back of the main body.

4. Pull the cable [1] to remove it from the main body.

5. Remove the cable tie [1], and disconnect three connectors [2].

6. Open the dual scan document feeder.

NOTE

- If the dual scan document feeder is set to be lifted up at angles up to 60 degrees due to the set position of the stopper for the hinge, change the set position to the lower side so that the dual scan document feeder can be opened completely.

7. Remove two screws [1].

8. Remove the dual scan document feeder [1].

**NOTE**

- When carrying the dual scan document feeder, be sure to hold onto the specified positions. The feeder main body can be distorted if held at inappropriate positions.
- After removing the dual scan document feeder from the machine, place it on the floor or the like as shown in the illustration.

9. Reinstall the above parts following the removal steps in reverse.

6.2.4 Front side glass cleaning roller unit (DF-701)

1. Remove the front cover.

[G.6.2.1 Front cover \(DF-701\)](#)

2. Remove the dual scan document feeder.

[G.6.2.3 Dual scan document feeder \(DF-701\)](#)

3. Place the dual scan document feeder vertically as shown in the illustration.

[2] [1]

4. Remove the C-clip [1] and the bearing [2].

5. Remove the C-clip [1], and shift the bearing [2], and remove the belt [3].
6. Remove the front side glass cleaning roller unit [4].

NOTE

- When installing the front side glass cleaning roller unit [2], make sure that the transparent sheets [1] are outside of the front side glass cleaning roller unit [2].

7. Reinstall the above parts following the removal steps in reverse.

NOTE

- When installing the front side glass cleaning roller unit, the following adjustment is necessary.
 - Adjust the actuator [1] so that it is positioned where it blocks the light of the document reading glass cleaning sensor [2], and install the belt.

- After completing the above adjustment, when you turn ON the main power switch, make sure that the shaft [1] is at the correct position (home position).

6.2.5 Back side glass cleaning roller unit (DF-701)

1. Open the dual scan document feeder.

2. Open the opening and closing guide [1].

3. While peeling off the mat, remove the screw [1], and while opening the opening and closing guide, remove the cover [2].

4. Remove the screw [1] and E-ring [2], and remove the bearing [3].

NOTE

- When installing the bearing [3], place the dowel [1] in the middle of the slot [2].

5. Remove the E-ring [1].
6. Remove the gear [2], and remove the belt [3].
7. Remove the bearing [4].
8. Remove the back side glass cleaning roller unit [5].

9. Reinstall the above parts following the removal steps in reverse.

NOTE

- When installing the back side glass cleaning roller unit, the following adjustment is necessary.
 - Align the D cut surface [2] of the shaft with the lines [1] marked on the bushing.

- When installing the belt, align the line [1] on the pulley and the line [2] on the transport guide.

6.2.6 CIS module (CIS) (DF-701)

1. Remove the front cover.
[G.6.2.1 Front cover \(DF-701\)](#)
2. Remove the rear cover.
[G.6.2.2 Rear cover \(DF-701\)](#)

3. Lift up the document feed tray [1].
4. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.

5. Remove 10 screws [1], and remove the transport guide [2].

NOTE

- Use care when mounting the screw in the dashed circle [1] (one on the left when looking from the front) since it is different from other nine screws [1].

6. Remove the screw [1], and disconnect two connectors [2].

7. Remove two screws (front side) [1].

8. Remove two screws (rear side) [1].

9. Remove the CIS module [1] as shown in the illustration.

10. Remove the E-ring [1] on the right and left and remove the metal set [2].

11. Reinstall the above parts following the removal steps in reverse.

NOTE

- Be sure to perform the following steps after the CIS module has been replaced with a new one.
- Adjust the back side skew feed on the ADF.
[I.17.1.3 Adjusting back side skew feed on ADF](#)
- Execute [Service Mode] -> [System 2] -> [CCD Calibration].
[I.11.15.7 CCD Calibration](#)
- Execute [Service Mode] -> [System 2] -> [Line Mag Setting].
[I.11.15.10 Line Mag Setting](#)

- Execute [Service Mode] -> [ADF] -> [Auto Stop Position Adjustment].
[I.11.20.3 Auto Stop Position Adjustment](#)
- Execute [Service Mode] -> [ADF] -> [FD-Mag. Adj. (B)].
[I.11.20.12 FD-Mag. Adj. \(B\)](#)
- Execute [Service Mode] -> [ADF] -> [Main Scanning Direction Zoom].
[I.11.20.13 Main Scanning Direction Zoom](#)

6.2.7 DF control board (DFCB) (DF-701)

1. Remove the rear cover.

[G.6.2.2 Rear cover \(DF-701\)](#)

2. Disconnect all the seventeen connectors from the DF control board.
3. Remove four screws [1], and remove the DF control board [2].

4. Reinstall the above parts following the removal steps in reverse.

NOTE

- Be sure to perform the following steps after the DF control board has been replaced with a new one.
- Install the firmware.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width].
[I.11.20.6 Original Tray Width](#)
- Execute [Service Mode] -> [ADF] -> [Mixed original Size adjustment].
[I.11.20.10 Mixed original size adjustment](#)

6.2.8 Document width sensor (VR1) (DF-701)

1. Remove the rear cover

[G.6.2.2 Rear cover \(DF-701\)](#)

2. Lift up the document feed tray [1].

3. Remove the lever for document exit [1].
4. Remove six screws [2] and remove the cover [3].

5. Remove two screws [1] and disconnect the connector [2], and remove the document width sensor [3].

NOTE

- For mounting the document width sensor, widen the side edge stop [4] of the document feed tray fully and make sure that the round hole [5] of the gear is at the position as shown on the illustration.

<OK>

<NG>

**NOTE**

- For mounting the document width sensor, mount it in the direction shown on the illustration.

6. Reinstall the above parts following the removal steps in reverse.

NOTE

- Be sure to perform the following operation when the document width sensor is replaced.
- Execute [Service Mode] -> [ADF] -> [Original Tray Width].
[I.11.20.6 Original Tray Width](#)
- Turn OFF the main power switch and turn it ON again and check whether size detection operates normally.

6.2.9 CIS power supply (CISPU) (DF-701)

1. Remove the front cover.
[G.6.2.1 Front cover \(DF-701\)](#)
2. Remove the rear cover.
[G.6.2.2 Rear cover \(DF-701\)](#)

3. Lift up the document feed tray [1].
4. Remove the claw [2] at the front side, and set the document feed tray [1] off the working area.

5. Remove 10 screws [1], and remove the transport guide [2].

NOTE

- Use care when mounting the screw in the dashed circle [1] (one on the left when looking from the front) since it is different from other nine screws [1].

6. Disconnect two connectors [1].
7. Remove two screws [2], and remove the CIS power supply [3].

8. Reinstall the above parts following the removal steps in reverse.

6.2.10 Document reading motor (M1) (DF-701)**(1) Remove procedure**

1. Remove the rear cover.
[G.6.2.2 Rear cover \(DF-701\)](#)
2. Remove the reading roller release motor.
[G.6.2.13 Reading roller release motor \(M4\) \(DF-701\)](#)

3. Disconnect the connector [1].
4. Remove the screw [2].

5. Remove three screws [1], and remove the document reading motor assy [2].

6. Remove two screws [1], and remove the document reading motor [2].

(2) Reinstallation procedure

1. Loosen the screw [1] and move the tension plate [2] in the direction of the arrow to reduce the belt tension.
2. Tighten the screw [1].

3. Install the document reading motor assy with four screws.

4. Loosen the screw [1] and apply tension to the belt.
5. Tighten the screw [1].

6. Reinstall the above parts following the removal steps in reverse.

6.2.11 Document feed motor (M2) (DF-701)

1. Remove the rear cover.
[G.6.2.2 Rear cover \(DF-701\)](#)

2. Disconnect the connector [1].
3. Remove the screw [2], and remove the earth plate [3].
4. Remove the screw [4]

5. Remove three screws [1], and remove the document feed motor assy [2].

6. Remove two screws [1] and belt [2], and remove the document feed motor [2].

7. Reinstall the above parts following the removal steps in reverse.

6.2.12 Registration motor (M3) (DF-701)

1. Remove the rear cover.
[G.6.2.2 Rear cover \(DF-701\)](#)
2. Remove the reading roller release motor.
[G.6.2.13 Reading roller release motor \(M4\) \(DF-701\)](#)
3. Remove the document reading motor
[G.6.2.10 Document reading motor \(M1\) \(DF-701\)](#)

4. Remove the screw [1] and move the cable [2] off the working area.
5. Disconnect the connector [3].

6. Remove the spring [1], and remove three screws [2].
7. Remove the registration motor assy [3].

8. Remove two screws [1], and remove the registration motor [2].

9. Reinstall the above parts following the removal steps in reverse.

6.2.13 Reading roller release motor (M4) (DF-701)

1. Remove the rear cover.

[G.6.2.2 Rear cover \(DF-701\)](#)

2. Disconnect the connector (J18) [1] on the DF control board.

3. Remove six wire saddles [1] and remove the harness from the harness guide [2].

4. Remove two screws [1] and a claw [2], and move the harness guide [3] off the working area.

5. Remove the screw [1].

6. Remove two screws [1].

7. Disconnect the connector [1], and remove the reading roller release motor assy [2].
8. Remove the harness from the harness guide [3].

9. Remove two screws [1], and remove the reading roller release motor [2].

10. Reinstall the above parts following the removal steps in reverse.

6.2.14 CIS cleaning motor (M5) (DF-701)

1. Remove the rear cover.

[G.6.2.2 Rear cover \(DF-701\)](#)

2. Disconnect the connector [1]
3. Remove two screws [2], and remove the CIS cleaning motor [3].

NOTE

- When mounting it, make sure to set the belt [5] to the gear [4] on the pulley firmly.

4. Reinstall the above parts following the removal steps in reverse.

6.2.15 Document reading glass cleaning motor (M6) (DF-701)

1. Remove the front cover.

[G.6.2.1 Front cover \(DF-701\)](#)

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the document reading glass cleaning motor [3].

4. Reinstall the above parts following the removal steps in reverse.

6.2.16 DF cooling fan motor (FM1) (DF-701)

1. Remove the rear cover.

[G.6.2.2 Rear cover \(DF-701\)](#)

2. Disconnect the connector [1].
3. Remove the DF cooling fan motor [2].

4. Reinstall the above parts following the removal steps in reverse.

6.2.17 Stamp unit (SP-501)

1. Peel off the mat (at two places on the left) [1].

2. Remove two screws [1] and remove the cover [2].

3. Remove the screw [1].
4. Remove the harness and disconnect the connector [2].

5. Remove the screw [1], and remove the guide plate [2].

NOTE

- When mounting it, set the ground terminal through the hole [3] shown on the illustration.

6. Remove the screw [1] and remove the stamp unit [2].

NOTE

- When mounting it, set the harness through the hole [3] shown on the illustration.
- Ensure that the ground terminal is on the upper side of the mounting bracket of stamp unit.

7. Reinstall the above parts following the removal steps in reverse.

6.2.18 Stamp (SP-501)

1. Peel off the mat (at two places on the left) [1].

2. Remove two screws [1] and remove the cover [2].

3. Remove the screw [1].
4. Remove the harness and disconnect the connector [2].

5. Remove the screw [1], and remove the guide plate [2].

NOTE

- When mounting it, set the ground terminal through the hole [3] shown on the illustration.

6. Remove the used stamp, and install the new stamp of replacement [1].

NOTE

- Align the round pin of the stamp with the slit in the stamp unit side.

7. Reinstall the above parts following the removal steps in reverse.

7.2 Disassembly/reassembly procedure (PC-210/PC-110)

7.2.1 Right door (PC-110/PC-210)

1. Open the right door.
2. Remove the screw [1], and remove the right door [2].

3. To reinstall, reverse the order of removal.

7.2.2 Rear right cover (PC-110/PC-210)

1. Remove two screws [1], and remove the rear right cover [2].

2. To reinstall, reverse the order of removal.

7.2.3 Rear cover (PC-110/PC-210)

1. Remove five screws [1], and remove the rear cover [2].

2. To reinstall, reverse the order of removal.

7.2.4 Tray 3, tray 4, storage box (PC-110/PC-210)

NOTE

- The tray 3, the tray 4 and the storage box are of the same form and mechanism. This procedure shows the steps taken for the tray 3.

1. Slide out the tray 3.

2. Remove the screw [1], and remove the stopper [2].

3. Hold up the tray 3 to remove it.

4. To reinstall, reverse the order of removal.

7.2.5 Paper feed cabinet (PC-110/PC-210)

CAUTION

- When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.

2. Remove the screw [1], and remove the fixing bracket [2].

3. Remove two screws [1], and remove the fixing bracket [2].

4. Slide the tray 2 and tray 3 back in.

5. Remove two screws [1], and remove two fixing brackets [2].

6. Remove the screw [1], and remove the rear under cover [2].

7. Remove the harness from the wire saddle [1].
8. Disconnect two connectors [2].

9. Pull out the transportation handles.

10. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].

NOTE

- When transporting or moving the main body, assign adequate number of persons.

7.2.6 Tray 3 paper feed unit (PC-110/PC-210)

1. Remove the right door.
[G.7.2.1 Right door \(PC-110/PC-210\)](#)
2. Remove the rear right cover.
[G.7.2.2 Rear right cover \(PC-110/PC-210\)](#)
3. Slide out the tray 3.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].

7. Remove three screws [1], and remove the tray 3 paper feed unit [2].

8. To reinstall, reverse the order of removal.

7.2.7 Tray 4 paper feed unit (PC-210)

1. Remove the right door.
[G.7.2.1 Right door \(PC-110/PC-210\)](#)
2. Remove the rear right cover.
[G.7.2.2 Rear right cover \(PC-110/PC-210\)](#)
3. Slide out the tray 4.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from the wire saddle [3].
6. Disconnect two connectors [4].

7. Remove four screws [1], and remove the tray 4 paper feed unit [2].

8. To reinstall, reverse the order of removal.

7.2.8 PC control board (PCCB) (PC-110/PC-210)

1. Remove the rear cover.
[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

2. Disconnect all connectors on the PC control board.
3. Remove four screws [1], and remove the PC control board [2].

4. To reinstall, reverse the order of removal.

7.2.9 Tray 3 paper empty indicator board (PEIB/3), tray 4 paper empty indicator board (PEIB/4) (PC-110/PC-210)

NOTE

- The tray 3 paper empty indicator board and the tray 4 paper empty indicator board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper empty indicator board.

1. Slide out the tray 3.
2. Slide out the tray 4 or storage box.

3. Remove four screws [1], and remove the right front cover [2].

4. Disconnect the connector [1].
5. Remove the screw [2], and remove the tray 3 paper empty indicator board [3].

6. To reinstall, reverse the order of removal.

7.2.10 Tray 3 FD paper size board (FDPSB/3), tray 4 FD paper size board (FDPSB/4) (PC-110/PC-210)

NOTE

- The tray 3 FD paper size board and the tray 4 FD paper size board are of the same form and mechanism. This procedure shows the steps taken for the tray 3 FD paper size board.

1. Remove the tray 3.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)
2. Remove the tray 4 or storage box.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

3. Disconnect the connector [1].
4. Remove the screw [2] and three tabs [3], and remove the tray 3 FD paper size board assy [4].

5. Remove the screw [1] and the tab [2], and remove the tray 3 FD paper size board [3].

6. To reinstall, reverse the order of removal.

7.2.11 Tray 3 CD paper size board (CDPSB/3) (PC-110/PC-210)

1. Remove the rear cover.
[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

2. Disconnect the connector [1] on the PC control board.

3. Remove the tray 3.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)
4. Remove the tray 4 or storage box.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

5. Remove three screws [1], and remove the tray 3 lift-up motor assy [2].

6. Disconnect the connector [1].
7. Remove the screw [2], and remove the tray 3 CD paper size board [3].

8. To reinstall, reverse the order of removal.

7.2.12 Tray 4 CD paper size board (CDPSB/4) (PC-210)

1. Remove the rear cover.

[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

2. Disconnect the connector [1] on the PC control board.

3. Remove the tray 3 and tray 4.

[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

4. Remove three screws [1], and remove the tray 4 lift-up motor assy [2].

5. Disconnect the connector [1].
6. Remove the screw [2], and remove the tray 4 CD paper size board [3].

7. To reinstall, reverse the order of removal.

7.2.13 Tray 3 paper feed motor (M111), tray 4 paper feed motor (M121) (PC-110/PC-210)

NOTE

- The tray 3 paper feed motor and the tray 4 paper feed motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 paper feed motor.

1. Remove the rear cover.

[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

2. Remove three screws [1].

3. Disconnect the connector [2], and remove the tray 3 paper feed motor assy [3].

NOTE

- When mounting the tray 3 paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the tray 3 paper feed motor [2].

5. To reinstall, reverse the order of removal.

7.2.14 Tray 3 vertical transport motor (M112), tray 4 vertical transport motor (M122) (PC-110/PC-210)

NOTE

- The tray 3 vertical transport motor and the tray 4 vertical transport motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 vertical transport motor.

1. Remove the rear cover.

[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

2. Remove three screws [1].

3. Disconnect the connector [2], and remove the tray 3 vertical transport motor assy [3].

NOTE

- When mounting the tray 3 vertical transport motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the tray 3 vertical transport motor [2].

5. To reinstall, reverse the order of removal.

7.2.15 Tray 3 lift-up motor (M113), tray 4 lift-up motor (M123) (PC-110/PC-210)

NOTE

- The tray 3 lift-up motor and the tray 4 lift-up motor are of the same form and mechanism. This procedure shows the steps taken for the tray 3 lift-up motor.

- Remove the rear cover.

[G.7.2.3 Rear cover \(PC-110/PC-210\)](#)

- Disconnect the connector [1].
- Remove three screws [2], and remove the tray 3 lift-up motor [3].

- To reinstall, reverse the order of removal.

7.3 Disassembly/reassembly procedure (PC-410)

7.3.1 Right door (PC-410)

- Open the right door.

- Remove the screw [1], and remove the right door [2].

- To reinstall, reverse the order of removal.

7.3.2 Rear right cover (PC-410)

- Remove two screws [1], and remove the rear right cover [2].

- To reinstall, reverse the order of removal.

7.3.3 Rear cover (PC-410)

- Remove five screws [1], and remove the rear cover [2].

- To reinstall, reverse the order of removal.

7.3.4 Paper feed tray (PC-410)

1. Slide out the paper feed tray.
2. Hold up the paper feed tray to remove it.

3. To reinstall, reverse the order of removal.

7.3.5 Paper feed cabinet (PC-410)

CAUTION

- When holding the transportation handles, be careful not to catch your fingers in the main body.

1. Slide out the tray 2 and tray 3.

2. Remove the screw [1], and remove the fixing bracket [2].

3. Remove two screws [1], and remove the fixing bracket [2].

4. Slide the tray 2 and tray 3 back in.

5. Remove two screws [1], and remove two fixing brackets [2].

6. Remove the screw [1], and remove the rear under cover [2].

7. Remove the harness from the wire saddle [1].
8. Disconnect two connectors [2].

9. Pull out the transportation handles.

10. Hold the transportation handles at the right and left of the main body, and lift the main body [1] and then remove the paper feed cabinet [2].

NOTE

- When transporting or moving the main body, assign adequate number of persons.

7.3.6 Paper feed unit (PC-410)

1. Remove the right door.
[G.7.3.1 Right door \(PC-410\)](#)
2. Remove the rear right cover.
[G.7.3.2 Rear right cover \(PC-410\)](#)
3. Slide out the paper feed tray.

4. Remove three tabs [1], and remove the harness cover [2].
5. Remove the harness from two wire saddles [3].
6. Disconnect two connectors [4].

7. Remove three screws [1], and remove the paper feed unit [2].

8. To reinstall, reverse the order of removal.

7.3.7 PC control board (PCCB) (PC-410)

1. Remove the rear cover.

[G.7.3.3 Rear cover \(PC-410\)](#)

2. Disconnect all connectors on the PC control board.
3. Remove four screws [1], and remove the PC control board [2].

4. To reinstall, reverse the order of removal.

7.3.8 Tray 3 paper empty indicator board (PEIB/3) (PC-410)

1. Slide out the paper feed tray.

2. Remove four screws [1], and remove the right front cover [2].

3. Disconnect the connector [1].
4. Remove the screw [2], and remove the tray 3 paper empty indicator board [3].

5. To reinstall, reverse the order of removal.

7.3.9 Paper feed motor (M131) (PC-410)

1. Remove the rear cover.

[G.7.3.3 Rear cover \(PC-410\)](#)

2. Remove three screws [1].
3. Disconnect the connector [2], and remove the paper feed motor assy [3].

NOTE

- When mounting the paper feed motor assy, use care not to forget to set the belt to the gear.

4. Remove three screws [1], and remove the paper feed motor [2].

5. To reinstall, reverse the order of removal.

7.3.10 Vertical transport motor (M132) (PC-410)

1. Remove the rear cover.

[G.7.3.3 Rear cover \(PC-410\)](#)

2. Remove the harness from the wire saddle [1].
3. Remove three screws [2].
4. Disconnect the connector [3], and remove the vertical transport motor assy [4].

NOTE

- When mounting the vertical transport motor assy, use care not to forget to set the belt to the gear.

5. Remove three screws [1], and remove the vertical transport motor [2].

6. To reinstall, reverse the order of removal.

7.3.11 Elevator motor (M134) (PC-410)

1. Slide out the paper feed tray.

2. Remove the rear cover.

[G.7.3.3 Rear cover \(PC-410\)](#)

3. Disconnect the connector [1].
4. Remove three screws [2], and remove the elevator motor [3].

5. To reinstall, reverse the order of removal.

7.3.12 Shifter motor (M133) (PC-410)

1. Slide out the paper feed tray.
2. Remove the rear cover.

[G.7.3.3 Rear cover \(PC-410\)](#)

3. Disconnect the connector [1].
4. Remove three screws [2], and remove the shifter motor [3].

5. To reinstall, reverse the order of removal.

7.3.13 Wire (PC-410)

1. Slide out the paper feed tray.

2. Remove three screws [1], and remove the cover [2].

3. Remove five screws [1], and remove the front cover assy [2].

4. Remove the paper feed tray.
[G.7.3.4 Paper feed tray \(PC-410\)](#)

5. Remove two C-rings [1].
 6. Remove two pulley covers [2].
 7. Remove two pulleys [3].

8. Remove two screws [1], and remove the metal plate [2].

9. Remove six screws [1] of the right paper guide plate.

10. Remove the C-ring [1].

11. Remove two pulley covers [2].

12. Remove two pulleys [3].

13. Remove three cable holding jigs (white) [1] and the cable holding jig (black) [2], and remove the main tray [3].

NOTE

- Use care not to bend the wires.

14. Remove the right paper guide plate assy [1].

15. Turn the tray upside down.
16. Remove the C-ring [1] and the bushing [2].

17. Turn the tray back to the original status.
18. Remove two C-rings [1] and two wire pulleys [2].
19. Remove the wire from the wire pulley [2].

NOTE

- Take care not to lose the pin.
- When reinstalling the wire pulley [2], check that the direction of the wire coming from both wire pulleys are the same.

20. To reinstall, reverse the order of removal.

7.4 Disassembly/reassembly procedure (LU-204)

7.4.1 Large capacity unit (LU-204)

1. Remove the large capacity unit [1] from the main body.

2. Remove two screws [1], and remove the cover [2].

3. Remove the harness from the wire saddle [1].

4. Disconnect two connector [1], the screw on the earth wire [2], and the cord clamp [3].

NOTE

- When the optional transformer kit TK-101 is installed, disconnect the connector [4].

5. Remove two screws [1] and remove the mounting plate [2].

6. Reinstall the above parts following the removal steps in reverse.

7.4.2 Right cover (LU-204)

1. Open the upper door.

2. Remove four screws [1] and remove the right cover [2].

3. Reinstall the above parts following the removal steps in reverse.

7.4.3 Front cover (LU-204)

1. Remove the right cover.

[G.7.4.2 Right cover \(LU-204\)](#)

2. Remove the harness from the connector [1] and the wire saddle [2].

3. Loosen five screws [1] and remove the front cover [2].

4. Reinstall the above parts following the removal steps in reverse.

7.4.4 Rear cover (LU-204)

1. Remove the right cover.

[G.7.4.2 Right cover \(LU-204\)](#)

2. Remove two screws [1] and remove the sheet metal [2].

3. Loosen five screws [1] and remove the rear cover [2].

4. Reinstall the above parts following the removal steps in reverse.

7.4.5 Feed cover (LU-204)

1. Remove the right cover.

[G.7.4.2 Right cover \(LU-204\)](#)

2. Remove the front cover.

[G.7.4.3 Front cover \(LU-204\)](#)

3. Remove the rear cover.

[G.7.4.4 Rear cover \(LU-204\)](#)

4. Remove two screws [1] and remove the feed cover [2].

5. Reinstall the above parts following the removal steps in reverse.

7.4.6 LU drive board (LUDB) (LU-204)

1. Remove the right cover.
[G.7.4.2 Right cover \(LU-204\)](#)
2. Remove the rear cover.
[G.7.4.4 Rear cover \(LU-204\)](#)

3. Disconnect six connectors [1] and remove four screws [2], and remove the LU drive board [3].

4. Reinstall the above parts following the removal steps in reverse.

7.4.7 Lift-up motor (M1) (LU-204)

1. Remove the right cover.
[G.7.4.2 Right cover \(LU-204\)](#)
2. Remove the rear cover.
[G.7.4.4 Rear cover \(LU-204\)](#)

3. Disconnect the connector [1] and remove two screws [2], and remove the lift-up motor [3].

4. Reinstall the above parts following the removal steps in reverse.

7.4.8 Paper feed motor (M2) (LU-204)

1. Remove the right cover.
[G.7.4.2 Right cover \(LU-204\)](#)
2. Remove the rear cover.
[G.7.4.4 Rear cover \(LU-204\)](#)
3. Remove the transport motor.
[G.7.4.9 Transport motor \(M3\) \(LU-204\)](#)

4. Disconnect four connectors [1].
5. Remove the harness from nine wire saddles [2].
6. Remove the screw [3], and remove the ground earth.

7. Remove nine screws [1], and remove the drive assy [2].

8. Remove two screws [1], and remove the paper feed motor [2].

9. Reinstall the above parts following the removal steps in reverse.

7.4.9 Transport motor (M3) (LU-204)

1. Remove the right cover.
[G.7.4.2 Right cover \(LU-204\)](#)
2. Remove the rear cover.
[G.7.4.4 Rear cover \(LU-204\)](#)

3. Remove the harness from two wire saddles [1] and the edge cover [2].
4. Disconnect the connector [3].
5. Remove three screws [4], and remove the transport motor assy [5].

6. Remove two screws [1], and remove the transport motor [2].

7. Reinstall the above parts following the removal steps in reverse.

7.4.10 Dehumidification heater (DH) (LU-204)

1. Remove four screws [1], and remove the left cover [2].

2. Disconnect the connector [1].
3. Remove the harness from two wire saddles [2].

4. Remove the harness from three wire saddles [1].
5. Remove four screws [2], and remove the dehumidification heater [3].

6. Reinstall the above parts following the removal steps in reverse.

7.4.11 Lift wire (LU-204)

(1) Removal

1. Remove the right cover.
[G.7.4.2 Right cover \(LU-204\)](#)
2. Remove the front cover.
[G.7.4.3 Front cover \(LU-204\)](#)
3. Remove the rear cover.
[G.7.4.4 Rear cover \(LU-204\)](#)
4. Remove the transport motor.
[G.7.4.9 Transport motor \(M3\) \(LU-204\)](#)

5. Disconnect four connectors [1].
6. Remove the harness from nine wire saddles [2].
7. Remove the screw [3], and remove the ground earth.

8. Remove nine screws [1], and remove the drive assy [2].

9. Remove two screws [1], and remove the bracket [2].
10. Remove the harness from two wire saddles [3].

11. Remove five screws [1], and remove the LU drive board assy [2].

12. Remove the lift wire/L [2] from the rotation plate [1].

13. Remove the auxiliary wire [2] from the spring [1] on the front side.

14. Remove the E-ring [1] on the front side to remove the wire holding jig [2].

15. Remove the E-ring [1] on the rear side to remove the driving pulley [2].

16. Pull out three lift wires [1].

17. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].

18. Remove the E-ring [1] on the front side to remove the driving pulley [2].

19. Pull out the auxiliary wire [1] and two lift wires [2].

20. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].

(2) Reinstall

1. Insert the lift wire/L [2] to the left hole [1] on the rear face.

2. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and secure it with the wire holding jig [3] and the E-ring [4].

3. Insert the lift wire/S [2] to the right hole [1] on the rear face.

4. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the wire holding jig [5] and the E-ring [6].

NOTE

- They are properly fixed if both edges of the wire [1] are at the same position.

5. Take the edges of the lift wire/S [1] and the lift wire/L [2] and set them to the holes on the shaft [3].

6. Take the edge of the lift wire/L [1] and set it to the hole [2] on the shaft.

7. Mount the driving pulley [1] and secure it with the E-ring [2].

8. Insert the lift wire/L [2] to the right hole [1] on the front face.

9. Set the lift wire/L [2] to the near side groove [1] on the wire pulley and secure it with the wire holding jig [3] and the E-ring [4].

10. Insert the lift wire/S [2] to the left hole [1] on the front face.

11. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the wire holding jig [5] and the E-ring [6].

NOTE

- They are properly fixed if both edges of the wire [1] are placed at the same position.

[1]

[3]

12. Take the edges of the lift wire/S [1] and the lift wire/L [2] to set them to the holes on the shaft [3].

[2]

[1]

13. Take the edge of the auxiliary wire [1] and set it to the hole [2] on the shaft.

[1]

[2]

14. Mount the driving pulley [1] and secure it with the E-ring [2].

Rear side

15. Wind the wire to the pulley [2] as rotating the lift up shaft [1] on the rear face counterclockwise and moving the tray assy to the upper end.

NOTE

- Wind the wire to the direction shown by the arrow.

Front side [2]

16. When the wire is wound with the tray assy being at the up end, wind the auxiliary wire [2] to the wire pulley [1] clockwise once.

17. Set the auxiliary wire [1] on the front face to the hook of the slide spring [2].

18. Mount the wire holding jig [2] and secure it with the E-ring [1].

**NOTE**

- Check to make sure that the wire hook [1] is at the position shown on the picture when the tray assy is at the lower end.

19. Place a weight such as a package of paper, etc. [1] to move the tray assy down to the lower end.

20. Wrap the lift wire/L [2] on the driving pulley [1] on the rear face clockwise six times.

21. Turn the rotation plate [1] one and a half times clockwise from the position where the plate holds the tension, to set the lift wire/L [2].

**NOTE**

- When the tray assy is at the lower limit, make sure that the part [1] from which the wire is put over the rotation plate is placed at the position shown by the arrow.

22. For the rest of the procedure for mounting, take the reverse steps from disassembling.

7.5 Disassembly/reassembly procedure (LU-301)

7.5.1 Large capacity unit (LU-301)

1. Remove the large capacity unit [1] from the main body.

2. Remove two screws [1], and remove the cover [2].

3. Remove the harness from the wire saddle [1].

4. Disconnect two connector [1], the screw on the earth wire [2], and the cord clamp [3].

NOTE

- When the optional transformer kit TK-101 is installed, disconnect the connector [4].

5. Remove two screws [1] and remove the mounting plate [2].

6. Reinstall the above parts following the removal steps in reverse.

7.5.2 Upper door (LU-301)

1. Remove the right cover.
[G.7.5.3 Right cover \(LU-301\)](#)
2. Remove the front cover.
[G.7.5.4 Front cover \(LU-301\)](#)
3. Remove the rear cover.

[G.7.5.5 Rear cover \(LU-301\)](#)

4. Remove the feed cover.

[G.7.5.6 Feed cover \(LU-301\)](#)

5. Open the upper door.

6. Remove two screws [1] and remove the fixed sheet metal [2].

7. Remove two screws [1], the sheet metal [2] and remove the upper door [3].

8. Reinstall the above parts following the removal steps in reverse.

7.5.3 Right cover (LU-301)

1. Open the upper door.

2. Remove four screws [1] and remove the right cover [2].

7.5.4 Front cover (LU-301)

1. Remove the right cover.

[G.7.5.3 Right cover \(LU-301\)](#)

2. Remove the harness from the connector [1] and the wire saddle [2].

3. Loosen five screws [1] and remove the front cover [2].

7.5.5 Rear cover (LU-301)

1. Remove the right cover.

[G.7.5.3 Right cover \(LU-301\)](#)

2. Remove two screws [1] and remove the sheet metal [2].

3. Loosen five screws [1] and remove the rear cover [2].

7.5.6 Feed cover (LU-301)

1. Remove the right cover.

[G.7.5.3 Right cover \(LU-301\)](#)

2. Remove the front cover.

[G.7.5.4 Front cover \(LU-301\)](#)

3. Remove the rear cover.

[G.7.5.5 Rear cover \(LU-301\)](#)

4. Remove two screws [1] and remove the feed cover [2].

7.5.7 Lift wire (LU-301)

(1) Removal

1. Remove the right cover.
[G.7.5.3 Right cover \(LU-301\)](#)
2. Remove the front cover.
[G.7.5.4 Front cover \(LU-301\)](#)
3. Remove the rear cover.
[G.7.5.5 Rear cover \(LU-301\)](#)

4. Remove the harness from the connector [1] and two wire saddles [2] on the rear side.

5. Remove nine screws [1] and five screws [2] to remove the motor assy [3] and the drive board assy [4].

6. Remove the lift wire/L [2] from the rotation plate [1].

7. Remove the auxiliary wire [2] from the spring [1] on the front side.

8. Remove the E-ring [1] on the front side to remove the wire holding jig [2].

9. Remove the E-ring [1] on the rear side to remove the driving pulley [2].

10. Pull out three lift wires [1].

11. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].

12. Remove the E-ring [1] on the front side to remove the driving pulley [2].

13. Pull out the auxiliary wire [1] and two lift wires [2].

14. Remove two E-rings [1] and two wire pulleys [2] to remove the lift wire/S [3] and the lift wire/L [4].

(2) Reinstall

1. Insert the lift wire/L [2] to the left hole [1] on the rear face.

2. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and secure it with the E-ring [3].

3. Insert the lift wire/S [2] to the right hole [1] on the rear face.

[2] [1]

4. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the E-ring [5].

NOTE

- They are properly fixed if both edges of the wire [1] are at the same position.

[1]

5. Take the edges of the lift wire/S [1] and the lift wire/L [2] and set them to the holes on the shaft [3].

[1] [2]

[3]

6. Take the edge of the lift wire/L [1] and set it to the hole on the shaft [2].

[1] [2]

7. Mount the driving pulley [1] and secure it with the E-ring [2].

[1][2]

8. Insert the lift wire/L [2] to the right hole [1] on the front face.

[1] [2]

9. Set the lift wire/L [2] to the near side groove [1] on the wire pulley and secure it with the E-ring [3].

10. Insert the lift wire/S [2] to the left hole [1] on the front face.

[1] [2]

11. Set the lift wire/L [2] to the near side groove [1] on the wire pulley, and set the lift wire/S [4] to the far side groove [3] and secure them with the E-ring [5].

NOTE

- They are properly fixed if both edges of the wire [1] are placed at the same position.

[1]

[3]

12. Take the edges of the lift wire/S [1] and the lift wire/L [2] to set them to the holes on the shaft [3].

[2]

[1]

13. Take the edge of the auxiliary wire [1] and set it to the hole on the shaft [2].

[2]

[1]

14. Mount the driving pulley [1] and secure it with the E-ring [2].

Rear side

[1] [2]

Front side

[2]

15. Wind the wire to the pulley [2] as rotating the lift up shaft [1] on the rear face counterclockwise and moving the tray assy to the upper end.

NOTE

- Wind the wire to the direction shown by the arrow.

16. When the wire is wound with the tray assy being at the up end, wind the auxiliary wire [2] to the wire pulley [1] clockwise once.

[1]
[2]

17. Set the auxiliary wire [1] on the front face to the hook of the slide spring [2].

[2]
[1]

18. Mount the wire holding jig [1] and secure it with the E-ring [2].

[1]
[2]

NOTE

- Check to make sure that the wire hook [1] is at the position shown on the picture when the tray assy is at the lower end.

[1]

19. Place a weight such as a package of paper, etc. [1] to move the tray assy down to the lower end.

[1]

20. Wrap the lift wire/L [2] on the driving pulley [1] on the rear face clockwise seven times.

[1]

[2]

21. Turn the rotation plate [1] one and a half times clockwise from the position where the plate holds the tension, to set the lift wire/L [2].

[2]

[1]

NOTE

- The rib edge [1] of the rotation plate must be around the dotted lines as shown in the picture when the tray assy is at the lowest level.

22. For the rest of the procedure for mounting, take the reverse steps from disassembling.

7.5.8 LU drive board (LUDB) (LU-301)

1. Remove the right cover.
[G.7.5.3 Right cover \(LU-301\)](#)
2. Remove the rear cover.
[G.7.5.5 Rear cover \(LU-301\)](#)

3. Disconnect five connectors [1], remove four screws [2] and remove the LU drive board [3].

7.5.9 Lift-up motor (M1) (LU-301)

1. Remove the right cover.
[G.7.5.3 Right cover \(LU-301\)](#)
2. Remove the rear cover.
[G.7.5.5 Rear cover \(LU-301\)](#)

3. Disconnect the connector [1], remove three screws [2] and remove the lift-up motor [3].

7.5.10 Dehumidification heater (DH) (LU-301)

1. Remove the right cover.
[G.7.5.3 Right cover \(LU-301\)](#)

2. Remove the harness from the connector [1] and three wire saddles [2].

3. Remove four screws [1] and remove the dehumidification heater [2].

7.6 Disassembly/reassembly procedure (JS-506)

7.6.1 Exit tray 1 (JS-506)

1. Remove two screws [1], and remove the control panel left cover/1 [2].

2. Remove three screws [1], and remove the exit tray [2].

3. Reinstall the above parts following the removal steps in reverse.

7.6.2 Exit tray 2 (JS-506)

1. Remove the job separator.
[G.7.6.3 Job separator \(JS-506\)](#)

2. Remove two claws [1] and move the exit tray 2 [2] upward.
3. Slide the exit tray 2 [2] to unlock the claws [3], and remove the exit tray 2 [2].

**NOTE**

- When mounting the exit tray 2, mount the exit tray 2 in the following step so that the shaft [2] of the actuator can be set to the groove [1] of the exit tray 2.
- Adjust the actuator [5] so that the positioning marks [3] and [4] will be aligned.
- Press the exit tray 2 down with the positioning mark [6] for the exit tray 2 and the positioning mark [7] for the shift unit being aligned.

4. Reinstall the above parts following the removal steps in reverse.

7.6.3 Job separator (JS-506)

1. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes. Be careful not to pinch the harness.

2. Remove the cable tie [1], and disconnect two connectors [2].

3. Remove two screws [1], and remove the job separator [2].

4. Reinstall the above parts following the removal steps in reverse.

7.6.4 Sensor unit (JS-506)

1. Remove two screws [1], and remove the control panel left cover/1 [2].

2. Remove the harnesses from two wire saddles [1] and the edge cover [2].
3. Disconnect the connector [3].
4. Remove the screw [4], and remove the sensor unit [5].

5. Reinstall the above parts following the removal steps in reverse.

7.6.5 JS control board (JSCB) (JS-506)

1. Remove the job separator.
[G.7.6.3 Job separator \(JS-506\)](#)
2. Remove the exit tray 2.
[G.7.6.2 Exit tray 2 \(JS-506\)](#)

3. Remove the cover [1].

4. Disconnect three connectors [1].
5. Remove four screws [2], and remove two ground terminals [3].
6. Remove the JS control board [4].

7. Reinstall the above parts following the removal steps in reverse.

7.6.6 Tray shift motor (M1) (JS-506)

1. Remove the job separator.
[G.7.6.3 Job separator \(JS-506\)](#)
2. Remove the exit tray 2.
[G.7.6.2 Exit tray 2 \(JS-506\)](#)

3. Disconnect two connectors [1].
4. Remove the actuator [2].

NOTE

- Be careful not to lose the spring [3] and stopper [4].

5. Remove two screws [5], and remove the cover [6].

6. Remove the E-ring [1], and remove the gear [2].
7. Remove three screws [3], and remove the tray shift motor drive assy [4].

NOTE

- When mounting the tray shift motor drive assy, place the earth terminal [5] on the plate for the tray shift motor drive assy and tighten the screw.

8. Remove two screws [1], and remove the tray shift motor [2].

9. Reinstall the above parts following the removal steps in reverse.

7.7 Disassembly/reassembly procedure (FS-535)

7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 (FS-535)

1. Remove two covers [1].

2. Remove two screws [1], and remove the upper cover/1 [2].

3. Remove three covers [1].

4. Open the front door.
5. Remove two screws [1].

6. Remove three screws [1], and remove the upper cover/2 [2].

7. Remove two screws [1], and remove the upper cover/3 [2].

8. Reinstall the above parts following the removal steps in reverse.

7.7.2 Rear cover (FS-535)

1. Remove eight screws [1], and remove the rear cover [2].

2. Reinstall the above parts following the removal steps in reverse.

7.7.3 Rear left cover (FS-535)

1. Remove six screws [1], and remove the rear left cover [2].

2. Reinstall the above parts following the removal steps in reverse.

7.7.4 Front left cover (FS-535)

1. Remove three screws [1], and remove the front left cover [2].

2. Reinstall the above parts following the removal steps in reverse.

7.7.5 Upper left cover (FS-535)

1. Remove the rear left cover.
[G.7.7.3 Rear left cover \(FS-535\)](#)
2. Remove the front left cover.
[G.7.7.4 Front left cover \(FS-535\)](#)

3. Remove four screws [1], and remove the upper left cover [2].

4. Reinstall the above parts following the removal steps in reverse.

7.7.6 Right cover (FS-535)

1. Remove two screws [1], and remove the right cover [2].

2. Reinstall the above parts following the removal steps in reverse.

7.7.7 Main tray (Paper exit lower tray) (FS-535)

1. Remove two screws [1], and remove the main tray [2].

NOTE

- To reinstall the main tray, align the four fittings [3] with the corresponding four guide holes [4] on the main tray and fix the tray.

2. Reinstall the above parts following the removal steps in reverse.

7.7.8 Sub tray (Paper exit upper tray) (FS-535)

1. Remove the sub tray [1] as shown in the illustration.

2. Reinstall the above parts following the removal steps in reverse.

7.7.9 Finisher (FS-535)

1. Open the finisher front door.

2. Remove the screw [1], and slide the finisher as shown in the illustration.

NOTE

- To mount the finisher, align the hook portion of the mounting bracket [1] with the hole [2] in the finisher. Then, push the finisher toward the rear.

3. Disconnect three connectors [1], and remove the finisher.

4. Reinstall the above parts following the removal steps in reverse.

7.7.10 Horizontal transport unit (FS-535)

1. Remove the finisher.

[G.7.7.9 Finisher \(FS-535\)](#)

2. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

3. Disconnect two connectors [1], and remove the cable tie [2].

4. Remove two screws [1], and remove the horizontal transport unit [2].

5. Reinstall the above parts following the removal steps in reverse.

7.7.11 Stapler unit (FS-535)

1. Open the finisher front door.

2. Remove four screws [1], and remove the staple unit cover [2].

3. Remove the stapler [1].

4. Disconnect two connectors [1].
5. Remove the harness from three wire saddles [2].

6. Remove two screws [1], and remove the plate [2].

7. Remove two cable ties [1] from the plate.
8. Remove two screws [2], and remove the stapler unit [3].

NOTE

- When removing the stapler unit [3], support it with your hand to prevent the stapler movement motor assy [4] from coming off and falling down.

9. Remove three screws [1], and remove the stapler unit [2].

10. Reinstall the above parts following the removal steps in reverse.

7.7.12 FS control board (FSCB) (FS-535)

1. Remove rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect all connectors from the FS control board.
3. Remove eight screws [1], and remove the FS control board [2].

NOTE

- When the FS control board (FSCB) has been replaced, be sure to remount EEPROM (IC5) [3]. Remove EEPROM (IC5) [3] from the old FS control board and mount it on the new FS control board.

**NOTE**

- When mounting EEPROM (IC5), align the notches (indicated by "A" in the illustration).

4. Reinstall the above parts following the removal steps in reverse.

NOTE

- After replacing the FS control board, be sure to install the latest firmware.

7.7.13 RU control board (RUCB) (FS-535)

1. Remove the horizontal transport unit.

[G.7.7.10 Horizontal transport unit \(FS-535\)](#)

2. Remove four screws [1], and remove the horizontal transport unit rear cover [2].

3. Disconnect all connectors from the RU control board.
4. Remove four screws [1], and remove the RU control board [2].

5. Reinstall the above parts following the removal steps in reverse.

7.7.14 1st transport motor (M1) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect the connector [1] and remove four screws [2], and remove the 1st transport motor assy [3].

3. Remove the E-ring [1], and remove the flange [2].
4. Remove the gear [3].

NOTE

- Be careful not to lose the pin.

5. Remove four screws [4], and remove the 1st transport motor [5]

6. Reinstall the above parts following the removal steps in reverse.

7.7.15 2nd transport motor (M2) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the upper cover/1, upper cover/2 and upper cover/3.

[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

3. Disconnect the connector [1] and remove three screws [2], and remove the 2nd transport motor assy [3].

4. Remove the E-ring [1], and remove the gear [2].

NOTE

- Be careful not to lose the pin.

5. Remove two screws [3], and remove the 2nd transport motor [4].

6. Reinstall the above parts following the removal steps in reverse.

7.7.16 Bypass transport motor (M3) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect the connector [1] and remove three screws [2], and remove the bypass transport motor assy [3].

3. Remove the E-ring [1], and remove the gear [2].

NOTE

- Be careful not to lose the pin.

4. Remove two screws [3], and remove the bypass transport motor [4].

5. Reinstall the above parts following the removal steps in reverse.

7.7.17 Exit roller motor (M4) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the rear left cover.

[G.7.7.3 Rear left cover \(FS-535\)](#)

3. Remove the upper cover/1, upper cover/2 and upper cover/3.

[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

4. Remove the paper output roller motor assy.

[G.7.7.19 Paper output roller motor \(M6\) \(FS-535\)](#)

5. Remove the E-ring [1], and remove the gear [2].

6. Disconnect the connector [1].
7. Remove four screws [2], and remove the drive assy [3].

8. Remove three screws [1], and remove the exit roller motor assy [2].
9. Remove the E-ring [3], and remove the gear [4].

NOTE

- Be careful not to lose the pin.

10. Reinstall the above parts following the removal steps in reverse.

7.7.18 Main tray up/down motor (M5) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect the connector [1].
3. Remove four screws [2], and remove the main tray up/down motor [3].

4. Reinstall the above parts following the removal steps in reverse.

7.7.19 Paper output roller motor (M6) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the rear left cover.

[G.7.7.3 Rear left cover \(FS-535\)](#)

3. Remove the upper cover/1, upper cover/2 and upper cover/3.

[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

4. Remove two screws [1], and remove the plate [2].

5. Disconnect the connector [1].
6. Remove the E-ring [2], and remove the bearing [3].

7. Remove the harness from 14 wire saddles [1] and three edge covers [2].

8. Remove two screws [1], and remove the plate [2].

9. Remove the harness from the wire saddle [1] and the edge cover [2].
10. Disconnect the connector [3].

11. Remove four screws [1], and move the plate [2] to the right.

12. Remove four screws [1], and remove the paper output roller motor drive assy [2].

13. Remove four screws [1], and remove the plate [2].

14. Remove the E-ring [3], and remove the gear [4].

NOTE

- Be careful not to lose the pin.

15. Reinstall the above parts following the removal steps in reverse.

7.7.20 Stacker transport motor (M10) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect the connector [1].
3. Remove the harness from the wire saddle [2] and edge cover [3], and disconnect the connector [4].
4. Remove three screws [5], and remove the stacker transport motor assy [6].

5. Remove the E-ring [1], and remove the gear [2].

NOTE

- Be careful not to lose the pin.

6. Remove two screws [3], and remove the stacker transport motor [4].

7. Reinstall the above parts following the removal steps in reverse.

7.7.21 Alignment plate motor/Fr (M11)/ Alignment plate motor/Rr (M12)/ Trailing edge stopper motor (M19) (FS-535)

1. Turn ON the main power switch of the main body.

2. Push up the actuator [1] of the main tray top surface sensor (PS4) with your finger, and then lower the finishing main tray [2].
3. In the state of the finishing main tray being lowered, turn OFF the main and sub power switches and unplug the power cord from the power outlet.

NOTE

- When the saddle unit (SD-512) is attached to the finisher, remove the driven part and two covers.
[G.7.9.3 Paper exit tray \(SD-512\)](#)

4. Remove the main tray.

[G.7.7.7 Main tray \(Paper exit lower tray\) \(FS-535\)](#)

5. Remove two screws [1], and remove the plate [2].
6. Remove nine screws [3].

NOTE

- As the plate [4] falls down, remove the screws while holding the plate [4].

7. Remove the plate [4].

8. Disconnect the connector [1].
9. Remove two screws [2], and remove the alignment plate motor/Fr [3].
10. Disconnect the connector [4].
11. Remove two screws [5], and remove the alignment plate motor/Rr [6].

12. Disconnect the connector [1].
13. Remove two screws [2], and remove the trailing edge stopper motor [3].

14. Reinstall the above parts following the removal steps in reverse.

7.7.22 Stapler movement motor (M13) (FS-535)

1. Remove four screws [1], and remove the staple unit cover [2].

2. Disconnect the connector [1].
3. Remove two cable ties [2] from the plate.
4. Remove two screws [3] and pull out the stapler movement motor assy [4].

5. Remove four screws [1], and remove the stapler movement motor assy [2].
6. Remove the E-ring [3], and remove the gear [4].

NOTE

- Be careful not to lose the pin.

7. Reinstall the above parts following the removal steps in reverse.

7.7.23 Trailing edge paddle up/down motor (M15) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Disconnect the connector [1], and remove the harness from two wire saddles [2].
3. Remove two screws [3], and remove the trailing edge paddle up/down motor [4].

4. Reinstall the above parts following the removal steps in reverse.

7.7.24 Paddle motor (M16) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the rear left cover.

[G.7.7.3 Rear left cover \(FS-535\)](#)

3. Remove the front left cover.

[G.7.7.4 Front left cover \(FS-535\)](#)

4. Remove the upper left cover.

[G.7.7.5 Upper left cover \(FS-535\)](#)

5. Remove the bypass transport motor.
[G.7.7.16 Bypass transport motor \(M3\) \(FS-535\)](#)
6. Remove the stacker transport motor
[G.7.7.20 Stacker transport motor \(M10\) \(FS-535\)](#)

7. Disconnect the connector [1].

8. Remove the E-ring [1], and remove the flange [2].

9. Remove the belt [1] from the gear [2].

10. Remove the E-ring [1], and remove the actuator [2].

11. Remove two E-rings [1].
12. Remove the belt [2] from the gear [3].

13. Remove the E-ring [1], and remove the flange [2].
14. Remove the belt [3] and the gear [4].
15. Remove the spring [5].
16. Remove three screws [6].
17. Remove the belt [7], and remove the gear [8].
18. Remove the paddle motor assy [9].

19. Remove the E-ring [1], and remove the flange [2].
20. Remove the gear [3].
21. Remove three screws [4], and remove the paddle motor [5].

22. Reinstall the above parts following the removal steps in reverse.

7.7.25 Stacker plate motor (M17) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the harness from three wire saddles [1].
3. Disconnect the connector [2].
4. Remove two screws [3], and remove the stacker plate motor assy [4].

5. Remove two screws [1], and remove the stacker plate motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.7.26 Leading edge paddle up/down motor (M18) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the rear left cover.

[G.7.7.3 Rear left cover \(FS-535\)](#)

3. Remove the upper cover/1, upper cover/2 and upper cover/3.

[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

4. Remove the paper output roller motor drive assy.

[G.7.7.19 Paper output roller motor \(M6\) \(FS-535\)](#)

5. Disconnect the connector [1].
6. Remove two screws [2], and remove the leading edge paddle up/down motor [3].

7. Reinstall the above parts following the removal steps in reverse.

7.7.27 RU transport motor (M35) (FS-535)

1. Remove the horizontal transport unit.

[G.7.7.10 Horizontal transport unit \(FS-535\)](#)

2. Remove four screws [1], and remove the horizontal transport unit rear cover [2].

3. Disconnect the connector [1].
4. Remove three tabs [2] from the harness guide.
5. Remove four screws [3], and remove the harness guide [4].

6. Remove four screws [1], and remove the RU transport motor assy [2].

NOTE

- To reinstall the RU transport motor assy [2], route the grounding wire [3] in front of the plate of the RU transport motor assy.

7. Remove two screws [1], and remove the RU transport motor [2].

8. Reinstall the above parts following the removal steps in reverse.

7.7.28 Center staple switching gate solenoid (SD1) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove two springs [1].
3. Disconnect the connector [2], and remove the harness from the wire saddle [3].

4. Remove the screw [1], and remove the center staple switching gate solenoid assy [2].

5. Remove two screws [1], and remove the center staple switching gate solenoid [2].

6. Reinstall the above parts following the removal steps in reverse.

7.7.29 Bypass switching gate solenoid (SD2) (FS-535)

1. Remove the rear cover.

[G.7.7.2 Rear cover \(FS-535\)](#)

2. Remove the upper cover/1, upper cover/2 and upper cover/3.

[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

3. Open the front door.

4. Raise the guide lever [1].

5. Disconnect two connectors [1].
6. Remove four screws [2], and remove the leading edge paddle up/down motor drive assy [3].

7. Remove the spring [1], and remove the screw [2].
8. Remove the E-ring [3], and remove the bearing [4].

9. Remove two springs [1].

10. Remove the harness from the edge cover [1].
11. Remove two screws [2], and remove the plate [3].

12. Remove the harness from the wire saddle [1].
13. Disconnect the connector [2].
14. Remove the bypass switching gate solenoid [3].

15. Reinstall the above parts following the removal steps in reverse.

7.7.30 Sub tray switching gate solenoid (SD3) (FS-535)

1. Remove the rear cover.
[G.7.7.2 Rear cover \(FS-535\)](#)
2. Remove the sub tray paper route.
[G.7.7.32 Sub tray paper exit route \(FS-535\)](#)

3. Remove two springs [1].

4. Remove the E-ring [1], and remove the pulley [2].
5. Remove the harness from the wire saddle [3].

6. Remove the screw [1] and pull out the sub tray switching gate solenoid assy [2].

7. Remove two screws [1], and remove the plate [2].

8. Pull out the sub tray switching gate solenoid [1] and remove the connector [2].

9. Reinstall the above parts following the removal steps in reverse.

7.7.31 Switchback gate solenoid (SD4) (FS-535)

1. Open the front door.

2. Remove the spring [1].
3. Remove the screw [2].
4. Remove the spring [3].

5. Remove the harness from the edge cover [1].
6. Disconnect the connector [2], and remove the switchback gate solenoid assy [3].

7. Remove two screws [1], and remove the switchback gate solenoid [2].

8. Reinstall the above parts following the removal steps in reverse.

7.7.32 Sub tray paper exit route (FS-535)

1. Remove the sub tray.
[G.7.7.8 Sub tray \(Paper exit upper tray\) \(FS-535\)](#)
2. Remove the rear cover.
[G.7.7.2 Rear cover \(FS-535\)](#)
3. Remove the rear left cover.
[G.7.7.3 Rear left cover \(FS-535\)](#)
4. Remove the front left cover.
[G.7.7.4 Front left cover \(FS-535\)](#)
5. Remove the upper left cover.
[G.7.7.5 Upper left cover \(FS-535\)](#)
6. Remove the upper cover/1, upper cover/2 and upper cover/3.
[G.7.7.1 Upper cover /1, Upper cover /2, Upper cover /3 \(FS-535\)](#)

7. Remove five screws [1].

8. Remove the cable tie [1] from the plate [2].
9. Disconnect the connector [3], and remove the plate [2].

10. Remove ten screws [1], and remove two sub tray mount plates [2].

11. Remove the E-ring [1], and remove the gear [2].

12. Remove the E-ring [1], and remove the bearing [2].

13. Disconnect two connectors [1].

14. Remove the harness from seven wire saddles [2].

15. Move the shaft [3] in the direction of the arrow shown in the illustration and remove the bearing [4] from the plate.

16. Remove six screws [1], and remove the sub tray paper exit route [2].

17. Reinstall the above parts following the removal steps in reverse.

7.7.33 Lift wire (FS-535)

CAUTION

- When the main tray up/down motor unit is removed, the main tray may fall down. When removing the main tray up/down motor unit, be sure to support the main tray with your hand.

NOTE

- The following procedure for replacing the lift wire shows the examples on the rear side. The front and rear lift wires are marked as "F" and "R" on their mounting plates respectively. Be sure to check it when reinstalling the lift wires.

(1) Disassembly procedure

1. Remove the rear cover.
[G.7.7.2 Rear cover \(FS-535\)](#)
2. Remove the rear left cover.
[G.7.7.3 Rear left cover \(FS-535\)](#)
3. Remove the front left cover.
[G.7.7.4 Front left cover \(FS-535\)](#)
4. Remove the main tray (Paper exit lower tray).
[G.7.7.7 Main tray \(Paper exit lower tray\) \(FS-535\)](#)

5. Remove five screws [1], and remove the reinforcing metal [2].

6. Disconnect the connector [1], and remove the harness from the wire saddle [2].

7. Remove two screws [1].

8. Remove five screws [1], and remove the main tray up/down motor unit [2].

NOTE

- When the main tray up/down motor unit [2] is removed, the main tray may fall down. When removing the main tray up/down motor unit, be sure to support the main tray with your hand.

**NOTE**

- To reinstall the main tray up/down motor unit, pass the shaft [2] through the hole of the plate [1].

9. Remove two screws [1].

10. Loosen two screws [1] on the belt tensioner.

11. Remove the E-ring [1] and remove the gear [2].

NOTE

- Be careful not to lose the pin.

12. Remove the plate [1] and the lift pulley /Lw [2], and remove the lift wire [3].

NOTE

- Be careful not to lose the pin.

(2) Installation procedure

1. Tighten the wire mounting plate [1] of the new lift wire on the lift stay [2] with two screws [3] temporarily.

NOTE

- The lift wire should be placed with the short side [4] to the bottom and the long side [5] to the top.

2. Fasten the wire end of the lift wire with the inner wire end hole of the lift pulley /Lw [1]. Then, draw the lift wire through the notch [2] and wind it 5 turns from inside to outside around the lift pulley with no slack, and then insert the lift pulley /Lw [1] into the shaft so that it coincides with the pin [3].

3. Hook the lift wire on the lift pulley /Up [1]. Then, wind the lift wire 2 turns from inside to outside around the lift pulley /Lw [2] with no slack, draw the lift wire through the notch and fasten it with the wire end hole [3].

NOTE

- Be sure to wind the lift wire on the lift pulley /Lw without the short side (the side wound in advance) and the long side (the side wound subsequently) are overlapped.

4. Insert the plate [1], the pin [2] and the gear [3], and then fasten it with E-ring [4].

5. Use a tension gauge or spring balance to pull up the belt tensioner [1] with a standard force “A” [3] and fasten it with the two screws [2].
Standard value [3]: A = 2.5 ± 0.25 kg

6. Loosen the two screws [2] on the wire mounting plate [1] at the front to push down the lift stay [3] to the horizontal position, and then remove four screws [2] and [4] from both the front and the rear.
- NOTE**
- Be sure to check the lift stay [3] is in the horizontal position.

7.7.34 Drive belt (FS-535)

NOTE

- As different types of belts are used, when installing a belt, be sure to install it at the correction location.

Drive belt part number	Type	Drive belt part number	Type
[1] A2Y1-7066-0X	B60S3M288	[2] A2Y1-7064-0X	B60S3M306

Drive belt part number	Type	Drive belt part number	Type
[3] A2Y1-7064-0X	B60S3M306	[4] A2Y1-7067-0X	B60S3M570
[5] A2Y1-7185-0X	B60S3M168	[6] A2Y1-7068-0X	B60S3M528
[7] A2Y1-7063-0X	B60S3M147	[8] A2Y1-7257-0X	B30S2M144
[9] A2Y1-7258-0X	B30S2M144	[10] A2Y1-7065-0X	B60S3M189
[11] A2Y1-7353-0X	B30S2M208	[12] A2Y1-7257-0X	B30S2M144
[13] A2Y1-9067-0X	B60S2M134	[14] A2Y1-9068-0X	B60S2M106

• The numbers after B in type refer to the belt width (x 0.1 mm) and the numbers after M refer to the length of the belt (mm).

7.7.35 Paddle/3 (FS-535)

- 1. Remove the sub tray.
G.7.7.8 Sub tray (Paper exit upper tray) (FS-535)
- 2. Remove the rear left cover.
G.7.7.3 Rear left cover (FS-535)
- 3. Remove the front left cover.
G.7.7.4 Front left cover (FS-535)
- 4. Remove the upper left cover.
G.7.7.5 Upper left cover (FS-535)

- 5. Remove three C-clips [1].
- 6. Remove three springs [2].
- 7. Remove three paddle/3 unit [3].

- 8. Remove three paddle/3 [1] from each paddle/3 unit.

- 9. To reinstall, reverse the order of removal.

7.8 Disassembly/reassembly procedure (PK-521)

7.8.1 Punch kit (PK-521)

- 1. Remove the finisher from the main body.

- 2. Remove three screws [1], and remove the punch kit cover [2].

3. Remove the board cover [1].

4. Remove the punch scraps box [1].

5. Disconnect three connectors [1].

6. Remove the harness from three wire saddles [2].

7. Remove the harness from the harness guide [1].

8. Remove the harness from two wire saddles [2].

9. Remove the cable tie [3] from the plate.

NOTE

- When routing the harness in reinstallation, be sure to remove a twist from the harness.

10. Disconnect the connector [1].

11. Remove four screws [1].

12. Pull the punch kit [1] out and remove it from the finisher.

13. Reinstall the above parts following the removal steps in reverse.

7.8.2 Punch oscillating motor (M302) (PK-521)

1. Remove the punch kit.

G.7.8.1 Punch kit (PK-521)

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the punch oscillating motor [3].

4. Remove the E-ring [1], and remove the gear [2].

NOTE

- Be careful not to lose the pin.

5. Remove two screws [3], and remove the plate [4].

6. Reinstall the above parts following the removal steps in reverse.

7.9 Disassembly/reassembly procedure (SD-512)

7.9.1 Front cover (SD-512)

1. Remove the screw [1], and remove the jam clearing dial [2].
2. Remove four screws [3], and remove the front cover [4].

3. Reinstall the above parts following the removal steps in reverse.

7.9.2 Saddle unit (SD-512)

CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.
- Be careful not to jam your finger in the connecting section of the pantograph.

1. Remove the finisher.
[G.7.7.9 Finisher \(FS-535\)](#)

2. Disconnect three connectors [1] of the pantograph.
3. Remove the screw [2], and remove the pantograph [3].

NOTE

- When installing the pantograph, insert the three pantograph hooks [1] into the holes on the back of the finisher.

4. Remove two screws [1] of the rails.

5. While raising the saddle unit by grasping it by the area [1] shown in the illustration, insert the right rail [2] into the finisher.

NOTE

- To reinstall the saddle unit, fit the boss [3] of the saddle unit into the hole of the right rail.

6. Detach the saddle unit [2] from the two tabs [1].

7. Reinstall the above parts following the removal steps in reverse.

CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.

- Be careful not to jam your finger in the connecting section of the pantograph.

7.9.3 Paper exit tray (SD-512)

1. Remove four screws [1], and remove two covers [2].

2. Remove three screws [1], and driven parts [2].

3. Remove two screws [1].
4. Disconnect the connector [2], and remove the paper exit tray [3].

5. Reinstall the above parts following the removal steps in reverse.

7.9.4 Staple unit (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove four screws [1], and remove the plate [2].

4. Remove three screws [1], and remove the tri-fold guide motor assy [2].

5. Remove four screws [1], and remove the the conveyance assy [2].

6. Remove two screws [1], and remove the plate [2].

- 7. Remove two screws [1].
- 8. Detach the board support film [3] from the harness guide tabs [2].

- 9. Remove the harness from the wire saddle [1].
- 10. Disconnect the connector [2].
- 11. Remove four screws [3], and remove the SD drive board assy [4].

12. Remove two screws [1], and remove the plate [2].

- 13. Remove the screw [1].
- 14. Release two tabs [2], and remove the cover [3].

15. Disconnect the connector [1].

16. Remove two screws [1], and remove the staple unit [2].

17. Reinstall the above parts following the removal steps in reverse.

7.9.5 SD drive board (SDDB) (SD-512)

- 1. Remove the saddle unit.
G.7.9.2 Saddle unit (SD-512)

- 2. Remove two screws [1].
- 3. Remove the board support film [3] from the harness guide [2].

- 4. Disconnect all the connectors from the SD drive board.
- 5. Remove four screws [1].
- 6. Detach the SD drive board [3] from the two tabs [2].

NOTE

- When the SD drive board (SDDB) has been replaced, be sure to remount EEPROM (U3) [4]. Remove EEPROM (U3) [4] from the old SD drive board and mount it on the new SD drive board.

NOTE

- When mounting EEPROM (U3), align the notches (indicated by “A” in the illustration).

7. Reinstall the above parts following the removal steps in reverse.

NOTE

- After replacing the SD drive board, be sure to install the latest firmware.

7.9.6 SD transport motor (M1) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the SD transport motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.9.7 Paper receiving guide control motor (M2) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove the harness from the wire saddle [1], and disconnect the connector [2].
4. Remove two screws [3], and remove the paper receiving guide control motor [4].

5. Reinstall the above parts following the removal steps in reverse.

7.9.8 Alignment motor (M3) (SD-512)

1. Remove the saddle unit.
[G.7.9.4 Staple unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove four screws [1], and remove the plate [2].

4. Remove four screws [1], and remove the plate [2].

5. Disconnect the connector [1].
6. Remove two screws [2], and remove the alignment motor [3].

7. Reinstall the above parts following the removal steps in reverse.

7.9.9 Stopper drive motor (M4) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Disconnect the connector [1].
5. Remove two screws [2], and remove the stopper drive motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.9.10 Center fold roller motor (M5) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)

2. Disconnect the connector [1].
3. Remove four screws [2], and remove the center fold roller motor [3].

4. Reinstall the above parts following the removal steps in reverse.

7.9.11 Tri-fold guide motor (M6) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the tri-fold guide motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.9.12 SD paddle motor (M7) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the SD paddle motor assy [3].

**NOTE**

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

5. Remove two screws [1], and remove the SD paddle motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.9.13 Center fold change motor (M8) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the center fold change motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.9.14 Center fold knife motor (M9) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Disconnect the connector [1].
5. Remove four screws [2], and remove the center fold knife motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.9.15 Paper transport belt motor (M34) (SD-512)

1. Remove the paper exit tray.
[G.7.9.3 Paper exit tray \(SD-512\)](#)

2. Remove two screws [1], and remove the cover [2].

3. Disconnect the connector [1].
4. Remove four screws [2], and remove the paper transport belt motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.9.16 Stopper solenoid (SD1) (SD-512)

1. Remove the saddle unit.
[G.7.9.2 Saddle unit \(SD-512\)](#)
2. Remove the front cover.
[G.7.9.1 Front cover \(SD-512\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Place the saddle unit as shown in the illustration.

5. Remove two stoppers [1], and remove the guide plate [2].

6. Remove two screws [1], and disconnect the connector [2].

7. Raise the saddle unit.

8. Disconnect the connector [1], and remove the harness from three wire saddles [2].

9. Disconnect the connector [1], and remove the drive lever [2].

10. Remove two screws [1].

11. Remove the guide plate assy [1].

NOTE

- When reinstalling the guide plate assy, perform mechanical adjustment.
[I.26.1.1 Half-fold skew adjustment](#)

12. Remove four screws [1], and remove the plate [2].

13. Remove two E-rings [1], and remove the stopper guide [2].

NOTE

- When reinstalling the stopper guide, fit the belt into the stopper guide groove [1].

14. Remove the screw [1], and remove the plate [2].

15. Remove the screw [1].

16. Disconnect the connector [1], and remove the stopper solenoid [2].

NOTE

- When reinstalling the stopper solenoid, fit its tip into the place [3] shown in the illustration.

17. Reinstall the above parts following the removal steps in reverse.

7.10 Disassembly/reassembly procedure (JS-602)

7.10.1 Separator (JS-602)

1. Remove the front cover.
[G.7.10.2 Front cover \(JS-602\)](#)
2. Remove the rear cover.
[G.7.10.3 Rear cover \(JS-602\)](#)

3. Remove two screws [1] and connector [2], and remove the separator [3].

7.10.2 Front cover (JS-602)

1. Unlock three tabs [1], and remove the front cover [2].

2. Reinstall the above parts following the removal steps in reverse.

7.10.3 Rear cover (JS-602)

1. Unlock the tab [1], and remove the spacer [2].

2. Unlock three tabs [1], and remove the rear cover [2].

3. Reinstall the above parts following the removal steps in reverse.

7.10.4 3rd entrance switching solenoid (SD404) (JS-602)

1. Remove the rear cover.

[G.7.10.3 Rear cover \(JS-602\)](#)

2. Remove the harness from the wire saddle [1] and edge cover [2].
3. Disconnect the connector [3].

4. Remove the screw [1], and remove the 3rd entrance switching solenoid [2].

5. Reinstall the above parts following the removal steps in reverse.

7.11 Disassembly/reassembly procedure (PI-505)

7.11.1 Upper cover (PI-505)

1. Remove the cap [1].
2. Remove four screws [2] and remove the upper cover [3].

3. Reinstall the above parts following the removal steps in reverse.

7.11.2 Rear cover (PI-505)

1. Remove the upper cover.

[G.7.11.1 Upper cover \(PI-505\)](#)

2. Remove the screw [1] and remove the connector cover [2].
3. Remove three screws [3] and remove the rear cover [4].

4. Reinstall the above parts following the removal steps in reverse.

7.11.3 Operation panel cover assy (PI-505)

1. Remove the upper cover.

[G.7.11.1 Upper cover \(PI-505\)](#)

2. Remove two screws [1], disconnect the connector [2] and remove the operation panel assy [3].

3. Reinstall the above parts following the removal steps in reverse.

7.11.4 Post inserter (PI-505)

1. Remove the screw [1] and remove the connector cover [2].

2. Open the front door of the finisher.
3. Remove three screws [1].

4. Disconnect two connectors [1].

5. Slide the post inserter [1] in the direction of arrow and remove it.

6. Reinstall the above parts following the removal steps in reverse.

7.11.5 PI drive board (PIDB) (PI-505)

1. Remove the rear cover.

[G.7.11.2 Rear cover \(PI-505\)](#)

2. Disconnect eight connectors [1] from the PI drive board.

3. Remove four board supports [1] and remove the PI drive board [2].

4. Reinstall the above parts following the removal steps in reverse.

7.11.6 PI control board (PIOB) (PI-505)

1. Remove the operation panel cover Assy.

[G.7.11.3 Operation panel cover Assy \(PI-505\)](#)

2. Remove two screws [1] and remove the PI control board [2].

3. Reinstall the above parts following the removal steps in reverse.

7.12 Disassembly/reassembly procedure (ZU-606)

7.12.1 Rear cover (ZU-606)

1. Remove the screw [1] and the clamp [2], and remove the power cord [3].

2. Loosen the screw [1], and remove two screws [2], and remove the rear cover [3].

3. Reinstall the above parts following the removal steps in reverse.

7.12.2 Upper cover (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)

2. Remove four screws [1], and remove the upper cover [2].

3. Reinstall the above parts following the removal steps in reverse.

7.12.3 Right cover (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)

2. Remove three screws [1], and remove the right cover [2].

3. Reinstall the above parts following the removal steps in reverse.

7.12.4 Front cover (ZU-606)

1. Remove the Z folding unit.
G.7.12.5 Z folding unit (ZU-606)

2. Remove three screws [1], and remove the front cover [2].

3. Reinstall the above parts following the removal steps in reverse.

7.12.5 Z folding unit (ZU-606)

(1) Removal from the finisher

1. Open the front door of finisher [1].
2. Remove two screws [2] and slide the finisher as shown in the illustration.

NOTE

- To mount the finisher, align the hook portions of the mounting bracket [1] and [2] with the upper and lower holes [3] in the finisher. Then, push the finisher toward the rear.

3. Disconnect three connectors [1] and remove the finisher.

4. Reinstall the above parts following the removal steps in reverse.

(2) Removal from the main body

1. Remove the finisher.

G.7.12.5.(1) Removal from the finisher

2. Remove the punch waste box [1].

3. Remove three screws [1] and two washers [2].

4. Disconnect three connectors [1].

NOTE

- When reconnecting the connectors, make sure that the harness of the Z folding unit is placed below the cable [2] of the horizontal transport unit.

5. Remove the Z folding unit [1].

CAUTION

- Make available collective manpower of an appropriate size for transporting the machine.

NOTE

- When reinstalling the Z folding unit, use the upper/lower brackets [1] as a guide for positioning the Z folding unit.

6. Reinstall the above parts following the removal steps in reverse.

7.12.6 Punch unit (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the rear cover.
[G.7.12.1 Rear cover \(ZU-606\)](#)
3. Remove the right cover.
[G.7.12.3 Right cover \(ZU-606\)](#)

4. Pull out the Z folding/conveyance unit [1].

5. Cut the wiring harness band [1], and disconnect two connectors [2].

NOTE

- When bind the wiring harness band [1], be sure to bind it so that the wiring harness [3] passes the wiring harness band [1] from left to right from the view of the rear.
- Be sure to bind the wiring harness band [1] with sufficient length of the wiring harness [3] when the punch unit move to forward.

6. Remove four screws [1], and remove the punch unit [2].

7. Reinstall the above parts following the removal steps in reverse.

7.12.7 Z folding/conveyance unit (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the upper cover.
[G.7.12.2 Upper cover \(ZU-606\)](#)

3. Pull out the Z folding/conveyance unit [1].

4. Disconnect three connectors [1] and remove two screws [2], and remove the arm [3].

5. Reinstall the Z folding/conveyance unit back again.

6. Remove four screws [1], and remove Z-folding/conveyance unit [3] to the front [4] by holding the rails [2] at the both sides.

**NOTE**

- When placing the Z-folding/conveyance unit, place it on the flat surface with its top or left side down.
- When reinstalling the Z-folding/conveyance unit, be sure to place the rails on the rail holders [1] at four positions.

7. Reinstall the above parts following the removal steps in reverse.

7.12.8 Punch motor (M4) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the punch unit.
[G.7.12.6 Punch unit \(ZU-606\)](#)

3. Remove two screws [1], and remove the punch motor assy [2].

NOTE

- When reinstalling the punch motor assy [2], press the punch motor gear [3] to the gear [4]. Be sure to check that the gears rotate smoothly and there is appropriate backlash.

4. Remove two screws [1] and disconnect the connector [2], and remove the punch motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.12.9 Main motor (M6) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the upper cover.
[G.7.12.2 Upper cover \(ZU-606\)](#)

3. Remove four screws [1], and remove the conveyance upper cover [2].

4. Remove the Z folding/conveyance unit.
[G.7.12.7 Z folding/conveyance unit \(ZU-606\)](#)

5. Remove three screws [1], and disconnect the connector [2], and remove the harness from three wire saddles [3].

6. Remove the screw [1], and remove the conveyance encoder sensor (PS10) [2].

7. Remove the screw [1], the slit circular disc [2] and the belt [3], and remove the main motor assy [4].

8. Remove four screws [1], and remove the main motor [2].

9. Reinstall the above parts following the removal steps in reverse.

7.12.10 Registration motor (M1) (ZU-606)

1. Remove the Z folding unit.

[G.7.12.5 Z folding unit \(ZU-606\)](#)

2. Disconnect the connector [1], and remove three screws [2], and remove the registration motor assy [3].

3. Remove the screw [1].
4. Remove four screws [2], and remove the registration motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.12.11 Punch shift motor (M5) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the rear cover.
[G.7.12.1 Rear cover \(ZU-606\)](#)

3. Disconnect two connectors [1] and remove three screws [2], and remove the punch shift motor assy [3].

4. Disconnect the connector [1] and remove two screws [2], and remove the punch shift motor [3].

NOTE

- When installing the punch shift motor assy, adjust its position so that there is a clearance of "a", as specified below, at the front and rear sides and make sure that the motor assy is horizontal.
Adjustment value: "a" = 2 mm

5. Reinstall the above parts following the removal steps in reverse.

7.12.12 Main motor cooling fan (FM1) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the rear cover.
[G.7.12.1 Rear cover \(ZU-606\)](#)
3. Remove the upper cover.
[G.7.12.2 Upper cover \(ZU-606\)](#)

4. Disconnect the connector [1], and remove four screws [2], and remove the harness from wire saddle [3], and remove the main motor cooling fan assy [4].

5. Remove two screws [1], and remove the main motor cooling fan [2].

6. Reinstall the above parts following the removal steps in reverse.

7.12.13 ZU control board (ZUCB) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the punch unit.
[G.7.12.6 Punch unit \(ZU-606\)](#)

3. Disconnect all thirteen connectors from the ZU control board.
4. Remove seven board supports [1], and remove the ZU control board [2].

5. Reinstall the above parts following the removal steps in reverse.

7.12.14 Paper size detect board (PSDTB) (ZU-606)

1. Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
2. Remove the punch unit.
[G.7.12.6 Punch unit \(ZU-606\)](#)

3. Remove two screws [1], and disconnect the connector [2], and remove the paper size detect board [3].

4. Reinstall the above parts following the removal steps in reverse.

7.13 Disassembly/reassembly procedure (FS-534)

7.13.1 Rear cover (FS-534)

1. Remove the harness from the wire saddle [1].
2. Remove eight screws [2], and remove the rear cover [3].

3. Reinstall the above parts following the removal steps in reverse.

7.13.2 Front door (FS-534)

1. Remove the upper and lower stoppers [1], and remove the front door [2].

2. Reinstall the above parts following the removal steps in reverse.

7.13.3 Front upper cover (FS-534)

1. Remove the front door.

[G.7.13.2 Front door \(FS-534\)](#)

2. Remove the dial (FS5) [1].
3. Remove five screws [2], and remove the front upper cover [3].

NOTE

- When the saddle unit is attached, move the guide plate [4] and then remove the front upper cover.

4. Reinstall the above parts following the removal steps in reverse.

7.13.4 Finisher (FS-534)

1. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

2. Remove the cable tie [1], and disconnect two connectors [2].

3. Open the front door.

4. Remove the screw [1], and pull out the lever [2].

NOTE

- At the time of the finisher installation, make sure that the screw hole [3] locates within the scope of the mounting hole of the lever [4].

5. Disconnect the connector [1].
6. Remove the finisher [2] from the main body.

CAUTION

- When transporting the finisher, make sure to push it to the direction as shown in the illustration. (to prevent turnover during transportation).

7. Reinstall the above parts following the removal steps in reverse.

7.13.5 Horizontal transport unit (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove two screws [1], and remove the horizontal transport unit [2].

3. Reinstall the above parts following the removal steps in reverse.

7.13.6 Stapler unit (FS-534)

1. Open the front door.

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. When the saddle unit is attached, remove the C-clip [1], and remove the guide plate [2].

4. Rotate the stapler transfer dial [1] until the stapler [2] has been moved to the location shown in the figure (the location where the back-end stopper [3] does not interact with the clincher staple arm [4]).

5. Disconnect two connectors [1] from the back of the finisher.
6. Remove the screw [2].

7. Remove the screw [1].

8. Remove two screws [1] from the front of the finisher.

9. Remove the stapler assy [1] from the finisher.

NOTE

- While removing the stapler assy [1], be careful not to hit the stapler against the finisher frame.

10. Put the stapler assy [2] on a stable workbench.

11. Rotate the stapler transfer dial [1] until the stapler unit [3] has been moved to the near side [4].

12. Remove two screws [2], and remove the cover [1].

13. Disconnect two connectors [1] of the stapler unit [2].

14. Flip the stapler assy [2] over.

15. Remove two E-rings [1] from the guide shafts.

16. Remove the clear spacers [1] and white rollers [2] on both shafts [3].

NOTE

- Be careful not to lose the clear spacers.

17. Slowly remove the stapler unit [1] from the stapler assy [4].

18. Remove the white rollers [2] on both shafts [3].

NOTE

- Ensure that the harness does not get damaged in the process.
- Be careful not to lose the white rollers.

19. Remove two screws [3] of the stapler unit, and remove the stapler base plate [2] from the stapler unit [1].

20. Reinstall the above parts following the removal steps in reverse.

NOTE

- When installing the stapler unit, ensure that the two connectors [1] removed in the process 8 are put through the hole in the base plate [2] and connected to the stapler unit before attaching the base plate.

7.13.7 Sensor unit (FS-534)

1. Remove the horizontal transport unit

[G.7.13.5 Horizontal transport unit \(FS-534\)](#)

2. Remove two screws [1], and remove the control panel left cover/1 [2].

3. Remove the harnesses from two wire saddles [1] and the edge cover [2].
4. Disconnect the connector [3].
5. Remove the screw [4], and remove the sensor unit [5].

6. Reinstall the above parts following the removal steps in reverse.

7.13.8 FS control board (FSCB) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. Remove all connectors from the FS control board.
4. Remove four screws [1], and remove the FS control board [2].

5. Reinstall the above parts following the removal steps in reverse.

7.13.9 RU transport motor (M1) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the horizontal transport unit.

[G.7.13.5 Horizontal transport unit \(FS-534\)](#)

3. Remove three screws [1], and remove the rear cover [2] of the horizontal transport unit.

4. Remove the harness from two wire saddles [1].
5. Disconnect the connector [2].

6. Remove four screws [1], and remove the RU transport motor assembly [2].

7. Remove two screws [1], and remove the RU transport motor [2].

8. Reinstall the above parts following the removal steps in reverse.

7.13.10 FNS entry transport motor (M2) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the FNS entry transport motor assembly [3].

5. Remove two screws [1], and remove the FNS entry transport motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.13.11 FNS discharge motor (M3) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. Remove the harness from the wire saddle [1], and disconnect the connector [2].
4. Remove two screws [3], and remove the FNS discharge motor assy [4].

5. Remove two screws [1], and remove the FNS discharge motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.13.12 Receiving roller retraction motor (M4) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the front door.

[G.7.13.2 Front door \(FS-534\)](#)

3. Remove the front upper cover.

[G.7.13.3 Front upper cover \(FS-534\)](#)

4. Disconnect the connector [1].
5. Remove two screws [2], and remove the receiving roller retraction motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.13.13 FNS paddle motor (M5) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the front door.
[G.7.13.2 Front door \(FS-534\)](#)
3. Remove the front upper cover.
[G.7.13.3 Front upper cover \(FS-534\)](#)

4. Disconnect the connector [1].
5. Remove two screws [2], and remove the FNS paddle motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.13.14 Trailing edge stopper motor (M6) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the front door.
[G.7.13.2 Front door \(FS-534\)](#)
3. Remove the front upper cover.
[G.7.13.3 Front upper cover \(FS-534\)](#)

4. Disconnect the connector [1].
5. Remove the harness from three wire saddles [2].
6. Remove two screws [3], and remove the trailing edge stopper motor assy [4].

7. Remove two screws [1], and remove the trailing edge stopper motor [2].

8. Reinstall the above parts following the removal steps in reverse.

7.13.15 Alignment motor/front (M7) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the front door.
[G.7.13.2 Front door \(FS-534\)](#)
3. Remove the front upper cover.
[G.7.13.3 Front upper cover \(FS-534\)](#)

4. Disconnect the connector [1].
5. Remove the harness from the wire saddle [2].
6. Remove two screws [3], and remove the alignment motor/front assy [4].

7. Remove two screws [1], and remove the alignment motor/front [2].

8. Reinstall the above parts following the removal steps in reverse.

7.13.16 Alignment motor/rear (M8) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the alignment motor/rear assembly [3].

5. Remove two screws [1], and remove the alignment motor/rear [2].

6. Reinstall the above parts following the removal steps in reverse.

7.13.17 Pre-eject drive motor (M9) (FS-534)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the rear cover.

[G.7.13.1 Rear cover \(FS-534\)](#)

3. When the saddle unit is attached, open the front door and pull out the saddle unit.

4. Remove two screws [1], and remove the exit tray [2].

5. Remove four screws [1], and remove the plate [2].

6. Disconnect the connector [1].

7. Remove seven screws [2], and remove the left lower cover [3].

NOTE

- When the saddle unit is attached, disconnect two connectors.

8. Disconnect the connector [1].

9. Remove seven screws [1], and remove the left upper cover [2].

10. Disconnect the connector [3].

11. Disconnect the connector [1].

12. Remove two screws [2], and remove the pre-eject drive motor assembly [3].

13. Remove the rotating disk [1].
14. Remove two screws [2], and remove the pre-eject drive motor [3].

15. Reinstall the above parts following the removal steps in reverse.

7.13.18 Bundle eject motor (M10) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the rear cover.
[G.7.13.1 Rear cover \(FS-534\)](#)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

4. Remove two screws [1], and remove the exit tray [2].

5. Remove four screws [1], and remove the plate [2].

6. Disconnect the connector [1].
7. Remove seven screws [2], and remove the left lower cover [3].

NOTE

- When the saddle unit is attached, disconnect two connectors.

8. Disconnect the connector [1].

9. Remove seven screws [1], and remove the left upper cover [2].
10. Disconnect the connector [3].

11. Disconnect the connector [1], and remove the harness from the wire saddle [2].
12. Remove two screws [3], and remove the bundle eject motor assy [4].

13. Remove the rotating disk [1].
14. Remove two screws [2], and remove the bundle eject motor [3].

15. Reinstall the above parts following the removal steps in reverse.

7.13.19 Main tray up/down motor (M11) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the rear cover.
[G.7.13.1 Rear cover \(FS-534\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the main tray up/down motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.13.20 Paper receiving control motor (M12) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the rear cover.
[G.7.13.1 Rear cover \(FS-534\)](#)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

4. Remove two screws [1].

5. Disconnect the connector [1], and remove the paper receiving control motor assy [2].

6. Remove two screws [1], and remove the paper receiving control motor [2].

7. Reinstall the above parts following the removal steps in reverse.

7.13.21 Side stapler movement motor (M13) (FS-534)

1. Remove the finisher from the main body.
[G.7.13.4 Finisher \(FS-534\)](#)
2. Remove the rear cover.
[G.7.13.1 Rear cover \(FS-534\)](#)
3. When the saddle unit is attached, open the front door and pull out the saddle unit.

4. Disconnect the connector [1].

[1]

5. Remove two screws [1], and remove the side stapler movement motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.14 Disassembly/reassembly procedure (PK-520)

7.14.1 Punch kit (PK-520)

1. Remove the finisher from the main body.

[G.7.13.4 Finisher \(FS-534\)](#)

2. Remove the harness from the wire saddle [1].
3. Remove eight screws [2], and remove the rear cover [3] of the finisher.

4. Remove the harness from five wire saddles [1].

5. Disconnect the connector [1].

6. Remove the screw [1], and remove the punch kit [2].

7. Reinstall the above parts following the removal steps in reverse.

7.15 Disassembly/reassembly procedure (SD-511)

7.15.1 Front cover (SD-511)

1. Remove the screw [1], and remove the jam clearing dial [2].
2. Remove four screws [3], and remove the front cover [4].

3. Reinstall the above parts following the removal steps in reverse.

7.15.2 Saddle unit (SD-511)

CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.
- Be careful not to jam your finger in the connecting section of the pantograph.

1. Remove the finisher.
[G.7.13.4 Finisher \(FS-534\)](#)

2. Open the front door [1] of the finisher.
3. Pull out the saddle unit [2].

4. Disconnect three connectors [1].

5. Remove the screw [1], and remove the pantograph [2].

NOTE

- For installation of the pantograph, insert three hooks [1] on the pantograph of the saddle unit into the back holes inside the finisher.

6. Remove two screws [1].

7. Insert the rail [1] on the right side into the finisher.

8. Grip the portion as shown in the illustration [1] to raise the saddle unit and take it out.

NOTE

- For installation of the saddle unit, insert two hooks on the left rail [3] into the two holes of the saddle unit [2].

9. Reinstall the above parts following the removal steps in reverse.

CAUTION

- Be careful not to catch your finger in the edge of the rail when mounting the saddle unit on the right rail for the saddle unit installation.

- Be careful not to jam your finger in the connecting section of the pantograph.

CAUTION

7.15.3 Paper exit tray (SD-511)

1. Remove the pin [1], and remove the exit lever [2].

2. Remove the paper exit tray [1].

3. Reinstall the above parts following the removal steps in reverse.

7.15.4 Staple unit (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove four screws [1], and remove the plate [2].

4. Remove three screws [1], and remove the tri-folding guide motor assembly [2].

5. Remove four screws [1], and remove the conveyance assembly [2].

6. Remove two screws [1], and remove the plate [2].

7. Remove two screws [1].
8. Detach the board support film [3] from the harness guide tabs [2].

9. Remove the harness from the wire saddle [1].
10. Disconnect the connector [2].
11. Remove four screws [3], and remove the SD drive board assy [4].

12. Remove two screws [1], and remove the plate [2].

13. Remove the screw [1].
14. Release two tabs [2], and remove the cover [3].

15. Disconnect the connector [1].

16. Remove two screws [1], and remove the staple unit [2].

17. Reinstall the above parts following the removal steps in reverse.

7.15.5 SD drive board (SDDb) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)

2. Remove two screws [1].
3. Remove the board support film [3] from the harness guide [2].

4. Disconnect all the connectors from the SD drive board.
5. Remove four screws [1].
6. Detach the SD drive board [3] from the two tabs [2].

NOTE

- When the SD drive board (SDDB) has been replaced, be sure to remount EEPROM (U3) [4]. Remove EEPROM (U3) [4] from the old SD drive board and mount it on the new SD drive board.

**NOTE**

- When mounting EEPROM (U3), align the notches (indicated by "A" in the illustration).

7. Reinstall the above parts following the removal steps in reverse.

NOTE

- After replacing the SD drive board, be sure to install the latest firmware.

7.15.6 SD transport motor (M1) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the SD transport motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.15.7 Paper discharge control motor (M2) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove the harness from the wire saddle [1], and disconnect the connector [2].
4. Remove two screws [3], and remove the paper discharge control motor [4].

5. Reinstall the above parts following the removal steps in reverse.

7.15.8 Alignment motor (M3) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove four screws [1], and remove the plate [2].

4. Remove four screws [1], and remove the plate [2].

5. Disconnect the connector [1].
6. Remove two screws [2], and remove the alignment motor [3].

7. Reinstall the above parts following the removal steps in reverse.

7.15.9 Stopper drive motor (M4) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Disconnect the connector [1].
5. Remove two screws [2], and remove the stopper drive motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.15.10 Center fold roller motor (M5) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)

2. Disconnect the connector [1].
3. Remove four screws [2], and remove the center fold roller motor [3].

4. Reinstall the above parts following the removal steps in reverse.

7.15.11 Tri-folding guide motor (M6) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the tri-folding guide motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.15.12 SD paddle motor (M7) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)

2. Remove the front cover.

[G.7.15.1 Front cover \(SD-511\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the SD paddle motor assy [3].

NOTE

- When reinstalling the belt, align the portions of the gear [1] and the gear [2] indicated in the illustration with the triangular marking on the metal plate. Then, install the belt.

5. Remove two screws [1], and remove the SD paddle motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.15.13 Center fold guide motor (M8) (SD-511)

1. Remove the saddle unit.

[G.7.15.2 Saddle unit \(SD-511\)](#)

2. Remove the front cover.

[G.7.15.1 Front cover \(SD-511\)](#)

3. Disconnect the connector [1].
4. Remove two screws [2], and remove the center fold guide motor [3].

5. Reinstall the above parts following the removal steps in reverse.

7.15.14 Center fold knife motor (M9) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Disconnect the connector [1].
5. Remove four screws [2], and remove the center fold knife motor [3].

6. Reinstall the above parts following the removal steps in reverse.

7.15.15 Stopper solenoid (SD1) (SD-511)

1. Remove the saddle unit.
[G.7.15.2 Saddle unit \(SD-511\)](#)
2. Remove the front cover.
[G.7.15.1 Front cover \(SD-511\)](#)

3. Remove six screws [1], and remove the plate [2].

4. Place the saddle unit as shown in the illustration.

5. Remove two stoppers [1], and remove the guide plate [2].

6. Remove two screws [1], and disconnect the connector [2].

7. Raise the saddle unit.

8. Disconnect the connector [1], and remove the harness from three wire saddles [2].

9. Disconnect the connector [1], and remove the drive lever [2].

10. Remove two screws [1].

11. Remove the guide plate assy [1].

NOTE

- When reinstalling the guide plate assy, perform mechanical adjustment.

[I.24.1.1 Half-fold skew adjustment](#)

12. Remove four screws [1], and remove the plate [2].

13. Remove two E-rings [1], and remove the stopper guide [2].

NOTE

- When reinstalling the stopper guide, fit the belt into the stopper guide groove [1].

14. Remove the screw [1], and remove the plate [2].

15. Remove the screw [1].

16. Disconnect the connector [1], and remove the stopper solenoid [2].

NOTE

- When reinstalling the stopper solenoid, fit its tip into the place [3] shown in the illustration.

17. Reinstall the above parts following the removal steps in reverse.

7.16 Disassembly/reassembly procedure (FS-533)

7.16.1 Front cover (FS-533)

1. Remove two screws [1] and remove the antistatic brush [2].

NOTE

- Make sure not to deform the brush by touching it.
- Make sure not to touch the upper surface of the transport unit [3] as it damages the guide plates.

2. Remove four screws [1] and two tabs [2], and remove the front cover [3].

NOTE

- When the punch kit (PK-519) is installed, the cover [1] should be removed.

3. Reinstall the above parts following the removal steps in reverse.

7.16.2 Upper cover (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)
2. Remove the rear cover.
[G.7.16.3 Rear cover \(FS-533\)](#)

3. Remove the screw [1], and remove the cover [2].

4. Reinstall the above parts following the removal steps in reverse.

7.16.3 Rear cover (FS-533)

1. Remove three screws [1], and remove the rear cover [2].

NOTE

- When mounting the rear cover, hook the tab [3] on the plate to the rear cover.

2. Reinstall the above parts following the removal steps in reverse.

7.16.4 Finisher (FS-533)

1. Remove three screws [1], and remove the rear left cover [2] of the main body.

2. Remove the screw [1], and remove the DF cable cover [2].

NOTE

- When mounting the cover, insert two claws [3] into the holes on the main unit cover first. Then fit two claws [4] into the holes.
- Be careful not to pinch the harness.

3. Remove the cable tie [1], and disconnect two connectors [2].

4. Slide the finisher by pulling the lever [1].
5. Remove two screws [2], and remove the cover [3].

NOTE

- When mounting the cover, make the finisher's cable come out from the cover at the position shown in the illustration.

6. Remove two screws [1], and remove the finisher [2] from the main body.

NOTE

- When carrying the finisher, be sure to hold the finisher by the sides as shown in the illustration.

7. Reinstall the above parts following the removal steps in reverse.

NOTE

- After mounting the finisher to the main body, press the antistatic brush [1] toward the rear using a rule or the like.
- Make sure that brush [1] touches the aluminum sheet [2] affixed to the bottom of the scanner unit.

7.16.5 Stapler unit (FS-533)

1. Remove the front cover.

[G.7.16.1 Front cover \(FS-533\)](#)

2. Disconnect two connectors [1].

3. Remove two screws [1], and remove the cover [2].
4. Remove the screw [3], and remove the stapler unit assy [4].

5. Remove two screws [1], and remove the stapler unit [2].

NOTE

- When replacing the stapler unit, attach the guide [3] (Parts No.: A2YU PPE9 ##) to the stapler unit.

6. Reinstall the above parts following the removal steps in reverse.

7.16.6 Paper exit tray unit (FS-533)

1. Remove five screws [1], and remove the paper exit tray unit [2].

2. Reinstall the above parts following the removal steps in reverse.

7.16.7 FS control board (FSCB) (FS-533)

1. Remove the rear cover.
[G.7.16.3 Rear cover \(FS-533\)](#)

2. Remove all connectors from the FS control board.
3. Remove the screw [1], and remove the FS control board [2].

4. Reinstall the above parts following the removal steps in reverse.

7.16.8 Stapler relay board (STREYB) (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)
2. Remove the stapler unit.
[G.7.16.5 Stapler unit \(FS-533\)](#)

3. Pull out the stapler drive assy [1].
4. Release the lock [2] of the board cover, and remove the flat cable [3].

5. Unhook the tab [1], and remove the board cover [2].

6. Unhook two tabs [1], and remove the stapler relay board [2].
7. Disconnect two connectors [3].

8. Reinstall the above parts following the removal steps in reverse.

7.16.9 Paper conveyance motor (M101) (FS-533)

1. Remove the rear cover.
[G.7.16.3 Rear cover \(FS-533\)](#)

2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove two screws [3], and remove the paper conveyance motor assy [4].

5. Remove two screws [1], and remove the paper conveyance motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.16.10 Paper exit motor (M102) (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)

2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove two screws [3], and remove the paper exit motor assy [4].

5. Remove two screws [1], and remove the paper exit motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.16.11 Alignment roller motor (M103) (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)

2. Disconnect the connector [1].
3. Remove two screws [2], and remove the alignment roller motor [3].

4. Reinstall the above parts following the removal steps in reverse.

7.16.12 Exit roller lift up motor (M104) (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)

2. Disconnect the connector [1].
3. Remove the spring [2].
4. Remove two screws [3], and remove the exit roller lift up motor assy [4].

5. Remove two screws [1], and remove the exit roller lift up motor [2].

6. Reinstall the above parts following the removal steps in reverse.

7.16.13 Alignment motor/F (M105), Alignment motor/R (M106) (FS-533)

1. Remove the paper exit tray unit.

[G.7.16.6 Paper exit tray unit \(FS-533\)](#)

2. Remove two screws [1], and remove the plate [2].

3. Remove two screws [1], and remove the cover [2].

NOTE

- When removing the cover [2], two claws [3] may come off and the alignment tray [4] may come up. This may cause the alignment tray to contact the actuator [5] and cause malfunction of the actuator. When mounting the cover [2], make sure two claws [3] are attached to the plate.

4. Remove two screws [1], and pull out the paper surface detect solenoid assy [2].

5. Disconnect the connector [1], remove two screws [2], and remove the alignment motor/F [3].
6. Disconnect the connector [4], remove two screws [5], and remove the alignment motor/R [6].

7. Reinstall the above parts following the removal steps in reverse.

7.16.14 Stapler movement motor (M107) (FS-533)

1. Remove the front cover.
[G.7.16.1 Front cover \(FS-533\)](#)
2. Remove the stapler unit.
[G.7.16.5 Stapler unit \(FS-533\)](#)

3. Pull out the stapler drive assy [1].
4. Release the lock [2] of the board cover, and remove the flat cable [3].

5. Remove two screws [1], and remove the stapler movement motor [2].
6. Disconnect the connector [3].

7. Reinstall the above parts following the removal steps in reverse.

7.16.15 Tray lift up motor (M109) (FS-533)

1. Remove the rear cover.
[G.7.16.3 Rear cover \(FS-533\)](#)

2. Disconnect the connector [1].
3. Remove the harness tie [2] and harness from the harness guide [3].

4. Remove the screw [1], and remove the finisher's cable [2].

5. Remove two screws [1], and remove the harness guide [2].

6. Remove two screws [2], and remove the tray lift up motor [1].

7. Reinstall the above parts following the removal steps in reverse.

7.16.16 Paper surface detect solenoid (SD101) (FS-533)

1. Remove the paper exit tray unit.
[G.7.16.6 Paper exit tray unit \(FS-533\)](#)

2. Remove two screws [1], and remove the plate [2].

3. Remove two screws [1], and remove the cover [2].

NOTE

- When removing the cover [2], two claws [3] may come off and the alignment tray [4] may come up. This may cause the alignment tray to contact the actuator [5] and cause malfunction of the actuator. When mounting the cover [2], make sure two claws [3] are attached to the plate.

4. Remove two screws [1], and pull out the paper surface detect solenoid assy [2].

5. Remove two screws [1], and pull out the paper surface detect solenoid [2].

6. Remove the harness from wire saddle [1], and disconnect the connector [2] and remove the paper surface detect solenoid [3].

7. Reinstall the above parts following the removal steps in reverse.

7.16.17 Batch solenoid (SD102) (FS-533)

1. Remove the rear cover.

[G.7.16.3 Rear cover \(FS-533\)](#)

2. Remove the FS control board.

[G.7.16.7 FS control board \(FSCB\) \(FS-533\)](#)

3. Remove the spring [1].

4. Remove the harness from the wire saddle [1].

5. Disconnect the connector [2].

6. Remove the screw [3], and remove the batch solenoid assy [4].

7. Remove the screw [1], and remove the batch solenoid [2].

8. Reinstall the above parts following the removal steps in reverse.

7.16.18 Paper exit roller solenoid (SD103) (FS-533)

1. Remove the front cover.

[G.7.16.1 Front cover \(FS-533\)](#)

2. Remove the spring [1].

3. Remove the harness from the wire saddle [1].
4. Disconnect the connector [2].
5. Remove the screw [3], and remove the paper exit roller solenoid assy [4].

6. Reinstall the above parts following the removal steps in reverse.

7.16.19 Paper exit paddle (FS-533)

1. Pull the knobs [1] to remove the exit paddle.

2. Reinstall the above parts following the removal steps in reverse.

7.17 Disassembly/reassembly procedure (PK-519)

7.17.1 Punch kit (PK-519)

1. Remove the finisher.
[G.7.16.4 Finisher \(FS-533\)](#)

NOTE

- Make sure that the punch unit is locked to the finisher before removing it.

2. Remove the rear cover.
[G.7.16.3 Rear cover \(FS-533\)](#)

3. Open the punch unit.
4. Remove the stopper arm [1] from the stopper pin [2].

5. Disconnect two connectors [1].

6. Remove the screw [1], and remove the punch unit [2].

7. Reinstall the above parts following the removal steps in reverse.

7.17.2 PK control board (PKCB) (PK-519)

1. Remove the finisher.
[G.7.16.4 Finisher \(FS-533\)](#)

2. Remove the screw [1], and remove the plate [2].

3. Disconnect two connectors [1].
4. Remove the screw [2], and pull out the PK control board [3].
5. Disconnect two connectors [4], and remove the PK control board [3].

6. Reinstall the above parts following the removal steps in reverse.

7.17.3 Punch motor (M201) (PK-519)

1. Remove the finisher.
[G.7.16.4 Finisher \(FS-533\)](#)

2. Remove the screw [1], and pull out the PK control board [2].
3. Disconnect the connector [3].

4. Remove two screws [1], and remove the plate [2].

5. Remove two screws [1], and remove the drive belt [2] from the gear [3].
6. Remove the punch motor [4].

7. Reinstall the above parts following the removal steps in reverse.

7.18 Disassembly/reassembly procedure (FK-511)

7.18.1 FAX kit (line 1), FAX kit (line 2) (FK-511)

NOTE

- The FAX kit (line 1) and the FAX kit (line 2) are of the same form and mechanism. This procedure shows the steps taken for the FAX kit (line 1).

1. Open the rear right cover [1].
2. Disconnect the modular cable [2].

3. Disconnect two connectors [1].

4. Remove the harness of FAX kit and USB cable from the harness guide.

5. Remove two screws [1], and remove the FAX kit [2].

NOTE

- For the reinstall procedure, refer to FAK kit FK-511 installation manual.

8. COMMERCIALLY AVAILABLE PARTS

8.1 Installing the key counter

8.1.1 Configuration

[1] Key counter socket	[2] Key counter
------------------------	-----------------

8.1.2 Procedure

NOTE

- When mounting the key counter, the optional key counter kit KIT-1 (4623-474) or key counter kit KIT-CF (4623-484; only for Europe and Japan) is necessary.
- Procedure for directly mounting the key counter to the main unit is described below.
For mounting the key counter to the optional working table WT-506, refer to WT-506 installation manual.

(1) Key counter kit KIT-1 (4623-474)

1. Remove the scanner right cover [1].
[G.5.2.2 Scanner right cover](#)
2. Cut out the knockouts [2] of the scanner right cover.
3. Remove two caps [3].

4. Remove the upper right cover.
[G.5.2.22 Upper right cover](#)

5. Remove the harness for the key counter from two wire saddles [1].

6. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].

7. Prepare one screw (M3 x 6).
8. Install the mounting plate (4623 1670 ##) [1] included in the key counter kit with the prepared screw [2].

9. Mount the scanner right cover [1], and insert the harness for the key counter through the hole [2] knockouts were removed from.

10. Using two screws [2], secure the counter mounting bracket [1].

NOTE

- Secure the counter mounting bracket passing the connector into the bracket.
- Use the two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

11. Mount the edge cover [1] to the counter mounting bracket and set the harness to the edge cover.

12. Connect the key counter socket connector [2].

13. Using two screws [4], secure the counter socket [3].

14. Using two screws [2], secure the key counter cover [1].

15. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only], [Vendor 1 + Key Counter] or [Vendor 2 + Key Counter]. Then, set the message.

For details on setting, see "I.13.3.2 Management Function Choice"

(2) Key counter kit KIT-CF (4623-484)

1. Remove the scanner right cover [1].
[G.5.2.2 Scanner right cover](#)
2. Cut out the knockouts [2] of the scanner right cover.
3. Remove two caps [3].

4. Remove the upper right cover.
[G.5.2.22 Upper right cover](#)

5. Remove the harness for the key counter from two wire saddles [1].

6. Route the harness through the hook [1] located at the middle of the upper right cover, and reinstall the upper right cover [2] using two screws [3].

7. Prepare one screw (M3 x 6).
8. Install the mounting plate (4623 1670 ##) [1] included in the key counter kit with the prepared screw [2].

9. Mount the scanner right cover [1], and insert the harness for the key counter through the hole [2] knockouts were removed from.

10. Using two screws [2], secure the counter mounting bracket [1].

NOTE

- Secure the counter mounting bracket passing the connector into the bracket.
- Use the two long screws (V116 0418 14: M4 x 18) in the key counter kit to secure the counter mounting bracket.

11. Mount the edge cover [1] to the counter mounting bracket and set the harness to the edge cover.

12. Connect the key counter socket connector [2].

13. Using two screws [4], secure the counter socket [3].

14. Using two screws [2], secure the key counter cover [1].

15. Select [Service Mode] -> [Billing Setting] -> [Management Function Choice] -> [Key Counter Only], [Vendor 1 + Key Counter] or [Vendor 2 + Key Counter]. Then, set the message.

For details on setting, see "[I.13.3.2 Management Function Choice](#)".

8.2 Installing the original size detection sensor/2 (PS205)

8.2.1 Procedure

1. Remove the original glass.

[G.5.2.13 Original glass](#)

2. Using the screw [1], mount the original size detection sensor/2 (PS205) [2] and fix it.

3. Select [Service Mode] -> [System 1] -> [Original Size Detection], and set the original glass to [Table2].

4. Select [Service Mode] -> [State Confirmation] -> [Sensor Check].

5. Set the original on the original glass, and check that the data for "Original Size Detection" changes from "0" to "1" on the screen.

H CLEANING/LUBRICATION

1. bizhub C554/C454

1.1 Cleaning parts list

No.	Section	Part name	Ref. page
1	Processing section	Transfer belt unit	H.1.3.1 Transfer belt unit
2		PH window	H.1.3.2 PH window
3	Tray 1	Tray 1 feed roller	H.1.3.3 Tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller
4		Tray 1 pick-up roller	
5		Tray 1 separation roller	
6	Tray 2	Tray 2 feed roller	H.1.3.4 Tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller
7		Tray 2 pick-up roller	
8		Tray 2 separation roller

12	Scanner section	Original glass	H.1.3.8 Original glass
13		Scanner rails	H.1.3.9 Scanner rails
14		Mirrors	H.1.3.10 Mirrors
15		Lens	H.1.3.11 Lens
16		CCD sensor	H.1.3.12 CCD sensor

1.2 Lubrication parts list

NOTE

- With this machine, the lubrication is not necessary.

1.3 Cleaning procedure

NOTE

- The alcohol described in the cleaning procedure represents the ethanol isopropyl alcohol.

1.3.1 Transfer belt unit

1. Remove the transfer belt unit.

[F.6.6.3 Replacing the transfer belt unit](#)

2. Using a hydro-wipe (65AA-99##), wipe the transfer belt [1].

NOTE

- Do not wipe out with water.
- Do not wipe out with any solvents.

1.3.2 PH window

1. Open the lower front door.
2. Remove the waste toner box.

[F.6.8.1 Replacing the waste toner box](#)

3. Clean the PH window by putting the PH window cleaning jig [1] back and forth a couple times.

NOTE

- Clean every PH window of Y,M,C,K.

1.3.3 Tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Using a cleaning pad dampened with alcohol, wipe the tray 1 feed roller [1], tray 1 pick-up roller [2], tray 1 separation roller [3] clean of dirt.

1.3.4 Tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller

1. Remove the tray 1.
[G.5.2.27 Tray 1](#)
2. Remove the tray 2.
[G.5.2.28 Tray 2](#)

3. Using a cleaning pad dampened with alcohol, wipe the tray 2 feed roller [1], tray 2 pick-up roller [2], tray 2 separation roller [3] clean of dirt.

1.3.5 Tray 2 transport roller

1. Open the right door.

2. Using a cleaning pad dampened with alcohol, wipe the tray 2 transport rollers [1] clean of dirt.

1.3.6 Manual bypass tray feed roller

1. Open the right door.

2. Remove the screw [1], and remove the feed roller cover [2].

3. Using a cleaning pad dampened with alcohol, wipe the manual bypass tray feed roller [1] clean of dirt.

1.3.7 Manual bypass tray separation roller

1. Remove the manual bypass tray separation roller unit.

[F.6.9.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy](#)

2. Using a cleaning pad dampened with alcohol, wipe the manual bypass tray separation roller [1] clean of dirt.

1.3.8 Original glass

1. Using a cleaning pad dampened with alcohol, wipe the original glass [1] clean of dirt.

2. Using a cleaning pad dampened with alcohol, wipe the slit glass [1] clean of dirt.

1.3.9 Scanner rails

1. Remove the original glass.

[G.5.2.13 Original glass](#)

2. Using a cleaning pad dampened with alcohol, wipe the scanner rails [1] clean of dirt.

NOTE

- Apply lubricant after cleaning.

1.3.10 Mirrors

1. Remove the original glass.
[G.5.2.13 Original glass](#)

2. Using a cleaning pad dampened with alcohol, wipe the mirrors [1].

1.3.11 Lens

1. Remove the original glass.
[G.5.2.13 Original glass](#)

2. Remove two tabs [1], and remove the lens cover [2].

3. Using a cleaning pad dampened with alcohol, wipe the lens [1] clean of dirt.

1.3.12 CCD sensor

1. Remove the original glass.

[G.5.2.13 Original glass](#)

2. Remove five screws [1], and remove the CCD board protective shield [2].

3. Unhook four tabs [1], and remove the CCD sensor cover [2].

4. Using a cleaning pad dampened with alcohol, wipe the CCD sensor [1] clean of dirt.

2. DF-701

2.1 Cleaning parts list

3.2 Cleaning procedure (PC-110/PC-210)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.2.1 Tray 3 feed roller, tray 3 pick-up roller, tray 3 separation roller

- Remove the tray 3.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)
- Remove the tray 4 or storage box.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

- Using a cleaning pad dampened with alcohol, wipe the tray 3 feed roller [1], tray 3 pick-up roller [2], tray 3 separation roller [3] clean of dirt.

3.2.2 Tray 4 feed roller, tray 4 pick-up roller, tray 4 separation roller

- Remove the tray 3 and tray 4.
[G.7.2.4 Tray 3, tray 4, storage box \(PC-110/PC-210\)](#)

- Using a cleaning pad dampened with alcohol, wipe the tray 4 feed roller [1], tray 4 pick-up roller [2], tray 4 separation roller [3] clean of dirt.

3.2.3 Tray 3 vertical transport roller, tray 4 vertical transport roller

- Open the right door.

- Using a cleaning pad dampened with alcohol, wipe the tray 3 vertical transport roller [1], tray 4 vertical transport roller [2] clean of dirt.

3.3 Cleaning procedure (PC-410)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.3.1 Feed roller, Pick-up roller, Separation roller

- Slide out the tray.
- Open the right door.

- Using a cleaning pad dampened with alcohol, wipe the feed roller [1], pick-up roller [2], separation roller [3] clean of dirt.

3.3.2 Vertical transport roller

- Open the right door.

- Using a cleaning pad dampened with alcohol, wipe the vertical transport roller [1] clean of dirt.

3.4 Cleaning procedure (LU-204)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.4.1 Pick-up roller

- Open the upper door.
- Move the feed roller up.
- Using a cleaning pad dampened with alcohol, wipe the pick-up roller [1] clean of dirt.

3.4.2 Feed roller

- Open the upper door.
- Move the feed roller up.
- Using a cleaning pad dampened with alcohol, wipe the feed roller [1] clean of dirt.

3.4.3 Separation roller

- Open the upper door.
- Move the feed roller up.

3. Remove four screws [1] and remove the sheet metal [2].

4. Using a cleaning pad dampened with alcohol, wipe the separation roller [1] clean of dirt.

3.4.4 Transport roller

1. Remove the feed cover.
[G.7.4.5 Feed cover \(LU-204\)](#)

2. Using a cleaning pad dampened with alcohol, wipe the transport roller [1] clean of dirt.

3.5 Cleaning procedure (LU-301)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.5.1 Pick-up roller

1. Open the upper door.
2. Move the feed roller up.
3. Using a cleaning pad dampened with alcohol, wipe the pick-up roller [1] clean of dirt.

3.5.2 Feed roller

[1]

1. Open the upper door.
2. Move the feed roller up.
3. Using a cleaning pad dampened with alcohol, wipe the feed roller [1] clean of dirt.

3.5.3 Separation roller

1. Open the upper door.
2. Move the feed roller up.

[2]

[1]

3. Remove four screws [1] and remove the sheet metal [2].

[1]

4. Using a cleaning pad dampened with alcohol, wipe the separation roller [1] clean of dirt.

3.5.4 Transport roller

1. Remove the feed cover.
[G.7.5.6 Feed cover \(LU-301\)](#)

[1]

2. Using a cleaning pad dampened with alcohol, wipe the transport roller [1] clean of dirt.

3.6 Cleaning procedure (FS-535)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.6.1 Paddle/1, Paddle/2

1. Using a cleaning pad dampened with alcohol, wipe the paddle/1 [1] and two paddle/2 [2].

3.7 Cleaning procedure (PI-505)

NOTE

- The alcohol described in the cleaning procedure of maintenance represents the isopropyl alcohol.

3.7.1 Pick-up roller /Up, feed roller /Up, separationroller /Up

1. Remove the upper cover.
[G.7.11.1 Upper cover \(PI-505\)](#)

2. Using a cleaning pad dampened with alcohol, wipe the pick-up roller /Up [1] clean of dirt.

3. Using a cleaning pad dampened with alcohol, wipe the feed roller /Up [1] clean of dirt.

4. Remove the separation roller assy /Up.
[F.15.1.3 Replacing the separation roller /Up and the torque limiter /Up](#)

5. Using a cleaning pad dampened with alcohol, wipe the separation roller /Up [1] clean of dirt.

3.7.2 Pick-up roller /Lw, feed roller /Lw, separationroller /Lw

1. Pull the release lever [1] and open the upper door [2].

2. Using a cleaning pad dampened with alcohol, wipe the pick-up roller /Lw [1] clean of dirt.

3. Using a cleaning pad dampened with alcohol, wipe the feed roller / Lw [1] clean of dirt.

[1]

4. Remove the separation roller assy /Lw.

[F.15.1.4 Replacing the separation roller /Lw and the torque limiter /Lw](#)

5. Using a cleaning pad dampened with alcohol, wipe the separation roller /Lw [1] clean of dirt.

3.7.3 Transport roller /Up

1. Pull the release lever [1] and open the upper door [2].

2. Using a cleaning pad dampened with alcohol, wipe the transport roller /Up [1] clean of dirt.

3.7.4 Transport roller /Lw

1. Remove the post inserter.

[G.7.11.4 Post inserter \(PI-505\)](#)

2. Using a cleaning pad dampened with alcohol, wipe the transport roller /Lw [1] clean of dirt.

I ADJUSTMENT/SETTING

1. HOW TO USE THE ADJUSTMENT/SETTING SECTION

1.1 Outline

- “Adjustment/Setting” contains detailed information on the adjustment items and procedures for this machine.
- Throughout this “Adjustment/Setting,” the default settings are indicated by “ ”.

1.2 Advance checks

- Before attempting to work adjustments and settings, the following advance checks must be made. Check to see if:
 - The power supply voltage meets the specifications.
 - The power supply is properly grounded.
 - The machine shares the power supply with any other machine that draws large current intermittently (e.g., elevator and air conditioner that generate electric noise).
 - The installation site is environmentally appropriate: high temperature, high humidity, direct sunlight, ventilation, etc.; levelness of the installation site.
- [A.3.3.2 Installation Requirements](#)
 - The original has a problem that may cause a defective image.
 - The density is properly selected.
 - The original glass, slit glass, or related part is dirty.
 - Correct paper is being used for printing.
 - The units, parts, and supplies used for printing (developer, PC drum, etc.) are properly replenished and replaced when they reach the end of their useful service life.
 - Toner is not running out.

CAUTION

- **To unplug the power cord of the machine before starting the service job procedures.**
- **If it is unavoidably necessary to service the machine with its power turned ON, use utmost care not to be caught in the scanner cables or gears of the exposure unit.**
- **Special care should be used when handling the fusing unit which can be extremely hot.**
- **The developing unit has a strong magnetic field. Keep watches and measuring instruments away from it.**
- **Take care not to damage the PC drum with a tool or similar device.**
- **Do not touch IC pins with bare hands.**

2. Accessibility

- The function allows you to adjust the control panel settings by correcting the touch position on the touch panel and changing a sound made at the time of key operation.

2.1 Touch Panel Adjustment

2.1.1 Use

- To adjust the position of the touch panel display.
- Make this adjustment if the touch panel is slow to respond to a pressing action.
- Use during the setup procedure.

2.1.2 Procedure

1. Press the Menu key.
2. Touch [Accessibility].
3. Touch [Touch Panel Adjustment].
4. Using the tip of a pen or similar object, touch the four keys (+) on the screen in sequence.
 - These crosses may be touched in any order; but be sure to touch the center of each cross.
 - Use care not to damage the screen surface with the tip of the pen.

5. Touching all four crosses will turn the Start key ON in blue.
6. Press the Start key.

2.2 Brightness Adjustment

- Adjust the brightness level of the Touch Panel.

2.2.1 Procedure

1. Press the Menu key.
2. Touch [Accessibility].
3. Touch [Brightness Adjustment].
4. Select [Low] or [High] to adjust the brightness.

2.3 Key Repeat Start/Interval Time

2.3.1 Time To Start

(1) Use

- Specify the length of time until a value begins to change after a key is held down.

(2) Default setting

- 0.8 sec.

(3) Setting range

- 0.1 to 3.0 sec.

2.3.2 Interval

(1) Use

- Specify the length of time for the value to change.

(2) Default setting

- 0.3 sec.

(3) Setting range

- 0.1 to 3.0 sec.

2.4 System Auto Reset Confirmation**2.4.1 Use**

- If the system auto reset function activated in enlarge display mode cancels the mode, you can select whether or not to display the confirmation screen that gives you the options of continuing the operation without cancelling the enlarge display or cancelling the enlarge display to return to the basic settings screen.

2.4.2 Default setting

- No

2.4.3 Setting item

- Yes
- "No"
- When selecting [Yes], set the time period during which the confirmation screen is displayed.

2.5 Auto Reset Confirmation**2.5.1 Use**

- If the system auto reset function activated in enlarge display mode returns your setting to default, you can select whether or not to display the confirmation screen that gives you the options of continuing the operation without cancelling the current setting or cancelling the setting.

2.5.2 Default setting

- No

2.5.3 Setting item

- Yes
- "No"
- When selecting [Yes], set the time period during which the confirmation screen is displayed.

2.6 Enlarge Display Mode Confirmation**2.6.1 Use**

- To select whether or not to display the message that the settings configured in normal mode are cancelled at the time when you switch to enlarge display mode by pressing Enlarge Display.

2.6.2 Default setting

- OFF

2.6.3 Setting item

- ON
- "OFF"

2.7 Message Display Time**2.7.1 Use**

- Specify the duration of time for displaying warning messages, which appear, for example, when an incorrect operation is performed.

2.7.2 Default setting

- 3 seconds

2.7.3 Setting item

- "3 seconds"
- 5 seconds

2.8 Sound Setting**2.8.1 Sound Setting****(1) Use**

- Select whether to respectively output the [Confirmation Sound], [Successful Completion Sound], [Ready Sound], and [Warning Sound].
- If [Batch Print] is set to [No], none of these sounds will be output.

(2) Default setting

- On

(3) Setting item

- "On"
- No

2.8.2 Operation Confirmation Sound**(1) Use**

- Select whether to output the operation confirmation sounds.
- When sounding, adjust the volume to [High], [Medium], or [Low] as needed.

Input Confirmation Sound	To select whether or not to produce a sound when a key in the control panel in the touch panel is pressed for an entry.
Invalid Input Sound	To select whether or not to produce a sound for invalid key operation in the control panel or the touch panel.
Basic Sound	To select whether or not to produce a sound when the default value item is selected for an option subject to rotational switching.

(2) Default setting

- Yes (Medium)

(3) Setting item

- "Yes"
- No

2.8.3 Successful Completion Sound**(1) Use**

- Select whether to output the successful completion sounds.
- When sounding, adjust the volume to [High], [Medium], or [Low] as needed.

Completed Operation Sound	To select whether or not to produce a sound when the operation has completed normally.
Completed Transmission Sound	To select whether or not to produce a sound when a communications-related operation is completed normally.

(2) Default setting

- Yes (Medium)

(3) Setting item

- "Yes"
- No

2.8.4 Completed Preparation Sound**(1) Use**

- To select whether or not to produce a sound when a device is ready.
- When sounding, adjust the volume to [High], [Medium], or [Low] as needed.

(2) Default setting

- Yes (Medium)

(3) Setting item

- "Yes"
- No

2.8.5 Caution Sound**(1) Use**

- Select whether to output the caution sounds.
- When sounding, adjust the volume to [High], [Medium], or [Low] as needed.

Simple Caution Sound (Level 1)	To set whether or not to produce a sound when the replacement time is nearing for supplies or a replaceable part and a message appears in the touch panel.
Simple Caution Sound (Level 2)	To set whether or not to produce a sound for a user error.
Simple Caution Sound (Level 3)	To set whether or not to produce a sound when an error occurs that can be corrected by the user by referring to the message that appears or the User's Guide.
Severe Caution Sound	To set whether or not to produce a sound when an error occurs that cannot be corrected by the user or requires action by a service representative.

(2) Default setting

- Yes (Medium)

(3) Setting item

- “Yes”
- No

2.9 Default Enlarge Display Settings

- This function is available when “Do Not Apply” is selected in [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Reset Settings\]](#) -> [\[Job Reset\]](#) -> [\[Default Basic/Enlarge Display Common Setting\]](#).
- When “Apply to all” is selected in [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Reset Settings\]](#) -> [\[Job Reset\]](#) -> [\[Default Basic/Enlarge Display Common Setting\]](#), the settings configured in [\[Initial Setting\]](#) take effect.
- This function cannot be selected until you change a copy or scan/fax setting in enlarge display mode.

2.9.1 Use

- To configure default copy or scan/fax settings in enlarge mode.

2.9.2 Procedure

1. In enlarge display mode, change copy or scan/fax settings.
2. Touch Menu -> [\[Accessibility\]](#) -> [\[Default Enlarge Display Settings\]](#).
3. Select the copy or scan/fax function for which settings are changed in step 1.
4. Select [\[Current Setting\]](#) and touch [\[OK\]](#). To restore factory defaults, select [\[Factory Default\]](#).

2.10 Double Tap Interval Settings

- Double tap is a way of operating the touch panel. Lightly touch the screen twice consecutively with your finger to call detailed information, enlarge a thumbnail or preview, or open User Box.
- To change the double-tap interval at five levels.

2.10.1 Procedure

1. Press the Menu key.
2. Touch [\[Accessibility\]](#).
3. Touch [\[Double Tap Interval Settings\]](#).
4. Select the double-tap interval from [\[Slow\]](#), [\[Standard\]](#), or [\[Fast\]](#). Double-tap the box at the right of the screen to check the current setting.

2.11 Voice Guidance Settings**2.11.1 Voice Guidance Settings**

- This function is available when “Yes” is selected in [\[Administrator Settings\]](#) -> [\[Voice Guidance Settings\]](#).
- The voice guidance function is available only when the optional i-Option LK-104 v3 and upgrade kit UK-204 are enabled.

(1) Use

- To select whether or not to use the voice guidance function.

(2) Default setting

- Yes

(3) Setting item

- “Yes”
- No

2.11.2 Volume**(1) Use**

- To set the volume of the voice guidance.
- While using the voice guidance, you can always change the volume by pressing the # or * key.

(2) Default setting

- 5

(3) Setting range

- 0 to 9

2.11.3 Voice Speed**(1) Use**

- To set the voice guidance playback speed.

(2) Default setting

- Std.

(3) Setting item

- Slower
- “Std.”

- Faster

3. Counter

- This function allows you to check the total number of pages that have been printed in the MFP by each function or by color and to print the data as a list when necessary.
- From user's usage condition, you can learn which types of image (coverage rate) are frequently output.
- You can check the ratio of color print jobs to all print jobs, the rate of paper saving achieved as a result of two-sided printing or the page combine function, and the transition of power consumption (Eco Info).

3.1 Meter Count

3.1.1 Meter Count

- You can check the total number of pages printed after the counting start date.

Total	To check the total number of printed pages.
Black	To check the total number of pages printed in Black mode.
Color	To check the total number of pages printed in Single Color, 2 Color, or Full Color modes.

3.1.2 Copy

- To check the total number of pages copied.
- This value includes the number of pages on which data saved in a User Box in copy mode is printed, and the number of pages list-output in [Administrator Settings].

	Total	Large Size*	Total (Copy + Print)
Black	Indicates the total number of pages copied in Black mode	Indicates the total number of pages copied on large-size paper in Black mode	Indicates the total number of pages copied in Black mode and that of pages printed in Black mode through a computer
Full Color	Indicates the total number of pages copied in Full Color mode	Indicates the total number of pages copied on large-size paper in Full Color mode	Indicates the total number of pages copied in Full Color mode and that of pages printed in Full Color mode through a computer
Single Color	Indicates the total number of pages copied in Single Color mode	Indicates the total number of pages copied on large-size paper in Single Color mode	-
2 Color	Indicates the total number of pages copied in 2 Color mode	Indicates the total number of pages copied on large-size paper in 2 Color mode	Indicates the total number of pages copied in 2 Color mode and that of pages printed in 2 Color mode through a computer
Total	Indicates the total number of pages copied in all the color modes	Indicates the total number of pages copied on large-size paper in all the color modes	-

- *: The large size setting is configured in [Service Mode] -> [Billing Setting] -> [Counter Setting].

3.1.3 Print

- Check the total number of pages printed through a computer.

	Total	Large Size*	Total (Copy + Print)
Black	Indicates the total number of pages printed in Black mode	Indicates the total number of pages printed on large-size paper in Black mode.	Indicates the total number of pages copied in Black mode and that of pages printed in Black mode through a computer
Full Color	Indicates the total number of pages printed in Full Color mode	Indicates the total number of pages printed on large-size paper in Full Color mode.	Indicates the total number of pages copied in Full Color mode and that of pages printed in Full Color mode through a computer
2 Color	Indicates the total number of pages printed in 2 Color mode	Indicates the total number of pages printed on large-size paper in 2 Color mode	Indicates the total number of pages copied in 2 Color mode and that of pages printed in 2 Color mode through a computer
Total	Indicates the total number of pages printed in all the color modes	Indicates the total number of pages printed on large-size paper in all the color modes.	-

- *: The large size setting is configured in [Service Mode] -> [Billing Setting] -> [Counter Setting].

3.1.4 Scan/Fax

- Check the total number of original pages scanned in the Scan/Fax or User Box mode.
- Check the total number of pages on which a file in a User Box or a received file is printed.
- Check the total number of pages sent and received in the fax mode.

	Total	Large Size* ¹
Black	Indicates the total number of pages on which a file in a User Box or a received file is printed in Black mode* ²	Indicates the total number of pages on which a file in a User Box or a received file is printed on large-size paper in Black mode* ²

	Total	Large Size*1
Full Color	Indicates the total number of pages on which a file in a User Box or a received file is printed in Full Color mode*2	Indicates the total number of pages on which a file in a User Box or a received file is printed on large-size paper in Full Color mode*2
Scans	Indicates the total number of original pages scanned in the Scan/Fax and User Box modes	Indicates the total number of large-size original pages that are scanned in the Scan/Fax and User Box modes.
Fax TX	Indicates the total number of pages in a sent fax (G3)	-
Fax RX	Indicates the total number of pages in a received fax (G3)	-

- *1: The large size setting is configured in [Service Mode] -> [Billing Setting] -> [Counter Setting].
- *2: In the Memory RX mode, pages are counted when printed.

3.1.5 Other

- Check the total number of scanned and printed original pages, total number of printed sheets, total number of pages printed on both sides, and the total number of printed pages regardless of functions or colors.

Original Counter	To check the total number of original pages that are scanned and printed in the Copy, Print, and Scan/Fax modes*
Paper Counter	To check the total number of sheets that are printed in the Copy, Print, and Scan/Fax modes*
Total Duplex	To check the total number of pages printed on both sides
No. of Total Pages Output	To check the total number of printed pages

- *: If a file is saved in a User Box, its pages are not counted unless they are printed. Report or list output pages are not targeted for counting.

3.1.6 Print List

- The counter list is printed.

(1) Procedure

- Touch [Print List].
- Select a paper tray.
- Select 1-Sided or 2-Sided, and touch [Start] or press the Start key.

3.1.7 Coverage Rate

NOTE

- This coverage is a calculated value based on the colored area and the transfer paper area, and is different from the toner consumption when actually printed.
- This is not displayed when [Service Mode] -> [System 2] -> [Coverage Rate Screen] is set to "Do Not Display."
- The coverage rate can be cleared in [Service Mode] -> [Billing Setting] -> [Coverage Rate Clear].

(1) Use

- The coverage rate is the average printing dot percentage with A4 paper area as 100 %.
- The coverage rate displays the printing dot accumulated average (calculated in A4) of each color (C/M/Y/K) for copy, printer, and fax/scan in unit of 0.001%.
- The coverage rate is calculated from all output excluding the following items.
 - <Items excluded in the calculation>
 - Output of meter counter list
 - Output in service mode
 - Output automatically performed by MFP such as image stabilization pattern

3.1.8 Eco Info

- You can check the ratio of color print jobs to all print jobs, and the ratio of paper saving as a result two-sided printing or the page combine function, and a transition of power consumption.
- Power Consumption and CO₂ Emission in [Eco Info 2] are not displayed when [Power Savings Display Level] is set to "OFF" in [Service Mode] -> [System 2] -> [Display Eco Index].

NOTE

- "Power Consumption" displayed here is an estimated value calculated from the average amount of power consumption and the operating hours of MFP, so that is not an exact power consumption value.
- As "Output Coefficient" used to calculate CO₂ emission is different depending on the electric power provider with whom the user contracts and the user's MFP use environment, an appropriate CO₂ emission coefficient needs to be set in [Service Mode] -> [System 2] -> [Display Eco Index] in advance.

(1) Procedure

- Touch [Eco Info].
- Touch [Eco Info 1] to check the ratio of color print jobs and paper saving rate.
- Touch [Eco Info 2] to check the hours during which power is used, power consumption, and CO₂ emission.

3.2 Display Keypad

3.2.1 Use

- The Keypad is displayed in the left-hand pane. This enables you to enter numeric values without sliding the Control Panel.

4. UTILITY

4.1 List of utility mode (outline)

NOTE

NOTE

- Keys displayed on screens are different depending on the setting.

Other Settings	Ref. page
Remote Panel Operation	I.8.4 Remote Panel Operation

4.3 Starting/Exiting

4.3.1 Starting procedure

1. Press the Menu key.
2. Touch [Utility].
3. The Utility Mode screen will appear.

4.3.2 Exiting procedure

1. Touch the [Close] key.

5. UTILITY (ONE-TOUCH/USER BOX REGISTRATION)

One-Touch User Box Registration-Outline

- In a copier where the user authentication function that uses an external server or MFP is set to ON, when you operate the copier without performing user authentication, this menu is not displayed.
- It will not be displayed when the authentication device 2 is set to "Set" by the following setting.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

5.1 Create One-Touch destination

5.1.1 Address Book (Public)/(Personal)

(1) E-mail

(a) Use

- To register/change e-mail address to send scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.

(2) User Box

- It will not be displayed when the following setting shows that authentication device 2 or the vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
(It will be displayed when the key counter is mounted.)

(a) Use

- To register/change the Box address when storing the scanned data in the box in the hard disk in the main body.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.
- At least one User Box must be registered for registering a Box address.

(3) Fax

(a) Use

- To register/change the fax destinations.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.

(4) PC (SMB)

(a) Use

- To register/change SMB address to send scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.

(5) FTP

(a) Use

- To register/change FTP address to send scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.

(6) WebDAV

(a) Use

- To register/change WebDAV address to send scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, edit or delete the setting.

(7) IP Address Fax

- Setting will be available only when [IP Address FAX Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To register/change the IP address fax destination when transmitting the IP address fax data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, change or delete the setting.

(8) Internet Fax

- Setting will be available only when [Internet FAX Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To register/change the Internet fax address when transmitting the internet fax data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, change or delete the setting.

5.1.2 Group**(1) Use**

- To register/change a group to send scanned data/fax data simultaneously.

(2) Procedure

- A new address can be registered by touching [New].
- Select any displayed group to check, edit or delete them.
- At least one address must be registered for registering a new group.

5.1.3 E-mail Settings

- It will not be displayed when the following setting shows that the management device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) E-mail Subject**(a) Use**

- To register the e-mail subject when transmitting the scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to detail check, edit or delete the setting.
- The subject can be set as default by selecting the subject displayed on the screen and pressing [Set as Default].

(2) E-mail Body**(a) Use**

- To register the e-mail message when transmitting the scanned data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to detail check or delete the setting.
- The text can be set as default by selecting the text displayed on the screen and pressing [Set as Default].

5.2 Create User Box

- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
(It will be displayed when the key counter is mounted.)
- This menu is not available due to functional restriction during user authentication when [User Box] is set to Restrict.
- It will not be displayed when [Allow/Restrict User Box] is set to "Restrict" in the following settings.
[\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[User Box Settings\]](#)

5.2.1 Public/Personal User Box**(1) Use**

- To register/change the box for storing text data in the hard disk of the machine.
- Shared or personal box can be registered according to its intended use.

(2) Procedure

- A new box can be registered by touching [New].
- Select any displayed box to change or delete it.

5.2.2 Bulletin Board User Box

- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)
- It will not be displayed due to functional restriction upon user authentication when [User Box] is set to "OFF."
- It will be displayed only when the optional fax kit FK-511 is mounted.
- It will not be displayed during user authentication if the fax operation is set to "Restrict" by the function restriction.

(1) Use

- To register/change the bulletin board user box.

(2) Procedure

- A new box can be registered by touching [New].
- Select any displayed box to change or delete it.

5.2.3 Relay User Box

- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)
- It will not be displayed due to functional restriction upon user authentication when [User Box] is set to "OFF."
- It will be displayed only when the optional FAX kit FK-511 is mounted.
- It will be displayed when the following setting is set to "ON."
[Service Mode] -> [FAX (Line1)] -> [System] -> [Display Setting] -> [Relay]

(1) Use

- To register/change the Relay User Box.

(2) Procedure

- A new box can be registered by touching [New].
- Select any displayed box to change or delete it.

5.3 Limiting Access to Destinations

- It will not be displayed when the following setting is set to "ON."
[Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode]

(1) Outline

- The Limiting Access to Destinations setting allows or restricts individual user's access to each destination. This enables security control by restricting information that can be accessed.

(a) Apply Levels

- One of the six levels from 0 to 5 can be assigned to all destinations. Similarly, one of the levels from 0 to 5 can be assigned to all users. Depending on the combination of the destination and user levels, destinations that a user can access can be limited. For example, users of level 2 can access the destinations that belong to the levels 0 to 2, but cannot access to the destinations that belong to the levels 3 to 5. Level 5 users can access all destinations of the levels 0 to 5.

(b) Groups

- A group can be made with a certain name to allow its members to access its destinations. Users and destinations can be registered for the group so that the registered destinations can be accessed by the registered users. Access restriction depending on an individual level is also applied to the group with access to the destinations determined by the combination of the user and destination levels within a group.
- A destination can be included in only one group.
- A user can be included in multiple different groups.

5.3.1 Apply Levels/Groups to Destinations

(1) Address Book

(a) Use

- Sets a level and a group for destinations registered in the address book.

(b) Procedure

- Select a destination, press [Apply Level] or [Apply Group] and make a setting.

(2) Group

(a) Use

- Sets a level and a group for destinations registered in the group.

(b) Procedure

- Select a destination, press [Apply Level] or [Apply Group] and make a setting.

(3) Program**(a) Use**

- Sets a level and a group for destinations registered in the program.

(b) Procedure

- Select a destination, press [Apply Level] or [Apply Group] and make a setting.

6. UTILITY (USER SETTINGS)

6.1 System Settings

6.1.1 Language Selection

(1) Use

- To select the language on the LCD display.
- To change the language used on the control panel.

(2) Procedure

- The language as a default depend on the marketing area selected in [\[Marketing Area\]](#) available from [\[System 1\]](#) under Service Mode.

6.1.2 Language Selection-Panel Keyboard Language Selection

(1) Use

- To set the language used in the keyboard displayed within the panel.
- When using the keyboard language different from the panel display language, you can select from the 9 basic languages.

(2) Default setting

- Panel Display Language Synchronize

(3) Setting item

- "Panel Display Language Synchronize"
- Panel Display Language Desynchronize

6.1.3 Language Selection-External Keyboard Language Selection

(1) Use

- To set the language used in the external keyboard.
- Selecting [\[Panel Display Language Desynchronize\]](#) allows you to select an external keyboard language regardless of the setting of the panel display language.

(2) Default setting

- Panel Display Language Desynchronize

(3) Setting item

- Panel Display Language Synchronize
- "Panel Display Language Desynchronize"

6.1.4 Select Keyboard

(1) Use

- Select the keyboard type displayed by default in the touch panel.
- The type of keyboard to be displayed when [\[Local Keyboard\]](#) is selected depends on the language selected in [\[User Settings\]](#) -> [\[System Settings\]](#) -> [\[Language Selection\]](#).
- The type of keyboard corresponding to each language is shown below.

Language	Keyboard
Japanese	Standard keyboard (JIS) + Local keyboard (Japanese)
English (US) *	Standard keyboard (US ASCII) only
English (UK) *	Standard keyboard (US ASCII) + Local keyboard (UK)
French	Standard keyboard (US ASCII) + Local keyboard (French)
Italian	Standard keyboard (US ASCII) + Local keyboard (Italian)
German	Standard keyboard (US ASCII) + Local keyboard (German)
Spanish	Standard keyboard (US ASCII) + Local keyboard (Spanish)
Simplified Chinese	Standard keyboard (JIS) + Local keyboard (Simplified Chinese)
Traditional Chinese	Standard keyboard (JIS) + Local keyboard (Traditional Chinese)
Korean	Standard keyboard (JIS) + Local keyboard (Korean)

- *: If [\[Marketing Area\]](#) is set to Europe and [\[Language Selection\]](#) is set to English, English (UK) takes effect. If another marketing area and English are selected, English (US) takes effect.

(2) Setting item

- Standard Keyboard
- Local keyboard

NOTE

- The language options depend on the marketing area selected in [\[Marketing Area\]](#) available from [\[System 1\]](#) under Service Mode.
[I.11.14.1 Marketing Area](#)

6.1.5 Measurement Unit Settings

(1) Use

- To select the unit displayed on the LCD display.

(2) Default setting

- The default setting varies depending on the marketing area.

(3) Setting item

- mm (Numerical Value)
- inch (Numerical Value)
- inch (Fraction)

6.1.6 Paper Tray Settings

(1) Auto Tray Selection Settings

(a) Use

- To set the tray for automatic selection when APS is being set.
- To establish the priority for switching the tray when ATS is being set.

(b) Procedure

- Select the tray on the [Auto Tray Select] screen.
- Set the priority on the [Tray Priority] screen.

(2) Auto Tray Switch ON/OFF

(a) Use

- To set whether to automatically switch to another tray which is meeting the following conditions when the paper feed tray runs out of paper during printing.
Operating conditions
 - The paper is the same size.
 - The paper is positioned in the same orientation.
 - The paper is the same type.
 - The paper trays are selected when the paper tray is automatically switched.

(b) Default setting

- Restrict

(c) Setting item

- Allow
- "Restrict"

(3) No Matching Paper in Tray Setting

(a) Use

- To set whether to switch to another tray automatically when the specified tray runs out of paper during printing.

Stop Printing (Tray Fixed)	It stops printing when the specified tray runs out of paper.
Switch Trays (Tray Priority)	To switch to another tray with the specified paper and print when the tray is out of paper.

(b) Default setting

- Stop Printing (Tray Fixed)

(c) Setting item

- "Stop Printing (Tray Fixed)"
- Switch Trays (Tray Priority)

(4) Print Lists

- It will not be displayed when the following setting shows that authentication device 2 or the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)

(a) Use

- To set the paper feed tray for output the list for the meter count or the unit check.
- It sets the simplex/duplex printing of the output for the sales counter or the unit check list.

(b) Default setting

- Paper tray: Tray 1
- Simplex/Duplex: 1-Sided

(5) Post Inserter Settings

- It will be displayed only when the optional post inserter PI-505 is mounted.

(a) Use

- To set the paper tray, paper type and paper size for the post inserter.

(b) Default setting

- Paper Tray: F1
- Paper Type: Plain Paper
- Paper Size: Auto Detect

(c) Setting item

Paper Tray

- "F1"
- F2

Paper Type

- "Plain Paper"
- Thick 1
- Thick 1+
- Thick 2

Paper Size

- "Auto Detect"
- Standard Size
- Custom Size

6.1.7 Auto Color Level Adjust.**(1) Use**

- To set the criterion level to discriminate between a colored original and a black-and-white original in the auto color mode.

(2) Default setting

- 3

(3) Setting item

- 1 (Black) to 5 (Full Color)

6.1.8 Power supply/power save settings

- It will be displayed only when the following setting is set to "Level 1" or "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Setting\]](#) -> [\[Administrator Security Level\]](#)
- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Low Power Mode Settings**(a) Use**

- To set the time until low power starts operating after the last key operation has been completed.
- Low power: To turn LED and LCD OFF, and lower the power consumption.

(b) Procedure

- Use the 10-key pad for setting.

(c) Default setting

- 15 min.

(d) Setting range

- 10 min. to 240 min.

(2) Sleep Mode Settings**(a) Use**

- To set the time until sleep mode starts operating after the last key operation has been completed.
- Turn all lines OFF except 5 V line for control.
- "OFF" will only be displayed when [\[Sleep ON/OFF Choice Setting\]](#) in Service Mode is set.

(b) Procedure

- Use the 10-key pad for setting.

(c) Default setting

- 30 min.

(d) Setting item

- 10 min. to 240 min.
- OFF

6.1.9 Output Settings

- It will be displayed only when the following setting is set to "Level 2."
[Administrator Settings] -> [Security Settings] -> [Administrator Security Levels]
- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)

(1) Print/Fax Output Settings**(a) Use**

- To set the timing for printing for the PC print job or fax received.

Batch Print	Starts printing when all data are received.
Page Print	Starts printing every time data for each page are received.

(b) Default setting

- Print: Page Print
- Fax: Batch Print

NOTE

- **[FAX] will be displayed only when the optional fax kit FK-511 is mounted.**

(2) Output Tray Settings

- It will be displayed when the optional finisher FS-534/535 or job separator JS-506 is mounted.

(a) Use

- To set the priority output tray for each application (Copy, Printer, Fax and Print Reports).

(b) Default setting

- Copy: Tray 2
- Print: Tray 2
- Print Reports: Tray 1
- Fax: Tray 1

6.1.10 AE Level Adjustment

- It will be displayed only when the following setting is set to "Level 2."
[Administrator Settings] -> [Security Settings] -> [Administrator Security Levels]
- It will not be displayed when the following setting shows that the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)

(1) Use

- To set the default setting for AE (Auto Exposure).
The larger the value becomes the more emphasized the background will be.
 - To make the background level foggy: Increase the setting value
 - To make the background level less foggy: Decrease the setting value

(2) Default setting

- 2

(3) Setting range

- 0 to 4

6.1.11 Auto Paper Select for Small Original**(1) Use**

- To make the copy setting when the paper is undetectably small, or no original is being set.
- To copy the original such as business cards with which the original detection is not effective.

Copy on Small Size	Copies on A5 paper.
Copy on A4/Letter	Copies on A4 or Letter (8 1/2 x 11) size paper.
Prohibit Copy	Does not copy since the original size cannot be detected. Paper feed tray needs to be selected prior to pressing the Start key.

(2) Default setting

- Prohibit Copy

(3) Setting item

- Copy on Small Size
- Copy on A4/Letter
- "Prohibit Copy"

6.1.12 Blank Page Print Settings

- It will be displayed only when the following setting is set to "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)
- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Use

- Select whether or not to print the stamp/composition on blank pages.

(2) Default setting

- Do Not Print

(3) Setting item

- Print
- "Do Not Print"

6.1.13 Page Number Print Position

- It will be displayed only when the following setting is set to "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- Specify a page number print position when printing page numbers after configuring 2-sided print or booklet settings. Select whether to print the page numbers on a same position on all pages or on positions symmetric with respect to the stapling position.

(2) Default setting

- Left & Right Bind: All the Same/Top & Bottom Bind: All the Same

(3) Setting item

- "Left & Right Bind: All the Same/Top & Bottom Bind: All the Same"
- Left & Right Bind: Symmetrical/Top & Bottom Bind: All the Same
- Left & Right Bind: Symmetrical/Top & Bottom Bind: Symmetrical

6.1.14 Blank Sheet Detection Level**(1) Use**

- To adjust the blank sheet detection level.
- Adjusting the level to the "+" side increases the possibility of originals being judged as blank.
- Adjusting the level to the "-" side decreases the possibility of originals being judged as blank.
- Note that light originals or originals with large white areas tend to be judged as blank sheet when the level is adjusted to the "+" side.

(2) Default setting

- 0

(3) Setting range

- -2 to +2

6.1.15 Separate Scan from Platen**(1) Use**

- To select whether or not to forcibly enable separate scan when scanning originals from the platen.

(2) Default setting

- No

(3) Setting range

- Yes
- "No"

6.2 Custom Display Settings**6.2.1 Copier Settings****(1) Default Tab****(a) Use**

- Selects a default tab display in the copy mode.

Basic	Normal basic screen
Quick Copy	• This screen displays all options that can be selected for Paper, Zoom, and Duplex/Combine functions. • For color functions, all selectable options can be displayed on the screen. • The normal [Basic] screen is also displayed as another tab on the screen.

(b) Default setting

- Basic

(c) Setting item

- "Basic"
- Quick Copy

(2) Quick Settings 1, 2**(a) Use**

- Allows you to register setting conditions for frequently used copy functions and place them on the basic settings screen.
- The registered setting condition can be invoked by only pressing the corresponding easy setting key.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

NOTE

- When this setting is set to ON, select the copy functions you wish to register.

6.2.2 Scan/Fax Settings**(1) Default Tab****(a) Use**

- To set the basic screen display in scan/fax mode.

(b) Default setting

- Address Book

(c) Setting item

- Address Search/LDAP Search
- Job History
- "Address Book"
- Direct Input

(2) Program Default**(a) Use**

- To set the default display for the program screen during scan/fax mode.
- To keep the default display on the program screen which frequently changes during scan/fax mode.

(b) Default setting

- PAGE 1

(c) Setting item

- Temporary One-Touch
- "PAGE1" to PAGE34

(3) Address Book Index Default-Index**(a) Use**

- To set the default display for the address book screen during scan/fax mode.
- To keep the default display instead of search string on the address book which frequently changes during scan/fax mode.

(b) Default setting

- Favorite

(c) Setting item

- "Favorite"
- All
- ABC to WXYZ
- etc

(4) Address Book Index Default-Address Type**(a) Use**

- To set the default display of the address book screen in scan/fax mode.
- To select the type(s) of address frequently used to add it to the default display of the Address Book screen in scan/fax mode.

(b) Default setting

- All

(c) Setting item

- Group
- Fax
- E-mail
- Box
- I-Fax
- IP Ad. Fax
- PC (SMB)
- FTP
- WebDAV
- "All"

(5) Default Address Sort Method**(a) Use**

- To set the order in which addresses are displayed in the scan/fax screen.

(b) Default setting

- Number Order

(c) Setting item

- "Number Order"
- Name Order

(6) Default Address Display Method**(a) Use**

- To set the type of layout used in the scan/fax screen.

(b) Default setting

- One-Touch Button Layout

(c) Setting item

- "One-Touch Button Layout"
- List Layout

6.2.3 User Box Settings**(1) Default Tab****(a) Use**

- Selects a default tab display in the user box mode.

(b) Default setting

- Public

(c) Setting item

- "Public"
- Group
- Personal
- System

(2) Shortcut Key 1/2

- [Shortcut Key 2] is not displayed when the optional image controller IC-414 is installed.

(a) Use

- Selects whether to use the shortcut key.
- Adds the shortcut keys of frequently used user box functions to the basic screen.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

NOTE

- When this setting is set to ON, select auxiliary functions to get their shortcut keys displayed on the screen.

6.2.4 Function Display Key (Copy/Print)

- This is not displayed when [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Custom Display Settings\]](#) -> [\[Function Display Key Permission Setting\]](#) -> [\[Copy/Print\]](#) is set to "Restrict."

(1) Default Tab**(a) Use**

- To set the display pattern of the function keys that appear in the print settings screen in copy and User Box mode.

(b) Procedure

1. Select a function key number to be reconfigured. ([Function Key 1] to [Function Key 7] are assigned to [Function 1], and [Function Key 8] to [Function Key 14] are assigned to [Function 2]).
2. Touch [ON], select a function to be assigned to a function key, then touch [OK].
3. This changes the function keys displayed in the main screen.

6.2.5 Function Display Key (Send/Save)

- This is not displayed when [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Custom Display Settings\]](#) -> [\[Function Display Key Permission Setting\]](#) -> [\[Send/Save\]](#) is set to "Restrict."

(1) Default Tab**(a) Use**

- To set the display pattern of the function keys that appear in the send or save settings screen in scan/fax and User Box mode.

(b) Procedure

1. Select a function key number to be reconfigured.
2. Touch [ON], select a function to be assigned to a function key, then touch [OK].
3. This changes the function keys displayed in the main screen.

6.2.6 Copy Screen

- It will not be displayed when the following setting shows that key counter or vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
However, this menu is available when the key counter is installed and [The next job reservation] is set to License.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Copy Operating Screen**(a) Use**

- To set the display on the control panel screen during printing.

Yes	The screen shows that the printing is being carried out. The job can be reserved with [Program Next Job].
No	The screen does not indicate the printing being carried out. The normal copy setting screen will be displayed. The copy reservation is available.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

6.2.7 Fax Active Screen

- It will be displayed only when the optional fax kit FK-511 is mounted.
- It will not be displayed when the following setting shows that key counter or vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) TX Display**(a) Use**

- To set the screen display for the control panel when transmitting fax.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

(2) RX Display**(a) Use**

- To set the screen display on the control panel when receiving fax.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

6.2.8 Search Option Settings**(1) Uppercase and Lowercase Letters****(a) Use**

- Select whether or not to differentiate between upper case and lowercase letters.

(b) Default setting

- Differentiate

(c) Setting item

- "Differentiate"
- Do Not Differentiate

(2) Search Option Screen**(a) Use**

- Select whether or not to display [Uppercase and Lowercase Letters] setting in the advanced search.
- Displaying the search option screen allows changing the search criteria for an individual search.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

6.3 Copier Settings**6.3.1 Auto Booklet Selection for Saddle Stitching**

- It will be displayed only when the optional saddle stitcher SD-511 is installed in the finisher FS-534.
- It will be displayed only when the optional saddle stitcher SD-512 is installed in the finisher FS-535.

(1) Use

- To set whether to set the auto booklet when Center Staple & Fold / Half-Hold is selected

Auto Select Booklet	Automatically selects Booklet when a user selects Center Staple & Fold or Half-Hold.
User Defined	Asks a user whether or not to select Booklet each time when a user selects Center Staple & Fold or Half-Hold.
Off	Does not select Booklet when a user selects Center Staple & Fold or Half-Hold.

(2) Default setting

- Auto Select Booklet

(3) Setting item

- "Auto Select Booklet"
- User Defined
- Off

6.3.2 Auto Zoom for Combine/Booklet**(1) Use**

- To set whether to select the appropriate magnification when combine or booklet is selected during auto paper select.

(2) Default setting

- Auto Display Zoom Ratio

(3) Setting item

- "Auto Display Zoom Ratio"
- OFF

6.3.3 Booklet Short Cut Mode**(1) Use**

- To select whether Booklet should be set to ON or OFF at the time of transition to the Booklet settings screen.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

6.3.4 Auto Sort/Group Selection**(1) Use**

- Selects whether to use the auto sort/group selection function when a job has output of two or more sheets.

Yes	Automatically disables the Auto sort/group selection when a sheet of original is placed on the ADF and the start key is pressed. Automatically enables the Auto sort/group selection when two or more sheets of originals are placed on the ADF and the start key is pressed.
No	Disable the Auto sort/group selection.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

6.3.5 Default Copy Settings

- This menu is unavailable if user authentication is not made while either of authentication devices is set to Set in the [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#).
- This menu is not available when the key counter is set or when a warning appears to inform that the vendor's main power switch needs to be checked or coins (a card) are not inserted under the condition where the vendor is set to Set in the [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#).

(1) Use

- To make default settings for the copy mode.

Current Setting	The settings made on the control panel before entering the setting menu screens are registered as the default settings of copy functions.
Factory Default	The settings made at the time of shipment from the factory are registered as the default settings of copy functions.

- * The machine is initialized at the following timings:
 - The main power switch is turned ON.
 - Panel is reset.
 - In an Interrupt mode.
 - Auto Reset
 - The password entry screen for account track is changed.

(2) Default setting

- Factory Default

(3) Setting item

- Current Setting
- "Factory Default"

6.3.6 Default Enlarge Display Settings

- Displayed only when you select [\[Utility\]](#) -> [\[User Settings\]](#) -> [\[Copier Settings\]](#) in the enlarge display mode.

(1) Use

- To make default settings for the enlarge display mode.

Current Setting	The settings made on the control panel before entering the setting menu screens are registered as the default settings of copy functions.
Factory Default	The settings made at the time of shipment from the factory are registered as the default settings of copy functions.

- * The machine is initialized at the following timings:
 - The main power switch is turned ON.
 - Panel is reset.
 - In an Interrupt mode.
 - Auto Reset
 - The password entry screen for account track is changed.

(2) Default setting

- Factory Default

(3) Setting item

- Current Setting
- "Factory Default"

6.3.7 When AMS Direction is Incorrect

(1) Use

- To set whether to print when the original is set in different direction from the set paper during auto zoom select.

Print	To print according to the selected direction and size of paper.
Delete Job	To display alarm and cancel the job.

(2) Default setting

- Print

(3) Setting item

- "Print"
- Delete Job

6.3.8 Separate Scan Output Method

(1) Use

- To set the output mode at Separate Scan setting.

Page Print	Print consecutively during the read operation.
Batch print	• Print all at once after reading all data. • Copy setting can be changed after the read operation.

(2) Default setting

- Page Print

(3) Setting item

- "Page Print"
- Batch Print

6.3.9 Enlargement Rotation

(1) Use

- Sets whether to rotate images of which length is more than 297 mm in the main scan direction (in the horizontal direction on the ADF or the Original glass) in the copying process.

Allow	Makes an enlargement rotation only when black is selected for the color setting.
Restrict	Disables an enlargement rotation regardless of the color setting.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

6.3.10 Auto Zoom (Platen)

- It will be displayed only when the following setting is set to "Level 1" or "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- To set whether to function the auto magnification when the feed tray is selected with document set on the original glass (excepting at automatic paper selection mode.)

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

6.3.11 Auto Zoom (ADF)

- It will be displayed only when the following setting is set to "Level 1" or "Level 2".
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- To set whether to function the auto magnification when the feed tray is selected with document set on the ADF (excepting at automatic paper selection mode.)

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

6.3.12 Specify Default Tray when APS Off

- It will be displayed only when the following setting is set to "Level 1" or "Level 2".
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- To set the tray to be used when APS is cancelled.

(2) Default setting

- Tray Before APS ON

(3) Setting item

- "Tray Before APS ON"
- Default Tray

6.3.13 Select Tray for Insert Sheet**(1) Use**

- To select the default setting of the tray for cover sheet paper.

(2) Default setting

- Tray 2

6.3.14 Tri-Fold Print Side

- It will be displayed only when the following setting is set to "Level 1" or "Level 2".
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)
- It will be displayed only when the optional saddle stitcher SD-511 is installed in the finisher FS-534.
- It will be displayed only when the optional saddle stitcher SD-512 is installed in the finisher FS-535.

(1) Use

- Specifies the side of copies to be folded.

Inside	Folds paper in three with the printed side in.
Outside	Folds paper in three with the printed side out.

(2) Default setting

- Inside

(3) Setting item

- Outside
- "Inside"

6.3.15 Print Jobs During Copy Operation

- It will be displayed only when the following setting is set to "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- To set whether to accept the printing job for print data or fax data during copy operation.

Accept	Receives the print data or fax data to print.
Receive Only	Print data or fax data will be printed when the copy operation is finished.

(2) Default setting

- Accept

(3) Setting item

- "Accept"
- Receive Only

6.3.16 Automatic Image Rotation

- [It will be displayed only when the following setting is set to "Level 1" or "Level 2."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Administrator Security Levels\]](#)

(1) Use

- To select the timing when automatic image rotation is enabled.

(2) Default setting

- When Auto Paper/Auto Zoom is set

(3) Setting item

- When Auto Paper/Auto Zoom/Reduce is set
- "When Auto Paper/Auto Zoom is set"
- When Auto Zoom/Reduce is set
- When Auto Zoom is set

6.3.17 Finishing Program

- It will be displayed only when the optional finisher FS-533/534/535 is mounted.

(1) Use

- Configure whether to display the Finishing Program button in the basic settings screen.
 To display the button, register the contents of the finishing program.
 Register frequently used finishing functions so that you can set them at once by using the button that appears in the basic settings screen.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

NOTE

- When selecting "ON," select the contents to be registered in the finishing program.

6.3.18 Card Shot Settings

(1) Layout

(a) Use

- To set the initial copy layout setting in card shot mode.

(b) Default setting

- Top/Bottom

(c) Setting item

- "Top/Bottom"
- Left/Right (Upper Half)
- Left/Right

(2) Zoom

(a) Use

- To set the initial zoom setting in card shot mode.

(b) Default setting

- Full Size

(c) Setting item

- "Full Size"
- x 1.0

(3) Store Original Size**(a) Use**

- To pre-register original sizes that are used in card shot mode.

(b) Procedure

- Enter an original size, name it, and register the data.

6.4 Scan/Fax Settings**6.4.1 JPEG Compression Level****(1) Use**

- To set the JPEG compression method when scanning with JPEG while in scan/fax mode.

High Quality	Lowens the compression rate and puts priority in quality while scanning.
Standard	Compression rate and quality are normally balanced while scanning.
High Compression	Makes the compression rate higher and puts priority in lowering the data volume while scanning.

(2) Default setting

- Standard

(3) Setting item

- High Quality
- "Standard"
- High Compression

6.4.2 Black Compression Level**(1) Use**

- To set the black compression method for scanning in the black mode while in scan/fax mode.

(2) Default setting

- MMR

(3) Setting item

- MH
- "MMR"

6.4.3 TWAIN Lock Time

- It will not be displayed when the optional image controller IC-414 is mounted.

(1) Use

- To set the period of time for unlocking the operation panel while in TWAIN scanning.

(2) Default setting

- 120 sec.

(3) Setting range

- 30 to 300 sec.

6.4.4 Default Scan/Fax Settings

- This menu is unavailable if user authentication is not made while either of authentication devices is set to set in the [\[Service Mode\] -> \[Billing Setting\] -> \[Management Function Choice\]](#).
- This menu is not available when the key counter is set or when a warning appears to inform that the vendor's main power switch needs to be checked or coins (a card) are not inserted under the condition where the vendor is set to Set in the [\[Service Mode\] -> \[Billing Setting\] -> \[Management Function Choice\]](#).

(1) Use

- To make default settings for the scan/fax mode.

Current Setting	The settings made on the control panel before entering the setting menu screens are registered as the default settings of scan/fax functions.
-----------------	---

Factory Default	The settings made at the time of shipment from the factory are registered as the default settings of scan/fax functions.
-----------------	--

- * The machine is initialized at the following timings:
 - The main power switch is turned ON.
 - Panel is reset.
 - In an Interrupt mode.
 - Auto Reset
 - The password entry screen for account track is changed.

(2) Setting item

- Current Setting
- Factory Default

6.4.5 Default Enlarge Display Settings

- Displayed only when you select [Utility] -> [User Settings] -> [Scan/Fax Settings] in the enlarge display mode.

(1) Use

- To make default settings for the enlarge display mode.

Current Setting	The settings made on the control panel before entering the setting menu screens are registered as the default settings of scan/fax functions.
Factory Default	The settings made at the time of shipment from the factory are registered as the default settings of scan/fax functions.

- * The machine is initialized at the following timings:
 - The main power switch is turned ON.
 - Panel is reset.
 - In an Interrupt mode.
 - Auto Reset
 - The password entry screen for account track is changed.

(2) Default setting

- Factory Default

(3) Setting item

- Current Setting
- "Factory Default"

6.4.6 Compact PDF/XPS Compression Level

(1) Use

- Selects a compression method applied to scanned data that is produced with the use of Compact PDF/XPS in the scan/fax mode.

High Quality	Lowers the compression rate and puts priority in quality while scanning.
Standard	Compression rate and quality are normally balanced while scanning.
High Compression	Makes the compression rate higher and puts priority in lowering the data volume while scanning.

(2) Default setting

- Standard

(3) Setting item

- High Quality
- "Standard"
- High Compression

6.4.7 Color TIFF Type

(1) Use

- Select the compression level used for saving TIFF format data in color.

TIFF (TTN2)	Scan in TTN2.
TIFF (modified TAG)	Scan in modified TAG.

(2) Default setting

- TIFF (TTN2)

(3) Setting item

- "TIFF (TTN2)"
- TIFF (modified TAG)

6.4.8 OCR Operation Setting

- It will be displayed only when the optional i-Option (LK-105) is activated.

(1) Use

- To set the method of OCR operation where a searchable PDF file is created.

(2) Default setting

- Prioritize Quality

(3) Setting item

- "Prioritize Quality"
- Prioritize Speed

6.4.9 Graphic Outlining

(1) Use

- To set the precision of outline conversion where outline PDFs are created.
- To set the processing level where scanned document is divided into text areas and image areas and the text is converted to outlines.

(2) Default setting

- OFF

(3) Setting item

- HIGH
- MIDDLE
- LOW
- "OFF"

6.4.10 Auto Rename Function

(1) Use

- To avoid duplicate file names being created in the destination when the file name is specified by the user, select whether to automatically add text to the file name.
- When [ON] is selected, the following text is added automatically.
[Device Name] + [lower 2 digits of year] + [2 digits in month] + [2 digits in date] + [2 digits in hour] + [2 digits in minute] + [2 digits in sequential number]
However, if a file name is automatically created, the text is not added.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

6.5 Printer Settings

6.5.1 Basic Settings

(1) PDL Setting

(a) Use

- To set the PDL (Page Description Language) for PC printing.

(b) Default setting

- Auto

(c) Setting item

- "Auto"
- PCL
- PS

(2) Number of Copies

(a) Use

- To set the number to be copied when not specified by the printer driver during PC printing.
- To use when the number cannot be specified by the printer driver during printing from Windows DOS, etc.

(b) Default setting

- 1

(c) Setting range

- "1" to 9999

(3) Original Direction**(a) Use**

- To set the default setting for the direction of the original during PC printing.

(b) Default setting

- Portrait

(c) Setting item

- "Portrait"
- Landscape

(4) Spool Print Jobs in HDD before RIP**(a) Use**

- To set whether to store the print data to HDD when receiving the next job during RIP process of the current job.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(5) A4/A3 <-> LTR/LGR Auto Switch**(a) Use**

- To set whether to switch between A4 and Letter (8 1/2 x 11) size paper, and A3 and Ledger (11 x 17) size paper in reading.

NOTE

- When switching the size, the image will be printed in the same magnification.
- The image will not be reduced when there is image deficiency.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(6) Banner Sheet Setting**(a) Use**

- To set whether or not to print on the banner (front cover) page.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(7) Binding Direction Adjustment**(a) Use**

- Specifies the alignment between the sides of paper (binding position adjustment) in duplex printing.
- To achieve faster printing performance, select Productivity Priority. To address misalignment problems between sides of copies in the horizontal and vertical directions, select Finishing Priority.

Finishing Priority	Able to optimize sides aligning operation as the process is performed after the machine receives all of the print data.
Productivity Priority	Able to accelerate print speed as sides alignment proceeds together with data reception and print operation.
Control Adjustments	Comply with the command from the printer driver and does not take the side alignment step.

(b) Default setting

- Finishing Priority

(c) Setting item

- "Finishing Priority"
- Productivity Priority
- Control Adjustments

(8) Line Width Adjustment**(a) Use**

- To correct line width of the output data during PC print.

(b) Default setting

- Thin

(c) Setting item

- "Thin"
- Normal
- Thick

(9) Gray Background Text Correction**(a) Use**

- Letters or lines on a gray background may look thicker than those on a non-gray background.

ON	Makes characters and lines on a grayscale background thicker and sharpens the outlines of characters and figures.
OFF	Makes grayscale background text correction by selecting Thin, Normal, or Thick in [Line Width Adjustment] . If selecting "ON" makes lines too thick, select "OFF."

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(10) Gray Background Text Correction (Fiery)

- It will be displayed when the optional image controller IC-414 is mounted.

(a) Use

- To make thin lines and small characters on a grayscale background more visible by correcting their line width when the optional image controller IC-414 is installed.

ON	Makes characters and lines on a grayscale background thicker and sharpens the outlines of characters and figures.
OFF	Makes grayscale background text correction by selecting Thin, Normal, or Thick in [Line Width Adjustment] . If selecting "ON" makes lines too thick, select "OFF."

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(11) Minimal Print**(a) Use**

- To set whether to slightly reduce the entire page when directly printing a PDF, PPML, or OOXML (docx, xlsx, or pptx) file.

(b) Default setting

- OFF

(c) Default setting

- ON
- "OFF"

(12) OOXML Print Mode**(a) Use**

- To set whether to give priority to either the image quality or speed when directly printing an OOXML (docx, xlsx, or pptx) file.

(b) Default setting

- Prioritize Speed

(c) Setting item

- "Prioritize Speed"
- Prioritize Quality

(13) Fold Type Settings**(a) Use**

- To set whether to fold the printed sheets. When you want to fold the printed sheets, set the folding mode.

(b) Default setting

- NO

(c) Setting item

- "NO"
- Half-Fold
- Tri-Fold

(14) Half-Fold/Tri-Fold Specification Settings**(a) Use**

- To set the unit by which the paper is folded from [By Copy Job (Multiple Sheets)], [1 Unit], and [By Page].
- When you select [By Page], enter the number of pages to be folded at one time at [Per Page Setting].

(b) Default setting

- By Copy Job (Multiple Sheets)

(c) Setting item

- "By Copy Job (Multiple Sheets)"
- 1 Unit
- By Page

6.5.2 Paper Setting**(1) Paper Tray****(a) Use**

- To set the paper feed tray when not specified by the printer driver during PC printing.
- To use when paper feed tray cannot be specified by the printer driver when printing from Windows DOS, etc.

(b) Default setting

- Auto

(2) Paper Size**(a) Use**

- To set the paper size when not specified by the printer driver during printing.
- To use when the paper size cannot be specified by the printer driver during printing from Windows DOS, etc.

(3) 2-Sided Print**(a) Use**

- To set whether to carry out duplex print during PC printing when not specified by the printer driver.
- To use when 2-sided printing cannot be specified by the printer driver while printing by Windows DOS, etc.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Binding Position**(a) Use**

- To set the binding direction during duplex printing when not specified by the printer driver during PC printing.
- To use when binding direction cannot be specified by the printer driver during printing by Windows DOS, etc.

(b) Default setting

- Left Bind

(c) Setting item

- Top Bind
- "Left Bind"
- Right Bind

(5) Staple

- It will be displayed only when the optional finisher is mounted.

(a) Use

- To set whether to staple or not when not specified by the printer driver during PC printing.
- To use when staple is not specified by the printer driver during printing by the Windows DOS, etc.

(b) Default setting

- OFF

(c) Setting item

- 1 Position
- 2 Position
- "OFF"

(6) Punch

- It will be displayed only when the optional finisher and punch kit are mounted.

(a) Use

- To select whether to make punch-holes or not when not specified by the printer driver during PC printing.
- To use when the printer driver cannot specify punching during printing from Windows DOS, etc.

(b) Default setting

- OFF

(c) Setting item

- 2-Hole/3-Hole/4-Hole *
- "OFF"

*: The number of punch holes being set is available from [\[Service Mode\]](#) -> [\[Finisher\]](#).

(7) Banner Paper Tray**(a) Use**

- To set the feed tray for printing on the banner (front cover) page.

(b) Default setting

- Auto

6.5.3 PCL Settings**(1) Font Settings****(a) Use**

- To set the font when not specified by the printer driver during PC printing.
- To use when the printer driver cannot specify the font during printing from Windows DOS, etc.
- It can be selected from the Resident font or the download font.

(b) Procedure

1. When selecting from the Internal font, touch [\[Internal\]](#), and select the one from the displayed font list.

(c) Default setting

- Courier

(2) Symbol Set**(a) Use**

- To set the font symbol set when not specified by the printer driver during PC printing.
- To use when the font symbol set cannot be specified by the printer driver during printing from Windows DOS, etc.

(b) Default setting

- Roman-8 or PC8, Code Page 437

(3) Font Size**(a) Use**

- To set the font size when not specified by the printer driver during PC printing.

- To set the font size when it cannot be specified by the printer driver during printing from Windows DOS, etc.
- To set scalable font (: Point) and bitmap font (: Pitch) respectively.

(b) Default setting

- Scalable Font: 12.00 points
- Bitmap Font: 10.00 pitch

(4) Line/Page

(a) Use

- To set the number of lines per page for printing the text data.

(b) Default setting

- 60 or 64 lines

NOTE

- Default setting value differs depending on the values by the following two different settings.
[\[Utility\] -> \[User Setting\] -> \[Printer Setting\] -> \[Basic Settings\] -> \[Original Direction\]](#)
[\[Utility\] -> \[User Setting\] -> \[Printer Setting\] -> \[Paper Settings\] -> \[Default Paper Size\]](#)

(c) Setting range

- 5 to 128

(5) CR/LF Mapping

(a) Use

- To set the mode for replacing data when printing the text data.

Mode 1	CR -> CR-LF LF=LF FF=FF
Mode 2	CR=CR LF -> CR-LF FF -> CR-FF
Mode 3	CR -> CR-LF LF -> CR-LF FF -> CR-FF
No	Does not replace

(b) Default setting

- No

(c) Setting item

- Mode 1
- Mode 2
- Mode 3
- "No"

(6) Bar Code Font Settings

- This is displayed only when the optional i-Option LK-106 and upgrade kit UK-204 are enabled.

(a) Use

- To set line width and space width for the bar code font.

(b) Default setting

- 0%

(c) Setting range

- -50 to +50 (by 5%)

6.5.4 PS Setting

(1) Print PS Errors

(a) Use

- To set whether to print or not the error information when an error occurred during PS rasterizing.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) ICC Profile Settings

(a) Use

- To select a profile to be used for print jobs from a computer when a profile is not specified by printer driver.

- Possible to set a profile separately for each of the following items.
 - Photo-RGB Color
 - Photo-Output Profile
 - Text-RGB Color
 - Text-Output Profile
 - Figure/Table/Graph-RGB Color
 - Figure/Table/Graph-Output Profile
 - Simulation Profile

(b) Default setting

- Photo-RGB Color: Device Color
- Photo-Output Profile: Auto
- Text-RGB Color: Device Color
- Text-Output Profile: Auto
- Figure/Table/Graph-RGB Color: Device Color
- Figure/Table/Graph-Output Profile: Auto
- Simulation Profile: Auto

(3) Auto Trapping

(a) Use

- Select this option to superimpose neighboring colors to print so as to prevent white space being generated around a picture.

ON	Adjacent colors are overprinted. If white lines appear at borders of colors on a graph or figure, select "ON."
OFF	The data is printed as is without being trap-processed.

NOTE

- If color-dulling results at the border of colors when "ON" is selected, change it to "OFF."
- Trapping process is sometimes specifiable with the application. When the trapping process is specified in the application, select "OFF" on the machine side.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Black Overprint

(a) Use

- Select this option to print with no white space around black characters or figures.

Text/Figure	Adjacent portion between a text and figure is overprinted with black. Use this setting when a white line appears around the black portion in a graph or figure.
Text	Black is overprinted on the adjacent colors in the text portion. Use this setting when a white line appears around the text.
OFF	The data is printed as is without overprinting with black.

NOTE

- If color-dulling results around the black portion when "ON" is selected, change it to "OFF."
- The black overprinting process is sometimes specifiable with the application. When the trapping process is specified in the application, select "OFF" on the machine side.

(b) Default setting

- OFF

(c) Setting item

- Text/Figure
- Text
- "OFF"

6.5.5 Security Settings

(1) Verify XPS/OOXML Digital Signature

(a) Use

- To set whether to verify a digital signature when printing an XPS or OOXML (docx, xlsx, or pptx) file with a digital signature added.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

6.5.6 OOXML Print Settings

(1) Print Sheet/Book

(a) Use

- To set whether to print the currently selected sheet or the entire book when handling an Excel file.

(b) Default setting

- Current Sheet

(c) Setting item

- "Current Sheet"
- All Sheets

(2) Paper Size

(a) Use

- To set a paper size to print an OOXML (docx, xlsx, or pptx) file.

(b) Default setting

- Auto Paper Select

(c) Setting item

- "Auto Paper Select", SRA3, A3, A4, A5, A6, B4, B5, B6, 12×18, 11×17, 8¹/₂×14, 8¹/₂×11, 7¹/₄×10¹/₂, 5¹/₂×8¹/₂, 8K, 8×13*, 16K, Post., 4×6, envB5, envC4, envC5, envC6, envDL, envCom10, envMonarch, Y3 Envelope, Y4 Envelope, L3 Envelope, L4 Envelope, K1 Envelope, K2 Envelope, K3 Envelope
- * The paper size selected in [Foolscap Size Setting] in service mode is displayed.

(3) Paper Type

(a) Use

- To set a paper type to print an OOXML (docx, xlsx, or pptx) file.

(b) Default setting

- Auto

(c) Setting item

- "Auto", Plain Paper, Single Side Only, Thin Paper, Transparency, Special Paper, Thick 1, Thick 1+, Thick 2, Thick 3, Thick 4, Letterhead, Colored Paper, Envelope, Index Paper, Recycled, User Paper 1, User Paper 2, User Paper 3, User Paper 4, User Paper 5, User Paper 6

6.5.7 Layout - Combination

(1) Use

- To set whether to reduce multiple pages onto one sheet for printing.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

6.5.8 Print Reports

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted.)

(1) Use

- To output the report or demo page concerning the print setting.
- To check the setting concerning the printer.

The types of report available for output are as follows.

Configuration Page	The list of printer setting will be output.
Demo Page	The test page will be output.
PCL Font List	PCL font list will be output.
PS Font List	PS font list will be output.

(2) Procedure

- Touch [User Setting] -> [Printer Setting] -> [Print Reports].
- Select the report to be output.

3. Select the paper tray.
4. Select simplex or duplex print, and touch [Start] or the Start key.

6.5.9 TIFF Image Paper Setting

(1) Paper Selection

(a) Use

- Select this option to configure how to determine the paper size when directly printing TIFF or JPEG image data.

Auto Paper Select	• Select this option to calculate the size of the image based on its resolution and the number of pixels to print the image on paper that fits the image size. • Select this option to print images on paper of the same size as the image.
Priority Paper Size	• Select this option to print on paper of the priority paper size specified on the machine. • If the image size is larger than the paper size, it is automatically reduced.

NOTE

- When “Auto Paper Select” is selected and paper larger than the image size is not in the paper trays, paper size error occurs.

(b) Default setting

- Auto Paper Select

(c) Setting item

- “Auto Paper Select”
- Priority Paper Size

6.6 Change Password

- When conducting user authentication (MFP only), it will be displayed only when the authentication is complete.
- This menu is available only when box administrator authentication is established during user authentication or account track.

6.6.1 Use

- To modify the password used for the user authentication.

6.6.2 Procedure

- Enter the user authentication password with the keys on the control panel.
 1. Enter the user authentication password currently used.
 2. Password: Enter the new user authentication password to be used.
 3. Password Confirmation: Enter the new user authentication password again.

NOTE

- When [Password Rules] which can be displayed by the following setting is set to “Enable”, password using the single letter or the password same with the previous one, less than 8-digit will not be modified.
[\[Utility\] -> \[Administrator Settings\] -> \[Security Settings\]](#)
- When the following setting is set to “ON”, entering the incorrect password three times will cause access lock. When an access lock occurred, turn the main power switch OFF, and wait for 10 seconds or more and turn main power switch ON again to enter the password again.
[\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#)

6.7 Change E-mail Address

- When conducting user authentication (MFP only), it will be displayed only when the authentication is complete.
- It will be displayed only when the following setting is set to “Level 2.”
[\[Administrator Settings\] -> \[Security Settings\] -> \[Administrator Security Levels\]](#)

6.7.1 Use

- To modify the e-mail address which is registered as a user.

6.7.2 Procedure

- Enter the new e-mail address using the keys on the control panel.

6.8 Register Authentication Settings

- It will be displayed when user authentication (MFP) is completed and the following is met; [Biometric/IC Card Info. Registration] is set to “Allow” in [\[Utility\] -> \[Administrator Settings\] -> \[System Settings\] -> \[Restrict User Access\] -> \[Restrict Access to Job Settings\]](#).

6.8.1 Use

- To enable users to register or delete their own biometric/IC card information.

6.9 Synchronize User Auth. and Account Track

- When conducting user authentication (ON (MFP), External Server Authentication, or Main + External Server), it will be displayed only when the authentication is complete.
- It will be displayed when the following setting is set to “Synchronize by User.”
[\[Administrator Settings\] -> \[User Authentication/Account Track\] -> \[General Settings\] -> \[Synchronize User Authentication & Account Track\]](#)

6.9.1 Use

- To set whether to synchronize the user authentication and account track.

6.9.2 Default setting

- Synchronize

6.9.3 Setting item

- "Synchronize"
- Do Not Synchronize
- When selecting [Synchronize], set the account name.

6.10 Cellular Phone/PDA Setting**6.10.1 Link File Error Notification**

- It will be displayed only when the optional local interface kit EK-607 is mounted.

(1) Use

- To set whether to print a job where a link error occurs when you are trying to print a web page and its links (page or file) from a cellular phone or PDA.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

6.10.2 Proxy Server Use

- It will be displayed only when the optional local interface kit EK-607 is mounted.

(1) Use

- To set whether to use a proxy server when communicating with a cellular phone or PDA.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

6.10.3 Print

- It will be displayed only when the optional local interface kit EK-607 is mounted.

(1) Use

- To set different print settings used when printing from a cell phone or PDA.

(2) Procedure

- The following items can be set.
 - Basic: 1-sided/2-sided, Full Color/Black, Paper, Finishing
 - Application: Page Margin, Stamp/Composition

7. UTILITY (ADMINISTRATOR SETTINGS)

Administrator Settings-Outline

- The Administrator Settings will be available by entering the administrator password (16 digits) set by the Administrator Settings or Service Mode. (The administrator password is initially set to "1234567812345678.")

NOTE

- When the following setting is set to "ON", entering the incorrect administrator password three times will cause access lock. The access lock is released after the lapse of a predetermined period of time after the main power switch is turned OFF and then ON more than 10 seconds later.
The access lock can be released by touching keys as follows.
[\[Service Mode\]](#) -> [\[Enhanced Security\]](#) -> [\[Administrator unlocking\]](#).

7.1 System Settings-Power Supply/Power Save Settings

7.1.1 Low Power Mode Settings

(1) Use

- To set the time until low power starts operating after the last key operation has been completed.
- Low power: To turn LED and LCD OFF, and lower the power consumption.

(2) Procedure

- Use the 10-key pad for setting.

(3) Default setting

- 15 min.

(4) Setting range

- 10 min. to 240 min.

7.1.2 Sleep Mode Settings

(1) Use

- To set the time until sleep mode starts operating after the last key operation has been completed.
- Turn all lines OFF except 5 V line for control.
- "OFF" will only be displayed when [Sleep ON/OFF Choice Setting] in Service Mode is set.

NOTE

- The sleep mode will begin in 48 hours even if it sets it to "OFF."

(2) Procedure

- Use the 10-key pad for setting.

(3) Default setting

- 20 min.
- When the marketing area setting is set to "Japan" or "Others3", the default setting is 1 min.

(4) Setting range

- 10 min. to 240 min.
- OFF

7.1.3 Power Key Setting

(1) Use

- To set whether to use the Power key on the control panel as a sub power off mode or power save mode.

Sub Power OFF	- Short time press the Power key to turn the sub power off. - Long time press the Power key, the power save mode shifts to the ErP Auto Power Off mode* (close to main power off mode), which offers a higher power saving effect than sub power off mode.
Power Save	- Short time press the Power key to shift to the Power Save mode (Low Power or Sleep mode). - Long time press the Power key to shift to sub power off mode.

NOTE

- *: In ErP auto power OFF mode, this machine cannot receive data or faxes, and also it cannot scan or print an original.

(2) Default setting

- Power Save (except for Europe)
- Sub Power OFF (Europe)

(3) Setting item

- Sub Power OFF
- Power Save

7.1.4 Power Save Settings**(1) Use**

- To set the type of the power save mode which starts by pressing the Power Save key.

(2) Default setting

- Low Power

(3) Setting item

- "Low Power"
- Sleep

7.1.5 Enter Power Save Mode**(1) Use**

- To set whether to immediately switch to the power save mode after printing in case of receiving the fax/PC print during power save mode.

Normal	Switches to the power save mode according to the normal power save mode after the printing.
Immediately	Switches to the power save mode immediately after the printing.

(2) Default setting

- Immediately

(3) Setting item

- Normal
- "Immediately"

7.1.6 Power Consumption in Sleep Mode**(1) Use**

- To set whether to reduce the power consumption in the sleep mode.

Enabled	Further reduces the power consumption in the Sleep mode. Select [Enabled] in normal conditions.
Disabled	Select this option when a smooth network communication is not established while [Enabled] is enabled.

(2) Default setting

- Enabled

(3) Setting item

- "Enabled"
- Disabled

7.1.7 Power Saving Fax/Scan

- This function is available when the option other than "Copy" is selected in [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Reset Settings\]](#) -> [\[System Auto Reset\]](#) -> [\[Priority Mode\]](#).

(1) Use

- Select whether to give priority to the power saving when the machine returns from Sleep or sub power off mode to a mode other than copy mode.
- When returning to a mode that does not involve printing, such as scan/fax mode, power consumption can be reduced by not adjusting the temperature of the Fusing Unit on this machine.

Power Save	The temperature of Fusing Unit is not adjusted when the machine returns to the normal mode.
Standard	The temperature of Fusing Unit is adjusted when the machine returns to the normal mode.

(2) Default setting

- Standard

(3) Setting item

- Power Save
- "Standard"

7.1.8 Awake from Power Save Mode by Touching Control Panel**(1) Use**

- To set whether to return to the normal mode when you touch the control panel in the Power Save mode.
- If you select [OFF], the machine returns to the normal mode only using the Power key.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.2 System Settings-Output Settings**7.2.1 Print/Fax Output Settings****(1) Use**

- To set the timing for printing for the PC print job or fax received.

Batch Print	Starts printing when all data are received.
Page Print	Starts printing every time data for each page are received.

(2) Default setting

- Printer: Page Print
- Fax: Batch Print

NOTE

- [FAX] will be displayed only when the optional fax kit FK-511 is mounted.

(3) Setting item

- Batch Print
- Page Print

7.2.2 Output Tray Settings

- It will be displayed when the optional finisher FS-534/535 or job separator JS-506 is mounted.

(1) Use

- To set the priority output tray for each application (Copy, Printer, Fax and Print Reports).

(2) Default setting

- Copy: Tray 2
- Print: Tray 2
- Report Output: Tray 1
- Fax: Tray 1

7.2.3 Shift Output Each Job

- It will be displayed when the optional finisher FS-533/534/535 is mounted.

(1) Use

- To set whether to offset each job when paper is printed using the finisher.
- Some paper type may fail to be discharged or get deteriorated loading when large volume copies are printed using the finisher. This function is used to print large volume copies when finisher is mounted.
(When this function is set to "No", the paper is discharged without offsetting the paper to the center of the tray.)

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.3 System Settings-Date/Time Settings**7.3.1 Use**

- To set the date/time and the time zone to start the clock.
- This setting should be carried out for set up.

7.3.2 Procedure

- For time zone, set the time difference with the world standard time.
- Setting range for the time zone: -12:00 to +12:00 (by 30 minutes)
- When the following setting is set to "ON", [Set Date] will be displayed. Touch [Set Date] and modify the time.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Detail Settings\]](#) -> [\[Time Adjustment Setting\]](#)

7.4 System Settings-Daylight Saving Time**7.4.1 Enable Settings****(1) Use**

- To set whether to set the daylight saving time.
- To set the time difference in setting the daylight saving time.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

NOTE

- When setting to Yes, set the time difference to move up.
 - Default setting: 60 min.
 - Setting range: 1 to 150

7.4.2 Start/End Settings**(1) Use**

- To set the daylight saving time to be automatically enabled on this machine at the specified date.

Specify Method	Set the method to specify the date and time to start the daylight saving time and the date and time to end it.	
	Weekly	Set the start date and end date by week and day of the week.
	Daily	Set the start date and the end date by date.
Start Date/Time / End Date/Time	Respectively select the date and time to start the daylight saving time and the date and time to end it.	

7.5 System Settings-Weekly Timer Settings

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.5.1 Weekly Timer ON/OFF Settings**(1) Use**

- To set whether to use or not to use the weekly timer.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

(4) Power Save Mode Setting**(a) Use**

- To configure the operation setting applied when the weekly timer is used.

ErP Auto Power OFF	A mode that provides a higher more effective power saving effect. In this mode, you cannot receive all jobs.
Sleep	This mode has a lower power saving effect than the [ErP Auto Power OFF] mode; however, it allows you to receive print jobs from a fax machine or computer. The received jobs are printed when the machine returns to the normal mode.

(b) Default setting

- Sleep

(c) Setting item

- ErP Auto Power OFF
- "Sleep"

7.5.2 Time Settings**(1) Use**

- To set the time to turn ON/OFF the weekly timer for each day of the week.

(2) Procedure

1. Touch the key of the day to be set.
2. Using the 10-key pad, input the ON time and the OFF time.
3. For cancelling the setting, press [Delete].

7.5.3 Date Settings**(1) Use**

- To select the date or the day of the week for the weekly timer to function.

(2) Procedure

1. Select the Year/Month with [+] / [-] keys.
2. For setting by the date, touch the appropriate key of the day.
3. For setting by the day of the week, touch the appropriate key of the week by [Daily Setting].
4. Check to make sure that the set key of the day is highlighted, and touch [OK].

7.5.4 Select Time for Power Save**(1) Use**

- To set the time to turn power OFF/ON when the weekly timer is set and the power is ON.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

NOTE

- When "Yes" is selected, using the 10-key pad, input the time to turn OFF and to turn back ON again.

7.5.5 Password for Non-Business Hours**(1) Use**

- To set whether to input the password before using when the weekly timer is set.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

NOTE

- When setting to Yes, enter the password (eight digits).

7.5.6 Tracking Function Settings**(1) Use**

- To select whether or not to enable the tracking function.
- Select [Auto Standby Adjustment Level] to specify the level at which it is judged that this machine is inactive. The higher the level is, the more easily this machine is judged as inactive, resulting in setting of a longer OFF time.
- When the tracking function is enabled, the weekly timer operates in accordance with the ON and OFF time calculated by the tracking function.

Level	Description
1	Lower.: Resulting in setting of a shorter OFF time.
2	
3	Default setting
4	
5	Higher.: Resulting in setting of a longer OFF time.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.5.7 Display ON/OFF Time**(1) Default setting**

- The ON time and OFF time of the weekly timer are displayed, reflecting data that has been obtained on each day of a week.
- Touch [Clear Usage Data] to clear MFP usage data and ON time and OFF time values that reflect data obtained on each day of a week.

(2) Setting item

- ON Time: 6:00
- OFF Time: 20:00

7.6 System Settings-Restrict User Access

7.6.1 Copy Program Lock Settings

(1) Use

- To set the prohibition for modifying the registered copy program.

(2) Procedure

1. Touch the key for the appropriate copy program.
2. Touch [OK].

7.6.2 Delete Saved Copy Program

(1) Use

- To delete the registered program job.

(2) Procedure

1. Touch the appropriate program job.
2. Touch [Delete].
3. Touch [Yes] on the check screen to delete the program job.

7.6.3 Restrict Access to Job Settings

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Changing Job Priority

(a) Use

- To set whether to allow or restrict the change on the print priority for the job.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

(2) Delete Other User Jobs

(a) Use

- To set whether to allow or restrict job delete by other users when the user is authenticated.

(b) Default setting

- Restrict

(c) Setting item

- Allow
- "Restrict"

(3) Registering and Changing Addresses

(a) Use

- To set whether to allow or restrict the change of the registered address.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

NOTE

- [Allow] cannot be selected when the following setting is set to "ON".
[\[Administrator Settings\]](#) -> [\[Security Setting\]](#) -> [\[Enhanced Security Mode\]](#)

(4) Changing Zoom Ratio

(a) Use

- To set whether to allow or restrict the change on the registered magnification.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

(5) Change the "From" Address**(a) Use**

- To set whether or not to prohibit the registered from address to be changed.

Administrator E-mail Address	Set the administrator's E-mail address to "From" address.
Login User Address	When user authentication is enabled, set the user's E-mail address to "From" address.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Administrator E-mail Address
- Login User Address

(6) Change Registered Overlay**(a) Use**

- Selects allow or restrict for the change of registered overlay.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

(7) Biometric/IC Card Info. Registration

- It will be displayed when the optional authentication unit AU-102/AU-201 is installed.

(a) Use

- Allow or restrict the registration or deletion of authentication information.

(b) Default setting

- Restrict

(c) Setting item

- Allow
- "Restrict"

(8) Synchronize User Authentication & Account Track

- It will be displayed when the following setting is set to "Synchronize by User."
[\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Settings\]](#) -> [\[Synchronize User Authentication & Account Track\]](#)

(a) Use

- Select whether to allow users to change the settings for synchronizing user authentication and account track when user authentication and account track are enabled.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

7.6.4 Restrict Operation**(1) Restrict Broadcasting****(a) Use**

- To set whether or not to prohibit sending the fax to more than one address.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

7.7 System Settings-Expert Adjustment

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the Key Counter is mounted or when the following setting shows that switch No.33 is set to [00000001] at Bit assignment/[01] at HEX assignment.
[Service Mode] -> [System 2] -> [Software Switch Setting])

7.7.1 AE Level Adjustment**(1) Use**

- To set the default setting for AE (Auto Exposure) the larger the value becomes the more emphasized the background will be.
 - To make the background level foggy: Increase the setting value
 - To make the background level less foggy: Decrease the setting value

(2) Default setting

- 2

(3) Setting range

- 0 to 4

7.7.2 Printer Adjustment-Leading Edge Adjustment

- This menu is unavailable when the key counter is not inserted while only the key counter is set to Set by [Service Mode] -> [Billing Setting] -> [Management Function Choice].

(1) Use

- To vary the print start position in the sub scan direction for each of different paper types in the manual bypass tray. (to adjust the timing where paper is sent out from the registration roller)
- This adjustment is made using a paper fed from the manual bypass tray and the adjusted value will be reflected to the other trays.
- The PH unit has been replaced.
- The paper type has been changed.
- The print image deviates in the sub scan direction.
- A faint image occurs on the leading edge of the image.
- Able to make an individual adjustment for each paper type of plain paper, thin paper, thick 1/1+, thick 2, thick 3, thick 4, transparencies, and envelopes.

(2) Setting range

- Width A on the test pattern produced should fall within the following range.

Specifications	4.2 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(3) Procedure

1. Place A3/11 x 17 plain paper on the manual bypass tray.
2. Call the Administrator Settings to the screen.
3. Touch [System Settings] -> [Expert Adjustment] -> [Printer Adjustment] -> [Leading Edge Adjustment].
4. Select the plain paper.
5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width A on the test pattern.
7. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width A on the test pattern.
10. If width A is outside the specified range, change the setting again and make a check again.
11. If width A falls within the specified range, touch [OK].
12. Following the same procedure, adjust for thin paper, thick 1 to 4, Transparency, and envelope.

7.7.3 Printer Adjustment-Centering

- This menu is unavailable when the key counter is not inserted while only the key counter is set to Set by [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#).

(1) Use

- To vary the print start position in the main scan direction for each paper source.
- The PH unit has been replaced.
- A paper feed unit has been added.
- The print image deviates in the main scan direction.

(2) Setting range

- Width A on the test pattern produced should fall within the following range.

Specifications	3.0 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(3) Procedure

- Call the Administrator Settings to the screen.
- Touch [\[System Settings\]](#) -> [\[Expert Adjustment\]](#) -> [\[Printer Adjustment\]](#) -> [\[Centering\]](#).
- Select the paper source to be adjusted.
- Press the Start key to let the machine produce a test pattern.
- Check the dimension of width A on the test pattern.
- If width A falls outside the specified range, change the setting using the [\[+\]](#) / [\[-\]](#) key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
- Press the Start key to let the machine produce a test pattern.
- Check the dimension of width A on the test pattern.
- If width A is outside the specified range, change the setting again and make a check again.
- If width A falls within the specified range, touch [\[OK\]](#).
- Following the same procedure, adjust for all other paper sources.
(Use A4 or 8 1/2 x 11 plain paper for the bypass.)

7.7.4 Printer Adjustment-Leading Edge Adjustment: Duplex Side 2

- This menu is unavailable when the key counter is not inserted while only the key counter is set to Set by [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#).

(1) Use

- Makes an adjustment by changing the image write start position in the sub scan direction on the 2nd side of duplex printing for plain paper.
- This adjustment is made using a paper fed from the manual bypass tray and the adjusted value will be reflected to the other trays.
- When the 2nd side image on paper fed from the tray is shifted in the sub scan direction.
- Able to make an individual adjustment for each paper type of plain paper, thin paper, thick 1/1+, thick 2 and thick 3.

(2) Setting range

- Width A on the test pattern produced should fall within the following range.
- For measurement, use the image produced on the backside of the test pattern.

Specifications	4.2 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(3) Procedure

- Place A3/11 × 17 plain paper on the manual bypass tray.
- Call the Administrator Settings to the screen.
- Touch [\[System Settings\]](#) -> [\[Expert Adjustment\]](#) -> [\[Printer Adjustment\]](#) -> [\[Leading Edge Adjustment \(Duplex side 2\)\]](#).
- Select the plain paper.

5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width A on the test pattern.
7. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width A on the test pattern.
10. If width A is outside the specified range, change the setting again and make a check again.
11. If width A falls within the specified range, touch [OK].
12. Following the same procedure, adjust for thin paper and thick 1 to 3.

7.7.5 Printer Adjustment-Centering: Duplex 2nd Side

- This menu is unavailable when the key counter is not inserted while only the key counter is set to set by [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#).

(1) Use

- To vary the print start position in the main scan direction for each paper source in the 2-sided mode.
- The image on the backside of the 2-sided copy deviates in the main scan direction.

(2) Setting range

- Width A on the test pattern produced should fall within the following range.
- For measurement, use the image produced on the backside of the test pattern.

Specifications	3.0 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(3) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Printer Adjustment] -> [Centering (Duplex 2nd Side)].
3. Select the paper source to be adjusted.
4. Press the Start key to let the machine produce a test pattern.
5. Check the dimension of width A on the test pattern.
6. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
7. Press the Start key to let the machine produce a test pattern.
8. Check the dimension of width A on the test pattern on the backside of the copy.
9. If width A is outside the specified range, change the setting again and make a check again.
10. If width A falls within the specified range, touch [OK].
11. Following the same procedure, adjust for all other paper sources.
(Use A4 or 8 1/2 x 11 plain paper for the manual bypass tray.)

7.7.6 Printer Adjustment-Erase Leading Edge

- It will be displayed only when the following setting is set to "Level 2".
[\[Service Mode\]](#) -> [\[Enhanced Security\]](#) -> [\[Administrator Feature Level\]](#)

(1) Use

- To set the leading edge erase amount of the paper.
- To change the width of the area not printed along the leading edge of the paper.
- This adjustment can be made individually for Front, Back, Thin Paper Front, and Thin Paper Back.

(2) Default setting

- Front/Back: 4 mm
- Thin Paper Front/Thin Paper Back: 5 mm

(3) Setting item

Front/Back:

- "4 mm"
- 5 mm
- 7 mm

Thin Paper Front/Thin Paper Back:

- 4.0 mm to 10.0 mm (Step: 1.0 mm)

7.7.7 Printer Adjustment-Vertical Adjustment

- It will be displayed only when the following setting is set to "Level 2."
[Service Mode] -> [Enhanced Security] -> [Administrator Feature Level]

(1) Use

- To synchronize the paper transport speed with the image writing speed.
- The printed image on the copy distorts (stretched, shrunk).
- When the printed image on the copy is stretched in the sub scan direction.
- Able to make an individual adjustment for each paper type of normal/thin paper, thick 1/1+, thick 2, thick 3 and thick 4.

(2) Setting range

- Width A and width B on the test pattern produced should fall within the following ranges.

NOTE

- Width A: equivalent to one grid
- Width B: equivalent to 48 grids

Specifications	A: 7.9 to 8.3
	B: 389.1 to 392.1
Setting range	A: -7 to +7
	B: -7 to +7

(3) Procedure

- Load manual bypass tray with A3 or 11 x 17 plain paper.
- Call the Administrator Settings to the screen.
- Touch these keys in this order: [System Settings] -> [Expert Adjustment] -> [Vertical Adjustment].
- Select [Normal/Thin Paper].
- Press the Start key to let the machine produce a test pattern.
- Check width A (equivalent to one grid) and width B (equivalent to 48 grids) on the test pattern.
- Touch these keys in this order: [System Settings] -> [Expert Adjustment] -> [Printer Adjustment] -> [Vertical Adjustment].
- If width of A or B falls outside the specified range, change the setting using the [+] / [-] keys.
 - If width A or B is longer than the specifications, make the setting value smaller than the current one.
 - If width A or B is shorter than the specifications, make the setting value greater than the current one.
- Press the Start key to let the machine produce a test pattern again.
- Check width A and width B on the test pattern.
- If width A or B falls outside the specified range, change the setting value and make a check again.
- If width A or B falls within the specified range, touch [OK].
- Following the same procedure, adjust for thick paper.

7.7.8 Printer Adjustment-Media Adjustment

(1) Use

- Adjust the 2nd image transfer output (ATVC) on the 1st page and the 2nd page for each paper type.
- This adjustment is available for both 600 dpi and 1200 dpi.
- This function is provided to open [Transfer Voltage Fine Adj] -> [Secondary transfer adj.] of Service Mode up to administrator and the fine-adjusted value is reflected in the Service Mode setting.
- To use when the transfer failure occurs.
- Pressing the [AUTO] key down activates the 2nd image transfer amperage upper and lower limit control. In this case, the machine uses the voltage determined by the transfer voltage control and the 2nd image transfer voltage fine adj value does not take effect.

(2) Default setting

- Auto

(3) Setting item

- 8 to +7 (Step: 1*)
- *: step is equivalent to 100 V.
- "Auto"

(4) Procedure

- Call the Administrator Settings to the screen.
- Touch these keys in this order: [Expert Adjustment] -> [Printer Adjustment] -> [Media Adjustment].
- Select the combination of the resolution (600 dpi or 1200 dpi) and the image side (1st or 2nd side) where transfer failure occurs.

NOTE

- For envelopes and OHP film, only [600dpi - Front] or [1200dpi - Front] can be selected.
- For banner thick paper, only [600dpi - Front] can be selected.

4. Select the paper type with the transfer failure.
5. Enter the new setting from the [+] / [-] keys.
 - To increase the ATVC value (in the direction of a foggy image), increase the setting value.
 - To decrease the ATVC value (in the direction of a less foggy image), decrease the setting value.
6. Touch [OK] to validate the adjustment value.
7. Check the print image for any image problem.

NOTE

- To automatically control the 2nd image transfer output without using the 2nd image transfer voltage fine adj value, press [Auto].

7.7.9 Finisher Adjustment-Center Staple Position**(1) Use**

- Adjust the stapling position for each paper size when printing with the center staple function.

(2) Setting range

- Width A should fall within the following range.

Specifications	0 ± 1.0 mm
Setting range	-10.0 mm to +10.0 mm (1 step: 0.1 mm)

(3) Procedure**NOTE**

- **After half-fold position adjustment, make this center staple position adjustment.**
1. Place five sheets of originals on the ADF.
 2. Make a set of copy in the saddle stitching mode.
 3. Check the amount of horizontal deviation (width A) between the staple and the half fold positions on the set of copy.
 4. If width A is out of the specified range, make the following adjustment.
 5. Call the Administrator Settings to the screen.
 6. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Center Staple Position].
 7. Touch the paper size where staple position is adjusted.
 8. Look at the copy and adjust the staple position with the [+] / [-] key.

**NOTE**

- The adjustment setting value used for each paper size is the value set with [All] plus the value set for each paper size.

9. Touch [OK].
10. Make another set of copy sample and check the amount of width A.
11. Following the same procedure, adjust for each paper size.

7.7.10 Finisher Adjustment-Half-Fold Position**(1) Use**

- Use this adjustment to adjust the half-fold position in half-fold printing.

(2) Setting range

- Width A should fall within the following range.

Specifications	0 ± 1.0 mm
----------------	------------

Setting range	-10.0 mm to +10.0 mm (1 step: 0.1 mm)
---------------	---------------------------------------

(3) Procedure

1. Place two sheets of originals on the ADF.
2. Make a copy in the folding mode.
3. Fold the copies along the crease.
4. Measure the amount of width A.
5. If width A is out of the specified range, make the following adjustment.
6. Call the Administrator Settings to the screen.
7. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Half-Fold Position].
8. Touch the paper size where half-fold position is adjusted.
9. Look at the copy and adjust the half-fold position with the [+] / [-] key.

**NOTE**

- The adjustment setting value used for each paper size is the value set with [All] plus the value set for each paper size.

10. Touch [OK].
11. Make another set of copy sample and check the amount of width A.
12. Following the same procedure, adjust for each paper size.

7.7.11 Finisher Adjustment-1st Tri-Fold Position Adjustment/2nd Tri-Fold Position Adjustment**(1) Use**

- To adjust the positions of the 1st Tri-fold and 2nd Tri-fold for the Tri-fold printing.

(2) Setting range

[1] Position of the first tri-fold	[2] Position of the second tri-fold
------------------------------------	-------------------------------------

- Check whether the tri-fold widths "a" and "b" of the ejected paper are within the specified range.

Specifications	a	96 mm $\pm$ 1 mm (A4S), 90.4 mm $\pm$ 1 mm (8.5 x 11S), 89 mm $\pm$ 1 mm (16KS)
	b	101 mm $\pm$ 2 mm (A4S), 95.4 mm $\pm$ 2 mm (8.5 x 11S), 94 mm $\pm$ 2 mm (16KS)
	c	Not specified
Setting range		-10.0 mm to +10.0 mm (Step = 0.1 mm)

(3) Procedure

- If the width "a" is out of the specified range:
 1. Make copies in the tri-fold mode.
 2. Width a should fall within the specified range.
 3. Call the Administrator Settings to the screen.
 4. Touch these keys in this order: [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [1st Tri-Fold Position Adjustment].
 5. Select a paper size where the tri-fold position needs adjustment.
 6. While looking at the copy samples, touch [+] or [-] to adjust the tri-fold position.
 - To increase the width a, enter a positive value with [+].
 - To decrease the width a, enter a negative value with [-].
 7. Touch [OK].
 8. Make copies in the tri-fold mode and check for possible deviation from the specified position.
- If the width "b" is out of the specified range:
 1. Make copies in the tri-fold mode.
 2. Width b should fall within the specified range.
 3. Call the Administrator Settings to the screen.
 4. Touch these keys in this order: [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [2nd Tri-Fold Position Adjustment].
 5. Select a paper size where the tri-fold position needs adjustment.

6. While looking at the copy samples, touch [+] or [-] to adjust the tri-fold position.
 - To increase the width b, enter a positive value with [+].
 - To decrease the width b, enter a negative value with [-].
7. Touch [OK].
8. Make copies in the tri-fold mode and check for possible deviation from the specified position.

7.7.12 Finisher Adjustment-Tri-Fold Output Setting

- It will be displayed only when the optional saddle stitcher SD-512 is installed in the finisher FS-535.

(1) Use

- To set the position where paper is ejected when paper is conveyed to the saddle stitcher in tri-fold mode.

(2) Default setting

- Normal Output

(3) Setting item

- "Normal Output"
- Extend Output

7.7.13 Finisher Adjustment-Punch Vertical Position Adjustment

- It will be displayed only when the optional punch kit PK-521 is installed in the finisher FS-535.

(1) Use

- Adjusts the vertical position of the punch holes.

(2) Setting range

- Length A should fall within the following range.

Specifications	2-4 hole	80 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.), 1/2 of the vertical length $A \pm 1.0$ mm
	2-3 hole (2 hole)	70 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.), 1/2 of the vertical length $A \pm 1.0$ mm
	2-3 hole (3 hole)	108 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.), 1/2 of the vertical length $A \pm 1.0$ mm
	SWE4 hole	• $A1=70 \pm 0.5$ mm (It is not possible to adjust the A value of the distance between holes.), 1/2 of the vertical length $A \pm 1.0$ mm • $A2=21 \pm 0.5$ mm (It is not possible to adjust the A value of the distance between holes.), 1/2 of the vertical length $A \pm 1.0$ mm
Setting range	-5.0 mm to +5.0 mm (1 step: 0.1 mm)	

(3) Procedure

1. Make a copy sample in the punch mode.
2. Make an adjustment so that 1/2 of the length A is within the following standard range.
3. Call the Administrator Settings to the screen.
4. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Vertical Position Adjustment].
5. Touch the paper size where punch vertical position is adjusted.
6. Look at the copy and adjust the punch vertical position with the [+] / [-] key.
 - To move the hole position upward: Enter the value of [+]
 - To move the hole position downward: Enter the value of [-]

NOTE

- The adjustment setting value used for each paper size is the value set with [All] plus the value set for each paper size.

7. Touch [OK].
8. Make another set of copy sample and check the amount of length (A).

7.7.14 Finisher Adjustment-Punch Horizontal Position Adjustment**(1) Use**

- To change the horizontal position of the punch holes.

(2) Setting range

- Width B should fall within the following range.

Specifications	<For PK-521> 9.5 mm $\pm$ 1.0 mm (2-3 hole), 11.0 mm $\pm$ 1.0 mm (2-4 hole), 10.5 mm $\pm$ 1.0 mm (SWE4 hole)
	<For PK-520> 9.5 mm $\pm$ 1.0 mm (2-3 hole), 11.0 mm $\pm$ 1.0 mm (2-4 hole), 10.5 mm $\pm$ 1.0 mm (SWE4 hole)
Setting range	<For PK-521> -5.0 mm to +5.0 mm (1 step: 0.1 mm)
	<For PK-520> -5.0 mm to +5.0 mm (1 step: 0.1 mm)

(3) Procedure (PK-521)

- Make a copy sample in the punch mode.
- Make an adjustment so that the width B is within the specified range.
- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Horizontal Position Adjustment].
- To adjust the punch edge of paper conveyed from MFP, select [Finisher]. To adjust the punch edge of paper conveyed from the post inserter, select [Post Inserter].
- Look at the copy and adjust the punch horizontal position with the [+] / [-] key.
 - To make width B greater: Enter the value of [+]
 - To make width B smaller: Enter the value of [-]

- Touch [OK].
- Make another set of copy sample and check the amount of width B.

(4) Procedure (PK-520)

- Make a copy sample in the punch mode.
- Make an adjustment so that the width B is within the specified range.
- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Horizontal Position Adjustment].
- Touch the paper type where punch horizontal position is adjusted.
- Look at the copy and adjust the punch horizontal position with the [+] / [-] key.
 - To make width B greater: Enter the value of [+]
 - To make width B smaller: Enter the value of [-]

- Touch [OK].
- Make another set of copy sample and check the amount of width B.

7.7.15 Finisher Adjustment-Paper Alignment Plate Settings

- It will be displayed only when the optional finisher FS-533 is installed.

(1) Use

- Use this feature to fine adjust the aligning plate that aligns ejected paper.

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Paper Alignment Plate Settings].
3. Select the [Paper Alignment Plate Pos.(Back)] or [Paper Alignment Plate Pos.(Front)].
 - The default setting is 0.0 mm.
 - Setting range: -10.0 mm to +10.0 mm (in 0.1 mm increments)
4. Set the correction value using the [+] / [-] keys.
5. Touch [OK].

7.7.16 Finisher Adjustment-Punch Regist Loop Size Adjustment**(1) Use**

- Adjusts the punch loop size used for paper exited from the main body.
- To address problems such as misaligned punch holes, wrinkled paper, and jam at the punch registration section.

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Regist Loop Size Adjustment].
3. Touch the place and the paper size where punch regist loop size is adjusted.
4. Set the correction value using the [+] / [-] keys.
 - Misaligned punched holes: Enter the value of [+]
 - Wrinkled paper: Enter the value of [-]
5. Touch [OK].

7.7.17 Finisher Adjustment-Punch Edge Sensor Adjustment

- It will be displayed only when the optional punch kit PK-521 is installed in the finisher FS-535.

(1) Use

- Adjusts the sensitivity (light intensity) of the PK punch front sensor of the punch kit.

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Edge Sensor Adjustment].
3. Touch Start key.
4. Confirm that the result is OK.

NOTE

- If the result is not OK, check whether the punch kit is properly installed.

5. Touch [OK].

7.7.18 Finisher Adjustment-Vertical Punch (Z-Fold) Position Adjustment**(1) Use**

- To adjust the position of the punch hole in the sub-scanning direction when ZU is in use.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

- Width A should fall within the following range.

Specifications	2-4 hole	80 ± 0.5, Top and bottom A dimension 1/2 ± 1
	2-3 hole (2 hole)	70 ± 0.5, Top and bottom A dimension 1/2 ± 1
	2-3 hole (3 hole)	108 ± 0.5, Top and bottom A dimension 1/2 ± 1
Setting range	-5.0 to +5.0 mm (1step: 0.1 mm)	

NOTE

- It is possible to adjust the A dimension of half of the top and bottom by ± 0.5 mm from the standard value.
- It is not possible to adjust the A value of the distance between holes.

(3) Procedure

1. Make a copy sample in the punch mode (when PK-521 is mounted, select Z-fold + punch mode).
2. Make an adjustment so that the width A is within the following range.
3. Call the Administrator Settings to the screen.

4. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Vertical Punch (Z-Fold) Position Adjustment].
5. Select [ALL] and make the setting using [+] or [-].
 - To make width A greater: Enter the Value of [+]
 - To make width A smaller: Enter the Value of [-]

NOTE

- The adjustment setting value used for each paper size is the value set with [All] plus the value set for each paper size.

6. Touch [OK].
7. Make copies in the punch mode again and check that the punch hole positions have been adjusted properly.

7.7.19 Finisher Adjustment-Horizontal Punch (Z-Fold) Position Adjustment**(1) Use**

- To adjust the position of the punch hole in the main scanning direction when ZU is in use.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

- Width B should fall within the following range.

Specifications	12.0 mm
Setting range	-5.0 mm to +5.0 mm (Step = 0.1 mm)

(3) Procedure

1. Make a copy sample in the punch mode.
2. Make an adjustment so that the width B is within the following range.
3. Call the Administrator Settings to the screen.
4. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Horizontal Punch (Z-Fold) Position Adjustment].
5. Make the setting using [+] or [-].
 - To make width B greater: Enter the Value of [+]
 - To make width B smaller: Enter the Value of [-]
6. Touch [OK].
7. Make copies in the punch mode again and check that the punch hole positions have been adjusted properly.

7.7.20 Finisher Adjustment-1st Z-Fold Position Adjustment/2nd Z-Fold Position Adjustment**(1) Use**

- To adjust the positions of the 1st Z-fold and 2nd Z-fold for the Z-fold mode.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

[1]	Length of the first fold	[2]	Position of the first fold
[3]	Length of the second fold	[4]	Position of the second fold

- Width a should fall within the following range.

Specifications	11 x 17	Length of 1st fold: 108 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 215 mm
	A3	Length of 1st fold: 105 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 209 mm
	B4	Length of 1st fold: 91 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 181 mm
	8.5 x 14	Length L: Less than 241.7 mm
	8K	Length of 1st fold: 98 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 194 mm
Setting range	-12.8 mm to +12.7 mm (Step = 0.1 mm)	

NOTE

- Length of the 1st fold is for standard value.
- The adjustable range for B4 size is only between -2.0 mm and +2.0 mm.
- 8.5 x 14 is available for only an half fold.

(3) Procedure

1. Make copies in the Z-fold mode.
2. Make an adjustment so that the width a is within the following range.
3. Call the Administrator Settings to the screen.
4. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [1st Z-Fold Position Adjustment] or [2nd Z-Fold Position Adjustment].
5. Select [ALL] and make the setting using [+] or [-].
 - To increase the length of the 1st fold (2nd fold), enter a negative value with [-] key.
 - To decrease the length of the 1st fold (2nd fold), enter a positive value with [+] key.

NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

6. Touch [OK].
7. Make copies in the Z-fold mode and check for possible deviation from the specified 1st and 2nd Z-fold positions.

7.7.21 Finisher Adjustment-Punch Unit Size Detect Sensor**(1) Use**

- To adjust sensitivity (light intensity) of the paper size detect board (PSDTB) of the punch unit of ZU.
- Make the adjustment upon setup of ZU-606.

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Punch Unit Size Detect Sensor].
3. Touch Start key.
4. Confirm that the result is OK.

NOTE

- If the result is not OK, check whether the punch unit is properly installed.

5. Touch [OK].

7.7.22 Finisher Adjustment-Post Inserter Tray Size Adjustment**(1) Use**

- To make automatic post inserter size detection adjustments separately in each of the upper and lower trays.
- Make this adjustment at the time of setup or when the post inserter cannot make proper size detection.
- Make this adjustment after performing PI displacement adjustment.

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Finisher Adjustment] -> [Post Inserter Tray Size Adjustment].
3. Touch [Upper Tray].
4. Place A4S paper on the upper tray and touch [A4 - 5. Touch Start key.
- 6. Confirm that the result is OK.
- 7. Touch [Lower Tray].
- 8. Place A4S paper on the lower tray and touch [A4 - 9. Touch Start key.
- 10. Confirm that the result is OK.
- 11. Touch [OK].

7.7.23 Density Adjustment**(1) Thick Paper Image Density-Yellow, Magenta, Cyan, Black****(a) Use**

- To fine-adjust density of printed images of each color for thick paper.
- To change the density of the printed image for each color with thick paper.

(b) Default setting

- 0

(c) Setting range

- -5 to +5 (Step: 1)

(d) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Density Adjustment].
3. Select a type of thick paper and a color that need to be adjusted.
4. Touch the Lighter or Darker key to correct the image density.

- Light color: Touch the Darker key.
- Dark color: Touch the Lighter key.

(2) Black Image Density

(a) Use

- To fine-adjust the density of the printed image for a black print.
- To vary the density of the printed image of a black print.

(b) Default setting

- 0

(c) Setting range

- -2 to +2 (Step: 1)

(d) Procedure

- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [Density Adjustment] -> [Black Image Density].
- Touch the Lighter or Darker key as necessary to correct the image density.
 - If the black is light, touch the Darker key.
 - If the black is dark, touch the Lighter key.

7.7.24 Image Stabilization

(1) Image Stabilization Only-Initialize+Image Stabilization

(a) Use

- To carry out an image stabilization sequence after the historical data of image stabilization control has been initialized.
- Use if an image problem persists even after [Gradation Adjustment] has been executed.
- Use if tone reproduction and maximum density are faulty even after image stabilization has been executed.

(b) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Image Stabilization] -> [Image Stabilization Only] -> [Initialize+Image Stabilization].
3. Press the Start key to start Stabilizer.
The Start key turns red and stays lit up red during the Stabilizer sequence.
4. Stabilizer is completed when the Start key turns blue.

(2) Image Stabilization Only-Image Stabilization Only

(a) Use

- The image stabilization sequence is carried out without clearing the historical data of image stabilization control.
- Use if an image problem persists even after [Gradation Adjustment] has been executed.
- When [Max Image Density Adj] and [Image Background Adj] of Service Mode are changed.

(b) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Image Stabilization] -> [Image Stabilization Only] -> [Image Stabilization Only].
3. Press the Start key to start Stabilizer.
The Start key turns red and stays lit up red during the Stabilizer sequence.
4. Stabilizer is completed when the Start key turns blue.

(3) Image Stabilization Setting

(a) Use

- To change the type and timing of image stabilization.
- To provide the desirable image stabilization control that depends on customer's machine usage pattern, i.e. the ratio of color to black print.

Standard	• This mode is suitable for low-volume users and reduces the number of times image stabilization is carried out when the main power switch is turned ON. • If the change of absolute humidity is detected during warm-up, normal stabilization is performed during warm-up.
Color Priority	• This mode is suitable for high-volume and high ratio of color print users. • Color stabilization sequence is performed unconditionally when the main power switch is turned ON.
Black & White Priority	This mode is suitable for users who use mainly black print and use less color print. It provides monochrome stabilization and reduces the number of times image stabilization is carried out when the main power switch is turned ON. If the change of absolute humidity is detected during warm-up, monochrome stabilization is performed during the warm-up and color stabilization is performed before color printing.

(b) Default setting

- Standard

(c) Setting item

- "Standard"
- Color Priority
- Black & White Priority

7.7.25 Paper Separation Adjustment**(1) Use**

- By changing the period between the activation of the registration roller and the 2nd image transfer output, the paper separation position can be adjusted for the 1st and 2nd sides of paper.
- To adjust the balance between paper separation and image transfer performances by changing the paper separation position in duplex printing of thin paper (52 to 59 g/m²) in hot and humid conditions.

(2) Default setting

- 0

(3) Setting range

- -10 mm to +10 mm (step: 0.1 mm)

(4) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Paper Separation Adjustment].
3. Select [Front], [Back], [Thin Paper Front], or [Thin Paper Back].
4. Change the setting value with [+] or [-] key.
 - Priority on paper separation performance: Increase the setting value
 - Priority on image transfer performance: Decrease the setting value
5. Touch [OK] to determine the adjusted value.
6. Make a print and check the image.

7.7.26 Color Registration Adjust**NOTE**

- This menu is unavailable when the key counter is not inserted while only the key counter is set to "Set" by [Service Mode] -> [Billing Setting] -> [Management Function Choice].

(1) Color Registration Adjust (Yellow, Magenta, Cyan)**(a) Use**

- To adjust color shift if there is any when comparing the original with copy of the plain or thick paper.
- To correct any color shift.
- Able to make an individual adjustment for each paper type of plain paper, thick 1/1+, thick 2, thick 3 and thick 4.

(b) Procedure

1. Call the Administrator Settings to the screen.
 2. Touch [System Settings] -> [Expert Adjustment] -> [Color Registration Adjust].
 3. Touch [Color Registration Adjust (X*)].
- NOTE**
- *: X= Yellow or Magenta or Cyan
4. Load manual bypass tray with A3/11 x 17 or A4/8 1/2 x 11 normal paper.
 5. Press the Start key.
 6. On the test pattern produced, check for deviation between the black line and the line of each color at positions X and Y.
 7. Select the color to be adjusted.
 8. Using the [+] / [-] key, change the setting value as necessary. (At this time, only the line of the selected color moves.)
 - If the cross deviates in the direction of A, increase the setting.
 - If the cross deviates in the direction of B, decrease the setting.
 9. Produce another test pattern and make sure that there is no deviation.
- Check Procedure

Check point X, Y

Adjustment for X direction:
Check point X

If the cross deviates in the direction of A,
increase the setting.
If the cross deviates in the direction of B,
decrease the setting.

Direction of A

Direction of B

Adjustment for Y direction:
Check point Y

If the cross deviates in the direction of A,
increase the setting.
If the cross deviates in the direction of B,
decrease the setting.

Direction of A

Direction of B

7.7.27 Gradation Adjustment

- It will not be displayed when the following setting is set to "ON."
[Service Mode] -> [Imaging Process Adjustment] -> [Grad/Dev AC Bias V Selection]
- This menu is unavailable when the key counter is not inserted while only the key counter is set to "Set" by [Service Mode] -> [Billing Setting] -> [Management Function Choice].

(1) Use

- To make an automatic adjustment of gradation based on the test pattern produced and the readings taken by the scanner.
- Color reproduction performance becomes poor.
- The IU has been replaced.
- The image transfer belt unit has been replaced.

Print	Priority is image gradation reproducibility (priority on gradation) as well as reproducibility of characters and lines (priority on resolution).
Copy	Priority is to increase the number of images that can be stored in the memory (priority on compression). The adjustment conforms to FEET (non-screen).

(2) Procedure

NOTE

- When executing the gradation adjustment, make sure to use the paper for color copy (white).**

- Touch [Image stabilization Only] and the Start key to perform image stabilization.

NOTE

- Before executing Gradation adjust, be sure to perform Stabilizer.**

- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [Gradation Adjustment].
- Select Print or Copy and select the paper size on which test pattern is printed.
- Press the Start key to let the machine produce a test pattern.
- Place the test pattern produced on the original glass.
- Place ten blank sheets of A3/11 x 17 paper on the test pattern and lower the original cover.
- Press the Start key. (The machine will then start scanning the test pattern.)
- Touch [OK] and repeat steps from 4 through 8 twice (a total of three times).

NOTE

- If the image is faulty, perform the troubleshooting procedures for image problems.**

7.7.28 Scanner Area

- Use the following color chart for the adjustment of the scanner section.
- If the color chart is not available, a scale may be used instead.
- It will be displayed only when the following setting is set to "Level 2."
[Service Mode] -> [Enhanced Security] -> [Administrator Feature Level]
- This menu is unavailable when the key counter is not inserted while only the key counter is set to Set by [Service Mode] -> [Billing Setting] -> [Management Function Choice].

Adjustment item	Ref.
A: Scanner Adjustment: Leading Edge	I.7.7.29 Scanner Area-Scanner Adjustment: Leading Edge
B: Scanner Adjustment: Centering	I.7.7.30 Scanner Area-Scanner Adjustment: Centering
C: Horizontal Adjustment	I.7.7.31 Scanner Area-Horizontal Adjustment
D: Vertical Adjustment	I.7.7.32 Scanner Area-Vertical Adjustment

7.7.29 Scanner Area-Scanner Adjustment: Leading Edge

(1) Use

- To adjust variations in mounting accuracy and sensitivity of the scanner home sensor and in mounting accuracy of the original width scale by varying the scan start position in the main scan direction.
- When the original glass is replaced.
- When the original width scale is replaced.

(2) Setting range

- A width on the color chart and one on the test pattern are measured and adjusted so that the difference of A width satisfies the specifications shown below.
- An adjustment must have been completed correctly of [Leading Edge Adjustment] of the Printer Adjustment.

Specifications	± 0.5 mm
Setting range	-3.0 to +3.0 (in 0.1 mm increments)

(3) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Scanner Adjustment] -> [Scanner Adjustment: Leading Edge].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point A on the image of the test pattern.
6. If the image falls outside the specified range, change the setting using the [+] / [-] key.
 - If the copy image is less than the specified length, increase the setting value.
 - If the copy image exceeds the specified length, decrease the setting value.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

7.7.30 Scanner Area-Scanner Adjustment: Centering

(1) Use

- To adjust part-to-part variations in accuracy of scanner parts and their mounting accuracy by varying the scan start position in the main scan direction.
- When the CCD board is replaced.
- When the original glass is replaced.
- The scanner home sensor has been replaced.

(2) Setting range

- B width on the color chart and one on the test pattern are measured and adjusted so that the difference of B width satisfies the specifications shown below.
- An adjustment must have been completed correctly of [Leading Edge Adjustment] of the Printer Adjustment.

Specifications	± 1.0 mm
Setting range	-4.0 to +4.0 (in 0.1 mm increments)

(3) Procedure

1. Call the Administrator Setting to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Scanner Adjustment] -> [Scanner Adjustment: Centering].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point B on the image of the test pattern.
6. If the image falls outside the specified range, change the setting using the [+] / [-] key.
 - If the copy image is less than the specified length, increase the setting value.
 - If the copy image exceeds the specified length, decrease the setting value.
7. Press the Start key to make another test pattern.
8. Check point B of the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

7.7.31 Scanner Area-Horizontal Adjustment**(1) Use**

- To adjust the zoom ratio in the main scan direction for the scanner section.
- The CCD board has been replaced.

(2) Setting range

- Measure C width on the color chart and on the test pattern, and adjust the gap to be within the following specification.

Specifications	± 1.0 mm
Setting range	0.990 to 1.010 (in 0.001 increments)

- * Standard size when using a scale: 200.0 mm

(3) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Scanner Adjustment] -> [Horizontal Adjustment].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a test pattern.
5. Check the C width on the image of the test pattern.
6. If the image falls outside the specified range, change the setting using the [+] / [-] key.
 - If the C width on the copy sample is less than one on color chart, increase the setting.
 - If the C width on the copy sample exceeds one on color chart, decrease the setting.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

7.7.32 Scanner Area-Vertical Adjustment**(1) Use**

- To adjust the zoom ratio in the sub scan direction for the scanner section.
- The LED exposure unit has been replaced.
- The scanner motor has been replaced.

(2) Setting range

- Measure D width on the color chart and on the test pattern, and adjust the gap to be within the following specification.

Specifications	± 1.5 mm
Setting range	0.990 to 1.010 (in 0.001 increments)

- * Standard size when using a scale: 300.0 mm

(3) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Scanner Adjustment] -> [Vertical Adjustment].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a test pattern.
5. Check the D width on the image of the test pattern.
6. If the image falls outside the specified range, change the setting using the [+] / [-] key.
 - If the D width on the copy sample is less than one on color chart, increase the setting.
 - If the D width on the copy sample exceeds one on color chart, decrease the setting.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

7.7.33 ADF Adjustment

- It will be displayed only when the following setting is set to "Level 2."
[\[Service Mode\]](#) -> [\[Enhanced Security\]](#) -> [\[Administrator Feature Level\]](#)

(1) Centering**(a) Use**

- To adjust the read position in the main scanning direction.
- When the result is Unable in the [Centering Auto Adjustment].
- When ADF has been replaced.

(b) Setting range

- The difference in the widths of A between the chart and the copy sample should fall within the following range.

Specifications	0 ± 2.0 mm
Setting range	-4.4 mm to +4.4 mm (1 step: 0.1 mm)

(c) Procedure

1. Place the chart in the document feed tray (with the side having an arrow facing up).
2. Make a full size copy of the chart.
3. Check that the difference in the widths of A between the chart and the copy sample falls within the specified range.
4. Call the Administrator Settings to the screen.
5. Touch [System Settings] -> [Expert Adjustment] -> [ADF Adjustment] -> [Centering].
6. Look at the copy and make adjustment with the [+] / [-] key.
 - If the difference in the widths of A is greater than the specifications, enter the [+] value.
 - If the difference in the widths of A is smaller than the specifications, enter the [-] value.
7. Touch [OK].
8. Make a copy of the chart again and check that the difference in the widths of A falls within the specified range.

(2) Original Stop Position**(a) Use**

- To manually adjust the original stop position and the read position in each of the ADF modes.
- When the result is Unable in the [Auto Adj. of Stop Position].

(b) Setting range

- The difference in the widths of B between the chart and the copy sample should fall within the following range.

Specifications	0 ± 2.0 mm
Setting range	-4.0 mm to +4.0 mm (1 step: 0.1 mm)

(c) Procedure

- Place the chart in the document feed tray (with the side having an arrow facing up).
- Make a full size copy of the chart.

NOTE

- In the same way place the chart with the blank side facing up in the document feed tray in the duplex mode and make a copy. Check the difference in the widths of a between the chart and the second sided surface of the copy sample.

- Check that the difference in the widths of B between the chart and the copy sample falls within the specified range.
- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [ADF Adjustment] -> [Original Stop position].
- Look at the copy and adjust [Front] or [Back] with the [+] / [-] key.
 - If the difference in the widths of B is greater than the specifications, enter the [+] value.
 - If the difference in the widths of B is smaller than the specifications, enter the [-] value.
- Touch [OK].
- Make a copy of the chart again and check that the difference in the widths of B falls within the specified range.

(3) Centering Auto Adjustment**(a) Use**

- To automatically adjust the read position in the main scanning direction.
- When ADF has been replaced.

(b) Procedure

- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [ADF Adjustment] -> [Centering Auto Adjustment].
- Place the chart in the document feed tray (with the side having an arrow facing up).
- Press the Start key.
- Make sure that result is OK. Then, touch [New].
- Touch [Close].

NOTE

- If the result is Unable:
Check and correct the skew of the document.
Manually correct the value of [Original Stop Position].
[I.7.7.33.\(2\) Original Stop Position](#)

(4) Auto Adj. of Stop Position**(a) Use**

- To automatically adjust the read position for the sub scanning direction.
- To check skew feed.
- When ADF has been replaced.

(b) Procedure

- Call the Administrator Settings to the screen.
- Touch [System Settings] -> [Expert Adjustment] -> [ADF Adjustment] -> [Auto Adj. of Stop Position].
- Touch [Front] or [Back].
- Place the chart in the document feed tray.
 - [Front]: Set the chart with its arrow side facing upward.
 - [Back]: Set the chart with its blank side facing upward.
- Press the Start key.
- Make sure that result is OK. Then, touch [New].
- Touch [Close].

NOTE

- If the result is Unable:
Check and correct the skew of the document.
Manually correct the value of [Original Stop Position].
[I.7.7.33.\(2\) Original Stop Position](#)

7.7.34 Line Detection-Prior Detection Setting (Front Side, Back Side)**(1) Use**

- To set whether or not to perform pre-detection of stain on the ADF original glass (or the CIS glass).
- To set the detection level of the pre-detection of stain on the ADF original glass (or the CIS glass).
- To set how to display the warning when stain on the ADF original glass (or the CIS glass) is detected.
- Use when changing the display of the warning which requests the cleaning of the stain on the glass detected by the pre-detection of the lines.

TYPE1	Warning will be displayed by the maintenance mark. (warning code: D-1 (Front Side), D-3 (Back Side))
TYPE2	Warning will be displayed on the message area on the basic screen.
TYPE3	Warning will be displayed on all screens.
OFF	Warning will not be displayed.

- Use when changing the detection level for the pre-detection of stain on the original glass.

Low	Stain on the glass will not be detected easily.
Std.	Normal detection level
High	Stain on the glass will easily be detected.

- Warning Display Time (Back Side Only)

Warning Detection	Displays the warning whenever contamination is detected.
During the Back Side Scan	Displays the warning only when back side scanning mode is selected.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

NOTE

- [Warning Display], [Detection Level], and [Warning Display Time] (Back Side Only) can be set when "Yes" is selected.

Warning Display	Default setting	TYPE2
	Setting item	• TYPE1 • "TYPE2" • TYPE3 • OFF
Detection Level	Default setting	Std.
	Setting item	• Low • "Std." • High
Warning Display Time (Back Side Only)	Default setting	• During the Back Side Scan
	Setting item	• Warning Detection • During the Back Side Scan

- Be aware that selecting "No" and performing the pre-detection with the following setting will display "NG."
[Service Mode] -> [Machine] -> [ADF Scan Glass Contamination]
- When "No" is selected, the original glass cleaning operation after the job ends does not operate.

7.7.35 Line Detection-Feed Cleaning Settings**(1) Use**

- To set the operation for detection and removing operation of stain on the ADF original glass when feeding the original.
- Use when changing the operation for detection and removing operation of stain on the ADF original glass when feeding the original.

Do Not Clean	The DF original glass cleaning brush will stop rotating when the original is fed, and will not perform removing the stain.
Clean	The DF original glass cleaning brush will rotate between originals when feeding the original.

(2) Default setting

- Clean

(3) Setting item

- "Clean"
- Do Not Clean

7.7.36 Trail Edge Adjust**(1) Use**

- To adjust trail edge if there is any when comparing the original with copy of the plain or thick paper.

- To correct any color shift at trail edge.
- Able to make a setting on a process speed basis independently for each paper type of normal/thin paper, thick 1/1+, and thick 2/3/4, and postcard.

(2) Procedure

1. Call the Administrator Settings to the screen.
 2. Touch [System Settings] -> [Expert Adjustment] -> [Trail Edge Adjust].
 3. Load manual bypass tray with A3/11 x 17 or A4/8 1/2 x 11 normal paper.
 4. Select a paper type that is set on the manual bypass tray.
 5. Press the Start key.
 6. On the test pattern produced, check for deviation between the black line and the line of each color at positions X and Y (If color shift is found on both areas, perform [Color Registration Adjustment]).
 7. Using the [+] / [-] key, change the setting value as necessary.
 - If the cross deviates in the direction of A, increase the setting.
 - If the cross deviates in the direction of B, decrease the setting.
 8. Produce another test pattern and make sure that there is no deviation.
- Check Procedure

7.7.37 User Paper Settings

- It will be displayed only when the following setting is set to "Level 2."
[\[Service Mode\]](#) -> [\[Enhanced Security\]](#) -> [\[Administrator Feature Level\]](#)

(1) Use

- To set and register individual user paper that includes different basic weight and transfer output fine adjustment data.
- To register a paper type that is suitable for customer's intended use and use environment.
- The feature available from [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[User Paper Settings\]](#) is extended to Administrator. However, the fusing temperature setting is not possible in Administrator Settings.
- The user paper registration keys and corresponding paper types are as follows:
 - User Paper 1, 2: Plain paper
 - User Paper 3: Thick 1
 - User Paper 4: Thick 1+
 - User Paper 5: Thick 2
 - User Paper 6: Thick 3

(2) Procedure

1. Call the Administrator Settings to the screen.
2. Touch [System Settings] -> [Expert Adjustment] -> [Forward] -> [User Paper Settings].
3. Select the desired key from [User Paper 1] to [User Paper 6] to register user paper.
4. Select [Basic Weight] and enter a value with the [+] / [-] key.
5. Select one from the following; [600/1200dpi-Media 1-Sided Color], [600/1200dpi-Media 1-Sided Black], [600/1200dpi-Media 2-Sided Color], or [600/1200dpi-Media 2-Sided Black]. Enter a 2nd transfer output value with the [+] / [-] key.
 Setting range: -8 to +7 (1 step: 1 increment or decrement)
6. Load the tray with A4S or 8 1/2 x 11S paper.
7. Touch [Test Pattern Output]. Specify a paper feed tray and select either 1st side or 2nd side.
8. Press the Start key and check the image of the output test pattern. If the image is not acceptable, adjust the settings, output and check a test pattern again.

(3) Test pattern in user paper settings

- The printable test pattern for user paper settings is provided to ease determining the most appropriate 2nd transfer output value used when customizing user paper.
- This test pattern changes output voltage as shown below based on the standard voltage A (voltage determined by the 2nd image transfer auto transfer voltage control) on a sheet of paper.

A: standard voltage

7.7.38 Erase Adjustment-Non-Image Area Erase Operation Settings

(1) Use

- Configure Non-Image Area operation settings.

Auto	Automatically detects the background density of the original, and selects either [Bevel] or [Rectangular] accordingly.
Specify	Allows you to manually specify an erase method and original density. As an erase method, select [Bevel] or [Rectangular]. Specify an original density from five levels.

(2) Default setting

- Specify

(3) Setting item

- Auto
- "Specify"

7.7.39 PS Designer Settings

(1) Use

- Specify to switch the density of output image when printing from the PS driver.
- Density correction is performed when printing from the PS driver because image density tends to be dark. Specify to print a document compatible with PostScript specifications.
Yes: Disable density correction and print a document according to PostScript specifications.
No: Enable density correction.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.8 System Settings-List/Counter

7.8.1 Management List

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]
(It will be displayed when the key counter is mounted or when the following setting shows that switch No.33 is set to [00000001] at Bit assignment/[01] at HEX assignment.
[Service Mode] -> [System 2] -> [Software Switch Setting])

(1) Job Settings List

(a) Use

- To output the value set by the setting menu.

(b) Procedure

- Touch [Job Settings List].
- Select the paper tray.
- Select simplex or duplex print, and touch the Start key.

7.8.2 Paper Size/Type Counter

(1) Use

- To register the combination of the specific paper size and the paper type, and to set the count.

(2) Procedure

- Press a key out of 1 to 10 registration keys.

2. Select the paper type.
3. Touch the paper size key to select the paper size.

7.8.3 Meter Counter List

- Setting will be available only when the following setting shows that management device 2 or vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Use

- To output the meter counter list.
- To print out the list in this setting because counter list cannot be printed when vendor is mounted.
[Menu](#) -> [\[Counter\]](#)

(2) Procedure

1. Touch [\[Meter Counter List\]](#).
2. Select the paper tray.
3. Select simplex or duplex print, and touch the Start key.

7.8.4 Check Consumables List

- Setting will be available only when the following setting shows that either authentication device 2, management device 2, vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Use

- To output the consumable life list.
- To print out the list in this setting because the list cannot be printed when vendor is mounted.
[\[Utility\]](#) -> [\[Check Consumable Life\]](#)

(2) Procedure

1. Touch [\[Check Consumable List\]](#).
2. Select the paper tray.
3. Select simplex or duplex print, and touch the Start key.

7.8.5 Fax Activity Summary Information

(1) Use

- To select whether or not to allow the transmission of the information on the function use frequency counter and machine configuration information.
- The counter information is collected via CS Remote Care.
- Though this setting is set to [\[Allow\]](#), the information is not sent if [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Acquiring Settings\]](#) is set to "OFF."

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.8.6 TX Operation Log Output

- This is displayed only when [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[TX Operation Log\]](#) is set to "Save."

(1) Use

- To select whether or not to output acquired TX operation logs.
- The logs can be printed or stored into a USB flash drive.

(2) Procedure

- Select [\[All\]](#) or [\[Set Range\]](#) in [\[Output Date Range\]](#). When selecting [\[Set Range\]](#), specify the start and end dates in [\[Set Output Date Range\]](#).
- Select [\[Print\]](#) or [\[Save to External Memory\]](#).

7.9 System Settings-Reset Settings

7.9.1 System Auto Reset

- The keys specified by [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Registered Key Settings\]](#) is displayed.
- Screen Saver Function is displayed only when the following two conditions are met: The optional i-Option LK-101 v3 and upgrade kit UK-204 are enabled. The screen saver application is registered.

(1) Use

- To set the period of time until system auto reset starts functioning.

(2) Procedure

- To set the functions displayed during system auto reset.

(3) Default setting

- Priority Mode: Copy
- System Auto Reset Time: 1 min.
- Screen Saver Function: No Limit

(4) Setting item

Priority Mode

- "Copy"
- Scan/Fax
- User Box
- Web browser

System Auto Reset Time

- "1" to 9
- OFF

Screen Saver Function

- Enable
- "No Limit"

7.9.2 Auto Reset**(1) Use**

- To set the period of time until auto reset starts functioning in "Copy", "Scan/Fax", "User Box", and "Web Browser."

(2) Default setting

- 1 min.

(3) Setting item

- 1 to 9
- No

7.9.3 Job Reset**(1) When Account is changed**

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
(It will be displayed when the key counter is mounted.)

(a) Use

- Selects whether to reset (initialize) a machine when the key counter is unplugged, a magnetic card is pulled out, or user authentication/account track is set.
- To select not to reset to the default settings even when the accounts are changed through the use of a data management device.

(b) Default setting

- Reset

(c) Setting item

- "Reset"
- Do Not Reset

(2) When Original is set on ADF**(a) Use**

- Select whether to reset the function when originals are placed on the ADF.

(b) Default setting

- Do Not Reset

(c) Setting item

- Reset
- "Do Not Reset"

(3) Next Job: Staple Setting**(a) Use**

- To set whether to cancel the staple setting when the staple setting job started and the next job setting has become available.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Next Job: Original Set/Bind Direction**(a) Use**

- To set whether to cancel the original set/bind direction when the job (which original set/bind direction is set) started and the next job setting has become available.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(5) Next Job: Reset Data After Job**(a) Use**

- To set whether to cancel the setting for scanning or transmitting fax when the scanning is finished or fax is transmitted, making the next job setting available.

(b) Default setting

- Reset All

(c) Setting item

- "Reset All"
- Reset Destination Only
- Confirm with User

7.9.4 Default Basic/Enlarge Display Common Setting**(1) Use**

- To configure default copy or scan/fax settings for basic/enlarge display mode.

(2) Default setting

- Do not Apply

(3) Setting item

- "Do not Apply"
- Apply to all

7.10 System Settings-User Box Settings**7.10.1 Delete Unused User Box****(1) Use**

- To delete the unused box without data.

(2) Procedure

1. Touch [Delete Unused User Box].
2. Touch [Yes] on the Check screen.
3. Touch [OK].

7.10.2 Delete Secure Print Documents**(1) Use**

- To delete the whole secure documents in the secure print user box.

(2) Procedure

1. Touch [Delete Secure Documents].
2. Touch [Yes] on the Check screen.
3. Touch [OK].

7.10.3 Auto Delete Secure Document**(1) Use**

- To set whether or not to delete the secure documents in the box after a certain period of time. It also sets the period of time to store data.

(2) Default setting

- 1 day

(3) Setting item

- "1 day"
- 2 days
- 3 days
- 7 days
- 30 days
- Time (5 min. to 12 hours)
- Save

7.10.4 Encrypted PDF Delete Time**(1) Use**

- Specifies whether to delete encrypted PDF data stored in the box after a lapse of a predetermined period of time.
Sets the time period for which encrypted PDF data can be stored.

(2) Default setting

- 1 day

(3) Setting item

- "1 day"
- 2 days
- 3 days
- 7 days
- 30 days
- Time (5 min. to 12 hours)
- Save

7.10.5 ID & Print Delete Time

- This is displayed only when [Administrator Settings] -> [User Authentication/Account Track] -> [User Authentication Setting] -> [Administrative Setting] -> [ID & Print Settings] is set to "ON."

(1) Use

- Specifies whether to delete ID & print data stored in the box after a lapse of a predetermined period of time.
Sets the time period for which ID & print data can be stored.

(2) Default setting

- 1 day

(3) Setting item

- "1 day"
- 2 days
- 3 days
- 7 days
- 30 days
- Time (5 min. to 12 hours)
- Save

7.10.6 Document Hold Setting**(1) Use**

- Selects whether to store the document again in the box after it was retrieved from the box.
- If the function is set to No, the document is automatically deleted after it was retrieved.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"
- When selecting "Yes", select whether or not to display the delete confirmation screen when the document is retrieved.

7.10.7 External Memory Function Settings**(1) Use**

- This operation enables or disables functions using an external memory connected to this machine.
- Capability to enable [Save Document], [Print Document] and [External Memory Document Scan] separately.

Save Document	A function that saves scanned documents into the external memory in the box mode.
Print Document	A function that prints and sends documents saved in the external memory in the box mode.
External Memory Document Scan	A function that saves files imported from the external memory into User Box in User Box mode.

(2) Default setting

- Save Document: OFF
- Print Document: ON
- External Memory Document Scan: OFF

(3) Setting item

Save Document

- ON
- "OFF"

Print Document

- "ON"
- OFF

External Memory Document Scan

- ON
- "OFF"

7.10.8 Allow/Restrict User Box**(1) Use**

- Specify whether to release functions so that the user can create, edit, or delete a User Box.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Prohibit

7.10.9 ID & Print Delete after Print Setting**(1) Use**

- Select whether to check that the document saved in the ID & Print User Box has been deleted after printed.

(2) Default setting

- Confirm with User

(3) Setting item

- "Confirm with User"
- Always Delete

7.10.10 Document Delete Time Setting**(1) Use**

- This function enables the administrator to specify the time to delete a document from a User Box when you cannot specify the document deletion time. When automatically specifying the document deletion time, select [Yes] and set the deletion time.

(2) Default setting

- 1 day

(3) Setting item

- "1 day"
- 2 days
- 3 days
- 7 days
- 30 days
- Time (5 min. to 12 hours)
- Save

7.11 System Settings-Standard Size Setting

- It will be displayed only when the following setting is set to "Level 2."
[Service Mode] -> [Enhanced Security] -> [Administrator Feature Level]

7.11.1 Original Glass Original Size Detect**(1) Use**

- To change the document size detection table.

(2) Default setting

- Table1

(3) Setting item

- "Table1"
- Table2

7.11.2 8¹/₂ × 14/Foolscap Size Detection**(1) Use**

- To set whether paper of 8¹/₂ × 13¹/₂ size is detected as 8¹/₂ × 14 or foolscap in original glass or ADF size detection.

(2) Default setting

- 8¹/₂ × 14

(3) Setting item

- "8¹/₂ × 14"
- Foolscap

7.11.3 Foolscap Size Setting**(1) Use**

- To set the size for foolscap paper.
- Upon setup.

(2) Procedure

- Select the size from among the following six.

(3) Default setting

- 8 × 13

(4) Setting item

- 8¹/₂ × 13¹/₂
- 220 × 330 mm *
- 8¹/₂ × 13
- 8¹/₄ × 13
- 8¹/₈ × 13¹/₄ *
- "8 × 13"

NOTE

- *: Available for manual bypass tray.

7.11.4 ADF Size Detection

- This setting is available only when "Others3" is selected in [\[Service Mode\]](#) -> [\[System 1\]](#) -> [\[Marketing Area\]](#).

(1) Use

- To set whether or not to give a priority to the detection of 8K/16K size when ADF is used.

(2) Default setting

- K Size (Taiwan)

(3) Setting item

- "K Size (Taiwan)"
- B Series (China)

7.12 System Settings-Stamp Settings**7.12.1 Header/Footer Settings****(1) Use**

- Saves or deletes header/footer settings.
- Able to obtain registered header/footer data by [\[Application\]](#) -> [\[Stamp/Composition\]](#).

(2) Procedure

- Touch [\[New\]](#) to register new headers and footers.

7.12.2 Fax TX Settings**(1) Use**

- Specifies whether to reset a stamp setting when fax is sent.

(2) Default setting

- Cancel

(3) Setting item

- "Cancel"
- Do Not Cancel

7.13 System Settings-Blank Page Print Settings**7.13.1 Use**

- Specifies whether to print a stamp/page number on blank pages.

7.13.2 Default setting

- Do Not Print

7.13.3 Setting item

- Print
- "Do Not Print"

7.14 System Settings-Registered Key Settings**7.14.1 Use**

- To select a function to be assigned to a register key on the control panel.
- The functions that can be assigned are as follows:
Copy, Scan/Fax, User Box, Web Browser, APP, 10 Keypad, Utility

7.14.2 Procedure

1. Select [Register Key 1], [Register Key 2], or [Register Key 3].
2. Select a function to which the key is assigned, and touch [OK].

7.15 System Settings-Job Priority Operation Settings**7.15.1 Fax RX Job Priority****(1) Use**

- Configure whether to start processing for the next job when the current job stops due to running out of paper in the paper tray.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.15.2 Skip Job (Fax)**(1) Use**

- Select whether to handle the subsequent job as long as it is a printing job for the received fax when printing has stopped because, for example, there is no paper.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.15.3 Skip Job (Copy, Print)**(1) Use**

- Select whether to handle the subsequent job as long as it is not a printing job for the received fax when printing has stopped because, for example, there is no paper.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.16 System Settings-Default Bypass Paper Type Setting

7.16.1 Use

- Configure the initial settings for the paper type to be used for the bypass tray.
- When selecting [Yes], select a paper type.

7.16.2 Procedure

1. Touch [Default Bypass Paper Type Setting].
2. Select the desired paper type and touch [OK].

7.17 System Settings-Page Number Print Position

7.17.1 Use

- Specify a page number print position when printing page numbers after configuring 2-sided print or booklet settings. Select whether to print the page numbers on a same position on all pages or on positions symmetric with respect to the stapling position.

7.17.2 Procedure

1. Touch [Page Number Print Position].
2. Check test pattern and fine adjust the position.

7.18 System Settings-Preview Settings

7.18.1 Original Direction Confirmation Screen

(1) Use

- To set whether to display the screen where the original set direction can be selected after touching [Preview] when printing with the advanced preview function in Scan/Fax mode.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.18.2 Realtime Preview

(1) Use

- To set whether or not to display a preview image for each page when scanning an original in Scan/Fax mode.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.18.3 Preview Display Conditions (Standard Application)

(1) Use

- To set the conditions for displaying preview images.

Job Executed	Shows a preview image when pressing Start to execute a job as well as when pressing Preview
Preview Settings Screen	Shows a preview image only when Preview is pressed

(2) Default setting

- Preview Settings Screen

(3) Setting item

- Job Executed
- "Preview Settings Screen"

7.18.4 Preview Display Conditions (Registered Application)

(1) Use

- To set conditions to display preview images when using an OpenAPI application.

(2) Default setting

- Preview Settings Screen

(3) Setting item

- Job Executed

- "Preview Settings Screen"
- Use Standard App. Settings

7.19 System Settings-Enlarge Display Settings

7.19.1 Display Default Setting

(1) Use

- To set whether to use Enlarge Display mode as the initial display of the control panel.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.19.2 Enlarge Display Setting

- This is displayed only when [Display Default Setting] is set to [Yes].

(1) Use

- To select display mode enabled when the reset key is pressed.

(2) Default setting

- Normal Display

(3) Setting item

- Enlarge Display
- "Normal Display"

7.19.3 Apply Basic Setting to Enlarge Display

(1) Use

- To set whether to inherit the settings configured on the normal screen display when switching the screen from Normal to Enlarge Display.

Mode 1	Inherit all normal mode settings.
Mode 2	In Copy mode, only inherit Normal mode settings that can be set in Enlarge Display mode. In Scan/Fax mode, reset the settings.

(2) Default setting

- Mode 2

(3) Setting item

- Mode 1
- "Mode 2"

7.20 System Settings-Scan File Name Settings

7.20.1 Function Mode Initial

(1) Use

- To set whether to use an initial of the relevant function as a prefix for the scan file name.
- The following letters are used as a prefix for the file name.

C	Copy
S	Scan/Fax or User Box
P	Print

(2) Default setting

- Attach

(3) Setting item

- "Attach"
- Do not Attach

7.20.2 Supplementary File Name

(1) Use

- To set whether to add a device name or desired text to the file name.

Device Name	Use the name of this machine for the file name. The name of this machine can be changed from, in the administrator mode, [Administrator/Machine Settings] - [Input Machine Address] - [Device Name].
-------------	---

Arbitrary Characters	Use any desired text for the file name. Enter a text to be added to the [Arbitrary Characters] (using up to 10 characters).
----------------------	--

(2) Default setting

- Device Name

(3) Setting item

- "Device Name"
- Arbitrary Characters

7.21 System Settings-PDF Settings**PDF Settings**

- This is displayed only when the optional i-Option LK-102 v3 and upgrade kit UK-204 are enabled.

7.21.1 PDF/A Default Settings**(1) Use**

- To set the default value of PDF/A.

(2) Default setting

- Disable

(3) Setting item

- PDF/A-1a
- PDF/A-1b
- "Disable"

7.21.2 PDF Web Optimization Default Settings**(1) Use**

- To set whether to optimize display of the PDF in the web browser.

(2) Default setting

- Invalid

(3) Setting item

- Enable
- "Invalid"

7.21.3 Searchable PDF Settings

- This is displayed only when the optional i-Option LK-105 v3 and upgrade kit UK-204 are enabled.

(1) Use

- To set whether to automatically generate a document name by automatically extracting a character string from OCR character recognition during creation of searchable PDF.

(2) Default setting

- Enable

(3) Setting item

- "Enable"
- No Limit
- When selecting [Enable], configure the following settings.

<Doc. Name Max. Length Settings>

- Set the maximum length of the extracted document name.

<Confirm Document Name Settings>

- Set whether to display a screen that allows you to check and edit the document name automatically assigned from OCR results.

7.22 System Settings-Set Paper Name by User**7.22.1 Set Paper Name by User****(1) Use**

- Register a paper name and paper type as custom paper. Custom paper can be added to the paper type option.
- When selecting [ON], set a user paper name.

(2) Procedure

1. Touch one of the keys in [Custom 1 to 19].
2. Touch [Paper Name], enter the paper name (using up to 12 characters).

3. Touch [Paper Type], Select a paper type. [Plain Paper] is specified by default.

7.23 System Settings-Custom Display Settings

7.23.1 Main Menu Default Settings

(1) Use

- To set a shortcut key that appears when Menu is pressed and that has a specific function assigned to it.
- The top menu can be extended to 2 screens and up to 23 shortcut keys can be created.

Function	Create a shortcut key to the main screen such as Copy mode or Scan/Fax mode.
Copy Function Settings	Create a shortcut key to the setting screen for copy function.
Scan/Fax Function Settings	Create a shortcut key to the setting screen for scan/fax function.
Copy Program	Create a shortcut key to a copy program. This category can be selected when a copy program is registered on this machine.
Scan/Fax Program	Create a shortcut key to a scan/fax program. This category can be selected when a scan/fax program is registered on this machine.
System User Box	Create a shortcut key to the System User Box.

(2) Procedure

1. Touch one of the keys in [Main Menu Key 1 to 23].
2. Select [ON] and select a function of which shortcut key is created.

7.23.2 Main Menu Display Settings

(1) Use

- The background of the main menu can be changed according to your preference.

(2) Default setting

- Theme 1

(3) Setting item

- "Theme 1"
- Theme 2
- Theme 3

7.23.3 Custom Function Pattern Selection

(1) Use

- To set the display pattern of functions provided in each mode.

Copy/Print	To change a display pattern of function keys to be displayed in the print settings screen in copy or User Box mode.
Send/Save	To change a display pattern of function keys to be displayed in the send or save settings screen in scan/fax or User Box mode.

- The display pattern can be changed to any of the above three types depending on function key usage conditions. Touch [Details] to check the functions to be displayed.
- When a custom function pattern is registered or imported in [Service Mode] -> [System 2] -> [Custom Pattern], the pattern ([Custom 1] to [Custom 3]) also can be selected.
- [Standard Functions] is not displayed in the USA model.

Full Functions	Displays all function keys
Standard Functions	Displays the standard function keys
Basic Functions	Displays the more basic function keys than [Standard Functions]

(2) Default setting

- Full Functions

(3) Setting item

- "Full Functions"
- Standard Functions
- Basic Functions

7.23.4 User/Admin Function Permissions

(1) Use

- To set whether to allow changes of the function key display pattern by user/account.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.23.5 Function Display Key Permission Setting-Copy/Print**(1) Use**

- To set whether or not to allow a change of function keys to be displayed on the main screen in the copy mode and the print settings screen in the User Box mode.
- When selecting [Allow], [Function Display Key (Copy/Print)] is displayed in [User Settings] -> [Custom Display Settings] and you can configure the setting.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.23.6 Function Display Key Permission Setting-Send/Save**(1) Use**

- To set whether or not to allow a change of function keys to be displayed on the main screen in the scan/fax mode and the send or save settings screen in the User Box mode.
- When selecting [Allow], [Function Display Key (Send/Save)] is displayed in [User Settings] -> [Custom Display Settings] and you can configure the setting.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.23.7 Temporarily Change Language Setting**(1) Use**

- To select whether or not to display the [Language] key, which is used to temporarily change the language for the control panel, on the top screen in each mode.
- The temporarily enabled language is returned to the language configured in [User Settings] after any of the following operations. (*1)
 - Main power switch (*1)
 - Power key (*1)
 - Sleep mode (*1)
 - Low power mode (*1)
 - System Auto Reset (*1)
 - Logout(*1)

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.24 Administrator/Machine Settings**7.24.1 Administrator Registration****(1) Use**

- Registers administrator information displayed Help service/Administrator information screen as well as sender addresses used for E-mail transmission from the machine.

(2) Procedure

1. Touch [Administrator Name], [E-mail Address] to input them.
2. Using the 10-key pad, enter the extension No.

7.24.2 Input Machine Address**(1) Use**

- To register the name of the machine and e-mail address.

Device Name	When the file name of the transmitted file or the document name of document registered in Box is generated automatically, it is added.
-------------	--

E-mail Address	To be used as from address at internal Fax transmission.
----------------	--

(2) Procedure

1. Touch [Device Name] and input the name.
2. Touch [E-mail Address] and input the E-mail address.

7.25 One-Touch/User Box Registration-Create One-Touch Destination**7.25.1 Address Book (Public)/(Personal)****(1) E-mail****(a) Use**

- To register/change the e-mail address for transmitting the scanned data by e-mail.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.

(2) User Box

- It will not be displayed when the following setting shows that authentication device 2 or the vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To register or change the box address for storing the scanned data to the box in the hard disk of the machine.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.
- At least one user box must be registered in order to register the box address.

(3) Fax

- It will be displayed only when the following setting shows that fax is set to "Set".
[Service Mode] -> [System 2] -> [Option Board Status]

(a) Use

- To register or change the fax number for transmitting the fax.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.

(4) PC (SMB)**(a) Use**

- To register or change the SMB address for transmitting the scanned data by SMB.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.

(5) FTP**(a) Use**

- To register and change the FTP address for transmitting the scanned data by FTP.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.

(6) WebDAV**(a) Use**

- To register and change the WebDAV address for transmitting the scanned data by WebDAV.

(b) Procedure

- Touch [New] to register the new address.
- Select any displayed address to check, edit, or delete the setting.

(7) IP Address Fax

- It will be displayed only when the following setting is set to "ON".

[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#) -> [\[IP Address Fax Function\]](#)

(a) Use

- To register/change the IP address fax destination when transmitting the IP address fax data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, change or delete the setting.

(8) Internet Fax

- It will be displayed only when the following setting is set to "ON".

[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#) -> [\[Internet Fax Function\]](#)

(a) Use

- To register/change the Internet fax address when transmitting the internet fax data.

(b) Procedure

- A new address can be registered by touching [New].
- Select any displayed address to check, change or delete the setting.

7.25.2 Group

(1) Use

- To register or change the group with a number of addresses to transmit data simultaneously.

(2) Procedure

- Touch [New] to register the new group.
- Select any displayed group to check, edit, or delete the setting.
- At least one address must be registered in order to register the group.

7.25.3 E-Mail Settings

(1) E-Mail Subject

(a) Use

- To register the e-mail subject for transmitting the scanned data by e-mail.

(b) Procedure

- Touch [New] to register the new subject.
- Select any displayed subject to detail check, edit, or delete the setting.
- The subject can be set as default by selecting the subject displayed on the screen and pressing [Set as Default].

(2) E-mail Body

(a) Use

- To register the e-mail message for transmitting the scanned data by e-mail.

(b) Procedure

- Touch [New] to register the new message.
- Select any displayed message to detail check or delete the setting.
- The text can be set as default by selecting the text displayed on the screen and pressing [Set as Default].

7.26 One-Touch/User Box Registration-Create User Box

7.26.1 Public/Personal User Box

(1) Use

- To register or change the box for storing the text data in the hard disk of the machine.

(2) Procedure

- Touch [New] to register the new box.
- Select any displayed box to edit or delete it.

7.26.2 Bulletin Board User Box

- It will be displayed when the optional fax kit FK-511 is installed.

(1) Use

- To register or change the bulletin board user box.

(2) Procedure

- Touch [New] to register the new box.

- Select any displayed box to edit or delete it.

7.26.3 Relay User Box

- It will be displayed when the optional fax kit FK-511 is installed.

(1) Use

- To register/change the Relay User Box.

(2) Procedure

- A new box can be registered by touching [New].
- Select any displayed box to change or delete it.

7.26.4 Annotation User Box

(1) Use

- To register or change the annotation user box.
- To attach the image of the date, time, and/or filing number to the document data stored in the scanner mode, and to distribute them.

(2) Procedure

- Touch [New] key to register the new box.
- Select any displayed box to change or delete it.

7.27 One-Touch/User Box Registration-One-Touch/User Box Registration List

7.27.1 Address Book List

(1) Use

- To output the address book list.

(2) Procedure

1. Select the destination type to be output in Print Destination List by Type.
2. Touch [Starting destination No.] and enter the number from which output starts.
3. Touch [Number of Destinations] and specify the number of destinations to be output.
4. Touch [Print], and select the paper feed tray.
5. Select the simplex or duplex print, and press the Start key to output the list of abbreviated addresses.

7.27.2 Group List

(1) Use

- To output the group list.

(2) Procedure

1. Touch [Starting destination No.] and enter the number from which output starts.
2. Touch [Number of Destinations] and specify the number of destinations to be output.
3. Touch [Print], and select the paper feed tray.
4. Select the simplex or duplex print, and press the Start key to output the list of abbreviated addresses.

7.27.3 Program List

(1) Use

- To output the program list.

(2) Procedure

1. Select the destination type to be output in Print Destination List by Type.
2. Touch [Starting destination No.] and enter the number from which output starts.
3. Touch [Number of Destinations] and specify the number of destinations to be output.
4. Touch [Print], and select the paper feed tray.
5. Select the simplex or duplex print, and press the Start key to output the list of abbreviated addresses.

7.27.4 E-Mail Subject/Text List

(1) Use

- To output the subject or the text list.

(2) Procedure

1. Select the paper feed tray.
2. Select [1-Sided] or [2-Sided] and touch [Start] to output Subject/Text List.

7.28 One-Touch/User Box Registration-Maximum Number of User Boxes

7.28.1 Use

- To set the maximum number of user boxes that can be created for each user or not.
- A user box type ([Public]/[Personal]/[Group]) can be selected according to the user authentication and account settings.

7.28.2 Procedure

1. To set an upper limit of user boxes, select a user box type, and select the user name or account name.
2. Select [ON].
3. To enter the maximum number of user boxes to create.
4. Select [Apply].

NOTE

- If the maximum number of user boxes is set to "0", you cannot create new ones.
- If the selected user has already created three user boxes, for example, you can set the maximum number of user boxes within the range of 3 to 1000.

7.29 User Authentication/Account Track-General Settings

- It will not be displayed when the following setting shows that key counter or vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

NOTE

- Before registering a user, select an authentication method. If all management data is cleared after the authentication method was selected, the histories of the registered users, print, send, receive, and save jobs are deleted.

7.29.1 User Authentication

(1) Authentication Method

(a) Use

- To set the user authentication method.
- To enable user authentication, select ON (MFP), External Server Authentication, or Main + External Server.

(b) Default setting

- OFF

(c) Setting item

- Authenticate (ON (MFP), External Server Authentication, Main + External Server)
- "OFF"

(2) Overwrite User Info

(a) Use

- To set whether to allow the user to overwrite registered user information
- When the external server authentication is used, authenticated user information is also managed on this machine. If the number of users who have executed the external server authentication reaches the maximum number of users this machine can manage, authentication of any new users will not be permitted. If you select [Allow], the oldest authenticated user information is erased and the new user is registered.

(b) Default setting

- Restrict

(c) Setting item

- Allow
- "Restrict"

(3) Default Authentication Method

(a) Use

- If you have selected [Main + External Server], select the authentication method you use normally.

(b) Default setting

- External Server Authentication

(c) Setting item

- "External Server Authentication"
- ON (MFP)

NOTE

- [OFF] cannot be selected when the following setting is set to "ON."
[Administrator Settings] -> [Security Settings] -> [Enhanced Security Mode]
- [ON (External Server)] cannot be selected when external servers are not registered in the following setting.
[Administrator Settings] -> [User Authentication/Account Track] -> [External Server Settings]
- Neither [ON (External Server)] or [ON (MFP)] can be selected when the presence of management device is set in the following setting.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

7.29.2 Public User Access

(1) Use

- To set whether to allow or prohibit the nonregistered user to use the system when User authentication has been set.
- Able to use the machine without authentication by logging in as a public user when [ON (Without Login)] is selected.

(2) Default setting

- Restrict

(3) Setting item

- "Restrict"
- ON (With Login)
- ON (Without Login)

NOTE

- This setting is not available without user authentication.
- [Allow] cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)
- [Allow] cannot be selected when [Synchronize User Authentication & Account Track] is set to "Do Not Synchronize."

7.29.3 Prohibited Function Login Setting**(1) Use**

- To set whether to appear the login screen when a public user attempts to use a restricted function.

(2) Default setting

- Do Not Request

(3) Setting item

- Request
- "Do Not Request"

7.29.4 Account Track**(1) Use**

- To set whether to enable the account track function or not.

(2) Default setting

- OFF

(3) Setting item

- "OFF"
- ON

7.29.5 Account Track Input Method**(1) Use**

- To set the authentication method for the account track.
- To select whether to authenticate by password or by account name & password.

(2) Default setting

- Account Name & Password

(3) Setting item

- "Account Name & Password"
- Password Only

NOTE

- This setting is not available without the account track.
- "Password Only" cannot be set when using both user authentication and account track.

7.29.6 Synchronize User Authentication & Account Track**(1) Use**

- To set whether to synchronize the user authentication and account track.

(2) Default setting

- Synchronize

(3) Setting item

- "Synchronize"
- Do not synchronize
- Synchronize by User

NOTE

- The setting is available only when carrying out the user authentication and account track.

7.29.7 When # of Jobs Reach Maximum

(1) Use

- To set whether to stop the currently printing job and start the next job, or to stop the machine, when reaching to the upper limit for the number of printed pages set by the user authentication and the account track.
- To stop the machine when the number of printed pages reach the upper limit set by the user authentication and the account track.

(2) Default setting

- Skip Job

(3) Setting item

- "Skip Job"
- Stop Job

7.29.8 Number of User Counters Assigned

- It will not be displayed when the following setting shows that management device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Use

- To set the number available to be assigned for the user registration and account registration.

(2) Procedure

- The total number to be registered for the user authentication and account track is 1000.
The number for the user registration will be set.
When setting the [Number of User Counters Assigned] to 50, the number available for Account Track will be 950.

NOTE

- The setting is available only when carrying out the user authentication and account track.

(3) Default setting

- 500

(4) Setting range

- 1 to 999

7.29.9 Ticket Hold Time Setting

(1) Use

- Specify the desired length of holding time of Kerberos authentication ticket.

NOTE

- This setting takes effect only when the authentication server type is set to active directory.

(2) Default setting

- 600 min.

(3) Setting range

- 1 to "600 min."

7.29.10 Scanner Settings

- It will be displayed only when the optional image controller IC-414 is mounted and user authentication or account track has been set.

(1) Use

- To select whether to use TWAIN scan function available in New Fiery Box when user authentication or account track is set to on.
- When user authentication or account track is set to on, select the use of TWAIN scan function available in New Fiery Box software that is supplied with the image controller.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.29.11 LDAP-IC Card Authentication Setting

- Configure settings for authentication by the LDAP server using the card ID registered on authentication cards in an environment with IC card-based user authentication implemented by connecting the Authentication Unit (IC card type).
- When [\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Settings\]](#) -> [\[User Authentication\]](#) is set to [\[External Server Authentication\]](#) or [\[Main + External Server\]](#), this function is available.

(1) LDAP-IC Card Authentication Setting**(a) Use**

- To set whether to enable authentication by the LDAP server using the card ID registered on authentication cards.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) Setting Up LDAP

- Register the LDAP server to be used for authenticating the user ID of the IC card.
- Touch the [Check Connection] to try connecting to the LDAP server using the entered information and check if the information registered is correct.
- Touch the [Reset All Settings] to reset all the information entered.

(3) Setting Up LDAP-User Name Acquisition**(a) Use**

- To set the method for obtaining the user name for logging in to this machine.

(b) Default setting

- Use Card IC

(c) Setting item

- "Use Card IC"
- Acquiring
- When [Acquiring] is selected, enter the attribute to be searched as the user name (such as "uid") in [User Name Attribute].

(4) Setting Up LDAP-Timeout**(a) Use**

- To set the timeout period for LDAP search.

(b) Procedure

1. Touch [Input].
2. Press the Clear key, and enter the timeout period using the 10-key pad.

(5) Setting Up LDAP-Search Attribute(s)**(a) Use**

- To enter the search attribute to be used for search of a user using the LDAP server (using up to 64 characters).

(b) Default setting

- uid

(6) Setting Up LDAP-Server Address**(a) Use**

- To set the LDAP server address.

(b) Procedure

1. Touch [Server Address].
2. Select [Input Host Name], [IPv4 Address Input] or [IPv6 Address Input], and enter the server address.

(7) Setting Up LDAP-Search Base**(a) Use**

- To set the directory path for LDAP server.

(b) Procedure

1. Touch [Search Base].
2. Enter the search base (up to 255 characters) on the on-screen keyboard, and touch [OK].

(8) Setting Up LDAP-SSL Setting**(a) Use**

- To set whether to use SSL (data encryption) for connecting to LDAP server.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(9) Setting Up LDAP-Port Number**(a) Use**

- To set the LDAP server port number.

(b) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-Key pad.

(10) Setting Up LDAP-Port Number (SSL)**(a) Use**

- To set the port number for LDAP server when using SSL.

(b) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-Key pad.

(11) Setting Up LDAP-Certificate Verification Level Settings**(a) Use**

- To verify the server certificate, configure settings to verify the certificate.

(b) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

(12) Setting Up LDAP-Authentication Type**(a) Use**

- To set the authentication method to logon to LDAP server.

Simple	Simple method which needs the user name and the password.
Digest-MD5	Method available with normal LDAP server. When failing to authenticate with Digest-MD5, it automatically switches to CRAM-MD5.
GSS-SPNEGO	Method available with Windows active directory (Kerberos authentication).
NTLM v1	Standard user authentication format used for Windows NT, etc.
NTLM v2	Standard user authentication format used for Windows NT, etc. It has been applied to the Windows NT4.0 SP4 and later versions. Its security has been enhanced compared to v1.

(b) Default setting

- Simple

(c) Setting item

- "Simple"
- Digest-MD5
- GSS-SPNEGO
- NTLM v1
- NTLM v2

(13) Setting Up LDAP-Referral Setting**(a) Use**

- To set whether or not to use the referral setting.

- To use when tracing the server with referral at the time of LDAP connection.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(14) Setting Up LDAP-Login Name

(a) Use

- To set the login name to connect to LDAP server.

(b) Procedure

1. Touch [Login Name].
2. Enter the login name (up to 64 characters) on the on-screen keyboard, and touch [OK].

(15) Setting Up LDAP-Password

(a) Use

- To set the password for connecting to LDAP server.

(b) Procedure

1. Touch [Password].
2. Enter the password (up to 64 characters) on the on-screen keyboard, and touch [OK].

(16) Setting Up LDAP-Domain Name

(a) Use

- To set the domain name for connecting to LDAP server.

(b) Procedure

1. Touch [Domain Name].
2. Enter the domain name (up to 64 characters) on the on-screen keyboard, and touch [OK].

(17) LDAP Server Connection Settings

- Select the name of the external server to be used as authentication information saved in this machine.
- The authentication information is saved in this machine when the LDAP-IC card authentication is successfully completed. This authentication information includes the user name and the external server name. As for the external server name in authentication information to be saved in this machine, you can register the name of external server registered on this machine.

7.30 User Authentication/Account Track-User Authentication Settings

- This setting is not available without user authentication.

7.30.1 Administrative Settings

(1) User Name List

- It cannot select [OFF] when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

(a) Use

- To set whether to display or not the list key for user names on user authentication screen.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

NOTE

- [ON] cannot be selected when [ON] is specified in the following setting.
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

(2) Default Function Permission

(a) Use

- To set the default value for the function permission in user authentication by the external server.
- To set the function which authenticated user can use when initially authenticating the user by the external server.
- Items available for setting:

Copy, Scan, Fax, Print, User Box, Print Scan/Fax TX, Save to External Memory, External Memory Document Scan, Manual Destination Input, Cellular Phone/PDA and Web browser

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

(3) ID & Print Settings

(a) Use

- To set whether to use ID & Print (a job sent by a user cannot be printed until the user authentication is completed).
- To set whether to print a job of unauthenticated or public user or to save the job into the ID & Print User Box.

(b) Default setting

- ID & Print: OFF
- Public User: Print Immediately

(c) Setting item

ID & Print

- ON
- "OFF"

Public User

- "Print Immediately"
- Save

(4) ID & Print Operation Settings

- It will be displayed only when the following setting shows that authentication device 2 is set to "installed".
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To set whether to print all jobs or only one job from the same authenticated user when ID & Print is selected.

(b) Default setting

- Print All Jobs

(c) Setting item

- "Print All Jobs"
- Print Each Job

(5) Default Operation Selection

(a) Use

- In the Login screen for user authentication where ID and print jobs are stored, specify the default values for the operation to be carried out after authentication has been completed.
When using this machine while the ID & print function is disabled, the user can select [Access] to log in to this machine without specifying the operation to be carried out after authentication.

(b) Default setting

- Print & Access Basic Screen

(c) Setting item

- "Print & Access Basic Screen"
- Access

7.30.2 User Registration

(1) Use

- To register, change or delete the user for authentication.

(2) Procedure

1. Select the user, and touch [Edit].
2. Input the user name, user password, and e-mail address.

NOTE

- It cannot be entered when conducting authentication by external server.

3. Set the [Max. Allowance Set], [Function Permission], [Pause] and touch [OK].

NOTE

- When the public users are allowed, the output permission and the function permission can be set.

- **[Authentication Information Registration]** does not appear when the presence of Authentication Device 2 is unset in the following setting.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.30.3 User Counter

(1) Use

- To display the status of use of the copy+print, copy, print and scan/fax for each user.

(2) Procedure

1. Select the user and touch [Counter Details].
2. Select the key to check to see the status of use.
3. For clearing the counter, touch [Clear Counter].
4. For clearing the all counters, touch [Reset All Counters].

7.31 User Authentication/Account Track-Account Track Settings

- The settings are available only when carrying out the account track.

7.31.1 Account Track Registration

(1) Use

- To register and change the account.

(2) Procedure

1. Select the proper Account and touch [Edit].
2. Input the [Account Name], [Password] and [Name].
3. Set the [Max. Allowance Set], [Function Permission], or [Pause] and touch [OK].

NOTE

- When the “Password Only” is selected for [Account Track Input Method], [Account Name] does not appear.
- When the “Account Name & Password” is selected for [Account Track Input Method], [Name] does not appear.

7.31.2 Account Track Counter

(1) Use

- To display the status of use of the copy+print, copy, print and scan/fax for each account.

(2) Procedure

1. Select the account and touch [Counter Details].
2. Select the key for the item to be checked.
3. For clearing the counter, touch [Clear Counter].
4. For clearing the all counters, touch [Reset All Counters].

7.32 User Authentication/Account Track-Print without Authentication

- It cannot select [Allow] when the following setting is set to “ON.”
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

7.32.1 Use

- To set whether to allow or restrict the print which user and account are not specified.
- To allow or restrict printing which user and account are not specified.
- When Allow is selected, pages printed by unidentified users are counted and included in the count of the public user.

7.32.2 Default setting

- Restrict

7.32.3 Setting item

- Full Color/Black
- Black Only
- “Restrict”

7.33 User Authentication/Account Track-Print Counter List

- The setting is available only when carrying out the user authentication or account track.
- It will not be displayed when the following setting shows that key counter, vendor 2, or management device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.33.1 Use

- To print out the User counter and the account counter.

7.33.2 Procedure

1. Touch [Counter List].
2. Select a paper tray.
3. Select the simplex or duplex print.

4. Select All Data or Print Data Only as print item, and touch [Start] to output a list.

7.34 User Authentication/Account Track-External Server Settings

7.34.1 External Server Settings

(1) New

(a) Use

- Registers and sets an external server that is used for user authentication.

(b) Procedure

1. Select one from No. 1 to No. 20 and touch [NEW].
2. Set [Server Name] and [Server Type].
3. To change settings, select an external server to be edited and touch [Edit].

(c) Setting item

Server Type:

- Active Directory
- NTLM v1
- NTLM v2
- NDS
- NDS over TCP/IP
- LDAP

NOTE

- Neither [NTLM v1] nor [NTLM v2] appear when OFF is selected in the following setting.
[Administrator Settings] -> [Network Settings] -> [SMB Settings] -> [Client Settings] -> [User Authentication (NTLM)]
- [NDS] does not appear when OFF is selected in the following setting.
[Administrator Settings] -> [Network Settings] -> [NetWare Settings] -> [User Authentication Setting (NDS)]

(2) Temporarily Save Authentication Info.

- This is displayed only when [Main + External Server] is selected as user authentication method.

(a) Use

- To select whether or not to cache the information used in the external server authentication into the MFP and to use it when the server is down.

(b) Default setting

- Invalid

(c) Setting item

- Enable
- "Invalid"

(3) Temporarily Save Authentication Info.-Reconnection Settings

(a) Use

- To change the time to reconnect to the authentication server.
- When selecting [Set Reconnect Interval], set the reconnection time.

Reconnect for every login	If the authentication server is in the shutdown state, first confirm that the authentication server is down, and use the temporarily saved authentication information to log in to this machine.
Set Reconnect Interval	Connect to the authentication server at the time specified in [Reconnection Time], and check the status of the authentication server. If the authentication server is in the shutdown state, use the authentication information temporarily saved in the main unit to log in.

(b) Default setting

- Set Reconnect Interval

(c) Setting item

- Reconnect for every login
- "Set Reconnect Interval"

7.35 User Authentication/Account Track-Limiting Access to Destinations

7.35.1 Create Group

(1) Use

- Registers and edits groups of destinations for limiting access.

(2) Procedure

1. Select a group and touch [Edit].
2. Enter [Group Name].

3. Set the Access Allowed Level and touch [OK].

7.35.2 Apply Levels/Groups to Destinations

(1) Use

- Sets Apply Level and Apply Group for individual destinations.

(2) Procedure

1. Select one from Address Book, Group, and Program.
2. Select a registered address. Touch [Apply Group] and [Apply Level] independently to make each settings.

7.35.3 Apply Levels/Groups to Users

(1) Use

- Sets Apply Level or Apply Group for individual users.

(2) Procedure

1. Select a registered user. Touch [Apply Group] and [Apply Level] independently to make each settings.

7.36 User Authentication/Account Track-Authentication Device Settings

- The function can be displayed when the authentication device 2 is set to Set by [\[Service Mode\] -> \[Billing Setting\] -> \[Management Function Choice\]](#).
- This is displayed when the optional i-Option LK-101 v3 and upgrade kit UK-204 are enabled.
- The function can be displayed when the IWS Settings is set to ON by [\[Administrator Settings\] -> \[Network Settings\]](#).

7.36.1 General Settings

(1) Use

- Specifies a device used for user authentication.

Card Authentication	Set the operation settings of the IC card authentication.
Bio Authentication	Set the beep and operation settings.

(2) Procedure

- Select either one of the authentication devices and press the corresponding key to go to the individual operation setting screen.
- The screen displays the authentication device that is selected in [\[Service Mode\] -> \[Billing Setting\] -> \[Management Function Choice\] -> \[Authentication Device 2\]](#).
- When [Card] is selected as the authentication device, select the [Card Detail Settings] to change setting information of the loadable driver for the registered IC cards on the web browser of this machine. To change the loadable driver settings on the control panel, the IWS (Internal Web Server) function must be enabled on this machine in advance.
- If SSFC (Shared Security Formats Cooperation) is selected in Card Authentication, set [Company Code], [Company Identification Code], [Area No.], [Building No.], [Floor No.], [Room No.], and [Security Level].

(3) Setting items for SSFC card information

When using SSFC card, acquire the following information from the administrator and convert the value to input using the control panel.

Information to be obtained from the administrator		
Items of Felica SSFC detail setting	Sample-data (decimal number)	Setting value (hexadecimal number)
Room number	37	00 25
Floor number	15	00 0F
Building number	50	00 32
Area number	85	00 55
Security level	2	00 02
Company identification code (CL code) *1	06BGLQVX17 (ASCII code)	30 36 42 47 4C 51 56 58 31 37
Company code *2	CompanyA (ASCII code)	CompanyA

*1: The character length of the company code is 10 bytes.

*2: Use alphabetical upper case/lower case characters and numeric characters for Company code. When the company code is not set, this space will be left blank.

7.36.2 Logoff Settings

(1) Use

- Select whether or not the user is logged off after a scan or fax is sent or after the copy document is scanned.

(2) Default setting

- Do not log off

(3) Setting item

- "Do not log off"

- Log off

7.37 User Authentication/Account Track-User/Account Common Setting

7.37.1 Logout Confirmation Screen Display Setting

(1) Use

- Select whether or not to display the logout confirmation screen.
- If the setting is made not to display the confirmation screen, the logout sequence is performed only through the access key operation with no confirmation screen appearing.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.37.2 Single Color > 2 Color Output Management

(1) Use

- Configure whether to manage the output of single color or 2 color as color print or black print.
When managing it as black print, even a user who is restricted from performing color print can perform single color or 2 color output.

(2) Default setting

- Color

(3) Setting item

- "Color"
- Black

7.37.3 Counter Remote Control

(1) Use

- To select whether or not to allow the Center to acquire counter information managed by the MFP when CS Remote Care is used.
- This setting is available if you use the CS Remote Care, and user authentication and account track is installed on this machine.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.38 User Authentication/Account Track-Scan to Home Settings

7.38.1 Use

- To set whether or not to enable the Scan to Home function that is used to send scanned data to user's home folder.

7.38.2 Default setting

- Disable

7.38.3 Setting item

- Enable
- "Disable"

7.39 User Authentication/Account Track-Scan to Authorized Folder Settings

7.39.1 Use

- Use to restrict specification of sending destinations by users.
- Enabling this item disables manual entry of destinations except for recipients of faxes or IP address faxes. Therefore users can specify sending destinations only by accessing the address book. Enabling this item also applies the following restrictions.
 - Users cannot save documents to User Boxes
 - Users cannot transmit documents from User Boxes
 - Users cannot use annotation User Boxes
 - Users cannot use the image panel
 - Users cannot select addresses from the transmission history
 - Users cannot use the URL notification function

7.39.2 Default setting

- Do Not Limit

7.39.3 Setting item

- Limit
- "Do Not Limit"

7.40 User Authentication/Account Track-Print Simple Auth.

7.40.1 Authentication Setting

(1) Use

- To select whether or not to allow simple authentication for print jobs.
- When MFP authentication is selected, you can print from the printer driver using authentication that requires only your user name (without password).

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.40.2 Register Authentication Server

- To register the LDAP server to check user names when external server authentication is implemented.
- When [\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Settings\]](#) -> [\[User Authentication\]](#) is set to [External Server Authentication], this function is available.
- Touch the [Check Connection] to try connecting to the LDAP server using the entered information and check if the information registered is correct.
- Touch the [Reset All Settings] to reset all the information entered.

(1) Register Authentication Server-External Server Authentication

(a) Use

- Select the external server name to be used as a part of user information when authentication using the LDAP server is successfully completed from the external servers registered on this machine.

(b) Procedure

1. Touch [Select Servers].
2. Select the external server to be used.

(2) Register Authentication Server-Timeout

(a) Use

- To set the timeout period for LDAP search.

(b) Procedure

1. Press the Clear key, and enter the timeout period using the 10-key pad.

(3) Register Authentication Server-Search Attributes

(a) Use

- To enter the search attribute to be used for search of a user using the LDAP server (using up to 64 characters).

(b) Default setting

- uid

(4) Register Authentication Server-Server Address

(a) Use

- To set the LDAP server address.

(b) Procedure

1. Touch [Server Address].
2. Select [Input Host Name], [IPv4 Address Input] or [IPv6 Address Input], and enter the server address.

(5) Register Authentication Server-Search Base

(a) Use

- To set the directory path for LDAP server.

(b) Procedure

1. Touch [Search Base].
2. Enter the search base (up to 255 characters) on the on-screen keyboard, and touch [OK].

(6) Register Authentication Server-SSL Setting**(a) Use**

- To set whether to use SSL (data encryption) for connecting to LDAP server.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(7) Register Authentication Server-Port Number**(a) Use**

- To set the LDAP server port number.

(b) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-Key pad.

(8) Register Authentication Server-Port Number (SSL)**(a) Use**

- To set the port number for LDAP server when using SSL.

(b) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-Key pad.

(9) Register Authentication Server-Certificate Verification Level Settings**(a) Use**

- To verify the server certificate, configure settings to verify the certificate.

(b) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

(10) Register Authentication Server-Authentication Type**(a) Use**

- To set the authentication method to logon to LDAP server.

Simple	Simple method which needs the user name and the password.
Digest-MD5	Method available with normal LDAP server. When failing to authenticate with Digest-MD5, it automatically switches to CRAM-MD5.
GSS-SPNEGO	Method available with Windows active directory (Kerberos authentication).
NTLM v1	Standard user authentication format used for Windows NT, etc.
NTLM v2	Standard user authentication format used for Windows NT, etc. It has been applied to the Windows NT4.0 SP4 and later versions. Its security has been enhanced compared to v1.

(b) Default setting

- Simple

(c) Setting item

- "Simple"
- Digest-MD5
- GSS-SPNEGO
- NTLM v1

- NTLM v2

(11) Register Authentication Server-Referral Setting

(a) Use

- To set whether or not to use the referral setting.
- To use when tracing the server with referral at the time of LDAP connection.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(12) Register Authentication Server-Login Name

(a) Use

- To set the login name to connect to LDAP server.

(b) Procedure

1. Touch [Login Name].
2. Enter the login name (up to 64 characters) on the on-screen keyboard, and touch [OK].

(13) Register Authentication Server-Password

(a) Use

- To set the password for connecting to LDAP server.

(b) Procedure

1. Touch [Password].
2. Enter the password (up to 64 characters) on the on-screen keyboard, and touch [OK].

(14) Register Authentication Server-Domain Name

(a) Use

- To set the domain name for connecting to LDAP server.

(b) Procedure

1. Touch [Domain Name].
2. Enter the domain name (up to 64 characters) on the on-screen keyboard, and touch [OK].

7.41 Network Settings-TCP/IP Settings

7.41.1 TCP/IP Settings

(1) Use

- To set whether to enable or disable TCP/IP settings.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

NOTE

- When the setting is changed, turn off the main power switch and turn it on again more than 10 seconds after.

7.41.2 IPv4 Settings

(1) Use

- To set whether to enter the IP address (IPv4) directly or to obtain it automatically.

(2) Default setting

- Auto Input

(3) Setting item

- Manual Input
- "Auto Input"

NOTE

- When it is set to [Auto Input], select the method to obtain it automatically.

DHCP Settings	• ON • OFF
---------------	---

BOOTP Settings	• ON • OFF
ARP/PING Settings	• ON • OFF
AUTO IP Settings	• ON • OFF

- [ARP/PING Settings] and [Auto IP Setting] cannot be set to “OFF” simultaneously.
- They will all be set to “ON” when [Manual Input] is changed to [Auto Input].
- When it is set to [Manual Input], set the IP address, subnet mask and default gate way.

7.41.3 IPv6 Settings

(1) IPv6 Settings

(a) Use

- To set whether or not to use IP address (IPv6).
- To set whether to enter the IP address (IPv6) directly or to obtain it automatically.

(b) Default setting

- ON

(c) Setting item

- “ON”
- OFF

(2) Auto IPv6 Settings

(a) Use

- To set whether or not to automatically obtain IP address (IPv6).
When selecting [OFF], set a global address or gateway address.

(b) Default setting

- ON

(c) Setting item

- “ON”
- OFF

(3) DHCP IPv6 Setting

(a) Default setting

- ON

(b) Setting item

- “ON”
- OFF

7.41.4 DNS Host

(1) DNS Host Name

(a) Use

- To set the DNS host name.

(b) Procedure

1. Touch [DNS Host Name].
2. Enter the DNS host name on the screen key board, and touch [OK].

(2) Dynamic DNS Settings

(a) Use

- To set whether or not to enable the dynamic DNS setting.

(b) Default setting

- Disable

(c) Setting item

- Enable
- “Disable”

7.41.5 DNS Domain

(1) Domain Name Auto Retrieval

(a) Use

- To set whether or not to enable the auto obtaining for the DNS domain name.
- To set the DNS default domain name.

(b) Default setting

- Enable

(c) Setting item

- "Enable"
- Disable

NOTE

- "Enable" cannot be set when [IP Settings] is set to "Auto Input."

(2) Search Domain Name Auto Retrieval

(a) Use

- To set whether or not to enable the auto obtaining for the DNS domain name.
- To set the DNS search domain name.

(b) Default setting

- Enable

(c) Setting item

- "Enable"
- Disable

(3) Procedure

- Touch [Default DNS Domain Name] or [DNS Search Domain Name 1 to 3], and enter the domain name using the keyboard on the screen and touch [OK].

7.41.6 DNS Server Settings (IPv4)

(1) DNS Server Auto Obtain

(a) Use

- To set whether or not to enable the auto obtaining of the DNS server address.

(b) Default setting

- Enable

(c) Setting item

- "Enable"
- Disable

NOTE

- "Enable" cannot be set when [IP Settings] is set to "Auto Input."

(2) Priority/secondary DNS server

(a) Use

- To set the Priority DNS server address, Secondary DNS server1 address, and Secondary DNS server 2 address.

(b) Procedure

- Touch the corresponding key, and input the server address.

7.41.7 DNS Server Settings (IPv6)

(1) DNS Server Auto Obtain

(a) Use

- To set whether or not to enable the auto obtaining of the DNS server address.

(b) Default setting

- Enable

(c) Setting item

- "Enable"
- Disable

NOTE

- "Enable" cannot be set when [IP Settings] is set to "Auto Input."

(2) Priority/secondary DNS server**(a) Use**

- To set the Priority DNS server address, Secondary DNS server1 address, and Secondary DNS server 2 address.

(b) Procedure

- Touch the corresponding key, and input the server address.

7.41.8 IPsec Settings**(1) Use**

- To set whether to use IPsec protocol for IP network communication.

7.41.9 IPsec Settings-IPsec Settings-IKEv1 Settings

- To configure the IKE (Internet Key Exchange) protocol settings for IPsec communication.

(1) Encryption Algorithm**(a) Use**

- Set an encryption algorithm used for IPsec communication.

(b) Setting item

- DES_CBC
- 3DES_CBC
- AES_CBC

(2) Authentication Algorithm**(a) Use**

- Set an authentication algorithm used for IPsec communication.

(b) Setting item

- MD5
- SHA-1
- SHA-2

(3) Diffie-Hellman Group**(a) Use**

- To set the Diffie-Hellman group.

(b) Default setting

- Group 2

(c) Setting item

- Group 1
- "Group 2"
- Group 5
- Group 14

(4) Key Validity Period**(a) Use**

- Set a key validity period.

(b) Default setting

- 28800 (sec.)

(c) Setting range

- 600 to 604800 (sec.)

(5) Negotiation Mode**(a) Use**

- To set the method to securely generate a common key used for encrypted communication.

(b) Default setting

- Main Mode

(c) Setting item

- "Main Mode"

- Aggressive Mode

7.41.10 IPsec Settings-IPsec Settings-IKEv2 Settings

(1) Encryption Algorithm

(a) Use

- Set an encryption algorithm used for IPsec communication.

(b) Setting item

- DES_CBC
- 3DES_CBC
- AES_CBC

(2) Authentication Algorithm

(a) Use

- Set an authentication algorithm used for IPsec communication.

(b) Setting item

- MD5
- SHA-1
- SHA-2
- AES-XCBC

(3) Diffie-Hellman Group

(a) Use

- To assign priorities to the Diffie-Hellman groups.

(b) Procedure

- Touch Priority 1 to 4 and assign priorities to the groups.

(4) Key Validity Period

(a) Use

- Set a key validity period.

(b) Default setting

- 28800 (sec.)

(c) Setting range

- 600 to 604800 (sec.)

7.41.11 IPsec Settings-IPsec Settings-IPsec SA Settings

(1) IPsec SA Settings

(a) Use

- To make the settings that relate to IPsec SA (Security Association) which is used for IPsec communication.
- Settings can be made independently for ten different sets (Group 1 to 10).

(2) Group Set Number

(a) Procedure

1. Among Group 1 to 10, select a group where settings are made.
2. After touching the key of the Group, make the following settings.
(If the combination of each selection is not allowed among different settings, the key operation of the corresponding option is locked.)

(3) Group Name

(a) Procedure

- Select [Group Name], enter the SA name (using up to 10 characters).

(4) Encapsulation Mode

(a) Use

- To configure encapsulation mode used in IPsec communication.

(b) Default setting

- Transport Mode

(c) Setting item

- Tunnel Mode

- "Transport Mode"

(5) Security Protocol

(a) Use

- Set a security protocol.

(b) Setting item

- AH
- ESP

(6) Key Exchange Method-IKEv1/IKEv2

(a) Use

- To set IKE settings used for SA.

General Settings	• Select an authentication method. • [Pre-Shared Key] is specified by default.
ESN	• Select whether to enable or invalidate the use of ESN (Extended Sequence Number). • [Invalid] is specified by default.
Replay Detection	• Select whether to enable or invalidate replay detection. • [Invalid] is specified by default.
ESP Encryption Algorithm	• Specify an encryption algorithm used in ESP protocol. • [OFF] is specified by default.
ESP Authentication Algorithm	• Specify an authentication algorithm used in ESP protocol. • [OFF] is specified by default.
AH Authentication Algorithm	• Specify an authentication algorithm used in AH protocol. • [OFF] is specified by default.
Perfect Forward Secrecy	• Configure this setting to increase the IKE strength. • [OFF] is specified by default.
Diffie-Hellman Group	• Select the Diffie-Hellman group.

(7) Key Exchange Method-Manual Key

(a) Use

- When using a device that does not support automatic key exchange using IKE, configure each parameter manually.

Encryption Algorithm	• Select the algorithm to be used for encryption.
Authentication Algorithm	• Select the algorithm to be used for authentication.
SA Index	• Specify the SA Security Parameter Index to be added to the IPsec header.
Common Key Encryption	• Specify the common key used for encryption. • You can specify different common keys respectively for send and receive.
Common Key Authentication	• Specify the common key used for authentication. • You can specify different common keys respectively for send and receive.

(8) Lifetime After Establishing SA

(a) Procedure

- Set the period of time starting from when SA connection is established and ending when the SA connection is cut.

(b) Default setting

- 3600 (sec.)

(c) Setting range

- 600 to 604800 (sec.)

7.41.12 IPsec Settings-IPsec Settings-Peer

(1) Peer

(a) Use

- To register destinations used for IPsec communication.
- Settings can be made independently for different ten sets (Group 1 to 10).

(2) Registered Peer

(a) Procedure

1. Among Group 1 to 10, select a group where settings are made.
2. After touching the key of the Group, make the following setting.

(3) Group**(a) Procedure**

- Enter a peer name (using up to 10 characters).

(4) Addressing Mode**(a) Procedure**

- To set the addressing mode

(b) Default setting

- Unicast

(c) Setting item

- "Unicast"
- Subnet Settings
- Set Range

(5) IP Address**(a) Use**

- Specify the IP address of destinations.

(b) Procedure

- Touch [IP Address] and enter the IP address with IPv4 or IPv6 format.

(6) Pre-Shared Key Text**(a) Use**

- Specify a Pre-shared key (Key data).

(b) Procedure

- Touch [Input] and enter the Pre-shared key.

(7) Key-ID String**(a) Use**

- Enter the Key-ID to be specified for the Pre-Shared Key

(b) Procedure

- Touch [Input], enter the Key-ID.

7.41.13 IPsec Settings-IPsec Settings-Protocol Setting**(1) Protocol Setting****(a) Use**

- To set a protocol used for IPsec communication.
- Settings can be made independently for ten different sets (Group 1 to 10).

(2) Group Set Number**(a) Procedure**

1. Among Group 1 to 10, select a group where settings are made.
2. After touching the key of the Group, make the following settings.
(If the combination of each selection is not allowed among different settings, the key operation of the corresponding option is locked.)

(3) Group Name**(a) Procedure**

- Select a Group Name and enter a name for the protocol configuration. (Up to 10 one-byte characters)

(4) Protocol Identification Setting**(a) Use**

- To set a protocol used for IPsec communication.

(b) Default setting

- Do Not Set

(c) Setting item

- TCP
- UDP
- ICMP
- ICMPv6

- “Do Not Set”

(5) Port Specification Method

(a) Use

- If [TCP] or [UDP] has been selected in [Protocol Identification Setting], specify the port number used for IPsec communication.

Port Number	• To set the Sender Port Number (Setting range 1 to 65535) • To set the Sender Port Number (Setting range 1 to 65535)
Set Range	• To set the Start Number and End Number of the Sender Port Number (Setting range 1 to 65535) • To set the Start Number and End Number of the Sender Port Number (Setting range 1 to 65535)

7.41.14 IPsec Settings-Enable IPsec

- This function allows you to select whether or not to use the IPsec protocol in IP network communication.
- This function is used when you use the IPsec protocol to perform encrypted communication.

(1) IPsec Policy

(a) Use

- You can specify criteria used for IP packets so that the IP packets that meet individual criteria can be passed or allowed.
- Settings can be made independently for ten different sets (Group 1 to 10).

(2) Group Set Number

(a) Procedure

1. Among Group 1 to 10, select a group where settings are made.
2. After touching the key of the Group, make the following settings.
(If the combination of each selection is not allowed among different settings, the key operation of the corresponding option is locked.)

(3) Group Name

(a) Procedure

- Enter a name for the IPsec policy (using up to 10 characters).

(4) action

(a) Use

- Select an action to be taken for the IP packets that met [Peer], [Protocol Setting], and [Communication Type].

(b) Default setting

- Protected

(c) Setting item

- “Protected”
- Allow
- Deny
- Cancel

(5) Select Group

(a) Use

- To configure the group settings.

Peer	• Select a peer setting. • Select the setting from those registered in [Peer] in [IPsec Settings].
Protocol Setting	• Select a protocol. • Select the setting from those registered in [Protocol Setting] in [IPsec Settings].
IPsec Setting	• Select a peer setting. • Select the setting from those registered in [IPsec SA Settings] in [IPsec Settings].

(6) Communication Type

(a) Use

- To set a direction of IPsec communication.

(b) Default setting

- Send and Receive

(c) Setting item

- "Send and Receive"
- Send
- Receive

7.41.15 IPsec Settings-Communication Check**(1) Communication Error Log****(a) Use**

- To display IPsec communication error logs.
- By touching [Details], you can check details of logs.

7.41.16 IP Filtering (Permit Access)**(1) Use**

- To set the IP filtering (Permit Access).
- To set whether to allow only IP addresses that are within a specified range.

(2) Procedure

1. Select Enable or "Disable".
2. When [Enable] is set, select one from Set 1 to Set 5 and specify the range of IP addresses to be allowed using the 10-key pad.
3. Touch [OK].

7.41.17 IP Filtering (Deny Access)**(1) Use**

- To set the IP filtering (Deny Access).
- When [Enable] is set, select one from Set 1 to Set 5 and specify the range of IP addresses to be allowed using the 10-key pad.

(2) Procedure

1. Select Enable or "Disable".
2. When [Enable] is set, select one from Set 1 to Set 5 and enter the range of IP addresses to be denied using the 10-key pad.
3. Touch [OK].

7.41.18 RAW Port Number**(1) Use**

- To set the RAW port number.
- Several data can be accepted at the same time by selecting several ports.

(2) Procedure

1. Select the necessary port number.
2. When using the selected port, press the Clear key to clear the value, and enter the RAW port number using the 10-key pad.
3. Touch [OK].

7.41.19 LLMNR Setting**(1) Use**

- To set whether or not to enable LLMNR (Linklocal Multicast Name Resolution) setting.
- To perform the name resolution to send data to a computer with Windows Vista/Server 2008 installed, select [Enable].
To perform the name resolution especially in the IPv6-only communication environment, enable this setting.

(2) Default setting

- Enable

(3) Setting item

- "Enable"
- Disable

7.42 Network Settings-NetWare Settings**7.42.1 IPX Settings****(1) IPX Settings****(a) Use**

- To enable or disable the NetWare (IPX) setting.

(b) Default setting

- ON

(c) Setting item

- "ON"

- OFF

(2) Ethernet Frame Type

(a) Use

- To set the ethernet frame type.

(b) Default setting

- Auto Detect

(c) Setting item

- "Auto Detect"
- 802.2
- 802.3
- Ethernet II
- 802.3SNAP

7.42.2 NetWare Print Settings

(1) NetWare Print Settings

(a) Use

- To set whether to use the NetWare print mode.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) NetWare Print Mode

(a) Use

- To set the NetWare print mode.

(b) Default setting

- PServer

(c) Setting item

- "PServer"
- Nprinter/Rprinter

NOTE

- After selecting either key in the NetWare print mode setting, proceed to each setting screen.

(3) Status

(a) Use

- To display NetWare status.

(b) Procedure

1. Touch [Status].
2. Touch up/down arrow keys to select the server to check.
3. Check the NetWare status.

7.42.3 P Server Settings: Print Server Name/Print Server Password

(1) Use

- To set the print server name and print server password.

(2) Procedure

1. Touch [Print Server name] or [Print Server Password].
2. Enter the print server name or the print server password (up to 63 characters) using the on-screen keyboard, and touch [OK].

7.42.4 P Server Settings: Polling Interval

(1) Use

- To set the polling interval.
- To set the interval to search the print queue.

(2) Procedure

1. Press the Clear key.

2. Enter the polling interval between 1 and 65535 using the 10-key pad.

7.42.5 P Server Settings: NDS/Bindery Setting

(1) Use

- To set whether to enable or disable the bindery setting when using NetWare4.x model and after.
- To enable the bindery service.

(2) Default setting

- NDS

(3) Setting item

- "NDS"
- NDS&Bindery

7.42.6 P Server Settings: File Server Name

(1) Use

- To set the full server name for the print server to logon.

(2) Procedure

1. Touch [File Server Name].
2. Enter the File server name (up to 47 characters) on the on-screen keyboard, and touch [OK].

7.42.7 P Server Settings: NDS Context Name

(1) Use

- To set the NDS context name (context name to register NDS print server).

(2) Procedure

1. Touch [NDS Context name].
2. Enter the NDS context name (up to 191 characters) on the on-screen keyboard, and touch [OK].

7.42.8 P Server Settings: NDS Tree Name

(1) Use

- To set the NDS tree name (name to login).

(2) Procedure

1. Touch [NDS Tree Name].
2. Enter the NDS tree name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.42.9 Nprinter/Rprinter Settings: Print Server Name

(1) Use

- To set the print server name.

(2) Procedure

1. Touch [Print Server Name].
2. Enter the printer name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.42.10 Nprinter/Rprinter Settings: Printer Number

(1) Use

- To set the printer number.

(2) Procedure

1. Touch [Auto] and cancel the reverse display.
2. Press the Clear key.
3. Enter the number between 0 and 254 using the 10-key pad.

7.42.11 User Authentication Setting (NDS)

(1) Use

- To set whether or not to use the user authentication setting.
- To conduct user authentication in netware environment.

(2) Default setting

- ON

(3) Setting item

- "ON"

- OFF

7.43 Network Settings-HTTP Server Settings

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.43.1 HTTP Server Settings

(1) Use

- To set whether or not to use the http server setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.43.2 PSWC Settings

(1) Use

- To set whether to use the PageScope Web Connection.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.43.3 IPP Settings

(1) Use

- To set whether to enable or disable IPP (Internet Printing Protocol) setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.43.4 Accept IPP jobs

(1) Use

- To set whether to allow or restrict the IPP job.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.43.5 Support Information

(1) Use

- To set the operation support information.
- For the response setting to see if IPP transmission supports each function.

(2) Procedure

1. Touch [Support Information].
2. Set "ON" or OFF for each item.

7.43.6 Printer Information

(1) Use

- To set the printer information.

(2) Procedure

1. Touch [Printer Information].

2. Enter the printer name, printer location, and printer information on the on-screen keyboard.
3. Touch [Print URI] to check the printer URI information.

7.43.7 IPP Authentication Settings

(1) Use

- To set whether or not to use the IPP authentication setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.43.8 General Settings

(1) Use

- To set the authentication method for IPP authentication.

(2) Default setting

- requesting-user-name

(3) Setting item

- "requesting-user-name"
- basic
- digest

7.43.9 User Name

(1) Use

- To set the User name for IPP authentication.

(2) Procedure

1. Touch [User Name].
2. Enter the user name on the on-screen keyboard, and touch [OK].

7.43.10 Password

(1) Use

- To set the password for IPP authentication.

(2) Procedure

1. Touch [Password].
2. Enter the password on the on-screen keyboard, and touch [OK].

7.43.11 realm

(1) Use

- To set the realm for identifying the authentication setting for IPP authentication.

(2) Procedure

1. Touch [realm].
2. Enter the realm on the on-screen keyboard, and touch [OK].

7.44 Network Settings-FTP Settings

7.44.1 FTP TX Settings

(1) Use

- To set whether to use FTP TX settings.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.44.2 FTP TX Settings: Proxy Server Address

(1) Use

- To set the proxy server address.

(2) Procedure

1. Touch [Host Address].
2. Select [Input Host Name], [IPv4 Address Input], or [IPv6 Address Input] and enter a host address.

7.44.3 FTP TX Settings: Proxy Server Port Number

(1) Use

- To set the proxy server port number.

(2) Procedure

1. Press the Clear key.
2. Enter the proxy server port number between 1 and 65535 using the 10-key pad.

7.44.4 FTP TX Settings: Port No.

(1) Use

- To set the port number to be used for transmission with FTP server.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the proxy server port number between 1 and 65535 using the 10-Key pad.

7.44.5 FTP TX Settings: Connection Timeout

(1) Use

- To set the timeout period for connecting to FTP server.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the connecting timeout period between 5 and 300 using the 10-key pad.

7.44.6 FTP Server Settings

(1) Use

- To set whether to use the FTP server of the machine for acquiring the print job data saved with [Print Data Capture](#) function.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

NOTE

- [ON] cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#)

7.44.7 FTP Server Settings-Deny Reception Command

(1) Use

- Select a command to deny a receiving job from an FTP client when using the FTP server of this machine.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- PASV/EPSV
- PORT/EPRT

7.44.8 FTP Server Settings-PORT Command Enhanced Security

(1) Use

- To set whether to enable the security of this machine against FTP bounce attacks.
- This option is not available if [Deny Reception Command] is set to [PORT/EPRT].

(2) Default setting

- Enable

(3) Setting item

- Invalid
- "Enable"

7.45 Network Settings-SMB Settings**SMB Setting**

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.45.1 Client Settings**(1) Client Settings****(a) Use**

- To set whether or not to use the SMB transmission setting.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) SMB Authentication Setting**(a) Use**

- To set the NTLM version for the user authentication.
NTLM has v1 and v2. Select the version which suits the network environment.
- [Kerberos]: Select this to use the function in the Active Directory domain environment.

(b) Default setting

- Kerberos

(c) Setting item

- NTLM v1
- NTLM v2
- NTLM v1/v2
- "Kerberos"

(3) Authentication Setting if Kerberos Fails**(a) Use**

- To specify the operation enabled when Kerberos authentication fails.

(b) Default setting

- Disable NTLM

(c) Setting item

- Enable NTLM v1/v2
- "Disable NTLM"

(4) User Authentication (NTLM)**(a) Use**

- To set whether or not to enable the user authentication setting by NTLM.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(5) DFS Setting**(a) Default setting**

- ON

(b) Setting item

- "ON"
- OFF

NOTE

- Select [ON] when using SMB transmission under an environment that uses a distributed file system (DFS).

(6) Single Sign-on Setting-Default Domain Name**(a) Use**

- Enter the default domain name to be added to the host name of the destination at SMB transmission (using up to 64 characters).
- If the domain name of the destination is not specified by the user when sending data using SMB, the domain name specified here is added.
- This item is not required when Active Directory is used as an authentication server.

(b) Procedure

- Touch [Default Domain Name], enter the default domain name.

(7) Single Sign-on Setting-SMB User Credential Setting**(a) Use**

- To set whether to use the user authentication information (login name and password) of this machine as SMB destination authentication information (host name and password).

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(8) Single Sign-on Setting-Edit SMB User Credentials**(a) Use**

- If you have selected [ON] at [SMB User Credential Setting], select whether to allow registration of the SMB destination including authentication information same as that for user authentication.

(b) Default setting

- Restrict

(c) Setting item

- Allow
- "Restrict"

7.45.2 Print Settings**(1) Use**

- To set whether to use SMB port or not in printer mode.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.45.3 Print Settings: NetBIOS Name**(1) Use**

- To set NetBIOS name.

(2) Procedure

1. Touch [NetBIOS Name].
2. Enter the NetBIOS name (up to 15 characters) on the on-screen keyboard, and touch [OK].

7.45.4 Print Settings: Print Service Name**(1) Use**

- To set the print service name.

(2) Procedure

1. Touch [Print Service Name].

2. Enter the print service name (up to 13 characters) on the on-screen keyboard, and touch [OK].

7.45.5 Print Settings: Workgroup

(1) Use

- To set the workgroup.

(2) Procedure

1. Touch [Workgroup].
2. Enter the workgroup (up to 15 characters) on the on-screen keyboard, and touch [OK].

7.45.6 WINS Settings

(1) Use

- To set whether or not to enable the WINS setting.
- To use the WINS (Windows Internet Name Service) setting is necessary.
- By using the WINS, the traffic by broadcast can be reduced, and the communication becomes available with the network where broadcast does not reach.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.45.7 WINS Settings: Automatic Retrieval Settings

(1) Use

- To set whether or not to enable the auto obtaining of the WINS server address.
- To acquire the WINS server address automatically.
- To obtain the WINS server address from DHCP server. If there are more than one address settings, up to two can be acquired.

(2) Default setting

- Enable

(3) Setting item

- "Enable"
- Disable

7.45.8 WINS Settings: WINS Server Address 1, 2

(1) Use

- To set the WINS server address.
- To use when manually entering the WINS server address.
- The primary address and the secondary address can be set.
(The primary address has the priority during operation.)

(2) Procedure

1. Touch [1] or [2].
2. Enter the WINS server address.

7.45.9 WINS Settings: Node Type Setting

(1) Use

- To set a node type.

(2) Default setting

- H Node

(3) Setting item

- B Node
- P Node
- M Node
- "H Node"

7.45.10 Direct Hosting Setting

(1) Use

- To set whether or not to enable the direct hosting setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.46 Network Settings-LDAP Settings

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.46.1 Enabling LDAP**(1) Use**

- To set whether to enable or disable the LDAP function.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.46.2 Setting Up LDAP

- Registration and/or setting concerning the LDAP server can be conducted.
- Touch [\[Setting Up LDAP\]](#), and select the optional blank key to register and/or set.

7.46.3 Setting Up LDAP-LDAP Server Name**(1) Use**

- Set the LDAP server name.

(2) Procedure

1. Touch [\[Server Name\]](#).
2. Enter the server name (up to 32 one-byte characters) on the on-screen keyboard, and touch [\[OK\]](#).

7.46.4 Setting Up LDAP-Max. Search Results**(1) Use**

- To set the Max. results of address for LDAP search.

(2) Procedure

1. Touch [\[Max. Search Results\]](#).
2. Press the Clear key.
3. Enter the Max. Search result numbers between 5 and 1000 using the 10-key pad.

7.46.5 Setting Up LDAP-Timeout**(1) Use**

- To set the timeout period for LDAP search.

(2) Procedure

1. Touch [\[Timeout\]](#).
2. Press the Clear key.
3. Enter the timeout period between 5 and 300 using the 10-key pad.

7.46.6 Setting Up LDAP-Initial Setting for Search Details**(1) Use**

- To set the initial items for search conditions in LDAP detail search.

(2) Procedure

1. Touch [\[Initial Setting for Search Details\]](#).
2. Touch the key about condition for each search item, and select the condition.

7.46.7 Setting Up LDAP-Change Search Attribute**(1) Use**

- To set attributes to be specified when performing the LDAP search.

(2) Default setting

- Name

(3) Setting item

- "Name"
- Nickname

7.46.8 Setting Up LDAP-Search**(1) Use**

- Select [ON] to display candidate destinations when entering a part of the name to search for a destination via the LDAP server.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.46.9 Setting Up LDAP-Check Connection

- It will not be displayed when [Enabling LDAP] is set to "OFF."
- It will not be displayed when the following is set to "Restrict."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[Manual Destination Input\]](#)

(1) Use

- To check the connection with the LDAP server which has been set.

(2) Procedure

1. Touch [Check Connection].
2. Confirm a proper connection and touch [Close].

7.46.10 Setting Up LDAP-Reset All Settings**(1) Use**

- To return the contents registered in the LDAP server to what they were prior to the shipping.

(2) Procedure

1. Touch [Reset All Settings].
2. Check the message and touch [Yes].
3. Touch [OK].

7.46.11 Setting Up LDAP-Server Address**(1) Use**

- To set the LDAP server address.

(2) Procedure

1. Touch [Server Address].
2. Select [Input Host Name], [IPv4 Address Input] or [IPv6 Address Input], and enter the server address.

7.46.12 Setting Up LDAP-Search Base**(1) Use**

- To set the directory path for LDAP server.

(2) Procedure

1. Touch [Search Base].
2. Enter the search base (up to 255 characters) on the on-screen keyboard, and touch [OK].

7.46.13 Setting Up LDAP-SSL Setting**(1) Use**

- To set whether to use SSL (data encryption) for connecting to LDAP server.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.46.14 Setting Up LDAP-Port Number**(1) Use**

- To set the LDAP server port number.

(2) Procedure

- Touch [Input].
- Press the Clear key.
- Enter the port number between 1 and 65535 using the 10-Key pad.

7.46.15 Setting Up LDAP-Port Number (SSL)**(1) Use**

- To set the port number for LDAP server when using SSL.

(2) Procedure

- Touch [Input].
- Press the Clear key.
- Enter the port number between 1 and 65535 using the 10-Key pad.

7.46.16 Setting Up LDAP-Certificate Verification Level Settings**(1) Use**

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	- Select whether to check that the server certificate chain (certification path) is correct. - The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	- Select whether to check that the server certificate is within the validity period. - The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

7.46.17 Setting Up LDAP-Authentication Type**(1) Use**

- To set the authentication method to logon to LDAP server.

Anonymous	User name and password are not necessary. (Dynamic authentication will be invalid when anonymous is selected.)
Simple	Simple method which needs the user name and the password.
Digest-MD5	Method available with normal LDAP server. When failing to authenticate with Digest-MD5, it automatically switches to CRAM-MD5.
GSS-SPNEGO	Method available with Windows active directory (Kerberos authentication).
NTLM v1	Standard user authentication format used for Windows NT, etc.
NTLM v2	Standard user authentication format used for Windows NT, etc. It has been applied to the Windows NT4.0 SP4 and later versions. Its security has been enhanced compared to v1.

(2) Default setting

- Anonymous

(3) Setting item

- "Anonymous"
- Simple
- Digest-MD5
- GSS-SPNEGO
- NTLM v1
- NTLM v2

7.46.18 Setting Up LDAP-Select Server Authentication Method**(1) Use**

- To set the authentication system when conducting LDAP server authentication.
- To use when changing the server authentication system.

Use Settings	It conducts authentication with the setting value set by [LDAP Server Registration].
Use User Authentication	It conducts authentication with the registration data for the copier's user authentication.

Dynamic Authentication	It conducts authentication by dynamic authentication.
------------------------	---

(2) Default setting

- Use Settings

(3) Setting item

- "Use Settings"
- Use User Authentication
- Dynamic Authentication

7.46.19 Setting Up LDAP-Referral Setting**(1) Use**

- To set whether or not to use the referral setting.
- To use when tracing the server with referral at the time of LDAP connection.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.46.20 Setting Up LDAP-Login Name**(1) Use**

- To set the login name to connect to LDAP server.

(2) Procedure

1. Touch [Login Name].
2. Enter the login name (up to 255 characters) on the on-screen keyboard, and touch [OK].

NOTE

- The setting is not available when authentication method is set to anonymous.

7.46.21 Setting Up LDAP-Password**(1) Use**

- To set the password for connecting to LDAP server.

(2) Procedure

1. Touch [Password].
2. Enter the password (up to 63 characters) on the on-screen keyboard, and touch [OK].

NOTE

- The setting is not available when authentication method is set to anonymous.

7.46.22 Setting Up LDAP-Domain Name**(1) Use**

- To set the domain name for connecting to LDAP server.

(2) Procedure

1. Touch [Domain Name].
2. Enter the domain name (up to 64 characters) on the on-screen keyboard, and touch [OK].

7.46.23 Setting Up LDAP-Search Attributes Authentication**(1) Use**

- To set whether to enable the attribute-based authentication when [Authentication Type] is set to [Simple] and [Select Server Authentication Method] to [Dynamic Authentication].

(2) Default setting

- No Limit

(3) Setting item

- Enable
- "No Limit"

7.46.24 Setting Up LDAP-Search Attribute(s)**(1) Use**

- To enter the search attribute to be automatically added before the user name.

(2) Procedure

1. Touch [Edit].
2. In normal circumstances, specify "uid" before the user name, however, depending on your environment, you need to specify other attribute such as "cn".

7.46.25 Default LDAP Server Setting**(1) Use**

- To set the server to be used as the default when searching LDAP.

(2) Procedure

1. Touch [Default LDAP Server Setting].
2. Select the optional server.

7.46.26 Default Search Result Display Setting**(1) Use**

- Select which of the following must be preferentially displayed, the fax number or E-mail address, as a result of LDAP search.

(2) Default setting

- E-Mail

(3) Setting item

- "E-Mail"
- Fax

7.47 Network Settings-E-Mail Settings-E-Mail TX (SMTP)

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.47.1 E-Mail TX (SMTP)**(1) Use**

- To set whether to enable or disable the e-mail transmission setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.47.2 Scan to E-mail**(1) Use**

- To set whether or not to transfer scanned data by e-mail.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.47.3 Status Notification**(1) Use**

- To set whether or not to inform the status by e-mail.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.47.4 Total Counter Notification**(1) Use**

- To set whether or not to inform the total counter by e-mail.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.47.5 SMTP Server Address**(1) Use**

- To set the SMTP server address.

(2) Procedure

1. Touch [Host Address].
2. Select [Input Host Name], [IPv4 Address Input] or [IPv6 Address Input], and enter the server address.

7.47.6 Binary Division**(1) Use**

- To set whether to carry out binary division for data to be transmitted.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.47.7 Divided Mail Size**(1) Use**

- To set the dividing size when carrying out the binary division for data to be transmitted.
- To change the dividing size of the data.

(2) Procedure

1. Press the Clear key.
2. Enter the dividing mail size between 100 and 15000 (in 100 increments) using the 10-key pad.

7.47.8 Connection Timeout**(1) Use**

- To set the timeout period for connection in transmitting e-mail to SMTP server.

(2) Procedure

- Select the timeout period using [+] / [-] keys.

(3) Default setting

- 60 sec.

(4) Setting range

- 30 to 300, in 30 sec. increments

7.47.9 Server Capacity**(1) Use**

- To set the Max. capacity per mail which SMTP server can receive.

(2) Default setting

- No Limit

(3) Setting item

- "No Limit"
- 1 to 100

7.47.10 SSL/TLS Settings**(1) Use**

- To set whether or not to use SSL/TLS when sending an e-mail.

(2) Default setting

- OFF

(3) Setting item

- SMTP over SSL
- Start TLS
- "OFF"

7.47.11 Port No.**(1) Use**

- To set the port number for transmission with SMTP server.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-key pad.

7.47.12 Port Number (SSL)**(1) Use**

- To set the port number when using SSL.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number (SSL) between 1 and 65535 using the 10-key pad.

7.47.13 Certificate Verification Level Settings**(1) Use**

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	Select whether to check that the server certificate chain (certification path) is correct. The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	Select whether to check that the server certificate is within the validity period. The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

7.47.14 Detail Settings: SMTP Authentication**(1) Use**

- To set whether or not to enable SMTP authentication.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

NOTE

- When set to "ON", enter the [User ID], [Password] and [Domain Name].

7.47.15 Detail Settings: POP Before SMTP Authentication**(1) Use**

- To set whether or not to enable the POP Before SMTP authentication.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.47.16 Detail Settings: POP Before SMTP Time

(1) Use

- To set the time necessary for POP Before SMTP authentication.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the time for POP Before SMTP between 0 and 60 using the 10-key pad.

7.48 Network Settings-E-Mail Settings-E-Mail RX (POP)

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.48.1 E-Mail RX (POP)

(1) Use

- To set whether to enable or disable the e-mail reception setting.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.48.2 POP Server Address

(1) Use

- To set the POP server address.

(2) Procedure

1. Touch [Host Address].
2. Select [Input Host Name], [IPv4 Address Input] or [IPv6 Address Input], and enter the server address.

7.48.3 Connection Timeout

(1) Use

- To set the timeout period for connection in receiving e-mail to POP server.

(2) Procedure

- Select the timeout period of connection using [+] / [-] keys.

(3) Default setting

- 60 sec.

(4) Setting range

- 30 to 300, in 30 sec. increments

7.48.4 SSL Setting

(1) Use

- To set whether or not to use SSL when receiving an e-mail.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.48.5 Port No.

(1) Use

- To set the port No. for transmitting with POP server.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port No. between 1 and 65535 using the 10-key pad.

7.48.6 Port Number (SSL)**(1) Use**

- To set the port number when using SSL.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.
3. Enter the port number (SSL) between 1 and 65535 using the 10-key pad.

7.48.7 Certificate Verification Level Settings**(1) Use**

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

7.48.8 Login Name**(1) Use**

- To enter a login name used for POP server authentication.

(2) Procedure

1. Touch [Login Name].
2. Enter a login name.

7.48.9 Password**(1) Use**

- To enter a login name used for POP server authentication.

(2) Procedure

1. Touch [Password].
2. Enter a password.

7.48.10 APOP Authentication**(1) Use**

- To set whether to use APOP authentication.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.48.11 Check for New Messages

- It will not be displayed when either [Internet Fax] is set to "OFF" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Setting\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(1) Use

- To set whether to automatically check a POP server for new messages.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.48.12 Polling Interval

- It will not be displayed when either [Internet Fax] is set to "OFF" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Setting\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(1) Use

- To set a polling interval at which a POP server is checked for new messages.

(2) Default setting

- 15 minutes

(3) Setting range

- 1 to 60 minutes

7.49 Network Settings-E-Mail Settings-S/MIME Communication Settings

7.49.1 S/MIME Communication Settings

(1) Use

- To set whether to activate S/MIME communication that provides encrypted E-mail transmission.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.49.2 Digital Signature

(1) Use

- Set whether to add a digital signature to S/MIME messages.

(2) Default setting

- Do not add signature

(3) Setting item

- "Do not add signature"
- Always add signature
- Select when sending

7.49.3 E-Mail Text Encryption Method

(1) Use

- To select an encryption method used for S/MIME E-mail text.

(2) Default setting

- 3DES

(3) Setting item

- RC2-40
- RC2-64
- RC2-128
- DES
- "3DES"
- AES-128
- AES-192
- AES-256

7.49.4 Print S/MIME Information

(1) Use

- To select whether to print S/MIME information when sending and receiving E-mail.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.49.5 Automatically Obtain Certificates**(1) Use**

- To set whether to automatically acquire a certificate when sending or receiving E-mail.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.49.6 Certificate Verification Level Settings**(1) Use**

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.

7.49.7 Digital Signature Type**(1) Use**

- To add digital signature when sending E-mails, select a digital signature type.

(2) Default setting

- SHA-1

(3) Setting item

- "SHA-1"
- SHA-256

7.50 Network Settings-SNMP Settings**7.50.1 SNMP Settings****(1) SNMP Settings****(a) Use**

- To set whether to use SNMP (Simple Network Management Protocol) or not.
- To set the SNMP version to be used.
- To readout management information base and to enter community name for writing.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) SNMP v1/v2c (IP)**(a) Use**

- To set whether or not to use SNMP v1/v2c (IP).

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) SNMP v3 (IP)**(a) Use**

- To set whether or not to use SNMP v3 (IP).

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(4) SNMP v1 (IPX)**(a) Use**

- To set whether or not to use SNMP v1 (IPX).

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

7.50.2 UDP Port Number**(1) Use**

- To set the UDP standby port number which is used for SNMP (IP).

(2) Procedure

1. Touch the Clear key.
2. Enter the port number between 1 and 65535 using the 10-key pad.

7.50.3 SNMP v1/v2c Settings**(1) Use**

- To conduct setting when using SNMP v1/v2c.
- To use when entering the community name for reading the Management Information Base (MIB) and writing to it.

(2) Read Community Name Settings**(a) Procedure**

- Enter a read community name.

(3) Write Setting**(a) Default setting**

- Enable

(b) Setting item

- "Enable"
- Invalid

NOTE

- [Enable] cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

(4) Write Community Name Settings**(a) Procedure**

- Enter a write community name.

7.50.4 SNMP v3 Settings**(1) Context Name Settings****(a) Use**

- Set the context name which is used for SNMP v3.

(b) Procedure

1. Touch [Context Name].
2. Enter the context name (up to 64 characters) on the on-screen key board, and touch [OK].

(2) Discovery User Permissions**(a) Use**

- To set whether or not to enable the discovery authority user which is used for SNMP v3.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) Discovery User Name Settings**(a) Use**

- To set the name of the discovery authority users which is used for SNMP v3.

(b) Procedure

1. Touch [Discovery User Name].
2. Enter the discovery user name (up to 32 characters) on the on-screen keyboard, and touch [OK].

NOTE

- The user name same with the read user name or the write user name cannot be set.

(4) Read User Name Settings**(a) Use**

- To set the read-only user name used for SNMP v3.

(b) Procedure

1. Touch [Read User Name].
2. Enter the read user name (up to 32 characters) on the on-screen keyboard, and touch [OK].

NOTE

- The user Name same with the discovery user name cannot be used.

(5) Security Level**(a) Use**

- To set the security level of the read-only user used for SNMP v3.

OFF	No authentication will be conducted when the read-only user accesses.
auth-password	Conducts authentication only for the authentication password when the read-only user accesses.
auth-password/priv-password	Conducts authentication by authentication password and privacy password when read-only user accesses.

(b) Default setting

- auth-password/priv-password

(c) Setting item

- OFF
- auth-password
- "auth-password/priv-password"

(6) Password Setting**(a) Use**

- To set the authentication password for the read-only user which is used for SNMP v3.

(b) Procedure

1. Select a type of password.
2. Enter the password (up to 32 characters) on the on-screen keyboard, and touch [OK].

(7) Write User Name Settings**(a) Use**

- To set the name of the reading/writing authority user which is used for SNMP v3.

(b) Procedure

1. Touch [Write User Name].
2. Enter the write user name (up to 32 characters) on the on-screen keyboard, and touch [OK].

NOTE

- The user name same with the discovery use name cannot be used.

(8) Security Level**(a) Use**

- To set the security level for the reading/writing authority user which is used for SNMP v3.

OFF	Authentication will not be conducted when reading/writing authority user accesses.
auth-password	Conducts authentication only with authentication password when reading/writing authority user accesses.
auth-password/priv-password	Conducts authentication by authentication password and privacy password when reading/writing authority user accesses.

(b) Default setting

- auth-password/priv-password

(c) Setting item

- OFF
- auth-password
- "auth-password/priv-password"

NOTE

- [Authentication OFF] cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

(9) Password Setting**(a) Use**

- To set the authentication password for the read-only user which is used for SNMP v3.

(b) Procedure

- Select a type of password.
- Enter the password (up to 32 characters) on the on-screen keyboard, and touch [OK].

(10) Encryption Algorithm**(a) Use**

- To set the encryption algorithm in SNMPv3 communication.

(b) Default setting

- DES

(c) Setting item

- "DES"
- AES-128

(11) Authentication Algorithm**(a) Use**

- To set the authentication algorithm in SNMPv3 communication.

(b) Default setting

- MD5

(c) Setting item

- "MD5"
- SHA-1

7.50.5 TRAP Setting**(1) Use**

- To set whether or not to allow the TRAP function.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

7.50.6 TRAP Setting When Authentication failed**(1) Use**

- To set whether or not to enable the TRAP function when authentication failed.

(2) Default setting

- Invalid

(3) Setting item

- Enable
- "Invalid"

7.51 Network Settings-AppleTalk Settings

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.51.1 AppleTalk Settings**(1) Use**

- To set whether to enable or disable the AppleTalk setting.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.51.2 Printer Name**(1) Use**

- To set the printer name displayed on the AppleTalk network.

(2) Procedure

1. Touch [Printer Name].
2. Enter the printer name (up to 31 characters) on the on-screen keyboard, and touch [OK].

7.51.3 Zone Name**(1) Use**

- To set the zone name connected with AppleTalk network.

(2) Procedure

1. Touch [Zone Name].
2. Enter the zone name (up to 31 characters) on the on-screen keyboard, and touch [OK].

7.51.4 Current Zone**(1) Use**

- To display the current zone on AppleTalk network.

7.52 Network Settings-Bonjour Setting**7.52.1 Bonjour Setting****(1) Use**

- To use when operating under the Bonjour service environment.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.52.2 Bonjour Name**(1) Use**

- To set the name for identifying over the bonjour network.

(2) Procedure

1. Touch [Bonjour Name].
2. Enter the Bonjour name (up to 64 characters) on the on-screen keyboard, and touch [OK].

7.53 Network Settings-TCP Socket Settings

7.53.1 TCP Socket

(1) TCP Socket

(a) Use

- To set whether or not to set the TCP socket.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) Use SSL/TLS

(a) Use

- Select to use SSL communication.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) Port Number

(a) Use

- To set the port number for TCP socket transmission.

(b) Procedure

1. Touch the Clear key.
2. Enter the port number between 1 and 65535 using the 10-key pad.

(4) Port Number (SSL/TLS)

(a) Use

- To change the SSL communication port number.

(b) Procedure

1. Press the Clear key.
2. Enter the port number between 1 and 65535 using the 10-key pad.

7.53.2 TCP Socket (ASCII Mode)

(1) TCP Socket/ASCII Mode

(a) Use

- To set whether or not to set the TCP socket for ASCII mode.
- This function is used to use applications that perform TCP socket communications in ASCII mode.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) Port Number (ASCII Mode)

(a) Use

- To set the port number which is used for TCP socket transmission by ASCII mode.

(b) Procedure

1. Touch the Clear key.
2. Enter the port number between 1 and 65535 using the 10-key pad.

7.54 Network Settings-Network Fax Settings

- It will not be displayed on the screen when all items are set to "OFF" in the following settings.
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Network Fax Settings\]](#)

7.54.1 Network Fax Function Settings

(1) IP Address Fax Function

- Setting will be available only when [IP Address Fax] is set to "ON" in the following settings.
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Network Fax Settings\]](#)

(a) Use

- To set whether or not to use IP address fax function.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) Internet Fax Function

- Setting will be available only when [Internet Fax] is set to "ON" in the following settings.
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Network Fax Settings\]](#)

(a) Use

- To set whether or not to use Internet fax function.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

7.54.2 SMTP TX Settings

(1) Use

- To set SMTP TX when network fax function is being used.
- To set SMTP TX port number and connecting time out period when network fax function is being used.

(2) Port No.

(a) Procedure

- Touch [Input].
- Enter the port number between 1 and 65535 using the 10-key pad.

(3) Connection Timeout

(a) Procedure

- Touch [Input].
- Enter the connection timeout time between 5 and 1000 (sec.) using the 10-key pad.

7.54.3 SMTP RX Settings

(1) Use

- To set SMTP RX when network fax function is being used.
- To set SMTP RX port number and connecting time out period when network fax function is being used.

(2) SMTP RX

(a) Default setting

- ON

(b) Setting item

- "ON"
- OFF

(3) Port No.

(a) Procedure

- Touch [Input].
- Enter the port number between 1 and 65535 using the 10-key pad.

(4) Connection Timeout

(a) Procedure

- Touch [Input].

2. Enter the connection timeout time between 5 and 1000 (sec.) using the 10-key pad.

7.55 Network Settings-WebDAV Settings-WebDAV Client Settings

7.55.1 WebDAV Client Setting

(1) Use

- To set whether to use WebDAV Client Settings.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.55.2 Proxy Server Address

(1) Use

- To set the proxy server address.

(2) Procedure

1. Touch [Host Address].
2. Select [Input Host Name], [IPv4 Address Input], or [IPv6 Address Input] and enter a host address.

7.55.3 Proxy Server Port Number

(1) Use

- To set the proxy server port number.

(2) Procedure

1. Press the Clear key.
2. Enter the proxy server port number between 1 and 65535 using the 10-key pad.

7.55.4 User Name

(1) Use

- To set the user name for WebDAV authentication.

(2) Procedure

1. Touch [User Name].
2. Enter the user name on the on-screen keyboard, and touch [OK].

7.55.5 Password

(1) Use

- To set the password for WebDAV authentication.

(2) Procedure

1. Touch [Password].
2. Enter the password on the on-screen keyboard, and touch [OK].

7.55.6 Chunk Transmission

(1) Use

- To set whether to transmit data by dividing it into some chunks.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.55.7 Connection Timeout

(1) Use

- To set the timeout period for connecting to WebDAV server.

(2) Procedure

1. Touch [Input].
2. Press the Clear key.

3. Enter the connecting timeout period between 5 and 300 using the 10-key pad.

7.55.8 Server Auth. Character Code

(1) Use

- To set a character code used during WebDAV server authentication.

(2) Default setting

- UTF-8

(3) Setting item

- "UTF-8"
- Windows Code page

7.55.9 Certificate Verification Level Settings

(1) Use

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

7.56 Network Settings-WebDAV Settings-WebDAV Server Settings

7.56.1 WebDAV Server Settings

(1) Use

- To set whether to use WebDAV Server Settings.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.56.2 SSL Setting

- It is displayed only when SSL Certificate is registered.

(1) Use

- To set whether to use SSL/TLS for communications when using the machine as WebDAV server.

(2) Default setting

- Non-SSL Only

(3) Setting item

- "Non-SSL Only"
- SSL Only
- SSL/Non-SSL

NOTE

- When "ON" is selected in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#), only [SSL Only] is selectable.

7.56.3 Password Setting

(1) Use

- To set a password to access WebDAV server.

(2) Procedure

1. Touch [Password Setting].
2. Enter a password with the keyboard on the screen, and touch [OK].

NOTE

- Touching [Initial Password] can restore the default password setting.

(Default password: sysadm)

7.57 Network Settings-WebDAV Settings-Proxy Setting for Remote Access

7.57.1 Proxy Setting for Remote Access

(1) Use

- To configure the settings of the proxy server used for CS Remote Care. When selecting [ON], the settings below are available.
- To configure the settings when a proxy server is used in http connection in CS Remote Care.
- To configure the settings of the proxy server used when MFP accesses to KM license server via WebDAV connection from [Administrator Settings] -> [License Settings] -> [Install License] (WebDAV connection) or [Service Mode] -> [Billing Setting] to activate i-Option function.

WebDAV Client Settings and Synchronization	Select whether to use the proxy server used for WebDAV transmission as a proxy server for remote diagnosis.
Individual Settings	To use a different proxy server for remote diagnosis, enter the proxy server information.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.58 Network Settings-DPWS Settings-DPWS Common Settings

7.58.1 Friendly Name

(1) Use

- To define a friendly name that is used when printing a job with WSD (Web Service on Devices) function.

(2) Procedure

1. Touch [Friendly Name].
2. Enter the friendly name (up to 62 characters) on the on-screen keyboard, and touch [OK].

7.58.2 Publication Service

(1) Use

- To set whether or not to enable Publication Service.
- Select [Enable] when using this machine under an environment where communication is possible only with Windows Vista's IPv6.

(2) Default setting

- Invalid

(3) Setting item

- Enable
- "Invalid"

7.58.3 Enable SSL

- It will be displayed only when SSL Certificate is registered.

(1) Use

- To set whether to use SSL when using WSD (Web Service on Devices) function.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.58.4 Certificate Verification Level Settings

- It will be displayed only when SSL Certificate is registered.

(1) Use

- To verify the server certificate, configure settings to verify the certificate.

(2) Procedure

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.

Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.

7.59 Network Settings-DPWS Settings-DPWS Extension Settings

DPWS Extension Settings

- This function allows you to configure the settings that enable the MFP to be used as a scanner via the discovery proxy defined by WS-Discovery under the condition where multicast communication is restricted.

7.59.1 Enable Proxy

(1) Use

- To set whether to use the discovery proxy.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.59.2 Register Proxy

- To set the discovery proxy server used on this machine.

(1) Register Proxy-Host Name

(a) Use

- Enter the discovery proxy server address. Select [Input Host Name], [IPv4 Address Input], or [IPv6 Address Input] and enter a host address.

(2) Register Proxy-File Path

(a) Use

- Enter the service name at the path part of the URL where the WS-Discovery service is published in the discovery proxy server (using up to 255 characters).

(3) Register Proxy-SSL Setting

(a) Use

- To set whether to use SSL to encrypt a communication with the discovery proxy server, select [ON].

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Register Proxy-Port Number

(a) Use

- To set the port number of the discovery proxy server.

(b) Procedure

- Press the Clear key.
- Enter the port number between 1 and 65535 using the 10-key pad.

7.60 Network Settings-DPWS Settings-Printer Settings

7.60.1 Printer Settings

(1) Use

- To set whether to use this printer as a WSD printer.

(2) Default setting

- OFF

(3) Setting item

- ON

- "OFF"

7.60.2 Printer Name

(1) Use

- To set the WS printer name.

(2) Procedure

1. Touch [Printer Name].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.60.3 Printer Location

(1) Use

- To set the WS printer location.

(2) Procedure

1. Touch [Printer Location].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.60.4 Printer Information

(1) Use

- To set the WS printer information.

(2) Procedure

1. Touch [Printer Information].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.61 Network Settings-DPWS Settings-Scanner Settings

7.61.1 Scanner Settings

(1) Use

- To set whether to use this machine as a WSD scanner.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.61.2 Scanner Name

(1) Use

- To set the WS scanner name.

(2) Procedure

1. Touch [Scanner Name].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.61.3 Scanner Location

(1) Use

- To set the WS scanner location.

(2) Procedure

1. Touch [Scanner Location].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.61.4 Scanner Information

(1) Use

- To set the WS scanner information.

(2) Procedure

1. Touch [Scanner Information].
2. Enter the friendly name (up to 63 characters) on the on-screen keyboard, and touch [OK].

7.61.5 Connection Timeout

(1) Use

- To set the timeout period for connection of WS scanner.

(2) Procedure

1. Press the Clear key.
2. Enter the connecting timeout period between 30 and 300 using the 10-key pad.

7.62 Network Settings-Distributed Scan Settings

7.62.1 Distributed Scan Settings

(1) Use

- Used to use scan server service provided by the server under the environment where Windows Server 2008 R2 is a predominant system that includes Active Directory.
- MFP can be integrated into the system where distributed scan management is used.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"
- The following settings are necessary for setting the [ON].
 - It will be displayed when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[DPWS Settings\]](#) -> [\[Scanner Settings\]](#)
 - It will be displayed when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[DPWS Settings\]](#) -> [\[DPWS Common Settings\]](#) -> [\[Enable SSL\]](#)

7.63 Network Settings-Detail Settings-Device Setting

7.63.1 MAC Address

(1) Use

- To display the MAC address of the machine.

(2) Procedure

- The address cannot be changed.

7.63.2 Network Speed

(1) Use

- To set the network speed.

(2) Default setting

- Auto (10M/100Mbps)

(3) Setting item

- "Auto (10M/100Mbps)"
- Auto (10M/100Mbps/1Gbps)
- 10Mbps Full Duplex
- 10Mbps Half Duplex
- 100Mbps Full Duplex
- 100Mbps Half Duplex
- 1Gbps Full Duplex

NOTE

- When Network speed setting is changed, turn off the main power switch and turn it on again more than 10 seconds after.

7.63.3 LLTD Setting

(1) Use

- To set whether or not to enable LLTD (Link Layer Topology Discovery).
- By enabling LLTD, Windows Vista's Network Map can show this machine's location on the network.

(2) Default setting

- Enable

(3) Setting item

- "Enable"
- Disable

7.64 Network Settings-Detail Settings-Time Adjustment Setting

7.64.1 Time Adjustment Setting

(1) Use

- To set whether to enable or disable the NTP setting.
- To synchronize the time between the server and the client.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.64.2 Auto IPv6 Retrieval

(1) Use

- To set whether or not to automatically obtain NTP server's IPv6 address.

(2) Default setting

- On

(3) Setting item

- "On"
- Off

7.64.3 NTP Server Setting

(1) Host Address

(a) Use

- To set the NTP server address.

(b) Procedure

1. Touch [Host Address].
2. Select [Input Host Name], [IPv4 Address Input], or [IPv6 Address Input] and enter a host address.

(2) Port Number

(a) Procedure

1. Touch the Clear key.
2. Enter the port number between 1 and 65535 using the 10-key pad.

7.64.4 Auto Time Adjustment

(1) Use

- To set whether or not to automatically adjust time.

(2) Default setting

- Off

(3) Setting item

- On
- "Off"

7.64.5 Polling Interval

(1) Use

- To set a polling interval when Auto Time Adjustment is set to ON.

(2) Procedure

1. Press the Clear key.
2. Enter a polling interval within the range between 1 to 240 hours with the 10-key pad.

7.65 Network Settings-Detail Settings-Status Notification Setting

- It will not be displayed when the following setting shows that authentication device 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
- To notify status, notifications both by E-mail and by SNMP TRAP function can be set. For E-mail, up to ten IP addresses and one IPX address can be set. For SNMP TRAP function, up to five IP addresses and one IPX can be set.

7.65.1 Register Notification Address (IP Address)

(1) Use

- To set IP addresses to which machine status notifications are sent.
- Up to 5 addresses can be registered.

(2) Procedure

1. From IP address 1 to 5, select an IP address where settings are made.
2. Touch [Host Address].
3. Select [Input Host], [IPv4 Address Input] or [IPv6 Address Input] and enter a host address.
4. Touch the Clear key and enter a port number within the range of 1 to 65535 using the 10-key pad.
5. Touch [Community Name] and enter a community name.
6. Touch [Notification Items] and set the items to be notified to [ON].
7. Touch [OK] and finish the settings.

7.65.2 Register Notification Address (IPX Address)

(1) Use

- To set IPX addresses to which machine status notifications are sent.

(2) Procedure

1. Touch [IPX Address].
2. Touch [Network Address] or [Node Address] and enter an address.
3. Touch [Community Name] and enter a community name.
4. Touch [Notification Items] and set the items to be notified to [ON].
5. Touch [OK] and finish the settings.

7.65.3 Register Notification Address (E-mail Address)

(1) Use

- To set E-mail addresses to which machine status notifications are sent.
- Up to 10 addresses can be registered.

(2) Procedure

1. Touch [Forward].
2. From E-mail addresses 1 to 10, select an E-mail address where settings are made.
3. Touch [Edit E-Mail Address].
4. Enter an E-mail address (up to 320 one-byte characters) using the keyboard on the screen and touch [OK].
5. Touch [Notification Items] and set the items to be notified to [ON].
6. Touch [OK] and finish the settings.

7.66 Network Settings-Detail Settings-Total Counter Notification Settings

7.66.1 Notification Schedule Setting

(1) Use

- To set the schedule for informing the total counter value.
- Two different schedules can be set for reporting.

(2) Procedure

1. Touch [Schedule 1] or [Schedule 2].
2. Select the reporting cycle from [Daily], [Weekly] or [Monthly].
3. When selecting [Daily] for the reporting cycle, set the Interval of day(s).
4. When selecting [Weekly] for the reporting cycle, set the Interval of week(s) and day of the Week.
5. When selecting [Monthly] for the reporting cycle, set the Interval of month(s) and date of the month.

7.66.2 Notification Address Setting

(1) Use

- To set the e-mail address for reporting the total counter value.
- Up to three e-mail addresses can be set.
- It can be selected whether to apply the schedule of the [Set Schedule] to each address.

(2) Procedure

1. Touch [Address 1], [Address 2] or [Address 3].
2. Touch [Edit E-Mail Address].
3. Enter the e-mail address (up to 320 one-byte characters) on the on-screen keyboard, and touch [OK].
4. Select whether to notify or ignore Eco-related information.
5. Touch [Schedule Settings].
6. Select ON/OFF for each schedule.

7.66.3 Model Name

(1) Use

- To set the device name for identifying the copier when reporting the total counter.

(2) Procedure

1. Touch [Model Name].
2. Enter the model name (up to 20 one-byte characters) on the on-screen keyboard, and touch [OK].

7.66.4 Send Now**(1) Use**

- To transfer the current total counter value to the set address.

7.67 Network Settings-Detail Settings-PING Confirmation**7.67.1 Use**

- To set the TCP/IP network diagnosis by PING.

7.67.2 Procedure

1. Touch [Host Address] for PING transmission.
2. Select [Input Host Name], [IPv4 Address Input], or [IPv6 Address Input] and enter a host address.
3. Touch [Check Connection] key to check the connection.

7.68 Network Settings-Detail Settings-SLP Setting**7.68.1 Use**

- To set whether to use SLP or not.
- Device search will be available with TWAIN by setting SLP enable.

7.68.2 Default setting

- Enable

7.68.3 Setting item

- "Enable"
- Disable

7.69 Network Settings-Detail Settings-LPD Setting**7.69.1 Use**

- To set whether to use LPD during printing or not.

7.69.2 Default setting

- Enable

7.69.3 Setting item

- "Enable"
- Disable

7.70 Network Settings-Detail Settings-Prefix/Suffix Setting**7.70.1 ON/OFF Setting****(1) Use**

- To set whether to add prefix or suffix to the address when calling or entering an address.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.70.2 Prefix/Suffix Setting**(1) Use**

- To register or change the prefix or suffix.
- Eight types of prefix and suffix can be added.

Prefix	Letters added to the top of the text (header part)
Suffix	Letters added to the bottom of the text (footer part)

(2) Procedure

- Available number to be registered as prefix is up to 20 characters.
- Available number to be registered as suffix is up to 64 characters.

7.71 Network Settings-Detail Settings-Error Code Display Setting

7.71.1 Use

- To set whether or not to display an error code when a network-related error occurs.
- To help to identify the cause of network error by displaying an error code.

7.71.2 Default setting

- OFF

7.71.3 Setting item

- ON
- "OFF"

7.72 Network Settings-IEEE802.1X Authentication Settings

NOTE

- IEEE802.1X authentication settings are made with PageScope Web Connection.

7.72.1 IEEE802.1X Authentication Settings

(1) Use

- To set whether or not to use IEEE802.1X authentication.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.72.2 Auth. Status

(1) Use

- Displays present IEEE802.1X authentication status.

7.72.3 Reset Job Settings

(1) Use

- Returns all IEEE802.1X authentication settings to initial values.

7.72.4 Certificate Verification Level Settings

(1) Procedure

- Sets a certificate verification method for server certificate verification.

Expiration Date	Select whether to check that the server certificate is within the validity period.
CN	Select whether to check that the CN of the server certificate matches the server address.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.

7.73 Network Settings-Web Browser Setting

- This is displayed only when the optional i-Option LK-101 v3 and upgrade kit UK-204 are enabled.

7.73.1 Use

- To set whether to use the web browser function.

7.73.2 Default setting

- Enable

7.73.3 Setting item

- "Enable"
- Invalid

7.74 Network Settings-Bluetooth Setting

- It will be displayed only when the following setting is set to "Invalid."
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Bluetooth Settings\]](#)

7.74.1 Use

- To set whether to enable or disable the Bluetooth function.

7.74.2 Default setting

- Enable

7.74.3 Setting item

- "Enable"
- Invalid

7.75 Network Settings-Single Sign-on Setting

Single Sign-on Setting

- Under the environment of authentication by Active Directory, single sign-on authentication can be enabled.
- When [Administrator Settings] -> [User Authentication/Account Track] -> [General Settings] -> [User Authentication] is set to [External Server Authentication] or [Main + External Server], this function is available.

7.75.1 Domain Login Setting

(1) Use

- To set whether to use the single sign-on function or not.
- To configure the settings on the Active Directory domain that allows single sign-on login.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.

<Host Name>

- Enter the host name of this machine (using up to 253 characters, including only - and . for symbol marks).
Enter the DNS host name specified in [Administrator Settings] -> [Network Settings] -> [TCP/IP Settings] -> [DNS Host].

<Domain Name>

- Enter the domain name of Active Directory (using up to 64 characters).

<Account Name>

- Enter the account name that has a privilege to participate users in the Active Directory domain (using up to 64 characters).

<Password>

- Enter the password of the account that has a privilege to participate users in the Active Directory domain (using up to 64 characters, excluding spaces and ").

<TX Timeout>

- To set the time-out time (30 Second is specified by default).

7.75.2 Applications and Settings

(1) Use

- To check the list of the MFP services available in the registered Active Directory domain.

7.75.3 Auto Log Out Time

(1) Use

- To set the time period during which single sign-on authentication information is kept.

(2) Default setting

- 1 Hour

(3) Setting item

- 15 Minutes
- 30 Minutes
- "1 Hour"
- 5 Hours
- 10 Hours
- 24 Hours

7.76 Network Settings-IWS Settings

7.76.1 IWS Settings

(1) Use

- To configure the settings of the WebDAV server which is used to transfer data in the IWS (Internal Web Server) function.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
 1. Touch [Password] in [File Upload Authentication Settings] and enter the password used to access the server.
 2. Set the port number in [Port Number] using the 10-key pad.
 3. Select Enable or No Limit for external access in [External Access].

7.77 Network Settings-Remote Panel Settings**Remote Panel Settings**

- It will not be displayed when [CE Authentication] is set to "OFF" in the following settings.
[Service Mode] -> [Enhanced Security]
- Issue and install the self-signed certificate from Device Certificate Setting under Security Setting of PageScope Web Connection.
- Enable CE Password.
- The control panel of this machine can be operated remotely from a computer on the network.
- The following two methods are available for operating the control panel.

Using the dedicated software	This method uses the dedicated software that collects screen information of the control panel of this machine periodically, and operates the control panel from a computer on the network. You must prepare a dedicated remote control software program and server. Despite the burden, this method enables you to control the machine remotely even from a computer located outside the router network.
Accessing the machine directly	This method accesses this machine directly from another computer on the network, and operates the control panel of the machine using a Web browser. A dedicated remote control software program is not required, but the computer used for the remote control must be able to access this machine.

- During remote operations, display on the control panel can be masked to thereby lock the operation on the MFP side (the MFP control panel is forced into the locked state when the machine is set into the service mode through remote operation).
- The control panel can also be unlocked through remote operation. The MFP control panel is enabled when unlocked remotely.
- Operations performed through the MFP control panel while it is in the unlocked state can be reflected in the remote panel side.
- The remote operations are disabled under the following conditions:
 - Service mode operations are being performed on the MFP.
 - Remote operations are already performed from another PC.

7.77.1 Server Settings**(1) Use**

- To access this machine directly and control the control panel of the machine remotely, select [ON].

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
 - <Server Settings - Password Authentication>
 - Select whether to request password entry for connecting with this machine. To request for a password entry, select [Yes], and enter the password (using up to 64 characters).
 - <Server Settings - IP Filtering (Permit Access)>
 - Select [Enable] to specify IP addresses allowed to access. Also enter the range of IP addresses allowed to access.
 - <Port Number>
 - To set the port number.
 - <Connection Timeout>
 - To set the time-out time (60 Second is specified by default).

Starting the remote operations

Access the MFP web server (URL: https://IP_address_of_MFP:Port_Number/panel/top.html) through the web browser.

- If Password Authentication is set, enter the set password.
- If IP Filtering is enabled, connection can be established only through the authorized address.

7.77.2 Client Settings**(1) Use**

- To control the control panel of this machine remotely using the dedicated software, select [ON].

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.

<Port No.>

- To set the port number.

<Connection Timeout>

- To set the time-out time (60 Second is specified by default).

<Server Address>

- Enter the address of the server where the dedicated software was installed.

<Certificate Verification Level Settings>

- To verify the server certificate, configure settings to verify the certificate.

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	Select whether to check that the server certificate chain (certification path) is correct.
Expiration Date Confirmation	Select whether to check that the server certificate is within the validity period. The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

<Synchronize WebDAV Client Setting>

- Select whether to use the proxy server for WebDAV transmission as a proxy server for the server where the dedicated software was installed.
- To use a different proxy server, select [Individual Settings] and enter the proxy server information.

7.78 Network Settings-Internet ISW Settings**7.78.1 Update Firmware at Specified Time**

- This is displayed only when [Open Mode Settings] is set to [ON] in [\[Service Mode\] -> \[Internet ISW\] -> \[Internet ISW Set\]](#).

(1) Use

- To update the downloaded firmware at the specified time.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"
- When selecting [Yes], set the time when firmware is updated.

7.78.2 HTTP Server Settings**(1) Use**

- To select whether or not to access the http server via a proxy server.
- When a proxy server is used, configure its settings.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
 1. Touch [Host Address] in [Proxy Server Address] to set the host address of the proxy server.
 2. Set the port number used to access the proxy server in [Proxy Server Port Number].
 3. Select whether or not to perform authentication when accessing the proxy server. When selecting [ON], enter a user name and a password.

7.78.3 FTP Server Settings**(1) Use**

- To select whether or not to access the FTP server via a proxy server.
- When a proxy server is used, configure the its settings

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
 1. Touch [Host Address] in [Proxy Server Address] to set the host address of the proxy server.
 2. Set the port number used to access the proxy server in [Proxy Server Port Number].

7.78.4 Firmware Update Parameters

- This is displayed only when [Open Mode Settings] is set to [ON] in [\[Service Mode\] -> \[Internet ISW\] -> \[Internet ISW Set\]](#).

(1) Use

- To download and update the firmware data.
- When you wish to update the firmware at the specified time, after downloading it in the way described here, you can specify the time in [Update Firmware at Specified Time].

(2) Procedure

1. Touch [Download] in [Administrator Settings] -> [Network Settings] -> [Internet ISW Settings] -> [Firmware Update Parameters].
2. Select [Yes] in the confirmation screen and touch [OK].
3. The firmware download starts.
4. The message to show the status will be displayed on the screen while connecting and transferring data.
5. Select [Upgrade] or [Delete].
 - Touching [Upgrade] starts updating using the downloaded firmware data. Select [Yes] in the confirmation screen and touch [OK].
 - Touching [Delete] will delete the downloaded firmware data. Select [Yes] in the confirmation screen and touch [OK].
6. When the firmware is normally upgraded, the main body will automatically be restarted to complete the Internet ISW.

NOTE

- To download the firmware, in addition to the necessary proxy settings configured in [HTTP Server Settings] or [FTP Server Settings], you need to configure appropriate settings in [\[Service Mode\] -> \[Internet ISW\] -> \[HTTP Setting\]](#), [\[FTP Setting\]](#), and [\[Forwarding Access Setting\]](#).

7.79 Copier Settings**7.79.1 Auto Zoom (Platen)****(1) Use**

- To set whether to function the auto zoom when the tray is selected with document set on the original glass (excepting at automatic paper selection mode.)

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.79.2 Auto Zoom (ADF)**(1) Use**

- To set whether to function the auto zoom when the feed tray is selected with document set on the ADF (excepting at automatic paper selection mode.)

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.79.3 Specify Default Tray when APS OFF**(1) Use**

- To set the tray to be used when APS is cancelled.
- To set the tray (tray 1) for the default setting when cancelling APS.

(2) Default setting

- Tray Before APS ON

(3) Setting item

- "Tray Before APS ON"
- Default Tray

7.79.4 Print Jobs During Copy Operation**(1) Use**

- To set whether to receive printing jobs for print data or fax data during copy operation.
- To restrict receiving printing jobs for print data or fax data during copy operation.

Accept	Receives the print data or fax data and print.
Receive Only	Print data or fax data will be printed when the copy operation is finished.

(2) Default setting

- Accept

(3) Setting item

- "Accept"
- Receive Only

7.79.5 Tri-Fold Print Side

- It will be displayed only when the optional finisher is mounted.

(1) Use

- Specifies the side of copies to be folded.

Inside	Folds paper in three with the printed side in.
Outside	Folds paper in three with the printed side out.

(2) Default setting

- Inside

(3) Setting item

- Outside
- "Inside"

7.79.6 Automatic Image Rotation**(1) Use**

- Select whether or not the image is automatically rotated when the document and copy paper orientations are different.

When Auto Paper / Auto Zoom / Reduce is set	If the "Auto" Paper setting, "Auto" Zoom setting or a Reduce setting is selected, the image is automatically rotated to fit the orientation of the paper.
When Auto Paper / Auto Zoom is set	If the "Auto" Paper setting or "Auto" Zoom setting is selected, the image is automatically rotated to fit the orientation of the paper.
When Auto Zoom / Reduce is set	If the "Auto" Zoom setting or a Reduce setting is selected, the image is automatically rotated to fit the orientation of the paper.
When Auto Zoom is set	If the "Auto" Zoom setting is selected, the image is automatically rotated to fit the orientation of the paper.

(2) Default setting

- When Auto Paper / Auto Zoom is set

(3) Setting item

- When Auto Paper / Auto Zoom / Reduce is set
- "When Auto Paper / Auto Zoom is set"
- When Auto Zoom / Reduce is set
- When Auto Zoom is set

7.80 Printer Settings**7.80.1 USB Timeout****(1) Use**

- To set a period of time that elapses before input and output timeouts of communication are activated.

(2) Default setting

- 60 seconds

(3) Setting range

- 10 to 1000 seconds

7.80.2 Network Timeout**(1) Use**

- To set a period of time that elapses before input and output timeouts of communication are activated.

(2) Default setting

- 60 seconds

(3) Setting range

- 10 to 1000 seconds

7.80.3 Print XPS/OOXML Errors**(1) Use**

- To set whether to print error information when an error occurs while printing a XPS or OOXML (Office Open XML) file.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.80.4 Assign Account to Acquire Device Info**(1) Use**

- Specify whether this machine requests the password from the Windows printer driver when the Windows printer driver acquires device information, for example, which options are installed in this machine.

Yes	Sets a password. By setting a password, the speed at which the printer driver obtains the machine information increases.
No	Does not set a password. The machine authenticates the printer driver with the OpenAPI feature.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.81 Fax Settings

- It will be displayed only when the optional fax kit FK-511 is mounted.

7.81.1 Header Information**(1) Sender****(a) Use**

- To register the name of the sender which will be printed when transmitting the fax.
- The name of the sender can register up to 20 can be selectively.

(b) Procedure

1. To register a new sender name, select a "Not Registered" column, touch [New].
If change the settings of the registered name of sender, select the name of sender and touch [Edit].
2. Enter the sender name (up to 30 characters) on the on-screen keyboard.
3. To set the default value, select the sender name and touch [Set as Default].

NOTE

- Optional Fax kit FK-511 to install two, [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[TX/RX Settings\]](#) -> [\[Individual Sender Line Setup\]](#) is "ON", if it is set to the initial value of each line can.

(2) Sender Fax No.**(a) Use**

- To register the sender fax number which will be printed when transmitting the fax.

(b) Procedure

- Enter Sender Fax No. (up to 20 characters) using the 10-key pad and [+], [Space] displayed on the screen.

7.81.2 Header/Footer Position**(1) Header Position****(a) Use**

- To set the position at which a header position is printed on the fax to be sent.

Inside Body Text	Prints the sender information inside the original image.
Outside Body Text	Prints the sender information outside the original image.
OFF	Prints nothing for sender information.

(b) Default setting

- Outside Body Text

(c) Setting item

- Inside Body Text
- "Outside Body Text"
- OFF

NOTE

- [Outside Body Text] cannot be selected for Internet Fax/IP Address Fax.
- The displays are different depending on the country.

(2) TTI Print Position and Character Size**(a) Use**

- To set the size of characters used for printing sender information.

Normal	Prints the sender information in the normal text size.
Minimal	Reduces the text height to a half of the size set with [Normal].

NOTE

- If [Normal] is selected for the scanning resolution for sending a fax, it is converted into [Normal] to prevent characters from becoming corrupted and unreadable.

(b) Default setting

- Minimal

(c) Setting item

- Normal
- "Minimal"

(3) Print Receiver's Name

- It will not be displayed on the screen when [Fax Target] is set to beside "US" or "HK" in the following settings.
[Service Mode] -> [System 1] -> [Marketing Area] -> [Fax Target]

(a) Use

- To set whether to print destination fax number as header position. If [OFF] is selected, the fax number of this machine is printed instead of the fax number of the destination.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(4) Footer Position**(a) Use**

- To set the position reception information (date, time and reception transaction number) on faxes received on this machine.

Inside Body Text	Prints the receiver information inside the original image.
Outside Body Text	Prints the receiver information outside the original image.
OFF	Prints nothing for receiver information.

(b) Default setting

- OFF

(c) Setting item

- Inside Body Text
- Outside Body Text
- "OFF"

NOTE

- [Outside Body Text] cannot be selected for the color mode of IP Address Fax.

7.81.3 Line Parameter Setting**(1) Dialing Method****(a) Use**

- To set the dialing method.

(b) Default setting

- PB

(c) Setting item

- "PB"
- 10 pps

NOTE

- The displays are different depending on the country.

(2) Receive Mode

- It will not be displayed when the following setting shows that management device 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To set the fax reception mode.
- To change to manual reception when using the remote reception function, etc. when connected to the external telephone.

(b) Default setting

- Auto RX

(c) Setting item

- "Auto RX"
- Manual RX

(3) Number of RX Call Rings (Receive Time Interval Setting)

- When the following setting is set to "Time", [Receive Time Interval Setting] will be displayed.
[Service Mode] -> [FAX] -> [Line1] -> [Network] -> [Network Setting 1] -> [Receive Signal Detection Mode]

(a) Use

- To set the number of times (times) to receive call rings.
- To change the number of times (times) of the fake ringback tone after it starts calling until it starts receiving.

(b) Default setting

- Number of RX Call Rings: 2 X
- Receive Time Interval Setting: 6 sec.

(c) Setting range

- Number of RX Call Rings: 0 to 15 X
- Receive Time Interval Setting: 0 to 45 sec.

(4) Number of Redials

- It will not be displayed when the following setting shows that vender 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To set the number of redials.
- To change the number of times to redial when the line is busy, etc.

(b) Default setting

- The default setting is different depending on the country.

(c) Setting range

- 0 to 7 X

NOTE

- The line which can be set up is different depending on the country.

(5) Redial Interval

- It will not be displayed when the following setting shows that vender 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To set the interval for redialing.

(b) Default setting

- 3 min

(c) Setting range

- 1 to 15 min

(6) Line Monitor Sound**(a) Use**

- To set whether to output the line monitor sound from the speaker or not.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(7) Line Monitor Sound Volume (Send)**(a) Use**

- To set the volume of the speaker for the sent signal sound.

NOTE

- When communicating with fax, monitoring sound is generated even if send or receive monitoring sound of this machine is set to "0" since the sound is generated both on this machine and on the destination side.
For setting to mute, set both [Line Monitor Sound Volume (Send)] and [Line Monitor Sound Volume (Receive)] to "0", or set [Line Monitor Sound] to "OFF".

(b) Procedure

- Change the volume by touching the [Lower] or [Higher].

(c) Default setting

- 10

(d) Setting range

- 0 to 31

(8) Line Monitor Sound Volume (Receive)**(a) Use**

- To set the volume for the speaker of this machine when outputting the communication sound created on destination side (including exchange equipments or terminals).

NOTE

- When communicating with fax, monitoring sound is generated even if send or receive monitoring sound of this machine is set to "0" since the sound is generated both on this machine and on the destination side.
For setting to mute, set both [Line Monitor Sound Volume (Send)] and [Line Monitor Sound Volume (Receive)] to "0", or set [Line Monitor Sound] to "OFF".

(b) Procedure

- Change the volume by touching the [Lower] or [Higher].

(c) Default setting

- 20

(d) Setting range

- 0 to 31

7.81.4 TX/RX Settings**(1) Duplex Print (RX)**

- It will not be displayed when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[TX/RX Settings\]](#) -> [\[Print Separate Fax Pages\]](#)

(a) Use

- To set whether to carry out the duplex print for the received document when receiving the fax.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) Letter/Ledger over A4/A3**(a) Use**

- To set whether to use the inch paper priority when receiving the fax.

(b) Default setting

- The default setting is different depending on the country.

(c) Setting item

- ON
- OFF

(3) Print Paper Selection**(a) Use**

- To set the priority for paper feed tray when receiving the fax.

Auto select	Selected automatically.
Fixed Size	Printed only on the fixed size.
Priority Size	Printed on size with priority. When the size is not set, it will be printed on the closest size.

(b) Default setting

- Auto Select

(c) Setting item

- "Auto Select"
- Fixed Size
- Priority Size

(4) Print Paper Size**(a) Use**

- To set the paper size to print the received document when receiving the fax.
- To make the setting of [Print Paper Size] enable, set [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[TX/RX Settings\]](#) -> [\[Tray Selection for RX Print\]](#) to "Auto."

(b) Default setting

- A4

(c) Setting item

- A3
- B4
- "A4"

NOTE

- The displays are different depending on the country.

(5) Incorrect User Box No. Entry**(a) Use**

- To set the operation when the unregistered box number is entered.

(b) Default setting

- Print

(c) Setting item

- "Print"
- Show Error Message
- Auto Create User Box

(6) Tray Selection for RX Print**(a) Use**

- To select the paper tray to be fixed when printing the received document.

(b) Default setting

- Auto

(c) Setting item

- "Auto"
- Tray 1
- Tray 2
- Tray 3
- Tray 4
- LCT

NOTE

- Tray 3 and Tray 4 will be displayed only when the optional paper feed cabinet PC-110/PC-210/PC-410 is mounted.
- LCT will be displayed only when the optional large capacity unit LU-204/LU-301 is mounted.

(7) Min. Reduction for RX Print**(a) Use**

- To set the print magnification for received document.

(b) Default setting

- 96

(c) Setting item

- 87 to "96"
- Full Size

(8) Print Separate Fax Pages

- It will not be displayed when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[TX/RX Settings\]](#) -> [\[Duplex Print \(RX\)\]](#)

(a) Use

- To set whether to divide the original into pages when it is longer than the standard size.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(9) File After Polling TX**(a) Use**

- To set whether to delete the original which polling transmission has been completed.

(b) Default setting

- Delete

(c) Setting item

- "Delete"
- Save

(10) No. of Sets (RX)**(a) Use**

- To set the number of copies to be printed with the received document.

(b) Default setting

- 1 set.

(c) Setting range

- "1" to 10 set.

(11) Individual Receiving Line Setup

- It will be displayed only when the optional FAX Kit FK-511 line 2 is installed and the following setting is set to "TX and RX" or "RX Only".
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Line 2 Setting\]](#)

(a) Use

- Specify whether to configure the individual receiving line setup.
- When this setting is set to "ON," the following settings can be made separately for each fax line:

Forward TX setting, TSI User Box Setting, PC-Fax RX setting, Memory RX Setting

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(12) Individual Sender Line Setup

- It will be displayed only when the optional FAX kit FK-511 line 2 is installed and the following setting is set to "TX and RX" or "TX Only".
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Line 2 Setting\]](#)

(a) Use

- Specify whether to configure the individual sender line setup.
- When this setting is set to "ON," the following settings can be made separately for each fax line:
Header Information

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(13) RX Document Print Settings

(a) Use

- Select whether to print a received network fax in color or black and white.
- To restrict the print to only black and white print, select [Black Only].

(b) Default setting

- Allow Color and Black

(c) Setting item

- "Allow Color and Black"
- Black Only

7.81.5 Function Settings-Function ON/OFF Setting

(1) F-Code TX

(a) Use

- To set whether to use the F code transmission.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

NOTE

- When the setting is changed, turn off the main power switch and turn it on again more than 10 seconds after.

(2) Relay RX

- It will be displayed only when the following setting is set to "ON."
[\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line1\]](#) -> [\[System\]](#) -> [\[Display Setting\]](#) -> [\[Relay\]](#)

(a) Use

- To set whether to use the relay RX function.
- To use the machine as the relay delivery station during relay TX.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) Relay Printing

- It will be displayed only when the following setting is set to "ON."
[\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line1\]](#) -> [\[System\]](#) -> [\[Display Setting\]](#) -> [\[Relay\]](#)

(a) Use

- To set whether to use the relay print function.
- To print out the document that the machine relayed during relay TX.
- The relay print will be output in the following case.
 1. When the relay delivery completes appropriately.
 2. When the delivery job is cancelled halfway by turning OFF sub power.
 3. When the delivery job is cancelled due to redial over.
 4. When main power switch is turned OFF/ON during relay print error.
 5. When delivery job is deleted in user operation during redialing.
 6. When delivery job is deleted in user operation during relay delivery.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Destination Check Display Function**(a) Use**

- To set whether or not to display the list of specified addresses when sending the fax.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(5) Confirm Address (TX)**(a) Use**

- To set whether to use Confirm Address (the machine displays the screen where the user reenters the fax number for confirmation when the user faxes by entering the fax number directly with the keys).

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(6) Confirm Address (Register)**(a) Use**

- To set whether to use Confirm Address (the machine displays the screen where the user reenters the fax number for confirmation when the user faxes by entering the fax number directly with the keys).

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

7.81.6 Function Settings-Memory RX Setting

- It will be displayed only when the following setting is set to "ON."
[\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line1\]](#) -> [\[System\]](#) -> [\[Display Setting\]](#) -> [\[Compulsory Memory RX\]](#)
- It will not be displayed when any one of the following settings is set to "ON."
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[PC-Fax RX Setting\]](#), [\[Forward TX Setting\]](#) or [\[TSI User Box Setting\]](#)

(1) Use

- To set whether to use the forced memory RX function.
- To store the received document in the hard disk without printing, and print it out when ordered.

(2) Default setting

- No

NOTE

- Enter the password (up to 8 digits) for printing when set to [ON].

7.81.7 Function Settings-Closed Network RX

- It will be displayed only when the following setting is set to "ON."
[Service Mode] -> [FAX] -> [Line1] -> [System] -> [Display Setting] -> [Closed area RX]

(1) Use

- To set whether to use the closed network function.
- To receive data only from the device which password matches.

(2) Default setting

- No

NOTE

- When use the closed network RX, enter the password (4 digits) to be used.

7.81.8 Function Settings-Forward TX Setting

- It will not be displayed when any one of the following settings is set to "ON."
[Administrator Settings] -> [Fax Settings] -> [Function Settings] -> [PC-Fax RX Setting], [Memory RX Setting] or [TSI User Box Setting]
- It will not be displayed when the following setting shows that [vendor 2](#) or [authentication device 2](#) is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(1) Forward TX Setting**(a) Use**

- To set whether to use the forward fax function.
- To forward the received document to the receiver which has been specified.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

NOTE

- When set to "Yes," set the Output Method and Forward Dest.

(2) Output Method**(a) Use**

- Select whether to print a received document on this machine when forwarding it.

Forward & Print	Forward the received document, and print all out.
Forward & Print (If TX Fails)	Forward the received document, and prints out only when fails to be forwarded.

(b) Default setting

- Forward & Print (If TX Fails)

(c) Setting item

- Forward & Print
- "Forward & Print (If TX Fails)"

(3) Forward Dest.**(a) Use**

- To set a forwarding destination for a received document.

(b) Procedure

- Directly enter a fax number using the 10-key, touch [Select from Address Book] and select one of the destinations that are registered in the machine.

NOTE

- A forwarding address except a case of the fax, specify [File Type] a fax can be converted into a file.

(4) Select Line**(a) Use**

- If two lines are used, select the line used to send a fax. If [No Selection] is selected, either line, whichever is not busy, is used for transmission.

(b) Default setting

- No Selection

(c) Setting item

- "No Selection"
- Line 1
- Line 2

7.81.9 Function Settings-Incomplete TX Hold

- It will be displayed only when the following setting is set to "ON."
[\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line1\]](#) -> [\[System\]](#) -> [\[Display Setting\]](#) -> [\[Re-Transmission\]](#)
- It will not be displayed when the following setting shows that [key counter](#) or [vendor 2](#) is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

(1) Use

- To set whether to use incomplete TX hold function.
- To re-send the data failed to be sent after a given time.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

NOTE

- When set to Yes, specify the File Storage Duration.

7.81.10 Function Settings-PC-Fax Permission Setting**(1) Use**

- Select whether to allow PC-Fax TX using the fax driver.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

7.81.11 Function Settings-PC-Fax RX Setting

- It will not be displayed when any one of the following settings is set to "ON."
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[Forward TX Setting\]](#), [\[Memory RX Setting\]](#) or [\[TSI User Box Setting\]](#)

(1) Use

- To set whether to use the PC-Fax reception function.
- To store the received document file in the box in the hard disk.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

NOTE

- When "Allow" is selected, make the settings of Receiving User BOX Destination, Print ON/OFF, and Password check ON/OFF.

7.81.12 Function Settings-TSI User Box Setting

- It will not be displayed when any one of the following settings is set to "ON."
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[Forward TX Setting\]](#), [\[Memory RX Setting\]](#) or [\[PC-Fax RX Setting\]](#)

(1) TSI User Box Setting**(a) Use**

- To set whether to use TSI distribution or not.

(b) Procedure

- Touch the [\[TSI User Box Registration\]](#) and register the distribution.

(c) Default setting

- No

(d) Setting item

- Yes
- "No"

(2) Action when TSI User Box is not set**(a) Use**

- To set setting method when there is no matched box at receiving.

Automatically Print	To print the received data.
Memory RX Use Box	To store the received data in the forced memory receiving box.
Specified User Box	To store the received documents in a User Box of this machine.

(b) Default setting

- Automatically Print

(c) Setting item

- "Automatically Print"
- Memory RX User Box
- Specified User Box

(3) Print**(a) Use**

- To set whether to use Print function or not.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

(4) TSI User Box Registration**(a) Use**

- To register the forwarding destination for each sender's fax number (TSI).

(b) Procedure

1. Select the registered number, touch [Edit].
2. Touch [Sender (TSI)], and enter a sender's fax number.
3. Touch [Select from Address Book] and select a destination, or touch [Search by User Box Number], then enter the number of the User Box you want to save received faxes in.

7.81.13 PBX Connection Setting**(1) Use**

- To set whether to use PBX connection setting or not.
- This will be used when the machine is connected to PBX line.

(2) Default setting

- No

NOTE

- When use PBX connection setting, enter the external number between 0 and 9999.

7.81.14 Report Settings**(1) Activity Report**

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(a) Use

- To set whether to print out the activity report or not, and also the timing for printing.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

NOTE

- When this setting is set to ON, make the setting of Output Setting and Output Time Settings.

(d) Output Setting

Default setting

- Every 100 Comm.

Setting item

- Daily
- "Every 100 Comm."
- 100/ Daily

(e) Remark Column Print Setup

Use

- To set whether or not to print user or account name in the remarks column of the activity report if user authentication or account track is enabled on this machine.

Default setting

- Normal Printing

Setting item

- "Normal Printing"
- User Name Printing
- Account Name Printing

(2) TX Result Report**(a) Use**

- To set whether to print out the TX report, and also the timing for printing.

(b) Default setting

- If TX Fails

(c) Setting item

- ON
- "If TX Fails"
- OFF

(3) Sequential TX Report**(a) Use**

- To set whether to print out the sequential TX report or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(4) Timer Reservation TX Report**(a) Use**

- To set whether to print out the reservation TX or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(5) Confidential RX Report**(a) Use**

- To set whether to print out the confidential RX report.

(b) Default setting

- ON

(c) Setting item

- "ON"

- OFF

(6) Bulletin TX Report

(a) Use

- To set whether to print out the bulletin TX report or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(7) Relay TX Result Report

- It will be displayed only when the following setting is set to "ON."
[Service Mode] -> [FAX] -> [Line1] -> [System] -> [Display Setting] -> [Relay]

(a) Use

- To set whether to print out the relay TX result report or not.
- To print out the relay TX result report after the relay delivery is completed when the machine is used as the relay delivery station.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(8) Relay Request Report

- It will be displayed only when the following setting is set to "ON."
[Service Mode] -> [FAX] -> [Line1] -> [System] -> [Display Setting] -> [Relay]

(a) Use

- To set whether to print out the relay request RX report or not.
- To print out the relay request RX report during relay request RX when the machine is used as the relay delivery station.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(9) PC-Fax TX Error Report

(a) Use

- To set whether to print out the PC-Fax TX error report or not.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(10) Broadcast Result Report

(a) Use

- To set the format to output the broadcast result report.

All Destinations	Outputs all reports after transmitting to all addresses.
Each Destination	Outputs a report after each transmission.

(b) Default setting

- All Destinations

(c) Setting item

- "All Destinations"

- Each Destination

(11) TX Result Report Check

(a) Use

- To set whether to display the TX result report screen.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(12) Network Fax RX Error Report

- It will be displayed only when either [IP Address Fax Function] or [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To set whether to print RX error report when network fax function is being used.
- To print the error report at unusual situation such as receiving the image data that cannot be processed.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(13) MDN Message

- It will be displayed only when [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To set whether to print message when receiving response message to MDN request when internet fax function is being used.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(14) DSN Message

- It will be displayed only when [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To set whether to print message when receiving response message to DSN request when network fax function is being used.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(15) Print E-mail Message Body

- It will be displayed only when [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(a) Use

- To set whether to print mail text received normally as the report when internet fax function is being used.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

7.81.15 Job Settings List

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)
 (It will be displayed when the key counter is mounted or when the following setting shows that switch No.33 is set to [00000001] at Bit assignment/[01] at HEX assignment.
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#))

(1) Use

- The set value list of the fax set up into this machine can be printed.

(2) Procedure

1. Touch [Administrator Settings] -> [Fax Settings] -> [Job Settings List].
2. Select the feed tray.
3. Select the 1-Sided or 2-Sided, and touch the Start key.

7.81.16 Multi Line Settings-Line Parameter Setting

- It will be displayed only when the optional fax kit FK-511 line 2 is mounted.

(1) Dialing Method**(a) Use**

- To set the dial method for the expanded line.

(b) Default setting

- PB

(c) Setting item

- "PB"
- 10 pps

NOTE

- The displays are different depending on the country.

(2) Number of Rx Call Rings (Receive Time Interval Setting)

- When the following setting is set to "Time", [Receive Time Interval Setting] will be displayed.
[\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line2\]](#) -> [\[Network\]](#) -> [\[Network Setting 1\]](#) -> [\[Receive Signal Detection Mode\]](#)

(a) Use

- To set the number of times (times) to receive call rings for the expanded line.
- To change the number of times (times) of the fake ringback tone with expanded line after it starts calling until it starts receiving.

(b) Default setting

- Number of RX Call Rings: 2 X
- Receive Time Interval Setting: 6 sec.

(c) Setting range

- Number of RX Call Rings: 0 to 15 X
- Receive Time Interval Setting: 0 to 45 sec.

(3) Line Monitor Sound**(a) Use**

- To set whether or not to output the line monitor sound of the expanded line from the speaker.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

7.81.17 Multi Line Settings-Function Settings

- It will be displayed only when the optional fax kit FK-511 line 2 is mounted.

(1) PC-FAX TX Line Setting

- It will be not displayed when the following setting is set to "RX Only."

[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Multi Line Settings\]](#)

- It will be not displayed when [PC-Fax Permission Setting] is set to "Restrict" in the following setting.
[\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[PC-Fax Permission Setting\]](#)

(a) Use

- To set the number of the line used for PC-Fax transmission.

(b) Default setting

- No Selection

(c) Setting item

- Line 1
- Line 2
- "No Selection"

7.81.18 Multi Line Settings-Multi Line Settings

- It will be displayed only when the optional fax kit FK-511 line 2 is mounted.
- To set the system for using each line when using more than one line.

(1) Multi Line Usage

(a) Procedure

- When selecting [Normal], perform the transmission setting for Line 2.

(2) Line 2 Setting

(a) Default setting

- TX and RX

(b) Setting item

- "TX and RX"
- RX Only
- TX Only

7.81.19 Multi Line Settings-Sender Fax No.

- It will be displayed only when the optional fax kit FK-511 line 2 is mounted.

(1) Use

- To register the fax ID when using the additional line.

(2) Procedure

- Enter Sender Fax No. (up to 20 characters) using the 10-key pad and [+], [Space] displayed on the screen.

7.81.20 Network Fax Settings-Black Compression Level

- It will be displayed only when either [IP Address Fax Function] or [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(1) Use

- To set black compression level at black TX mode when network fax function is being used.

(2) Default setting

- MMR

(3) Setting item

- "MMR"
- MR
- MH

7.81.21 Network Fax Settings-Color/Grayscale Multi-Value Compression Method

- It will be displayed only when either [IP Address Fax Function] or [Internet Fax Function] is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(1) Use

- To set a color/black multi value compression method used when faxing selecting JPEG or PDF as a file format under network fax operation.

JPEG (Color)	Data is compressed in color JPEG format.
JPEG (Gray Scale)	Data is compressed in monochrome JPEG format.

Not Set	Data transmission in color or grayscale is disabled. Data is compressed in black and white (binary) with a specified compression method.
---------	--

(2) Default setting

- JPEG (Color)

(3) Setting item

- "JPEG (Color)"
- JPEG (Gray Scale)
- Unset

7.81.22 Network Fax Settings-Internet Fax Self Rx Ability

- It will be displayed only when [Internet Fax Function] is set to "ON" in the following settings.
[Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network Fax Function Settings]

(1) Use

- To set image data compression system, paper size and resolution, which can be received by the machine with internet fax.

(2) Procedure

- The following shows the options of each setting item.

Compression Type	Paper Size	Resolution
JPEG Color	A3	Ultra Fine
JPEG (Grayscale)	B4	Super Fine
MMR	A4	Fine
MR	-	Std.
MH	-	-

7.81.23 Network Fax Settings-Internet Fax Advanced Settings

- It will be displayed only when [Internet Fax Function] is set to "ON" in the following settings.
[Administrator Settings] -> [Network Settings] -> [Network Fax Settings] -> [Network Fax Function Settings]
- To set advanced functions of internet fax.

NOTE

- Only MDN Request will be sent when both MDN Request and DSN Request are set to "Yes."

(1) MDN Request**(a) Use**

- To set whether to send MDN (Message Disposition Notification) request when transmitting through internet fax.

(b) Default setting

- Yes

(c) Setting item

- "Yes"
- Do Not Send

(2) DSN Request**(a) Use**

- To set whether to send DSN (Delivery Status Notification) request when transmitting through internet fax.

(b) Default setting

- Do Not Send

(c) Setting item

- Yes
- "Do Not Send"

(3) MDN Response**(a) Use**

- To set whether to response for MDN request made by the other machine when receiving through internet fax.

(b) Default setting

- Yes

(c) Setting item

- "Yes"

- Do Not Send

(4) MDN/DSN Response Monitoring Time

(a) Use

- To set the period to observe the response from the other machine when sending MDN/DSN request.
In the case of time over, time out message is notified.

(b) Default setting

- 24 hours

(c) Setting item

- 1 to 99 hours
- Do Not Monitor

(5) Maximum Resolution

(a) Use

- To set maximum resolution for reading, TX/RX and record when internet fax function is being used.

(b) Default setting

- Ultra Fine

(c) Setting item

- "Ultra Fine"
- Super Fine

(6) Add Content-Type Information

(a) Use

- To set whether or not to add Content-Type information when using Internet fax.
When [Yes] is selected, "application=faxbw" is added as sub-type to MIME Content-Type header.

(b) Default setting

- Do Not Send

(c) Setting item

- Yes
- "Do Not Send"

7.81.24 Network Fax Settings-IP Address Fax Operation Settings

- It will not be displayed when [IP Address Fax Function] is set to "OFF" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(1) Operation Mode

(a) Use

- To set the operational mode applied to IP address fax.

Mode1	This mode allows communication between Konica Minolta models capable of transmitting IP address faxes and models compatible with the Direct SMTP standard defined by CIAJ. However, a unique method developed for Konica Minolta models is used to transmit a color fax.
Mode2	This mode allows communication between Konica Minolta models capable of transmitting IP address faxes and models compatible with the Direct SMTP standard defined by CIAJ. The transmission in color mode is performed in the communication mode (Profile-C format) compatible with the Direct SMTP standard.

(b) Default setting

- Mode1

(c) Setting item

- "Mode1"
- Mode2

NOTE

- When set to Mode2, to set whether to allow the transmission of color originals.

7.81.25 Fax Print Quality Settings

(1) Use

- To set whether to correct the received document of G3 fax according to the resolution.

Prioritize Quality	Corrects and outputs the received image.
--------------------	--

Prioritize Speed	Does not correct the received image, which results in a shorter output time.
------------------	--

(2) Default setting

- Low Resolution: Prioritize Quality
- High Resolution: Prioritize Speed

(3) Setting item

Low Resolution

- "Prioritize Quality"
- Prioritize Speed

High Resolution

- Prioritize Quality
- "Prioritize Speed"

7.82 System Connection**7.82.1 OpenAPI Settings-Access Setting****(1) Use**

- To select Allow or Restrict for access from the PageScope Data Administrator or the other systems that use OpenAPI.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

7.82.2 OpenAPI Settings-SSL/Port Settings**(1) Use**

- To set the SSL/access port for other systems with OpenAPI.

(2) SSL Setting**(a) Default setting**

- Non-SSL Only

(b) Setting item

- "Non-SSL Only"
- SSL Only
- SSL/Non-SSL

(3) Port No./Port Number (SSL)**(a) Procedure**

1. Select Port No. or Port Number (SSL), and touch [Input].
2. Press the Clear key.
3. Enter the port number between 1 and 65535 using the 10-key pad.

(4) Client Certificate**(a) Default setting**

- Invalid

(b) Setting item

- Enable
- "Invalid"

(5) Certificate Verification Level Settings

Expiration Date	Select whether to check that the server certificate is within the validity period.
Key Usage	Select whether to check that the server certificate is used according to the purpose approved by the issuer.
Chain	• Select whether to check that the server certificate chain (certification path) is correct. • The chain is validated by referencing the external certificates managed on this machine.
Expiration Date Confirmation	• Select whether to check that the server certificate is within the validity period. • The OCSP service and CRL (Certificate Revocation List) are checked in this order when the expiration date of the certificate is checked.
CN	Select whether to check that the CN of the server certificate matches the server address.

7.82.3 OpenAPI Settings-Authentication

(1) Use

- To select ON or OFF for authentication applied when the PageScope Data Administrator or the other systems that use OpenAPI access MFP.
- To set authentication of the access from other systems using OpenAPI.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

NOTE

- When setting to [ON], enter the login name and the password to be set.

7.82.4 OpenAPI Settings-External Application Connection

(1) Use

- To select whether or not to use external application connection of the OpenAPI.

(2) Default setting

- Yes

(3) Setting item

- "Yes"
- No

7.82.5 Call Remote Center

- It will be displayed when the setup at the CS Remote Care center is complete.

(1) Use

- To call the CS Remote Care center from the administrator, when the CS Remote Care setup is complete.

(2) Procedure

- For details, see "[1.11.6 CS Remote Care \(Outlines\)](#)."

7.82.6 Prefix/Suffix Automatic Setting

(1) Use

- Select whether to automatically add prefix and suffix to a destination number.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.82.7 Printer Information

- It will be displayed only when the optional local interface kit EK-607 is mounted.

(1) Use

- Specify [Printer Name], [Printer Location], [Printer Information], and [Printer URI].
The [Printer Information] setting is linked to [Printer Information] in [HTTP Server Settings].

(2) Procedure

1. Touch [Printer Information].
2. Enter the printer name, printer location and printer information using the keyboard on the display.
3. Touch [Printer URI], and confirm the printer URI information.

7.82.8 Cellular Phone/PDA Setting

- It will be displayed only when the optional local interface kit EK-607 is mounted.

(1) Use

- Specify whether to allow the user to print data in a cellular phone or PDA or save such data in a User Box.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

7.83 Security Settings-Administrator Password**7.83.1 Use**

- To set/change the administrator password.

7.83.2 Procedure

- Enter the administrator password on the on-screen keyboard.
 1. Enter the current administrator password
 2. Password: Enter the new administrator password to be used
 3. Password Confirmation: Re-enter the new administrator password

NOTE

- When "Enable" is selected in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[Password Rules\]](#), the following passwords cannot be accepted: password of single repeated characters, password same as the one before being changed, and password where the number of characters is less than the minimum number specified in [\[Set Minimum Password Length\]](#).

7.84 Security Settings-User Box Administrator Setting

- Setting is disabled if user authentication or account track is not performed.

7.84.1 Use

- To set whether to allow or restrict the box administrator to use the system.
- To allow the box administrator to use the system.
The box administrator is the special administrator for box, who is allowed to browse contents in common box / individual box without the password.

NOTE

- [\[Allow\]](#) cannot be set when the user authentication or account track is not carried out.

7.84.2 Default setting

- Restrict

7.84.3 Setting item

- Allow
- "Restrict"

NOTE

- [\[Allow\]](#) cannot be selected when user authentication and account track are not conducted.
- [\[Allow\]](#) cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)
- Set the password when setting to [\[Allow\]](#).
- When "Enable" is selected in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[Password Rules\]](#), the following passwords cannot be accepted: password of single repeated characters, password same as the one before being changed, and password where the number of characters is less than the minimum number specified in [\[Set Minimum Password Length\]](#).

7.85 Security Settings-Administrator Security Levels

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[Management Function Choice\]](#)

7.85.1 Use

- To set the level for administrator settings item open to the user.
- To make part of the administrator settings items open to the user.

Level 1	Allows users to configure [Low Power Mode Settings] , [Sleep Mode Settings] , [Auto Zoom (Platen)] , [Auto Zoom (ADF)] , [Specify Default Tray when APS Off] , [Tri-Fold Print Side] , and [Automatic Image Rotation] .
Level 2	Allows users to configure the items contained in [Level 1] , [Print/Fax Output Settings] , [Output Tray Settings] , [AE Level Adjustment] , [Blank Page Print Settings] , [Page Number Print Position] , [Change E-mail Address] , and [Print Jobs During Copy Operation] .
Prohibit	Not to allow the user to set neither Level 1 nor Level 2

7.85.2 Default setting

- Prohibit

7.85.3 Setting item

- Level 1
- Level 2
- "Prohibit"

7.86 Security Settings-Security Details

7.86.1 Password Rules

(1) Use

- To set whether to apply the password rules.
- To apply the password rule to enhance security.
- Passwords to be covered: CE password, administrator password, user password, account track password, public user box password, user box administrator password, passwords for confidential documents, WebDAV server password, SNMPv3 Write User password, remote panel server password, Encryption Passphrase
- Details of the password rules:
 - Minimum number of characters specified in [Set Minimum Password Length] (Default: 12 characters)
 - Upper- and lower-case letters are distinguished in alphabetical letters.
 - Only one-byte symbols can be used.
 - Password with only the same letter is prohibited.
 - Password same with the one prior to change is prohibited.

NOTE

- When the password rule is set to [Enable], the password cannot be changed or registered unless it follows the above conditions.
- When [Enable] is selected, it is possible to determine the minimum number of characters that a password can contain. (8 to 64 characters, Default: 12 characters)

(2) Default setting

- Invalid

(3) Setting item

- Enable
- "Invalid"

NOTE

- [Invalid] cannot be selected when the following setting is set to "ON."
[\[Administrator Settings\] -> \[Security Settings\] -> \[Enhances Security Mode\]](#)
- [Enable] cannot be selected when the following setting is set to "OFF."
[\[Service Mode\] -> \[Enhanced Security\] -> \[CE Authentication\]](#)
"OFF" setting of [CE Authentication] will not be displayed and cannot be set to "OFF" when [Password Rules] is set to "Enable."

7.86.2 Prohibited Functions When Authentication Error

(1) Use

- To set the function for prohibiting authentication operation in order to prevent the unauthorized access.
- To use when setting the system to prohibit authentication failure when conducting authentication by password, etc.
- Authentications which are subjected to this function: CE authentication, administrator authentication, user+ accounts authentication, SNMP authentication, secure print authentication, user box authentication.

Mode 1	When failed to authenticate, authentication operation (entering the password) will be prohibited for a certain period of time.
Mode 2	When failed to authenticate, authentication operation (entering the password) will be prohibited for a certain period of time. The number of times failure occurred will be counted, and when the number reaches to the specified time, authentication will be prohibited and the access will be locked. When the access is locked, touch [Release] on the main body, or turn main power switch OFF/ON to cancel it. For CE authentication and administrator authentication, only turning main power switch OFF/ON will cancel it. When the machine goes into an access lock condition, release the lock in the following procedure.
User & Accounts authentication	• Touch keys in the following order. [Administrator Settings] -> [Security Setting] -> [Security Details] -> [Prohibited Functions When Authentication Error]. Then touch [Release].
Secure print authentication	
User box authentication	
SNMP authentication	
WebDAV Server	
Administrator authentication	• After the main power switch is turned OFF and ON, the access lock is released automatically after the lapse of a predetermined period of time. • [Service Mode] -> [Enhanced Security] -> [Administrator unlocking]
CE authentication	• The lock release timer starts to operate by input the Stop -> 0 -> 9 -> 3 -> 1 -> 7 in Menu key -> [Counter] -> [Print List] after the main power switch is turned OFF and ON. When the timer reaches the time specified in this setting, the access lock is released.

(2) Default setting

- Mode 1

(3) Setting item

- "Mode 1"
- Mode 2

NOTE

- **[Mode 2] cannot be selected when the following setting is set to "ON."**
[\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#)
- Only the number of times for trials up to the access lock can be changed.
- When **[Mode 2]** is selected, set the number of times where checks are made before access is locked.

(4) Procedure

- Touch [Release Time Settings] and set a period of time that elapses before access lock is released.

7.86.3 Confidential Document Access Method**(1) Use**

- To display the status of the authentication system on the control panel for the confidential document access.
- It cannot be changed at the operator's option since it will automatically be set according to the [Prohibit Functions When Auth. Error] setting.
- It will be set to [Mode 1] when [Prohibit Functions When Auth. Error] is set to [Mode 1].
It will be set to [Mode 2] when [Prohibit Functions When Auth. Error] is set to [Mode 2].

Mode 1	This mode is for authentication by confidential document ID and password. It displays the list of the corresponding confidential document to print them.
Mode 2	This mode is for authentication by confidential document ID. It displays the list of the corresponding confidential document, and print them with authentication by password.

(2) Default setting

- Mode 1

(3) Setting item

- "Mode 1"
- Mode 2

NOTE

- **[Mode 2] cannot be selected when the following setting is set to "ON."**
[\[Administrator Settings\] -> \[Security Setting\] -> \[Enhanced Security Mode\]](#)

7.86.4 Manual Destination Input**(1) Use**

- To set whether to allow or prohibit to manually enter the destination address on the destination Input screen.

Allow All	Allows manual destination input in all transmission options.
Individual Allowance	Allows manual destination input only for G3 fax and restricts it in other transmission options.
Restrict	Hides the [Direct Input] tab to prevent you from directly entering destinations.

(2) Default setting

- Allow All

(3) Setting item

- "Allow All"
- Individual Allowance
- Restrict

7.86.5 Print Data Capture**(1) Use**

- To set whether to allow or restrict capturing the print job data.
- To be used when carrying out [\[Service Mode\] -> \[System 2\] -> \[Data capture\]](#).

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

NOTE

- **[Allow] cannot be selected when the following setting is set to "ON."**
[\[Administrator Settings\] -> \[Security Setting\] -> \[Enhanced Security Mode\]](#)

7.86.6 Job Log Settings**(1) Use**

- Selects whether to keep logs of operations and access made by users and service engineers.
- To set whether to overwrite existing logs.
- To ensure security, this settings is used to keep logs of operations and access including security settings changes, authentication, and job executions by users and service engineers.
- Logs are saved in HDD and SSD board.

(2) Job Log Settings**(a) Default setting**

- No

(b) Setting item

- Yes
- "No"

NOTE

- After selecting "Yes", the main power switch must be turned OFF and ON so that the new setting takes effect.
- When ON is selected in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#), this setting is automatically set to "Yes."

(3) Overwrite**(a) Use**

- Set whether to allow or restrict overwriting existing logs when saving audit logs.

(b) Default setting

- Allow

(c) Setting item

- "Allow"
- Restrict

NOTICE

- To erase audit logs, press [Erase Job Log].

7.86.7 Restrict Fax TX**(1) Use**

- To set whether or not to prohibit sending fax.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

7.86.8 Personal Data Security Settings**(1) Use**

- Selects whether to display file names and destinations in Job History/Current Job.
- To retain security, this function is used to hide file names and destinations displayed in Job History/Current Job.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"
- When selecting [Yes], configure the following settings.

Job History	Select whether to hide personal information, such as destination and file name, in [Log] in the [Job List] screen. The default is [No] (without user authentication/account track) or [Yes] (with user authentication/account track).
Current Job	Select whether to hide personal information, such as destination and file name, in [Active] in the [Job List] screen. The default is [No] (without user authentication/account track) or [Yes] (with user authentication/account track).

- When you have selected [Yes], select items you want to hide.

Display Settings	Mode 1	Doc. Name/Destination, User Box
	Mode 2	Doc. Name/Destination, User Box, User Name

- Select how to display items you specified in [Display Settings] per Public User, User Authentication, and Authentication Track.

Mode 1	Hide all display items.
Mode 2	Hide only display items other than for login user/login account.
Mode 3	Hide only display items other than for a public user, login user/public user, and login account.
Mode 4	Show all display items.

7.86.9 Hide Personal Information (MIB)

- If [\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#) is set to "ON", selecting "OFF" in this setting cancels enhanced security mode.

(1) Use

- Specify whether to display the file name, address, or User Box number as MIB information in Job List.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.86.10 Display Activity Log

(1) Use

- Selects whether to display communication logs for scan/fax transmission.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

7.86.11 Initialize

(1) Use

- All data of selected items is cleared.
- Data of the following items can be cleared.
 - Job history
 - Copy Program
 - Network Settings
 - Address Registration

(2) Procedure

1. Touch [Initialize].
2. Select the desired item to clear its data and touch [OK].
3. Select [Yes] on the confirmation screen and touch [OK] to initialize the data.

7.86.12 Secure Print Only

(1) Use

- To set whether or not to allow only Secure Print for print jobs from PC.
When "ON" is selected in this setting, the Secure Print feature must be always used for printing from a printer driver. As all print jobs require ID or a password, output documents remains private.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.86.13 Copy Guard

- It will be displayed only when the optional security kit SC-508 is mounted.

(1) Use

- Specify whether to use the Copy Guard function.
If [Copy Guard] is selected in [Application], you can embed copy inhibit information on paper.
- This is used upon set-up of the optional security kit SC-508.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.86.14 Password Copy

- It will be displayed only when the optional security kit SC-508 is mounted.

(1) Use

- Specify whether to use the Password Copy function.
If [Password Copy] is selected in [Application], you can embed a password on paper. You can also detect a password embedded on paper.
- This is used upon set-up of the optional security kit SC-508.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

7.86.15 Web browser contents access

- It will be displayed only when an extended function of the web browser via OpenAPI application is enabled.

(1) Use

- To set whether to enable or disable access to locally-stored files (pre-installed contents, image files, and help files) from the web browser that is interacting with MFP via OpenAPI applications.

(2) Default setting

- Allow

(3) Setting item

- "Allow"
- Restrict

NOTE

- When using the application where server authentication is carried out by web browser extensions, [Allow] is automatically selected.

7.86.16 TX Operation Log**(1) Use**

- To select whether or not to save the history of operations performed on the control panel to send scanned files or faxes as TX operation logs.
- To print the saved sending operation logs or save them in USB memory, select [Utility] -> [Administrator Settings] -> [System Settings] -> [List/Counter] -> [TX Operation Log Output] on the Control Panel.
- [TX Operation Log Erase] is available only when [Save] is selected. When changing from [Save] to [Do Not Save], check in with users about erasing TX operation logs.

(2) Default setting

- Do Not Save

(3) Setting item

- Save
- "Do Not Save"

7.86.17 Export Debug Log

- This is displayed only when Switch No. "155" is set to "01" in HEX Assignment in [Service Mode] -> [System 2] -> [Software Switch Setting].

(1) Use

- To select whether or not allow CE to export debug information (logs) from the MFP to use the information to analyze problem in the MFP.

(2) Default setting

- Restrict

(3) Setting item

- Allow

- “Restrict”

7.87 Security Settings-Enhanced Security Mode

7.87.1 Use

- To set whether or not to enhance security.
- To use when enhancing the security function at user's option.
- The following settings are necessary for setting the security enhancement “ON”.

Administrator Password	Change it with the one which meets password rules.
User Authentication	Set to “ON (MFP)”, “External Server Authentication”, or “Main + External Server”.
HDD encryption word	Set the encryption word with 20 characters.
SSL Certificate	Register self-certificate for SSL communication from the PSWC.
CE Password	Change it with the one which meets password rules.
CE Authentication	Set to [ON].
Image Controller Setting	Set to [Controller 0].
Management Function Choice	Set to “Unset.”

7.87.2 Default setting

- OFF

7.87.3 Setting item

- ON
- “OFF”

NOTE

- Note that setting Enhanced Security Mode to “ON” disables the following functions.
 - Print Data Capture (forcibly prohibited when Enhanced Security Mode is set to “ON”)
 - In CS Remote Care, the following operation is prohibited.
 - Rewriting instructions of firmware, communication of the account track counter information, the setting renewal of the machine.
 - Firmware upgrading through Internet ISW (When the Enhanced Security Mode is set to ON, the setting of this function cannot be changed from “OFF.”)
- Setting the Enhanced Security Mode “ON” will change the setting values for the following functions.

Function Name		Default Setting	When Enhanced Security mode is set to [ON]
Password Rules	To apply the password rule to enhance security.	Invalid	Enable (not to be changed)
Prohibit Functions When Auth. Error	To set the function for prohibiting Authentication operation in order to prevent the unauthorized access.	Mode 1	Mode 2 (not to be changed): Three times is set. * The number of times can be changed to once, twice, or three times. (It is twice, four or six times for WebDAV server password.)
Confidential Document Access Method	To display the status of the Authentication system on the control panel for the Confidential document access.	Mode 1	Mode 2 (not to be changed) * In association with Prohibit Functions When Auth. Error, the method is changed from authentication using Secure Document ID and password (Mode 1) to that using the password with the Secure Document first narrowed down by Secure Document ID (Mode 2).
Public User Access	To permit use by a public user having no user registration if user authentication setting has been made.	Restrict	Restrict (not to be changed)
User Name List	To display the list key for User names on User Authentication screen.	OFF	OFF (not to be changed)
Print without Authentication	To allow or restrict printing which user and account are not specified.	Restrict	Restrict (not to be changed)
User Box Administrator Setting	To set whether to allow or restrict the Box Administrator to use the system.	Restrict	Restrict (not to be changed)
SSL	To set whether to encrypt access by SSL.	OFF	ON (not to be changed)
SSL Encryption Strength	To set the SSL encryption strength for the SSL encryption communication.	AES-256, 3DES-168, RC4-128, DES-56, RC4-40	AES/3DES (not to be changed to one containing strength lower than AES/3DES)
Automatically Obtain Certificates of S/MIME	-	No	No (not to be changed)

Function Name		Default Setting	When Enhanced Security mode is set to [ON]
S/MIME Encryption Method	-	3DES	3DES (not to be changed to DES or RC-2)
FTP Server	To set whether to use FTP server or not.	ON	OFF (not to be changed)
SNMPv1/v2c	To use when changing Write setting.	Read/Write enable	Only Read is enabled (not to be changed)
SNMP v3 Security Level and auth/priv-password	To set the security level for the Reading/Writing Authority User which is used for SNMP v3.	auth/priv-password	- The security level can be selected from among [authpassword] and [auth/priv-password]. - An 8-digit-or-more auth-password and priv-password can both be set.
Print Data Capture	To set whether to allow or restrict capturing the Print Job Data.	Allow	Restrict (not to be changed)
Network Setting Clear	To clear the network setting through PageScope Web Connection.	Enabled	Restrict
Administrator Password Change Via Network	To clear the network setting through PageScope Web Connection.	Enabled	Restrict (not to be changed)
Release Time Settings	To set the period of time to be elapsed before the access lock state is released.	5 min.	The setting value should be 5 min. or more (no value less than 5 can be set)
Destination Registration Change by User (Address Book and Program destination)	-	Enabled	Restrict (not to be changed)
Secure Print User Box Preview	-	Thumbnail View, Detail View, and Document Details are enabled	Only Detail View is enabled before password authentication (Mode 2)
Initialize (Network Settings)	To clear the network related settings.	Enabled	Restrict (not to be changed)
Image Log Transfer Settings	Specifies whether to transfer the input or output image data to the server using whenever MFP inputs or outputs image data.	OFF	OFF (not to be changed)
Internet ISW Set	To set firmware upgrading by Internet ISW, and enable or disable various settings.	No	No (not to be changed)
Operation Ban release time	To set the period of time to be elapsed before the access lock state is released in CE password authentication.	5 min.	The setting value should be 5 min. or more (no value less than 5 can be set)

7.88 Security Settings-HDD Settings

7.88.1 Check HDD Capacity

(1) Use

- To display the used space capacity, total space capacity, and the remaining capacity of the hard disk.
- To check the capacity and the status of use of the hard disk.

7.88.2 Overwrite HDD Data

- When the image becomes unnecessary, temporary data overwrite function will write meaningless data over all area where images are stored, and destroy the image data itself.
The structure of image data will be destroyed so that in case HDD is stolen, the remaining data included in the image data will not leak. Using the HDD lock password function or HDD encryption function along with this function will provide a high level of security which prevents images of great importance from leaking. It is recommended to use HDD lock password function or HDD encryption function along with this function for those who require high level of security.

(1) Overwrite HDD Data

(a) Use

- To set whether or not to use overwrite temporary data.
- To use when making temporary data overwrite function valid.
- All data are temporarily written into HDD during PC print, copy, scanning and fax transmission. When the operation is complete, perform overwriting to the area data were once written in HDD in order to enhance security.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

NOTE

- When selecting [Yes], select an overwrite method.

(2) HDD Overwrite Method**(a) Use**

- To set overwriting method to use temporary data overwrite function.
- To change overwriting method to use temporary data overwrite function.

Mode 1	To overwrite 0x00 one time.
Mode 2	Overwrite 0x00 -> overwrite 0xff -> overwrite 0x61 -> validation

(b) Default setting

- Mode 1

(c) Setting item

- "Mode 1"
- Mode 2

(3) Encryption Priority/Overwrite Priority**(a) Use**

- "Encryption Priority/Overwrite Priority" can be selected.

Encryption Priority	When the encryption word is set, the security level of the data will be enhanced before writing to HDD. When erasing data, they will all be converted into encryption data before overwritten. Therefore, overwriting will be executed with the value besides the value specified by the selected mode.
Overwrite Priority	• Standard encryption method will be applied to data written to HDD even when the encryption word is set, so overwriting and erasing will be performed without fail using the specified value in the selected mode. • It is used for performing the overwriting and erasing according to the HDD data erase standard.

NOTE

- It is necessary to make HDD format when encryption priority/overwrite priority setting is changed.

(b) Default setting

- Encryption Priority

(c) Setting item

- "Encryption Priority"
- Overwrite Priority

7.88.3 Overwrite All Data**(1) Use**

- To delete the whole data in the hard disk by overwriting.
- To initialize the area of use for the user stored in SSD board.
- To use when disposing of the hard disk.
- Select the overwriting method from Mode 1 through 8.

Mode 1	It overwrites 0x00 once.
Mode 2	Overwrites with random numbers -> overwrites with random numbers -> overwrites with 0x00
Mode 3	Overwrites with 0x00 -> overwrites with 0xff -> overwrites with random numbers -> verifies
Mode 4	Overwrites with random numbers -> overwrites with 0x00 -> overwrites with 0xff
Mode 5	Overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff
Mode 6	Overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with random numbers
Mode 7	Overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0xaa
Mode 8	Overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0x00 -> overwrites with 0xff -> overwrites with 0xaa -> verifies

(2) Procedure

1. Touch [Overwrite All Data].
2. Select a mode and touch [Delete].

3. Select [Yes] on the confirmation screen and touch [OK].
4. Turn off the main power switch and turn it on again more than 10 seconds after.

7.88.4 HDD Lock Password

(1) Use

- To set the lock password for the hard disk.
- To enter, change or delete the lock password for the hard disk.

NOTE

- **Don't forget the password.**
- **After setting a lock password, if you replace the HDD due to its breakage or other reasons and install a new HDD, an error message is displayed. In that case, clear the HDD lock password and set a new password using this function.**

(2) Procedure

1. Touch [HDD Lock Password].
2. Enter the password (20 characters) on the on-screen keyboard, and touch [OK].

NOTE

- **Password using only a single letter is not acceptable.**
- **Don't forget the password. When the password is forgotten, the replacement of hard disk is needed.**

3. Re-enter the password to confirm.
4. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

7.88.5 Format HDD

(1) Use

- To conduct logical formatting of HDD.

NOTE

- **It is subject to logical formatting here, therefore if starting with physical formatting, follow as [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [HDD Format].**

(2) Procedure

1. Touch [Format HDD].
2. Select [Yes] on the confirmation screen and touch [OK].
3. Turn off the main power switch and turn it on again more than 10 seconds after.

7.88.6 HDD Encryption Setting

(1) Use

- To re-set encrypting passphrase due to exchange of SSD board or etc.

NOTE

- **HDD formatting is required after this setting. Therefore it is necessary to retrieve certain data from HDD in advance. The following data will be lost after HDD formatting.**

1. Address data
2. Authentication data: Authentication mode, user authentication setting, account track setting
3. Box setting data: Box and text in the box, setting information of each box, box for fax
4. Job history, fax transmission history

And after setting the HDD encryption key, the movie data, voice data, OCR dictionary data, PDF/A font, OCR font, and Unicode font need to be reinstalled as necessary since these data will be deleted by HDD format.

- **If you replace the HDD due to its breakage or other reasons, you can automatically reset the encryption passphrase by installing a new HDD and performing the logical format.**

(2) Procedure

1. Press [HDD Encryption Setting].
2. Enter encryption passphrase (20 characters) with the keyboard on the operation panel and press [OK].

NOTE

- **Double-byte and identical characters are not acceptable.**

3. Turn off the main power switch and turn it on again more than 10 seconds after.
4. Open [Administrator Settings] and conduct HDD formatting according to the instruction appeared on the panel.
5. Turn off the main power switch and turn it on again more than 10 seconds after.

7.88.7 Debug Log Encryption Settings

(1) Use

- To set a password used to encrypt debug data when storing it into the HDD.

(2) Default setting

- 01234567890123456789

(3) Procedure

- Enter an encryption passphrase from the on-screen keyboard.
 1. Enter the encryption passphrase currently in use.
 2. Encryption Passphrase: Enter a new encryption passphrase.

3. Encryption Passphrase Confirmation: Re-enter the new encryption passphrase.

7.89 Security Settings-Function Management Settings

7.89.1 Usage Settings for Each Function

- It will be displayed only when the following setting shows that vendor 2 or management device 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(1) Use

- To set whether to use management function for each item of [Copy], [PC print], [Send data] and [Other Prints].
[Other Prints] is not displayed when vendor 2 is connected.
- [ON] for [Send Data] will not be displayed when the optional image controller (IC-414) is mounted.

ON	Can be used after authentication or coin insertion.
OFF	Can be used without authentication or coin insertion.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF
- Restrict

7.89.2 Maximum Job Allowance

- It will be displayed only when the following setting shows that vendor 2 is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(1) Use

- To set the upper limit of the number of copy or PC print when management function has been set.

(2) Default setting

- 9999

(3) Setting range

- 1 to "9999"

7.89.3 Network Function Usage Settings

(1) Use

- To set whether to use network function or not when management function has been set.
- Not to use the network function whose counter is difficult to be managed when management function has been set.
- The following are target functions.
PC-FAX transmission/Using the HDD TWAIN driver to view and retrieve documents in user boxes/Using PageScope Box Operator to view and retrieve documents in user boxes/Box operations using the PageScope Web Connection.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

NOTE

- However, when the vendor or management device setting in the Service Mode is set, this setting is set to OFF.
Exercise caution since it will stay in "OFF" setting even when "unset" is selected on vendor or management device setting in Service Mode later.

7.90 Security Settings-Stamp Settings

7.90.1 Apply Stamps

(1) Use

- Selects whether to add a stamp to documents when jobs are printed or scanned/fax data is sent.

(2) Default setting

- Do Not Apply

(3) Setting item

- Apply
- "Do Not Apply"

(4) Procedure

- Touch "Apply" to make stamp settings independently for print and transmission modes.

7.90.2 Delete Registered Stamp**(1) Use**

- Deletes registered stamps, and copy protect/repeat stamps.

(2) Procedure

1. Touch [Delete Registered Stamp].
2. Select [Stamp] or [Copy Protect/Stamp Repeat].
3. Select [Yes] on the confirmation screen and touch [OK] to delete the registered stamps.

7.91 Security Settings-Image Log Transfer Settings**7.91.1 Image Log Transfer Settings**

- This is displayed only when Switch No. 63 is set to [00000001] at Bit assignment/[01] at HEX assignment (Type 1) or [00000010] at Bit assignment/[02] at HEX assignment (Type 2) in [\[Service Mode\] -> \[System 2\] -> \[Software Switch Setting\]](#).

7.91.2 Image Log Transfer Settings (Type1)**(1) Use**

- Specifies whether to transfer the input or output image data to the server using whenever MFP inputs or outputs image data. Makes the settings of the WebDAV Server, the FTP Server, or the SMB Server where image data are transferred.
- Use this settings to keep logs of input and output image data for security purpose.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
1. Select Forwarding Destination and configure the sever settings.

WebDAV Server setting	Host Name, File Path, User Name, Password, Port Number, Proxy, SSL Settings
FTP Server setting	Host Name, File Path, User Name, Password, Port Number, PASV, and Proxy
SMB Server setting	Host Name, File Path, User Name, Password

2. Specify Audit item(s).

All Items	Applied to Fax TX, Fax RX, Scan, and Others.
Individual Item	Can be selected from Fax TX, Fax RX, and Scan.

7.91.3 Image Log Transfer Settings (Type2)**(1) Use**

- To select whether or not to transfer only input/output images in Fax TX/RX to the server when image data is input or output to or from MFP.

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

(4) Procedure

- When selecting [ON], configure the following settings.
1. Configure the file type and scan setting.
 2. Select Forward or Do Not Forward for Fax TX/RX. To transfer data, select [Forwarding Dest.] and configure the server settings.

FTP Server setting	Host Name, File Path, User Name, Password, Port Number, PASV, and Proxy
SMB Server setting	Host Name, File Path, User Name, Password
WebDAV Server setting	Host Name, File Path, User Name, Password, Port Number, Proxy, SSL Settings

7.92 Security Settings-Driver Password Encryption Setting

7.92.1 Use

- To set whether to use the factory default encryption word or user-defined one as a common key that encrypts a password used for a print job.

User-Defined	Sets an encryption word. Enter an encryption word of 20 letters.
Use Factory Default	Uses the factory default encryption word (undisclosed predefined encryption key).

NOTE

- When selecting [User-Defined], set an encryption key being consisted of the same letters in the printer driver. If the encryption word set in the main body differs from the encryption key set in the printer driver, different encrypted passwords are created and printing cannot be made.
- The use of OpenAPI allows an encryption key to be obtained from the main body.

7.92.2 Default setting

- Use Factory Default

7.92.3 Setting item

- User-Defined
- "Use Factory Default"

7.93 Security Settings-FIPS Settings

7.93.1 FIPS Settings

(1) Use

- To set whether to enable the Fips mode.
- To disable using specific ciphers (RC4, RC2, DES, etc.) and specific hash functions (MD5, MD4, etc.) by enabling FIPS mode.

(2) Default setting

- Invalid

(3) Setting item

- Enable
- "Invalid"

7.94 License Settings

7.94.1 Get Request Code

(1) Use

- To display and print a request code and serial number used to activate i-Option.
- Used to confirm the request code and serial number.

(2) Procedure

- Touch [Get Request Code], and [Yes].
- A serial number and request code are issued.
- By touching [Print], the serial number and request code are printable.

7.94.2 Install License

- This is displayed only when the additional memory included in the optional upgrade kit UK-204 is installed.

(1) Use

- To allow administrator to activate functions provided by i-Option.
- The functions can be activated by entering Function/License Code or Token Code.
- By making settings in [\[Service Mode\]](#) -> [\[Billing Setting\]](#), CE can also activate functions provided by i-Option.

NOTE

- When activating i-Option, MFP accesses to KM license server via WebDAV connection. Set the proxy server setting in [\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[WebDAV Settings\]](#) -> [\[Proxy Setting for Remote Access\]](#) as occasion demands.
- For accessing to KM license server, it is necessary to select "Fixed Address" in [\[Service Mode\]](#) -> [\[Billing Setting\]](#) -> [\[WebDAV Server Setting\]](#).
- When the server connection error "MAE001" is displayed, check the network settings.
- To use web browser function, it is necessary to rewrite the firmware to MFP card version: A2XK0Y0-F000-G20-58, set switch No. 150 to [00000001] at Bit assignment/[01] at HEX assignment in [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#), then activate the i-Option license(LK-101 v3).

(2) Procedure (Function/License Code)

- Touch [Install License].
- Touch [Function/License Code].
- Touch [Function Code].
- Enter the Function Code.
- Touch [OK].
- Touch [License Code].

7. Enter the license code that was issued in the license management server using the key board on the control panel, and touch [OK].
8. Touch [Install] key.
9. Confirm the message, select [Yes], and touch [OK].
10. Turn OFF and ON the main power switch.

(3) Procedure (Token Code)

1. Touch [Token Code].
2. Touch one of the Token Codes 1 to 10.
3. Enter the Token Code.
4. Touch [OK].
5. Touch [Install] key.
6. Confirm the message, select [Yes], and touch [OK].
7. Turn OFF and ON the main power switch.

7.94.3 List of Enabled Functions

- This is displayed only when the additional memory included in the optional upgrade kit UK-204 is mounted.

(1) Use

- To display currently activated functions.

7.95 Voice Guidance Settings-Voice Guidance

7.95.1 Use

- To select whether or not to enable the voice guidance function.
- Selecting [Yes] allows you to configure the settings on the voice guidance function in the [Accessibility] screen.

NOTE

- The voice guidance function is available only when the optional i-Option LK-104 v3 and upgrade kit UK-204 are enabled.

7.95.2 Default setting

- No

7.95.3 Setting item

- Yse
- "No"

7.96 OpenAPI Authentication Management Setting

7.96.1 Restriction Code Settings

(1) Use

- These are communication settings for the application which is developed by the third vendor.
Do not set or change these settings without vendor's instructions.

7.97 External Memory Backup

7.97.1 Import/Export

- This is displayed only when Switch No. 72 is set to [00000100] at Bit assignment/[04] at HEX assignment in [\[Service Mode\] -> \[System 2\] -> \[Software Switch Setting\]](#).

(1) Use

- To export various types of setting information to an external memory (USB memory).
- To import various types of setting information from other machine via the USB memory.
- Types of data that can be exported and imported: Address Book, Authentication Data, Network Settings, Remote Access Setting

(2) Procedure (Import)

1. Connect the external memory to the machine.
2. Touch [Import].
3. Touch [Password], enter the password previously set for the import data, and touch [OK].
4. Touch [Start].
5. Import results appear.

(3) Procedure (Export)

1. Connect the external memory to the machine.
2. Touch [Export].
3. Select the item to be exported.
4. Touch [Password], enter the password of the export data, and touch [OK].
5. Touch [Start].
6. Export results appear.

7.98 Remote Access Setting

7.98.1 Import/Export User Data

(1) Use

- To set whether to remotely rewrite (import or export) user data such as address information using the CS Remote Care.

(2) Default setting

- Restrict

(3) Setting item

- Allow
- "Restrict"

8. UTILITY (OTHER SETTINGS)

8.1 Banner Printing

- It will not be displayed when the following setting shows that vendor 2 is mounted.
[\[Service Mode\]](#) → [\[Billing Setting\]](#) → [\[Management Function Choice\]](#)

8.1.1 Use

- To shift to the banner printing mode.
- To use when printing on the long size paper.

8.1.2 Procedure

- Set the long size paper to the bypass tray.
- Touch [Banner Printing], and touch [Allow].
- Send the job for the long paper print.
- Touch [Exit] to finish banner printing mode.

NOTE

- Only PC print is available for the long paper print.**
- Normal job cannot be accepted during banner printing mode.**

8.2 My Panel Settings

- It is displayed when the optional upgrade kit UK-204 is validated and PageScope My Panel Manager is installed.
- This is displayed only when a registered user is logging in after user authentication.
However, this is not displayed when both management device 2 and user authentication are used.

8.2.1 Use

- To make various settings about My Panel.
- To customize My Panel screen for individual registered users.
- Items that can be set are as follows:
Language Setting, Measurement Unit Setting, Copier Settings, Scan/Fax Settings, User Box Settings, Color Selection Setting, Main Menu Settings, and Initial Screen Setting

8.2.2 Procedure

- Touch [My Panel Settings].
- Touch a key that represents a desirable item and change its settings.

NOTE

- Registering, editing, and deleting My Panel settings are allowed only when logging in as a registered user.**
- When My Panel is not customized, the settings for MFP take effect in the three of the control panel settings, Language setting, Measurement unit setting, and Color selection setting.**
- Depending on the functions provided by each MFP and the optional device configuration, not all My Panel settings may not take effect.**

8.3 Device Information

8.3.1 Use

- To display the function version of the firmware installed in MFP and the IP address.

8.3.2 Procedure

- Touch [Device Information] to check the function version and IP address.
About function version
 - Model: bizhub C554/C454
 - Function version: Version 1 (Initial firmware)

8.4 Remote Panel Operation

- It will be displayed only when the following setting is set to "ON."
[\[Administrator Settings\]](#) → [\[Network Settings\]](#) → [\[Remote Panel Settings\]](#) → [\[Client Settings\]](#)

8.4.1 Use

- To start remote operations of the control panel of the machine.

9. ADJUSTMENT ITEM LIST

9.1 Replace feed roller, pick-up roller, separation roller (tray 1, tray 2)

Replacement part/Service job	Adjustment/setting items	Procedure
Replace feed roller, pick-up roller, separation roller (tray 1, tray 2)	[Service Mode] / [Counter] / [Life] / [Counter Clear]	1

9.2 Replace feed roller, separation roller assy (manual bypass tray)

Replacement part/Service job	Adjustment/setting items	Procedure
Replace feed roller, separation roller assy	[Service Mode] / [Counter] / [Life] / [Counter Clear]	1

9.3 Install LCT (Built-in)

Replacement part/Service job	Adjustment/setting items	Procedure
Install LCT (Built-in)	[Service Mode] / [System2] / [LCT (Built-in) Size Settings]	1
	[Service Mode] / [Machine] / [Printer Area] / [Printer Image Centering Side 1]	2
	[Service Mode] / [Machine] / [Printer Area] / [Prt. Image Center. Side 2 (Dup)]	3
	[Service Mode] / [Machine] / [Printer Area] / [Tray Printing Position: Tip]	4

9.4 Install LCT

Replacement part/Service job	Adjustment/setting items	Setting order
Install LCT	[Service Mode] / [Machine] / [Printer Area] / [Printer Image Centering Side 1]	1

9.5 Replace CCD board

Replacement part/Service job	Adjustment/setting items	Procedure
Replace CCD board	[Service Mode] / [System2] / [CCD Calibration]	1
	[Service Mode] / [System2] / [Line Mag Setting]	2
	[Service Mode] / [Machine] / [Printer Area] / [Paper Feed Direction 1]	3
	[Service Mode] / [Machine] / [Scan Area] / [Main Scan Zoon Adj.]	4
	[Service Mode] / [Machine] / [Scan Area] / [Scanner Image Centering.]	5

9.6 Replace developing unit

Replacement part/Service job	Adjustment/setting items	Procedure
Replace developing unit	[Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust]	1

9.7 Replace drum unit

Replacement part/Service job	Adjustment/setting items	Procedure
Replace drum unit	[Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust]	1

9.8 Replace transfer belt unit

Replacement part/Service job	Adjustment/setting items	Procedure
Replace transfer belt unit	[Service Mode] / [Counter] / [Life] / [New Release]	1
	[Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust]	2

9.9 Replace PH unit

Replacement part/Service job	Adjustment/setting items	Procedure
Replace PH unit	[Service Mode] / [Machine] / [Skew adjustment] / [Print Head Skew Reset]	1
	[Service Mode] / [Machine] / [Printer Area] / [Leading Edge Adjustment]	2
	[Service Mode] / [Machine] / [Printer Area] / [Printer Image Centering Side 1]	3

9.10 Replace original size detection sensor

Replacement part/Service job	Adjustment/setting items	Procedure
Replace original size detection sensor	Installation of original size sensor	1
	[Service Mode] / [State Confirmation] / [Table Number]	2

9.11 Replace scanner motor

Replacement part/Service job	Adjustment/setting items	Procedure
Replace scanner motor	Scanner motor belt adjustment	1
	[Service Mode] / [Machine] / [Scan Area] / [Sub Scan Zoom Adj.]	2

9.12 Replace scanner home sensor

Replacement part/Service job	Adjustment/setting items	Procedure
Replace scanner home sensor	[Service Mode] / [Machine] / [Scan Area] / [Scanner Image Centering]	1

9.13 Replace printer control board

Replacement part/Service job	Adjustment/setting items	Procedure
Replace printer control board	Installing the firmware	1
	[Service Mode] / [Enhanced Security] / [Engine Data Backup]	2

9.14 Replace MFP board

Replacement part/Service job	Adjustment/setting items	Procedure
Replace MFP board	Entering the machine type information	1
	Installing the firmware	2
	Restore (backup) data	3
	[Service Mode] / [Imaging Process Adjustment] / [Gradation Adjust]	4

9.15 Replace SSD board

Replacement part/Service job	Adjustment/setting items	Procedure
Replace SSD board	Installing the firmware.	1

NOTE

- Contact Konica Minolta technical support, if the SSD board needs a replacement.

9.16 Replace original glass

Replacement part/Service job	Adjustment/setting items	Procedure
Replace original glass	[Service Mode] / [Machine] / [Scan Area] / [Scanner Image Centering]	1
	[Service Mode] / [Machine] / [Scan Area] / [Image position: Leading Edge]	2

9.17 Replace hard disk

Replacement part/Service job	Adjustment/setting items	Procedure
Replace hard disk	[Service Mode] / [State Confirmation] / [Memory/HDD Adj.] / [HDD Format]	1
	[Service Mode] / [State Confirmation] / [Memory/HDD Adj.] / [HDD R/W Check]	2
	Install Data	3

9.18 Replace control panel unit

Replacement part/Service job	Adjustment/setting items	Procedure
Replace control panel unit	Touch panel calibration	1
	[Accessibility] / [Touch panel Adjustment]	2

9.19 Replace DF control board

Replacement part/Service job	Adjustment/setting items	Procedure
Replace DF control board	Installing the firmware	1
	[Service Mode] / [ADF] / [Original Tray Width]	2
	[Service Mode] / [ADF] / [Mixed original Size adjustment]	3

9.20 Add key counter

Replacement part/Service job	Adjustment/setting items	Procedure
Add key counter	Re-entry of Enhanced Security settings	1

9.21 Execute initialize

Replacement part/Service job	Adjustment/setting items	Procedure
Execute initialize	Re-entry of Utility settings	1

Replacement part/Service job	Adjustment/setting items	Procedure
	[Service Mode] / [System 1] / [Serial Number]	2
	[Service Mode] / [System 1/2] and re-entry of setting values	3
	Re-entry of Enhanced Security settings	4
	[Accessibility] / [Touch panel Adjustment]	5

9.22 Add an optional device

Replacement part/Service job	Adjustment/setting items	Procedure
Add an optional device	[Service Mode] / [Firmware Version]	1

9.23 Execute F/W update

Replacement part/Service job	Adjustment/setting items	Procedure
Execute F/W update	[Service Mode] / [Firmware Version]	1

9.24 Add fax board

Replacement part/Service job	Adjustment/setting items	Procedure
Add fax board	[Service Mode] / [System2] / [Option Board Status]	1
	Installing the firmware	2
	[Service Mode] / [System1] / [Marketin Area] / [Fax Target]	3

9.25 Replace DF-701

Replacement part/Service job	Adjustment/setting items	Setting order
Replace DF-701	ADF adjusting the height	1
	Adjusting front side skew feed on ADF	2
	Adjusting back side skew feed on ADF	3
	[Service Mode] / [ADF] / [Original Tray Width]	4
	[Service Mode] / [ADF] / [Original Stop Position]	5
	[Service Mode] / [ADF] / [FD-Mag. ADJ. (F)]	6
	[Service Mode] / [ADF] / [FD-Mag. ADJ. (B)]	7
	[Service Mode] / [ADF] / [Main Scanning Direction Zoom]	8
	[Service Mode] / [ADF] / [Read Pos Adj]	9
	[Service Mode] / [System 2] / [CIS Image Adjustment]	10

9.26 Replace CIS module

Replacement part/Service job	Adjustment/setting items	Setting order
Replace CIS module	Adjusting back side skew feed on ADF	1
	[Service Mode] / [ADF] / [FD-Mag. ADJ. (F)]	2
	[Service Mode] / [ADF] / [FD-Mag. ADJ. (B)]	3
	[Service Mode] / [ADF] / [Auto Stop Position Adjustment]	4
	[Service Mode] / [ADF] / [Main Scanning Direction Zoom]	5
	[Service Mode] / [ADF] / [Read Pos Adj]	6
	[Service Mode] / [System 2] / [CIS Image Adjustment]	7

10. LIST OF SERVICE MODE

10.1 List of service mode (outline)

NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

Service Mode	Machine	I.10.2.1 Machine
	Firmware Version	I.11.4 Firmware Version
	Imaging Process Adjustment	I.10.2.2 Imaging Process Adjustment
	CS Remote Care	I.10.2.3 CS Remote Care
	System 1	I.10.2.4 System 1
	System 2	I.10.2.5 System 2
	Counter	I.10.2.6 Counter
	List Output	I.10.2.7 List Output
	State Confirmation	I.10.2.8 State Confirmation
	Test Mode	I.10.2.9 Test Mode
	ADF	I.10.2.10 ADF
	FAX *1	I.10.2.11 FAX
	Finisher *2	I.10.2.12 Finisher
	Internet ISW	I.10.2.13 Internet ISW

- The function tree is shown to comply with the format displayed on the screen.
- *1: It will be displayed only when the optional fax kit FK-511 is mounted.
- *2: It will be displayed only when the optional finisher FS-533, FS-534 or FS-535 is mounted.

10.2 List of service mode (detail)

10.2.1 Machine

NOTE

- After exiting Service Mode, you must turn OFF the main power switch. Turning ON the main power switch again after waiting 10 seconds makes the changes to the Service Mode setting take effect.

Machine		Ref. Page

11. SERVICE MODE

11.1 Starting/Setting/Exiting

11.1.1 Starting procedure

NOTE

- Ensure appropriate security for Service Mode function setting procedures. They should NEVER be shown to any unauthorized person not involved with service jobs.

(1) Procedure

1. Press the Menu key.
2. Touch [Counter].
3. Press the following keys in this order.; Stop -> 0 -> 0 -> Stop -> 0 -> 1
4. Enter the CE password and touch [END].

NOTE

- When the following setting is set to "ON", CE password authentication is necessary; [\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#)
- If a wrong CE password is entered, re-enter the right password. The machine will not enter Service Mode unless the CE password is entered correctly. To return to the basic screen, turn OFF the main power switch and turn it ON again. When the following setting is set to "Mode 2", operation will be prohibited since it indicates authentication failure by failing to enter the correct CE password within the specified number of times; [\[Administrator Settings\] -> \[Security Settings\] -> \[Security Details\] -> \[Prohibited Functions When Authentication Error\]](#)
- If the access lock is activated, the lock release timer starts to operate by input the Stop -> 0 -> 9 -> 3 -> 1 -> 7 in Menu key -> [Counter] -> [Print List] after the main power switch is turned OFF and On. When the timer reaches the time specified in this setting, the access lock is released.
- The service code entered is displayed as " * "

5. The Service Mode menu will appear.

NOTE

- Be sure to change the CE password from its default value.
- For the procedure to change the CE password, see the "[1.12.3.1 CE Password](#)."
- NEVER forget the CE password.

11.1.2 Setting procedure

1. Press the key corresponding to the function you would like to change the setting for. Keys or setting screens will appear for each function.

Ex.: System 1

2. Press the key for the item that you would like to change the setting for. Setting screens will appear for each item.

Ex.: Install Date

3. Press the key for the setting you would like to change. You can also input the numerical value using the 10-key pad. (the [+]/[-] keys can also be used for settings. Follow the directions on the screen to input numerical values.)

NOTE

- For more details, see the description pages for each setting item.
[1.10.1 List of service mode \(outline\)](#)

4. Touch [END]. This closes the setting screen and returns to the Service Mode screen. (If deep within the hierarchy of the setting screen, it may be necessary to touch [END] several times)

5. Touch [Exit]. This will close the Service Mode screen and exit the Service Mode.

6. Turn OFF the main power switch. After waiting 10 seconds, turn ON the main power switch again. Turning the main power switch OFF and then ON again makes the changes to the Service Mode setting take effect.

NOTE

- Simply exiting the Service Mode will not make the changed settings take effect. You must turn the main power switch OFF and then ON again.

11.1.3 Exiting procedure

- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch. Wait 10 seconds, then turn ON the main power switch again.

11.2 Date/Time Input mode**11.2.1 Use**

- This mode is used to set time-of-day and date.

11.2.2 Procedure

- [Call the Service Mode to the screen.](#)

2. Press the following keys in this order.
 - Stop -> 1 -> 1 -> 4 -> 4 -> Clear
3. Enter year, month, day, hour, and minute, in that order, from 10-key pad.
 - Year 4 digits -> Month 2 digits -> Day 2 digits -> Hour 2 digits -> Minute 2 digits

NOTE

- Before entering date and time, press the Clear key to delete the present time from the place where data and time is entered.
- When setting the month, day, hour, or minute, enter "0" first if the data one digit.

4. Make sure that correct figures have been entered and then touch [Entry].
5. Touch [END] to return to the Service Mode.

11.3 Machine
11.3.1 Trail Edge Color Alignment Adj**(1) Use**

- To adjust color shift if color shift is found at the trailing edge of either plain paper or thick paper by the comparison of originals and their output.
- Uses this function when color shift occurs at the trailing edge of images.
- Able to make a setting on a process speed basis independently for each paper type of Normal/Thin Paper, Thick 1/1+ and Thick 2/3/4.

(2) Default setting

- 0

(3) Procedure

1. Call the Service Mode to the screen.
2. Touch these keys in this order: [Machine] -> [Trail Edge Color Alignment Adj].
3. Load manual bypass tray with A3/11 x 17 or A4/8 1/2 x 11 plain paper.
4. Select the paper type to be adjusted.
5. Press the Start key.

6. Using the printed test pattern, check color shift in the sub scan direction on both leading and trailing edge areas. If color shift is found only around the trailing edge, perform the following adjustment. (If color shift is found on both areas, perform [Color Registration Adjustment].)
7. Using the [+] / [-] key, change the setting value as necessary.
 - If the cross deviates in the direction of A, increase the setting. (Decrease paper transport speed.)
 - If the cross deviates in the direction of B, decrease the setting. (Increase paper transport speed.)
8. Produce another test pattern and make sure that there is no deviation.

Check Procedure

11.3.2 Fusing Temperature

(1) Use

- To adjust individually the temperature of the heating roller for each type of paper, thereby coping with varying fusing performance under changing environmental conditions.
- When fusing performance is poor, or wax streak or offset occurs when the type of paper is changed or environmental conditions change.
- Use when the curling of the paper due to the paper type or environmental change occurred, or when the paper jam, as well as stapling or folding position error occurred due to the curling of the paper.
- By setting the temperature higher (+), gloss of print can be improved.
- By setting the temperature lower (-), exit roller mark can be reduced.

(2) Adjustment range

Paper type	Setting range	Step
Plain Paper	-20 °C to +10 °C	5 °C
Thin Paper		
OHP Film		
Thick 1		
Thick 1+		
Thick 2		
Thick 3		
Thick 4		
Post.		
Enve.	-5 °C to +5 °C	5 °C
Recycled	-20 °C to +10 °C	

(3) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Fusing Temperature].
3. Select the paper type.
4. Enter the new setting from the [+] / [-] key.
 - If fusing performance is poor, increase the setting.
 - If wax streaks occur, decrease the setting.
 - If offset is poor, decrease the setting.
 - If curling of the paper occurs, decrease the setting.
5. Touch [END] to validate the adjustment value.
6. Return to the basic screen.
7. Output two or three test patterns and check to see whether the image has any problem.
8. Make the adjustment for each type of paper.

11.3.3 Fusing Transport Speed

(1) Use

- To adjust the speed of the fusing motor so as to match the fusing speed with transport speed.
- Brush effect or blurred image is evident as a result of changes in environmental conditions or degraded durability.

(2) Setting range

(a) bizhub C554

Paper Type	Setting range	Step
Normal/Thin Paper	-20 to +20	1
Thick 1-4		

(b) bizhub C454

Paper Type	Setting range	Step
Normal/Thin Paper	-20 to +20	1
Thick 1/1+		
Thick 2/3/4		

(3) Procedure

- Call the Service Mode to the screen.
- Touch these keys in this order: [Machine] -> [Fusing Transport Speed].
- Select the paper type.
- Enter the new setting from the 10-key pad.
 - If brush effect is evident, vary the setting value and check for image.
 - If a blurred image occurs, decrease the setting.
- Touch [END] to validate the adjustment value.
- Back to the basic screen.
- Check the print image for any image problem.

11.3.4 Heater Control Level (bizhub C454 only)

(1) Use

- It switches the control level of the fusing unit phase to control the flicker when turning on/off the fusing heater.

(2) Default setting

- Level 2 or Level 3 (The default setting varies depending on the marketing area.)

(3) Setting range

- Level 1 to Level 4 (Step: 1)

(4) Procedure

- Call the Service Mode to the screen.
- Touch [Machine] -> [Heater Control Level].
- Enter the new setting from the [+] / [-] key.
 - When the fluorescent light flickers: Turn down the level. (Example: Level 2 -> Level 1)
 - When there is a noise at power source system such as DC power supply: Turn up the level. (Example: Level 2 -> Level 3 -> Level 4)

11.3.5 Printer Area

(1) Leading Edge Adjustment

(a) Use

- To vary the print start position in the sub scan direction for each of different paper types. (to adjust the timing where paper is sent out from the registration roller)
- The PH unit has been replaced.
- The paper type has been changed.
- The print image deviates in the sub scan direction.
- A faint image occurs on the leading edge of the image.
- This setting can be made independently for plain paper, thin paper, thick 1/1+, thick 2, thick 3, thick 4, OHP film, and envelopes.

(b) Setting range

- Width A on the test pattern produced should fall within the following range.

Specifications	4.2 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(c) Procedure

1. Place A3 paper on the manual bypass tray.
2. [Call the Service Mode to the screen.](#)
3. Touch [Machine] -> [Printer Area] -> [Leading Edge Adjustment].
4. Select the [Plain Paper].
5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width A on the test pattern.
7. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width A on the test pattern.
10. If width A is outside the specified range, change the setting again and make a check again.
11. If width A falls within the specified range, touch [END].
12. Following the same procedure, adjust for thin paper, thick 1 to 3, OHP film, and envelope.

(2) Printer Image Centering Side 1**(a) Use**

- To vary the print start position in the main scan direction for each paper source.
- The PH unit has been replaced.
- A paper feed unit has been added.
- The print image deviates in the main scan direction.

(b) Setting range

- Width A on the test pattern produced should fall within the following range.

Specifications	3.0 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Machine] -> [Printer Area] -> [Printer Image Centering Side 1].
3. Select the paper source to be adjusted.
4. Press the Start key to let the machine produce a test pattern.
5. Check the dimension of width A on the test pattern.
6. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
7. Press the Start key to let the machine produce a test pattern.
8. Check the dimension of width A on the test pattern.
9. If width A is outside the specified range, change the setting again and make a check again.
10. If width A falls within the specified range, touch [END].
11. Following the same procedure, adjust for all other paper sources. (Use A4 or 8 1/2 x 11 plain paper for the bypass.)

(3) Leading Edge Adj. Side 2 (Duplex)**(a) Use**

- For individual types of paper, this function allows the adjustment of the image write start position in the sub scan direction on the 2nd side of duplex printing.
- This adjustment is made when the image on the 2nd side of paper deviates from the original position in the sub scan direction.
- This adjustment can be made independently for each of plain paper, thin paper, thick paper 1/1+, thick paper 2, and thick paper 3.

(b) Setting range

- Width A on the test pattern produced should fall within the following range.
- For measurement, use the image produced on the backside of the test pattern.

Specifications	4.2 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(c) Procedure

1. Place A3 paper on the manual bypass tray.
2. [Call the Service Mode to the screen.](#)
3. Touch [Machine] -> [Printer Area] -> [Leading Edge Adj. Side 2 (Duplex)].
4. Select the [Plain Paper].
5. Press the Start key to let the machine produce a test pattern.
6. Check the dimension of width A on the test pattern.
7. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
8. Press the Start key to let the machine produce a test pattern.
9. Check the dimension of width A on the test pattern.
10. If width A is outside the specified range, change the setting again and make a check again.
11. If width A falls within the specified range, touch [END].
12. Following the same procedure, adjust for thin paper and thick paper.

(4) Prt. Image Center. Side 2 (Dup)**(a) Use**

- To vary the print start position in the main scan direction for each paper source in the 2-Sided mode.
- The image on the backside of the 2-sided copy deviates in the main scan direction.

(b) Setting range

- Width A on the test pattern produced should fall within the following range.
- For measurement, use the image produced on the backside of the test pattern.

Specifications	3.0 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Machine] -> [Printer Area] -> [Prt. Image Center. Side 2 (Dup)].
3. Select the paper source to be adjusted.
4. Press the Start key to let the machine produce a test pattern.
5. Check the dimension of width A on the test pattern.
6. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
7. Press the Start key to let the machine produce a test pattern.
8. Check the dimension of width A on the test pattern on the backside of the copy.
9. If width A is outside the specified range, change the setting again and make a check again.
10. If width A falls within the specified range, touch [END].
11. Following the same procedure, adjust for all other paper sources. (Use A4 or 8 1/2 x 11 plain paper for the manual bypass tray.)

(5) Paper Feed Direction Adj.**(a) Use**

- To synchronize the paper transport speed with the image writing speed.
- [Sub Scan Zoom Adj.] becomes necessary.
- The print image on the copy distorts (stretched, shrunk).

- When the print image on the copy is stretched in the sub scan direction.
- This setting can be made independently for normal/thin paper, thick 1/1+, thick 2, thick 3, and thick 4.

(b) Setting range

- Width A and width B on the test pattern produced should fall within the following ranges.

NOTE

- **Width A: equivalent to one grid**
- **Width B: equivalent to 48 grids**

Specifications	A: 7.9 to 8.3
	B: 389.1 to 392.1
Setting range	A: -7 to +7
	B: -7 to +7

(c) Procedure

1. Load manual bypass tray with A3 or 11 x 17 plain paper.
2. [Call the Service Mode to the screen.](#)
3. Touch [Machine] -> [Printer Area] -> [Paper Feed Direction Adj.].
4. Select [Plain / Thin Paper - Color].
5. Press the Start key to let the machine produce a test pattern.
6. Check width A (equivalent to one grid) and width B (equivalent to 48 grids) on the test pattern.
7. Touch these keys in this order: [Machine] -> [Printer Area] -> [Paper Feed Direction Adj.].
8. If width of A or B falls outside the specified range, change the setting using the [+] / [-] keys.
 - If width A or B is longer than the specifications, make the setting value smaller than the current one.
 - If width A or B is shorter than the specifications, make the setting value greater than the current one.
9. Press the Start key to let the machine produce a test pattern again.
10. Check width A and width B on the test pattern.
11. If width A or B falls outside the specified range, change the setting value and make a check again.
12. If width A or B falls within the specified range, touch [END].
13. Following the same procedure, adjust for thick paper.

(6) Tray Printing Position: Tip

(a) Use

- To change and adjust image printing position at vertical scanning direction by each feed. (to adjust the timing starting from the roller connection up to start of transfer output). It is not applicable in case the job is fed at re-feed.
- To be used when [Printer Area-leading Edge Adjustment] is not enough for full adjustment (as such case that image printing position gets deviated due to pattern of each feed.)
- Setting is available according to feed of 1st. Short (the length of paper at vertical scanning direction is under 276.4 mm), 1st. Long (the length of paper at vertical scanning direction is over 276.4 mm), 2nd, 3rd, 4th and Manual.
- Adjustment is made for plain paper.

(b) Setting range

NOTE

- [Printer Area-leading Edge Adjustment] should be made within specification.
- Image printing position at vertical scanning direction is adjusted based on the combination value of this setting figure and [Printer Area-leading Edge Adjustment] figure. In case the value is larger than +3.0mm or less than -3.0mm, the figure should be rounded to 3.0mm or -3.0mm.

- Width A on the test pattern produced should fall within the following range.

Specifications	4.2 ± 0.5 mm
Setting range	-3.0 mm to +3.0 mm (in 0.2 mm increments)

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Machine] -> [Printer Area] -> [Tray Printing Position: Tip].
3. Set plain paper to the targeted tray, and select the feed tray.

4. Press the Start key to let the machine produce a test pattern.
5. Check the dimension of width A on the test pattern.
6. If width A falls outside the specified range, change the setting using the [+] / [-] key.
 - If width A is longer than the specifications, make the setting value smaller than the current one.
 - If width A is shorter than the specifications, make the setting value greater than the current one.
7. Press the Start key to let the machine produce a test pattern.
8. Check the dimension of width A on the test pattern.
9. If width A is outside the specified range, change the setting again and make a check again.
10. If width A falls within the specified range, touch [END].

11.3.6 Scan Area

- Use the following color chart for the adjustment of the scanner section.
- If the color chart is not available, a scale may be used instead.

Adjustment item	Ref. page
A: Image Position: Leading Edge	I.11.3.6.(1) Image Position: Leading Edge
B: Scanner Image Centering	I.11.3.6.(2) Scanner Image Centering
C: Main Scan Zoom Adj.	I.11.3.6.(3) Main Scan Zoom Adj.
D: Sub Scan Zoom Adj.	I.11.3.6.(4) Sub Scan Zoom Adj.

(1) Image Position: Leading Edge

(a) Use

- To adjust variations in mounting accuracy and sensitivity of the scanner home sensor and in mounting accuracy of the original width scale by varying the scan start position in the main scan direction.
- When the original glass is replaced.
- When the original width scale is replaced.

(b) Setting range

- A width on the color chart and one on the test pattern are measured and adjusted so that the difference of A width satisfies the specifications shown below.
- An adjustment must have been completed correctly of [Leading Edge Adjustment] of [Printer Area].

Specifications	Width A: ± 0.5 mm
Setting range	-3.0 mm +3.0 mm (in 0.1 mm increments)

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Scan Area] -> [Image Position: Leading Edge].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point A on the test pattern.
6. If width A on the test pattern falls outside the specified range, change the setting using the [+] / [-] key.
 - If the test pattern is less than the specified length, increase the setting value.
 - If the test pattern exceeds the specified length, decrease the setting value.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

(2) Scanner Image Centering

(a) Use

- To adjust part-to-part variations in accuracy of scanner parts and their mounting accuracy by varying the scan start position in the main scan direction.
- When the CCD unit is replaced.
- When the original glass is replaced.
- The scanner home sensor has been replaced.

(b) Setting range

- B width on the color chart and one on the test pattern are measured and adjusted so that the difference of B width satisfies the specifications shown below.
- An adjustment must have been completed correctly of [Printer Image Centering Side 1] of [Printer Area].

Specifications	Width B: ± 1.0 mm
Setting range	-5.7 mm to +5.7 mm (in 0.1 mm increments)

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Scan Area] -> [Scanner Image Centering].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a copy.
5. Check point B on the image of the test pattern.
6. If the test pattern falls outside the specified range, change the setting using the [+] / [-] key.
 - If the test pattern is less than the specified length, increase the setting value.
 - If the test pattern exceeds the specified length, decrease the setting value.
7. Press the Start key to make a test pattern.
8. Check point B of the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

(3) Main Scan Zoom Adj.

(a) Use

- To adjust the zoom ratio in the main scan direction for the scanner section.
- The CCD board has been replaced.

(b) Setting range

- Measure C width on the color chart and on the test pattern, and adjust the gap to be within the following specification.
- An adjustment must have been completed correctly of "Paper Feed Direction Adj." of [Printer Area].

Specifications	Width C: ± 1.0 mm
Setting range	0.990 to 1.010 (in 0.001 increments)

* Standard size when using a scale: 200.0 mm

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Scan Area] -> [Main Scan Zoom Adj.].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a test pattern.
5. Check the C width on the image of the copy.
6. If the test pattern falls outside the specified range, change the setting using the [+] / [-] key.
 - If the C width on the test pattern is less than one on color chart, increase the setting.
 - If the C width on the test pattern exceeds one on color chart, decrease the setting.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

(4) Sub Scan Zoom Adj.

(a) Use

- To adjust the zoom ratio in the sub scan direction for the scanner section.
- The LED exposure unit has been replaced.
- The scanner motor has been replaced.

(b) Setting range

- Measure D width on the color chart and on the test pattern, and adjust the gap to be within the following specification.
- An adjustment must have been completed correctly of "Paper Feed Direction Adj." of [Printer Area].

Specifications	Width D: ± 1.5 mm
Setting range	0.990 to 1.010 (in 0.001 increments)

* Standard size when using a scale: 200.0 mm

(c) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Scan Area] -> [Sub Scan Zoom Adj.].
3. Position the color chart correctly so that the original reference point is aligned with the scale.
4. Press the Start key to make a test pattern.
5. Check the D width on the image of the test pattern.
6. If the test pattern falls outside the specified range, change the setting using the [+] / [-] key.
 - If the D width on the test pattern is less than one on color chart, increase the setting.
 - If the D width on the test pattern exceeds one on color chart, decrease the setting.
7. Press the Start key to make another test pattern.
8. Check the image on the test pattern to see if the specifications are met.
9. Make adjustments until the specifications are met.

11.3.7 Printer Reg. Loop Adj.

(1) Use

- To set the correction value of the paper loop length for each process speed of tray 1, tray 2-4 and LCT, manual or Duplex.
- To adjust the length of the loop formed in paper before the registration rollers.
- Use "Paper Passage" for paper passage check.
- When a paper skew occurs.
- When a paper misfeed occurs.

(2) Setting range

- The adjustable range is different depending on paper source and paper type.

	Tray 1	Tray 2-4, LCT (Built-in), LCT	manual	Duplex
Normal/Thin Paper	-11 to +7	-11 to +7	-11 to +7	-12 to +8
Thick 1/1+	-11 to +7	-11 to +7	-11 to +7	-12 to +8
Thick 2/3/4	-11 to +7	-11 to +7	-11 to +7	-12 to +8

(3) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Printer Reg. Loop Adj.].
3. Select a paper source and a processing speed where the settings are made by touching the corresponding keys.
4. Enter the new setting from the 10-key pad.
 - To decrease the loop amount: Decrease the setting value.
 - To increase the loop amount: Increase the setting value.

11.3.8 Color Registration Adjustment

(1) Cyan, Magenta, Yellow

(a) Use

- To adjust color shift if there is any when comparing the original with copy of the plain or thick paper.
- To correct any color shift.
- This setting can be made independently for plain paper, thick 1/1+, thick 2, thick 3, and thick 4.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Color Registration Adjustment].

3. Load manual bypass tray with A3/11 x 17 or A4/8 1/2 x 11 plain paper.
4. Press the Start key.
5. On the test pattern produced, check for deviation between the black line and the line of each color at positions X and Y.
6. Select the color to be adjusted.
7. Using the [+] / [-] key, change the setting value as necessary. (At this time, only the line of the selected color moves.)
 - If the cross deviates in the direction of A, increase the setting.
 - If the cross deviates in the direction of B, decrease the setting.
8. Produce another test pattern and make sure that there is no deviation.

Check Procedure

Check point X, Y

Adjustment for X direction:
Check point X

If the cross deviates in the direction of A,
increase the setting.
If the cross deviates in the direction of B,
decrease the setting.

Direction of A

Direction of B

Adjustment for Y direction:
Check point Y

If the cross deviates in the direction of A,
increase the setting.
If the cross deviates in the direction of B,
decrease the setting.

Direction of A

Direction of B

11.3.9 Print Head Skew Adj.

(1) Print Head Skew Adj.

(a) Use

- To display the default position of the skew correction motor.
- In this machine, it is not unable to enter the adjusting value.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Skew adjustment] -> [Print Head Skew Adj.].
3. Check the skew adjustment value for each color.
4. Touch [OK].

(2) Print Head Skew Reset

(a) Use

- Returns the skew correction motor to the default position and clear the backup copies of the cumulative skew amount.
- Use this feature when the PH unit is replaced.
- After addressing the alert code P-14 and completing an action to the problem, perform this function.
- Use this function when the current skew correction motor's position becomes unavailable due to the skew adjustment interrupted by the door being opened or the main power switch being turned OFF.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Machine] -> [Skew adjustment] -> [Print Head Skew Reset].
3. Touch the start key and execute the print head skew reset.

NOTE

- After the print head skew reset is complete, be sure to perform [Initialize + Image Stabilization].

(c) Skew adjustment result on the panel

- Skew adjustment result is provided in [Skew Adjust Value], which is selected as follows: [Service Mode] -> [State Confirmation] -> [Color Regist].

State Confirmation

Color Regist

	Front		Back		skew adjustment		
	K	Y	X	Y	Initial	Adjust	Move
C	0	0	0	0	0	0	0
M	0	0	0	0	0	0	0
Y	0	0	0	0	0	0	0

END

Skew Adjust Value	Description
Initial Value	Displays the initial position of the skew correction.
Adjust Value	Displays the final skew correction position that was obtained after finishing the image stabilization control.
Move	Displays how much skew adjust value changed in the previous image stabilization control.

11.3.10 LD adjustment

(1) LD Timing Adj.

(a) Use

- It displays the emission delay value between two laser diode.

(b) Procedure

- Call the Service Mode to the screen.
- Touch these keys in this order: [Machine] -> [LD adjustment] -> [LD Timing Adj.].
- Check the LD emission delay value for each color.
- Touch [OK].

(2) LD 1/2 Balance Adj.

(a) Use

- This function adjusts the LD lightness balance between the two LDs to correct the difference of LD lightness between the LDs.
- This setting is made after the PH unit is replaced.
- This adjustment is made to prevent uneven density in highlighted halftone area processed with error diffusion being caused by inappropriate laser intensity.

(b) Procedure

- Call the Service Mode to the screen.
- Touch these keys in this order: [Machine] -> [LD adjustment] -> [LD 1/2 Balance Adj.].
- Select [For adjustment] and press Start key.
- Patterns are output with LD2 light intensity changed on the basis of LD1.

- Each pattern has four squares. The two small squares diagonal to each other are printed with the same LD. (The pair of small squares where image density change corresponds to LD2.)
- From the test pattern, select the pattern where the least density difference appears between LD1 and LD2 for each color.

7. Enter the adjustment value corresponding to the pattern you selected (see the above illustration) or a value close to the adjustment value using the ten key pads on the panel.
8. Select [For effect confirmat.] and press Start key.
9. Check that LD2 small squares have no image noise of woodgrain.
10. Touch [OK].

(3) LD Light Width Adjustment

(a) Use

- To fine-adjust the light-emitting time of the laser that is scanned by the polygon motor.
- Use when the reproducibility of thin line is reduced.

NOTE

- **Adjustment value of this setting will be reflected by the image stabilization control.**

(b) Default setting

- +3

(c) Setting range

- 0 to +6 (Step:1)

(d) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Machine] -> [LD adjustment] -> [LD Light Width Adjustment].
3. Enter the new setting from the [+] / [-] key.
 - Increase the value: Light-emitting time will be lengthened.
 - Decrease the value: Light-emitting time will be shortened.

11.3.11 Manual Bypass Tray Width Adj

(1) Use

- To set the maximum width and the minimum width for the bypass paper width detection resistor of the manual bypass guide.
- Use when the bypass paper width detection resistor of the manual bypass guide has been changed.
- Use when a false paper size is displayed when the manual bypass is used.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
 2. Touch these keys in this order: [Machine] -> [Manual Bypass Tray Width Adj].
 3. Touch [Max. Width].
 4. Load the bypass tray with paper having a width of 297 mm.
 5. Press the Start key and check that the results are [OK].
 6. Touch [Min. Width].
 7. Load the bypass tray with paper having a width of 110 mm.
 8. Press the Start key and check that the results are [OK].
- * Make the adjustment again if the results are [NG].

11.3.12 Lead Edge Erase Adjustment

(1) Use

- To set the leading edge erase amount of the paper.
- Upon user requests, it is possible to specify the void area where image is not printed along the leading edge.
- This adjustment can be made individually for First Side, Second Side, Thin Paper Front, and Thin Paper Back.

(2) Default setting

(a) First Side/Second Side

- 4 mm

(b) Thin Paper Front/Thin Paper Back

- 4 mm

(3) Setting item

(a) First Side/Second Side

- "4 mm"
- 5 mm
- 7 mm

NOTE

- When "4 mm" is selected, 4.2 mm is the actual amount to be erased in print based on the control system of the machine.

(b) Thin Paper Front/Thin Paper Back

- 4.0 mm to 10.0 mm (Step: 1.0 mm)

11.3.13 Non-Image Area Erase Check

(1) Use

- The non-image area erase function may not work properly under bright light source. Incoming light quantity is checked to verify that the non-image area erase function can work properly under the environment.
- Verification results are shown as follows:

OK	Works properly.
NG1	Works properly. However, data that may interfere with the non-image area erase function was found. This function may not work well with dark original.
NG2	Data that may interfere with the non-image area erase function was found.

- Use this feature when installing a new machine or reinstalling a machine in a new place.
- Use this feature when the non-image area erase function fails to work properly due to the changes of the surrounding environment at the installation site.

(2) Procedure

- Call the Service Mode to the screen.
- Touch these keys in this order: [Machine] -> [Non-Image Area Erase Check].
- Press the Start key to start a check.

NOTE

- Before the check, make sure that the DF is completely opened. In addition, make sure that no scratch or stain exists on the original glass.

- Check the result is "OK."

* If the check result is "NG1" or "NG2," reinstall the machine in another place or adjust the orientation of the machine to reduce light incidence on the machine. Then, perform the check again.

11.3.14 ADF Scan Glass Contamination

(1) Use

- To check the stain on the DF original glass and display the result.

NOTE

- If the result is NG, "NG1" or "NG2" is displayed.
NG1 corresponds to the detection of stain on the front side and NG2 corresponds to that on the back side.

- To manually perform the pre-detection of the stain which is normally conducted when the main power switch is turned ON, recovering from the sleep/low power mode, etc.
- [ADF Scan Glass Contamination] will be conducted with the detection level set by the following setting.
[Service Mode] -> [System 2] -> [ADF Scan Glass Contamin. Set.] -> [ADF Scan Glass Contamin. Sensitivity]
When the above setting is set to "Not Set", "NG1" or "NG2" will be displayed even though the pre-detection is conducted.

(2) Procedure

- Call the Service Mode to the screen.
- Touch these keys in this order: [Machine] -> [ADF Scan Glass Contamination].
- Press the start key to start the pre-detection.
- Check to make sure that "OK" is displayed for the result.

* When the result says "NG1" or "NG2", clean the glass and check again.

11.3.15 Exhaust Fan Stop Delay

(1) Use

- It sets the period of time till the ozone fan (FM13) stops.
- When the ozone fan stops when it is rotating at the full speed such as when the jam/trouble occurred after printing/image stabilization is finished, the period of time until it stops is delayed to discharge ozone which is around photo conductor.
(When shifting to the sleep mode immediately, ozone fan does not stop but carry out delay rotation.)

(2) Default setting

- 0

(3) Procedure

- 0 to 15 (minutes) can be entered with the ten-key pad. (Default is 0.)

NOTE

- When this setting is set to 0 (minute), the fan motor runs for 5 seconds before it stops.

11.3.16 PPM Control Choice

(1) Use

- To improve productivity when printing on thin paper.
- To give a higher priority to productivity than to fusing performance, change the setting to "100 %."

(2) Default setting

- 70 %

(3) Setting item

- 100 %
- "70 %"

11.4 Firmware Version

11.4.1 Use

- To check the firmware version.
- Use when the firmware is upgraded.
- When the firmware is upgraded or PWB is replaced.

11.4.2 Procedure

1. Call the Service Mode to the screen.
2. Touch [Firmware Version].
3. Select the appropriate key from 1 to 5 to check the firmware version.

11.5 Imaging Process Adjustment

11.5.1 Gradation Adjust

(1) Use

- To make an automatic adjustment of gradation based on the test pattern produced and the readings taken by the scanner.
- Color reproduction performance becomes poor.
- The imaging unit, drum unit or developing unit, or transfer belt unit has been replaced.

* The Adj. Values of "Dark" and "Highlight" shown on the gradation adjust screen represent how much corrections are made to produce an ideal image output. Conv. Value shows the difference from the ideal image density.

* The closer the Conv. Value to 0, the more ideal the image.

Mode key	Description
Stabilizer	• The image stabilization is performed. • After the image stabilization is performed, [Printer] / [Copy] key will become selectable.
Print	The gradation adjustment for print is performed.
Copy	The gradation adjustment for copy is performed.

Example of the gradation adjustment screen (Print).

Imaging Process Adjustment

Gradation Adjust Print

Stabilizer

Print

Copy

		Dark		Highlight	
		Adj. Value	Conv. Value	Adj. Value	Conv. Value
Print	C	4	0	0	0
	M	4	0	0	0
	Y	4	0	0	0
	K	4	0	0	0
Printer (Gradation)	C	4	0	0	0
	M	4	0	0	0
	Y	4	0	0	0
	K	4	0	0	0

END

Example of the gradation adjustment screen (Copy).

Imaging Process Adjustment

Gradation Adjust Copy

Stabilizer

Print

Copy

		Dark		Highlight	
		Adj. Value	Conv. Value	Adj. Value	Conv. Value
Copy	C	4	0	0	0
	M	4	0	0	0
	Y	4	0	0	0
	K	4	0	0	0
Printer (Gradation)	C	4	0	0	0
	M	4	0	0	0
	Y	4	0	0	0
	K	4	0	0	0

END

(2) Procedure

NOTE

- When executing the gradation adjustment, make sure to use the white paper for color copy.

- Call the Service Mode to the screen.
- Touch these keys in this order: [Image Process Adjustment] -> [Gradation Adjust].
- Touch [Stabilizer] and the Start key to perform image stabilization.

NOTE

- Before executing Gradation adjust, be sure to perform Stabilizer.

- Select Print or Copy and select the paper size on which test pattern is printed.
- Press the Start key to let the machine produce a test pattern.

NOTE

- When the image stabilization performed in step 3 is NG, the Start key stops functioning.
- When one of the alert codes, P-5, P-6, P-7, P-8, P-9, and P-28 is on the screen and [Printer] is selected, the Start key stops functioning.

- Place the test pattern produced on the original glass.

NOTE

- Depending on the size of the test pattern, it is set in a different position. Set the test pattern according to the instructions displayed on the control panel.

- Place ten blank sheets of paper on the test pattern and lower the original cover.
- Press the Start key. (The machine will then start scanning the test pattern.)
- Touch [OK] and repeat steps from 4 through 8 twice (a total of three times).
- Touch [Gradation Adjust] to display the Adj. Values and Conv. Values of each color (C, M, Y and K) for Dark and Highlight.
- Use the following procedures to check the Conv. Value.

NOTE

- Dark: 0 ± 100 and Highlight: 0 ± 60 : It completes the adjustment procedure.
- If neither Dark nor Highlight falls outside the ranges specified above: Perform steps from 4 to 8.

- If the convergence falls within the specified range after the second Gradation Adjustment, further adjustment may not be necessary.
- If a fault is detected, "0" is displayed for all values. In that case, after turning off the main power switch, turn it on again more than 10 seconds after and then make the gradation adjustment again.
- If either dark or highlight still remains outside the specified ranges perform [Max Image Density Adj.](#)
- If a total of four sequences of gradation adjust do not bring the values into the specified range, check the image.
- If the image is faulty, perform the [troubleshooting procedures for image problems](#).

11.5.2 Max Image Density Adj

(1) Use

- To adjust gradation, color, and image density to target reproduction levels by varying the maximum amount of toner sticking to paper through auxiliary manual fine-adjustment of gamma of each color after gradation adjust.
- An image quality problem is not corrected even after gradation adjust has been run.

(2) Default setting

- 0

(3) Setting range

- -10 to +10 (step: 1 *)
- *: 1 step corresponds to 0.03 in density difference.

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Max Image Density Adj].
3. Select [COPY] or [Printer].
4. Select the color to be adjusted.
5. Enter the new setting from the 10-key pad and [+/-].
 - To increase the maximum amount of toner sticking, increase the setting value.
 - To decrease the maximum amount of toner sticking, decrease the setting value.
6. Touch [END] to return to the [Process] menu screen.
7. Touch [Stabilizer].
8. Touch [Stabilizer Mode].
9. Press the Start key to validate the adjustment value.
10. Check the print image for any image problem.

NOTE

- If the setting value has been changed, be sure to run an image stabilization sequence to make valid the new value.

11.5.3 TCR Level Setting

(1) Use

- To adjust the T/C control level when an abnormal image density occurs as a result of a change in the amount of charge of toner and carrier due to an environmental change.
- Use when T/C changes due to changes in environmental conditions of the user site.

(2) Default setting

- 0

(3) Setting range

- -3 to +3
(1 step in positive (+) direction: 0.5 % increase, 1 step in negative (-) direction: 0.5 % decrease, Center value 0 corresponds to 6.5 % T/C ratio.)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Process] -> [TCR Level Setting].
3. Select the color to be adjusted.
4. Enter the new setting from the 10-Key pad and [+/-] key.
 - To increase T/C, increase the setting value.
 - To decrease T/C, decrease the setting value.
5. Touch [END] to validate the adjustment value.
6. Check the print image for any image problem.

11.5.4 Image Background Adj

(1) Use

- To adjust the highlight portion (fog level) to the target reproduction level by making an auxiliary manual fine-adjustment of γ of each color after gradation adjust.
- Use when a foggy background occurs due to a printer problem.

(2) Default setting

- 0

(3) Setting range

- -5 to +5 (step: 1*)
- *: 1 step corresponds to 10 V.

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Image Background Adj].
3. Select the color to be adjusted.
4. Enter the new setting from the 10-key pad.
 - To make the background level foggier, decrease the setting value.
 - To make the background level less foggy, increase the setting value.
5. Touch [END] to return to the [Image Adjust] menu screen.
6. Touch [Stabilizer].
7. Touch [Stabilization Only].
8. Press the Start key to validate the adjustment value.
9. Check the print image for any image problem.

NOTE

- If the setting value has been changed, be sure to run an image stabilization sequence to make valid the new value.

11.5.5 Transfer Voltage Fine Adj**(1) Primary transfer adj.****(a) Use**

- Adjust the output value for the 1st image transfer voltage.
- To use when white spots appeared.

(b) Default setting

- 0

(c) Setting range

- -8 to +7 (step: 1 *)
- *1: step is equivalent to 2μA.

(d) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select [\[Test Mode\]](#) -> [\[Halftone Pattern\]](#) to output the red or green test pattern.
3. When the test pattern image has white spots, adjust with the following procedure.
4. Touch these keys in this order: [Imaging Process Adjustment] -> [Transfer Voltage Fine Adj].
5. Select [Primary transfer adj.].
6. Select the color.
7. Change the setting value using the [+] / [-] keys.

Adjust the output value for the 1st image transfer voltage by;

 - Increasing it: Increase the setting value (white spots will decrease).
 - Decreasing it: Decrease the setting value.
8. Touch [OK] key to set the adjustment value.

Gradually increase the adjustment value to the acceptable white spots level while checking the test pattern.

NOTE

- Photo conductor memory may occur by taking measure to white spots occurred by increasing the 1st image transfer voltage to adjust it.
- Check the image on the test pattern or the color chart when adjusting.

(2) Secondary transfer adj.**(a) Use**

- Adjust the 2nd image transfer output (ATVC) on the 1st page and the 2nd page for each paper type.
- To use when the transfer failure at the trailing edge occurs.
- Pressing the [AUTO] key down activates the 2nd image transfer amperage upper and lower limit control. In this case, the machine uses the voltage determined by the auto transfer voltage control and the 2nd image transfer voltage fine adj value does not take effect.

(b) Default setting

- Auto

(c) Setting range

- -8 to +7 (step: 1 *)
- *1: step is equivalent to 100 V.

(d) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Transfer Voltage Fine Adj].
3. Select [Secondary transfer adj.].
4. Select the side of the image (1st side or 2nd side), on which the transfer failure occurs.

NOTE

- For envelopes, OHP film and long size paper, only first side can be selected.

5. Select the paper type with the transfer failure.
6. Enter the new setting from the [+] / [-] keys.
 - To increase the ATVC value (in the direction of a foggy image), increase the setting value.
 - To decrease the ATVC value (in the direction of a less foggy image), decrease the setting value.
7. Touch [END] to validate the adjustment value.
8. Check the print image for any image problem.

NOTE

- * Press [Auto] to automatically control the 2nd image transfer output without using the 2nd image transfer voltage fine adj value.

11.5.6 Stabilizer**(1) Stabilization Only****(a) Use**

- The image stabilization sequence is carried out without clearing the historical data of image stabilization control.
- Use if an image problem persists even after gradation adjustment has been executed.
- When [Max Image Density Adj] and [Image Background Adj] of Service Mode are changed.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Stabilization Only].
3. Press the Start key to start Stabilizer.
4. The Start key turns red and stays lit up red during the stabilizer sequence.
5. Stabilizer is completed when the Start key turns blue.

(2) Initialize+Image Stabilization**(a) Use**

- To carry out an image stabilization sequence after the historical data of image stabilization control has been initialized.
- Use if an image problem persists even after gradation adjustment has been executed.
- Use if tone reproduction and maximum density are faulty even after stabilizer mode has been executed.
- When color shift correction is needed again after the machine maintenance.
- After executing the print head skew reset.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Stabilizer].
3. Touch [Initialize+Image Stabilization].
4. Press the Start key to start stabilizer.
The Start key turns red and stays lit up red during the stabilizer sequence.
5. Stabilizer is completed when the Start key turns blue.

11.5.7 Thick Paper Density Adjustment**(1) Use**

- To fine-adjust density of printed images of each color for thick paper.
- To change the density of the printed image for each color with thick paper.

(2) Default setting

- 0

(3) Setting range

- -5 to +5 (step: 1)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Thick Paper Density Adjustment].
3. Select [Thick 1, 1+] or [Thick 2, 3, 4].
4. Touch the Lighter or Darker key for the desired color to correct the image density.
 - Light color: Touch the Darker key.
 - Dark color: Touch the Lighter key.

11.5.8 Paper separation adjustment**(1) Use**

- By changing the period between the activation of the registration roller and the 2nd image transfer output, the paper separation position can be adjusted for the 1st and 2nd sides of paper.
- To ensure proper balance between paper separating and image transferring performances by varying the paper separation position applied for duplex printing of thin paper (52 to 59 g/m²) in hot and humid conditions.

(2) Default setting

- 0

(3) Setting range

- -10 mm to +10 mm (step: 0.1 mm)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Paper separation adjustment].
3. Select [First Side], [Second Side], [Thin Paper Front] or [Thin Paper Back].
4. Use the [+] or [-] key to change the setting value.
 - Priority on paper separation performance: Increase the setting value.
 - Priority on image transfer performance: Decrease the setting value.
5. Touch [OK] and determine the adjustment value.
6. Make a print and check the produced image.

11.5.9 Manual Toner Add**(1) Manual Toner Add****(a) Use**

- To adjust the set T/C level by replenishing an auxiliary supply of toner when a low ID occurs due to a lowered T/C after large numbers of prints have been made of originals having a high image density.
- When there is a drop in T/C ratio.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Manual Toner Add].
3. Select the color, for which supply of toner is to be replenished.
4. Pressing the Start key will let the machine detect the current toner density and; if the density is lower than a reference value, a toner replenishing sequence and then a developer agitation sequence are run.
5. Operation above is repeated maximum of ten sets of times with one set consisting of three sequences until it reaches to the reference value. When it is higher than the reference value, only the agitation is conducted.

(2) Hopper Toner Filling**(a) Use**

- To fill the sub hopper with toner and perform agitate in the developing unit.
- Used when toner is manually supplied to the toner hopper and agitate in the developing unit is performed.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Manual Toner Add] -> [Hopper Toner Filling].
3. Press the Start key to start filling and agitating operations.

11.5.10 Monochrome Density Adjustment**(1) Use**

- To fine-adjust the density of the printed image for a black print.
- To vary the density of the printed image of a black print.

(2) Default setting

- 0

(3) Setting range

- -2 to +2 (step: 1)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Monochrome Density Adjustment].
3. Touch [Lighter] or [Darker] as necessary to correct the image density.
 - If the black is light, touch the Darker key.
 - If the black is dark, touch the Lighter key.

11.5.11 Grad/Dev AC Bias V Selection**(1) Use**

- To change the setting of the development AC voltage.
- When this function is turned ON, it decreases the development AC voltage, thereby preventing voltage leak from occurring.
- Use when patches of white occur in the image in an ambience of low atmospheric pressure, such as in high altitudes.

(2) Default setting

- OFF

(3) Setting item

- ON

- "OFF"

11.5.12 Removable Voltage Adjust

(1) Use

- To allow the basic charge neutralizing voltage to be adjusted.
- To prevent separation failure (jam, paper conveyance failure) that may occur when paper other than recommended one is used by adjusting the neutralization voltage to the one that suits the type of paper the user uses.

(2) Default setting

- Auto

(3) Setting range

- -3 to +3 (Step: 1*)
- *1: step is equivalent to 1,000 V.

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Imaging Process Adjustment] -> [Removable Voltage Adjust].
3. Select [First Side], [Seconf Side], [Thin Paper Front] or [Thin Paper Back].
4. Enter the new setting from the [+] / [-] keys.
 - To increase the neutralization voltage, increase the setting value.
 - To decrease the neutralization voltage, decrease the setting value.
5. Touch [END] to validate the adjustment value.
6. Check the print image for any image problem.

NOTE

- * **Select [Auto] at each paper type to automatically control the neutralization voltage without using the neutralization voltage adjustment value.**

11.6 CS Remote Care (Outlines)

- CS Remote Care enables the machine and the computer at CS Remote Care center to exchange data through telephone/fax line, network or E-mail in order to control the machine.
- CS Remote Care enables the machine to call the computer at the center when trouble occurs. It also enables the computer at the center to contact the machine for the necessary data.
- Data which CS Remote Care handles can be divided into the following groups.
 - Data which show the status of use of the machine such as total count, PM count.
 - Data which show the abnormal situation on the machine such as where and how often errors occur.
 - Data on adjustment
 - Data on setting

NOTE

- It cannot be set when the following setting is set to "ON".
[\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#)

11.7 Setting up the CS Remote Care

NOTE

- For resetting up the machine which CS Remote Care has already been set up, clear the RAM for CS Remote Care before resetting.
[1.11.13.3.\(4\) RAM Clear](#)
- When using a telephone line modem for connection, use the data modem which is based on the ITU-T recommendations V.34/V.32 bis/V.32 and AT command.

11.7.1 Using the telephone line modem

1. Register the device ID
 - Register the device ID to the application at CS Remote Care center.

NOTE

 - **The initial connection is not available unless the device ID is registered.**
2. Connecting the modem
 - Turn the power for the modem OFF. Connect the machine and the modem with a modem cable. Connect the modem and the wall jack with a modular cable.

NOTE

 - **For connecting the modular cable, see the manual for the modem.**
3. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.

[I.11.13.2 Maintenance/Default Settings - ID Code](#)
4. Clearing the RAM
 1. Select [Service Mode] -> [CS Remove Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [RAM Clear].
 3. Select Set, and touch [OK].

[I.11.13.3.\(4\) RAM Clear](#)
5. Selecting the CS Remote Care function
 - Select [Service Mode] -> [CS Remove Care] -> [Maintenance/Default Settings] -> [System Selection], and touch [Modem].
6. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.

[I.11.13.2 Maintenance/Default Settings - ID Code](#)
7. Setting the date and time for CS Remote Care
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Date & Time Setting].
 3. Input the date, time and the time zone using the 10-key pad, and touch [Set].

[I.11.13.3.\(3\) Date & Time Setting](#)
8. Setting the Center ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center ID], and input the Center ID (five digits).

[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
9. Confirm the Device ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

 - **[Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].**
10. Setting the telephone number of the Center
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center Telephone Number].
 3. Input the telephone number of the center using the 10-key pad and [P], [T], [W], [-].

[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
11. Inputting the device telephone number
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device Telephone Number].
 3. Input the Device telephone number using the 10-key pad and [P], [T], [W], [-].

[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
12. Inputting the AT command for initializing the modem
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [AT Command].
 3. Input AT Command.

NOTE

 - **Change this command only when it is necessary. (They do not need to be changed in normal condition.)**
 - **For details on AT command, see the manual for the modem.**

[I.11.13.3.\(8\) AT Command](#)
13. Setting the DIPSW for CS Remote Care

NOTE

 - **This setting is not normally necessary.**
 - **Take this step only when necessary in a specific connecting condition.**
14. Executing the initial transmission
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.
 3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

NOTE

 - **The initial transmission key at the right bottom of the screen will be displayed only when the center ID, the device ID, Telephone number of the center and the device telephone number have been input.**
 - **However, if an invalid value is input as the device ID, the initial transmission key is not displayed.**

[I.11.13.3 Maintenance/Default Settings - Detail Setting](#)

11.7.2 Using the Fax line modem

NOTE

- **Setting will be available only when the optional fax board is installed.**
1. Register the device ID
 - Register the device ID to the application at CS Remote Care center.

NOTE

- **The initial connection is not available unless the device ID is registered.**

- Remove the telephone line modem
 - Be sure to remove the telephone line modem when the fax line is used.
- Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.[I.11.13.2 Maintenance/Default Settings - ID Code](#)
- Clearing the RAM
 1. Select [Service Mode] -> [CS Remove Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [RAM Clear].
 3. Select Set, and touch [OK].[I.11.13.3.\(4\) RAM Clear](#)
- Selecting the CS Remote Care function
 - Select [Service Mode] -> [CS Remove Care] -> [Maintenance/Default Settings] -> [System Selection], and touch [Fax].
- Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.[I.11.13.2 Maintenance/Default Settings - ID Code](#)
- Setting the date and time for CS Remote Care
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Date & Time Setting].
 3. Input the date, time and the time zone using the 10-key pad, and touch [Set].[I.11.13.3.\(3\) Date & Time Setting](#)
- Setting the Center ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center ID], and input the Center ID (five digits).[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
- Confirm the Device ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- **[Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].**

- Setting the telephone number of the Center
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center Telephone Number].
 3. Input the telephone number of the center using the 10-key pad and [P], [T], [W], [-].[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
- Inputting the device telephone number
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device Telephone Number].
 3. Input the Device telephone number using the 10-key pad and [P], [T], [W], [-].[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
- Setting the DIPSW for CS Remote Care

NOTE

- **This setting is not normally necessary.**
Take this step only when necessary in a specific connecting condition.

- Executing the initial transmission
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.
 3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.

NOTE

- **The initial transmission key at the right bottom of the screen will be displayed only when the center ID, the device ID, Telephone number of the center and the device telephone number have been input.**
However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

[I.11.13.3 Maintenance/Default Settings - Detail Setting](#)

11.7.3 Using E-mail

- Register the device ID
 - Messages can be exchanged only between the center with initial connection and the copier.

NOTE

- **The initial connection is not available unless the device ID is registered.**

- Remove the telephone line modem
 - Be sure to remove the telephone line modem when e-mail is used.
- Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.[I.11.13.2 Maintenance/Default Settings - ID Code](#)
- Clearing the RAM
 1. Select [Service Mode] -> [CS Remove Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [RAM Clear].
 3. Select Set, and touch [OK].[I.11.13.3.\(4\) RAM Clear](#)
- Selecting the CS Remote Care function
 - Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Setting], and touch [E-Mail 1] or [E-Mail 2].
- Inputting the ID code

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
2. Input the seven digits ID of the service person, and touch [ID Code] again.
- [I.11.13.2 Maintenance/Default Settings - ID Code](#)
7. Setting the date and time for CS Remote Care
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Date & Time Setting].
 3. Input the date, time and the time zone using the 10-key pad, and touch [Set].
- [I.11.13.3.\(3\) Date & Time Setting](#)
8. Setting the Center ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center ID], and input the Center ID (five digits).
- [I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
9. Confirm the Device ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

 - **[Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].**
10. Encryption setting
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Basic Setting] and select either Encryption or No Encryption.
11. Retransmission interval on e-mail delivery error
 - When selecting [E-mail 2], set the retransmission interval on e-mail delivery error in software SW setting.
- [I.11.8 Software SW setting for CS Remote Care](#)
12. Setting the Respond Timeout
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Respond Timeout] and enter the response timeout using the 10-key pad.

NOTE

 - **Under normal conditions, there is no need to change the default setting.**
- [I.11.13.3.\(7\) Response Time Out](#)
13. Setting the E-mail address
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Server Set].
 2. Touch [Server for RX], and set POP3 server address, POP3 login name, POP3 password and POP3 port number.
 3. Press [Receive], and set the E-Mail address, Mail Check, Connection Time Out and APOP Authentication.
 4. Touch [Send], and set the SMTP server address, SMTP port number, Connection Time Out, and APOP Authentication.
 5. Touch [TX/RX Test], and press Start key to carry out a transmission/reception test. If it fails to exchange messages, see the error message to take necessary measure, and try again.
- [I.11.13.4.\(1\) Server for RX-POP3 server](#)
14. When selecting [E-Mail2]:
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Schedule] and set the schedule of periodic transmission.
 3. Touch [Center Notifi. Item] and set items that will be reported to the Center.
- [I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
15. Receiving the initial connection E-mail message
 - Sending the initial connection E-mail message from the center to the address of the copier.

NOTE

 - **When receiving the initial connection E-mail message from the center while CS Remote Care-related screen is being displayed, the current setting information will be deleted, and CS Remote Care setting will be displayed.**
 - **For sending the initial connection E-mail, see the manual for CS Remote Care center.**
 - **Messages can be exchanged only between the center with initial connection and the copier.**
 - **The initial connection from the center will be carried out, and the E-mail address of the center will be stored in the copier.**
 - **When the initial registration is complete, the E-mail address of the center will be displayed by selecting [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting] -> [Basic Setting] -> [E-Mail address].**

11.7.4 When using a WebDAV server in http communication

NOTE

- **When MFP is connected to the Internet via a proxy, the proxy server related settings are necessary in advance.**
The proxy settings used in the http communication for CS Remote Care is configured in [Administrator Settings] -> [Network Settings] -> [WebDAV Settings] -> [Proxy Setting for Remote Access].

(1) Bilateral communication

1. Register the device ID
 - Register the device ID to the application at CS Remote Care center.

NOTE

 - **The initial connection is not available unless the device ID is registered.**
2. Remove the telephone line modem
 - Be sure to remove the telephone line modem when the http communication is used.
3. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.
- [I.11.13.2 Maintenance/Default Settings - ID Code](#)
4. Clearing the RAM
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [RAM Clear].
 3. Select Set, and touch [OK].
- [I.11.13.3.\(4\) RAM Clear](#)
5. Selecting the CS Remote Care function
 - Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Selection], and touch [http1].

6. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.

[I.11.13.2 Maintenance/Default Settings - ID Code](#)
7. Setting the date and time for CS Remote Care
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Date & Time Setting].
 3. Input the date, time and the time zone using the 10-key pad, and touch [Set].

[I.11.13.3.\(3\) Date & Time Setting](#)
8. Setting the Center ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center ID], and input the Center ID (five digits).

[I.11.13.3.\(1\) Basic Setting \(E-Mail1, E-Mail2, Modem or Fax\)](#)
9. Confirm the Device ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

 - **[Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].**
10. Encryption setting
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Basic Setting] -> [Client Setting] and select either Encryption or No Encryption.
11. Heart Beat
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting] -> [Basic Setting], and touch [Heart Beat].
 2. In [Communication], set whether or not to enable Heart Beat communication. (Default: Yes)
 3. Touch [Comm. Interval] and enter a Heart Beat transmission interval (1 to 256 minutes, Default: 30 minutes).
 4. In [Specified Transmission], set whether or not to enable Heart Beat transmission at a specified interval. (Default: Yes)
 5. Touch [Hour] and [Minute] and enter a time for specified transmission.

NOTE

 - **Heart Beat is a feature that uploads a Heart Beat file to the registered web server at a specified interval to report that the device is operating. Heart Beat files include total counter and status information.**
12. Setting the http server
 1. Select [Service Mode] -> [CS Remote Care], and touch [Server Settings].
 2. Touch [HTTP Server Settings] and set a URL address, account, password, and port number.
 3. Touch [SSL Settings] and make SSL settings.

[I.11.13.5 Maintenance/Default Settings - Server Setting \(http1 or http2 is selected\)](#)
13. Setting the DIPSW for CS Remote Care

NOTE

 - **This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.**
14. Executing the initial transmission
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.

NOTE

 - **The initial transmission key at the right bottom of the screen will be displayed only when the center ID, device ID and the URL address have been input.**
 - **However, if an invalid value is input as the device ID, the initial transmission key is not displayed.**
 3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.
 - If communication error between the machine and Center occurs, check the error code that appears.

(2) Unilateral communication: Device to Center

1. Register the device ID
 - Register the device ID to the application at CS Remote Care center.

NOTE

 - **The initial connection is not available unless the device ID is registered.**
2. Remove the telephone line modem
 - Be sure to remove the telephone line modem when the http communication is used.
3. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.

[I.11.13.2 Maintenance/Default Settings - ID Code](#)
4. Clearing the RAM
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [RAM Clear].
 3. Select Set, and touch [OK].

[I.11.13.3.\(4\) RAM Clear](#)
5. Selecting the CS Remote Care function
 - Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [System Selection], and touch [http2].
6. Inputting the ID code
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [ID Code].
 2. Input the seven digits ID of the service person, and touch [ID Code] again.

[I.11.13.2 Maintenance/Default Settings - ID Code](#)
7. Setting the date and time for CS Remote Care
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Date & Time Setting].

I.11.13.3.(3) Date & Time Setting

8. Setting the Center ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Center ID], and input the Center ID (five digits).

I.11.13.3.(1) Basic Setting (E-Mail1, E-Mail2, Modem or Fax)

9. Confirm the Device ID
 1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
 2. Touch [Machine Setting] -> [Device ID], and input Device ID (13 digits).

NOTE

- [Device ID] displays the serial number that is entered in [Service Mode] -> [System 1] -> [Serial Number].

10. Encryption setting

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
2. Touch [Basic Setting] -> [Client Setting] and select either Encryption or No Encryption.

11. Heart Beat

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting] -> [Basic Setting], and touch [Heart Beat].
2. In [Communication], set whether or not to enable Heart Beat communication. (Default: Yes)
3. Touch [Comm. Interval] and enter a Heart Beat transmission interval (1 to 256 minutes, Default: 30 minutes).
4. In [Specified Transmission], set whether or not to enable Heart Beat transmission at a specified interval. (Default: Yes)
5. Touch [Hour] and [Minute] and enter a time for specified transmission.

NOTE

- Heart Beat is a feature that uploads a Heart Beat file to the registered web server at a specified interval to report that the device is operating. Heart Beat files include total counter and status information.

12. Notification Setting

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting], and touch [Notification Setting].
2. Touch [Schedule] and set the schedule of periodic transmission.
3. Touch [Center Notifi. Item] and set items that will be reported to the Center.

I.11.13.3.(9) Notification Setting

13. Setting the http server

1. Select [Service Mode] -> [CS Remote Care], and touch [Server Set].
2. Touch [HTTP Server Settings] and set a URL address, account, password, and port number.
3. Touch [SSL Settings] and make SSL settings.

I.11.13.5 Maintenance/Default Settings - Server Setting (http1 or http2 is selected)

14. Setting the DIPSW for CS Remote Care

NOTE

- This setting is not normally necessary. Take this step only when necessary in a specific connecting condition.

15. Executing the initial transmission

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail Setting].
2. Touch [initial transmission] key on the right bottom of the screen to start initial transmission.

NOTE

- The initial transmission key at the right bottom of the screen will be displayed only when the center ID, device ID and the URL address have been input.
However, if an invalid value is input as the device ID, the initial transmission key is not displayed.

3. When the machine is properly connected with the center, CS Remote Care setting screen will be displayed.
- If communication error between the machine and Center occurs, check the error code that appears.

11.8 Software SW setting for CS Remote Care

NOTE

- Software SW bits data are written into the memory region on the MFP board every time a change is made. In case you changed bit data by accident, be sure to restore the previous state.
- Do not change any bit not described on this table.

11.8.1 Input procedure

1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings] -> [Detail Setting], and touch [Software Switch Setting].
2. Touch [Switch No.], and input the switch number (two digits) using the 10-key pad.
3. Touch [Bit Assignment], and select switch bit number using the arrow keys, and input 0 or 1 using the 10-key pad.
(For setting by hexadecimal numbers, touch [HEX Assignment] key, and input using the 10-key pad or A to F keys.)
4. Touch [Fix].

NOTE

- About functions of each switch, see to "I.11.8.2 List of software SW for CS Remote Care"

11.9 Setup confirmation

- Follow the steps below to make sure that CS Remote Care has been properly set up.
- 1. [Call the Service Mode to the screen.](#)
- 2. Touch [CS Remote Care].
- 3. Check to make sure that only selected item is displayed.

11.10 Calling the maintenance

- When CE starts maintenance, inputting the ID code of CE (seven digits: numbers which CE can identify. They are controlled by the distributor.) will transmit the information to the Center side and tells that the maintenance has started. When the maintenance is finished, touching [Maintenance Complete] key will transmit the information to the center and tells that it is finished.

NOTE

- The MFP sends the maintenance start information to the Center. While the MFP is in maintenance mode, the communication between the MFP and the Center is unavailable. Therefore, CE must touch [Maintenance Complete] immediately after the completion of maintenance to end maintenance mode.

11.10.1 When starting the maintenance

- Select Service Mode and touch [CS Remote Care].
- Touch [Maintenance Start]..
- Input the ID code using the 10-key pad.
- Select estimated hours that elapse before the completion of the maintenance from the options of [2 hours], [4 hours], [6 hours], [8 hours], [10 hours], or [12 hours].
- Touch [OK].

NOTE

- * The Start key blinks while maintenance mode is being carried out.
- You cannot extend the estimated hours while the maintenance is in progress.
- If you forget to touch [Maintenance Complete] after the completion of the maintenance, the maintenance completion information is automatically sent after the lapse of the selected estimated hours and the normal communication becomes available.

11.10.2 When finishing the maintenance

- Select Service Mode and touch [CS Remote Care].
- Touch [Maintenance Complete].

11.11 Calling the center from the administrator

- When the CS Remote Care setup is complete, the administrator can call the CS Remote Care center.
1. Select [Administrator Settings], and touch [System Connection].
 2. Touch [Admin. transmission].
 3. Press the Start key.

When the setup is not complete or another transmission is being carried out, the Admin. transmission key will not be displayed, and the transmission is not available.

NOTE

- For transmitting data of the machine by calling the center on the specified date and time, refer to the manual for CS Remote Care center.

11.12 Checking the transmission log

- The transmission log list will be output to be checked.
1. Select [Service Mode] -> [CS Remote Care] -> [Maintenance/Default Settings], and touch [Detail setting].
 2. Touch [Communication Log Print].
 3. Load tray 1 or bypass tray with A4S paper.
 4. Press the Start key to output transmission log.

11.13 Detail on settings for CS Remote Care

11.13.1 Maintenance/Default Settings - System Selection

(1) Use

- To select the system type for remote diagnosis.
- Use to newly build or change the system.

(2) Setting range

- E-Mail1
- E-Mail2
- Modem
- Fax
- http1
- http2

(3) Procedure

- Select [E-Mail 1], [E-Mail 2], [http 1], [http 2], [Modem], or Fax.
- Fax is available only when the optional fax kit is being installed.

11.13.2 Maintenance/Default Settings - ID Code

(1) Use

- To register the service ID.
- Use when registering and changing service ID.

(2) Procedure

1. Touch [ID code] and enter the service ID.
 - Enter a 7-digit code from the 10-key pad. (0000001 to 9999999)
2. Touch [ID code] to register the ID.
3. The [Detail Setting] will appear when the ID has been registered.

11.13.3 Maintenance/Default Settings - Detail Setting

(1) Basic Setting (E-Mail1, E-Mail2, Modem or Fax)

(a) Use

- Execute the primary setting.
- Use to change the set contents.
- Use to register the machine to the CS Remote Care center.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touching the [Detail Setting] will display the primary setting.

<Center Setting>

- Set the center ID, Device ID, and the phone No.
 - When e-mail is selected for system and all setup procedures are completed, e-mail address of the center is displayed.
- * When entering the phone number, 10-key and keys on the screen have following meanings.

[-] Pose	Waits to start transmitting after dialing
[W] Wait	Detects the dial tone of the other end
[T] Tone dial	Carry out tone dialing
[P] Pulse dial	Carry out pulse dialing
[*], [#]	To be used as necessary

<Schedule (Only when the [E-Mail2] is selected)>

- Set the schedule of notification to the center.
- Up to three different notification schedules can be registered.
- Select the notification cycle from [Day], [Week], or [Month].
When selecting [Day] for the notification cycle, set the Day Frequency.
When selecting [Week] for the notification cycle, set the Week Frequency and day of the week.
When selecting [Month], set the Month Frequency and the date of the month.

<Center Notification (Only when the [E-Mail2] is selected)>

- Select the items of data that will be sent to the center in one-way transmission through E-Mail2.
- The following table shows each of the notification item keys and corresponding data.

[1]	Sales count data	[7]	EKC data
[2]	Error count data	[8]	Adjustment data
[3]	Service count data	[9]	Coverage data
[4]	Life count data Life cycle data	[10]	Not used
[5]	CSRC-System data Device config data	[11]	Not used
[6]	History data	[12]	Not used

NOTE

- **Multiple items of data can be selected and sent at one time. However, be sure that only EKC data cannot be sent together with other items of data.**

<Initial Transmission>

- Touching the Initial Transmission key will send the information to the CS Remote Care center to register the machine.
(Only when the modem or fax is selected on the system Input.)

(2) Basic Setting (http1 or http2)

(a) Use

- Execute the primary setting.
- Use to change the set contents.
- Use to register the machine to the CS Remote Care center.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touching the [Detail Setting] will display the primary setting.

<Center Setting>

- Set the center ID.
- Display the device ID.

<Client Setting>

- To set whether or not to encrypt communication.

<Heart Beat>

- To make Heart Beat related settings.
- Heart Beat is a feature that uploads a Heart Beat file to the registered web server at a specified interval to report that the device is operating. Heart Beat files include total counter and status information.

<Initial Transmission>

- Touching the Initial Transmission key will send the information to the CS Remote Care center to register the machine.

(3) Date & Time Setting

(a) Use

- To set the date and time-of-day.
- Use to set or change the date and time-of-day.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touch [Detail Setting] to access Date & Time Setting.
4. Enter the date (month, day and year), time-of-day, and the time zone from the 10-key pad.
5. Touch [SET] to start the clock.

(4) RAM Clear

(a) Use

- To clear the following data at the center.
- To be used for setting CS Remote Care.
- To be used for reset the every data of the center to default.

NOTE

- **If RAM clear is selected during transmission, RAM clear processing will be implemented at the time the transmission is completed regardless of whether it is done properly or not.**

(b) Default setting

- Unset

(c) Setting item

- Set
- "Unset"

(5) Communication Log Print**(a) Use**

- To print out the communication log.
- Use to output and use the communication log.

(b) Procedure

1. [Call the Service Mode on the screen.](#)
2. Touch [CS Remote Care] -> [Maintenance/Default Settings].
3. Touch [Detail Setting] to access communication log print.
4. Load a paper tray with A4S/A4 or 8¹/₂ x 11S/8¹/₂ x 11 paper.
5. Press Start key to print out the communication log.

(6) Software Switch Setting**(a) Use**

- To change the CS Remote Care settings.

(b) Procedure

- Refer to "[I.11.8 Software SW setting for CS Remote Care](#)" for the setting.

(7) Response Time Out**(a) Use**

- It sets the intervals for resending e-mails when transmission error occurred.
- It can be set only when [E-Mail] is selected in [System Setting].
- To use when changing the intervals for resending e-mails when transmission error occurred.

(b) Default setting

- 60 minute

(c) Setting range

- 10 to 1440

(8) AT Command**(a) Use**

- To set the command to be issued at the time of modem initialization.
- This setting is available only when [Modem] is selected in [System Setting].

(b) Procedure

- Enter the command and touch [SET] to register.

(9) Notification Setting**(a) Use**

- To make the settings of notification to the center that is performed under unilateral communication via http.
- This setting is available only when [http2] is selected in [System Setting].

(b) Procedure

<Schedule>

- Set the schedule of notification to the center.
- Up to three different notification schedules can be registered.
- Select the notification cycle from [Day], [Week], or [Month].
When selecting [Day] for the notification cycle, set the Day Frequency.
When selecting [Week] for the notification cycle, set the Week Frequency and day of the week.
When selecting [Month], set the Month Frequency and the date of the month.

<Center Notifi. Item>

- The following table shows each of the notification item keys and corresponding data.

[1]	Sales count data	[7]	EKC data
[2]	Error count data	[8]	Adjustment data
[3]	Service count data	[9]	Coverage data
[4]	Life count data Life cycle data	[10]	Not used
[5]	CSRC-System data Device config data	[11]	Not used
[6]	History data	[12]	Not used

NOTE

- Multiple items of data can be selected and sent at one time. However, be sure that only EKC data cannot be sent together with other items of data.

11.13.4 Maintenance/Default Settings - Server Setting (E-Mail1 or E-mail2 is selected.)**(1) Server for RX-POP3 server****(a) Use**

- To set the POP3 server address used for the CS Remote Care.
- To set the address of the POP3 Server.
- POP3 server address can be set with IP address or the domain name.

(b) Procedure

<Input IP Address>

- IP address version 4 format
[0 to 255].[0 to 255].[0 to 255].[0 to 255]

<Input FQDN>

- Enter the domain name.

(2) Server for RX-POP3 login name**(a) Use**

- To set the login name for the POP3 server used for the CS Remote Care.

(b) Procedure

- Up to 64 characters (alphanumeric characters and symbols) can be used.

(c) Default setting

- No

(3) Server for RX-POP3 password**(a) Use**

- To set the logon password for the POP3 server used for the CS Remote Care.

(b) Procedure

- Up to 15 characters (alphanumeric characters and symbols) can be used.

(c) Default setting

- No

(4) Server for RX-POP3 port number**(a) Use**

- To set the POP3 port number used for the CS Remote Care.

(b) Default setting

- 110

(c) Setting range

- 1 to 65535

(5) Receive-E-mail Address**(a) Use**

- To set the e-mail address used for the CS Remote Care.

(b) Procedure

- Up to 129 characters (alphanumeric characters and symbols) can be used.

(c) Default setting

- No

(6) Receive-Mail Check**(a) Use**

- To set whether or not to use mail check and the time interval for the POP server used for the CS Remote Care.
- To change the time interval for mail check.

(b) Default setting

- No

(c) Setting item

- "No"
- 1 to 120 min.

(7) Receive-Connection timeout**(a) Use**

- To set the timeout period for connection during reception.

(b) Default setting

- 60 Sec

(c) Setting range

- 30 to 300 Sec

(8) Receive-APOP Authentication**(a) Use**

- To set whether or not to authenticate the APOP during reception.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

(9) Send-SMTP server**(a) Use**

- To set the SMTP server address for transmission used for the CS Remote Care.
- SMTP server address can be set by the IP address or the domain name.

(b) Procedure

<Input IP Address>

- IP address version 4 format
[0 to 255].[0 to 255].[0 to 255].[0 to 255]

<Input FQDN>

- Enter the domain name.

(10) Send-SMTP port number**(a) Use**

- To set the SMTP port number for transmission used for the CS Remote Care.

(b) Default setting

- 25

(c) Setting range

- 1 to 65535

(11) Send-SMTP Connection Time-out**(a) Use**

- To set the timeout period for transmission.

(b) Default setting

- 60 Sec

(c) Setting range

- 30 to 300 Sec

(12) Send-Authentication Setting**(a) Use**

- To set whether or not to authenticate during transmission via SMTP server.
- To use when authenticating during transmission.
Available authentication mode: POP Before SMTP, SMTP authentication

(b) Default setting

- OFF

(c) Setting item

- "OFF"
- POP Before SMTP
- SMTP Authentication

NOTE

- **Setting to "POP Before SMTP" will set the time for POP Before SMTP.**
 - **Default setting: 60 Sec**
 - **Setting range: 0 to "60 Sec"**
- When setting to SMTP authentication, touch the "Setting Check" key for authentication.

User ID	Enter the user ID for SMTP authentication.
Password	Enter the password for SMTP authentication.
Domain name	Enter the domain name for SMTP authentication.

(13) TX/RX Test**(a) Use**

- To determine the correct transmission and reception using CS Remote Care.

(b) Procedure

1. Press the Start key to let the machine start the transmission and reception test.
2. The test procedure and result will be displayed on the screen.

(14) Data Initialization**(a) Use**

- To initialize the contents for the sever setting.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

11.13.5 Maintenance/Default Settings - Server Setting (http1 or http2 is selected)**(1) HTTP Server Settings****(a) Use**

- To set a http server at the other end that is used in CS Remote Care.

(b) Procedure

<URL>

- To set the address of the http server.

<Account>

- To set an account that is used to access the http server.

<Password>

- To set a password that is used to access the http server.

<Port Number>

- To set a port number that is used to access the http server.

(2) SSL Settings**(a) Use**

- To make SSL settings of the http server at the other end that is used in CS Remote Care.

(b) Procedure

- To set whether or not to use SSL communication.

(3) Data Initialization**(a) Use**

- To initialize values in the server settings.

11.13.6 Product Auth. Settings**(1) Product Authentication****(a) Use**

- To set whether or not to enable product authentication.

NOTE

- **When changing this setting under the condition where http is used for CS Remote Care communication, you need to perform RAM Clear and then initial transmission again.**

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

(2) WebDAV**(a) Use**

- To set a WebDAV server for the product authentication.

(b) Procedure

<URL>

- To set the address of the WebDAV server.

<Account>

- To set an account that is used to access the WebDAV server.

<Password>

- To set a password that is used to access the WebDAV server.

<Port Number>

- To set a port number that is used to access the WebDAV server.

(3) Register Manually**(a) Use**

- To install the certificate to be used in product authentication.

(b) Procedure

<LMS>

1. [Call the Service Mode to the screen.](#)
2. Touch [CS Remote Care] -> [Product Auth. Settings].
3. Touch [Register Manually] -> [LMS].
4. Touch [Start] to communicate with LMS (License Management System) and install the certificate.
5. Check that the "Install OK" message appears.

<USB>

1. Connect the USB flash drive where the certificate obtained from LMS (License Management System) is stored to the USB port of MFP.
2. [Call the Service Mode to the screen.](#)
3. Touch [CS Remote Care] -> [Product Auth. Settings].
4. Touch [Register Manually] -> [USB].
5. Touch [Start] to install the certificate.
6. Check that the "Install OK" message appears.

11.13.7 Import/Export Settings**(1) WebDAV Setting****(a) Use**

- To configure WebDAV server settings used to remotely export or import MFP data (address book data, authentication setting data).

(b) Procedure

<URL>

- To set the address of the WebDAV server.

<Folder Name>

- To set a folder name of the WebDAV server that is used to transfer data.

<Account>

- To set an account that is used to access the WebDAV server.

<Password>

- To set a password that is used to access the WebDAV server.

(2) Port Number**(a) Use**

- To set a port number that is used to access the WebDAV server.

(b) Procedure

- Set the port number of the WebDAV server using the 10-key pad.

(3) SSL Settings**(a) Use**

- To configure the WebDAV server's SSL settings.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

(4) Data Initialization**(a) Use**

- To initialize the settings on the server.

(b) Default setting

- No

(c) Setting item

- Yes
- "No"

Unit Change		Japan	US	Europe	Europe	Europe	Europe	Europe	Europe

NOTE

- The language used in the service mode depends on the Language Selection setting, and changes to the language as following table.

Language Selection	Service Mode
Japanese	Japanese
Simplified Chinese	Simplified Chinese
Traditional Chinese	Traditional Chinese
Hangul	Hangul
Language other than listed above	English

11.14.2 Tel/Fax Number

(1) Use

- To enter the tel/fax number of the service contact that will appear on the control panel when a malfunction occurs in the machine.
- Upon setup.

(2) Procedure

- Enter the tel/fax number (19 digits) from the 10-key pad.
- Use Interrupt key to enter “-.”

11.14.3 Serial Number

(1) Use

- To register the serial numbers of the machine and options.
- The numbers will be printed on the list output.
- To use the serial number as device ID during CS Remote Care communication.
- Upon setup.

NOTE

- When main power switch was turned ON while the serial No. was not entered, the message to require entering the serial No. will be displayed.
- Do not change the serial number registered in the machine. If memory data is lost and entering the serial number is required, enter the original correct serial number. Be careful to enter the correct serial number since characters other than alphanumeric can be also entered. CSRC communication is not available if a wrong serial number is entered.
- The serial number of “Printer” can be checked through the following: Menu key -> [Counter].

(2) Procedure

- Type the serial numbers.
Printer, Scanner, ADF, LCT, Sorter/FN, Duplex, Vendor, Fax1, Fax2, RU, ZU (Not used)

11.14.4 Sleep ON/OFF Choice Setting

(1) Use

- To display the option of “OFF” for the sleep mode setting screen available from [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Power Supply/Power Save Settings\]](#).

NOTE

- The sleep mode will begin in 48 hours even if it sets it to “OFF.”

(2) Default setting

- Prohibit

(3) Setting item

- Permit
- “Prohibit”

11.14.5 Foolscap Size Setting

(1) Use

- To set the size for foolscap paper.
- Upon setup.

(2) Setting item

- 8¹/₂ x 13¹/₂
- 220 x 330 mm
- 8¹/₂ x 13
- 8¹/₄ x 13
- 8¹/₈ x 13¹/₄
- 8 x 13

NOTE

- “8¹/₈ x 13¹/₄” and “220 x 330 mm” setting are corresponding to paper fed from the manual bypass tray only.

11.14.6 Original Size Detection

(1) Copy Glass

(a) Use

- To change the size detection table for the document glass.

(b) Default setting

- The default setting varies depending on the marketing area.

(c) Setting item

- "Table1"
- Table2

NOTE

- Table 2 can be set only when original size sensor 2 is being mounted.

(2) 8¹/₂ x 14/Foolscap Size Detection

(a) Use

- To set whether paper of 8¹/₂ x 13¹/₂ size is detected as 8¹/₂ x 14 or foolscap in original glass or DF size detection.
- When Table 1 is selected in Copy Glass, paper of 8¹/₂ x 13¹/₂ size is detected as Foolscap despite of the setting of 8¹/₂ x 14/Foolscap Size Detection.

(b) Default setting

- 8¹/₂ x 14

(c) Setting item

- "8¹/₂ x 14"
- Foolscap

(3) ADF Size Detection

(a) Use

- To set whether or not to give a priority to the detection of 8K/16K size when DF is used.

(b) Default setting

- B series

(c) Setting item

- K Size
- "B series"

11.14.7 Install Date

(1) Use

- To register the date the main body was installed.
- Upon setup.

(2) Procedure

1. [Call the Service Mode on the screen.](#)
2. Select the key as follows.
[System 1] -> [Install Date].
3. Press the Clear key.
4. Enter the date (Year 4 digit -> Month 2 digit -> date 2 digit) from the 10-key pad.
5. Touch [Entry] to set the date of installation.

11.14.8 Initialization-Clear All Data

(1) Use

- To initialize the setting data.
- For details on items to be cleared, see "[I.15. CONTENTS TO BE CLEARED BY RESET FUNCTION.](#)"

NOTE

- When removing or installing the hard disk after registering the data below, be sure to clear the data.
Referring data: One-touch registration, user authentication/account track.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Clear All Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

11.14.9 Initialization-Clear Individual Data

- Clear Individual Data enables you to select and clear multiple items at a time.

(1) Copy Program Data

(a) Use

- To clear data registered as copy program.
- Use this feature to clear all copy program data at a time.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Copy Program Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

(2) Address Registration Data

(a) Use

- To clear address registration data.
- Use this feature to initialize address registration data.
- The following are address registration data:
Group address data, Program key data, One-touch destination data, Mail body data, Subject data, Prefix/suffix data

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Address Registration Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

(3) Fax Setting Data

(a) Use

- To clear fax-related settings and parameters. However, address-related data is not cleared.
- Use this feature to clear fax-related settings and parameters at a time.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Fax Setting Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

(4) All History Data

(a) Use

- To clear history data.
- The following are history data:
Job history, Journal history, Receive reject history, Destination history, Job secure counter (Internal data for history management)

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [All History Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

(5) Network Setting Data

(a) Use

- To clear network-related settings.
- Use this feature to initialize and set network-related settings again when the machine does not work properly upon change of network-related settings.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Network Setting Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

(6) Server Cache Data

(a) Use

- To clear user information cached from the external authentication server.
- When [Administrator Settings] -> [User Authentication/Account Track] -> [External Server Settings] -> [Temporarily Save Authentication Information] is set to "Enable," the corresponding user information is cached each time when authentication by the external server is successful.
The information is used when MFP cannot be connected to the external server.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [Server Cache Data].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

11.14.10 Initialization-System Error Clear

(1) Use

- To reset the trouble data.
- Use to clear the [Jam], [Trouble], [Error] displays, and other improper displays.
- For details on items to be cleared, see "[I.15. CONTENTS TO BE CLEARED BY RESET FUNCTION.](#)"

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 1] -> [Initialization] -> [System Error Clear].
3. Press the Start key.
4. When [OK] is displayed, turn off the main power switch and turn it on again more than 10 seconds after.

11.14.11 Problem Unit Isolation Set.

(1) Use

- Individual units and options have a set or unset setting for the problem unit isolation set. function.
- When a problem occurs, this function enables the continuous use of the units that are not affected by separately controlling them and isolating other units that have a problem.
- The machine isolates only units that have a "set" setting.

NOTE

- The malfunction detection mechanism is not applied to units and options that are being isolated.
- This function can be selected for the following units and options.
Tray 1, Tray 2, Tray 3, Tray 4, LCT, manual, Half-Fold/Tri-Fold Center Stapling, Post inserter, Z fold, Punch, Staple, Scanner, ADF
- Though Problem Unit Isolation Set. is not selected, if the specified malfunctions occur on the above listed units or options, an alert screen appears and asks users whether to isolate the units or options where malfunction occurs.
See the "[K.3.4 List of the trouble code](#)" section for the corresponding trouble codes.

(2) Default setting

- Unset

(3) Setting item

- Set
- "Unset"

NOTE

- After changing the setting, touch [Apply] and turn the main power switch OFF and ON to make the new setting effective.

11.14.12 Post card transfer table

(1) Use

- This setting allows you to select the transfer table to be used for thick3 postcards.
- For the use of thick 3 postcards, you can select the transfer table suitable for postcards.
- This setting is used to improve transfer performance to postcards.

Post.	The postcard 2nd image transfer table is used when printing on thick3 postcards.
Thick 3	The normal thick3 2nd image transfer table is used when printing on thick 3 postcards.

(2) Default setting

- Thick 3

(3) Setting item

- Post.
- "Thick 3"

11.14.13 Warm Up**(1) Change Warm Up Time****(a) Use**

- To change warm up completion time.
- Mode is changed to Mode 2 in case the paper gets curled significantly when black printing is conducted immediately after warm up at Mode 1.
- Mode is changed to Mode 3 or 4 in case the paper gets curled immediately after normal warm up or the curled paper causes paper jam, paper exit failure, punch/staple/fold position failure or etc.

NOTE

- This setting is available only for bizhub C454. In bizhub C554, this setting is disabled.

(b) Default setting

- Mode1

(c) Setting item

- "Mode1"
- Mode2
- Mode3
- Mode4

Mode1 (Default)	It makes the warm-up time for black print shortest.
Mode2	The warm-up time for both black and color will be as specified value.
Mode3	To prevent curling of the paper immediately after the warm-up, printing productivity is decreased by PPM control. The warm-up time will be as specified for both black and color.
Mode4	By having a longer warm-up time and warming up the fusing unit, curling of the paper immediately after the warm-up can be prevented. The warm-up period of time will be 65 seconds or under.

(d) Fusing operation mode

- Warm-up related control can be changed by using [Warm Up] setting and [Choice of high humidity circumstance] setting.
When the main power switch is turned on, the mode is defined according to each choice setting.
- The following table shows the features of each operation mode.

Operation mode	Service Mode		Target user	Advantages	Disadvantages
	Warm up	Choice of high humidity circumstance			
1 (Default setting)	Mode1	OFF	• Black usage rate is high • want to print quickly	Makes warm-up time for black shortest	Curling may occur in high humidity
2		ON	• Black usage rate is high • want to prevent curling	• Warm-up time for black is made shortest except when in high humidity • Decreases possibility curling occurs in high humidity	Warm-up time is long in high humidity (65 seconds or later)
3	Mode 2	OFF	• want to print quickly • color usage rate is high	• Warm-up time is as specified value or later • High productivity even in high humidity	Curling may occur in high humidity
4		ON	• color usage rate is high • want to prevent curling	• Warm-up time is as specified value or later except in high humidity • Decreases possibility curling occurs in high humidity	Warm-up time is long in high humidity (65 seconds or later)
5	Mode 3	OFF	• want to print quickly • want to prevent curling immediately after warm-up	• Warm-up time is as specified value or later • Decreases the curling in normal circumstance	• Productivity immediately after warm-up decreases • Curling may occur in high humidity
6		ON	• want to prevent curling immediately after warm-up • want to print quickly • want to prevent curling when humidity is high	• Warm-up time is as specified value or later • Decreases possibility curling occurs	• Productivity immediately after warm-up decreases • Warm-up time is long in high humidity (65 seconds or later)
7	Mode 4	OFF	want to prevent curling immediately after warm-up	Decreases possibility curling occurs	Warm-up time is long (65 seconds or later)
		ON			

(2) Low Power Consumption Mode**(a) Use**

- To set whether to give priority to either the warm-up time or productivity when some optional devices are installed and the machine cannot secure enough electric power supply.

NOTE

- This setting is available only for bizhub C554 for Japan/Taiwan and bizhub C454 for Japan.

(b) Default setting

- Warm Up Priority

(c) Setting item

- "Warm Up Priority"
- Productivity Priority

11.14.14 Machine State LED Setting**(1) Use**

- To set how to display main body statuses on the machine state LED (state display lamp, paper empty lamp).

NOTE

- Each of Type1 and Type2 has the following LED display forms.

Machine State LED Setting		Type1	Type2
Warning statuses	Attention	Blinking	Blinking
	Near life	Blinking	Unlit
	Alert code	Unlit	Unlit
	Problem Unit Isolation	Blinking	Blinking
	Fatal error	Lit	Lit
Amount of paper remaining (Tray 1/2 paper empty lamp)	100 % to near empty	Unlit	Unlit
	Near empty	Blinking	Unlit
	Empty	Lit	Lit
	• Being lifted up • Cassette open	Unlit	Unlit
Amount of paper remaining (Tray 3/4 paper empty lamp)	100 % to near empty	Unlit	Unlit
	Near empty	Blinking	Unlit
	Empty	Lit	Lit
	• Being lifted up • Cassette open	Unlit	Unlit

(2) Default setting

- Type 2

(3) Setting item

- Type 1
- "Type 2"

11.14.15 TP Level**(1) Use**

- To adjust the selectivity of the touch panel.

(2) Default setting

- 0

(3) Setting range

- 2 to +2 (step: 1*)
- To increase sensitivity of the touch panel, increase the setting value.
- To decrease sensitivity of the touch panel, decrease the setting value.

NOTE

- When the setting has been changed, turn off the main power switch and turn it on again more than 10 seconds after.

11.15 System 2

11.15.1 HDD

- Setting change is unnecessary. (Select [Installed] at any time.)

11.15.2 Image Controller Setting

(1) Image Controller Setting

(a) Use

- To set the type of the controller.
- When setting up the controller.

(b) Procedure

- Select the controller to be used.

(c) Default setting

- Controller 0

(d) Setting item

- “Controller 0”: The standard controller is used.
- Controller 1: The optional image controller IC-414 is used.
- Controller 2: undefined.
- Controller 3: undefined.
- Others: undefined.

* [Peripheral Mode] appears when [Others] is selected.

NOTE

- When the following setting is “ON”, this setting should be set to “Controller 0”.
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)
 When [Enhanced Security Mode] is set to “ON”, this setting cannot be changed.

- After changing setting, make sure to turn off the main power switch and turn it on again more than 10 seconds after.

(e) Note on returning the setting from “Controller 1” to “Controller 0”.

- Selecting “Controller 0” will initialize the following settings made while “Controller 1” was selected. Reset the following items as necessary when using the internal standard controller.

<Control panel on the machine>

- Setting items included in [Network Setting] available from [Administrator Setting]. (Except [Status Notification Setting] and [Prefix/Suffix Setting] available from the following setting. [Administrator Settings] -> [Network Settings] -> [Detail Settings].)
- The following setting
[Administrator Settings] -> [User Authentication /Account Track] -> [General Settings] -> [External Server]
- The following setting
[Administrator Settings] -> [System Connection] -> [OpenAPI Setting]
- Mailbox Destination (scan)
- Information on the original specified by the program destination

<Page Scope Web Connection>

- SSL/TLS

(2) Peripheral Mode

(a) Procedure

- Select the operating mode of the Scanner.

NOTE

- After changing setting, make sure to turn off the main power switch and turn it on again more than 10 seconds after.

(b) Setting item

- Mode 1: undefined.
- Mode 2: undefined.
- Mode 3: undefined.

11.15.3 Option Board Status

(1) Use

- To set when the optional fax board (FK-511) or DSC board (SC-508) is mounted.
- Use when setting up the optional fax kit FK-511 or security kit SC-508 is mounted.

NOTE

- The setting for DSC2 is available only when DF-701 is mounted.

(2) Default setting

- Unset

(3) Setting item

Fax (circuit 1)

- Set
- “Unset”

Fax (circuit 2)

- Set
- “Unset”

DSC1

- Set
- “Unset”

DSC2

- Set
- “Unset”

NOTE

- When the setting has been changed, turn off the main power switch and turn it on again more than 10 seconds after.

11.15.4 Consumable Life Reminder

(1) Use

- To select whether or not to give the display of PM parts lifetime

PM parts lifetime display	An entire screen warning is given when the service life of a specific unit has been reached, prompting the user to replace the part.
---------------------------	--

- Applicable units:
Transfer belt unit, fusing unit, ozone filter, toner filter, transfer roller unit, developing unit, drum unit
- Use to select not to give the display of PM parts lifetime.

Yes	When the service life has been reached, an entire screen warning appears on the control panel.
No	When the service life has been reached, a message appears in one line on the upper side of the screen.

(2) Default setting

- No

(3) Setting item

- Yes
- "No"

11.15.5 Unit Change**(1) Unit Change****(a) Use**

- To select who is to replace a unit.
- When the unit life arrives, the warning display is intended for the specific person who is going to replace the unit.
 - When "User" is selected: Printing is inhibited.
 - When "Service" is selected: Life warning.
- Upon setup.

(b) Setting item

	Japan		US, Europe		Others1/2/3/4/5	
Toner Cartridge	"User"	Service	"User"	Service	"User"	Service
Drum Unit	User	"Service"	"User"	Service	"User"	Service
Waste Toner Box	User	"Service"	"User"	Service	"User"	Service
Hole-Punch Scrape Box	"User"	Service	"User"	Service	"User"	Service

(2) Warning Display - Toner Near Empty**(a) Use**

- To set whether or not to display a toner near empty warning.
- Upon setup.

(b) Default setting

- Yes

(c) Setting item

- "Yes"
- No

(3) Warning Display - Near Empty Display Time**(a) Use**

- To change the timing of toner cartridge near empty detection in order to optimize the timing of the toner cartridge replacement depending on individual use (PV).
- To configure the setting for both toner cartridge/K and toner cartridge/C,M,Y.
- For reference purpose, the list below shows the number of pages that can be printed between the near empty detection specified in this setting and the empty detection.

-2	1,000 print :A4
-1	2,000 print :A4
0	3,000 print :A4
+1	4,000 print :A4
+2	5,000 print :A4

(b) Default setting

- 0

(c) Setting range

- -2 to +2

(4) Warning Display – Near Life Display Settings**(a) Use**

- To set whether or not to display the near life warning of individual consumables.
- When [Do Not Display] is selected, a warning is not displayed at the time of near life detection. However, in CS Remote Care, near life warning is always sent to the Center regardless of this setting.
- Applicable consumables are as follows:
drum unit, developing unit, fusing unit, ozone filter, toner filter, transfer roller unit, image transfer belt unit

(b) Default setting

- Display

(c) Setting item

- "Display"

- Do Not Display

11.15.6 Software Switch Setting

(1) Use

- To set the operating characteristic of each function from software switch depending on what types of printing are normally made.

(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Software Switch Setting].
3. Touch [Switch No.] and enter the intended switch number with the ten-key pad.
4. Touch [Bit Assignment].
5. Use [←] or [→] to select a bit. To set the bit, enter 0 or 1 with the 10-key pad.
6. To set the bit in hex, touch [HEX Assignment] and use the ten-key pad and [A] to [F] keys to enter numbers and characters.
7. Touch [Fix].

(3) Details of the software switch settings

NOTE

- For switches not mentioned in the list below, use them in the default value (Bit Assignment: 00000000 / HEX Assignment: 00) unless indicated otherwise.

Switch No.	Function	Setting value			Default value (Bit/HEX)	Reference
		Bit Assignment	HEX Assignment	Details		
012	Addition of the authentication device	00000000	00	Standard	00000000 / 00	I.13.3.4 Management Function Choice - Authentication Device 2
		00000010	02	[Card3] choice is added in Service Mode.		
033	Renders some functions, which were available when both administrator authentication and key counter were provided with when using the vendor, available only with administrator authentication.	00000000	00	Available with the combination of administrator authentication and key counter.	00000000 / 00	• I.7.7 System Settings-Expert Adjustment • I.7.8 System Settings-List/Counter • I.7.8.15 Job Settings List
		00000001	01	Available only with administrator authentication.		
050	The 1st transfer roller's default position setting of the ACS mode.	00000000	00	The color mode (pressed position)	00000000 / 00	O.7.3.3.(4) ACS mode control change with the software SW
		00010000	01	The black mode (retracted position)		
051	Settings for the life warning/replace display of the units	00000000	00	Normal display	00000000 / 00	• O.4.3.9 Drum unit life detection • O.5.3.9 Developing unit life detection • O.7.3.10 Transfer belt life detection • O.14.3.13 Fusing unit life detection • O.15.3.10 Fusing unit life detection
		00010000	10	Does not show the life warning/replace display of the drum unit.		
		00100000	20	Does not show the life warning/replace display of the developing unit.		

Switch No.	Function	Setting value			Default value (Bit/HEX)	Reference
		Bit Assignment	HEX Assignment	Details		
		01000000	40	Does not show the life warning/replace display of the transfer belt unit.		• I.11.16.2.(3) New Release
		10000000	80	Does not show the life warning/replace display of the fusing unit.		
063	Display setting of [Image Log Transfer Settings] on the control panel	00000000	00	Not displayed.	00000000 / 00	• I.13.3.8 Setting items that automatically change the setting values • I.7.91.1 Image Log Transfer Settings
		00000001	01	Displayed (Type 1)		
		00000010	02	Displayed (Type 2: Only applicable to fax communication)		
		00000011	03	Not used.		
069	When printing using the manual bypass tray in a custom size, allows for printing only with a printer driver settings.	00000000	00	After setting a paper in the manual bypass tray, touch [complete] key to start printing.	00000000 / 00	-
		00000001	01	Start printing with the paper settings specified by the printer driver as the manual bypass tray paper settings without giving a warning.		
072	Import/export function of the address book through the USB memory	00000000	00	Import/export function is disabled.	00000000 / 00	I.7.97.1 Import/Export
		00000100	04	Import/export function is enabled.		
143	Expansion setting of the touch panel sensitive area when the web browser function is used *1	00000000	00	26 dots : 26 dots from the perimeter of the touch panel is a non-sensitive area.	00000000 / 00	C.19.2 Web browser function
		00000001	01	16 dots : 16 dots from the perimeter of the touch panel is a non-sensitive area.		
		00000010	02	9 dots : 9 dots from the perimeter of the touch panel is a non-sensitive area.		
150	Activation setting of the web browser function	00000000	00	Web browser function is disabled.	00000000 / 00	• C.19.1 Available function for i-Option • I.13.3.10 License management - Activation • I.7.94 License Settings
		00000001	01	Web browser function is enabled.		
155	Validation/invalidation of the debug setting.	00000000	00	Debug setting is disabled.	00000000 / 00	• Debug Setting/I.14.2 Starting/Exiting • Debug Setting/I.14.4.1 Basic mode
		00000001	01	Debug setting is enabled.		
156	Line width setting of monochrome printing in the 1,200 dpi mode	00000000	00	Standard mode : When printed in the 1,200 dpi mode, thin lines appear wider than they are in the 600dpi mode.	00000000 / 00	-

Switch No.	Function	Setting value			Default value (Bit/HEX)	Reference
		Bit Assignment	HEX Assignment	Details		
		00000001	01	Thin line mode*2 : When printed in the 1,200 dpi mode, thin lines appear in the same width as they are in the 600 dpi mode (Note that the gradation reproducibility is lower than the 1,200 dpi standard mode).		

- *1: The sensitive area of the control panel can be expanded by selecting "16 dots" or "9 dots" on the software switch No.143. Note that the control panel's sensitive area expanded in this manner may not detect touches properly.
- *2: When selecting the "thin line mode" on the software switch No.156, ensure to run the Image Stabilizer manually. Without the Image Stabilizer in effect, the image will be printed with decreased density.

Setting procedure

1. Touch [Fix] after changing the software switch setting, and touch [END]. The software switch setting screen will be closed and the Service Mode screen will reappear.
2. Touch [END]. The Service Mode screen will be closed and the basic screen will reappear.
3. Turn OFF the main power switch and turn it ON again more than 10 seconds after.
4. Go back into the Service Mode, and execute the [Imaging Process Adjustment / Stabilizer \(Initialize+Image Stabilization\)](#).
5. Once the Stabilizer has finished running, the Stabilizer screen will be automatically closed, and the Service Mode screen will reappear.
6. Touch [END]. The Service Mode screen will be closed and the basic screen will reappear.
7. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

(4) Software Switch Setting list

- The list of the setting values of Software Switch Setting can be print from [Service Mode] -> [List Output] -> [\[Machine Management List\]](#).

063	00000000	00	127	00000000	00	191	00000000	00	255	00000000	00				

11.15.7 CCD Calibration

(1) Use

- To set whether to use the calibration adjustment value set prior to the shipping.
 - To display the current calibration adjustment value.
 - When CCD board (front side)/CIS (back side) has been replaced, set to "OFF."
- After replacing the CCD board or CIS, the default generic value needs to be set since the calibration value set for each unit changes to control the differences in reading performance on each scanner (CCD).
- The original calibration adjustment value can be disabled to address image failure and other problems caused by individual CCD performance difference.

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

NOTE

- When the setting is changed, the function becomes available by turning the main power switch OFF and ON again.

11.15.8 LCT (Built-in) Size Settings

(1) Use

- To set the paper size for the built-in LCT.
- To use when the optional paper feed cabinet PC-410 is mounted.

(2) Default setting

- The default setting depends on the setting made for the applicable marketing area.

(3) Setting item

- A4
- 8 1/2 x 11

11.15.9 LCT Paper Size Setting

(1) Use

- To set an optional large capacity unit type (LU-301 or LU-204).
- To set the paper size for the optional large capacity unit LU-301 or LU-204.
- Use this feature upon the optional large capacity unit LU-301 or LU-204 set-up.

(2) Default setting

- A4LCT

(3) Setting item

- "A4LCT"
- A3LCT

* For a selected LCT type, set a paper size.

NOTE

- When the LCT type setting is changed, the paper size setting in the LCT is returned to the default.

(4) A4LCT

(a) Default setting

- The default setting depends on the setting made for the applicable marketing area.

(b) Setting item

- A4
- 8 1/2 x 11

(5) A3LCT

(a) Default setting

- The default setting depends on the setting made for the applicable marketing area.

(b) Setting item

- SRA3
- A3
- B4
- A4S
- A4
- 12 x 18
- 11 x 17
- 8 1/2 x 14
- 8 1/2 x 11
- 8 1/2 x 11S

11.15.10 Line Mag Setting

(1) Use

- To set whether to use the offset value which has been set prior to the shipping.
- To display the current magnification offset value.
- When CCD board (front side)/CIS (back side) has been replaced, set to "OFF."
After replacing the CCD board or CIS, the default generic value needs to be set since the magnification offset value between the lines set for each unit changes to control the differences in reading performance on each scanner (CCD).
- The original offset value can be disabled to address image failure and other problems caused by individual CCD performance difference.

(2) Default setting

- ON

(3) Setting item

- "ON"

- OFF

NOTE

- When the setting is changed, the function becomes valid by turning the main power switch OFF and ON again.

11.15.11 Data Capture

(1) Use

- When an error occurs, it acquires the print job data in order to analyze the cause of the error.
- When an error occurs, this will be used to analyze the cause of the error according to the print job data.

(2) Procedure

NOTE

- The following conditions are necessary for this function.
 - When selecting **[Security Setting] -> [Security Details] -> [Print Data Capture]** in Administrator Settings, **[Allow]** must be set.
 - The hard disk must be mounted to the machine.
 - When selecting **[Administrator Settings] -> [Network Settings] -> [FTP Settings] -> [FTP Server Settings]**, **[ON]** must be set.
 - This function is not available when the optional image controller IC-414 is mounted.
 - This function also allows print job data stored in the HDD to be obtained from **[Debug Settings] -> [Debug Log Output]**.
1. Select [Service Mode] -> [System 2], and touch [Data Capture]. Select [ON].
(While the Data Capture setting is [ON], the print job data from the PC will be stored in the hard disk.)

NOTE

- Maximum 5 print job data can be stored, and the data will be overwritten beginning with the chronologically oldest one.
2. Check the IP address of the machine.
 3. Connect the PC (Windows) and the machine with ethernet cable.
 4. Start the DOS command prompt of the PC, and specify the IP address of the machine to start FTP.

5. Input the user name and the password.
 - User name: capture
 - Password: sysadm

6. Using the "ls" command, display the list of the file available for capture.

7. Using the "binary" command, set the File transfer mode to the binary transfer.

```

Select Command Prompt - Rp
ftp> Put
200 PORT command successful.
150 Opening ASCII mode data connection for capture.
c715n.cpt
c716n.cpt
c717n.cpt
c718n.cpt
c719n.cpt
226 Transfer complete.
ftp> Type
Type set to I.
ftp> bin
200 Type set to I.
ftp>

```

8. Using the "get" command, transfer the data for capture to PC.

```

Select Command Prompt - Rp
ftp> Put
200 PORT command successful.
150 Opening ASCII mode data connection for capture.
c715n.cpt
c716n.cpt
c717n.cpt
c718n.cpt
c719n.cpt
226 Transfer complete.
ftp> Type
Type set to I.
ftp> bin
200 Type set to I.
ftp> get c716n.cpt
200 PORT command successful.
150 Opening BINARY mode data connection for capture.
c716n.cpt
226 Transfer complete.
ftp>

```

9. Finish the command prompt.

NOTE

- After receiving capture data, select [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[Print Data Capture\]](#), and select [\[Restrict\]](#) for print data capture in order to delete the job data stored in the hard disk. When HDD Format or Overwrite Temporary Data is performed, job data is deleted.

11.15.12 ADF Scan Glass Contamin. Set.

(1) ADF Scan Glass Contamin. Sensitivity

- To make settings for contamination detection.

(a) Use

- To set the detection level for the pre-detection of stain on the DF original glass (or the CIS glass). In the back side pre-detection, stains of not only the CIS glass but also the back side glass cleaning roller are detected.
- Use when changing the setting for whether or not to detect the stain on the DF original glass when opening/closing DF as well as its detection level as the main power switch being ON, recovering from the sleep/low power mode, etc.

Not Set	Detection of stain on the glass will not be conducted.
Low	Stain on the glass will not be detected easily.
Normal	Normal level detection.
High	Stain on the glass will easily be detected.

NOTE

- Be aware that selecting "Not Set" and performing the pre-detection with the following setting will display "NG."
[\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[ADF Scan Glass Contamination\]](#)
- When "Not Set" is selected, the original glass cleaning operation after the job ends does not operate.

(b) Default setting

- Normal

(c) Setting item

- Not Set
- Low
- "Normal"
- High

(2) ADF Scan Glass Contamin. Warn/Level

(a) Use

- To set how to display the warning when stain on the DF original glass (or the CIS glass) is detected.

- Use when changing the display of the warning which requests the cleaning of the stain on the glass detected by the pre-detection of the lines.

0	Warning will not be displayed.
1	Warning will be displayed by the maintenance mark. (Warning code: D-1/D-2)
2	Warning will be displayed on the message area on the basic screen.
3	Warning will be displayed on all screens.

NOTE

- This setting is invalid when [ADF Scan Glass Contamin. Sensitivity] is set to "Not Set."

(b) Default setting

- 1

(c) Setting item

- 0
- "1"
- 2
- 3

(3) Feed Cleaning Settings**(a) Use**

- To set the operation for detection and cleaning operation of stain on the DF original glass when feeding the original.
- Use when changing the operation for detection and cleaning operation of stain on the DF original glass when feeding the original.

0	The cleaning brush will stop moving when the original is fed, and will not perform cleaning the stain.
1	The cleaning brush will move between originals when feeding the original.

- This setting can be made separately for the front side and the back side.

(b) Default setting

- 1

(c) Setting item

- 0
- "1"

(4) Display Timing**(a) Use**

- To set the timing at which a warning is displayed when contamination is detected on the surface of the CIS glass in a pre-detection process.

Back Scan Time	Displays the warning only when duplex scanning mode is selected.
Warning Detection	Displays the warning whenever contamination is detected.

- This setting is enabled only when [Back Side] is selected.

(b) Default setting

- Back Side Scan

(c) Setting item

- Warning Detection
- "Back Side Scan"

11.15.13 Stamp**(1) Use**

- To set the mounting status of the optional stamp unit SP-501.
- To use when setting up the stamp unit SP-501.

(2) Default setting

- Unset

(3) Setting item

- Set
- "Unset"

11.15.14 Network Fax Settings**(1) Use**

- To set whether or not to use network fax function.

- To use network fax function (IP address fax, internet fax).
- Selection will be available when each network fax function is set to "ON" in the following settings.
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Network Fax Settings\]](#) -> [\[Network Fax Function Settings\]](#)

(2) Default setting

- OFF

(3) Setting item

IP Address Fax

- ON
- "OFF"

SIP-Fax

- Not Used

Internet Fax

- ON
- "OFF"

11.15.15 Image Stabilization Setting

(1) Use

- To change the type and timing of image stabilization.
- To provide the desirable image stabilization control that depends on customer's machine usage pattern, i.e. the ratio of color to black print.

Standard	This mode is suitable for low-volume users and reduces the number of times image stabilization is carried out when the main power switch is turned ON.	If the change of absolute humidity is detected during warm-up, normal stabilization is performed during warm-up.
Color Priority	This mode is suitable for high-volume and high ratio of color print users.	Color stabilization sequence is performed unconditionally when the main power switch is turned ON.
Black Priority	This mode is suitable for users who use mainly black print and use less color print. It provides monochrome stabilization and reduces the number of times image stabilization is carried out when the main power switch is turned ON.	If the change of absolute humidity is detected during warm-up, monochrome stabilization is performed during the warm-up and color stabilization is performed before color printing.

(2) Default setting

- Standard

(3) Setting item

- "Standard"
- Color Priority
- Black Priority

11.15.16 User Paper Settings

(1) Use

- To set and register individual user paper that includes a different basic weight, fusing temperature, 2nd image transfer fine adjustment value.
- User Paper Settings is also available from [\[Administrator Settings\]](#) -> [\[System Settings\]](#) -> [\[Expert Adjustment\]](#) -> [\[User Paper Settings\]](#).
- To register a paper type that is suitable for individual customer's intended use and use environment.
- The following shows user paper registration keys and corresponding paper types.

User Paper 1/2	Plain paper
User Paper 3	Thick1
User Paper 4	Thick1+
User Paper 5	Thick2
User Paper 6	Thick3

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the key as follows.
[System 2] -> [\[F4\]](#) -> [User Paper Settings].
3. Select the desired key from [User Paper 1] to [User Paper 6] to register user paper.
4. Select [Basic Weight] and enter a value with the [+] / [-] key.
5. Select [600dpi] and enter a fusing temperature with the [+] / [-] key.
The setting range is -20 °C to +10 °C. (1 step: 5 °C)
6. Select a target item of the [Secondary transfer adj.], and enter a 2nd image transfer fine adjustment value with the [+] / [-] key.
The setting range is -8 to +7. (1 step: 1 increment or decrement)
7. Set paper of A4S/A4 or 8¹/₂ x 11S/8¹/₂ x 11 on the manual tray.
8. Select [1-side] (only front side) or [Front side] (only back side) and press the Start key.
9. Check the image of the output test pattern.

If the image is not acceptable, adjust the settings and output the test pattern again.

(a) Test Pattern in User Paper Settings

- The printable test pattern for user paper settings is provided to ease determining the most appropriate 2nd image transfer output value when customizing user paper.
- This test pattern changes output voltage as shown below based on the standard voltage A (voltage determined by the 2nd image auto transfer voltage control) on a sheet of paper.

A: Standard voltage

11.15.17 Coverage Rate Screen

(1) Use

- To set whether or not to display a coverage rate on the sales counter screen and sales counter list.

(2) Default setting

- Display

(3) Setting item

- "Display"
- Do Not Display

11.15.18 JAM Code Display Setting

(1) Use

- To set whether or not to add a jam code to a jam warning display on the control panel when a jam occurs.

(2) Default setting

- Do Not Display

(3) Setting item

- Display
- "Do Not Display"

11.15.19 BootUp Screen

(1) Use

- To customize the BootUp Screen displayed upon machine start-up.
 - Use this feature when changing the KonicaMinolta logo displayed on the control panel upon start-up to a client company logo or others for client's intended use of the machine.
 - Register logo data in the machine's flash ROM via a USB memory device.
- The following are the logo data specifications that should be met.

Image format	PNG format
File extension	*. png
File name	BootupScreen.png
Image size	800 x 480 dots
Color	256 colors (Palette that the machine specifies is used.)

NOTE

- When making the logo data, use the exclusive image making tool.
- If a USB memory device is not connected or a nonconforming USB memory device is connected, "USB NG" is displayed and logo data cannot be registered.
- If the file name of logo data does not conform to the above specifications, "File NG" message is displayed and logo data cannot be registered.

(2) Procedure

1. Save logo data that conforms to the above specifications in the root directory of a USB memory device.

NOTE

- Be sure to save data in the root directory as the machine cannot detect data saved in other directories.

2. Connect the USB memory device to the machine USB port.
3. Select the key as follows.

[System 2] -> [] -> [BootUp Screen].

4. Touch [Set].
5. Check result "OK" is displayed and touch [END].

NOTE

- If logo data is already registered, new logo data overwrites the existing logo data.
- The color of logo data may look different between the machine control panel and some PC screens. After registering logo data, restart the machine and check the color of the logo data on the BootUp screen.

* To delete registered data, touch [Delete] and check result "OK" is displayed.

11.15.20 Install Data

(1) Use

- To install movie help data, voice data, OCR dictionary data or PDF/A font into HDD.
- To use when the logical format of the hard disk is performed.
- To install each data into the machine HDD via USB memory device.

(2) Procedure

NOTE

- To use voice guidance, the optional upgrade kit UK-204 and i-Option LK-104 v3 must be activated.
- To use OCR function, the optional upgrade kit UK-204 and i-Option LK-105 v3 must be activated.
- To create PDF/A-compliant PDF files where PDF/A font is used, optional upgrade kit UK-204 and i-Option LK-102 v3 must be enabled.

1. Save data (*.tar) into the root directory of a USB memory device.
2. Connect the USB memory device to the machine USB port.
3. Select the key as follows.
[System 2] -> [] -> [Install Data].
4. Touch [Movie Data], [Voice Data], [OCR Dictionary] or [PDF/A Font].
You can select the above three types of data at a time and install them.
5. Touch [Set].
6. Press the Start key to install the data.
7. Check result "OK" is displayed and touch [END].

NOTE

- If data is already installed, it is necessary to delete old data before installing new one.

* To delete registered data, select the data to be deleted, and touch [Delete] -> [Fix]. Check result "OK" is displayed.

11.15.21 Bluetooth Settings

(1) Use

- To set whether to enable or disable the Bluetooth function.
- Use this setting upon set-up of the optional local interface kit EK-607.

(2) Default setting

- Invalid

(3) Setting item

- Effective
- "Invalid"

11.15.22 CIS Image Adjustment

(1) Use

- To compensate colors so that the brightness, saturation, and hue of the back side image data (CIS image scanning quality) become consistent with those of the front side image data.

Brightness	Increase in the positive (+) direction makes the data brighter (paler) and increase in the negative (-) direction makes the data darker (deeper).
Saturation	Increase in the positive (+) direction makes the data clearer and increase in the negative (-) direction makes the data more subdued.
Hue	Increase in the positive (+) direction processes and outputs the data in the way that corresponds to the clockwise rotation on the hue circle. Increase in the negative (-) direction processes and outputs the data in the way that corresponds to the counterclockwise rotation on the hue circle.

(2) Default setting

- 0

(3) Setting range

- -3 to +3 (step: 1)

(4) Procedure

1. [Call the Service Mode to the screen.](#)

2. Select the key as follows.
[System 2] -> [] -> [CIS Image Adjustment].
3. Select [Brightness], [Saturation] or [Hue].
4. Use the [+] or [-] key to change the setting value.
5. Touch [END] and determine the adjustment value.

11.15.23 Display Eco Index

(1) Use

- To set whether or not to display [Power Consumption] and [CO2 Emission] in [Menu key -> \[Counter\] -> \[Eco Info\]](#). The amount of power consumption displayed on MFP is an estimated value calculated from the average amount of power consumption and the operating hours of MFP, so that is not an exact power consumption value. Therefore, explain this to users before selecting the option of displaying these items.
- To set an emission coefficient used to calculate the amount of CO2 emission.
As the CO2 emission coefficient is different depending on the electric power provider with whom the user contracts and the user's MFP use environment, the coefficient needs to be set individually.

(2) Default setting

- Power Savings Display Level: OFF
- Output Coefficient Settings: 0.4166

(3) Procedure

1. Explain to users that [Power Consumption] and [CO2 Emission] displayed on MFP are estimated values, and obtain their consent.
2. [Call the Service Mode to the screen.](#)
3. Touch these keys in this order: [System 2] -> [] -> [Display Eco Index].
4. Select [ON] in [Power Savings Display Level].
5. Depending on the user's MFP use environment, configure [Output Coefficient Settings] using the 10-key pad.
6. Touch [END].

11.15.24 Internal Error. Auto Cancel

(1) Use

- To set whether or not to automatically reset trouble when a trouble code classified as rank B or C occurs.

(2) Default setting

- Rank B: No
- Rank C: Yes

(3) Behavior

- When this setting is set to "Yes," MFP operates as follows:
 1. When specified trouble occurs, the trouble warning screen displays for about 10 seconds the message that the trouble is automatically reset. Then automatic trouble reset is performed.
 2. If the trouble reset is successful, MFP can be used.
If the trouble reset fails, retry is performed. (The number of retries is up to 2 times.)

11.15.25 Acquiring Settings

(1) Use

- To count frequency of use by each function and collect machine configuration information.
- This setting allows us to understand the trend in the market and the usage of MFP by collecting and counting frequency of use by each function.
- The collected information can be obtained only via CSRC and cannot be displayed on the control panel or printed.
- To send the collected information, [\[Administrator Settings\] -> \[System Settings\] -> \[List/Counter\] -> \[Meter Count and Device Confirmation Tx Settings\]](#) must be set to "Allow."

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"

11.15.26 Driver Install

(1) Use

- To install the [loadable device driver](#).
- Used when the authentication device that needs the loadable device driver (include AU-102 and AU-201) is attached.

(2) Procedure

1. Prepare a USB memory where only the loadable device driver is stored in the ROOT directory. (Only one loadable device driver must be stored in the USB memory, and please do not save any other data in the USB memory.)
2. Connect the USB memory to the USB port of the MFP.
3. [Call the Service Mode to the screen.](#)

4. Touch [System 2] -> [Driver Install].
5. Touch [SET] and press Start key to install the data.
6. Check that data is normally installed from the message that appears on the control panel.
7. Turn OFF the main power switch.
8. Remove the USB memory.

11.15.27 IWS Settings

(1) Use

- To enable the IWS (Internal Web Server) function.
- Used when transferring web page contents to MFP and use MFP as web server.
- The WebDAV server used for the web page contents transfer is configured from [Administrator Settings] -> [Network Settings] -> [IWS Settings].

NOTE

- **When using a web browser function after installing the application to the IWS, 26 dots from the perimeter of the touch panel area is not sensitive area.**
It is possible to narrow the non-sensitive area by using [\[Software Switch Setting\]](#) in Service Mode as with followings. However, the touch panel cannot detect touch operation correctly.
 - Switch No.143 Hex:00 non-sensitive area: 26 dots from the perimeter of the touch panel
 - Switch No.143 Hex:01 non-sensitive area: 16 dots from the perimeter of the touch panel
 - Switch No.143 Hex:02 non-sensitive area: 9 dots from the perimeter of the touch panel

(2) Default setting

- Invalid

(3) Setting item

- Effective
- "Invalid"
- After changing the setting, be sure to touch [decision].

11.15.28 Custom Pattern

(1) Use

- To register or delete custom patterns.
- To customize the panel display by allowing MFP to read the setting file (CPD file) that defines whether or not to display the various setting keys that appear on the control panel.
- When making the setting file (CPD file), use the "Panel Customization Tool."

(2) Panel customization tool

(a) System requirement

PC	PC-AT compatible machine
CPU	Conforms to the specifications of the operating system
Memory (RAM)	Conforms to the specifications of the operating system
HDD	100 MB or more free space is required
Display	1280 x 800 pixels or more, 24bit full color
OS	• Windows XP Professional (SP3 or later) • Windows XP Professional x64 Edition (SP2 or later) • Windows 7 Professional (SP1 or later)* * 32-bit (x86) and 64-bit (x64) editions of Windows are supported.

(b) Target machine

- bizhub C754/C654
- bizhub C364/C284/C224
- bizhub C554/C454

(c) Operation procedures

When creating a new display setting file (CPD file):

1. Start up the Panel Customization Tool.
2. Set a name for your customization in [Name]. (1 to 24 characters consisting of one-byte alphanumerics and symbols. Comma cannot be used.)
3. Select a model in [Model].
4. Select a preset pattern or marketing area in [Preset]. (The number of functions displayed in the Function list below decreases in the order of Full > Standard > Basic.)
5. Select whether items should be displayed (ticked) or hidden (unticked) in [Function]. (Make this setting both in the Copy tab and the Scan/Fax tab.)
6. Save the setting file (CPD file) in [Save as...].

When editing an existing setting file (CPD file):

1. Start up the Panel Customization Tool.
2. Select a model in [Model].
3. Select an existing setting file (CPD file) in [File] -> [Open].
4. Select whether items should be displayed (ticked) or hidden (unticked) in [Function]. (Make this setting both in the Copy tab and the Scan/Fax tab.)

5. Save the setting file (CPD file) in [Save as...].

(3) Procedure

1. Copy the setting file (CPD file) to the root directory of a USB memory.
2. Connect the USB memory to the USB port of the MFP.
3. [Call the Service Mode to the screen.](#)
4. Touch [System 2] -> [Custom Pattern].
5. Select [Custom Pattern 1], [Custom Pattern 2] or [Custom Pattern 3].
6. Touch [Import] and press Start Key to import the data.
7. Select the registered custom pattern in [\[Administrator Settings\] -> \[System Settings\] -> \[Custom Display Settings\] -> \[Custom Function Pattern Selection\]](#).

To delete registered data, make sure that the custom pattern is not selected in [\[Administrator Settings\] -> \[System Settings\] -> \[Custom Display Settings\] -> \[Custom Function Pattern Selection\]](#), and touch [Delete] -> [Fix] and check that the result "OK" appears.

11.16 Counter

- The counter displays the counts of various counters to allow the technical representative to check or set as necessary.

11.16.1 Common procedure

1. Touch [Counter] to show the counter menu.
2. Select the specific counter to be displayed.
3. To clear the counts of two or more counters within a group or across different groups at once, touch [Counter Reset], select the specific counters to be cleared, and touch [END]. Two or more counters can be selected. (However, the [Service Call], [Service Total], and [JAM] counters cannot be selected.)

11.16.2 Life

(1) Use

- To check the number of hours or times each of the different maintenance parts has been used.
- To clear the count of each counter.
- To perform New Release in fusing unit and transfer belt unit.
- To check how many times maintenance parts have been used.

- When each of the maintenance parts is replaced.

(2) Procedure

(a) Counter clear

- To clear the count of a counter, select the specific part and press the Clear key.
- If a counter is cleared mistakenly, press the Interrupt key, which will undo the clearing operation.
- It is not possible to clear the count of the counters for the fusing unit, transfer belt unit, imaging unit and TCR new article detection.
- For the count method of each counter, see the table "Count method of each life counter."

Count method of each life counter

Counter item	Counting method
Fusing Unit Page Count	Counts how many sheets have been ejected. The counter increases by 1 per every 216 mm in the sub scan direction and shows the total count. For paper length less than 216 mm in the sub scan direction, the counter uses 216 mm as the paper length.
Transfer belt Unit Rotation Time	Counts how many hours the transfer belt unit has turned.
Transfer belt Unit Page Count	Counts how many sheets have been ejected. The counter increases by 1 per every 216 mm in the sub scan direction and shows the total count. For paper length less than 216 mm in the sub scan direction, the counter uses 216 mm as the paper length.
Transfer Roller Unit	Counts how many hours the transfer roller unit has turned.
Toner Filter	Counts how many sheets have been printed for color printing and black printing. The counter increases by 1 per every 216 mm in the sub scan direction and shows the total count. For paper length less than 216 mm in the sub scan direction, the counter uses 216 mm as the paper length. For the life counter, value based on the calculation below is displayed. Value (1) or (2) below whichever is larger than the other one (1) Number of prints for black printing (2) Number of prints for color printing ÷ 150,000 x 300,000
Ozone Filter	Counts how many hours the ozone filter has turned.
1st.	Number of sheets of paper fed from tray 1
2nd.	Number of sheets of paper fed from tray 2
3rd.	Number of sheets of paper fed from tray 3
4th.	Number of sheets of paper fed from tray 4
Manual Tray	Number of sheets of paper fed from the bypass
Drum Unit (C) Rotation Time	Counts how many hours PC drum has turned.
Drum Unit (M) Rotation Time	
Drum Unit (Y) Rotation Time	
Drum Unit (K) Rotation Time	Counts how many hours DC has turned.
Developing Unit (C) Print Count	Counts how many sheets have been printed.
Developing Unit (M) Print Count	
Developing Unit (Y) Print Count	
Developing Unit (K) Print Count	
LCT Parts	Number of sheets of paper fed from the LCT.
LCT (Built-in) Parts	Number of sheets of paper fed from the built-in LCT(PC-410)
ADF Feed	Number of sheets of original fed through the take-up section of the DF
ADF Reverse	Not used.
Sorter/Finisher	Number of sheets of paper fed out of the sorter/finisher
TCR new article detection (C)	Period of time over which the toner cartridge has been used.
TCR new article detection (M)	
TCR new article detection (Y)	
TCR new article detection (K)	

(3) New Release

- After replacing a fusing unit or transfer belt unit, perform New Release to clear its life counter.
 1. Select the key as follows.
[Counter] -> [Life] -> [New Release].
 2. Open the lower front door.
 3. Select a unit where New Release is made.
 4. Press the Start key and perform New Release.

(4) New Release Disable mode

- To enable a unit that is used temporarily for troubleshooting to be used again as a new unit in another machine, the New Release Disable mode is provided.
- Applicable units are the following units that have the new unit detection feature.
Imaging unit/Y,M,C, drum unit/K, developing unit/K
- See the "I.12.3.9 Engine FW DipSW" for the method of enabling the New Release Disable mode.

11.16.3 Service Call

(1) Use

- To count and display how many times trouble has been detected on a trouble type basis.
- Use this feature to check how many times trouble has occurred.

NOTE

- In the service call counter list, "Reboot" shows how many times abort code (C-FXXX) has occurred.

11.16.4 Section Service Call

(1) Use

- To count and display how many times trouble has been detected during a certain period, i.e. an interval between service visits, on a trouble type basis.
- Use this feature to check how many times trouble has occurred in a certain period, i.e. an interval between service visits.
- By clearing the counter at the time of visit to your customer, i.e. service visit, you can check how many times trouble has occurred since the previous visit.
To reset the counter, use [Counter Reset].

NOTE

- In the zone service call list, "Reboot" shows how many times abort code (C-FXXX) has occurred.

11.16.5 Warning

(1) Use

- To count and display how many times warning code has been detected on a warning code type basis.
- To check the number of warning conditions detected according to the warning type.

(2) Procedure

- To clear the count of a counter, select the specific part and press the Clear key.
- If a counter is cleared mistakenly, press the Interrupt key, which will undo the clearing operation.
- When a warning condition occurs, an oil mark appears at the upper right area of the basic screen.
- Touching the oil mark will display the warning code screen.

11.16.6 Maintenance

(1) Use

- To set a count value for maintenance of any given part.
- When any given part is replaced.

(2) Procedure

Maint.-Set

- Enter the maintenance counter value from the 10-key pad.

Maint.-Count

- The number of sheets that have been ejected is counted up. (1 sided: 1 count, 2 sided: 2 count)
- Pressing the Clear key will clear the count.
- If the count is cleared mistakenly, press the Interrupt key, which will undo the clearing operation.

11.16.7 Service Total

(1) Total

(a) Use

- To display the count value for the service total counter.
- Use to check the total No. of printed pages including the ones printed by the Service Mode.

(b) Procedure

- Service Total: No. of pages printed by user mode and Service Mode.
- Service Total (Duplex): No. of pages printed by user mode and Service Mode in duplex.

(2) Paper Size 1/Paper Size 2

(a) Use

- To display the count value for service total counter of each paper size.
- To check the total number of printed pages including the one at Service Mode according to each paper size.
- The count of Paper Size 1 and Paper Size 2 that contain the following paper sizes is provided respectively.

Paper Size 1	SRA3, A3, A4, A4S, A5, A6, B4, B5, B5S, B6, Post., 12 x 18, 11 x 17, 8 1/2 x 14, 8 1/2 x 11, 8 1/2 x 11S, 7 1/4 x 10 1/2, 5 1/2 x 8 1/2, 4 x 6, Foolscap
Paper Size 2	8K, 16K, Long Length, Others

11.16.8 Counter of Each Mode

(1) Use

- To display the printed pages in the following specified modes; copy, printer, scanner, and fax. It also displays the count value of using the specified mode.
- Use to check the printed pages in the following specified modes; copy, printer, scanner, and fax, as well as No. of times each mode was used, in order to know the using condition.

Copy/Print/Scanner counter	Displays individual counts in copy, printer, and scan mode.
Fax-related counter	Displays individual counts in fax mode.
Counter by finishing option	Displays individual counts on a finishing option basis.
Stabilization counter	Displays individual counts on a basis of the factors that cause image stabilization. The counter helps to understand what causes image stabilization and how to improve image stabilization control.
PJ counter	- Jobs that the machine has processed are divided according to the number of pages per job: 1P/J, 2P/J, ... 10P/J, or 11P/J and more. The total number of jobs in each group is counted and displayed separately based on whether job is processed in color, monochrome, or auto color mode. - The counter is used to understand how the machine has been used in the field.

11.16.9 Service Call History (Data)

(1) Use

- To display the trouble history in chronological order.
- Use to check the trouble history in chronological order.

11.16.10 ADF Paper Pages

(1) Use

- To display the No. of sheets and mixed originals fed to DF.

11.16.11 Paper Jam History

(1) Use

- To display the jam history in chronological order.
- Use to check the jam history in chronological order.

NOTE

- [Code] displayed on the screen of JAM history indicates JAM code. For details of JAM code, see "K.1.1 List of the JAM code."

11.16.12 Fax Connection Error

(1) Use

- To display the No. of fax transmission errors occurred.

11.16.13 ADF Scan Glass Contamin. Counter

(1) Use

- To display the average number of detected stain on the DF original glass (front side)/CIS glass (back side) at the pre-detection.

Pre-detection small size (Front Side)	Small-sized detected stain divided by the number of times pre-detection is practiced (average number of detected lines) will be displayed.
Pre-detection small size (Back Side)	Small-sized detected stain divided by the number of times pre-detection is practiced (average number of detected lines) will be displayed.
Cleaning brush rotation count (Front Side)	Total rotation count is displayed by counting 1 per one rotation of cleaning brush.
Cleaning brush rotation count (Back Side)	Total rotation count is displayed by counting 1 per one rotation of cleaning brush.

(2) Procedure

- To clear each counter value, select the items to be cleared, and press the Clear key.
- If the count is cleared mistakenly, press the Interrupt key, which will undo the clearing operation.

11.16.14 Parts Counter (Fixed)

- It will be displayed only when the optional finisher FS-533, FS-534 or FS-535 is mounted.

(1) Use

- When the optional finisher is mounted, the parts counter screen displays the relevant parts and their counts. When the relevant parts are replaced, their counters need to be reset to update the service history.
- When the optional finisher is mounted, the relevant parts counter can be checked from this menu.
- Service history can be maintained from this menu.

NOTE

- See the table below for the relevant parts and count method.

(2) Procedure

- Touch in the order of [Service Mode] -> [Counter] -> [↑] -> [Parts Counter (Fixed)].
- Check the parts counter or display the relevant part of which counter will be reset.
- Check the part count.
To reset the count value, touch the key of the part where the counter is reset. Touch the Clear key.

(3) Fixed parts to be counted

No.	CSRC parameter	Parts name	Parts number	Limit value	Count condition	FS-535	FS-534	FS-533
001	22	FNS 2-Staple Stapler	A07P7901	500,000	1 count for each sheet ejection in both 1 staple and 2 staple mode.	●	-	-
002	23	FNS Center Staple & Fold Stapler	A10D9293	200,000	1 count for each sheet ejection in both 1 staple and 2 staple mode.	●	●	-
003	3A	Stacker Accessory Plate Movement Monitor	56AA8002	3,000,000	1 count for each sheet ejection in front 1 staple, rear 1 staple, 2 staples in sort staple mode as well as shift sort m	●	-	-
004	26	FNS 1st Mid Fold Knife Motor	A3ERPP4S	250,000	1 count for each sheet ejection in half-fold, saddle stitch, and tri-fold mode	●	●	-
005	56	FNS 2nd Mid Fold Knife Motor	A3ERPP5R	250,000	1 count for each sheet ejection in tri-fold mode	●	●	-
006	34	FNS Output roller/A	122H4825	300,000	1 count for each sheet ejection to the FNS main tray. 1 count for each sheet ejection in staple mode	●	-	-
007	57	FNS FD Alignment Roller	A2YUPPG0/4	1,000,000	1 count for each 1 stack	●	-	●
008	29	PI sheet paper feed clutch (Upper)	13QN8201	1,000,000	1 count for each sheet fed from the PI upper tray	●	-	-
009	2A	PI sending Roller Pair/A (Upper)	50BA-574	200,000		●	-	-
010	2B	PI sending Roller Pair/B (Upper)	50BA-575	100,000		●	-	-
011	2C	PI Reversal Rubber Pair (Upper)	13QN-443	100,000		●	-	-
012	2D	PI Torque Limiter (Upper)	13QN4073	600,000		●	-	-

11.16.15 Jam

(1) Use

- To count and display how many times jam has been detected on a jam location basis.

11.16.16 Section JAM

- To count and display how many times jam has been detected in a certain period, i.e. an interval between service visits, on a jam location basis.
- Use this feature to check how many times jam has occurred in a certain period, i.e. an interval between service visits.
- By clearing the jam counter at the time of visit to your customer site, i.e. service visit, you can check how many times jam has occurred since the previous visit.
To reset the counter, use [Counter Clear].

11.17 List Output

11.17.1 Batch List CSV Output

(1) Use

- To save various lists data into a USB memory device all together with the CSV format.
- Compared to output to paper, outputting various lists data to the USB memory device can save time, paper, and toner. With the output data, analyzing the machine statistically becomes easier.
- Lists data to be output are as follows:

Target list	Data symbol
Machine Management List	S1
Adjustments List	S2
Parameter List	S3
Service Parameter	S4
Protocol Trace List	S5
Fax Setting List	S6
Management List	A1
Paper Size/Type Counter	A2
Configuration Page	U1
PCL Font List	U2
PS Font List	U3
Meter Count	C1

(2) Procedure

- Call the Service Mode to the screen.
 - Touch [List Output].
 - Insert the USB memory device to the USB port (for user).
 - Touch [USB save] displayed in the Batch List CSV Output.
Then, List data are transferred to the USB memory device.
 - Confirm that "OK" is displayed as the result of data saving.
- <File names of lists data>
- Each list data has its file name in accordance with the following file name rule.
[2-digit data symbol that corresponds to each list (see the above table)] + [_(underscore)] + [13-digit serial number] + [6-digit date (year, month, and day)] + [2-digit hour] + [2-digit minute].csv

11.17.2 Machine Management List

(1) Use

- To produce an output of a list of setting values, adjustment values, total counter values, and others.
- At the end of setup or when a malfunction occurs.
- To produce an output of a list of Software Switch Setting.

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.3 Adjustment List

(1) Use

- To output the adjustment list for machine adjustment, process adjustment, etc. in Service Mode.
- At the end of setup or when a malfunction occurs.

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.4 Parameter List

(1) Use

- Output a nonvolatile parameter list.

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.5 Service Parameter

(1) Use

- Output a FAX Service Mode set value list.

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.6 Protocol Trace

(1) Use

- Protocol Trace List (Last):
The facsimile protocol of the communication which was executed previously is output.
- Protocol Trace List (Error):
Output the facsimile procedure for the last error communication.

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.7 Fax Setting List

(1) Use

- Output a FAX user set value list. (Items vary depending on models.)

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.17.8 Fax Analysis List

(1) Use

- Following list is output in the Fax Analysis List.
 - Parameter List
 - Machine Management List

- Protocol Trace List (Error)
- Fax Setting List
- Communication Management List
- Service Parameter List

(2) Procedure

- Load the A4S/A4 or 8 1/2 x 11S/8 1/2 x 11 plain paper to a paper source.
- Press the Start key, which will let the machine produce the list.
- The time-of-day and date will also be printed.

11.18 State Confirmation

11.18.1 Sensor Check

(1) Use

- To display the states of the input ports of sensors and switches when the machine remains stationary.
- Used for troubleshooting when a malfunction or a misfeed occurs.

(2) Procedure

- The operation of each of the switches and sensors can be checked on a real-time basis.
- It can be checked as long as the 5-V power line remains intact even when a door is open.

(a) Electrical components check procedure through input data check

- When a paper misfeed occurs in the paper feed section of the machine, the tray 2 paper feed sensor is considered to be responsible for it.
 1. Remove the sheet of paper misfed.
 2. From the sensor check list that follows, check the panel display of the tray 2 paper feed sensor. For the tray 2 paper feed sensor, you check the data of "Paper feed" of "Tray 2."
 3. [Call the Service Mode to the screen.](#)
 4. Select [State Confirmation] -> [Sensor Check] and then select the screen that contains "Paper feed" under "Tray 2." For "Paper feed" under "Tray 2," select "1" on the left-hand side of the screen.
 5. Check that the data for "Paper feed" under "Tray 2" is "0" (sensor blocked).
 6. Move the actuator to unblock the tray 2 paper feed sensor.
 7. Check that the data for "Paper feed" under "Tray 2" changes from "0" to "1" on the screen.
 8. If the input data is "0," change the sensor.

(3) Sensor check screens

- These are only typical screens which may be different from what are shown on each individual machine.

(n) Sensor monitor 14 (Scanner section of the MFP)

Symbol	Panel display	Part/signal name	Operation characteristics/panel display	
			1	0
	Scanner			
PS201	Home Sensor	Scanner home sensor	At home	Out of home
PS9	Home sensor opposite board	Document reading glass cleaning sensor	At home	Out of home
	Org. Detecting Sensor			
RS201	Original Cover	Original cover sensor	Lowered	Raised
PS202	20 Degree	Angle sensor	Less than 14.5 degree	14.5 degree or more
PS203	Original Size Detection 1	Original size sensor/1	• Original loaded • Not mounted	Original not loaded
PS204	Original Size Detection 2	Original size sensor/2	• Original loaded • Not mounted	Original not loaded
-	Original Size Detection 3	Not used	-	-
-	Original Size Detection 4	Not used	-	-
-	Original Size Detection 5	Not used	-	-
-	Original Size Detection 6	Not used	-	-
-	Original Size Detection 7	Not used	-	-
-	Original Size Detection 8	Not used	-	-

11.18.2 Table Number**(1) Use**

- When IDC is detected, for plain paper, Thick 1/1+, Thick 2/3/4, and Black, the machine independently displays each Vg/Vdc output value that is calculated based on the density (toner amount stuck on the belt) of the test pattern created on the transfer belt.
- Used for troubleshooting of image problems.
- Reference values: C, M, Y, K Vdc: around 400 V, Vg: around 500 V

(2) Procedure

- If the value is high, correct so that the image density becomes low.
- If the value is low, correct so that the image density becomes high.

11.18.3 Level History 1**(1) Use**

- To display TCR (T/C ratio), IDC sensor output values, and fusing temperature.
- Used for troubleshooting of image problems.

(2) Procedure

TCR-C/-M/-Y/-K	Shows the T/C output reading taken last.
IDC1/IDC2	Shows the latest IDC data.
Middle heat temperature	Displays the latest detected temperature of the heating roller thermistor/3. (bizhub C554 only)
Medium Heating Temperature	Displays the latest detected temperature of the heating roller thermistor/2.
Heat edge temperature	Displays the latest detected temperature of the heating roller thermistor/1.
Main Heating Temperature	Displays the latest detected temperature of the heating roller temperature sensor.

"Reading taken last" means

- Density of toner of the latest image.
- When a test pattern is produced by pressing the Start key while level history 1 is being displayed.

11.18.4 Level History 2**(1) Use**

- IDC Sensor (Transfer belt bare surface level) as adjusted through the image stabilization sequence and ATVC value.
- Used for troubleshooting of image problems.

(2) Procedure

IDC Sensor Adjust 1/2	Shows the intensity adjustment value (0 to 255) of the IDC sensor. The normal value is 35 to 110, but the value increases depending on how long the machine has been used.
ATVC -C/-M/-Y/-K	Shows the first image transfer nearest output value (5 to 40 μ A).
ATVC -2nd	Shows the second image transfer nearest output value (300 to 4,800 V).

11.18.5 Temp. & Humidity**(1) Use**

- To display the temperature, humidity and paper temperature of a specific location (IDC sensor portion) inside the machine.
- Used as reference information when a malfunction occurs.

(2) Procedure

Temp-Inside	0 to 80 °C in 1 °C increments
Humidity	10 to 90 % in 1 % increments
Absolute Humidity	0 to 255 in 1 increments
Paper temperature	0 to 100 °C in 1 °C increments

11.18.6 CCD Check**(1) Use**

- To display the D/A value of CCD clamp/gain for R, G, and B.
- To display the D/A value of CIS clamp/gain.
- Used for troubleshooting for the CCD sensor/CIS.

(2) Procedure

- Use the following guidelines on the correct range of values.

(a) CCD

- CLAMP: The maximum value and the minimum value of the output value should be within the range shown below.

Acceptable clamping rage	Minimum value	Maximum value
R	600	1500

G	600	1700
B	600	1600

- GAIN: The maximum value and the minimum value of the output value should be within the range shown below.

Acceptable gain range	Minimum value	Maximum value
R	20	238
G	10	222
B	70	247

(b) CIS

- CLAMP: 0 (remain static)
- GAIN: 70 to 255 * Show data themselves

11.18.7 Memory/HDD Adj.

(1) Memory Check

(a) Use

- To check correspondence of data written to and that read from memory through write/read check.
- If the copy image is faulty.
- The following shows the memory names that correspond to each memory where check is made.

WORK0	Standard memory (MEMB/1)
WORK1	Standard memory (MEMB/2)
FILE0, 1	Memory of ASIC200 installed in the MFP board
FILE2, 3	Memory of ASIC200 installed in the EIF board for IC-414
FILE4, 5	Memory of ASIC200 installed in the DS board

<Rough Check>

- A check is made to see if the image data reading and writing are correctly made in a very limited area.
- The progress of the check sequence is displayed in percentage.

<Detail Check>

- A check is made to see if the image data reading and writing are correctly made at the addresses and buses in all areas.
- The progress of the check sequence is displayed in percentage.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
 2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [Memory Check].
 3. Select the desired type of check, either [Rough Check] or [Detail Check].
 4. Press the Start key to start the check procedure.
 5. When the check procedure is completed, the results are shown on the screen.
If the check results are NG, check the memory for connection or replace the memory with a new one.
- * Press the Stop key to interrupt the check sequence.

(2) Compress / Decompression Check

(a) Use

- To check whether compression and decompression are carried out properly.
- If the copy image is faulty.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [Compress / Decompression Check].
3. Pressing the Start key will automatically start to complete a compression/decompression check sequence.
4. The check result will be displayed.

(3) JPEG Check

(a) Use

- To check whether compression and decompression are carried out properly.
- If the copy image is faulty.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [JPEG Check].
3. Pressing the Start key will automatically start to complete a compression/decompression check sequence.
4. The check result will be displayed.

(4) Memory Bus Check

(a) Use

- To check to see if image data is correctly transferred from scanner to memory, and from memory to printer.
- Bus check between scanner and memory has two steps; the scanner internal check step as internal processing and the check step between scanner and memory. If either of the two steps is NG, NG1 or NG2 is displayed respectively.
- The bus check is performed separately for the front side and the back side and the individual results are displayed.

- If the print image is faulty.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [Memory Bus Check].
3. Select either [Scanner -> Memory], [Memory -> PRT], or both.
4. Pressing the Start key will start the memory bus check and be terminated automatically.
5. The check result will be displayed, [OK] or [NG].

(5) DSC Bus Check

(a) Use

- To check the connection between the DSC board and the scanner section when the optional security kit SC-508 is installed.
- When an error is detected after checking, NG1 or NG2 is displayed depending on the location of the board where the defect is found.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [DSC Bus Check].
3. Select "Front side" or "Back side", and touch [Scanner -> DSC].
4. Pressing the Start key will start the DSC bus check and be terminated automatically.
5. The check result will be displayed.

(6) HDD R/W Check

(a) Use

- To check to see if the hard disk is connected properly, and if read/write operation of the hard disk is correctly performed.
- When the hard disk is mounted.

(b) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [HDD R/W Check].
3. Pressing the Start key will start the hard disk R/W check sequence and be terminated automatically.
4. The check result will be displayed, [OK] or [NG].

(7) HDD Format

(a) Use

- To format the hard disk.
- The function proceeds in the order of physical format to logical format.
- If the hard disk is yet to be formatted, the malfunction code "C-D010" will appear. Ignore this code and continue with the formatting procedure.
- When the hard disk is mounted.
- When the hard disk is to be initialized. (Physical format to logical format)

NOTE

- **As HDD formatting deletes Movie data, Voice data, OCR dictionary data, Unicode Font data, OCR font data, and PDF/A font, you need to reinstall these data as necessary after using this function.**

(b) Procedure (Physical Format)

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [HDD Format].
3. Touch [Physical Format].
4. Press the Start key to start the formatting sequence.
5. The sequence will be automatically terminated as it is completed.
6. Turn off the main power switch and turn it on again more than 10 seconds after.

NOTE

- **If [HDD Encryption Setting] is not set to "ON," when the physical format is completed and the main power switch is turned OFF/ON, a message that prompts you to set an encrypting word is displayed.**

If you perform [HDD Encryption Setting], after setting an encrypting word, perform the logical format.

(c) Procedure (Logical Format (only when set up with HDD replacement))

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [State Confirmation] -> [Memory / HDD Adj.] -> [HDD Format].
3. Touch [Logical Format].
4. Press the Start key to start the formatting sequence.
5. The sequence will be automatically terminated as it is completed.
6. Turn off the main power switch and turn it on again more than 10 seconds after.

* Formatting the hard disk will erase all data contained in it.

(8) SSD -> HDD Data Copy

- Not used.

11.18.8 Memory/HDD State

(1) Use

- To display the condition and amount of the memory and hard disk.

11.18.9 Color Regist

(1) Use

- To check each of C, M, and Y for color shift amount.
- The data is updated after a color shift correction has been made or color shift adjustment has been completed.
- To display the results of skew adjustment.

(2) Procedure

- For each of C, M, and Y, the color shift amount (in X and Y directions) at two locations (one at the front and the other in the rear) and the difference in color shift amount between the front and rear (X and Y directions) are displayed.
- Display unit: dots
- Individual color shifts of C, M, and Y are based on K and their amounts are displayed.
- For details of skew adjustment, see the "I.11.3.9 Print Head Skew Adj."

11.18.10 Load Check

(1) Use

- To check each device (electric component) for proper condition by individually activating the load associated with the device.
- To identify faults at the time of troubleshooting.

NOTE

Take note of the following during the load check mode.

- No malfunction is detected and no count is taken of consumables life and related items.
- Two or more devices (motors, clutches, solenoids, and fans) cannot be checked simultaneously.
- Detection of proper installation of various types of units and waste toner box does not function. During the check procedure, therefore, make sure that the unit in question is installed correctly or yet to be installed.

(2) Procedure

- Call the Service Mode to the screen.
- Touch [State Confirmation] -> [Load Check].
- Open the lower front door or the upper right door.
- Touch [Start Load Check].
Entry screen of the check code and the multi code appears.
- Close the door opened on step3.
- Referring to the load check list, enter a check code.
- Referring to the load check list, enter a multi code.
- Press the Start key.
When pressing the Start key, the specified load is activated. The Start key blinks in orange.
- Check the load operation and output of signals.
- Press the Stop key to stop the check operation and check the result.

NOTE

- Depending on the type of load being activated, after the lapse of the specified time or after the transition to the specified state, the corresponding device automatically stops working.
- When 'NG' is displayed, check the wiring and connectors.

11. To check another load or signal output, repeat steps 6 to 10.

12. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

NOTE

- To exit from the load check mode, be sure to turn off and on the main power switch.
At the point when you display [Service Mode] -> [State Confirmation] -> [Load Check], MFP enters into load check mode.
Regardless of whether load check is actually performed or not, the main power switch must be turned off and on to exit from load check mode.

(3) Load check list

Check code	Multi code	Symbol	Load name	Operation outline	Note
8	1	EL/Y, EL/M, EL/C	Erase LED /Y,M,C	Outputs erase LED. <At the time of start> Turns on erase LED/Y, M, C remote. Turns on erase LED/K low light intensity remote. Turns on erase LED/K. <At the time of stop> Turns off erase LED/Y, M, C remote. Turns off erase LED/K low light intensity remote. Turns off erase LED/K.	-
	2	EL/K	Erase LED /K		-
20	1	CL3	Tray1 paper feed clutch	Drives the specified clutch.	-
	2	CL1	Tray2 paper feed clutch		-
	3	CL7	Bypass paper feed clutch		-

Check code	Multi code	Symbol	Load name	Operation outline	Note
23	1	-	Bypass tray lift-up plate elevator motor /down	Drives the paper feed motor in the specified direction.	The motor stops when the upper limit sensor or lower limit is detected.
	3	SD1	Bypass pick-up solenoid	Turns ON the solenoid.	The solenoid will stop after a lapse of predetermined time.
	4	M12	Tray1 lift-up motor	Starts the lift-up operation.	The motor stops when the upper limit sensor or lower limit is detected.
	5	M13	Tray2 lift-up motor		The motor stops when the upper limit sensor or lower limit is detected.
	6	M113	Tray3 lift-up motor		Only when PC-110 or PC-210 is mounted. The motor stops when the upper limit sensor or lower limit is detected.
	7	M123	Tray4 lift-up motor		Only when PC-210 is mounted. The motor stops when the upper limit sensor or lower limit is detected.
	8	M1	LU lift-up motor		Only when LU-301 or LU-204 is mounted. The motor stops when the upper limit sensor or lower limit is detected.
	9	M134	LCT elevator motor moving up		Only when PC-410 is mounted. The motor stops when the upper limit sensor or lower limit is detected.
	10		LCT elevator motor moving down		
	11	M133	Shifter motor move to home position	Starts the shifter operation.	Only when PC-410 is mounted.
	12		Shifter motor shift operation		Only when PC-410 is mounted.
24	1	-	1st transfer roller (Y,M,C) pressure	Starts the pressure/release operation of the 1st transfer roller.	-
	2	-	1st transfer roller release	NOTE Be sure to perform the release operation whenever the pressure/release operation has been performed. *1	
26	1	M24	Registration motor high speed	Drives the motor at the specified speed.	-
	2		Registration motor low speed		-
	3		Registration motor minimum speed		-
28	1	M22	Paper feed motor high speed	Drives the motor at the specified speed.	-
	2		Paper feed motor low speed		-
	3		Paper feed motor minimum speed		-
	4	M23	Tray2 vertical transport motor high speed		-
	5		Tray2 vertical transport motor low speed		-
	6		Tray2 vertical transport motor minimum speed		-
	7	M131	LCT paper feed motor high speed		Only when PC-410 is mounted.

Check code	Multi code	Symbol	Load name	Operation outline	Note
	8		LCT paper feed motor low speed		The paper lifting plate must not be at upper limit position.
	9		LCT paper feed motor minimum speed		
	10	M132	LCT vertical transport motor high speed		Only when PC-410 is mounted.
	11		LCT vertical transport motor low speed		
	12		LCT vertical transport motor minimum speed		
	13	M111	Tray3 paper feed motor high speed		Only when PC-110 or PC-210 is mounted. The paper lifting plate must not be at upper limit position.
	14		Tray3 paper feed motor low speed		
	15		Tray3 paper feed motor minimum speed		
	16	M121	Tray4 paper feed motor high speed		Only when PC-210 is mounted. The paper lifting plate must not be at upper limit position.
	17		Tray4 paper feed motor low speed		
	18		Tray4 paper feed motor minimum speed		
	19	M112	Tray3 vertical transport motor high speed		Only when PC-110 or PC-210 is mounted.
	20		Tray3 vertical transport motor low speed		
	21		Tray3 vertical transport motor minimum speed		
	22	M122	Tray4 vertical transport motor high speed		Only when PC-210 is mounted.
	23		Tray4 vertical transport motor low speed		
	24		Tray4 vertical transport motor minimum speed		
	25	M2	LU paper feed motor high speed		Only when LU-301 or LU-204 is mounted. The paper lifting plate must not be at upper limit position.
	26		LU paper feed motor low speed		
	27		LU paper feed motor minimum speed		
	28	M3	LU transport motor high speed		Only when LU-301 or LU-204 is mounted.
	29		LU transport motor low speed		
	30		LU transport motor minimum speed		
32	1	M14	Polygon motor high speed	Drives the motor at the specified speed. Drives the power supply cooling fan at the same timing.	-
	2		Polygon motor middle speed		-
	3		Polygon motor low speed		-
40	1	M1	Transport motor high speed	Drives the motor at the specified speed. NOTE Perform the operation check after the drum unit/K and the transfer belt unit have been removed. *2	-
	2		Transport motor low speed		
	3		Transport motor minimum speed		
41	1	M2	PC motor high speed	Drives the motor at the specified speed. NOTE Perform the operation check after the drum units/Y,M,C have been removed. *3	-
	2		PC motor low speed		
	3		PC motor minimum speed		
42	1	FM1	Power supply cooling fan	Drives the specified fan.	-
	2	FM2	Transfer belt cleaner cooling fan		-
	3	-	Not used.		-
	4	FM7	IH coil cooling fan full speed		-
	5		IH coil cooling fan half speed		-
	6	FM12	Fusing power supply cooling fan full speed (bizhub C554 only)		-

Check code	Multi code	Symbol	Load name	Operation outline	Note
	7		Fusing power supply cooling fan half speed (bizhub C554 only)		-
	8	FM11	Toner suction fan		-
	9	FM8	Paper cooling fan		-
	10	FM12	Fusing power supply cooling fan (bizhub C454 only)		-
	11	FM13	Ozone fan full speed		-
45	1	M3	Fusing motor high speed	Drives the motor at the specified speed.	-
	3		Fusing motor low speed		-
	4		Fusing motor minimum speed		-
	5		Fusing motor warming-up speed		-
	6		Fusing motor standby speed		-
	7	M11	Fusing pressure motor drive (pressure)	Starts the pressure/release operation of the pressure roller. NOTE Be sure to perform the release operation whenever the pressure/release operation has been performed. *4	-
	8		Fusing pressure motor drive (release)		
50	1	M21	Developing motor high speed	Drives the motor at the specified speed. NOTE Perform the operation check after the drum units/Y,M,C and the developing units/Y,M,C have been removed. *5	-
	2		Developing motor low speed		
	3		Developing motor minimum speed		
81	0	CL6	ADU transport clutch	Drives the specified clutch.	-
83	0	SD3	Gate switch solenoid	Turns ON the solenoid.	The solenoid will stop after a lapse of predetermined time.
84	1	M4	Switchback motor high speed (Normal rotation)	Drives the motor at the specified speed and direction.	-
	2		Switchback motor low speed (Normal rotation)		-
	3		Switchback motor minimum speed (Normal rotation)		-
	4		Switchback motor high speed (Reverse rotation)		-
	5		Switchback motor low speed (Reverse rotation)		-
	6		Switchback motor minimum speed (Reverse rotation)		-
85	1	M5	ADU transport motor high speed	Drives the motor at the specified speed.	-
	2		ADU transport motor low speed		-
	3		ADU transport motor minimum speed		-

NOTE

- *1: If the PC motor is energized with the 1st transfer roller in its pressed position, the transfer belt and the photoconductor drum may be damaged.
- *2: The cleaning blades of the drum unit/K and the transfer belt unit, if driven with no toner deposited, may be curved to warp.
- *3: The cleaning blades of the drum unit/Y,M,C, if driven with no toner deposited, may be curved to warp.
- *4: The pressure roller, if left to stand in the pressed position, may be deformed. The drive gear may be damaged if the fusing unit is removed with the pressure roller in the pressed position.
- *5: If the machine is driven with the specified units left mounted on it, the developing roller and developer contact the photoconductor drum to damage it. If the machine is driven with the developing units/Y,M,C left mounted on it, the developing roller, which is yet to be charged, is driven, so that toner may scatter around.

11.18.11 Adjustment Data List**(1) Use**

- To display the adjustment and setting value set in the main unit
- Use to check the adjustment and setting value set in the main unit.

11.19 Test Mode

- To check the image on the printer side by letting the machine produce various types of test pattern. It also tests the printing operation in paper passage test, as well as the fax transmission.
- The machine searches through the paper sources in the order of tray 2, tray 3, tray 4, and tray 1 for paper of the maximum size for printing.

11.19.1 Procedure for test pattern output

1. Touch [Test Mode] to display the test mode menu.
2. Touch the desired test pattern key.
3. Set up the desired functions and press the Start key.

11.19.2 Gradation Pattern

(1) Use

- To produce a gradation pattern.
- Used for checking gradation reproducibility.

(a) Test pattern

e.g.

- SINGLE
- HYPER
- Gradation
- Cyan

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER".
- Select "1-Sided", 2-Side1 or 2-Side2.
 - 2-Side1: The same pattern is printed on both front and back sides.
 - 2-Side2: The front side is blank and the pattern is printed on the back side.
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Select "12 Gradations", 24 Gradations or 256 Gradations.
- Select the color mode.
 - "Cyan", Magenta, Yellow, Black (4PC), CMYK, 8Color, 4Color, Black (1PC)
 - Black (4PC): Uses four colors.
 - Black (1PC): Uses one color of black.

NOTE

- When 24 Gradations or 256 Gradations is selected, [8 Color] or [4 Color] is not selectable in color mode.

11.19.3 Halftone Pattern

(1) Use

- To produce a solid halftone pattern.

- Used for checking uneven density and pitch noise.

(a) Test pattern

e.g.

- SINGLE
- HYPER
- Gradation
- Cyan
- Density: 128

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Select "1-Sided", 2-Side1 or 2-Side2.
 - 2-Side1: The same pattern is printed on both front and back sides.
 - 2-Side2: The front side is blank and the pattern is printed on the back side.
- Select the color mode.
"Cyan", Magenta, Yellow, Black (4PC), Red, Green, Blue, CMYK, 3 Color, 4 Color, Black (1PC), MIX
- Select a printable area from [Full Bleed] or [Front Half].

NOTE

- [Front Half] is selectable only for one-side printing.

- Type the density level (0 to "255").

11.19.4 Lattice Pattern

(1) Use

- To produce a lattice pattern.
- Used for checking fine line reproducibility and uneven density.
- A reverse pattern is also used to check for fine line reproducibility of white letters on a solid background.

(a) Test pattern

e.g.

- SINGLE
- FEET
- Cyan
- CD Width: 5
- FD Width: 5
- Density: 255
- Normal

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select "FEET" or HYPER.
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Select "1-Sided", 2-Side1 or 2-Side2.
 - 2-Side1: The same pattern is printed on both front and back sides.
 - 2-Side2: The front side is blank and the pattern is printed on the back side.
- Select Gradation or Resolution. (Only select HYPER)
- Select the color mode.
"Cyan", Magenta, Yellow, Black (4PC), Red, Green, Blue, CMYK, 3 Color, 4 Color, Black (1PC)
- Enter CD width and FD width (0 to 191 dots).
- Type the density level (0 to "255").

- Select "Normal" or Reverse.

11.19.5 Solid Pattern

(1) Use

- To produce each of the C, M, Y, and K solid patterns.
- Used for checking reproducibility of image density.

(a) Test pattern

e.g.

- SINGLE
- HYPER
- Gradation
- Density: 255

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Type the density level (0 to "255").

11.19.6 Color Sample

(1) Use

- To produce a color sample.
- Used for checking reproducibility of each of the different colors.

(a) Test pattern

e.g.

- SINGLE
- HYPER
- Gradation

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Produce 12-gradation-level patches of C, M, Y, K, R, G, and B, and a patch of each of the 12 reference colors in the hue circle with lightness and saturation corrected.

11.19.7 8 Color Solid Pattern

(1) Use

- To produce an 8-color solid pattern.
- Used for checking color reproducibility and uneven density of each color.

(a) Test pattern

e.g.

- SINGLE
- HYPER
- Gradation
- Density: 255

(2) Procedure

- # of Print ("1" to 999)
- Select "SINGLE" (single copy) or MULTI (multi copy).
- Select FEET or "HYPER."
- Select "Gradation", Resolution, Error diffusion or Hybrid Error Diffusion if HYPER has been selected.
- Type the density level (0 to "255").

11.19.8 CMM Pattern**(1) Use**

- To produce a CMM (Color Management Module) pattern.
- Used to check color difference depending on the places where output is made.

(a) Test pattern

e.g.

- Error diffusion
- 270 degrees

(2) Procedure

- # of Print is always "1".
- Select "Error diffusion", Hybrid Error Diffusion, Gradation, or Resolution.
- Select an angle from among "0 degrees", 90 degrees, 180 degrees, and 270 degrees.

11.19.9 Paper Passage Test**(1) Use**

- To test the printing operation in paper passage test.
- Use to check the printing operation in paper passage test from each paper source.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch these keys in this order: [Test Mode] -> [Paper Passage Test].
3. Touch [Select Tray] and select the paper feed tray to be tested.
4. If you select "Manual" in step 2, touch [Paper Size] and select a paper size.
5. Touch [Paper Type] and select a paper type.
6. Press the Start key to start the paper passage test.
7. Pressing the Stop key will stop operation.

11.19.10 Fax Test-Signal Send Test**(1) Use**

- Image information signals, control signals and DTMF can be individually output.
- Signal sounds are monitored by the monitor speaker.
- When two fax kit is installed, Line 2 can be specified.

(2) Procedure

1. Touch [Service Mode] -> [Test Mode] -> [FAX Test], in that order.
2. Select the [Line1] or [Line2], and touch the [Signal Send Test].
3. Select a test item.
4. Select the parameter you would like to test.

5. Press the [Start] key.

(In order to move to another test, select the next test item after pressing the [Stop] key.)

NOTICE

- Signal is output from pressing [Start] to pressing [Stop].
- To check Line 1, [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Line Parameter Setting\]](#) -> [\[Line Monitor Sound\]](#) should be set to "ON".
- To check Line 2, [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Multi Line Settings\]](#) -> [\[Line Parameter Setting\]](#) -> [\[Line Monitor Sound\]](#) should be set to "ON".

(a) V34 Main CH: Default setting

- 33,600

(b) V34 Main CH: Setting range

- 2,400 to "33,600" (step: 2,400)

(c) V34 Control CH: Default setting

- CTL CH

(d) V34 Control CH: Setting item

- "CTL CH"

- No parameters

11.19.11 Fax Test-Signal Receive Test**(1) Use**

- Check a signaling tone by connecting the machine to the line to output a test signal of the fax board.
- Signal sounds are monitored by the monitor speaker.
- When two fax kit is installed, Line 2 can be specified.

(2) Procedure

1. Touch [Service Mode] -> [Test Mode] -> [FAX Test], in that order.
 2. Select the [Line1] or [Line2], and touch the [Signal Receive Test].
 3. Select a test item.
 4. Select the parameter you would like to test.
 5. Press the [Start] key.
- (In order to move to another test, select the next test item after pressing the [Stop] key.)

NOTICE

- Signal is output from pressing [Start] to pressing [Stop].
- To check Line 1, [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- To check Line 2, [Administrator Settings] -> [Fax Settings] -> [Multi Line Settings] -> [Line Parameter Setting] -> [Line Monitor Sound] should be set to "ON".
- The status of testing or results of tests are shown in the title line as follows

RCV	Waiting signals
OK/NG	Results of signal reception

(a) V17: Default setting

- 14,400bps

(b) V17: Setting item

- "14,400bps"

(i) PB: Setting item

- "0" to 9, *, #, A, B, C, D

(j) Special Tone: Default setting

- 1,100Hz

(k) Special Tone: Setting item

- "1,100Hz"
- 1,300Hz
- 2,100Hz

11.19.12 Fax Test-NCU TEST

(1) Use

- To check the operation of NCU.

(2) Procedure

1. Touch [Service Mode] -> [Test Mode] -> [FAX Test], in that order.
2. Select the [Line1] or [Line2], and touch the [NCU TEST].
3. Select a test item.
4. Press the [Start] key.
(In order to move to another test, select the next test item after pressing the [Stop] key.)

NOTE

- When CML / CTL / TEL relay test is selected and the [Start] is pressed, ON is displayed in the parameter and relay is turned to ON. When [Stop] is pressed, relay is turned OFF.
- When the DC-LOOP detection test is selected and [Start] is pressed, DT=0001 is shown in the title row in case of detecting the DC-LOOP. If not detected, DT=0000 is displayed.

Contents of test	Device to be tested
CML Relay	IC201, IC202
CTL Relay	RL201
TEL Relay	RL501 *
DC-LOOP Detect	
Speaker	
Outside Ring Send	
Audio Response Send	

- * RL501 mounts only the Japanese.

11.20 ADF

11.20.1 Original Stop Position

(1) Use

- To manually adjust the original stop position and the read position in each of the DF modes.
- When the result is Unable in the automatic adjustment of the original stop position.

(2) Procedure

(a) Sub Scanning Direction 1-Side / Sub Scanning Direction 2-Side

NOTE

- Before performing this adjustment, the feed zoom adjustment needs to be complete.
[I.11.20.8 FD-Mag. Adj. \(F\)](#)

- The difference in the widths of B between the chart and the copy sample should fall within the following range.

Specifications	0 ± 2.0 mm
Setting range	-4.0 mm to +4.0 mm (1 step: 0.1 mm)

- Place the chart in the document feed tray (with the side having an arrow facing up).
- Make a full size copy of the chart.

NOTE

- In the same way place the chart with the blank side facing up in the document feed tray in the duplex mode and make a copy. Check the difference in the widths of a between the chart and the second sided surface of the copy sample.

- Check that the difference in the widths of B between the chart and the copy sample falls within the specified range.
- [Call the Service Mode to the screen.](#)
- Touch [ADF] -> [Original Stop Position].
- Touch [Sub Scanning Direction 1-Side] or [Sub Scanning Direction 2-Side].
- Enter the value from the ten-key pad. (Press the [+/-] key to change the +/- code.)
 - If the difference in the widths of B is greater than the specifications, enter the + value.
 - If the difference in the widths of B is smaller than the specifications, enter the - value.
- Touch [END].
- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
- Make a copy of the chart again and check that the difference in the widths of B falls within the specified range.

(b) Main Scanning (Front) / Main Scanning (Back)

- The difference in the widths of A between the chart and the copy sample should fall within the following range.

Specifications	0 ± 2.0 mm
Setting range	-4.4 mm to +4.4 mm (1 step: 0.1 mm)

- Place the chart in the document feed tray (with the side having an arrow facing up).
- Make a full size copy of the chart.

NOTE

- In the same way place the chart with the blank side facing up in the document feed tray in the duplex mode and make a copy. Check the difference in the widths of A between the chart and the second sided surface of the copy sample.**

- Check that the difference in the widths of A between the chart and the copy sample falls within the specified range.
- [Call the Service Mode to the screen.](#)
- Touch [ADF] -> [Original Stop Position].
- Touch [Main Scanning (Front)] or [Main Scanning (Back)].
- Enter the value from the ten-key pad. (Press the [+/-] key to change the +/- code.)
 - If the difference in the widths of A is greater than the specifications, enter the + value.
 - If the difference in the widths of A is smaller than the specifications, enter the - value.
- Touch [END].
- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
- Make a copy of the chart again and check that the difference in the widths of A falls within the specified range.

11.20.2 Registration Loop Adj.**(1) Use**

- To adjust the length of the loop to be formed in paper before the registration rollers.
- When an original misfeed or skew occurs.

(2) Procedure

- [Call the Service Mode to the screen.](#)
- Touch [ADF] -> [Registration Loop Adj].
- Select either [1-Side] or [Second Side] for the adjustment.
- Press the clear key and change the setting value using the 10-key pad. (Press the [+/-] key to change the +/- code.)
The amount of loop increases by the amount of positive (+) value and decreases by the amount of negative (-) value.
- Touch [END].
- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(3) Default setting

- 0

(4) Setting range

- 5 mm to + 5 mm (in 1 mm increments)

11.20.3 Auto Stop Position Adjustment**(1) Use**

- To automatically adjust the read position for the Sub Scanning Direction.
- To check skew feed.
- When DF has been replaced.
- When CIS module has been replaced.

NOTE

- Before performing this adjustment, the feed zoom adjustment needs to be complete.**
[I.11.20.8 FD-Mag. Adj. \(F\)](#)

(2) Procedure**(a) Sub Scanning Direction 1-Side**

- [Call the Service Mode to the screen.](#)
- Touch [ADF] -> [Auto Stop Position Adjustment].
- Touch [Sub Scanning Direction 1-Side].
- Place the chart in the document feed tray (with the side having an arrow facing up).
- Press the Start key.
- Make sure that result is OK. Then, touch [SET].
- Touch [END].
- Touch [Exit] on the Service Mode screen.

9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is Unable:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position].
[I.11.20.1 Original Stop Position](#)

(b) Sub Scanning Direction 2-Side

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Sub Scanning Direction 2-Side].
4. Place the chart in the document feed tray (Set the chart with its blank side facing upward).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is Unable:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position].
[I.11.20.1 Original Stop Position](#)

(c) Main Scanning (Front)

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Main Scanning (Front)].
4. Place the chart in the document feed tray (with the side having an arrow facing up).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is Unable:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position].
[I.11.20.1 Original Stop Position](#)

(d) Main Scanning (Back)

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Auto Stop Position Adjustment].
3. Touch [Main Scanning (Back)].
4. Place the chart in the document feed tray (Set the chart with its blank side facing upward.).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is Unable:

- Check and correct the skew of the document.
- Manually correct the value of [Original Stop Position].
[I.11.20.1 Original Stop Position](#)

11.20.4 Paper Passage**(1) Use**

- To check for paper passage through the DF in each of the DF modes.
- Used for checking the document path for any abnormal condition when a document misfeed occurs.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Paper Passage].
3. Select a paper passage mode to be tested from [1-Sided No Detect], [1-Sided Mixed Org.] or [2-Sided].
4. Set the original in the feed tray.
5. The Start key changes from orange to blue.
6. Press the Start key. The operation starts.

NOTE

- After starting the operation by pressing the Start key, if the Start key is pressed during the operation, the operation will be suspended.
Then, if the Start key is pressed again during the suspension, the operation will be resumed.
- If the Stop key is pressed during the test operation, the test will be forced to end.
- If there is no Original set in the feed tray, the Start key will not work.

- All Originals set in the feed tray are passed through. Upon the completion of all Originals passed through, the paper through test ends.

11.20.5 Sensor Check

(1) Use

- To check sensors on the paper path.
- When a document misfeed occurs.

(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [ADF] -> [Sensor Check].
3. Operate the sensor to check by using paper or the like, and check the screen display.
(Paper detected: 1, No paper detected: 0)

(3) Sensor check screen

- This is only typical screen which may be different from what are shown on each individual main body.

(4) Sensor check list

Symbol	Panel display	Part/signal name	Operation characteristics/panel display	
			1	0
PS14	Feed Open&Close	Upper door sensor	Open	Close
PS15	Open/Close Guide under CIS	CIS cover sensor	Open	Close
PS3	Registration Sensor	Registration sensor	Paper present	Paper not present
PS2	After Separate	After separate sensor	Paper present	Paper not present
PS5	Exit Sensor	Document exit sensor	Paper present	Paper not present
RS201	DF Open	Original cover sensor	Open	Close
PS6	Before Read	Document reading sensor	Paper present	Paper not present
VR1	Original Width Sensor	Document width sensor	Analog value	
PS8	Length Sensor1	Document length sensor/1	Paper present	Paper not present
PS9	Length Sensor2	Document length sensor/2	Blocked	Unblocked
-	Length Sensor3	-	-	-
PS13	Glass Cleaning Home Position	Document reading glass cleaning sensor	At home	Not at home
PS1	Original Detection Sensor	Document empty sensor	Paper present	Paper not present
PS10	Mixed Original 1	Mixed Original sensor/1	Paper present	Paper not present
PS11	Mixed Original 2	Mixed Original sensor/2	Paper present	Paper not present
PS12	Mixed Original 3	Mixed Original sensor/3	Paper present	Paper not present
FM1	Fan Lock Detection	DF cooling fan motor	Locked	Not locked

11.20.6 Original Tray Width

(1) Use

- To set the values of maximum (A3 position) and minimum (B6 position) widths on the restriction plate positional volume.
- When an original misfeed occurs.
- When an original size detection error occurs.

- When the DF control board has been replaced.
- When the document width sensor has been replaced.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Original Tray Width].

3. Set the A3 paper [1] on the original feed tray, and widen the width across the edge guides [2] by sliding them to the "A3" position.

4. Touch [Max. Width].
5. Press the Start key.
6. OK is displayed when the adjustment has been completed.

7. Set the B6 paper [1] on the original feed tray, and narrow the width across the edge guides [1] by sliding them to the "B6" position.

8. Touch [Min. Width].
9. Press the Start key.
10. OK is displayed when the adjustment has been completed.
11. Touch [END].
12. Touch [Exit] on the Service Mode screen.
13. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is NG:

- Possible causes includes failure or wrong wiring of the document width sensor and failure of the DFCB.

11.20.7 Read Pos Adj

(1) Use

- To adjust the original read position.
- When the scanner home sensor have been replaced.

(2) Procedure

(a) Auto Adjust

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Read Pos Adj].
3. Touch [Auto Adjust].

[1]

4. Open the DF.
5. Place the DF reading chart [1] so that a triangular mark may become the original glass side (downward) and the pointed tip of the triangle points toward the black sheet on the left side.
6. Press the Start key.

NOTE

- Be sure that the DF reading chart is in position.
- Keep the automatic document feeder open while making the adjustment.
- When the edge deviation at DF reading after carrying out this adjustment becomes larger, conduct the "[I.11.20.1 Original Stop Position](#)".

7. Make sure that the result is OK.
8. Touch [END].
9. Touch [Exit] on the Service Mode screen.
10. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

NOTE

If the result is Unable:

- Check that the chart is in the correct place.
- Make the adjustment on the [Original Stop Position] screen.
[I.11.20.1 Original Stop Position](#)

(b) Read Pos Adj

- Not used.

11.20.8 FD-Mag. Adj. (F)**(1) Use**

- To adjust the feed zoom in the front side feeding direction on the DF.
- When DF has been replaced.

(2) Procedure**(a) Auto Adjust**

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [FD-Mag. Adj. (F)].
3. Touch [Auto Adjust].
4. Place the chart in the document feed tray (with the side having an arrow facing up).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(b) Orig. Feed Zoom Ad

- The difference in the widths of C between the chart and the copy sample should fall within the following range.

Specifications	0 ± 1.0 mm
Setting range	-2.00% to +2.00% (1 step: 0.1%)

1. Place the chart in the document feed tray (with the side having an arrow facing up).
2. Make a full size copy of the chart.
3. C width on the chart and one on the copy sample are measured and adjusted so that the difference of C width satisfies the specifications shown below.
4. [Call the Service Mode to the screen.](#)
5. Touch [ADF] -> [FD-Mag. Adj. (F)].
6. Touch [Orig. Feed Zoom Ad].
7. Enter the value using the [+] / [-] keys.

- If the difference in the widths of C is greater than the specifications, enter the - value.
 - If the difference in the widths of C is smaller than the specifications, enter the + value.
8. Touch [END].
 9. Touch [Exit] on the Service Mode screen.
 10. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
 11. Make a copy of the chart again and check that the difference in the widths of C falls within the specified range.

11.20.9 Scanning Light Adjustment

(1) Use

- To adjust the scanning light of DF.
- Used for adjusting the difference in the scanning lights between scanning from the original glass and scanning from the DF original glass.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Scanning Light Adjustment].
3. Select a color by pressing [Red], [Green], or [Blue].
4. Press the value using the [+] / [-] key.

NOTE

- It is recommended that the scanning light adjustment should be made by the same steps for all the three colors of red, green, and blue.

5. Touch [END].
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(3) Setting range

- -4 to + 4 (1 step)

11.20.10 Mixed original size adjustment

(1) Use

- To adjust paper length detection accuracy used during paper feed in DF mixed original mode.
- To set the threshold for each size detection based on the length detected when feeding standard sizes (A4S).
- When the DF control board has been replaced.

(2) Procedure

NOTE

- Before performing this adjustment, the feed zoom adjustment needs to be complete.

[I.11.20.8 FD-Mag. Adj. \(F\)](#)

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Mixed original Size adjustment].
3. Place the chart in the document feed tray (with the side having an arrow facing up).
4. Press the Start key.
5. Make sure that result is OK. Then, touch [SET].
6. Touch [END].
7. Touch [Exit] on the Service Mode screen.
8. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

11.20.11 Home Read Position Adjust

(1) Use

- When image failure occurs due to the dirty back side shading shaft on the DF, use this function to adjust the home position of the shading shaft and to change a shading reference plate.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Home Read Position Adjust].
3. Press the value using the [+] / [-] key.
4. Touch [END].
5. Touch [Exit] on the Service Mode screen.
6. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(3) Default setting

- 0

(4) Setting range

- -4 to + 4 (1 step)

11.20.12 FD-Mag. Adj. (B)

(1) Use

- To adjust the feed zoom in the back side feeding direction on the DF.

- When DF and CIS has been replaced.

(2) Procedure

(a) Auto Adjust

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [FD-Mag. Adj. (B)].
3. Touch [Auto Adjust].
4. Place the chart in the document feed tray (Set the chart with its blank side facing upward).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(b) Orig. Feed Zoom Ad

- The difference in the widths of D between the chart and the copy sample should fall within the following range.

Specifications	$0 \pm 1.0 \text{ mm}$
Setting range	-2.00% to +2.00% (1 step: 0.1%)

1. Place the chart in the document feed tray (Set the chart with its blank side facing upward).
2. Make a full size copy of the chart.
3. D width on the chart and one on the copy sample are measured and adjusted so that the difference of D width satisfies the specifications shown below.
4. [Call the Service Mode to the screen.](#)
5. Touch [ADF] -> [FD-Mag. Adj. (B)].
6. Touch [Orig. Feed Zoom Ad].
7. Enter the value using the [+] / [-] keys.
 - If the difference in the widths of D is greater than the specifications, enter the - value.
 - If the difference in the widths of D is smaller than the specifications, enter the + value.
8. Touch [END].
9. Touch [Exit] on the Service Mode screen.
10. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
11. Make a copy of the chart again and check that the difference in the widths of D falls within the specified range.

11.20.13 Main Scanning Direction Zoom

(1) Use

- To adjust the feed zoom in the back side main scanning direction on the DF.
- When DF and CIS has been replaced.

(2) Procedure

(a) Auto Adjust

1. [Call the Service Mode to the screen.](#)
2. Touch [ADF] -> [Main Scanning Direction Zoom].
3. Touch [Auto Adjust].
4. Place the chart in the document feed tray (Set the chart with its blank side facing upward).
5. Press the Start key.
6. Make sure that result is OK. Then, touch [SET].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.
9. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(b) Main scanning direction zoom adj

- The difference in the widths of E between the chart and the copy sample should fall within the following range.

Specifications	$0 \pm 2.0 \text{ mm}$
Setting range	-1.00% to +1.00% (1 step: 0.1%)

1. Place the chart in the document feed tray (Set the chart with its blank side facing upward).
2. Make a full size copy of the chart.
3. E width on the chart and one on the copy sample are measured and adjusted so that the difference of E width satisfies the specifications shown below.
4. [Call the Service Mode to the screen.](#)
5. Touch [ADF] -> [Main Scanning Direction Zoom].
6. Touch [Main scanning direction zoom adj].
7. Enter the value using the [+] / [-] keys.
 - If the difference in the widths of E is greater than the specifications, enter the - value.
 - If the difference in the widths of E is smaller than the specifications, enter the + value.
8. Touch [END].
9. Touch [Exit] on the Service Mode screen.
10. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
11. Make a copy of the chart again and check that the difference in the widths of E falls within the specified range.

11.21 FAX setting (Line1)

- It will be displayed only when the optional fax kit FK-511 is mounted.

11.21.1 Modem/NCU

(1) V34:1/2 : RX Max. Bit Speed

(a) Use

- To set the max. bit speed for reception in V.34.

(b) Default setting

- 33600 bps

(c) Setting range

- 2400 to "33600 bps" (step: 2400 bps)

(2) V34:1/2 : TX Max. Bit Speed

(a) Use

- To set the max. bit speed for transmission in V.34.

(b) Default setting

- 33600 bps

(c) Setting range

- 2400 to "33600 bps" (step: 2400 bps)

(3) V34:1/2 : Control CH Speed

(a) Use

- A bit speed of the control channel.
- The negotiation of 2400/1200 is performed in the V.34 start-up procedure.

(b) Default setting

- 1200 bps

(c) Setting item

- "1200 bps"
- 2400 bps

(4) V34:1/2 : Max. SYMB Speed**(a) Use**

- Maximum modulation speed (baud rate) of V.34
 - 3429 SYMB: 3429 33.6 k to 4.8 k
 - 3200 SYMB: 3200 31.2 k to 2.4 k
 - 3000 SYMB: 3000 28.8 k to 2.4 k
 - 2800 SYMB: 2800
 - 2400 SYMB: 2400
- The modulation speed of both sending and receiving change by change of setting.
- The upper limit value of V.34 maximum bit speed is determined.
- Normally you do not need to change the value. In case that a V.34 error frequently occurs, you can attempt to set up 3000 SYMB and decrease the symbol rate, for instance.

(b) Default setting

- 3429 SYMB

(c) Setting item

- 2400 SYMB
- 2800 SYMB
- 3000 SYMB
- 3200 SYMB
- "3429 SYMB"

(5) V34:2/2 : SYMB Select Criterion (S/N)**(a) Use**

- To set the SYMB Select Criterion (S/N).
- S/N is measured by sending and receiving line conditioning signal (L1/L2) in the Phase 2. Its result determines the SYMB speed (modulation speed).

(b) Default setting

- 0 dB

(c) Setting range

- -6 to 6 dB (step: 1 dB)

NOTICE

It becomes easy to select a high SYMB by using "- direction".

(6) V34:2/2 : SYMB Select Criterion (Distortion)**(a) Use**

- To set the SYMB Select Criterion (Distortion).
- S/N is measured by sending and receiving line conditioning signal (L1/L2) in the Phase 2. Its result determines the SYMB speed (modulation speed).

(b) Default setting

- 0 dB

(c) Setting range

- -6 to 6 dB (step: 1 dB)

NOTICE

It becomes easy to select a high SYMB by using "+ direction".

(7) V34:2/2 : Main CH Speed Selection Standard**(a) Use**

- The bit speeds of V.34 are determined by the Phase 3 (training).
- This functional parameter sets thresholds for the bit speed determination.

(b) Default setting

- 0 dB

(c) Setting range

- -8 to 7 dB (step: 1 dB)

NOTICE

It becomes easy to select a high speed by using "- direction".

(8) V17 Send Max Speed: TX Max. Speed**(a) Use**

- To set the max. speed for transmission.

(b) Default setting

- V17-14400bps

(c) Setting item

- "V17-14400bps"
- V17-12000bps
- V17-9600bps
- V17-7200bps
- V29-9600bps
- V29-7200bps
- V27-4800bps
- V27-2400bps

(9) V17 Send Max Speed: RX Max. Speed**(a) Use**

- To set the max. speed for reception.

(b) Default setting

- V17-14400bps

(c) Setting item

- "V17-14400bps"
- V29-9600bps
- V27-4800bps

(10) TxATT: PIX TxATT**(a) Use**

- To set the output level of PIX TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(11) TxATT: TONE/Procedure Signal TxATT**(a) Use**

- To set the output level of TONE/Procedure Signal TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(12) TxATT: CED/ANSam TxATT**(a) Use**

- To set the output level of CED/ANSam TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(13) TxATT: DTMF TxATT**(a) Use**

- To set the output level of DTMF TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(14) Level: CD/SED ON Level**(a) Use**

- To set reception signal sensitivity level.
- SED is not used.

(b) Default setting

- -48 dBm

(c) Setting range

- “-48” to -33 dBm (step: 5 dBm)

(15) Level: DTMF H-L Level Difference**(a) Use**

- To set DTMF H-L level difference.

(b) Default setting

- 2.0 dB

(c) Setting range

- 1.0 to 4.0 dB (step: 0.5 dB)

(16) Cable EQL: TX**(a) Use**

- Frequency response of the cable attenuation equalizer.
Frequency response of the cable amplitude equalizer

**(b) Default setting**

- 0 dB

(c) Setting range

- “0” to 12 dB (step: 4 dB)

(17) Cable EQL: RX**(a) Use**

- Frequency response of the cable attenuation equalizer.
Frequency response of the cable amplitude equalizer

(b) Default setting

- 0 dB

(c) Setting range

- "0" to 12 dB (step: 4 dB)

11.21.2 Network**(1) Network Setting 1: Receive Signal Detection Mode****(a) Use**

- To set whether to detect the receive signal by the number of times or by time.
- Sets to "Time" when ringer can not be detected by the number.

(b) Default setting

- No. of Times

(c) Setting item

- "No. of Times"
- Time

(2) Network Setting 1: BUSY TONE Detection**(a) Use**

- To set whether to use the Busy Tone detection or not.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(3) Network Setting 1: No. of Times of Busy Tone Detection**(a) Use**

- To set the number of times of Busy Tone detection.

**(b) Default setting**

- 0

(c) Setting range

- "0" to 15 count (step: 1 count)

(4) Network Setting 2: 1300 Hz Detection**(a) Use**

- To set whether to use the 1300 Hz detection or not.
- Set this function to "ON" if the facsimile network (F-net) is to be used.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(5) Network Setting 2: Dial Tone Detection**(a) Use**

- To set whether to use the Dial Tone detection or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(6) Network Setting 2: DC-LOOP Check**(a) Use**

- Checks the DC loop current before dialing.
- When the current is zero, an error occurs. (T.80)
- You can change the setting to be compliant to standards in other countries. In Japan, set this parameter to OFF.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(7) Network Setting 2: min. RING OFF Time**(a) Use**

- Minimum time to recognize ringer interval.

For country spec.

a	To avoid judging "a" as a ring-off time.	b	Ring-off time
---	--	---	---------------

(b) Default setting

- 0 ms

(c) Setting range

- "0" to 1000 ms (step: 100 ms)

(8) Network Setting 2: Response Waiting Time**(a) Use**

- To set the response waiting time.

(b) Default setting

- 55 s

(c) Setting range

- 35 to 115 sec (step: 5 s)

(9) Network Setting 2: Pause Time**(a) Use**

- The pause time for one pause key (pause between digits)

(b) Default setting

- 1 s

(c) Setting range

- "1" to 7 sec (step: 1 s)

11.21.3 System**(1) Display Setting: Closed area Rx****(a) Use**

- To set whether or not to use the menu display for closed reception by using F-code for junk fax messages.

(b) Default setting

- ON

(c) Setting item

- "ON"

- OFF

(2) Display Setting: Re-Transmission

(a) Use

- To set whether to use the re-transmission function or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

NOTE

- It will be set "OFF" when the following setting shows that **key counter** or **vendor 2** is mounted.
[Service Mode] -> [Billing Setting] -> [Management Function Choice]

(3) Display Setting: Compulsory Memory RX

(a) Use

- To set whether to use the compulsory memory reception function or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

NOTE

- When turned "ON", the function permits selection of ON or OFF setting for the compulsory memory reception function that allows a document when received not to be printed automatically and, instead, to be printed through manual operation.

(4) Display Setting: Reject Calls

(a) Use

- To set whether to use the reject calls function or not.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

NOTE

- Menu display for the Reject Calls function. When turned "ON", the function displays the function that allows the user to set a remote machine to be rejected as a reject call number.

(5) Display Setting: Relay

(a) Use

- To set whether to use the relay function or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(6) Scan Setting: Frame Erasure HP

(a) Use

- To set the frame erasure size during reading.
- The four edges of the original are erased by the same width.

- Erases the outer lines to prevent black lines from appearing. Effective in the book transmission.

(b) Default setting

- 10 mm

(c) Setting item

- 5 mm
- "10 mm"
- 15 mm

(7) System Function: Fax Board Watchdog

(a) Use

- To set whether to enable watchdog by the fax board CPU or not.

ON	Reset when hung up.
OFF	Keeps being hung up.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(8) System Function: Fax BOOT Rewrite on ISW

(a) Use

- Required when a BOOT BLOCK program is upgraded or a hardware is changed.

Flash memory

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(9) System Function: Error Code Display Time

(a) Use

- To set the communication error code display time.

(b) Default setting

- 20 s

(c) Setting item

- 10 to 250 s (step: 10 s)
- HOLD

(10) Communication Setting: Auto Rotation Send (LT)

(a) Use

- To set whether to rotate the Letter size original automatically or not for transmission.

ON	Transmits in the A4 width.
OFF	Transmits in the A3 width.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(11) Communication Setting: Auto Rotation Send (A4T)**(a) Use**

- To set whether to rotate the A4 size original automatically or not for transmission.

ON	Transmits in the A4 width.
OFF	Transmits in the A3 width.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(12) Communication Setting: Error Page Resending**(a) Use**

- To set whether to retransmit, after a communication error occurs, the document starting with the error page or all pages.

Error Page	Retransmit the document starting with the error page
All Page	Retransmit the document all pages

(b) Default setting

- Error Page

(c) Setting item

- "Error Page"
- All Page

(13) Communication Setting: Number of Redials (Error Page)**(a) Use**

- To set the number of redials for the error page.
- Counted as a busy redial when the error page redial is busy.

(b) Default setting

- The default setting is different depending on the country.

(c) Setting range

- 0 to 7 (step: 1)

11.21.4 Fax File Format

The following data can be initialized.

- All of the scan/fax documents stored in the box are erased.
- All of the boxes produced automatically by the F code are erased.

Supplement: For the formats of the Fax Function Parameter and the Communication Journal, see [I.11.21.8 Initialization](#)

(1) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [FAX].
3. Touch [Fax File Format].
4. Press [START] key.
5. The Fax File Format is executed.

11.21.5 Communication**(1) Protocol: V8 / V34 Protocol****(a) Use**

- To set whether to use the V.8/V.34 protocol or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) Protocol: V17 EP TONE**(a) Use**

- Whether the EP tone (Echo Protect: 2100Hz) is added to the top of the training signal.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) Protocol: V29 EP TONE**(a) Use**

- Whether the EP tone (Echo Protect: 2100Hz) is added to the top of the training signal.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(4) Protocol: V17 Selection Mode "-"**(a) Use**

- V.34 is not used when a dash (-) is added at the top of dial number.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(5) Protocol: ANSam Send Time**(a) Use**

- To set the transmission time for the V.8 protocol signal ANSam.

(b) Default setting

- 4.0 s

(c) Setting range

- 1.0 to 5.5 s (step: 0.5 s)

(6) Int'l Comm. Function: Foreign Communication Function**(a) Use**

- To set whether or not to use the mode that employs the number of DIS waiting times.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(7) Int'l Comm. Function: No. of DIS Waiting Times at Foreign Communication**(a) Use**

- To set the number of DIS waiting times.

(b) Default setting

- 1

(c) Setting item

- "1"
- 2

(8) Int'l Comm. Function: V34 Speed**(a) Use**

- To set the V.34 international communication mode speed.

(b) Default setting

- 28800 bps

(c) Setting range

- 16800 to 33600 bps (step: 2400 bps)

(9) Int'l Comm. Function: V17 Speed**(a) Use**

- To set the V.17 international communication mode speed.

(b) Default setting

- 7200 bps

(c) Setting range

- "7200" to 14400 bps (step: 2400 bps)

(10) Int'l Comm. Function: V29 Speed**(a) Use**

- To set the V.29 international communication mode speed.

(b) Default setting

- 4800 bps

(c) Setting range

- 2400 to 9600 bps (step: 2400 bps)

(11) TIMER 1: T1**(a) Use**

T1 timer (T.30 standard)	Calling	Designate by the response waiting timer
	Called	Starts after DIS is output. The waiting time until DCS is received.
Response waiting timer (55sec)	Calling	Starts after dialing. Until CED is received.

(b) Default setting

- 35 s

(c) Setting range

- 30 to 90 s (step: 5 s)

(12) TIMER 1: DCS-TCF DELAY**(a) Use**

- To set the delay time between DCS and TCF.

(b) Default setting

- 80 ms

(c) Setting range

- 50 to 150 ms (step: 10 ms)

(13) TIMER 1: CED-DIS DELAY**(a) Use**

- To set the delay time between CED and DIS.

(b) Default setting

- 80 ms

(c) Setting range

- 50 to 150 ms (step: 10 ms)

(14) TIMER 1: PIX-PMC DELAY**(a) Use**

- To set the delay time between PIX and PMC.

(b) Default setting

- 80 ms

(c) Setting range

- 50 to 150 ms (step: 10 ms)

(15) TIMER 2: EOL-EOL**(a) Use**

- To set the transmission time between EOLs.

**(b) Default setting**

- 13.0 s

(c) Setting range

- 4.0 to 25.5 s (step: 0.5 s)

(16) TIMER 2: CFR-PIXWAIT**(a) Use**

- Sets the waiting time from CFR is sent to the image signals are received.
- Radio fax on boats occasionally requires more than 6 sec.

(b) Default setting

- 6.0 s

(c) Setting range

- "6.0" to 25.5 s (step: 0.5 s)

(17) TIMER 2: EOM-PIXWAIT**(a) Use**

- Waiting time to receive PIX before sending DIS when EOM is used.
- Some fax machines sends PIX without returning to Phase B in spite of EDM.

(b) Default setting

- 5.5 s

(c) Setting range

- "5.5" to 25.5 s (step: 0.5 s)

(18) TIMER 2: JM WAIT**(a) Use**

- Time to continue outputting CM until receiving JM.

(b) Default setting

- 9.0 s

(c) Setting range

- 6.0 to 25.5 s (step: 0.5 s)

(19) Others: ECM Function**(a) Use**

- Set whether or not to cancel reception ECM (error correction mode).

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(20) Others: Frame Size at ECM TX**(a) Use**

- To set the frame size at ECM transmission.

(b) Default setting

- 256

(c) Setting item

- 64
- "256"

(21) Others: Coding Ability**(a) Use**

- To set the coding ability.
- Effective to both sending and reception.

(b) Default setting

- MH/MR/MMR/JBIG

(c) Setting item

- MH
- MH/MR
- MH/MR/MMR
- "MH/MR/MMR/JBIG"

11.21.6 List Output**(1) Report Addition Information****(a) Use**

- To set whether or not to add the diagnosis code or dial number to the communication journal.

Diagnosis Code	The diagnosis code is printed on the communication journal.
Dial Number	The dial number is printed on the communication journal.

(b) Default setting

- OFF

(c) Setting item

- Diagnosis Code
- Dial Number
- "OFF"

(2) TX Result Report**(a) Use**

- To set whether or not to add image to the transmission result report.
- Even if set to "With image" images are not attached at the time of the quick memory transmission and the manual transmission.

(b) Default setting

- With image

(c) Setting item

- "With image"
- Without image

(3) Protocol Trace Auto Output**(a) Use**

- To set the timing for the protocol trace auto output.

(b) Default setting

- OFF

(c) Setting item

- Always
- Error
- "OFF"

11.21.7 Function Parameter**(1) Use**

- Function parameters can be set through addressing.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [FAX].
3. Touch [Function Parameter].
4. Select the address and then, enter the address using [A] to [F] or keypad.
* A Cursor is movable if ◀ or ▶ is pushed.
5. Next, select the data and enter a value using binary numbers with keypad.
6. When the address and the value are correct, touch [Apply].
7. After the settings have been completed, touch [END].

(3) Address parameter list**NOTE**

- When changing a value in this address parameter list, be sure to comply with the phone line standards of other countries.
- Depending on values that have been changed, compliance with the phone line standards of other countries may not be obtained.
 - [FAX setting \(Address parameter list: for main line and sub line\)](#)
 - [FAX setting \(Address parameter list: for main line\)](#)
 - [FAX setting \(Address parameter list: for sub line\)](#)

11.21.8 Initialization**(1) Use**

- The following data can be initialized. Select data you want to initialize and touch the [Yes].

Fax Function Parameter	The function set condition is initialized into the Factory Default condition.
Communication Journal Data	All of the Communication Journal is erased.

NOTICE

- For the formats of the Abbreviated Registration Data, the Program Registration Data, The Group Registration Data, and the F-code Box Data, see [11.21.4 Fax File Format](#).

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [FAX].
3. Touch [Initialization].
4. Select data you want to initialize.
Supplement: Two or more selections are possible for data.
5. Touch [Yes].
6. When a verification message is displayed, touch [Yes].
7. The data selected is initialized.

11.22 FAX setting (Line2)

- It will be displayed only when two optional fax kit FK-511 are mounted.

11.22.1 Modem/NCU

(1) V34:1/2 : RX Max. Bit Speed

(a) Use

- To set the max. bit speed for reception in V.34.

(b) Default setting

- 33600 bps

(c) Setting range

- 2400 to "33600 bps" (step: 2400 bps)

(2) V34:1/2 : TX Max. Bit Speed

(a) Use

- To set the max. bit speed for transmission in V.34.

(b) Default setting

- 33600 bps

(c) Setting range

- 2400 to "33600 bps" (step: 2400 bps)

(3) V34:1/2 : Control CH Speed

(a) Use

- A bit speed of the control channel.
- The negotiation of 2400/1200 is performed in the V.34 start-up procedure.

(b) Default setting

- 1200 bps

(c) Setting item

- "1200 bps"
- 2400 bps

(4) V34:1/2 : Max. SYMB Speed

(a) Use

- Maximum modulation speed (baud rate) of V.34
 - 3429 SYMB: 3429 33.6 k to 4.8 k
 - 3200 SYMB: 3200 31.2 k to 2.4 k
 - 3000 SYMB: 3000 28.8 k to 2.4 k
 - 2800 SYMB: 2800
 - 2400 SYMB: 2400
- The modulation speed of both sending and receiving change by change of setting.
- The upper limit value of V.34 maximum bit speed is determined.

- Normally you do not need to change the value. In case that a V.34 error frequently occurs, you can attempt to set up 3000 SYMB and decrease the symbol rate, for instance.

(b) Default setting

- 3429 SYMB

(c) Setting item

- 2400 SYMB
- 2800 SYMB
- 3000 SYMB
- 3200 SYMB
- "3429 SYMB"

(5) V34:2/2 : SYMB Select Criterion (S/N)

(a) Use

- To set the SYMB Select Criterion (S/N).
- S/N is measured by sending and receiving line conditioning signal (L1/L2) in the Phase 2. Its result determines the SYMB speed (modulation speed).

(b) Default setting

- 0 dB

(c) Setting range

- -6 to 6 dB (step: 1 dB)

NOTICE

It becomes easy to select a high SYMB by using "-" direction".

(6) V34:2/2 : SYMB Select Criterion (Distortion)

(a) Use

- To set the SYMB Select Criterion (Distortion).
- S/N is measured by sending and receiving line conditioning signal (L1/L2) in the Phase 2. Its result determines the SYMB speed (modulation speed).

(b) Default setting

- 0 dB

(c) Setting range

- -6 to 6 dB (step: 1 dB)

NOTICE

It becomes easy to select a high SYMB by using "+" direction".

(7) V34:2/2 : Main CH Speed Selection Standard

(a) Use

- The bit speeds of V.34 are determined by the Phase 3 (training).
- This functional parameter sets thresholds for the bit speed determination.

(b) Default setting

- 0 dB

(c) Setting range

- -8 to 7 dB (step: 1 dB)

NOTICE

It becomes easy to select a high speed by using "-" direction".

(8) V17 Send Max Speed: TX Max. Speed

(a) Use

- To set the max. speed for transmission.

(b) Default setting

- V17-14400bps

(c) Setting item

- "V17-14400bps"
- V17-12000bps
- V17-9600bps
- V17-7200bps
- V29-9600bps
- V29-7200bps

- V27-4800bps
- V27-2400bps

(9) V17 Send Max Speed: RX Max. Speed**(a) Use**

- To set the max. speed for reception.

(b) Default setting

- V17-14400bps

(c) Setting item

- "V17-14400bps"
- V29-9600bps
- V27-4800bps

(10) TxATT: PIX TxATT**(a) Use**

- To set the output level of PIX TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(11) TxATT: TONE/Procedure Signal TxATT**(a) Use**

- To set the output level of TONE/Procedure Signal TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(12) TxATT: CED/ANSam TxATT**(a) Use**

- To set the output level of CED/ANSam TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(13) TxATT: DTMF TxATT**(a) Use**

- To set the output level of DTMF TxATT.
- Directly sets modem. There are no external attenuator.

(b) Procedure

- The setting value are different depending on the country.

(14) Level: CD/SED ON Level**(a) Use**

- To set reception signal sensitivity level.
- SED is not used.

(b) Default setting

- -48 dBm

(c) Setting range

- "-48" to -33 dBm (step: 5 dBm)

(15) Level: DTMF H-L Level Difference**(a) Use**

- To set DTMF H-L level difference.

(b) Default setting

- 2.0 dB

(c) Setting range

- 1.0 to 4.0 dB (step: 0.5 dB)

(16) Cable EQL: TX**(a) Use**

- Frequency response of the cable attenuation equalizer.
Frequency response of the cable amplitude equalizer

**(b) Default setting**

- 0 dB

(c) Setting range

- "0" to 12 dB (step: 4 dB)

(17) Cable EQL: RX**(a) Use**

- Frequency response of the cable attenuation equalizer.
Frequency response of the cable amplitude equalizer

**(b) Default setting**

- 0 dB

(c) Setting range

- "0" to 12 dB (step: 4 dB)

11.22.2 Network**(1) Network Setting 1: Receive Signal Detection Mode****(a) Use**

- To set whether to detect the receive signal by the number of times or by time.
- Sets to "Time" when ringer can not be detected by the number.

(b) Default setting

- No. of Times

(c) Setting item

- "No. of Times"
- Time

(2) Network Setting 1: BUSY TONE Detection**(a) Use**

- To set whether to use the Busy Tone detection or not.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(3) Network Setting 1: No. of Times of Busy Tone Detection**(a) Use**

- To set the number of times of Busy Tone detection.

**(b) Default setting**

- 0

(c) Setting range

- "0" to 15 count (step: 1 count)

(4) Network Setting 2: 1300 Hz Detection**(a) Use**

- To set whether to use the 1300 Hz detection or not.
- Set this function to "ON" if the facsimile network (F-net) is to be used.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(5) Network Setting 2: Dial Tone Detection**(a) Use**

- To set whether to use the Dial Tone detection or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(6) Network Setting 2: DC-LOOP Check**(a) Use**

- Checks the DC loop current before dialing.
- When the current is zero, an error occurs. (T.80)
- You can change the setting to be compliant to standards in other countries. In Japan, set this parameter to OFF.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(7) Network Setting 2: min. RING OFF Time**(a) Use**

- Minimum time to recognize ringer interval.

For country spec.

a	To avoid judging "a" as a ring-off time.	b	Ring-off time
---	--	---	---------------

(b) Default setting

- 0 ms

(c) Setting range

- "0" to 1000 ms (step: 100 ms)

(8) Network Setting 2: Response Waiting Time**(a) Use**

- To set the response waiting time.

(b) Default setting

- 55 s

(c) Setting range

- 35 to 115 sec (step: 5 s)

(9) Network Setting 2: Pause Time**(a) Use**

- The pause time for one pause key (pause between digits)

(b) Default setting

- 1 s

(c) Setting range

- "1" to 7 sec (step: 1 s)

11.22.3 Communication**(1) Protocol: V8 / V34 Protocol****(a) Use**

- To set whether to use the V.8/V.34 protocol or not.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) Int'l Comm. Function: Foreign Communication Function**(a) Use**

- To set whether or not to use the mode that employs the number of DIS waiting times.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(3) Int'l Comm. Function: No. of DIS Waiting Times at Foreign Communication**(a) Use**

- To set the number of DIS waiting times.

(b) Default setting

- 1

(c) Setting item

- "1"
- 2

(4) Int'l Comm. Function: V34 Speed**(a) Use**

- To set the V.34 international communication mode speed.

(b) Default setting

- 28800 bps

(c) Setting range

- 16800 to 33600 bps (step: 2400 bps)

(5) Int'l Comm. Function: V17 Speed**(a) Use**

- To set the V.17 international communication mode speed.

(b) Default setting

- 7200 bps

(c) Setting range

- "7200" to 14400 bps (step: 2400 bps)

(6) Int'l Comm. Function: V29 Speed**(a) Use**

- To set the V.29 international communication mode speed.

(b) Default setting

- 4800 bps

(c) Setting range

- 2400 to 9600 bps (step: 2400 bps)

(7) Others: ECM Function**(a) Use**

- Set whether or not to cancel reception ECM (error correction mode).

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(8) Others: Frame Size at ECM TX**(a) Use**

- To set the frame size at ECM transmission.

(b) Default setting

- 256

(c) Setting item

- 64
- "256"

(9) Others: Coding Ability**(a) Use**

- To set the coding ability.
- Effective to both sending and reception.

(b) Default setting

- MH/MR/MMR/JBIG

(c) Setting item

- MH
- MH/MR
- MH/MR/MMR
- "MH/MR/MMR/JBIG"

11.22.4 Initialization**(1) Use**

- The following data can be initialized. Select data you want to initialize and touch the [Yes].

Fax Function Parameter	The function set condition is initialized into the Factory Default condition.
------------------------	---

NOTICE

- For the formats of the Abbreviated Registration Data, the Program Registration Data, The Group Registration Data, and the F-code Box Data, see [11.21.4 Fax File Format](#).

(2) Procedure

1. [Call the Service Mode to the screen](#).
2. Touch [FAX].
3. Touch [Initialization].
4. Select data you want to initialize.
Supplement: Two or more selections are possible for data.
5. Touch [Yes].
6. When a verification message is displayed, touch [Yes].
7. The data selected is initialized.

11.23 FAX setting (Address parameter list: for main line and sub line)**11.23.1 0b000***

11.26 Finisher

11.26.1 FS-FN adjustment - Center Staple Position

(1) Use

- Adjust the stapling position for each paper size when printing with the center staple function.

(2) Setting range

- Width A should fall within the following range.

Specifications	0 ± 1.0 mm
Setting range	-10.0 mm to +10.0 mm (1 step: 0.1 mm)

(3) Procedure

NOTE

- After [Half-Fold Position] adjustment, make this [Center Staple Position] adjustment.
- Place five sheets of originals on the DF.
 - Make a set of copy in the saddle stitching mode.
 - Check the amount of horizontal deviation (width A) between the staple and the half fold positions on the set of copy.
 - If width A is out of the specified range, make the following adjustment.
 - Call the Service Mode to the screen.
 - Touch [Finisher] -> [FS-FN adjustment] -> [Center Staple Position].
 - Touch the paper size where staple position is adjusted.
 - Look at the copy and adjust the staple position with the [+] / [-] key.

NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

- 9. Touch [OK].
- 10. Touch [Exit] on the Service Mode screen.
- 11. Make another set of copy sample and check the amount of width A.
- 12. Following the same procedure, adjust for each paper size.

11.26.2 FS-FN adjustment - Half-Fold Position

(1) Use

- Use this adjustment to adjust the half-fold position in half-fold printing.

(2) Setting range

- Width A should fall within the following range.

Specifications	0 ± 1.0 mm
Setting range	-10.0 mm to +10.0 mm (1 step: 0.1 mm)

(3) Procedure

- 1. Place two sheets of originals on the DF.
- 2. Make a copy in the folding mode.
- 3. Fold the copies along the crease.
- 4. Measure the amount of width A.
- 5. If width A is out of the specified range, make the following adjustment.
- 6. [Call the Service Mode to the screen.](#)
- 7. Touch [Finisher] -> [FS-FN adjustment] -> [Half-Fold Position].
- 8. Touch the paper size where half-fold position is adjusted.
- 9. Look at the copy and adjust the half-fold position with the [+]/[-] key.

NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

- 10. Touch [OK].
- 11. Touch [Exit] on the Service Mode screen.
- 12. Make another set of copy sample and check the amount of width A.
- 13. Following the same procedure, adjust for each paper size.

11.26.3 FS-FN adjustment - Punch Centering Fine Adj

(1) Use

- Adjusts the vertical position of the punch holes.

(2) Setting range

- Length A should fall within the following range.

Specifications	2-4 hole	80 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.) $1/2$ of the vertical length $A \pm 1.0$ mm
	2-3 hole (2 hole)	70 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.) $1/2$ of the vertical length $A \pm 1.0$ mm
	2-3 hole (3 hole)	108 ± 0.5 mm (It is not possible to adjust the A value of the distance between holes.) $1/2$ of the vertical length $A \pm 1.0$ mm
	SWE4 hole	$A1=70 \pm 0.5$ mm (It is not possible to adjust the A value of the distance between holes.) $1/2$ of the vertical length $A \pm 1.0$ mm $A2=21 \pm 0.5$ mm (It is not possible to adjust the A value of the distance between holes.) $1/2$ of the vertical length $A \pm 1.0$ mm
Setting range	-5.0 mm to +5.0 mm (1 step: 0.1 mm)	

(3) Procedure

- Make a copy sample in the punch mode.
- Make an adjustment so that $1/2$ of the length A is within the following standard range.
- Call the Service Mode to the screen.
- Touch [Finisher] -> [FS-FN adjustment] -> [Punch Centering Fine Adj].
- Touch the paper size where punch centering is adjusted.
- Look at the copy and adjust the punch centering with the [+] / [-] key.
 - To move the hole position upward: Enter the value of [+]
 - To move the hole position downward: Enter the value of [-]

**NOTE**

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

- Touch [OK].
- Touch [Exit] on the Service Mode screen.
- Make another set of copy sample and check the amount of length A.

11.26.4 FS-FN adjustment - Punch Edge Adj**(1) Use**

- To change the horizontal position of the punch holes.

(2) Setting range

- Width B should fall within the following range.

Specification	<For PK-521>	9.5 mm $\pm$ 1.0 mm (2-3 hole), 11.0 mm $\pm$ 1.0 mm (2-4 hole), 10.5 mm $\pm$ 1.0 mm (SWE4 hole)
	<For PK-520>	9.5 mm $\pm$ 1.0 mm (2-3 hole), 11.0 mm $\pm$ 1.0 mm (2-4 hole), 10.5 mm $\pm$ 1.0 mm (SWE4 hole)
Setting range	<For PK-521>	-5.0 mm to +5.0 mm (1 step: 0.1 mm)
	<For PK-520>	-5.0 mm to +5.0 mm (1 step: 0.1 mm)

(3) Procedure (For PK-521)

- Make a copy sample in the punch mode.
- Make an adjustment so that the width B is within the following range.

3. [Call the Service Mode to the screen.](#)
4. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Edge Adj].
5. To adjust the punch edge of paper conveyed from MFP, select [Main body]. To adjust the punch edge of paper conveyed from the post inserter, select [PI].
6. Look at the copy and adjust the punch horizontal position with the [+] / [-] key.
 - To make width B greater: Enter the value of [+]
 - To make width a smaller: Enter the value of [-]

**NOTE**

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

7. Touch [OK].
8. Touch [Exit] on the Service Mode screen.
9. Make another set of copy sample and check the amount of width B.

(4) Procedure (For PK-520)

1. Make a copy sample in the punch mode.
2. Make an adjustment so that the width B is within the following range.
3. [Call the Service Mode to the screen.](#)
4. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Edge Adj].
5. Touch the paper type where punch horizontal position is adjusted.
6. Look at the copy and adjust the punch horizontal position with the [+] / [-] key.
 - To make width B greater: Enter the value of [+]
 - To make width a smaller: Enter the value of [-]

**NOTE**

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

7. Touch [OK].
8. Touch [Exit] on the Service Mode screen.
9. Make another set of copy sample and check the amount of width B.

11.26.5 FS-FN adjustment - Punch F. Sensor Intensity Adj.**(1) Use**

- Adjusts the sensitivity (light intensity) of the PK punch front sensor of the punch kit.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch F. Sensor Intensity Adj.].
3. Touch Start key.
4. Confirm that the result is OK.

NOTE

- When NG appears, check whether the punch kit is properly installed.

5. Touch [OK].
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

11.26.6 FS-FN adjustment - Punch vertical position (Z-fold)**(1) Use**

- To adjust the position of the punch hole in the sub-scanning direction when ZU is in use.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

- Width A should fall within the following range.

Specifications	2-4 hole	80 ± 0.5, Top and bottom A dimension 1/2 ± 1
	2-3 hole (2 hole)	70 ± 0.5, Top and bottom A dimension 1/2 ± 1
	2-3 hole (3 hole)	108 ± 0.5, Top and bottom A dimension 1/2 ± 1
Setting range	-5.0 to +5.0 mm (1step: 0.1 mm)	

NOTE

- It is possible to adjust the A dimension of half of the top and bottom by ± 0.5 mm from the standard value.
- It is not possible to adjust the A value of the distance between holes.

(3) Procedure

- Make a copy sample in the punch mode (when PK-521 is mounted, select Z-fold + punch mode).
- Make an adjustment so that the width A is within the following range.
- [Call the Service Mode to the screen.](#)
- Touch [Finisher] -> [FS-FN adjustment] -> [Punch vertical position (Z-fold)].
- Select [ALL] and make the setting using [+] or [-].
 - To make width A greater: Enter the value of [+]
 - To make width A smaller: Enter the value of [-]

NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

- Touch [OK] twice.
- Touch [Exit] on the Service Mode screen.
- Make copies in the punch mode again and check that the punch hole positions have been adjusted properly.

11.26.7 FS-FN adjustment - Punch horizontal position (Z-fold)

(1) Use

- To adjust the position of the punch hole in the main scanning direction when ZU is in use.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

- Width B should fall within the following range.

Specifications	B = 12.0 mm
Setting range	-5.0 mm to +5.0 mm (Step = 0.1 mm)

(3) Procedure

- Make a copy sample in the punch mode.
- Make an adjustment so that the width B is within the following range.
- [Call the Service Mode to the screen.](#)
- Touch [Finisher] -> [FS-FN adjustment] -> [Punch horizontal position (Z-fold)].
- Make the setting using [+] or [-].
 - To make width B greater: Enter the value of [+]
 - To make width B smaller: Enter the value of [-]
- Touch [OK] twice.
- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
- Make copies in the punch mode again and check that the punch hole positions have been adjusted properly.

11.26.8 FS-FN adjustment - Punch resist adj. (Z-fold)

(1) Use

- Adjust the size of the punch resist loop that is applied when ZU operates.
- Make the adjustment upon setup of ZU-606.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch regist adj. (Z-fold)].
3. Set the correction value using the [+] / [-] keys.
 - Misaligned punched holes: Enter the value of [+]
 - Wrinkled paper: Enter the value of [-]
4. Touch [OK] twice.
5. Touch [Exit] on the Service Mode screen.
6. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.
7. Make copies in the punch mode again and check that the punch hole positions have been adjusted properly.

(3) Setting range

- -16.0 mm to +16.0 mm (Step = 0.8 mm)

11.26.9 FS-FN adjustment - Punch Registration Loop Adj**(1) Use**

- To correct the tilt of paper (change the loop amount) before punching operation. (paper conveyed from MFP).
- To address problems such as misaligned punch holes, wrinkled paper, and jam at the punch registration section.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Registration Loop Adj].
3. Touch the paper type where punch regist loop size is adjusted.
4. Set the correction value using the [+] / [-] keys.
 - Misaligned punched holes: Enter the value of [+]
 - Wrinkled paper: Enter the value of [-]
5. Touch [OK] twice.
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(3) Setting range

- -5.0 mm to +5.0 mm (Step = 0.1 mm)

11.26.10 FS-FN adjustment - Punch Resist Loop Size (PI)**(1) Use**

- To correct the tilt of paper (change the loop amount) before punching operation. (paper conveyed from post inserter).
- To address problems such as misaligned punch holes, wrinkled paper, and jam at the punch registration section.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Resist Loop Size (PI)].
3. Touch [Upper] or [Lower].
4. Select a type of paper where adjustment is made.
5. Set the correction value using the [+] / [-] keys.
 - Misaligned punched holes: Enter the value of [+]
 - Wrinkled paper: Enter the value of [-]
6. Touch [OK] twice.
7. Touch [Exit] on the Service Mode screen.
8. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

(3) Setting range

- -5.0 mm to +5.0 mm (Step = 0.1 mm)

11.26.11 FS-FN adjustment - 1st Z-Fold Position/2nd Z-Fold Position**(1) Use**

- To adjust the positions of the 1st Z-fold and 2nd Z-fold for the Z-fold mode.
- Make the adjustment upon setup of ZU-606.

(2) Setting range

[1]	Length of the first fold	[2]	Position of the first fold
[3]	Length of the second fold	[4]	Position of the second fold

- Width a should fall within the following range.

Specifications	11 x 17	Length of 1st fold: 108 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 215 mm
	A3	Length of 1st fold: 105 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 209 mm
	B4	Length of 1st fold: 91 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 181 mm
	8.5 x 14	Length L: Less than 241.7 mm
	8K	Length of 1st fold: 98 mm, Length a: 4.0 ± 2.0 mm, Length L: Less than 194 mm
Setting range	-12.8 mm to +12.7 mm (Step = 0.1 mm)	

NOTE

- Length of the 1st fold is for standard value.
- The adjustable range for B4 size is only between -2.0 mm and +2.0 mm.
- 8.5 x 14 is available for only an half fold.

(3) Procedure

- Make copies in the Z-fold mode.
- Make an adjustment so that the width a is within the following range.
- [Call the Service Mode to the screen.](#)
- Touch [Finisher] -> [FS-FN adjustment] -> [1st Z-Fold Position] or [2nd Z-Fold Position].
- Select [ALL] and make the setting using [+] or [-].
 - To increase the length of the 1st fold (2nd fold), enter a negative value with [-] key.
 - To decrease the length of the 1st fold (2nd fold), enter a positive value with [+] key.

NOTE

- The adjustment setting value used for each paper size is the value set with [ALL] plus the value set for each paper size.

- Touch [OK] twice.
- Touch [Exit] on the Service Mode screen.
- Make copies in the Z-fold mode and check for possible deviation from the specified 1st and 2nd Z-fold positions.

11.26.12 FS-FN adjustment - 1st Tri-Fold Adjustment/2nd Tri-Fold Adjustment

(1) Use

- To adjust the positions of the 1st Tri-fold and 2nd Tri-fold for the Tri-fold printing.
- Make the adjustment upon setup of SD.

(2) Setting range

[1]	Position of the first tri-fold	[2]	Position of the second tri-fold
-----	--------------------------------	-----	---------------------------------

- Check whether the tri-fold widths "a" and "b" of the ejected paper are within the specified range.

Specifications	a	96 mm $\pm$ 1 mm (A4S), 90.4 mm $\pm$ 1 mm (8.5 x 11S), 89 mm $\pm$ 1 mm (16KS)
	b	101 mm $\pm$ 2 mm (A4S), 95.4 mm $\pm$ 2 mm (8.5 x 11S), 94 mm $\pm$ 2 mm (16KS)
	c	Not specified

Setting range	-10.0 mm to +10.0 mm (Step = 0.1 mm)
---------------	--------------------------------------

(3) Procedure

- If the width "a" is out of the specified range:
 1. Make copies in the tri-fold mode.
 2. Check whether the tri-fold widths "a" and "b" of ejected copy samples are within the specified range.
 3. [Call the Service Mode to the screen.](#)
 4. Touch [Finisher] -> [FS-FN adjustment] -> [1st Tri-Fold Adjustment].
 5. Select a paper size where the tri-fold position needs adjustment.
 6. While checking the copy samples, touch [+] or [-] to adjust the tri-fold position.
 - To increase the width a, enter a positive value with [+].
 - To decrease the width a, enter a negative value with [-].
 7. Touch [OK] twice.
 8. Touch [Exit] on the Service Mode screen.
 9. Make copies in the tri-fold mode and check for possible deviation from the specified position.
- If width "b" is out of the specified range:
 1. Make copies in the tri-fold mode.
 2. Check whether the tri-fold widths "a" and "b" of ejected copy samples are within the specified range.
 3. [Call the Service Mode to the screen.](#)
 4. Touch [Finisher] -> [FS-FN adjustment] -> [2nd Tri-Fold Adjustment].
 5. Select a paper size where the tri-fold position needs adjustment.
 6. While checking the copy samples, touch [+] or [-] to adjust the tri-fold position.
 - To increase the width b, enter a positive value with [+].
 - To decrease the width b, enter a negative value with [-].
 7. Touch [OK] twice.
 8. Touch [Exit] on the Service Mode screen.
 9. Make copies in the tri-fold mode and check for possible deviation from the specified position.

11.26.13 FS-FN adjustment - Punch Regist Loop Size

(1) Use

- To adjust the amount of the punch registration loop applied to paper conveyed from MFP.
- Used when tilted punched hole position, wrinkled paper, or jam at punch registration section occurs.

(2) Setting range

- -4.0 to +4.0

(3) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch Regist Loop Size].
3. Select a paper type where the punch hole position needs adjustment.
4. Enter an adjustment value using [+] or [-].
 - If the punch hole position is tilted, enter a positive (+) value.
 - If wrinkled paper or other problems occur, enter a negative (-) value.
5. Touch [OK].
6. Touch [Exit] on the Service Mode screen.

11.26.14 FS-FN adjustment - PI Size Detection

(1) Use

- To specify paper sizes that the post inserter detects.
- To set a paper size with which size detection is made when a paper having a similar size is placed on the feeder.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [PI Size Detection].
3. Touch [Mode 1].
4. Select a desired paper size with which size detection is made.
5. Make the same setting in [Mode 2] to [Mode 6].
6. Touch [OK] twice.
7. Touch [Exit] on the Service Mode screen.

11.26.15 FS-FN adjustment - Post Inserter Adjustment

(1) Use

- To make automatic post inserter size detection adjustments separately in each of the upper and lower trays.
- Make this adjustment at the time of setup or when the post inserter cannot make proper size detection.
- Make this adjustment after performing PI displacement adjustment.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Post Inserter Adjustment].
3. Touch [Upper Tray].
4. Place A4S paper on the upper tray and touch [A4 

5. Touch Start key.
6. Confirm that the result is OK.
7. Touch [Lower Tray].
8. Place A4S paper on the lower tray and touch [A4 .
9. Touch Start key.
10. Confirm that the result is OK.
11. Touch [OK] twice.
12. Touch [Exit] on the Service Mode screen.

11.26.16 FS-FN adjustment - Finisher Components Test Mode

(1) Use

- Use this adjustment to check finisher's operation.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Finisher Components Test Mode].
3. Select a mode.
4. Press the Start key to start finisher operation.
5. Press the Stop key to stop ongoing finisher operation.

(3) Finisher components list (FS-535/SD-512/PK-521/PI-505/ZU-606)

	Mode
Finisher Components Test Mode 1	M1 (1st Transport M) Forward Rotation 667 mm/s Linear Speed

11.26.17 FS-FN adjustment - Alignment plate Position

(1) Use

- When FS-533 is installed, use this feature to fine adjust the aligning plate that aligns ejected paper.

(2) Default setting

- 0.0mm

(3) Setting range

- 10.0 mm to +10.0 mm (1 step: 0.1 mm)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Alignment Plate Position].
3. Select the [Alignment Plate Position (Back)] or [Alignment Plate Position (Side)].
4. Set and adjust a value with the [+] / [-] key.
5. Touch [OK].
6. Touch [Exit] on the Service Mode screen.
7. Turn OFF the main power switch, wait for 10 sec., then turn the switch ON.

11.26.18 FS-FN adjustment - Paper Alignment Guides W. Adj.

(1) Use

- To fine adjust the horizontal width of the aligning plate.
- Use this feature to fine adjust the aligning plate that aligns ejected paper.

(2) Default setting

- 0.0 mm

(3) Setting range

- 10.0 mm to +10.0 mm (1 step: 0.1 mm)

(4) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Paper Alignment Guides W. Adj.].
3. Select a mode from the following.
4. Set and adjust a value with the [+] / [-] key.
5. Touch [OK].
6. Touch [Exit] on the Service Mode screen.

11.26.19 FS-FN adjustment - Punch unit edge detection

(1) Use

- To adjust sensitivity (intensity) of the paper size detect board (PSDTB) of the punch unit of ZU.
- Make the adjustment upon setup of ZU.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [FS-FN adjustment] -> [Punch unit edge detection].

3. Press the Start key.
4. Check that [OK] is displayed.

NOTE

- If the [OK] do not appear, check the install condition again.

5. Touch [OK] twice.
6. Touch [Exit] on the Service Mode screen.

11.26.20 Max Staple Limit Setting**(1) Use**

- When FS-535 is installed, specify the maximum number of sheets that can be stapled together.
- To change the maximum that can be stapled together.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [Max Staple Limit Setting].
3. Enter a desirable maximum number with the 10-key pad.
4. Touch [END].
5. Turn OFF the main power switch. Then, wait for 10 sec. or more and turn ON the main power switch.

NOTE

- If mixed originals includes one or more large size ones (A3/11 x 17 or more), the maximum that can be stapled together is subject to the setting of large size staple limit restriction.
- If large size staple limit restriction is set to [-20 pieces] and the maximum number of sheets to be stapled together less 20 is 2 or less, then the restricted number of sheets as the maximum is 2.
- When FS-535 is installed and the staples for 50 sheets are detected, 50 sheets becomes the upper limit even though the setting of the upper limit up to which sheets can be stapled exceeds 50 sheets.

(3) Default setting

- "100 Piece". Large size staple limit restriction: "Do not do."

(4) Setting range

- [2 to 100]. Large size staple limit restriction: [-20 pieces] or [Do not do.]

11.26.21 Punch Option Setting**(1) Use**

- Specifies punch settings depending on the optional punch kit attached to the finisher.
- An individual punch setting needs to be made according to the type of the punch option.
- This setting is necessary when ZU-606 is installed.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [Punch Option Setting].
3. Touch [PK-521] or [PK-520].
4. Touch [2-Holes/3-Holes], [2-Holes/4-Holes], [EU4 holes] or [SWE4 holes].
5. When ZU-606 is installed, touch [ZU-606].
6. Touch [decision].
7. Touch [END].
8. Touch [Exit] on the Service Mode screen.

11.26.22 Max. # of Folded Sheets Setting**(1) Use**

- Imposes restriction on the number of sheets to be folded in each of different folding modes.
- This function is available only when SD-511, SD-512 or ZU-606 is installed.
- To change the maximum number of sheets to be folded in each of different folding modes.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [Max. # of Folded Sheets Setting].
3. Select a folding mode where the maximum is restricted and enter a desirable maximum number with the 10-key pad.
4. Touch [END].
5. Touch [Exit] on the Service Mode screen.

(3) Default setting

- Center Fold: 5 Piece
- Center Staple: 20 Piece
- three fold: 3 Piece
- z fold/staple using together: 10 Piece
- z fold: 50 Piece

(4) Setting range

Center Fold

- 1 to "5 Piece"
- Center Staple
 - 2 to "20 Piece"
- three fold
 - "1" to 3 Piece
- z fold/staple using together
 - 2 to "10 Piece"
- z fold
 - "50 pieces"
 - 40 pieces
 - 30 pieces
 - 20 pieces

11.26.23 Tri-Fold Output Setting

(1) Use

- To set the position where paper is ejected when paper is conveyed to the saddle stitcher in tri-fold mode.

(2) Default setting

- Normal Output

(3) Setting item

- "Normal Output"
- Extend Output

11.26.24 Job Separator

(1) Use

- Checks the job separator's operation.

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Finisher] -> [Job Separator].
3. Select the mode where you wish to check the operation.
4. Press the Start key to start job separator operation.
5. Press the Stop key to stop ongoing job separator operation.

11.27 Internet ISW

- By using this setting, the firmware stored in the server can be downloaded over internet for upgrading.
- For details for upgrading the firmware, refer to ["REWRITING OF FIRMWARE."](#)

11.27.1 Internet ISW Set

(1) Use

- To set whether or not to enable each setting for Internet ISW.
- To use when upgrading the firmware by Internet ISW.
- Each setting such as Server setting will be valid by setting this to "ON".

NOTE

- When the following setting is set to "ON", this setting will automatically be set to "OFF" and cannot be changed.
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#)

(2) Default setting

- OFF

(3) Setting item

- ON
- "OFF"
- When this setting is set to "ON," [Open Mode Settings] can be configured. When [Open Mode Settings] is set to "Set," firmware download and update via Internet ISW are available in Administrator Settings.
[I.7.78.4 Firmware Update Parameters](#)

11.27.2 Internet ISW - HTTP Setting

- It will be displayed only when [Internet ISW Set] is set to "ON".

(1) Data acquisition setting**(a) Use**

- To set whether or not to enable downloading using the HTTP protocol.
- To use when accessing the server using the HTTP protocol.

(b) Default setting

- OFF

(c) Setting item

- ON
- "OFF"

(2) Connection Time-Out**(a) Use**

- To set the time for the timeout for accessing the server.

(b) Default setting

- 60 sec

(c) Setting range

- 30 to 300 sec.

11.27.3 Internet ISW - FTP Setting

- It will be displayed only when [Internet ISW Set] is set to "ON".

(1) Data Input Setting**(a) Use**

- To set whether or not to enable downloading using FTP protocol.
- To use when accessing the server with FTP protocol.

(b) Default setting

- ON

(c) Setting item

- "ON"
- OFF

(2) Connection Setting**(a) Use**

- To set the port No. and the time for timeout when accessing the FTP server, and also to set whether or not to enable PASV mode.
- To use when connecting by the PASV (passive) mode (FTP server side will inform the connection port before connecting).

(b) Procedure

Port Number

- Enter the value between 1 and 65535 using the 10-key pad.

Connection Time Out

- Enter the value between 1 and 60 (min.) using the 10-key pad.

(c) Default setting (PASV Mode)

- OFF

(d) Setting item (PASV Mode)

- ON

- “OFF”

11.27.4 Forwarding Access Setting

(1) User ID

(a) Use

- To register the user ID for accessing the program server where firmware is to be stored.

(b) Procedure

1. Select [User ID].
2. Enter the user ID (up to 64 one-byte characters) on the on-screen keyboard.

(2) Password

(a) Use

- To register the password for accessing the program server where firmware is to be stored.

(b) Procedure

1. Select [Password].
2. Enter the password (up to 64 characters) on the on-screen keyboard.

(3) URL

(a) Use

- To register the address and directory of the program server where the firmware is to be stored in URL.

(b) Procedure

1. Select [URL].
2. Enter the URL (up to 256 one-byte characters) on the on-screen keyboard.

NOTE

- Enter the URL which format suits the protocol to be used.
When connecting to http [http://](#) (Host name or IP address)/ directory name or [https://](#) (Host name or IP address)/directory name.
When connecting to ftp [ftp://](#) (Host name or IP address) / directory name.

(4) FileName

(a) Use

- To register the file name of the firmware data to be downloaded.

(b) Procedure

1. Select [FileName].
2. Enter [the file name](#) (up to 63 one-byte characters) on the on-screen keyboard.

11.27.5 Download

NOTE

- To connect MFP to the Internet via a proxy, the proxy server related settings must be configured in addition to [Forwarding Access Setting].
The setting of the proxy used in the Internet ISW communication is configured in [\[Administrator Settings\] -> \[Network Settings\] -> \[Internet ISW Settings\] -> \[HTTP Server Settings\]](#) or [\[FTP Server Settings\]](#).

(1) Download/Update

(a) Use

- Access the program server according to the Internet ISW setting, and download the firmware.
- To use when updating the firmware via network.
- The firmware is downloaded and updated successively. During the firmware download and update, MFP cannot be used.

(b) Procedure

1. Select [Download/Update].
2. Touch [Start] to start downloading the firmware.
3. The message to show the status will be displayed on the screen while connecting and transferring data.

NOTE

- When it failed to connect to the program server, or failed to download, the error code and the message will be displayed.
Check the cause of the error by the error code, and follow the message for resetting.
Refer to [“K.5.1 Error code list for the Internet ISW”](#) for the error codes.

4. When the firmware is normally upgraded, the main body will automatically be restarted to complete the Internet ISW.

(2) Download

(a) Use

- To access the program server and download the firmware in accordance with the settings configured in Internet ISW Settings.
- As the firmware is downloaded in the background, MFP can be used during download.

- If firmware data already downloaded exists in the HDD, the data is overwritten and replaced by the new data.

(b) Procedure

1. Select [Download].
2. Touch [Start] to start downloading the firmware.
3. The status message appears on the screen during connection and data transfer.
In the middle of downloading, the task can be cancelled by touching [Cancel].

NOTE

- If connection to the program server or data download fails, an error code and a message are displayed. Identify the cause of the problem with the error code and reconfigure the settings following the message.
- For details on error codes, refer to "[K.5.1 Error code list for the Internet ISW.](#)"

4. When the firmware download is successfully completed, the result "OK" appears.

(3) Update**(a) Use**

1. To update the firmware by using the firmware downloaded and saved in the HDD
2. During the firmware download and update, MFP cannot be used.
3. This button is not appeared if there is no firmware in the HDD.

(b) Procedure

1. Touch [Update].
2. Check the firmware file version in HDD.
3. Press Start key to update the firmware.
4. When the firmware is normally upgraded, the main body will automatically be restarted to complete the Internet ISW.

(4) Delete**(a) Use**

- To delete the firmware file saved in the HDD.
- This button is not appeared if there is no firmware in the HDD.

(b) Procedure

- Touch [Delete].
- Press Start key to delete the firmware.

11.27.6 Update Start Time Settings**(1) Use**

- To set the start time in order to automatically update the downloaded firmware.

(2) Procedure

1. Select [Set] for [Update Firmware at Specified Time].
2. Touch [Hour] and [Min.] and set the firmware update start time.

NOTE

- If updated firmware has not been downloaded by the specified time, firmware update is not performed.
- If the main power switch is turned OFF during a firmware update, the firmware is updated next time when the main power switch is turned ON.
- If a job is in process when the specified time comes, the firmware is updated after the completion of the job.

12. ENHANCED SECURITY

12.1 List of Enhanced Security

Enhanced Security	Ref. Page
CE Password	I.12.3.1 CE Password
Administrator Password	I.12.3.2 Administrator Password
Administrator Feature Level	I.12.3.3 Administrator Feature Level
CE Authentication	I.12.3.4 CE Authentication
DC/DevC Lifestop	I.12.3.5 DC/DevC Lifestop
Memory Data Backup	I.12.3.6 Memory Data Backup
Operation Ban release time	I.12.3.7 Operation Ban release time
Administrator unlocking	I.12.3.8 Administrator unlocking
Engine FW DipSW	I.12.3.9 Engine FW DipSW
Engine Data Backup	I.12.3.10 Engine Data Backup

12.2 Starting/Exiting

12.2.1 Starting procedure

1. [Call the Service Mode to the screen.](#)
2. Press the following keys in this order.
 - Stop -> 0 -> Clear
3. Enhanced Security menu will appear.

12.2.2 Exiting procedure

1. Touch [Exit] on the Service Mode screen.
2. Turn OFF the main power switch. Wait 10 seconds, then turn ON the main power switch again.

12.3 Enhanced Security

12.3.1 CE Password

(1) Use

- To set and change the CE password.
- The CE password needs to be 8 to 64 one-byte alphanumeric characters and symbols.

(2) Default setting

- 9272927292729272

(3) Procedure

- Enter the CE password (8 digits) on the on-screen keyboard.
 1. Current Password: Enter the currently using CE password.
 2. New Password: Enter the new CE password.
 3. Re-Input Password: Enter the new CE password again.

NOTE

- When the following setting leads to the Password Rules [ON], the password with the same letters as well as the password which is same as the previous one cannot be changed.
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#)
- NEVER forget the CE password. When forgetting the CE password, call responsible person of KMBT.

12.3.2 Administrator Password

(1) Use

- To set and change the administrator password.
- Use this function when the administrator forget the administrator password because a new password can be set without entering the current administrator password with this.
- The administrator password needs to be 8 to 64 one-byte alphanumeric characters and symbols.

(2) Default setting

- 1234567812345678

(3) Procedure

- Enter the administrator password on the on-screen keyboard.
 1. New Password: Enter the new administrator password.
 2. Re-Input Password: Enter the new administrator password again.

NOTE

- When the following setting leads to the Password Rules [ON], the password with the same letters, the password which is same as the previous one and the password of less than eight digits cannot be changed.
[\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#)

12.3.3 Administrator Feature Level

(1) Use

- To set which modes to be allowed for the administrator to use in Service Mode.
- Use when allowing the administrator to use some modes in Service Mode.
- The modes allowed for the administrator to use in each setting are as follows.

Administrator settings function			Level 1	Level 2
[System Setting] -> [Expert Setting]	Printer Adjustment	Erase Leading Edge	-	○
		Leading Edge Adjustment	-	○
	Scanner Adjustment	Centering	-	○
		Horizontal Adjustment	-	○
		Vertical Adjustment	-	○
		ADF Adjustment	-	○
	ADF Adjustment	Centering	-	○
		Original Stop Position	-	○
		Centering Auto Adjustment	-	○
		Auto Adj. of Stop Position	-	○
	User paper Settings		-	○
[Standard Size Setting]	Original Glass Original Size Detect		-	○
	Foolscap Size Setting		-	○

(2) Default setting

- Prohibit

(3) Setting item

- Level1
- Level2
- "Prohibit"

12.3.4 CE Authentication

- The setting item "OFF" will not be displayed when the [\[Password Rules\]](#) is set to "Enable".
- It will not be displayed when the Remote Panel Settings is set to "ON".

(1) Use

- To determine whether or not to authenticate CE password as entering Service Mode.
- Use when authenticating CE password as entering Service Mode.

NOTE

- For setting the [\[Password Rules\]](#) to "Enable", set the CE Authentication to "ON" and change the initial CE password beforehand..
- Before setting the [Remote Panel Settings](#) to "ON", set the CE Authentication to "ON".

(2) Default setting

- ON

(3) Setting item

- "ON"
- OFF

12.3.5 DC/DevC Lifestop

(1) Use

- To select whether or not to stop a print cycle when the drum unit or developing unit reaches its service life.

(2) Default setting

- Stop

(3) Setting item

- "Stop"
- No Stop

12.3.6 Memory Data Backup

(1) Use

- To backup the data stored in the memory region on the MFP board to the flash memory.
- To backup current data in order to prevent data in the memory region on the MFP board from being erased unexpectedly.
- To backup data manually. It usually makes backup every hour automatically.
- Backup data can be restored by following the specified procedure when the trouble (CD3XX) occurred.
- Refer to "TROUBLESHOOTING" for details on restoration procedure.
[K.3.16.15 CD3##](#)

(2) Procedure

1. Touch [Memory Data Backup].
2. Touch [Start] to start making a backup.
3. Check the message [Backup is completed.], and turn main power switch OFF. Wait for ten seconds or more and turn main power switch back ON.

12.3.7 Operation Ban release time

(1) Use

- To set the time that elapses before the machine releases an access lock that is activated after the CE password authentication.
- To set the period of time that elapses before the machine releases the access lock, which aims to prevent the unintentional release of the access lock.
- After the CE password authentication, if the access lock is activated, the lock release timer starts to operate by input the Stop -> 0 -> 9 -> 3 -> 1 -> 7 in the Menu key -> [Counter] -> [Print List] after the main power switch is turned OFF and ON.
When the timer reaches the time specified in this setting, the access lock is released.

(2) Default setting

- 5 (minutes)

(3) Setting range

- 1 to 60 (minutes)

NOTE

- When Enhanced Security Mode is set to ON in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#), the period of time that can be set in this setting is 5 minutes or more.

12.3.8 Administrator unlocking

(1) Use

- To release an access lock that is activated after an administrator password authentication.
- To release the access lock with service authority when an administrator password authentication fails and the access lock is activated.
- When the main power switch is turned OFF and ON or the period of time set in the Release Time Settings elapses, the machine releases the access lock that is activated after the administrator password authentication.

In addition to these operations, this setting provides another way to release the access lock.

(2) Procedure

1. Touch [Administrator unlocking].
2. Touch [unlocking] to release an access lock.
3. When [OK] is displayed, touch [OK].

12.3.9 Engine FW DipSW

- It will be displayed when the following setting shows that switch No.59 is set to [01] at HEX assignment.
[Service Mode] -> [System 2] -> [Software Switch Setting]

(1) Use

- To make printer engine settings.
- The following table shows DIP switches that can be set in this machine.

Switch No.	Function	Ref. page
1	Not used	-
2	Not used	-
3	New Release Disable mode	I.12.3.9.(3).(a) New Release Disable mode
4	Not used	-
5	Choice of high humidity circumstance	I.12.3.9.(3).(b) Choice of high humidity circumstance
6	Choice of warm-up complete temperature	I.12.3.9.(3).(c) Choice of warm-up complete temperature
7 : 10	Not used	-
11	Choice of fusing roller rotation while waiting	I.12.3.9.(3).(d) Choice of fusing roller rotation while waiting
12	Not used	-
13	Choice of securing fusibility	I.12.3.9.(3).(e) Choice of securing fusibility
14	Choice of unit simultaneous replacement promotion	I.12.3.9.(3).(f) Choice of unit simultaneous replacement promotion
15 : 17	Not used	-
18	Choice of FS-533 tray home position	I.12.3.9.(3).(g) Choice of FS-533 tray home position
19 : 20	Not used	-
21	Choice of drum unit slight rotation	I.12.3.9.(3).(h) Choice of drum unit slight rotation
22	Choice of main scan direction white line correction	I.12.3.9.(3).(i) Choice of main scan direction white line correction
23	Not used	-
24	Choice of continuous temperature control after printing	I.12.3.9.(3).(j) Choice of continuous temperature control after printing
25	ACS parameter choice	I.12.3.9.(3).(k) ACS parameter choice
26	Choice of printing pause time during temperature increase inside the machine	I.12.3.9.(3).(l) Choice of printing pause time during temperature increase inside the machine
27	Not used	-
28	Choice of fusing mode for index paper	I.12.3.9.(3).(m) Choice of fusing mode for index paper

(2) Procedure

1. Touch [Engine FW DipSW].
2. Touch the key that corresponds to the switch No. of the function to be set and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(3) Details of Each Function

(a) New Release Disable mode

- To enable a unit that is temporarily used for troubleshooting or other purposes to be used again as a new unit in another machine, New Release Disable mode is provided.
 - Applicable units are the following that have the new unit detection feature.
Drum unit/Y, M, C, K, Developing unit/Y, M, C, K,
1. Open the lower front door.
 2. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
 3. Touch [3] and check the key is highlighted (ON state) in reverse video.
 4. Touch [OK].
 5. Close the lower front door.
By closing the lower front door, the New Release Disable mode takes effect.

(b) Choice of high humidity circumstance

- Out of PPM control for preventing the paper from losing its fusibility, "high humidity circumstance mode" which controls paper curling in high humidity is prohibited.
- When this setting is ON, high humidity circumstance mode for PPM control will not be conducted.

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [5] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(c) Choice of warm-up complete temperature

- It ensures fusibility in monochrome printing with suggested paper for Europe marketing area.

OFF	Normal warm-up time (default)
ON	The warm-up time when in monochrome 30 seconds mode becomes longer.

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [6] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(d) Choice of fusing roller rotation while waiting

- It sets whether to constantly rotate the fusing motor or not while waiting the job for MFP.

OFF	The fusing motor stops after 30 minutes in waiting condition. Steadiness while waiting has a priority. (default)
ON	The fusing motor constantly rotates while waiting. It ensures the fusibility when immediately starts printing from the waiting status.

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [11] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(e) Choice of securing fusibility

- It sets whether to conduct printing wait or not for ensuring fusibility in low temperature and low humidity.

OFF	Without printing wait (default)
ON	With printing wait

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [13] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(f) Choice of unit simultaneous replacement promotion

- To set whether or not to enable "F.5.3 Control causing inhibited printing for one part when an inhibited-printing event occurs in another part."
 - OFF: Enables "Control causing inhibited printing for one part when an inhibited-printing event occurs in another part."
 - ON: Disables "Control causing inhibited printing for one part when an inhibited-printing event occurs in another part."

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [14] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(g) Choice of FS-533 tray home position

- It switches the tray home position for FS-533.

OFF	Tray home position becomes the low limit position. (default)
ON	Tray home position becomes the paper receiving position.

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [15] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(h) Choice of drum unit slight rotation

- It sets whether to conduct slight rotation control or not for the color photo conductor.
- When the printing is continued with lower coverage, abrasion of the photo conductor and the cleaning blade becomes large and may cause noise when slightly rotating the drum unit.
It is used for preventing noise caused by the slight rotation of the color photo conductor.

OFF	Conducts slight rotation control. (default)
ON	Does not conduct slight rotation control

Procedure

1. Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
2. Touch [21] and check the key is highlighted (ON state) in reverse video.
3. Touch [OK].

(i) Choice of main scan direction white line correction

- When printing is continued with lower coverage, filming may occur to the transfer belt which may cause the main scan direction white lines.
- By setting this ON, the toner will be supplied to the transfer belt by the toner patch during image stabilization to prevent white lines to occur.

The toner consumption increases by using this setting. Choose the setting suitable for the user.

OFF	Does not conduct toner patch for the white lines (default)
ON	Conducts toner patch for the while lines

Procedure

- Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
- Touch [22] and check the key is highlighted (ON state) in reverse video.
- Touch [OK].

(j) Choice of continuous temperature control after printing

- To select the fusing unit temperature adjustment control performed when a print job sent from PC is completed.
- When [Administrator Settings] -> [System Settings] -> [Power Supply/Power Save Settings] -> [Enter Power Save Mode] is set to "Immediately", select whether or not to turn OFF the fusing heater immediately after a print job from PC is completed.
 - OFF: The fusing heater is turned OFF immediately after printing a job sent from PC. (default)
 - ON: The temperature control continues until the next sleep request is sent from the controller.

Procedure

- Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
- Touch [24] and check the key is highlighted (ON state) in reverse video.
- Touch [OK].

(k) ACS parameter choice

- It sets the black printing quantity threshold until switching the transfer belt from all press to K press when a few pages of black printing is included in color printing.
- With the initial setting, productivity has the priority and printing is conducted with all press even when the specified quantity of black printing is included.

This process shortens the life of the color drum unit due to unnecessary rotation. When this setting is ON, black printing quantity threshold until switching to K press becomes smaller.

This setting is to be used when the drum unit life should have priority over productivity.

OFF	Productivity has priority (default)
ON	Life has priority

Procedure

- Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
- Touch [25] and check the key is highlighted (ON state) in reverse video.
- Touch [OK].

(l) Choice of printing pause time during temperature increase inside the machine

- The printing pauses for a specified period of time in order to prevent toner from adhering when the temperature inside increases.

OFF	Short pause (default)
ON	Pause for printing becomes longer. Temperature inside comparatively becomes low which may improve the image quality.

Procedure

- Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
- Touch [3] and check the key is highlighted (ON state) in reverse video.
- Touch [OK].

(m) Choice of fusing mode for index paper

- When index paper is used, change the fusing temperature control mode to reduce the curling of the paper.

OFF	Normal temperature control for index paper (default)
ON	Change the temperature control mode that is lowered the target temperature to reduce the curling of the paper.

Procedure

- Touch [Service Mode] -> [Enhanced Security] -> [Engine FW DipSW].
- Touch [28] and check the key is highlighted (ON state) in reverse video.
- Touch [OK].
- Turn OFF the main power switch and turn it ON again more than 10 seconds after.

(4) Notes when using the New Release Disable mode**NOTE****<1> Before starting the mode**

- Output the list in [Service Mode] -> [List Output] to check the information on the wear-out rate of each unit and keep the Dmax density adjustment value.

Replace units that have reached their life or that are near life with new ones, and perform New Release.

<2> During the New Release Disable mode

- The New Release Disable mode is subject to the condition that the New Release Disable mode should not be used for a long period, i.e. duration of printing only several tens of sheets. Units used in the New Release Disable mode for a long time cannot be guaranteed as new ones.

- If a unit (imaging unit/Y,M,C or developing unit/K) which has reached its life or for which a accumulated rotation time excess warning has been issued are replaced with a new one in the New Release Disable mode, the new unit life is judged as normal and the accumulated rotation time excess warning is reset.
 - In the New Release Disable mode, the drum unit/K life counter is not reset and it continues to count in a normal manner. If the counter reading becomes close to the value at which an accumulated rotation time excess warning is issued or becomes close to the end of life value, the accumulated rotation time excess warning or the end of life warning can be issued in the New Release Disable mode.
(If the drum unit/K counter should reach the end of life value while temporarily using a new drum unit/K in the New Release Disable mode, turn OFF the New Release Disable mode, open and close the lower front door (or turn the main power switch OFF and ON), and perform New Release in a normal manner. In this case, the previous drum unit/K, which has been temporarily removed, cannot be used again.)
 - After activating the New Release Disable mode in [Engine FW DipSW], do not turn OFF and ON the main power switch or do not let the machine go into the sleep mode until the work in the New Release mode is completed.
(In case that the main power switch is turned OFF or the machine goes into the sleep mode, be sure to open the lower front door and turn the main power switch ON or activate the machine from the sleep mode. Then turn ON the New Release Disable mode and close the lower front door.)
- <3> After finishing work in New Release Disable mode
- When continuing to use the new unit used in the New Release Disable mode in the same machine, turn OFF the new Release Disable mode and open and close the lower front door (or turn OFF and ON the main power switch) to perform New Release.
 - To reinstall the previous unit used in the machine, open the lower front door, turn OFF the New Release Disable mode, replace the new unit with the previous unit, and close the lower front door (or turn the main power switch and sub power switch OFF and ON).
In this case, perform Initialize + Image Stabilization, Gradation Adjustment, and input of the previous Dmax density adjustment value in service mode. If these adjustments are not performed, gradation reproducibility cannot be guaranteed.
 - After temporarily using a new drum unit/K in the New Release Disable mode, before reinstalling the previous drum unit/K, be sure to check the reading of the drum unit/K life counter in [Service Mode] -> [Counter] -> [Life] to learn that New Release is not performed on the new drum unit/K, i.e. the counter value have not decreased.
There is no way to judge whether New Release is performed on the new drum unit/K or not from the appearance of the unit. Checking the counter reading is necessary to avoid bringing back the drum unit/K on which New Release is performed, assuming that the drum unit/K remains new.

12.3.10 Engine Data Backup

(1) Use

- To back up or restore settings configured for the engine.
- Used to save or restore settings when the printer control board is replaced.
- The backup data is stored in the SSD board.

(2) Procedure

(a) Engine Data Save Mode (backup)

NOTE

- **This is not displayed when the trouble code C-4801 "Machine unit board failure" occurs.**
1. Touch [Service Mode] -> [Enhanced Security] -> [Engine Data Backup].
 2. Touch [Engine Data Save Mode], and press the Start key.
 3. Select [Yes], and press the Start key again.
 4. Check that the result "OK" appears.

(b) Engine Data Reflect Mode (restore)

NOTE

- **This function is available only when the data backed up in [Engine Data Save Mode] is stored in the SSD board and the trouble code C-4802 "Main unit backup data miscompare" occurs.**
1. Touch [Service Mode] -> [Enhanced Security] -> [Engine Data Backup].
 2. Touch [Engine Data Reflect Mode], and press the Start key.
 3. Select [Yes], and press the Start key again.
 4. Check that the result "OK" appears.
 5. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

13. BILLING SETTING

Billing setting

- When using the optional upgrade kit UK-204 and license kit LK-101 v3, LK-102 v3, LK-104 v3, LK-105 v3, LK-106, LK-107 or LK-108, license management is done with the following procedures.
[Service Mode] -> [Billing Setting] -> [License Management]
- [License Management] can set Activation/Deactivation of each i-Option functions, Repair/Initialize of functions for troubleshooting, or etc.

13.1 List of billing setting

Billing Setting		Ref. Page
Counter Setting		I.13.3.1 Counter Setting
Management Function Choice		I.13.3.2 Management Function Choice
Coverage Rate Clear		I.13.3.9 Coverage Rate Clear
License Management	Activation	I.13.3.10 License management - Activation
	Deactivation	I.13.3.11 License management - Deactivation
	Repair *1	I.13.3.12 License management - Repair
	Initialize	I.13.3.13 License management - Initialize
	Request Code	I.13.3.14 License management - Request Code
	List	I.13.3.15 License management - List
	Function list	I.13.3.16 License management - Function List
OpenAPI Authentication Management	Restriction Code	I.13.3.17.(1) Restriction Code
	Region Code	I.13.3.17.(2) Region Code
WebDAV Server Setting		I.13.3.18 WebDAV Server Setting

- *1: It is displayed only when "K.14.3.1 License management error" occurs.

13.2 Starting/Exiting

13.2.1 Starting procedure

- Call the Service Mode to the screen.
- Press the following keys in this order.
 - Stop -> 9
- Billing Setting menu will appear.

13.2.2 Exiting procedure

- Touch [Exit] on the Service Mode screen.
- Turn OFF the main power switch. Wait 10 seconds, then turn ON the main power switch again.

13.3 Billing setting

13.3.1 Counter Setting

(1) Use

- To set the counting method for the total counter, size counter and long length paper counter.
- To set the size regarded as the large size (2 counts.)
- Use to change the counting method for the counters.

(2) Total Counter**(a) Default setting**

- Japan: "Mode 1"
- US, Europe, Others 1, Others 2, Others 3, Others 4, Others 5: "Mode 2"

(b) Setting item

- Mode 1: 1 count per 1 copy cycle
- Mode 2: Large size is double counts

NOTE

- The content of this setting is reflected in the count method with the key counter.
- "Others 1" to "Others 4" are setting items in [Marketing Area] available from Service Mode.
[I.11.14.1 Marketing Area](#)

(3) Size Counter**(a) Default setting**

- US: A3 and 11 x 17
- Europe, Others 1, Others 2, Others 3, Others 4, Others 5: A3, B4, 11 x 17, and 8 1/2 x 14
- Japan: Not counted

(b) Setting item

A3/11 x 17	When it exceeds 279 mm in the main scan direction and 420 mm in the sub scan direction (exceeds 399 mm at fax scan), it is regarded as the large size.
A3/B4/11 x 17/8 1/2 x 14	When it exceeds 215 mm in the main scan direction and 355 mm in the sub scan direction (exceeds 337 mm at fax scan), it is regarded as the large size.
A3/11 x 17/B4/8 1/2 x 14/Foolscap	When it exceeds 203 mm in the main scan direction and 330 mm in the sub scan direction (exceeds 313 mm at fax scan), it is regarded as the large size (However the size in the main scan direction changes according to the foolscap size setting.)

- Not counted
- A3/11 x 17
- A3/B4/11 x 17/8 1/2 x 14
- A3/11 x 17/B4/8 1/2 x 14/Foolscap

NOTE

- When the Size Counter setting is set to "Not counted", the machine operate with following conditions regardless of the each control panel settings.
 - Total Counter: Mode1
 - Long Length Paper Count Mode: Mode1
 - Banner Counter Double Count Mode: OFF

(c) Count-up table

Print mode	1-Sided				2-Sided			
Size	Sizes other than those specified		Specified sizes		Sizes other than those specified		Specified sizes	
Mode	Mode		Mode		Mode		Mode	
	1	2	1	2	1	2	1	2
Total	1	1	1	2	2	2	2	4
Size	0	0	1	1	0	0	2	2
2-sided Total	0	0	0	0	1	1	1	1

- 0: No count
- 1: 1 count
- 2: 2 counts
- 3: 3 counts
- 4: 4 counts

(4) Long Length Paper Counter Mode

- When printing on the long paper (457.2 mm or over), the counting value will be the total of the value set by the total counter mode and the value by this setting.

(a) Default setting

- Mode 4

(b) Setting item

- Mode 1: + 0 count
- Mode 2: + 1 count
- Mode 3: + 2 counts (457.2 to 915.0 mm will be + 1 count)
- Mode 4: + 3 counts (457.2 to 686.0 mm will be + 1 count, and 686.1 to 915.0 mm will be + 2 count)

(5) Banner Counter Double Count Mode

- To set whether to use normal count or double count when printing long size paper.
- When "ON" is selected, double count is applied to only long size paper.

(a) Default setting

- OFF

(b) Setting item

- ON
- "OFF"

(6) Count methods that are the combination of each setting

- The count method used when printing long size paper depends on the combination of the CounterSetting: Settings in Long Length Paper Counter Mode and Banner Counter Double Count Mode. The following shows details on count methods that are the combination of each setting.

Total Counter	Long Length Paper Counter Mode	Banner Counter Double Count Mode	Paper size	Count
Mode 1	Mode 1	OFF	Normal size	1 count
			Long size	1 count
		ON	Normal size	1 count
			Long size	2 counts
	Mode 2	OFF	Normal size	1 count
			Long size	2 counts
		ON	Normal size	1 count
			Long size	4 counts
	Mode 3	OFF	Normal size	1 count
			Long size 457.3 to 915.0 mm	2 counts
			Long size 915.1 mm or more	3 counts
		ON	Normal size	1 count
			Long size 457.3 to 915.0 mm	4 counts
			Long size 915.1 mm or more	6 counts
	Mode 4	OFF	Normal size	1 count
			Long size 457.3 to 686.0 mm	2 counts
			Long size 686.1 to 915.0 mm	3 counts
			Long size 915.1 mm or more	4 counts
		ON	Normal size	1 count
			Long size 457.3 to 686.0 mm	4 counts
			Long size 686.1 to 915.0 mm	6 counts
			Long size 915.1 mm or more	8 counts
Mode 2	Mode 1	OFF	Small size	1 count
			Large size	2 counts
			Long size	2 counts
		ON	Small size	1 count
			Large size	2 counts
	Mode 2	OFF	Small size	1 count
			Large size	2 counts
			Long size	3 counts
		ON	Small size	1 count
			Large size	2 counts
			Long size	6 counts
	Mode 3	OFF	Small size	1 count
			Large size	2 counts
			Long size 457.3 to 915.0 mm	3 counts
			Long size 915.1 mm or more	4 counts
		ON	Small size	1 count
			Large size	2 counts
			Long size 457.3 to 915.0 mm	6 counts
			Long size 915.1 mm or more	8 counts
	Mode 4	OFF	Small size	1 count

Total Counter	Long Length Paper Counter Mode	Banner Counter Double Count Mode	Paper size	Count
			Large size	2 counts
			Long size 457.3 to 686.0 mm	3 counts
			Long size 686.1 to 915.0 mm	4 counts
			Long size 915.1 mm or more	5 counts
		ON	Small size	1 count
			Large size	2 counts
			Long size 457.3 to 686.0 mm	6 counts
			Long size 686.1 to 915.0 mm	8 counts
			Long size 915.1 mm or more	10 counts

NOTE

- When the Size Counter setting is set to “Not counted”, the machine operate with following conditions regardless of the each control panel settings.
 - Total Counter: Mode1
 - Long Length Paper Count Mode: Mode1
 - Banner Counter Double Count Mode: OFF

13.3.2 Management Function Choice

- To set whether or not the following items are to be mounted.
Key Counter, Management Device (Data controller), Authentication Device, or Vendor

NOTE

- It will not be displayed when the following setting is set to “ON”.
[\[Administrator Settings\]](#) -> [\[Security Setting\]](#) -> [\[Enhanced Security Mode\]](#)
- When the setting shows that [Management Device 2] or [Vendor 2] is mounted, the following applications will be invalid.
PC FAX transmission / HDD TWAIN/PS Box Operator / PS Scan Direct / PS Job Spooler / Fiery: Scan to Box
Also, the following setting will be set to “OFF”.
[\[Administrator Settings\]](#) -> [\[Security Setting\]](#) -> [\[Function Management Setting\]](#) -> [\[Network Function Usage Setting\]](#)

13.3.3 Management Function Choice - Key Counter IF Vendor

- Not used.

13.3.4 Management Function Choice - Authentication Device 2**(1) Use**

- To set whether or not the authentication device 2 is installed.
- Set when the authentication unit (biometric type or card type) is mounted.

NOTE

- When using the authentication device including AU-102 and AU-201, the loadable device driver needs to be installed.
 - [I.11.15.26 Driver Install](#)
 - [E.1.3.1.\(3\) IC card information setting procedures](#)

Card	Uses IC card authentication system (AU-201/SCL-010/AU-201H/AU-202H)
Body	Uses biometrics (finger vein) authentication system (AU-102)
Card 3	Uses IC card authentication device for PKI card system

- When selecting [Body], set a film timeout interval, capture trial time and authentication trial time.
- When selecting [Card], a response timeout interval is displayed. (The interval is unchangeable.)
- [Card 3] will be displayed only when the following setting shows that switch No.12 is set to [00000010] at Bit assignment/[02] at HEX assignment.
[\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#).

(2) Setting item

Authentication Mode

- Card
- Body

(3) Installation procedures of authentication unit**(a) AU-102**

- Install the AU-102 loadable driver (BIO_LDR.tar) to the main unit.
- Install the AU-102 to the main unit.
- Select [Body] in [Service Mode] -> [Billing Settings] -> [Management Function Choice] -> [Authentication Device 2].
- Turn off the main power switch and turn it on again more than 10 seconds after.
- Register the authentication user data.

(b) AU-201

- Install the loadable driver (ICC_LDR.tar) to the main unit. *1,*2,*3,*4
- Install the AU-201 to the main unit.
- Select [Card] in [Service Mode] -> [Billing Settings] -> [Management Function Choice] -> [Authentication Device 2].
- Turn off the main power switch and turn it on again more than 10 seconds after.

5. Register the authentication card data.

Note *1

- A combination of the loadable driver and the IC card information setting file will be supplied as a loadable driver by KMBT.

Note *2

- The loadable driver to be installed varied according to the type of the card. Identify the type of the card requiring authentication and install the correct loadable driver.

Loadable driver name (KM standard setting)	Corresponding card type
AU-201 loadable driver (FeliCa IDm)	FeliCa IDm
AU-201 loadable driver (TypeA)	TypeA
AU-201 loadable driver (TypeA + FeliCa IDm)	TypeA and FeliCa IDm
AU-201 loadable driver (FeliCa FCF)	FeliCa FCF
AU-201 loadable driver (FeliCa FCF Campus)	FeliCa FCF Campus
AU-201 loadable driver (TypeA + FeliCa FCF)	TypeA and FeliCa FCF
AU-201 loadable driver (TypeA + FeliCa FCF Campus)	TypeA and FeliCa FCF Campus

Note *3

- If FeliCa IDm, FeliCa SSFC, FeliCa Private, or related card requiring detailed settings is to be used, make the detailed settings by using either one of the following methods:

- Using the Auth Device Tool Advanced for AU-201, prepare a combination of the loadable driver and the IC card information setting file and export it as a loadable driver.

[E.1.3.1.\(3\) IC card information setting procedures](#)

- Using the Auth Device Tool Advanced for AU-201, prepare the IC card information setting file only and install the loadable driver in the MFP. Then, using the PageScope Data Administrator, write the IC card information setting file in the MFP.

[E.1.3.1.\(3\) IC card information setting procedures](#)

E.g.: Information setting sample when the FeliCa SSFC card is used

Information to be obtained from the administrator		
Items of Felica SSFC detail setting	Sample-data (decimal number)	Setting value (hexadecimal number)
Room number	37	00 25
Floor number	15	00 0F
Building number	50	00 32
Area number	85	00 55
Security level	2	00 02
Company identification code (CL code) *1	06BGLQVX17 (ASCII code)	30 36 42 47 4C 51 56 58 31 37
Company code *2	CompanyA (ASCII code)	CompanyA

*1: The character length of the company code is 10 bytes.

*2: Use alphabetical upper case/lower case characters and numeric characters for Company code. When the company code is not set, this space will be left blank.

Note *4

- Use a loadable driver in combination with the following MFP card version of the main unit.

bizhub C554/C454 initial MFP card version: A2XK0Y0-F000-G00-58. A2XK0Y0-F000-G20-58

Authentication device	IC card type	Loadable driver version
AU-201	FeliCa IDm	A2X00Y0-A502-G00-12
	TypeA + FeliCa FCF Campus	A2X00Y0-A502-G00-12
	TypeA + FeliCa FCF General	A2X00Y0-A502-G00-12
	FeliCa FCF Campus	A2X00Y0-A502-G00-12
	FeliCa FCF General	A2X00Y0-A502-G00-12
	TypeA + FeliCa IDm	A2X00Y0-A502-G00-12
	TypeA	A2X00Y0-A502-G00-12
	FeliCa Private	A2X00Y0-A500-G00-01
SCL-010	TypeA	A2X00Y0-A510-G00-01
AU-201H	HID Prox	A2X00Y0-A001-G00-01
AU-202H	HID iClass	A2X00Y0-A300-G00-01
AU-102	Biometric authentication	A2X00Y0-A900-G00-01

bizhub C554/C454 MFP card version: A2XK0Y0-F000-G00-65. A2XK0Y0-F000-G20-65

Authentication device	IC card type	Loadable driver version
AU-201	FeliCa IDm	A2X00Y0-A502-G00-12
	TypeA + FeliCa FCF Campus	A2X00Y0-A502-G00-12
	TypeA + FeliCa FCF General	A2X00Y0-A502-G00-12
	FeliCa FCF Campus	A2X00Y0-A502-G00-12

Authentication device	IC card type	Loadable driver version
	FeliCa FCF General	A2X00Y0-A502-G00-12
	TypeA + FeliCa IDm	A2X00Y0-A502-G00-12
	TypeA	A2X00Y0-A502-G00-12
	FeliCa Private	A2X00Y0-A500-G00-01
SCL-010	TypeA	A2X00Y0-A510-G00-01
AU-201H	HID Prox	A2X00Y0-A001-G00-02
AU-202H	HID iClass	A2X00Y0-A300-G00-01
AU-102	Biometric authentication	A2X00Y0-A900-G00-01

(c) Miscellaneous card readers

- The same setting method as that for AU-201 applies for other card readers.
- The following loadable drivers are necessary.

Card reader	Loadable driver name (KM standard setting)	Corresponding card type
SCL-010	SCL-010 loadable driver (Default: TypeA) *1, *2	- TypeA - FeliCa IDm - TypeA and FeliCa IDm
AU-201H	AU-201H loadable driver	HID Prox
AU-202H	AU-202H loadable driver *2	HID iClass

Note *1

- A combination of the loadable driver and the IC card information setting file will be supplied as a loadable driver by KMBT.

Note *2

- If cards of FeliCa IDm of SCL-010 and HID iClass of AU-202H that require detailed settings are to be used, make the detailed settings by using either one of the following methods:
 - Using the Auth Device Tool Advanced for SCL-010 or Auth Device Tool Advanced for AU-202H, prepare a combination of the loadable driver and the IC card information setting file and export it as a loadable driver.
[E.1.3.1.\(3\) IC card information setting procedures](#)
 - Using the Auth Device Tool Advanced for SCL-010 or Auth Device Tool Advanced for AU-202H, prepare the IC card information setting file only and install the loadable driver in the MFP. Then, using the PageScope Data Administrator, write the IC card information setting file in the MFP.
[E.1.3.1.\(3\) IC card information setting procedures](#)

13.3.5 Management Function Choice - Key Counter Only

(1) Use

- To set whether or not the key counter is installed.
- Set when the key counter is mounted.
- Select [Color Mode] and [Message] when the key counter is mounted.

(2) Color Mode

(a) Use

- When [Mode 1] is set on [Total Counter Mode] after selecting [Billing Setting] -> [Counter setting].

Mode 1	1 count per 1 print cycle
Mode 2	2 counts per 1 print cycle
Mode 3	3 counts per 1 print cycle
Mode 4	4 counts per 1 print cycle
Mode 5	5 counts per 1 print cycle

- When [Mode 2] is set on [Total Counter Mode] after selecting [Billing Setting] -> [Counter setting] and large size is selected on [Large Size Counter Mode]

Mode 1	2 counts per 1 print cycle
Mode 2	4 counts per 1 print cycle
Mode 3	6 counts per 1 print cycle
Mode 4	8 counts per 1 print cycle
Mode 5	10 counts per 1 print cycle

- When [Mode 2] is set on [Total Counter Mode] after selecting [Billing Setting] -> [Counter setting] and sizes other than large size are selected on [Large Size Counter Mode]

Mode 1	1 count per 1 print cycle
Mode 2	2 counts per 1 print cycle
Mode 3	3 counts per 1 print cycle
Mode 4	4 counts per 1 print cycle
Mode 5	5 counts per 1 print cycle

(b) Setting item

- Mode 1
- Mode 2
- Mode 3
- Mode 4
- Mode 5

(3) Message**(a) Use**

- Select the message type when the administrative unit is mounted.

Type 1	Message for key counter
Type 2	Message for card scanning
Type 3	Message for ID management
Type 4	Message for remote SW

(b) Setting item

- Type 1
- Type 2
- Type 3
- Type 4

(4) Confirmation copy**(a) Use**

- Set whether to allow a confirmation copy when a key counter is installed.

(b) Default setting

- Ban

(c) Setting item

- License
- "Ban"

(5) The next job reservation**(a) Use**

- Set whether to allow the reservation of the next job when a key counter is installed.

(b) Default setting

- Ban

(c) Setting item

- License
- "Ban"

NOTE

- The setting is available only when user authentication and account track are set "OFF" with [\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Setting\]](#).

(6) Count Setting**(a) Use**

- To set the count timing used when the key counter is installed.

(b) Default setting

- Paper feed

(c) Setting item

- "Paper feed"
- Paper out

13.3.6 Management Function Choice - Management Device**(1) Management Device 2****(a) Use**

- To set whether or not the management device 2 is installed.
- Select the Management Setting Mode

Mode 1	Use contact type device (Logout with ID key is not allowed.)
Mode 2	Use non-contact type device (Logout with ID key is allowed.)

(b) Setting item (Management Setting)

- Mode 1
- Mode 2

NOTE

- The setting is not available when either “External Server” of user authentication, “Password Only” of account track, “Do not synchronize” of user authentication and account track or “Allow” of public user access has been set with [\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Settings\]](#).

13.3.7 Management Function Choice - Vendor 2**(1) Use**

- To set whether or not the vendor 2 is installed.

NOTE

- When using the vendor along with the key counter, inserting the key counter will set it to the “Key Counter Mode” and removing it will set it to the “Vendor Mode”.

(2) Procedure

- Select color mode and message of key counter. (Only for key counter, the type of the color mode and message are same after mounting.)

(3) Confirmation copy**(a) Use**

- Set whether to allow a confirmation copy when a key counter is installed.

(b) Default setting

- Ban

(c) Setting item

- License
- “Ban”

(4) The next job reservation**(a) Use**

- Set whether to allow the reservation of the next job when a key counter is installed.

(b) Default setting

- Ban

(c) Setting item

- License
- “Ban”

(5) Message**(a) Use**

- Select message of vendor.

Type 1	Message for key counter
Type 2	Message for card scanning
Type 3	Message for ID management

(b) Setting item

- Type 1
- Type 2
- Type 3

NOTE

- The setting is available only when user authentication and account track are set “OFF” with [\[Administrator Settings\]](#) -> [\[User Authentication/Account Track\]](#) -> [\[General Setting\]](#).

(6) Count Setting**(a) Use**

- To set the count timing used when the key counter is installed.

(b) Default setting

- Paper feed

(c) Setting item

- “Paper feed”
- Paper out

13.3.8 Setting items that automatically change the setting values

NOTE

- Performing the setup for each unit to be mounted will internally change the setting values below. It needs resetting when cancelling the setting in order to set back to "not mounted" because the setting value will remain.

(1) When the vendor2 or authentication device 1/2 is mounted

	Setting Item	Vendor 2	Authentication Device 2
Utility	Default Copy Settings	Factory Default	-
	Default Scan/Fax Settings	Factory Default	-
	Copy Operating Screen	[Yes]	-
	Fax Active Screen	Tx/Rx Display [Yes]	-
	Scan/Fax Settings Default Tab	Direct Input	-
	Left Panel Display Default	[Job List]	-
Administrator Settings	Each Function Setting	Copy, PC print, Send Data, and Print others will be set to "ON".	
	Network Function Usage Settings	OFF	-
	Administrator Security Level	Prohibit	-
	Weekly Timer ON/OFF Setting	OFF	-

13.3.9 Coverage Rate Clear

(1) Use

- To clear the coverage rate.

(2) Procedure

- Touching [END] key will clear the coverage rate.

(3) Default setting

- Unset

(4) Setting item

- Set
- "Unset"

13.3.10 License management - Activation

(1) Functions

- To activate i-Option functions.

(2) Use

- To activate i-Option functions with CE.
- The functions can be activated by selecting the desired function and enter the appropriate license code and function code.
- Administrators also can carry out the procedure No.14 or later step to activate i-Option functions through Administrator Settings.

(3) Procedure

NOTE

- You need to access License Management System (LMS) to implement each function setting.

- Before accessing the LMS, CE are required to register the E-mail address and the password in the LMS. To register, click [CE Initial Registration] that is located in the upper right of CE Login screen.
 - To use web browser function, it is necessary to rewrite the firmware to MFP card version: A2XK0Y0-F000-G20-58, set switch No. 150 to [00000001] at Bit assignment/[01] at HEX assignment in [Service Mode] -> [System 2] -> [Software Switch Setting], then activate the i-Option license(LK-101 v3).
1. Prepare "token certification."
 2. Access the following URL using the PC connected to the Internet.
<https://lms.konicaminolta.com/license/KM/support.aspx>
 3. Click [CE Login].

4. Enter [E-Mail Address] and [Password], and click [Login].

5. Click [Generate License Code].

6. Enter the serial number of the target MFP, and click [Next].

NOTE

- Make sure to enter alphabet letters of the serial number in all capital letters.

7. Click [Next].

8. Enter the token number written in the token certification, and select the product description.

9. Click [Add].

10. Confirm the registered items, and click [Next].

11. Click [Generate license Code].

12. LMS issues license code and function code.

13. Write down the serial number, license code and function code.

<When activating with an USB memory>

Click [Download], and save a "****.fek" file to the root directory of the USB memory.

14. Select [Service Mode] -> [Billing Setting] -> [License Management].

15. Select [Activation] -> [Function Code] or [License Code], and enter the function code and the license code confirmed at Step13.

<When activating with an USB memory>

Connect the USB memory to the USB port on the side of the control panel, and select [Activation] -> [USB].

16. Touch [Apply].

17. Follow the message appearing on the screen and turn OFF and ON the main power switch.

<When activating with an USB memory>

This step is unnecessary. Proceed to the next step.

18. Select [Service Mode] -> [Billing Setting] -> [License Management] -> [Function List], and confirm that the activated function is displayed at the list.

13.3.11 License management - Deactivation

(1) Functions

- To deactivate i-Option functions.

(2) Use

- To deactivate i-Option functions due to registration error, expiration of lease term, change to other MFP or etc.
- The functions can be deactivated by selecting the desired function and enter the appropriate deactivation code.

(3) Procedure

NOTE

- You need to access **License Management System (LMS)** to implement each function setting.
- Before accessing the LMS, CE are required to register the E-mail address and the password in the LMS. To register, click [CE Initial Registration] that is located in the upper right of CE Login screen.

- Check the serial number of the target MFP.
- Access the following URL using the PC connected to the Internet.
<https://lms.konicaminolta.com/license/KM/support.aspx>
- Click [CE Login].

4. Enter [E-Mail Address] and [Password], and click [Login].

5. Click [Deactivate License Code].

6. Enter the serial number of the target MFP, and click [Retrieve].

NOTE

- Make sure to enter alphabet letters of the serial number in all capital letters.

7. Select the token to be deactivated, and click [Registration].

8. LMS issues deactivation code and function code.
 9. Write down the serial number, deactivation code and function code.
 <When deactivating with an USB memory>
 Click [Download], and save a "****.fek" file to the root directory of the USB memory.

10. Select [Service Mode] -> [Billing Setting] -> [License Management].

11. Select [Deactivation] -> [Function Code] or [Deactivation Code], and enter the function code and the deactivation code confirmed at Step9.

<When deactivating with an USB memory>

Connect the USB memory to the USB port on the side of the control panel, and select [Deactivation] -> [USB].

12. Touch [Apply].

13. Write down or print out the serial number and deactivation complete code.

<When deactivating with an USB memory>

MFP will restart automatically. After MFP restarts, write down or print out the serial number and deactivation complete code.

NOTE

- When A4S or 8 1/2 x 11S is set to the paper feed tray, the above-mentioned serial number and deactivation complete code can be printed out by pressing the start key.
- Serial number and deactivation complete code can be confirmed in [List] available from [License Management].

14. Follow the message appearing on the screen and turn OFF and ON the main power switch.

<When deactivating with an USB memory>

This step is unnecessary. Proceed to the next step.

15. Access to the LMS and login again.

For detail of the login method, refer to step 2 to step4.

16. Click [Deactivate License Code in LMS].

17. Enter the serial number and the deactivation complete code confirmed at step13.

NOTE

- Make sure to enter alphabet letters of the serial number in all capital letters.

18. "Deactivation Complete" message will be displayed.

The license become invalid at both MFP and LMS, and deactivated token number can be used for another MFP.

13.3.12 License management - Repair

(1) Functions

- To repair license management information.

(2) Use

- To be used when license management information is lost due to replacement of MFP board or any other trouble.
- License management information can be repaired by acquiring repair code with repair request code, and entering the repair code.

(3) Procedure

NOTE

- You need to access **License Management System (LMS)** to implement each function setting.
- Before accessing the LMS, CE are required to register the E-mail address and the password in the LMS. To register, click [CE Initial Registration] that is located in the upper right of CE Login screen.
- When the message "License management error occurred." is displayed, carry out the repair operation with the following steps.

1. Select [Service Mode] -> [Billing Setting] -> [License Management].

2. Select [Repair] -> [Repair Request Code].

3. Write down or print out the serial number, repair request code and request code.

NOTE

- When A4S or 8 1/2 x 11S is set to the paper feed tray, the above-mentioned serial number and repair request code can be printed out by pressing the start key.

4. Access the following URL using the PC connected to the Internet.
<https://lms.konicaminolta.com/license/KM/support.aspx>
 5. Click [CE Login].

6. Enter [E-Mail Address] and [Password], and click [Login].

7. Click [Repair License Code].
8. Enter the serial number, repair request code and request code confirmed at step3, and click [Registration].

NOTE

- Make sure to enter alphabet letters of the serial number in all capital letters.

9. LMS issues repair permission code.
10. Write down the serial number and repair permission code.

11. Select [Service Mode] -> [Billing Setting] -> [License Management].

12. Select [Repair] -> [Repair Code], and enter the repair code confirmed at step 10.

13. Touch [Apply].

14. Follow the message appearing on the screen and turn OFF and ON the main power switch.

13.3.13 License management - Initialize

(1) Functions

- To initialize license management information.

(2) Use

- To be used when license management information cannot be repaired.
- License management information should be initialized when the machine fails to generate request code or repair request code due to any trouble and the information cannot be repaired.

(3) Procedure

NOTE

- **You need to access License Management System (LMS) to implement each function setting.**
- When license management information cannot be repaired, initialize the information with the following procedure.
 1. Contact the license management section of sales company to report the information necessary to issue the initialize code.
 2. The license management section of sales company supplies the initialize code.
 3. [Call the Billing Setting to the screen.](#)
 4. Touch [License Management] -> [Initialize].
 5. Enter the initialize code issued by call center using the keyboard on the screen, and touch [Apply].

6. After completing the initialization, follow the message appearing on the screen and turn OFF and ON the main power switch.

13.3.14 License management - Request Code

- When the license management error is occurred, it will not be displayed until the repair code is input.

(1) Functions

- To display and print request code and serial number.

(2) Use

- To check the request code and serial number.

(3) Procedure

- Set A4S or 8 1/2 x 11S paper to the tray, and press start key at request code screen to print.

13.3.15 License management - List

(1) Functions

- To display and print deactivation complete code and serial number.

(2) Use

- To display and print deactivation complete code and serial number.

(3) Procedure

- Set A4S or 8 1/2 x 11S paper to the tray, and press start key at deactivation complete code screen to print.

13.3.16 License management - Function List

(1) Functions/Use

- To display activated functions.

13.3.17 OpenAPI Authentication Management

(1) Restriction Code

(a) Use

- These are communication settings for the application which is developed by the third vendor. Do not set or change these settings without vendor's instructions.

(2) Region Code

(a) Use

- These are communication settings for the application which is developed by the third vendor. Do not set or change these settings without vendor's instructions.

13.3.18 WebDAV Server Setting

(1) Select Address

(a) Use

- To select the address of the LMS server used to manage the license of i-Option.
- Used to change the LMS server address set at the time of shipment.

Fixed Address	Uses the LMS server address set at the time of shipment. The specified address cannot be changed.
Specify Address	Specifies a desired LMS server address. When selecting [Specify Address], [Server Setting] is displayed.

(b) Default setting

- Fixed Address

(c) Setting item

- "Fixed Address"
- Specify Address

(2) Server Setting

(a) Use

- To configure the settings on the WebDAV server that communicates with MFP when selecting [Specify Address] in [Select Address].

(b) Procedure

<Host Name>

- Set the host name of the WebDAV server. (Up to 253 one-byte alphameric characters and symbols)

<File Path>

- Set the file path used in the WebDAV server communication. (Up to 47 one-byte alphameric characters and symbols)

<User name>

- Set the user name used to access the WebDAV server. (Up to 64 one-byte alphameric characters and symbols)

<Password>

- Set the password used to access the WebDAV server. (Up to 64 one-byte alphameric characters and symbols)

<Port Number>

- Set the port number used to access the WebDAV server. (Default: 80)

(3) Polling

(a) Use

- To set the number of times and interval at which MFP polls the WebDAV server.

(b) Procedure

<Polling Count>

- Set the number of times that MFP polls the WebDAV server. (Default: 30 times.)

<Polling Interval>

- Set the interval at which MFP polls the WebDAV server. (Default: 20 seconds.)

NOTE

- When MFP accesses to WebDAV server via proxy server, set the proxy setting in [\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[WebDAV Settings\]](#) -> [\[Proxy Setting for Remote Access\]](#).

14. DEBUG SETTINGS

Debug Settings

- To configure the settings on log information acquisition performed to analyze the MFP controller's internal operation.

14.1 List of debug settings

Debug Settings	Ref. Page
Debug Log Output	I.14.3.1 Debug Log Output
Acquiring Mode	I.14.3.2 Acquiring Mode
TX Debug Log Settings	I.14.3.3 TX Debug Log Settings
USB Password	I.14.3.4 USB Password

14.2 Starting/Exiting

14.2.1 Starting procedure

NOTE

- Before the procedure, set the switch No. 155 to [00000001] at Bit assignment/[01] at HEX assignment in [Service Mode] -> [System 2] -> [Software Switch Setting].
1. Call the Service Mode to the screen.
 2. Press the following keys in this order.
 - Stop -> 6 -> 1 -> 8
 3. Select a mode.

14.2.2 Exiting procedure

1. Touch [Exit] on the Service Mode screen.
2. Turn OFF the main power switch. Wait 10 seconds, then turn ON the main power switch again.

14.3 Debug Settings

14.3.1 Debug Log Output

(1) Use

- To select debug log data to be output and save it in a USB memory.

All	Outputs available all logs.
Select File	Specifies a desired file and outputs it Capable of narrowing file types from [Normal], [Trouble], or [Print Data].
Select Time	Specifies a desired period and outputs corresponding data.
Shared Memory -> HDD	- Manually stores debug information written in the memory into the HDD. - After selecting [Save], saving is started by pressing the Start key.
HDD -> USB Memory	- Outputs debug information stored in the HDD into a USB flash drive. - After selecting [Output], saving is started by pressing the Start key.

Logs obtained under normal operation and logs obtained upon occurrence of trouble are separated and stored in different areas. Up to 20 logs can be stored.

- Logs obtained under normal operation: 10 logs
- Logs obtained upon occurrence of trouble: 10 logs

When the number of saved logs reaches the upper limit, files are overwritten starting from the oldest file.

(2) Setting item

- "All"
- Select File
- Select Time
- Shared Memory -> HDD
- HDD -> USB Memory

NOTE

- If a USB memory is not connected to the USB port of MFP or [\[Administrator Settings\] -> \[Security Settings\] -> \[Security Details\] -> \[Export Debug Log\]](#) is set to [\[Restrict\]](#), output is unavailable.

14.3.2 Acquiring Mode

(1) Use

- To select mode used to acquire debug logs.
- If the cause of a problem cannot be identified by the debug logs acquired in basic mode, obtain more detailed debug logs in Enhance mode and analyze them.

Basic	Normal mode Stores debug information saved in the memory into the HDD.
Enhance	Mode that enables you to obtain more detailed debug information than Basic mode. When a large amount of detailed information must be output, the CPU or other devices is heavily loaded and the performance of MFP is affected.

(2) Default setting

- Basic

(3) Setting item

- "Basic"
- Enhance

(4) Enhance mode

- When "Enhance" is selected, configure the following items.

(a) Network Packet

- If network packet information is necessary, select "ON."

(b) Acquisition function

- Select the functions to be covered when obtaining debug logs.
Select All, Copy, Printer, Box, Net/Scan, PSWC, FAX, Net Fax, and Authentication
- This item will not be displayed when [Network Packet] is set to "ON."

(c) Network Packet Capture

- If [Network Packet] is set to "ON," configure [Capture Filter Settings] and [Capture Settings].
- This item will not be displayed when [Network Packet] is set to "OFF."

(d) By Job

- Set the number of jobs handled as a unit (the number of jobs by which debug information is acquired).

(e) Individual Command

- Register and execute individual debug commands.

(f) Command Set

- Install a command set and execute it.

(5) Timing of Saving Debug Information in Each Mode**(a) Basic mode**

Debug information is stored in the HDD at the timings described below.

- When trouble occurs
- When there is no job
- During transition to energy save mode (sleep mode or low power mode)
- When authentication fails
- When [Debug Log Output] -> [Shared Memory -> HDD] is performed manually

(b) Enhance mode

- Save debug information to the USB memory or HDD as needed.

14.3.3 TX Debug Log Settings

- To configure settings used to send debug information via the network.
- To send the information via the network, SMB transmission or FTP transmission is selectable.
- This item will be displayed only when [Acquiring Mode] is set to "Basic."

(1) Select TX Method**(a) Use**

- To select a method used to send via the network.

(b) Default setting

- "OFF"

(c) Setting item

- "OFF"
- SMB
- FTP

(2) SMB Setting**(a) Use**

- To configure settings used in SMB transmission.

(b) Procedure

<Host Name>

- Set the host name of the SMB server.

<File Path>

- Set the file path used in SMB server transmission.

<User Name>

- Set the user name used to access the SMB server.

<Password>

- Set the password used to access the SMB server.

(3) FTP Setting**(a) Use**

- To configure settings used in FTP transmission.

(b) Procedure

<Host Name>

- Set the host name of the FTP server.

<File Path>

- Set the file path used in FTP server transmission.

<User Name>

- Set the user name used to access the FTP server.

<Password>

- Set the password used to access the FTP server.

<Port Number>

- Set the port number used to access the FTP server.

<PASV>

- Set PASV mode to ON or OFF.

<Proxy>

- Set whether or not to connect to a proxy server.

14.3.4 USB Password**(1) Use**

- To set a password used to store debug information into a USB flash drive.

- CE informs the KMBT contact person of this password and the debug information data separately.

NOTE

- **NEVER forget the USB password.**

(2) Default setting

- 01234567890123456789

(3) Procedure

- Enter an USB password from the keyboard on the screen.
 1. Current Password: Enter the USB password currently in use.
 2. New Password: Enter a new USB password.
 3. Re-input Password: Re-enter the new USB password.

14.4 Operation of the debug log function**14.4.1 Basic mode****(1) Intended purpose**

- To retrieve the program sequence logs from the MFP; for analyzing field problems caused by MFP controller program malfunction which could be difficult to reproduce in KMBT.

NOTE

- **CE should get permission from CUSTOMER before retrieving the program sequence logs from the customer's MFP.**

(2) Outline

1. Save the key file in the USB memory by using the Key generate utility on the PC.
2. Set the Debug Settings to "ON" in the Service Mode.
3. Set the data encryption password through the customer administrator.
4. Try to reproduce the problem/malfunction on the MFP.
5. The problem/malfunction is reproduced.
6. Set the debug log acquisition to "Allow" in Administrator Settings.
7. Select the debug log(s) that corresponds to the problem. Select "USB Memory" as the output destination and acquire the log(s).
8. Send the log(s) and the USB password to the department of KMBT from which you receive instructions.

NOTE

- **Up to a total of 20 log files can be saved, including ten during normal operations and another ten when errors occur.**
- **When the number of log files saved exceeds the upper limit, the log files are overwritten in chronological order.**
- **Each log file is concerned with a single job.**
- **Priority is given to job processing. A log file may not therefore be saved if jobs are performed continuously or if power is turned OFF immediately after processing of a job has been completed.**

(3) Details of the procedure**(a) Advance preparation**

- Save a key file into a USB memory.
 1. Set the USB Password on the Key generation utility.
 2. Generate the Key file by typing in the Serial number (capital letter) of the target MFP.
 3. Copy the created "Debug Log" folder into the root directory of the USB memory.
- Make sure that [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#) is set to OFF.

(b) Settings for acquiring logs

1. Get permission from the CUSTOMER to retrieve the program sequence logs from the MFP at the customer's site.

NOTE

- **Logs include the MFP control program sequences only. They do not include the copy/scan/print/fax image data.**

2. Set the switch number No.155 to [00000001] at Bit assignment/[01] at HEX assignment in [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#).
3. [Call the Debug Settings to the screen.](#)
4. Select [Basic] in [\[Debug Settings\]](#) -> [\[Acquiring Mode\]](#).
5. Ask the administrator of the MFP to set a debug log encryption passphrase in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[HDD Settings\]](#) -> [\[Debug Log Encryption Settings\]](#). (Default: 01234567890123456789)

NOTE

- **This setting is used to encrypt debug logs to be stored in the HDD.**
- **Be sure to set the encryption password. Failure to set the encryption password may hamper correct analysis of the log.**

6. Try to reproduce the problem/malfunction on MFP.
7. The problem/malfunction is reproduced.
8. Ask the administrator of the MFP to set [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Security Details\]](#) -> [\[Export Debug Log\]](#) to [Allow].
9. Call the Debug Settings in Service Mode.
10. Set the USB password in [\[Debug Settings\]](#) -> [\[USB Password\]](#).

NOTE

- **The USB password set here must be same as the password set in the USB memory in advance preparation procedure.**

11. Call [\[Debug Settings\]](#) -> [\[Debug Log Output\]](#) to the screen.
12. Connect the USB memory prepared in advance preparation to the USB port located on the right-side of the MFP control panel.
13. Touch [Select File]. Select the intended file and touch [Output] in [\[HDD -> USB Memory\]](#).
14. Check that the Start key lights up in blue, and press the Start key.

NOTE

- If the Start key lights up orange, the USB password and/or MFP serial number on for the MFP do not match the key file.

15. [OK] will be displayed.

16. Touch [OK], and exit the Debug Settings.

17. Return the switch No. 155 to [00000000] at Bit assignment/[00] at HEX assignment in [\[Service Mode\] -> \[System 2\] -> \[Software Switch Setting\]](#).

18. Exit the Service Mode.

19. Remove the USB memory from the MFP and check that the USB memory contains the file of which name is "LOGSYS_XXXXXXXXX.log".

20. Send KMBT your request of analyzing the problem with the log file.

NOTE

- Send the USB password and log file(s) to the recipient of your request SEPARATELY.

14.4.2 Enhance mode**(1) Intended purpose**

- To retrieve the program sequence logs from the MFP; for analyzing field problems caused by MFP controller program malfunction which could be difficult to reproduce in KMBT.

NOTE

- CE should get permission from CUSTOMER before retrieving the program sequence logs from the customer's MFP.
- Please explain to the CUSTOMER that the MFP performance will be down during the procedure. The top priority of the MFP is to save the logs completely before starting the next job process; so the CUSTOMER will see a pause between jobs.

(2) Outline

1. Save the key file in the USB memory by using the Key generate utility on the PC.
2. Set the Debug Settings to "ON" in the Service Mode.
3. Set the data encryption password through the customer administrator.
4. Select the target device (USB memory or HDD) to save the log files.
 - When selecting USB memory as target, ask the administrator of the MFP to set [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Export Debug Log] to [Allow].
 - Connect the USB memory into the USB port on the right-rear side of the MFP.
5. Try to reproduce the problem/malfunction on the MFP.
6. The problem/malfunction is reproduced
7. Remove the USB memory if you select USB memory as a target device. (Go to step 9)
8. When selecting HDD as target, ask the administrator of the MFP to set [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Export Debug Log] to [Allow].
 - Save a key file into a USB memory.
9. Send the log(s) and the USB password to the department of KMBT from which you receive instructions SEPARATELY.

(3) Details of the procedure**(a) Advance preparation**

- Save a key file into a USB memory.
 1. Set the USB Password on the Key generation utility.
 2. Generate the Key file by typing in the Serial number (capital letter) of the target MFP.
 3. Copy the created "Debug Log" folder into the root directory of the USB memory.
- Make sure that [\[Administrator Settings\] -> \[Security Settings\] -> \[Enhanced Security Mode\]](#) is set to OFF.

(b) Settings for acquiring logs (When selecting USB memory as a target device)

1. Get permission from the CUSTOMER to retrieve the program sequence logs from the MFP at the customer's site.

NOTE

- Logs include the MFP control program sequences only. They do not include the copy/scan/print/fax image data unless selecting printer.
- Please explain to the CUSTOMER that the MFP performance will be down during the procedure. The top priority of the MFP is to save the logs completely before starting the next job process; so the CUSTOMER will see a pause between jobs.

2. Set the switch number "155" to "01" in HEX Assignment in [\[Service Mode\] -> \[System 2\] -> \[Software Switch Setting\]](#).

3. Call the Debug Settings to the screen.

4. Select [Enhance] in [Debug Settings] -> [Acquiring Mode].

5. Select the target logs.

NOTE

- DO NOT TOUCH the command settings (Individual Command and Command Set) without KMBT instructions.

6. Set the USB password in [\[Debug Settings\] -> \[USB Password\]](#).

NOTE

- The USB password set here must be same as the password set in the USB memory in advance preparation procedure.

7. Exit the Service Mode.

8. Ask the administrator of the MFP to set [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Export Debug Log] to [Allow].

9. Connect the USB memory into the USB port on the right-rear side of the MFP.

10. Try to reproduce the problem/malfunction on MFP.

Cautions when saving log files each time the problem/malfunction is reproduced

- Saved Logs will not be overwritten. USB memory should have enough capacity to save the all logs.
- Debug log function will stop if USB memory is FULL.

- While saving the log data, a specific ICON will appear on the control panel. DO NOT REMOVE the USB memory when the ICON is displayed.

11. The problem/malfunction is reproduced.
12. Return the switch number "155" in HEX Assignment to "00" in [Service Mode] -> [System 2] -> [Software Switch Setting].
13. Exit the Service Mode.
14. Remove the USB memory from the MFP and check that the USB memory contains the file of which name is "LOGSYS_XXXXXXXXXX.log".
15. Send KMBT your request of analyzing the problem with the log file.

NOTE

- Send the USB password and log file(s) to the recipient of your request SEPARATELY.

(c) Settings for acquiring logs (When selecting HDD as a target device)

1. Get permission from the CUSTOMER to retrieve the program sequence logs from the MFP at the customer's site.

NOTE

- Logs include the MFP control program sequences only. They do not include the copy/scan/print/fax image data unless selecting printer.
- Please explain to the CUSTOMER that the MFP performance will be down during the procedure. The top priority of the MFP is to save the logs completely before starting the next job process; so the CUSTOMER will see a pause between jobs.

2. Set the switch number "155" to "01" in HEX Assignment in [Service Mode] -> [System 2] -> [Software Switch Setting].
3. Call the Debug Settings to the screen.
4. Select [Enhance] in [Debug Settings] -> [Acquiring Mode].
5. Select the target logs.

NOTE

- DO NOT TOUCH the command settings (Individual Command and Command Set) without KMBT instructions.

6. Set the USB password in [Debug Settings] -> [USB Password].

NOTE

- The USB password set here must be same as the password set in the USB memory in advance preparation procedure.

7. Exit the Service Mode.
8. Ask the administrator of the MFP to set a debug log encryption passphrase in [Administrator Settings] -> [Security Settings] -> [HDD Settings] -> [Debug Log Encryption Settings]. (Default: 01234567890123456789)

NOTE

- This setting is used to encrypt debug logs to be stored in the HDD.
- Be sure to set the encryption password. Failure to set the encryption password may hamper correct analysis of the log.

9. Try to reproduce the problem/malfunction on MFP.
10. The problem/malfunction is reproduced.
11. Ask the administrator of the MFP to set [Administrator Settings] -> [Security Settings] -> [Security Details] -> [Export Debug Log] to [Allow].
12. Call [Debug Settings] -> [TX Debug Log Settings] to the screen.
13. Connect the USB memory prepared in advance preparation to the USB port located on the right-side of the MFP control panel.
14. Touch [Select File]. Select the intended file and touch [Output] in [HDD -> USB Memory].
15. Check that the Start key lights up in blue, and press the Start key.

NOTE

- If the Start key lights up orange, the USB password and/or MFP serial number on for the MFP do not match the key file.

16. [OK] will be displayed.
17. Touch [OK], and exit the Debug Settings.
18. Return the switch number "155" in HEX Assignment to "00" in [Service Mode] -> [System 2] -> [Software Switch Setting].
19. Exit the Service Mode.
20. Remove the USB memory from the MFP and check that the USB memory contains the file of which name is "LOGSYS_XXXXXXXXXX.log".
21. Send KMBT your request of analyzing the problem with the log file.

NOTE

- Send the USB password and log file(s) to the recipient of your request SEPARATELY.

16. MECHANICAL ADJUSTMENT bizhub C554/C454

16.1 Scanner section

16.1.1 Adjustment of the scanner motor belt

(1) Purpose

This adjustment must be made in the following case:

- The scanner motor assy has been removed.

(2) Procedure

1. Attach the spring to the scanner motor assy [1].
2. Temporarily secure the scanner motor assy [1] with three screws [2].

NOTE

- The screws [2] should be temporarily tightened to a degree that the position of the motor can be adjusted by the spring force.

3. Attach the drive belt [1] to the pulley and make sure that the belt deflection is not excessive and the belt tension is not too tight.

NOTE

- Make sure that the drive belt [1] is properly kept tight by the spring [2] force.
- If the deflection or tension of the drive belt [1] is excessive, the scanner unit does not work correctly. This may result in trouble.

4. Turn the pulley and make sure that the belt does not ride over the pulley's teeth.

5. Tighten the screw [1] of the scanner motor assy.
6. Tighten two screws [2] of the scanner motor assy and fix it.

NOTE

- After securing the scanner motor assy, check again that the deflection and tension of the drive belt [3] are not excessive.

16.2 Control panel section

16.2.1 Fixing the control panel

(1) Use

- To fix the control panel in a slid position.
- Use the function to fix the control panel in a slid position and permit ten-key pad operation at all times.

(2) Procedure

1. Prepare screws for fixing.
Bind machine screws (Parts No.: V118 0308 03) 3 x 8 mm

NOTE

- Be sure to use the specified screw. Any screws not specified may not reach the fixing bracket or have threads damaged.

2. Bring the control panel up to the front.

3. Remove the cover [1] from the backside of the control panel.

4. Slide the touch panel and fix it in position [2] using the fixing screw [1].

5. Reinstall the cover to the backside of the control panel.

16.2.2 Adjustment of the slide amount

(1) Use

- To adjust the sliding amount of the control panel.
- When a keyboard is mounted on the machine, the control panel interferes with the keyboard as it is slid all the way. The sliding amount is adjusted to avoid this situation.

(2) Procedure

1. Bring the control panel up to the front.

2. Remove the cover [1] from the backside of the control panel.

3. Using a hexagon wrench, loosen screw [1].
4. Move the touch panel [2] of the control panel and move the screw to the position [3] shown.

5. Tighten the screw.
6. Reinstall the cover to the backside of the control panel.

16.3 Paper feed section

16.3.1 Centering adjustment of the tray 1/2

(1) Purpose

This adjustment must be made in the following case:

- When an image printed on a copy is displaced from the correct position with the use of the tray 1/2.

(2) Procedure

1. Make a test print and check the amount of misalignment.
2. Pull out the tray where this adjustment is made.

3. Stretch the paper guides [1] to the maximum size position.

4. Loosen two screws [1].

5. Move the paper guides [1] complete according to the amount of the mis-centering you checked in step 1 and adjust the center position of it.
6. Tighten two screws [2].

7. Make another test print and check the amount of misalignment.

16.3.2 Pick-up pressure adjustment of the tray 1/2

(1) Purpose

This adjustment must be made in the following case:

- When paper jam occurs while thin paper (52 g/m²) is fed.

(2) Procedure

1. Remove the paper feed unit.

[G.5.3.2 Paper feed unit](#)

2. Remove the spring [1] stored for replacement from the paper feed unit.

3. Remove the C-clip [1], and remove the tray 2 pick-up roller [2].

4. Remove the bearing [1].

5. Remove two E-rings [1], and remove the shaft [2] of the pick-up roller.

6. Remove the spring [1] and replace it with the replacement spring prepared in step 3.

NOTE

- The pick-up pressure of the tray 1 can be adjusted by replacing the spring of the tray 1 paper feed unit with the replacement spring prepared in step 3.

7. To reinstall, reverse the order of removal.
8. Make a test print to check whether paper is fed properly.

16.3.3 Separator roller pressure adjustment of the bypass tray

(1) Purpose

This adjustment must be made in the following case:

- When paper jam occurs with a specific type of thick paper (300 g/m²) is fed.

(2) Procedure

1. Open the right door.

2. Remove the screw [1], and remove the cover [2].

3. Hold the edge of the spring [1] with a plier, etc, to pull it off the hook part [2].
4. Hook the edge of the removed spring to the hook part [3] shown on the illustration.

5. Make a test print to check whether paper is fed properly.
6. When returning the pressure to the original status, return the hook of the spring in reverse steps.

16.3.4 Adjustment of the bypass CD paper size VR

(1) Purpose

This adjustment must be made in the following case:

- The bypass CD paper size VR has been removed.

(2) Procedure

1. Align the match mark [1] on the bypass guide rack gear with the groove on the gear rim at two places and install two bypass guide rack gears [2].

2. When installing the bypass CD paper size VR Assy [3], make sure that the part [1] (pointed by the arrow) on the bypass guide rack gear and the gear's hole [2] on the bypass CD paper size VR Assy are placed in a straight line.
3. Secure the bypass CD paper size VR Assy with two screws.

4. After the bypass CD paper size VR base has been mounted, check that the lever of the bypass CD paper size VR moves smoothly in a manner operatively connected to the bypass guide.
5. Call the Service Mode to the screen and select [\[Machine\] -> \[Manual Bypass Tray Width Adj.\]](#). Then, carry out manual bypass tray width adjustment.

16.4 Fusing section

16.4.1 Adjusting the parallelism of the fusing unit path

(1) Purpose

This adjustment must be made in the following case:

- When the second transfer paper feed path and the fusing section path are not parallel and caused wrinkles on the paper.

(2) Procedure

1. Remove the fusing unit

[F.6.11.1 Replacing the fusing unit \(C554\)](#)

[F.6.11.2 Replacing the fusing unit \(C454\)](#)

2. Remove the screw [1] for the fusing unit positioning material.

3. Remove the screw [1], and remove the fusing unit positioning material [2].

[1]

4. 0.6 mm adjusting shim plate [1] is installed as the standard status. Add or reduce the number of shims to adjust the parallelism.
- Removing the standard adjusting shim plate: The fusing unit mounting position (front side) will move down by 0.6 mm.
 - Adding one adjusting shim plate: The fusing mounting position (front side) will move up by 0.6mm.
- Adjusting shim plate parts number: A161 1126##

5. To reinstall, reverse the order of removal.
6. Make a test print to check whether paper is fed properly.

17. MECHANICAL ADJUSTMENT DF-701

17.1 Original document feed section

17.1.1 Adjusting the height

(1) Purpose

This adjustment must be made in the following case:

- When the dual scan document feeder has been reinstalled.

(2) Procedure

1. Check the clearance between the upper face of scanner and the protrusion [1] on the dual scan document feeder side (3 spots).

NOTE

- There must be no clearance between the protrusion [1] on the dual scan document feeder and the upper face of scanner.

2. If there is any clearance, the following adjustment is needed.

3. Remove the clearance by turning the adjusting screw [1].
 - Clockwise rotation: Lifting up the rear side
 - Counterclockwise rotation: Lowering the rear side
4. Use the adjusting screw [2] when further adjustment is needed.
 - Clockwise rotation: Lifting up the rear side
 - Counterclockwise rotation: Lowering the rear side

17.1.2 Adjusting front side skew feed on ADF

(1) Purpose

This adjustment must be made in the following case:

- When the dual scan document feeder has been reinstalled.

(2) Procedure

1. Check how the edges of the chart are misaligned. The amount of the deviation of the chart will be X.

Deviation in + (plus)

Deviation in - (minus)

2. Place the chart [1] in the document feed tray (with the side having an arrow facing up).

Deviation in + (plus) Deviation in - (minus)

3. Make copies 5 times repeatedly in single side mode.
4. Fold all 5 sample copies as illustrated and check for any deviation. Deviation on the sample will be Y.
5. Obtain the difference between the deviation of the chart and the deviation of the sample.
Difference of the deviation = $Y - X$
Specifications: 0 ± 2 mm
6. If the difference of the deviation does not fall within the specified range, perform the following adjustment.

7. Loosen the mounting screw [1] on the right hinge viewed from the front.

8. Loosen the nut [1] shown in the illustration.

9. When the difference of the deviation is + (plus), turn the adjustment screw [1] located at the back of the dual scan document feeder counterclockwise to adjust.

NOTE

- Look at the guide lines [2] when making the adjustment.
- When turning the screw, be sure not to raise the dual scan document feeder until in an upright position.
- To prevent the adjustment screw [1] breakage, be sure to follow the above instructions.

10. When the difference of the deviation is - (minus), turn the adjustment screw [1] located at the back of the dual scan document feeder clockwise to adjust.

NOTE

- Look at the guide lines [2] when making the adjustment.
- When turning the screw, be sure not to raise the dual scan document feeder until in an upright position.
- To prevent the adjustment screw [1] breakage, be sure to follow the above instructions.

11. Tighten the nut [1] shown in the illustration.

12. After the adjustment is completed, tighten the mounting screw [1] on right side hinge securely with screwdriver.

**17.1.3 Adjusting back side skew feed on ADF****(1) Purpose**

This adjustment must be made in the following case:

- When the dual scan document feeder has been reinstalled.
- When the CIS module has been reinstalled.

(2) Procedure

1. Check how the edges of the chart are misaligned. The amount of the deviation of the chart will be X.

Deviation in + (plus) Deviation in - (minus)

2. Place the chart [1] in the document feed tray (Set the chart with its blank side facing upward).

Deviation in + (plus) Deviation in - (minus)

3. Make copies 5 times repeatedly in 2-side mode.
4. Fold all 5 sample copies as illustrated and check for any deviation. Deviation on the sample will be Z.
5. Obtain the difference between the deviation of the chart and the deviation of the sample.
Difference of the deviation = $Z - X$
Specifications: 0 ± 2 mm
6. If the difference of the deviation does not fall within the specified range, perform the following adjustment.

7. Remove the front cover of the dual scan document feeder.
[G.6.2.1 Front cover \(DF-701\)](#)

8. Loosen two screws [1].

9. Depending on the difference of the deviations, turn the adjustment dial [1] using the marks [2] as a guide.
 - When the difference is a positive (+) value, turn the dial clockwise.
 - When the difference is a negative (-) value, turn the dial counterclockwise.

10. After completing the adjustment, tighten the screw loosened in step 8.
11. Make duplex sample copies and check the distance Z.
12. Install the front cover.

17.1.4 Adjusting the pressure of the separation roller

(1) Purpose

This adjustment must be made in the following case. The adjustment is available in two different levels.

- Original misfeed often occurs.

(2) Procedure

1. Open the left cover [1].

2. Grip both sides [1] of the holder and remove the cover [2].

3. Remove the spacer [1] shown on the illustration.

4. Set the spacer to the lower part of the spring in the direction shown on the illustration (with deeper groove facing upper side).

NOTE

- When this procedure does not improve the situation, carry out the adjustment below for the stronger spring force.

5. Set the spacer to the lower part of the spring in the direction shown on the illustration (with shallow groove facing upper side).

18. MECHANICAL ADJUSTMENT PC-210/PC-110

18.1 Paper reference position

18.1.1 Purpose

This adjustment must be made in the following case:

- When the PH unit has been replaced.
- When the image on the print is offset in the main scan direction.
- When adjustment in the following screen does not resolve a problem.
[Service Mode] -> [Machine] -> [Printer Area] -> [Printer Image Centering Side 1].

NOTE

- When the optional finisher FS-534 is installed, mechanical adjustment is necessary before adjustment [Printer Image Centering Side 1].

18.1.2 Procedure

1. Measure the width of printed reference line A.
Specification: 3.0 mm $\pm$ 1.0 mm

2. Slide out the tray [1] and unload paper from it.
3. Loosen three screws [2] at the center of the paper lifting plate.

4. Watching the graduations [1] provided in the drawer, move the paper width guide [2] in the rear.
 - If width A is greater than the specified value, move the paper width guide toward the front.
 - If width A is smaller than the specified value, move the paper width guide toward the rear.

5. Tighten three screws which have been loosened.
6. Perform another test print and check the reference deviation.

19. MECHANICAL ADJUSTMENT PC-410

19.1 Paper reference position

19.1.1 Purpose

This adjustment must be made in the following case:

- When the PH unit has been replaced.
- When the image on the print is offset in the main scan direction.
- When adjustment in the following screen does not resolve a problem.

[Service Mode] -> [Machine] -> [Printer Area] -> [Printer Image Centering Side 1]. [I.19.2 Shifter movement timing belt adjustment](#)

NOTE

- When the PH unit has been replaced.

19.1.2 Procedure

1. Measure the width of printed reference line A.
Specification: 3.0 mm $\pm$ 1.0 mm

2. Slide out the paper feed tray [1] and unload paper from it.
3. Loosen six screws [2].

4. Watching the graduations [1] provided near the screws, move the front cover assy [2].
 - If width A is greater than the specified value, move the front cover assy toward the rear.
 - If width A is smaller than the specified value, move the front cover assy toward the front.

5. Tighten six screws which have been loosened.
6. Perform another test print and check the reference deviation.

19.2 Shifter movement timing belt adjustment

19.2.1 Procedure

1. Remove the paper feed tray.
[G.7.3.4 Paper feed tray \(PC-410\)](#)

2. While raising the main tray [1], and remove two screws [2] that hold the shift tray in position.

NOTE

- When reinstalling, use caution because the wire of the main tray [1] comes off easily.

3. Remove the shift tray [3].

4. Move the sifter.
5. Loosen the tension pulley assy fixing screw [1] and move it in the direction of the arrow.
6. After moving the shifter, tighten the tension pulley assy fixing screw [1].

20. MECHANICAL ADJUSTMENT LU-204

20.1 Paper feed section

20.1.1 Centering adjustment of the LCT

(1) Purpose

This adjustment must be made in the following case:

- When adjustment in the following screen does not resolve a problem.

[Service Mode] → [Machine] → [Printer Area] → [Centering]

[I.11.3.5.\(2\) Printer Image Centering Side 1](#)

(2) Procedure

1. [Call the Service Mode to the screen.](#)
2. Touch [Machine].
3. Touch [Printer Area].
4. Touch [Centering].
5. Touch [LCT].
6. Press the Start key to let the machine produce a test print.

7. Measure the width of printed reference line A.
Specification: 3.0 mm ± 1.0 mm

8. If the measured width A falls outside the specified range, enter the correction value using the [-] or [+] key.
9. Produce another test print and check to see if width A falls within the specified range.
10. If the use of the [-] or [+] key does not allow the measurement to fall within the specified range, perform the following steps.

11. Open the upper door on LCT to loosen eight screws [1].

NOTE

- During adjustment, in order to keep the same distance between the paper guide side plates, place a sheet of paper between the paper guide side plates with 1.0 mm apart from each of the plates.

12. When the width A is larger than the standard value:
Move the paper guide side plates [2] leftward and tighten eight loosened screws [1].

13. When the width A is smaller than the standard value:
Move the paper guide side plates [2] rightward and tighten eight loosened screws [1].

14. Load paper and let the machine produce another test print. Then, check width A.
15. Make the adjustment until width A falls within the specified range.

20.1.2 Pick-up roller load adjustment of the LCT

(1) Purpose

This adjustment must be made in the following case:

- In case a no feed jam occurs frequently, perform the pick-up roller load adjustment.

(2) Procedure

1. Open the upper door.

2. Remove the screw (M3 x 8 mm: V116 0308 03) [1] and remove the paper assist plate assy [2].

3. Remove the screw [1] and remove the assist handle [2].

4. Add one more paper assist plate (A03N 5604 ##) [1] to the original ones.

NOTE

- Adding only one paper assist plate is allowed and the total needs to be up to four.

5. Reinstall the assist handle that was removed in step 3, securing it with the screw.
6. Reinstall the paper assist plate assy with a new screw (M3 X 10 mm: V118 0310 03).
The screw removed in step 2 (M3 X 8 mm: V116 0308 03) cannot be used to reinstall the assy.
7. Close the upper door.
8. Perform copying/printing to check whether the no feed or the double feed occurs or not.

21. MECHANICAL ADJUSTMENT LU-301

21.1 Paper feed section

21.1.1 Centering adjustment of the LCT

(1) Purpose

This adjustment must be made in the following case:

- When adjustment in the following screen does not resolve a problem.

[Service Mode] → [Machine] → [Printer Area] → [Centering]

[I.11.3.5.\(2\) Printer Image Centering Side 1](#)

(2) Procedure

1. Call the Service Mode to the screen.
2. Touch [Machine].
3. Touch [Printer Area].
4. Touch [Centering].
5. Touch [LCT].
6. Press the Start key to let the machine produce a test print.

7. Measure the width of printed reference line A.
Specification: 3.0 mm ± 1.0 mm

8. If the measured width A falls outside the specified range, enter the correction value using the [-] or [+] key.
9. Produce another test print and check to see if width A falls within the specified range.
10. If the use of the [-] or [+] key does not allow the measurement to fall within the specified range, perform the following steps.

11. Open the upper door on LCT to loosen four screws [1].

NOTE

- During adjustment, in order to keep the same distance between the paper guide side plates, place a sheet of paper [2] between the paper guide side plates with 1.0 mm apart from each of the plates.

12. When the width A is larger than the standard value.
Move the paper guide side plates [2] leftward and tighten four loosened screws [1].

13. When the width A is smaller than the standard value.
Move the paper guide side plates [2] rightward and tighten four loosened screws [1].

14. Load paper and let the machine produce another test print. Then, check width A.
15. Make the adjustment until width A falls within the specified range.

21.1.2 Pick-up roller load adjustment of the LCT

(1) Purpose

This adjustment must be made in the following case:

- In case a no feed jam occurs frequently, perform the pick-up roller load adjustment.

(2) Procedure

1. Open the upper door.

2. Remove the screw (M3 x 8 mm: V116 0308 03) [1] and remove the paper assist plate assy [2].

3. Remove the screw [1] and remove the assist handle [2].

4. Add one more paper assist plate (A03N 5604 ##) [1] to the original ones.

NOTE

- Adding only one paper assist plate is allowed and the total needs to be up to four.

5. Reinstall the assist handle that was removed in step 3, securing it with the screw.
6. Reinstall the paper assist plate assy with a new screw (M3 X 10 mm: V118 0310 03).
The screw removed in step 2 (M3 X 8 mm: V116 0308 03) cannot be used to reinstall the assy.
7. Close the upper door.
8. Perform copying/printing to check whether the no feed or the double feed occurs or not.

22. MECHANICAL ADJUSTMENT PK-519

22.1 Punch section

22.1.1 Punch hole deviation correction

(1) Purpose

This adjustment must be made in the following case:

- The punch holes are on a slanted line.

(2) Procedure

1. Set the mode to Punch mode for printing.
2. Hold the output paper half and check the displacement of the punch hole.
Standard value: 0 ± 2.0 mm

3. If the positional deviation of the punch holes is not within the accepted range, take the following steps.

4. Slide the finisher by pulling its lever.

5. Remove the C-clip [1], and remove the lever [2].

6. Remove the screw [1], and remove the cover [2].

7. Loosen the screw [1].

8. Move the punch unit [1] back and forth to adjust its position, referring to the guide lines.

9. Make a copy and check the punch hole positions again.
10. Make a copy and check the punch hole positions again.

23. MECHANICAL ADJUSTMENT PK-520

23.1 Punch section

23.1.1 Punch hole deviation correction

(1) Purpose

This adjustment must be made in the following case:

- The punch holes are on a slanted line.

(2) Procedure

1. Set the mode to Punch mode for printing.
2. Hold the output paper half and check the displacement of the punch hole.
Standard value: 0 ± 2.0 mm

3. In case the figure exceeds the above mentioned standard value, follow the procedures shown below.

4. Open the upper cover [1].

5. Loosen two screws [1].

6. Using the triangle marks [1] on the plate as a guide, move the punch unit [2] back and forth to adjust its position.

24. MECHANICAL ADJUSTMENT SD-511

24.1 Paper exit section

24.1.1 Half-fold skew adjustment

(1) Purpose

This adjustment must be made in the following case:

- Fold line goes off the tolerance in the half-fold mode.
- When reinstalling the guide plate assy, perform mechanical adjustment.

(2) Procedure

1. Make a copy in the half-fold mode.
2. Unfold the paper that exits the machine and lay the paper with the ridge facing up.

3. Confirm the skew of the fold line [1] of the output copy sample (Widths of A1 and A2)
Standard value: $A1-A2=\pm 1.0$ mm
4. In case the figure exceeds the above mentioned standard value, follow the adjustment procedures below.

5. Open the front door of the finisher.
6. Pull the saddle unit.

7. Loosen two screws [1].

8. Loosen two screws [1].

9. Incline the guide plate assy [1] forward or backward according to the deviation of the crease

In case the cease [1] skews as the right side:

- In case the cease [1] skews as the right side:
Incline the guide plate assy backward.
- In case the cease [1] skews as the left side:
Incline the guide plate assy forward.

In case the cease [1] skews as the left side:

10. Make the copy sample again to confirm the cease skew.

11. Reinstall the above parts following the removal steps in reverse.

25. MECHANICAL ADJUSTMENT PK-521

25.1 Punch section

25.1.1 Punch hole deviation correction

(1) Purpose

This adjustment must be made in the following case:

- The punch holes are on a slanted line.

(2) Procedure

1. Insert a piece of paper [1] into the finisher's interlock to turn it ON.

2. Turn ON the Main power switch of the machine, and make sample copies for both the single-side and double-side with any tray in Punch mode.
3. Fold the output paper in half and check whether the punch holes are aligned. If the punch holes are misaligned, make the following adjustment.

4. Remove three screws [1], and remove the punch kit cover [2].

5. Loosen four screws [1] and move the punch kit to the left or right by the amount that needs to be corrected referring to the mark [2].
 - Wider at the rear [3]: Move the punch kit to the left.
 - Wider at the front [4]: Move the punch kit to the right.

6. Make copies in punch mode again and check that punch holes are not on the slanted line.

25.1.2 Centering adjustment of the punch kit

(1) Purpose

This adjustment must be made in the following case:

- Centering is not correct in punching.

(2) Procedure

1. Insert a piece of paper [1] into the finisher's interlock to turn it ON.

2. Place approx. 10 sheets of A4 paper on the manual feed tray and make copies in punch mode.

3. When the machine is punching, the connecting plate [1] stops. Check the alignment between the middle line (among the three lines on the connecting plate) and the plate [2] shown in the illustration.

4. If the punch holes are misaligned significantly, make the following adjustment.

5. Remove the screw [1] and slide the finisher as shown in the illustration.

6. Loosen two screws [1], and move the mounting plate [2] backward or forward by the amount that corrects misalignment.

- If the plate [3] is off to the backward: Move the mounting plate [2] to the backward.

- If the plate [3] is off to the frontward: Move the mounting plate [2] to the frontward.

7. Make copies in punch mode with paper fed from each tray and perform a check as shown in step 3.
8. If punch holes are still deviated from the appropriate position, make centering adjustment in each tray.

26. MECHANICAL ADJUSTMENT SD-512

26.1 Paper exit section

26.1.1 Half-fold skew adjustment

(1) Purpose

This adjustment must be made in the following case:

- Fold line goes off the tolerance in the half-fold mode.
- When reinstalling the guide plate assy, perform mechanical adjustment.

(2) Procedure

1. Make a copy in the half-fold mode.
2. Unfold the paper that exits the machine and lay the paper with the ridge facing up.

3. Confirm the skew of the fold line [1] of the output copy sample (Widths of A1 and A2)
Standard value: $A1-A2=\pm 1.0$ mm
4. In case the figure exceeds the above mentioned standard value, follow the adjustment procedures below.

5. Open the front door of the finisher.
6. Pull the saddle unit.

7. Loosen two screws [1].

8. Loosen two screws [1].

9. Incline the guide plate assy [1] forward or backward according to the deviation of the crease.

In case the cease [1] skews as the right side:

- In case the cease [1] skews as the right side:
Incline the guide plate assy backward.
- In case the cease [1] skews as the left side:
Incline the guide plate assy forward.

In case the cease [1] skews as the left side:

10. Make the copy sample again to confirm the cease skew.

11. Reinstall the above parts following the removal steps in reverse.

27. MECHANICAL ADJUSTMENT PI-505

27.1 PI displacement adjustment (with PK-521 installed)

27.1.1 Purpose

This adjustment must be made in the following case:

- When the punch position is displaced when feeding from PI.

NOTE

- Punch hole deviation correction must be completed before making this adjustment.
[I.25.1.1 Punch hole deviation correction](#)
- Centering adjustment of the tray 1/2 must be completed before making this adjustment.
[I.16.3.1 Centering adjustment of the tray 1/2](#)
- Paper reference position adjustment of optional tray 3/4 must be completed before making this adjustment.
[I.18.1 Paper reference position](#)
[I.19.1 Paper reference position](#)
- In the PI displacement adjustment, adjust the tray /Up, and then adjust the tray /Lw.

27.1.2 Procedure

(1) In the upper tray case

- Set three sheets of paper in the tray of the PI, and then feed them in the punch mode as samples.
- Fold the sheets in half at the center and check the misalignment of the punch holes.
- Release the hook [1], and remove the adjustment cover [2].

- Loosen two adjustment screws [1] on the side guide plate /Rr [2] and slide the side guide plate /Rr half as long as the misalignment of the punch hole position (for example, if the misalignment is 3 mm to the rear, slide 1.5 mm to the rear).
1 index: 2 mm

- Fully tighten the adjustment screws to secure the side guide plate /Rr.
- For the tray /Lw, reinstall the side guide plate /Rr with two screws.
- Repeat step 1 to 6 until the misalignment of the punch holes is corrected.
- Reinstall the adjustment cover.
- In the service mode, perform [Post Inserter Adjustment].
[I.11.26.15 FS-FN adjustment - Post Inserter Adjustment](#)

(2) In the lower tray case

- Set three sheets of paper in the tray of the PI, and then feed them in the punch mode as samples.
- Fold the sheets in half at the center and check the misalignment of the punch holes.
- Remove the adjustment cover in the same way as the upper tray case.
Remove two screws [1], slide the side guide plate /Rr [2] to the front, and remove it.

4. Loosen two adjustment screws [1] on the side guide plate /Rr [2] and slide the side guide plate /Rr twice as long as the misalignment of the punch hole position (for example, if the misalignment is 1.5 mm to the rear, slide 3 mm to the rear).
1 index: 2 mm

5. Fully tighten the adjustment screws to secure the side guide plate /Rr.
6. For the tray /Lw, reinstall the side guide plate /Rr with two screws.
7. Repeat step 1 to 6 until the misalignment of the punch holes is corrected.
8. Reinstall the adjustment cover.
9. In the service mode, perform [Post Inserter Adjustment].
[I.11.26.15 FS-FN adjustment - Post Inserter Adjustment](#)

28. MECHANICAL ADJUSTMENT ZU-606

28.1 Gate solenoid/Lw adjustment

28.1.1 Purpose

This adjustment must be made in the following case:

- When the gate solenoid/Lw (SD1) is replaced with a new one.

28.1.2 Procedure

- Remove the Z folding unit.
[G.7.12.5 Z folding unit \(ZU-606\)](#)
- Remove the front cover.
[G.7.12.4 Front cover \(ZU-606\)](#)
- Pull out the Z folding/conveyance unit.

- Loosen two screws [1] and then visually adjust so that the gate/Lw [2] maintains the standard value a relative to the guide plate [3]. Then, tighten the two screws [1].
Standard value: a = 3 mm to 5 mm
- Loosen two screws [4] and adjust the gate /Lw [2] so that the clearance between the gate /Lw [2] and the guide plate [3] gets to the standard value "b" while gate solenoid/Lw turns ON and the plunger [5] is pulled, and then tighten two screws [4].
Standard value: b = 2 mm to 4.6 mm

28.2 1st folding skew adjustment

28.2.1 Purpose

This adjustment must be made in the following case:

- When the skew of the 1st folding is not within the standard value.

NOTE

- This adjustment affects the 1st Z-fold position. Be sure therefore to perform [1st Z-fold Position] of the service mode whenever this adjustment has been completed.

[I.11.26.11 FS-FN adjustment - 1st Z-Fold Position/2nd Z-Fold Position](#)

28.2.2 Procedure

- Remove the upper cover.
[G.7.12.2 Upper cover \(ZU-606\)](#)

2. Perform the Z-folding printing operation on A3 or 11 x 17 paper and check to see if the skew of the 1st folding is within the standard value "a".
Standard value: a = 2 mm or less
When the value is not within the standard value, perform the following procedure.

3. Open the front door, and pull out the Z folding/conveyance unit.

4. Remove four screws [1], and remove the conveyance upper cover [2].

5. Loosen four screws [1].
6. Adjust the 1st stopper assembly [2] by moving the front side of the assembly to right and left by referring to the markings [3], and then tighten the four screws [1].
 - When the skew pattern is [4], move the front side of the 1st stopper assembly [2] to the left [5].
 - When the skew pattern is [6], move the front side of the 1st stopper assembly [2] to the right [7].
7. Replace the Z folding/conveyance unit, and then perform the Z-folding printing operation and check to see if the skew of the 1st folding is within the standard value.

8. Repeat steps 5 to 7 until the standard value can be obtained.

28.3 2nd folding skew adjustment

28.3.1 Purpose

This adjustment must be made in the following case:

- When the skew of the 2nd folding is not within the standard value.

NOTE

- This adjustment affects the 2nd Z-fold position. Be sure therefore to perform [2nd Z-fold Position] of the service mode whenever this adjustment has been completed.

[I.11.26.11 FS-FN adjustment - 1st Z-Fold Position/2nd Z-Fold Position](#)

28.3.2 Procedure

1. Perform the Z-folding printing operation on A3 or 11 x 17 paper and check to see if the skew of the 2nd folding is within the standard value "a".
Standard value: a = 2 mm or less
When the value is not within the standard value, perform the following procedure.

2. Open the front door, and pull out the Z folding/conveyance unit.

3. Loosen four screws [1].
4. Adjust the 2nd stopper assembly [3] by moving it vertically by referring to the markings [2], and then tighten the four screws [1].
 - When the skew pattern is [4], move the back side of the 2nd stopper assembly [3] upward [5].
 - When the skew pattern is [6], move the back side of the 2nd stopper assembly [3] downward [7].
5. Replace the Z-folding/conveyance unit, and then perform the Z-folding printing operation and check to see if the skew of the 2nd folding is within the standard value.

6. Repeat steps 4 to 6 until the standard value can be obtained.

28.4 2nd stopper position adjustment

28.4.1 Purpose

This adjustment must be made in the following case:

- When the 2nd folding position cannot be adjusted from the service mode or the skew of the 2nd folding cannot be adjusted by the procedure in "I.28.3 2nd folding skew adjustment."

NOTE

- This adjustment affects the 2nd Z-fold amount and 2nd Z-fold position. Be sure therefore to perform the following adjustment procedure whenever this adjustment has been completed.
 - 2nd folding skew adjustment
[I.28.3 2nd folding skew adjustment](#)
 - [2nd Z-fold Position] of the service mode
[I.11.26.11 FS-FN adjustment - 1st Z-Fold Position/2nd Z-Fold Position](#)

28.4.2 Procedure

1. Conduct the Z-folding printing operation to move the 2nd stopper [1] to the home position, and then turn OFF the main power switch of the main body.
2. Open the front door, and pull out the Z folding/conveyance unit.
3. Check to see if the distance between the 2nd stopper [1] and inside edge of the guide plate [2] is within a standard value.
Standard value: $a = 20 \pm 0.5 \text{ mm}$
4. When the value is not within the standard value, perform the following procedure.
5. Loosen two screws [3] with the hex wrench, and then adjust the distance between the 2nd stopper [1] and the inside of the guide plate [2] so that it gets to the standard value a .

NOTE

- Be sure not to rotate the actuator [5] of the 2nd stopper home sensor [4] during the adjustment. It may be moved from the home position.
- Conduct the following steps 6 to 14 only if you cannot reach to the screws [3] with the hex wrench when they are located in side of the 2nd stopper assembly.

6. Rotate the shaft [2] so that you can reach to two screws [1] with the hex wrench.
7. Loosen two screws [1].
8. Rotate the shaft [2] so that the actuator [3] is roughly positioned to the home position [5] of the 2nd stopper home sensor [4].

NOTE

- **Never remove the screw [6] from the actuator [3].**
- **At the appropriate position, the anti-rotation pin [7] points upward when the actuator [3] faces to the left.**

9. Rotate the pulley [8] to move the 2nd stopper [9] to the position within the standard value.
10. Loosen four screws [10].
11. Lift up the shaft [12] upward enough to remove the belt [11] from the pulley [8], and then rotate the pulley [8] without moving the shaft [2] and the 2nd stopper [9] so that the screw [1] faces outside.
12. Tighten two screws [1].
13. Tighten four screws [10].

NOTE

- **Before tightening the screws [10], be sure to check the tension is exerted on two belts [11].**

14. Repeat the steps 3 to 5 to adjust the 2nd stopper to the position within the standard value.

J REWRITING OF FIRMWARE

- There are two ways to update the firmware: One is by directly connecting with the main body using the USB memory device, and the other is by downloading over a network using the Internet ISW.

NOTE

- **The settings in the "Utility" mode and the "Service Mode" will not be changed, when the firmware is updated.**
- **Rewrite BootROM and install the loadable device driver, OCR dictionary, and PDF/A fonts as necessary depending on the firmware to be rewritten and the user's usage pattern.**

1. Confirming the firmware version

1.1 Procedure

1. [Call the Service Mode to the screen.](#)
2. Select the [Firmware Version].
3. Check if the firmware version is updated.

NOTE

- After conducting firmware updating, check the firmware version No. and confirm that the firmware has been normally updated.

2. USB memory

NOTE

- **USB memory must be connected with the main power switch off.**
- **When updating the firmware, use the service port.**
It cannot be updated when connected to other USB port.

2.1 Preparation

Conditions for USB memory which can be used for updating the firmware are as follows:

- USB flash memory compatible with the USB (1.1/2.0) interface
- Formatted to the FAT32 file system
- Memory capacity of 2GB or less recommended.*1
- Not including security features (Possible to turn OFF security features)
- A USB flash memory that appears as multiple drives on a computer cannot be used.

NOTE

- ***1: Possible to be non-operational products.**

2.2 Procedure

1. Extract the obtained firmware data.
2. Connect the USB to the PC, and copy the extracted firmware data to the root directory of the USB memory.

NOTE

- **More than one firmware data with a single model can be stored in the USB memory.**
In this case, copy the firmware data to the USB memory according to the following procedures.
 1. Copy the firmware data to the root directory of the USB memory.
(When making a folder and storing more than one firmware data, it is also necessary to copy the firmware data to the root directly.)
 2. Make the folder named "FWSelect" (case-sensitive) to the root directory of the USB memory.
 3. Make a folder with any folder name (one byte alphanumeric characters, maximum 40 characters) under "FWSelect" folder, and store the firmware data to the folder.

3. Turn OFF the main power switch.
4. Remove the screw [1].
5. Lift up the cover [2] of the service port.
6. Insert the USB memory device [3] to the service port.

**NOTE**

- USB memory must be connected with the main power switch off.
- When updating the firmware, use the service port.
It cannot be updated when connected to other USB port.

- Turn ON the main power switch.
- Control panel shows F/W items to be updated, and select the particular type of F/W to be updated. (Select [YES].)

Firmware Update Please do not turn off the main SW and Sub-Power!

MFP CONTROLLER	YES NO	ADF(DF-M)	YES NO	DSC1	YES NO

MFP CONTROLLER	SSD board (SSDB)	
SCANNER	MFP board (MFPB)	
PRINTER	Printer control board (PRCB)	
FAX BOARD CONTROLLER1	Fax board/1 (FAXB/1)	Only when FK-511 is mounted
FAX BOARD CONTROLLER2	Fax board/2 (FAXB/2)	Only when FK-511 is mounted
ADF (DF-M)	DF control board (DFCB)	
FINISHER	FS control board (FSCB)	Only when FS-533/FS-534/FS-535 is mounted
RU	FS control board (FSCB)	Only when FS-533/FS-534/FS-535 is mounted
ZU	ZU control board (ZUCB)	Only when ZU-606 is mounted
SD	SD drive board (SDDB)	Only when SD-511/SD-512 is mounted
DSC1	DSC board/1 (DSCB/1)	Only when SC-508 is mounted
DSC2	DSC board/2 (DSCB/2)	Only when SC-508 is mounted

NOTE

- Unless one of the keys on the control panel is pressed, firmware is automatically updated after 30 seconds when the main power switch is turned on.
- When the BootRom file is in the firmware data, [BootRom] key is displayed. Pressing the key updates data.
- When more than one firmware are stored in step 1, pressing [FW Data Select] enables selection. (Data of other models cannot be selected.)
(Data with * at the left top of data selection screen will be the default data copied to the root directly in the USB memory.)
- By pressing [Machine Type Select], you can set machine information. For details, refer to [“J.2.4 Entering the machine type information”](#).

- Press the [START]. (At this time, the Start key starts blinking red.)

10. Check that the control panel shows the message indicating that the data has been rewritten correctly ([Downloading Completed]). Check also the check sum value ([Check Sum #####]) shown on the control panel. (The Start key lights blue.)
11. Turn OFF the main power switch.
12. Remove the USB memory device, and fix the cover of the service port using a screw.
13. Turn ON the main power switch.
14. [Call the Service Mode to the screen.](#)
15. Select [Firmware Version].
16. Make sure if the version of firmware is updated.

2.3 Action when data transfer fails

- If "NG" appears on the control panel, indicating that rewriting has been unsuccessful (in which case the Start key lights up red), take the following steps.
 1. Perform the data rewriting procedure again.
 2. If the procedure is abnormally terminated, change the USB memory for a new one and try another rewriting sequence.
 3. If the procedure is still abnormally terminated, change the board that has caused "NG" and carry out data rewriting procedure.

F/W to be updated	Appropriate board	Remark

DSC2	DSC board/2 (DSCB/2)	Only when SC-508 is mounted

2.4 Entering the machine type information

- When MFP board is replaced, it is necessary to enter the machine type information.
- Refer to the following procedures to enter the machine type information.

Procedure

1. Insert the USB memory to the service port.
2. Turn ON the main power switch.
3. Touch [Machine Type Select].

The screenshot shows the 'Firmware Update' screen with the instruction 'Please do not turn off the main SW and Sub-Power!'. It features a grid of selection buttons for various components: MFP CONTROLLER, ADF/DF-M, DSC1, SCANNER, FINISHER, DSC2, PRINTER, RU, FAX BOARD CONTROLLER1, ZU, and FAX BOARD CONTROLLER2, ED. Each component has 'YES' and 'NO' buttons. To the right, there are 'Machine Type Select' and 'FW Data Select' buttons. At the bottom, the 'FW Ver' is displayed as '12345678901234567890123456789' with 'Boot Rem' and 'START' buttons.

4. Enter [Machine] and [Type] information according to the following table. Then touch [Fix].

	bizhub C554		bizhub C454	
[Machine]	1		1	
[Type]	A		0	

5. Touch [OK], and turn OFF the main power switch.

3. Internet ISW

3.1 Preparations for firmware rewriting

3.1.1 Outline

- [Internet ISW] is the system which gives the instruction for updating the firmware with the control panel of the main body, so the main body will automatically receive the firmware from the program server over a network for updating. With the Internet ISW, the firmware can be updated when the CE is at the user's without firmware data.

3.1.2 Service environment

The following conditions are necessary for using the Internet ISW function.

- The main body is connected to such a network environment that the firmware can be downloaded on the internet using the ftp or http protocol.

The "Internet ISW" will not operate under the following conditions.

- Main power switch is set to OFF.
- Sub power is set to OFF.
- When the following setting is set to "ON":
[\[Administrator Setting\]](#) -> [\[Security Setting\]](#) -> [\[Enhanced Security Mode\]](#)
- Machine is operating, or there are jobs present (including appointed jobs).
- Machine is in idle with suspended job
- Paper jam has occurred
- Image file is in the memory
- Model or the circuit board of the program does not match

3.1.3 Preparations for firmware rewriting

- For using the Internet ISW, the network parameter, program server address as well as firewall address need to be set to the main body.
[I.11.27 Internet ISW](#)

(1) Internet ISW Set

1. [Call the Service Mode to the screen.](#)
2. Touch [Internet ISW Set] which is available from [Internet ISW].

3. Select [ON] in [Function Setting], and touch [END].

NOTE

- Settings such as server setting, etc. will be available by selecting "ON" on this setting.
- When the following setting is set to "ON", "ON" cannot be selected on this setting.
[\[Administrator Setting\]](#) -> [\[Security Setting\]](#) -> [\[Enhanced Security Mode\]](#)
- To allow the administrator to rewrite firmware, press [Open Mode Settings] and select [Set].

(2) Protocol setting

- It performs the setting concerning the protocol (ftp or http) for connecting to the Internet ISW.

(a) Connecting by http

1. Select [Internet ISW] which is available from [Service Mode].
2. Data input setting
 - Touch [HTTP Setting], and select [ON].
3. Connection Time-Out
 - Select [Connection Time-Out], and set the time for the connection time out between 30 and 300 seconds.

NOTE

- To connect MFP to the Internet via a proxy, in addition to the configuration in [\[Forwarding Access Setting\]](#), the proxy server settings are necessary.

The settings of the proxy used in Internet ISW communications is configured in [\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Internet ISW Settings\]](#) -> [\[HTTP Server Settings\]](#).

(b) Connecting by ftp

1. Select [Internet ISW] which is available from [Service Mode].
2. Data input setting
 - Touch [FTP Setting], and select [ON].
3. Connection Setting
 - Perform the setting for accessing FTP server.
 1. Select [Port Number], and set the port number for FTP server from 1 through 65535.
 2. Select [Connection Time Out], and set the time for the connection time out from 1 through 60.
 3. When connecting in PASV mode, select [PASV Mode], and select [ON].

NOTE

• PASV Mode:

This mode is for transferring the file with FTP under the condition where communication is restricted such as inside the firewall. Since with PASV mode, the client with restriction sets the port number, data transmission port can be secured to enable the file transmission.

NOTE

- To connect MFP to the Internet via a proxy, in addition to the configuration in [\[Forwarding Access Setting\]](#), the proxy server settings are necessary.

The settings of the proxy used in Internet ISW communications is configured in [\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Internet ISW Settings\]](#) -> [\[FTP Server Settings\]](#).

(3) Forwarding Access Setting

- To make the access setting for the program server which stores the firmware data.
 1. Select [Internet ISW] which is available from [Service Mode].
 2. Touch [Forwarding Access Setting].

3. Select [User ID], and enter the user ID which is necessary for connecting to the program server on the on-screen keyboard, and touch [END].
4. Select [Password], and enter the password which is necessary for connecting to the program server on the on-screen keyboard, and touch [END].
5. Select [URL], and enter the directory which stores the program server address and the firmware on the on-screen keyboard by URL method, and touch [END].

NOTE

- Enter the URL which matches to the protocol to be used.

When connecting to http	http://(host name or IP address)/directory name or https://(host name or IP address)/directory name
When connecting to ftp	ftp://(host name or IP address)/directory name

6. Select [\[File Name\]](#), and enter the file name of the firmware data to be downloaded on the on-screen keyboard, and touch [END].
7. Touch [END] to finish setting.

3.2 Making the firmware data

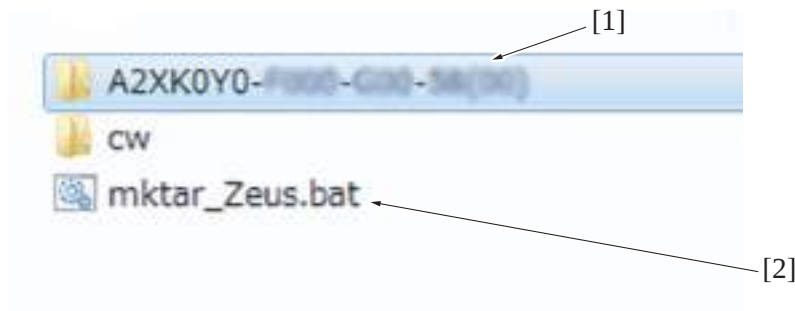

3.2.1 Outline

- It is necessary to convert the firmware data and save it in the target directory of the Internet ISW server for upgrading the firmware via Internet ISW.

3.2.2 Procedure

1. Uncompress the firmware file.

2. Drag and Drop the firmware folder [1] which is in the uncompressed folder to the batch file [2] (mktar_Zeus.bat).

3. "making Zeus(A161)" message in the command prompt window appears.

4. The command prompt window closed automatically.
5. "A161fw.tar" is created in the same directory.

6. Copy the "A161fw.tar" in the firmware data directory of Internet ISW server.

3.3 Firmware rewriting from the control panel

3.3.1 Firmware rewriting from the control panel

NOTE

- When performing the Internet ISW, ask the administrator for permission beforehand.
- DO NOT turn OFF the main power switch while downloading.

(1) Conducting rewriting on the control panel

1. Perform the following setting.
[Service Mode] -> [Internet ISW] -> [Download]
2. To download and update firmware data, select [Download/Update].
To only download firmware data and update it later, select [Download].
3. Touch [Start].

4. MFP accesses the server and starts downloading the firmware data.
5. To download and update firmware data, select the types of firmware data to be written and replaced with a newer version in the Firmware Update screen and press [START].

F/W to be updated	Appropriate board	Remark
MFP CONTROLLER	MFP board (MFPB)	
SCANNER	MFP board (MFPB)	
PRINTER	Printer control board (PRCB)	
FAX BOARD CONTROLLER1	Fax board/1 (FAXB/1)	Only when FK-511 is mounted
FAX BOARD CONTROLLER2	Fax board/2 (FAXB/2)	Only when FK-511 is mounted
ADF (DF-M)	DF control board (DFCB)	
FINISHER	FS control board (FSCB)	Only when FS-533/FS-534/FS-535 is mounted
RU	FS control board (FSCB)	Only when FS-533/FS-534/FS-535 is mounted
ZU	ZU control board (ZUCB)	Only when ZU-606 is mounted
SD	SD drive board (SDDB)	Only when SD-511/SD-512 is mounted
DSC1	DSC board/1 (DSCB/1)	Only when SC-508 is mounted
DSC2	DSC board/2 (DSCB/2)	Only when SC-508 is mounted

NOTE

- Unless one of the keys on the control panel is pressed, firmware is updated after 30 seconds when the unit has restarted.

(2) During firmware updating

1. After rebooting the machine, MFP will connect to the server to download the firmware data.
2. The message to indicate the status will be displayed on the screen while connecting or transferring data.

(3) Completed or failed**(a) Firmware updated normally**

1. When the Firmware is normally updated, restart the main body in auto or manual mode to display the outcome, and touch [OK] to return to the main screen.

(b) Failing to update the firmware due to the network trouble

1. When updating failed to complete due to the trouble on connecting to the network, an error code and the message will be displayed.
2. Restart the main body in auto or manual mode, and touch [OK]. It can be used with the firmware version before conducting updating.
3. Check the settings for the network by error codes, and try updating again.

[Network Error Code](#)

(c) Failing to update the firmware after downloading has started

1. Once firmware updating has started, the ROM in the main body will be deleted.
When it failed right after updating has started, restart the main body, and shift to the standby screen to retry downloading.
2. When updating on the control panel, touch [settings] on the standby screen, and check the Network settings again.
Touch [Download], and restart the Internet ISW.

NOTE

- Return to the standby screen without fail after turning the main power switch OFF/ON if the firmware is not updated.
- Firmware can be updated with the USB memory.

4. CS Remote Care

4.1 Firmware rewriting from the CS Remote Care

- For detailed error information relating to CS Remote Care, refer to "[I.11.6 CS Remote Care \(Outlines\)](#)"
- For the firmware update procedure using CS Remote Care, refer to CS Remote Care Center Manual.

5. How to install the i-Option data

5.1 Available function for i-Option

i-Option	Function	Data location	How to recover when replacing or formatting HDD.
LK-101 v3	Web browser	In the Web browser firmware *1	n/a
LK-102 v3	PDF processing	In the Standard firmware	I.11.15.20 Install Data
LK-104 v3	Voice guidance	In the Standard firmware*2	
LK-105 v3	Searchable PDF	In the Standard firmware	
LK-106	Barcode font	In the Standard firmware	n/a
LK-107	Unicode font	In the Standard firmware	LK-107/LK-108 font data installation procedure
LK-108	OCR font	In the Standard firmware	

NOTE

- *1: MFP card version: A2XK0Y0-F000-G20-58 or later is necessary
- *2: When the MFP card version Ver. A2XK0Y0-F000-G00-65 or A2XK0Y0-F000-G20-65 is installed, voice data Ver. A2XK0Y0-C100-G00-21 is required for the voice guidance function.

5.2 LK-107/LK-108 font data installation procedure

Installing procedure of the font data

5.2.1 When the font data is ***.prn format file

- Setup LPR printing settings between MFP and PC.
- Open command prompt and print the Unicode font data or OCR font data via LPR command below
lpr -S [IP address of MFP] -P printer [font data]

- Activate the LK-107 or LK-108.
For details of activation procedure, refer to "I.13.3.10 License management - Activation."
- Print out the PCL font list from [Menu] -> [User Settings] -> [Printer Settings] -> [Print Reports] -> [PCL Font List], and check that the fonts downloading to the MFP are registered in the list.
 - LK-107: Andale Mono WT J, Andale Mono WT K, Andale Mono WT S, Andale Mono WT T
 - LK-108: OCR-A
 - If any fonts are not listed, try to download the font to the MFP again.

NOTE

- In Windows Vista/7, lpr commands are disabled on the initial state. To use lpr commands, set the following setting.
 - Windows Vista:
In [Control Panel] -> [Programs] -> [Programs and Features] -> [Turn Windows features on or off] -> [Print Services], select the check box of [LPD Print Service and LPR Port Monitor].
 - Windows 7:
In [Control Panel] -> [Programs] -> [Programs and Features] -> [Turn Windows features on or off] -> [Print and Document Services], select the check box of [LPD Print Service and LPR Port Monitor].

5.2.2 When the font data is ***.pdf format file

- Prepare an USB memory.
- Copy the font data to the root directory of the USB memory.
 - OCR font: download_OCRA-0.pdf
 - Unicode font: download_Andale_J-0.pdf, download_Andale_K-0.pdf, download_Andale_S-0.pdf, download_Andale_T-0.pdf
- Turn ON the main power switch, and connect the USB memory to the USB port on the side of the control panel.
- The message "Print a document from External Memory" will be displayed on the control panel, and select it.
- The font data in the USB memory will be displayed, and select these data to print out.
- The message "Document Printing Failed" will be displayed, and touch [OK].
- Print out a [PCL font list](#), and confirm that the font data are registered as following names.
 - LK-107: Andale Mono WT J, Andale Mono WT K, Andale Mono WT S, Andale Mono WT T
 - LK-108: OCR-A

K TROUBLESHOOTING

1. JAM CODE

(1) JAM DISPLAY

- When the paper jam occurred, the message, the position jam occurred (number blinks), position of the remaining paper (number lights up), and the JAM code are displayed.

NOTE

- JAM code is displayed on the jam warning screen only when the following setting is set to "Display."
[Service Mode] -> [System 2] -> [JAM Code Display Setting]

(2) Misfeed display resetting procedure

- Open the corresponding door, clear the sheet of paper misfed, and close the door.
- Touch "OK" displayed on the touch panel.

1.1 List of the JAM code

JAM code	JAM type	Ref. page
10-01	Manual bypass feed section	K.1.6.1 10-01, 10-02, 10-40

1.2 JAM that do not display the JAM code

JAM type	Detection timing	Ref. page
Manual bypass feed section	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at manual bypass feed section.	K.1.6.1 10-01, 10-02, 10-40
Tray 1 feed section	Tray 1 paper feed sensor (PS23) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.6.2 11-01, 11-02, 11-40
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at tray 1 feed section.	
Tray 2 feed section	Tray 2 vertical transport sensor (PS19) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.6.3 12-01, 12-40
	Tray 2 paper feed sensor (PS20) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at tray 2 feed section.	
Tray 3 feed section	Tray 3 vertical transport sensor (PS113) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.6.4 13-01, 13-40
	Tray 3 paper feed sensor (PS112) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at tray 3 feed section.	
Tray 4 feed section	Paper feed sensor (PS132) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.6.6 15-01, 15-40
	Vertical transport sensor (PS133) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at LCT feed section or LCT vertical transport section.	
LCT feed/vertical transport section	Paper feed sensor (PS132) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.6.7 16-01, 16-40
	Vertical transport sensor (PS133) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at LCT feed section or LCT vertical transport section.	
Vertical transport section	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at vertical transport section.	K.1.7.2 20-21 K.1.7.3 20-22
2nd image transfer section	The sensor in front of tim. roller (PS1) is unblocked when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.8.1 30-03
	The paper exit sensor (PS3) is unblocked when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at 2nd image transfer section.	
Exit section	The paper exit sensor (PS3) is blocked when the main power switch is unblocked, a door or cover is opened and closed, or a misfeed or malfunction is reset.	K.1.8.2 32-01, 32-05

JAM type	Detection timing	Ref. page
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at exit section.	
Duplex pre-registration section	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at duplex pre-registration section.	K.1.11.1 92-01, 92-02, 92-40
Duplex transport section	In case the ADU paper passage sensor/1 (PS40) is blocked or the ADU paper passage sensor/2 (PS41) is unblocked after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at duplex transport section.	K.1.11.2 93-10
	In case the registration sensor (PS1) is unblocked after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at duplex transport section.	
	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at duplex transport section.

1.4 Initial check items

- When a paper misfeed occurs, first perform the following initial check items.

Check item	Action
Does paper meet product specifications?	Replace paper.
Is the paper curled, wavy, or damp?	Replace paper. Instruct user on proper paper storage.
Is a foreign object present along the paper path, or is the paper path deformed or worn?	Clean the paper path or replace the part on the paper path if necessary.
Are rolls/rollers dirty, deformed, or worn?	Clean the defective roll/roller. Replace the defective roll/roller.
Are the paper size and the detected paper size by the edge guide are matching?	Adjust the edge guide to match the paper size.
Are the actuators operating correctly?	Correct the defective actuator. Replace the defective actuator.

1.5 Jam when thin paper is fed

- If paper jams occur while feeding thin paper (52 g/m² (13 13/16 lb)), adjust the paper pick-up pressure of the manual bypass tray, the tray 1 or the tray 2 to apply the pick-up pressure for thin paper to the tray. However, if the pick-up pressure is changed to the one for thin paper, jam may occur especially when plain paper or thick paper is used.

[I.16.3.2 Pick-up pressure adjustment of the tray 1/2](#)

[I.16.3.3 Separator roller pressure adjustment of the bypass tray](#)

1.6 1*.-**

1.6.1 10-01, 10-02, 10-40

(1) Contents

JAM type	Misfeed at manual bypass feed section	
JAM code	10-01, 10-02, 10-40	
Detection timing	10-01	The leading edge of the paper does not unblocked the registration (PS1) even after the lapse of a given period of time after the manual bypass starts to feed paper.
	10-02	For paper fed from the manual bypass, loop forming has not been complete before a sheet enters the registration roller because the rise timing of load to perform registration is earlier than the rise timing of load to form a loop.
	10-40	For paper fed from the manual bypass, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at manual bypass feed section.
Misfeed processing location	Right door	
Relevant parts	- Paper feed motor (M22) - Registration motor (M24) - Bypass paper feed clutch (CL7)	

- Bypass pick-up solenoid (SD1)
- Registration roller (PS1)
- Front side board (FRB)
- Expansion control board (EXCB)
- Printer control board (PRCB)

(2) Procedure

(1) Contents

JAM type	Misfeed at tray 1 feed section	
JAM code	11-01, 11-02, 11-40	
Detection timing	11-01	The leading edge of the paper does not unblocked the registration sensor (PS1) even after the lapse of a given period of time after the tray 1 starts to feed paper.
	11-02	For paper fed from the tray1, due to a delay in paper arrival, loop forming in front of the registration roller is not complete before the rise timing of the registration motor (M24).
	11-40	For paper fed from the tray1, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
	-	Tray 1 paper feed sensor (PS23) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at tray 1 feed section.
Misfeed processing location	• Right door • Tray 1	
Relevant parts	• Paper feed motor (M22) • Registration motor (M24) • Tray 1 paper feed clutch (CL3) • Registration sensor (PS1) • Tray 1 paper feed sensor (PS23) • Front side board (FRB) • Expansion control board (EXCB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS1 I/O check, sensor check	FRB CN8-3 (ON)	3-L
3	PS23 I/O check, sensor check	PRCB CN26-10 (ON)	8-C
4	CL3 operation check	PRCB CN26-8 (ON)	8-C
5	M22 operation check	EXCB CN3-5 to 8	22-P
6	M24 operation check	EXCB CN3-1 to 4	21-P
7	Replace FRB	-	-
8	EXCB IC4, IC5 conduction check	-	-
9	Replace EXCB	-	-
10	PRCB ICP5 conduction check	-	-
11	Replace PRCB	-	-

1.6.3 12-01, 12-40

(1) Contents

JAM type	Misfeed at tray 2 feed section	
JAM code	12-01, 12-40	
Detection timing	12-01	The leading edge of the paper does not turn ON the tray 2 vertical transport sensor (PS19) even after the lapse of a given period of time after the tray 2 starts to feed paper.
	12-40	For paper fed from the tray 2, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
	-	Tray 2 vertical transport sensor (PS19) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	Tray 2 paper feed sensor (PS20) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at tray 2 feed section.
Misfeed processing location	• Right door • Tray 2	
Relevant parts	• Paper feed motor (M22) • Tray 2 vertical transport motor (M23) • Tray 2 paper feed clutch (CL1) • Tray 2 vertical transport sensor (PS19) • Tray 2 paper feed sensor (PS20) • Expansion control board (EXCB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS19 I/O check, sensor check	PRCB CN19-5 (ON)	9-C
3	PS20 I/O check, sensor check	PRCB CN19-2 (ON)	9-C
4	CL1 operation check	PRCB CN19-14 (ON)	10-C
5	M22 operation check	EXCB CN3-5 to 8	22-P
6	M23 operation check	EXCB CN3-9 to 12	22-P
7	EXCB IC4, IC5 conduction check	-	-
8	Replace EXCB	-	-
9	PRCB ICP4 conduction check	-	-
10	Replace PRCB	-	-

1.6.4 13-01, 13-40

(1) Contents

JAM type	Misfeed at tray 3 feed section	
JAM code	13-01, 13-40	
Detection timing	13-01	The leading edge of the paper does not turn ON the tray 3 vertical transport sensor (PS113) even after the lapse of a given period of time after the tray 3 starts to feed paper.
	13-40	For paper fed from the tray 3, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
	-	Tray 3 vertical transport sensor (PS113) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	Tray 3 paper feed sensor (PS112) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at tray 3 feed section.
Misfeed processing location	• Right door • Tray 3	
Relevant parts	• Tray 3 paper feed motor (M111) • Tray 3 vertical transport motor (M112) • Tray 3 paper feed sensor (PS112) • Tray 3 vertical transport sensor (PS113) • PC Control board (PCCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS112 I/O check, sensor check	PCCB CN4-11 (ON)	PC-110/PC-210 5 to 6-C

Step	Action	Control signal	Location of electrical component
3	PS113 I/O check, sensor check	PCCB CN4-14 (ON)	PC-110/PC-210 5-C
4	M111 operation check	PCCB CN5-1 to 8	PC-110/PC-210 4-C
5	M112 operation check	PCCB CN5-9 to 16	PC-110/PC-210 3 to 4-C
6	Change PCCB	-	-

1.6.5 14-01, 14-40

(1) Contents

JAM type	Misfeed at tray 4 feed section	
JAM code	14-01, 14-40	
Detection timing	14-01	The leading edge of the paper does not turn ON the tray 4 vertical transport sensor (PS123) even after the lapse of a given period of time after the tray 4 starts to feed paper.
	14-40	For paper fed from the tray 4, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
	-	Tray 4 vertical transport sensor (PS123) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	Tray 4 paper feed sensor (PS122) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at tray 4 feed section.
Misfeed processing location	• Right door • Tray 4	
Relevant parts	• Tray 4 paper feed motor (M121) • Tray 4 vertical transport motor (M122) • Tray 4 paper feed sensor (PS122) • Tray 4 vertical transport sensor (PS123) • PC Control board (PCCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS122 I/O check, sensor check	PCCB CN18-2 (ON)	PC-210 7-K
3	PS123 I/O check, sensor check	PCCB CN18-5 (ON)	PC-210 7-K
4	M121 operation check	PCCB CN9-1 to 8	PC-210 6-K
5	M122 operation check	PCCB CN9-9 to 16	PC-210 6-K
6	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.2 PC-210](#))

1.6.6 15-01, 15-40

(1) Contents

JAM type	LCT feed section	
JAM code	15-01, 15-40	
Detection timing	15-01	The leading edge of the paper does not block the paper feed sensor (PS3) even after the lapse of a given period of time after the LCT starts to feed paper.
	15-40	For paper fed from the LCT, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.
Misfeed processing location	Lower right door	
Relevant parts	• Paper feed motor (M2) • Paper feed sensor (PS3) • LU drive board (LUDB) • Printer control board (PRCB) • PC control board (PCCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS3 I/O check, sensor check	LUDB CN5-8 (ON)	LU-204/LU-301 4-G
3	M2 operation check	LUDB CN4-5 to 6	LU-204/LU-301 3-G
4	Replace LUDB (LU-204/LU-301)	-	-
5	Replace PRCB	-	-

Step	Action	Control signal	Location of electrical component
6	Replace PCCB (PC-110/PC-210/PC-410)	-	-

- Link to the wiring diagram ([N.3.4 LU-204](#))
- Link to the wiring diagram ([N.3.5 LU-301](#))

1.6.7 16-01, 16-40

(1) Contents

JAM type	Misfeed at LCT feed/vertical transport section		
JAM code	16-01, 16-40		
Detection timing	16-01	The leading edge of the paper does not turn ON the vertical transport sensor (PS133) even after the lapse of a given period of time after the LCT starts to feed paper.	
	16-40	For paper fed from the LCT, the image write start signal permit continues to be disabled for a predetermined period of time after the timing of the image write start signal output.	
	-	Paper feed sensor (PS132) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	-	Vertical transport sensor (PS133) is turned ON when the main power switch is turned ON, a door or cover is opened and closed, or a misfeed or malfunction is reset.	
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened / closed or jam/trouble reset is done, it is regarded as paper jam at LCT feed section or LCT vertical transport section.	
Misfeed processing location	Right door		
Relevant parts	• Paper feed motor (M131) • Vertical transport motor (M132) • Paper feed sensor (PS132) • Vertical transport sensor (PS133) • PC Control board (PCCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS132 I/O check, sensor check	PCCB CN4-11 (ON)	PC-410 7-J
3	PS133 I/O check, sensor check	PCCB CN4-14 (ON)	PC-410 7-J
4	M131 operation check	PCCB CN5-1 to 8	PC-410 5-J
5	M132 operation check	PCCB CN5-9 to 16	PC-410 4-J
6	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.3 PC-410](#))

1.7 2*-.**

1.7.1 20-01, 20-02

(1) Contents

JAM type	Misfeed at vertical transport section	
JAM code	20-01, 20-02	
Detection timing	20-01	The registration sensor (PS1) is not unblocked even after the lapse of a given period of time after the paper has turned ON the tray 2 vertical transport sensor (PS19).
	20-02	For paper fed from the tray 2, tray 3, tray 4 or LCT, loop forming has not been complete before a sheet enters the registration roller because the rise timing of load to perform registration is earlier than the rise timing of load to form a loop.
Misfeed processing location	Right door	
Relevant parts	• Tray 2 vertical transport motor (M23) • Registration motor (M24) • Registration sensor (PS1) • Tray 2 vertical transport sensor (PS19) • Front side board (FRB) • Expansion control board (EXCB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS1 I/O check, sensor check	FRB CN8-3 (ON)	3-L
3	PS19 I/O check, sensor check	PRCB CN19-5 (ON)	9-C
4	M23 operation check	EXCB CN3-9 to 12	22-P

Step	Action	Control signal	Location of electrical component
5	M24 operation check	EXCB CN3-1 to 4	21-P
6	Replace FRB	-	-
7	EXCB IC5, IC6 conduction check	-	-
8	Replace EXCB	-	-
9	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))

1.7.2 20-21

(1) Contents

JAM type	Misfeed at vertical transport section (tray 3)		
JAM code	20-21		
Detection timing	20-21	<When PC-110 or PC-210 is installed>	The tray 2 vertical transport sensor (PS19) is not turned ON even after the lapse of a given period of time after the tray 3 vertical transport sensor (PS113) has been blocked by a paper.
		<When PC-410 is installed>	The tray 2 vertical transport sensor (PS19) is not turned ON even after the lapse of a given period of time after the vertical transport sensor (PS133) has been blocked by a paper.
	-	In case paper position is detected as locating properly after main power switch is turned ON, door and cover are opened /closed or jam/trouble reset is done, it is regarded as paper jam at vertical transport section.	
Misfeed processing location	Right door		
Relevant parts	<When PC-110 or PC-210 is installed>		• Tray 2 vertical transport motor (M23) • Tray 3 vertical transport motor (M112) • Tray 2 vertical transport sensor (PS19) • Tray 3 vertical transport sensor (PS113) • Expansion control board (EXCB) • Printer control board (PRCB) • PC control board (PCCB)
	<When PC-410 is installed>		• Tray 2 vertical transport motor (M23) • Vertical transport motor (M132) • Tray 2 vertical transport sensor (PS19) • Vertical transport sensor (PS133) • Expansion control board (EXCB) • Printer control board (PRCB) • PC control board (PCCB)

(2) Procedure

When PC-110 or PC-210 is installed

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	PS113 I/O check, sensor check	PCCB CN4-14 (ON)	PC-110/PC-210 5-C

(1) Contents

JAM type	DF image reading section	
JAM code	66-05, 66-06	
Detection timing	66-05	The document reading sensor (PS6) is not turned OFF after a lapse of a given time after the registration sensor (PS3) is blocked.
	66-06	The document reading sensor (PS6) is turned ON earlier than a given time after PS6 is turned OFF during original transportation.
Misfeed processing location	Left cover	
Relevant parts	• Document reading motor (M1) • Reading roller release motor (M4) • Registration sensor (PS3) • Document reading sensor (PS6) • DF control board (DFCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	Make the adjustment of original stop position.	-	-
3	PS3 I/O check, sensor check	DFCB J14-12 (ON)	DF-701 4-G
4	PS6 I/O check, sensor check	DFCB J10-3 (ON)	DF-701 2-G
5	M1 operation check	DFCB J7-1 to 4	DF-701 1-B
6	M4 operation check	DFCB J18-4 to 5	DF-701 1-G
7	Replace DFCB	-	-

1.10.38 72-90

(1) Contents

JAM type	FS section		
JAM code	72-90		
Detection timing	72-90	<When FS-535 is installed>	The finisher does not stop even after the set period of time has elapsed after MFP sends a processing stop signal to the finisher.
Misfeed processing location	• Front door • Stacker unit		
Relevant parts	FS control board (FSCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Initial check items	-	-
2	Replace FSCB	-	-

1.10.39 73-16**(1) Contents**

JAM type	FS section		
JAM code	73-16		
Detection timing	73-16	<When FS-535 is installed>	- A jam occurs during initialization. - A jam occurs while a trouble code is being displayed upon the occurrence of trouble. - Trouble of which trouble code is undefined occurs.
Misfeed processing location	Front door		
Relevant parts	FS control board (FSCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical component
1	Rewrite the firmware.	-	-
2	Replace FSCB	-	-

1.10.40 75-42**(1) Contents**

JAM type	RU section		
JAM code	75-42		
Detection timing	75-42	<When FS-534 is installed>	The RU entrance sensor (PS2) is not locked even after the set period of time has elapsed after the copier's paper exit sensor (PS3) is unlocked by the paper.
		<When FS-535 is installed>	The RU transport sensor (PS60) is not locked even after the set period of time has elapsed after the copier's paper exit sensor (PS3) is unlocked by the paper.
Misfeed processing location	Horizontal transport cover		
Relevant parts	<When FS-534 is installed>		- Paper exit sensor (PS3) - RU entrance sensor (PS2) - FS control board (FSCB)
	<When FS-535 is installed>		- Paper exit sensor (PS3) - RU transport sensor (PS60) - RU control board (RUCB) - FS control board (FSCB)

Relevant parts	-	

2. MALFUNCTION CODE

2.1 Display procedure

- The machine's CPU performs a self-diagnostics function that, on detecting a malfunction, gives the corresponding warning code and maintenance call mark on the control panel.
- Touching the maintenance call mark will display the corresponding warning code on the state confirm screen.

2.2 List of the malfunction code

- If an image stabilization or scanner fault occurs, the corresponding warning code appears.

Code	Item	Ref. page
S-1	CCD gain adjustment failure	K.2.3 S-1
S-2	CIS gain adjustment failure	K.2.4 S-2
D-1	Split line detect (front side)	K.2.5 D-1
D-3	Split line detect (back side)	K.2.6 D-3
P-5	IDC sensor/Fr failure	K.2.7 P-5, P-28
P-28	IDC sensor/Rr failure

2.3 S-1

2.3.1 Contents

Malfunction type	CCD gain adjustment failure
Malfunction code	S-1
Description timing	It is detected that the CCD clamp gain adjustment value is faulty.
Relevant parts	• LED exposure unit (LU201) • Scanner drive board (SCDB) • CCD board (CCDB) • MFP board (MFPB)

2.3.2 Procedure

1. Correct the harness connection between CCDB PJ3 and MFPB PJ01 if faulty.
2. Check for possible extraneous light and correct as necessary.
3. Clean the lens, mirrors, CCD surface, and shading sheet if dirty.
4. Correct reflective mirror of the scanner if faulty, or change scanner mirror.
5. [Replace CCDB.](#)
6. [Replace SCDB.](#)
7. [Replace MFPB.](#)

2.4 S-2

2.4.1 Contents

Malfunction type	CIS gain adjustment failure
Malfunction code	S-2
Description timing	It is detected that the CIS clamp gain adjustment value is faulty.
Relevant parts	• CIS module (CIS) • Dual scan image processing board (DSIPB) • MFP board (MFPB)

2.4.2 Procedure

1. Correct the harness connection between CIS and DSIPB if faulty.
2. Correct the harness connection between DSIPB and MFPB if faulty.
3. Check for possible extraneous light and correct as necessary.
4. Wipe clean the back side scanning glass surface.
5. [Replace CIS.](#)
6. [Replace DSIPB.](#)
7. [Replace MFPB.](#)

2.5 D-1

2.5.1 Contents

Malfunction type	Split line detect (front side)
Malfunction code	D-1
Description timing	• While recovering from the power save mode or when the main power switch is ON, it detects whether or not stain exist at the DF original glass when the DF is closed. This warning will be displayed if the original is set to DF when stain exist. • The thin line detection level and the warning display can be changed by the following setting. [Service Mode] -> [System 2] -> [ADF Scan Glass Contamin. Set.] -> [Front Side]
Relevant parts	• Document reading glass cleaning motor (M6) • Document reading glass cleaning sensor (PS13) • DF control board (DFCB)

2.5.2 Procedure

1. Wipe clean the glass surface of the DF original glass.
2. Check the document reading glass cleaning roller unit for proper installation and correct if necessary.
Clean the document reading glass cleaning roller unit if dirty.
3. Select [\[Service Mode\] -> \[System 2\] -> \[ADF Scan Glass Contamin. Set.\] -> \[Front Side\]](#), and change the setting.
4. Check the DFCB connector for proper connection and correct as necessary.
5. M6 operation check.
6. [Replace the document reading glass cleaning roller unit.](#)
7. [Replace DFCB.](#)

2.6 D-3

2.6.1 Contents

Malfunction type	Split line detect (back side)
Malfunction code	D-3
Description timing	- When the main power switch is turned ON or when the machine is recovering from the power save mode, if the DF is closed, the machine detects whether stain exists in the back side original scanning section (CIS). This warning will be displayed if the original is set to DF when stain exist. - The thin line detection level and the warning display can be changed by the following setting. [Service Mode] -> [System 2] -> [ADF Scan Glass Contamin. Set.] -> [Back Side]
Relevant parts	- CIS module (CIS) - CIS power supply (CISPU) - Dual scan image processing board (DSIPB)

2.6.2 Procedure

1. Wipe clean the CIS glass surface.
2. Check the front side glass cleaning roller unit for proper installation and correct if necessary.
Clean the front side glass cleaning roller unit if dirty.
3. If there is a problem in the CIS module connection, correct the faulty connection.
4. [Replace CIS.](#)
5. [Replace CISPU.](#)
6. [Replace DSIPB.](#)

2.7 P-5, P-28

2.7.1 Contents

Malfunction type	IDC sensor/Fr failure, IDC sensor/Rr failure
Malfunction code	P-5, P-28
Description timing	- During IDC sensor light intensity correction, output voltage detected for all eight sample patterns are 3.35 V or more. - During IDC sensor light intensity correction, sensor output voltage for light intensity selected after the correction is under 0.7 V. - During IDC base surface detective control, sensor output voltage detected is under 0.7 V or over 3.35V. - During image stabilization (gamma correction control), detected output value for IDC sensor did not go below threshold (half the value of what is detected by IDC sensor on the belt surface) for three consecutive times (position of the pattern end is not detected). - During image stabilization (gamma correction control), sensor's output value of each color for hyper 0 gradation after the primary approximation is half the detection level on the belt surface or under.
Relevant parts	- IDC sensor/Fr (IDCS/Fr) - IDC sensor/Rr (IDCS/Rr) - IDC sensor shutter solenoid (SD2) - Printer control board (PRCB) - High voltage unit (HV) - Transfer belt unit

2.7.2 Procedure

1. Wipe clean the surface of the transfer belt with a soft cloth, if it is dirty.
2. [Change the image transfer belt unit](#) if the transfer belt is damaged.
3. Reinstall or reconnect IDCS/Fr Assy or IDCS/Rr Assy, sensor shutter or connector, if it is installed or connected improperly.
4. Clean IDCS/Fr or IDCS/Rr if it is dirty.
5. Check the HV connector for proper connection and correct as necessary.
6. SD2 operation check.
7. Open/close the front door, run an image stabilization sequence, and select [\[State Confirmation\]](#) -> [\[Level History 1\]](#) to check the IDC value.

IDC1	IDCS/Fr
IDC2	IDCS/Rr

If the value is 1.0 V or less, Assy Assy or IDCS/change IDCS/Fr Rr

8. PRCB ICP11 conduction check.
9. [Replace PRCB.](#)

2.8 P-6, P-7, P-8, P-9

2.8.1 Contents

Malfunction type	Drum/Development unit (C) failure, Drum/Development unit (M) failure, Drum/Development unit (Y) failure, Drum/Development unit (K) failure
Malfunction code	P-6, P-7, P-8, P-9
Description timing	- All density readings taken from the density pattern produced on the transfer belt are 1.0 g/m² (IDC sensor photo receiver output) or less during max. density adjustment (Vg/Vdc adjustment). - All density readings taken from the density pattern produced on the transfer belt are 5.0 g/m² (IDC sensor photo receiver output) and more during max. density adjustment (Vg/Vdc adjustment).
Relevant parts	Drum unit/Y,M,C,K

- Developing unit/Y,M,C,K
- IDC sensor/Fr (IDCS/Fr)
- IDC sensor/Rr (IDCS/Rr)
- IDC sensor shutter solenoid (SD2)
- Printer control board (PRCB)
- High voltage unit (HV)
- Transfer belt unit

2.8.2 Procedure

1. Select [\[Imaging Process Adjustment\]](#) -> [\[Max Image Density Adj\]](#) and, if the setting value is negative, readjust.
2. Check the drive transmission portion of the drum/developing unit and correct as necessary.
3. Clean the IDC sensor/Fr (IDCS/Fr) or IDC sensor/Rr (IDCS/Rr) window if dirty.
4. Clean the contact of the drum/developing unit connector if dirty.
5. Check the HV connector for proper connection and correct as necessary.
6. SD2 operation check.
7. [Replace drum unit.](#)
8. [Replace developing unit.](#)
9. [Replace the transfer belt unit.](#)
10. [Replace HV.](#)
11. [Replace PRCB.](#)

2.9 P-14

2.9.1 Contents

Malfunction type	Skew correction trouble
Malfunction code	P-14
Description timing	The difference between the skew default position setting value and the cumulative amount of skew adjustment values goes over the predetermined value.
Relevant parts	• IDC sensor/Fr (IDCS/Fr) • IDC sensor/Rr (IDCS/Rr) • Drum unit/Y,M,C,K • PH relay board (PHRYB) • Front side board (FRB) • Printer control board (PRCB) • PH unit

2.9.2 Procedure

1. Check the drive transmission portion of the drum unit and correct as necessary.
2. Clean the contact of the drum unit connector if dirty.
3. Reinstall or reconnect IDCS/Fr Assy or IDCS/Rr Assy, sensor shutter or connector, if it is installed or connected improperly.
4. Clean IDCS/Fr or IDCS/Rr if it is dirty.
5. Check the FRB connector for proper connection and correct as necessary.
6. Check the PHRYB connector for proper connection and correct as necessary.
7. Check the PRCB connector for proper connection and correct as necessary.
8. FRB fuse conduction check
9. [Replace FRB.](#)
10. Replace IDCS/Fr Assy or IDCS/Rr Assy.
11. [Replace drum unit.](#)
12. [Replace PH unit.](#)
13. [Replace PHRYB.](#)
14. [Replace PRCB.](#)

NOTE

- After the PH unit is replaced, reset the skew default position for each color. Touch keys as follows for this setting.
[\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[Skew adjustment\]](#) -> [\[Print Head Skew Adj.\]](#)
- When this alert code is displayed, according to the list, take actions to address the problem. After the problem is resolved, select [\[Service Mode\]](#) -> [\[Machine\]](#) -> [\[Skew adjustment\]](#) -> [\[Print Head Skew Reset\]](#) and perform the skew adjustment reset.

2.10 P-21

2.10.1 Contents

Malfunction type	Color regist test pattern failure
Malfunction code	P-21
Description timing	• During pre-pattern detection, pre-pattern edge (start/end point of effective area) is not detected within the pre-pattern search area. • During detection of regist pattern at vertical/horizontal direction, pattern edge (start/end point of effective area) is not detected within the pattern search area of each unit.
Relevant parts	• Transfer belt unit • PH unit • IDC sensor shutter solenoid (SD2) • Front side board (FRB) • Printer control board (PRCB)

2.10.2 Procedure

1. Wipe clean the surface of the transfer belt with a soft cloth, if it is dirty.
2. [Change the image transfer belt unit](#) if the transfer belt is damaged.
3. SD2 operation check.
4. [Replace the PH unit.](#)
5. [Replace FRB.](#)
6. PRCB ICP6 conduction check.
7. [Replace PRCB.](#)

2.11 P-22

2.11.1 Contents

Malfunction type	Color regist adjust failure
Malfunction code	P-22
Description timing	• The gap between maximum and minimum value of deviations among each color (the values before averaging) is over the predetermined value. • Average deviation exceeds the predetermined value. • In case the final value of the deviation after stabilization exceeds the predetermined value, it is regarded as failure even if the average deviation is within tolerance.
Relevant parts	• IDC sensor/Fr (IDCS/Fr) • IDC sensor/Rr (IDCS/Rr) • IDC sensor shutter solenoid (SD2) • Front side board (FRB) • Printer control board (PRCB)

2.11.2 Procedure

1. Slide out the drum/developing unit and reinstall it in position.
2. Reinstall or reconnect IDCS/Fr assy or IDCS/Rr assy if it is installed or connected improperly.
3. Check the vertical transport guide for installed position and correct as necessary.
4. SD2 operation check.
5. PRCB ICP6 conduction check.
6. [Replace FRB.](#)
7. [Replace PRCB.](#)

2.12 P-27

2.12.1 Contents

Malfunction type	Secondary transfer ATVC failure
Malfunction code	P-27
Description timing	An abnormal average value is detected during an adjustment of the second transfer ATVC value.
Relevant parts	• High voltage unit (HV) • Printer control board (PRCB) • Image transfer entrance guide • 2nd transfer assy • Transfer belt unit

2.12.2 Procedure

1. Check the contact between the roller opposed to the 2nd transfer roller in the transfer belt unit and the grounding terminal. Clean the joint or correct if necessary.
2. Check the image transfer entrance guide for proper installation and correct if necessary.
3. Check that the spring does not come off during the pressure operation of the 2nd transfer roller and correct if necessary.
4. Check the contact at the joint of the 2nd transfer assy and HV. Clean the joint or correct if necessary.
5. [Replace the transfer belt unit.](#)
6. [Replace HV.](#)
7. [Replace PRCB.](#)

2.13 P-32

2.13.1 Contents

Malfunction type	Heating roller temperature sensor temperature detection failure
Malfunction code	P-32
Description timing	• During warm up, the temperature detected by the heating roller thermistor/3 exceeded the warm up complete temperature of the heating roller for over the predetermined value, and stayed for a predetermined period of time. • When the predetermined period of time had passed after the warm up became complete, detected temperature of the heating roller thermistor/3 exceeded the temperature detected by the heating roller temperature sensor for over the predetermined value for more than the predetermined period of time. • While printing, temperature detected by the heating roller thermistor/3 exceeded the temperature detected by the heating roller temperature sensor for more than the predetermined value for a predetermined period of time. • This warning indicates that condensation dirt on the heating roller temperature sensor was detected, and the alternate temperature control is being conducted.

	With condensation, the warning is cleared when the condensation is detected to be removed. When the dirt on the sensor is detected, it is considered as a failure and the trouble code C392A is issued.
Relevant parts	• Fusing unit • Heating roller thermistor/3 (TH3) • Heating roller temperature sensor (TEMS)

2.13.2 Procedure

1. Wipe the TEMS clean of dirt if any.
 - <Cleaning procedure>
 - Clear away a dirt or a foreign object on the sensor with a cotton swab.
 - When a dirt is left even if you cleaned the sensor by above procedure, clear away a dirt or a foreign object on the sensor using a cotton swab dampened with the alcohol.
 - And, wipe off the sensor with a dry cotton swab afterwards.
2. Check the connection of the fusing unit.
3. [Replace the fusing unit.](#)

2.14 P-33

2.14.1 Contents

Malfunction type	LD malfunction
Malfunction code	P-33
Description timing	The DETOUT signal of the LD drive detected malfunction consecutively for the predetermined frequency.
Relevant parts	• Laser diode/C (LD/C) • Laser diode/K (LD/K) • Laser diode/M (LD/M) • Laser diode/Y (LD/Y) • Laser drive board (LDDB) • PH unit • PH relay board (PHRYB) • MFP board (MFPB) • Printer control board (PRCB)

2.14.2 Procedure

1. [Replace the PH unit.](#)
2. [Replace PHRYB.](#)
3. [Replace the PRCB.](#)

2.15 L-1, L-2, L-3, L-4

2.15.1 Contents

Malfunction type	Drum unit/C rotation time excess warning, Drum unit/M rotation time excess warning, Drum unit/Y rotation time excess warning, Drum unit/K rotation time excess warning
Malfunction code	L-1, L-2, L-3, L-4
Description timing	• PC drum rotation time count value used for the life judgment of drum units (the value for PC drum rotation distance calculated into the rotation time) is above the threshold value for the excess warning. • Printing with this warning being displayed is not included in the image warranty.

2.16 L-5

2.16.1 Contents

Malfunction type	Transfer belt unit accumulated rotation time excess warning
Malfunction code	L-5
Description timing	• Count value for the transfer belt rotation time used for judging the transfer belt unit life is above the threshold value for excess warning. • Printing with this warning being displayed is not included in the image warranty

3. TROUBLE CODE

3.1 Display procedure

- The machine's CPU performs a self-diagnostics function that, on detecting a malfunction, gives the corresponding malfunction code on the control panel.

3.2 Trouble resetting procedure

- Different malfunction resetting procedures apply depending on the rank of the trouble code.

* List of malfunction resetting procedures

Trouble code rank	Resetting procedures
Rank A	Trouble reset: Refer to the Trouble resetting procedure by Trouble Reset key .
Rank B	Opening/closing the lower front door Trouble reset: When the [internal error. auto cancel] for rank B is set to "Yes", after the set period of time, trouble is automatically cleared.
Rank C	Turning main power switch OFF/ON Trouble reset: When the [internal error. auto cancel] for rank C is set to "Yes", after the set period of time, trouble is restarted and cleared.

3.2.1 Trouble resetting procedure by Trouble Reset key

(1) Use

- If the all troubles occur and the status would not be cleared by turning main power switch OFF and ON again, or opening and closing the lower front door, clear the status of the machine.
- To be used when the status would not be cleared by turning main power switch OFF and ON again, or opening and closing the lower front door in case of a trouble.

(2) Procedure

- Turn OFF the main power switch.
- Turn main power switch ON while pressing the Reset key.
- Touch [Trouble Reset].
- Check to make sure that [OK] is displayed and it has been reset.
- After turning off the main power switch, turn it on again more than 10 seconds after and check if the machine starts correctly.

3.2.2 Trouble resetting procedure by the auto cancel function

(1) Use

- When rank B or C trouble occurs, MFP automatically clears trouble and makes the MFP ready for use. When the trouble auto cancel function is enabled, upon the occurrence of trouble to be automatically cleared, the trouble detection message is displayed on the screen and the trouble is automatically cleared. If the trouble remains after performing the auto cancel operation 3 times, the normal trouble code display screen appears.

(2) Procedure

- Select [Yes] for the trouble rank to which the trouble auto cancel operation is applied in [\[Service Mode\] -> \[System 2\] -> \[\] -> \[Internal Error. Auto Cancel\]](#). (The default setting for rank C is set to [Yes].)
- Touch [OK], and turning main power switch OFF and ON again.

3.2.3 Trouble resetting procedure by remote operation

(1) Use

- Trouble can be cleared by remote operation using the applications or CS Remote Care system.
- The combinations of the applications to be used and the ranks of trouble to be cleared are shown below.

Trouble code rank	Rank A	Rank B	Rank C
Application			
PageScope Web Connection	Cannot be cleared	Can be cleared	Can be cleared
OpenAPI (PageScope Enterprise Suite)	Cannot be cleared	Can be cleared	Can be cleared
CS Remote Care (Excluding communications by fax modem)	Can be cleared	Can be cleared	Can be cleared

(2) Procedure

(a) PageScope Web Connection

1. Access the PageScope Web Connection of the MFP where trouble occurs.
2. The screen for logging into Administrator Mode appears.
3. Check the following message appears; "An error has occurred. Do you want to clear the error?"
Click [Trouble Reset].
4. Click [Trouble Reset] again in the confirmation screen.
5. Check that the MFP starts normally.

(b) OpenAPI (PageScope Enterprise Suite)

1. Access PageScope Enterprise Suite.
2. Select [Device List] -> [Device Management] -> [Device List] -> [Device].
3. For rank B trouble, click [Trouble Reset]. For rank C trouble, click [Reset].
4. For rank B trouble, click the [Execute] button.
For rank C trouble, click the [Execute] button in [Device Reset].
5. Check that the MFP starts normally.

(c) CS Remote Care

- Refer to the CS Remote Care Center manual.

3.3 Trouble isolation function

- The trouble isolation function enables you to control MFP temporarily isolating faulty units and options where the trouble isolation function can be applied when trouble occurs. This allows you to continue using the other units that are not affected and reduce down time that continues until CE resolves the problem.
- This function can be selected for the following units and options.
 - Tray 1
 - Tray 2
 - Tray 3
 - Tray 4
 - LCT
 - Manual
 - Half-Fold/Tri-Fold Center Stapling
 - Post Insertion
 - Z fold
 - Punch
 - Staple
 - Scanner
 - DF
- If a problem occurs with the units where the trouble isolation function can be applied, the control panel displays a trouble code and a key with which you decide whether to continue using the MFP. When you press down the key, the control panel displays the units that will be isolated as well as the next confirmation key with which you decide to continue.
- When you press down the confirmation key, the message on the control panel asks you to turn OFF and ON the main power switch. After turning OFF and ON the main power switch, the MFP starts operating, isolating the faulty units. The message on the control panel also tells that the MFP is working, isolating the faulty units.
- To temporarily isolate faulty units and continue using the MFP with the trouble isolation function, be sure to make the above mentioned control panel operation. The faulty units cannot be automatically isolated.

NOTE

- The malfunction detection mechanism is not applied to units and options that are being isolated.

3.4 List of the trouble code

Code	Item	Rank	Ref. page
C0002	Paper feed communication error	C	K.3.5.1 C0002
C0106	Tray 3/LCT paper feed motor turning at abnormal timing	B	K.3.5.2 C0106
C0107	Tray 3/LCT vertical transport motor turning at abnormal timing	B	K.3.5.3 C0107
C0108	Tray 4 paper feed motor turning at abnormal timing	B	K.3.5.4 C0108
C0109	Tray 4 vertical transport motor turning at abnormal timing	B	K.3.5.5 C0109
C0202	Tray 1 feeder up/down abnormality	B	K.3.5.6 C0202
C0204	Tray 2 feeder up/down abnormality	B	K.3.5.7 C0204
C0206	Tray 3 lift-up failure	B	K.3.5.8 C0206
C0208	Tray 4 lift-up failure	B	K.3.5.9 C0208
C0210	LCT lift failure	B	K.3.5.10 C0210

Code	Item	Rank	Ref. page
C0211	Manual feed up/down abnormality	B	K.3.5.11 C0211
C0214	LCT shift failure	B	K.3.5.12 C0214
C0216	LCT up/down abnormality	B	K.3.5.13 C0216
C1003	PK communication error <When FS-535+PK-521 is installed>	B	K.3.6.1 C1003
C1004	FNS communication error <When FS-533, FS-534, FS-535 or JS-506 is installed>	C	K.3.6.2 C1004
C1005	ZU communication error <When FS-535+ZU-606 is installed>	B	K.3.6.3 C1005
C1080	RU communication error <When FS-535 is installed>	B	K.3.6.4 C1080
C1081	SD communication error <When FS-534+SD-511 or FS-535+SD-512 is installed>	C	K.3.6.5 C1081
C1102	Main tray up/down motor's drive malfunction <When FS-533, FS-534 or FS-535 is installed>	B	K.3.6.6 C1102
C1103	Alignment plate motor/Fr's malfunction <When FS-533, FS-534 or FS-535 is installed>	B	K.3.6.7 C1103
C1104	Exit roller motor's malfunction <When FS-535 is installed>	B	K.3.6.8 C1104
C1105	Bundle eject motor's drive malfunction <When FS-534 is installed> Paper output roller motor's drive malfunction <When FS-535 is installed>	B	K.3.6.9 C1105
C1106	Stapler movement motor's malfunction <When FS-533, FS-534 or FS-535 is installed>	B	K.3.6.10 C1106
C1109	Stapler motor's drive malfunction <When FS-533, FS-534 or FS-535 is installed>	B	K.3.6.11 C1109
C1112	Stapler motor's malfunction <When FS-534+SD-511 or FS-535+SD-512 is installed>	B	K.3.6.12 C1112
C1113	Center-staple lead edge stopper motor malfunction <When FS-534+SD-511 or FS-535+SD-512 is installed>	B	K.3.6.13 C1113
C1114	Center-staple front adjust drive motor malfunction <When FS-534+SD-511 or FS-535+SD-512 is installed>	B	K.3.6.14 C1114
C1115	Center-staple knife drive motor malfunction <When FS-534+SD-511 or FS-535+SD-512 is installed>	B	K.3.6.15 C1115
C1124	Sheet feeder up/down drive failure (lower) <When FS-535+PI-505 is installed>	B	K.3.6.16 C1124
C1125	Sheet feeder up/down drive failure (upper) <When FS-535+PI-505 is installed>	B	K.3.6.17 C1125
C1127	Punch oscillating motor's drive malfunction <When FS-535+PK-521 is installed>	B	K.3.6.18 C1127
C1130	1st stopper motor's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.19 C1130
C1131	2nd stopper motor's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.20 C1131
C1132	Punch drive motor's malfunction <When FS-533+PK-519 or FS-534+PK-520 or FS-535+PK-521 is installed>	B	K.3.6.21 C1132
C1133	Punch shift motor's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.22 C1133
C1134	Main motor cooling fan's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.23 C1134
C1135	Punch motor's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.24 C1135
C1136	Punch switchover motor's drive malfunction <When FS-535+ZU-606 is installed>	B	K.3.6.25 C1136
C1140	Alignment plate motor/Rr's malfunction <When FS-533, FS-534 or FS-535 is installed>	B	K.3.6.26 C1140
C1141	Paddle motor's drive malfunction <When FS-534 or FS-535 is installed>	B	K.3.6.27 C1141
C1142	Trailing paddle up/down motor's malfunction <When FS-535 is installed>	B	K.3.6.28 C1142
C1143	Leading edge paddle up/down motor's malfunction <When FS-535 is installed>	B	K.3.6.29 C1143
C1144	Pre-eject drive motor's malfunction <When FS-534 is installed> Stacker plate drive motor's malfunction <When FS-535 is installed>	B	K.3.6.30 C1144
C1145	Trailing edge stopper motor's malfunction <When FS-534 or FS-535 is installed>	B	K.3.6.31 C1145

Code	Item	Rank	Ref. page
C1152	Paper transport belt motor's malfunction <When FS-535+SD-512 is installed>	B	K.3.6.32 C1152

3.5.1 C0002

(1) Contents

Trouble type	Paper feed communication error
Trouble code	C0002
Rank	C
Detection timing	When the printer control board (PRCB) is receiving data, a communication error is detected.
Trouble isolation	-
Relevant electrical parts	Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.1. C0002, C4802, C5601, CC153, CEEE3](#))

3.5.2 C0106

(1) Contents

Trouble type	Tray 3/LCT paper feed motor turning at abnormal timing		
Trouble code	C0106		
Rank	B		
Detection timing	• The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary. • The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.		
Trouble isolation	-		
Relevant electrical parts	<When PC-110 or PC-210 is installed>	• Tray 3 paper feed motor (M111) • PC control board (PCCB)	
	<When PC-410 is installed>	• Paper feed motor (M131) • PC control board (PCCB)	

(2) Procedure

When PC-110 or PC-210 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M111-PCCB CN5 for proper connection and correct as necessary.	-	-
2	Check the connector of M111 for proper drive coupling and correct as necessary.	-	-
3	M111 operation check	PCCB CN5-5 (CW/CCW)	PC-110/PC-210 4-C
4	Replace M111	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.1 PC-110](#))
- Link to the wiring diagram ([N.3.2 PC-210](#))
- Link to the layout drawings for related parts by each trouble code ([S.2.1 PC-110/PC-210](#))

When PC-410 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M131-PCCB CN5 for proper connection and correct as necessary.	-	-
2	Check the connector of M131 for proper drive coupling and correct as necessary.	-	-
3	M131 operation check	PCCB CN5-5 (CW/CCW)	PC-410 5-J
4	Replace M131	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.3 PC-410](#))
- Link to the layout drawings for related parts by each trouble code ([S.2.2 PC-410](#))

3.5.3 C0107**(1) Contents**

Trouble type	Tray 3/LCT vertical transport motor turning at abnormal timing		
Trouble code	C0107		
Rank	B		
Detection timing	- The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary. - The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.		
Trouble isolation	-		
Relevant electrical parts	<When PC-110 or PC-210 is installed>	- Tray 3 vertical transport motor (M112) - PC control board (PCCB)	
	<When PC-410 is installed>	- Vertical transport motor (M132) - PC control board (PCCB)	

(2) Procedure

When PC-110 or PC-210 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M112-PCCB CN5 for proper connection and correct as necessary.	-	-
2	Check the connector of M112 for proper drive coupling and correct as necessary.	-	-
3	M112 operation check	PCCB CN5-13 (CW/CCW)	PC-110/PC-210 3 to 4-C
4	Replace M112	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.1 PC-110](#))
- Link to the wiring diagram ([N.3.2 PC-210](#))
- Link to the layout drawings for related parts by each trouble code ([S.3.1 PC-110/PC-210](#))

When PC-410 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M132-PCCB CN5 for proper connection and correct as necessary.	-	-
2	Check the connector of M132 for proper drive coupling and correct as necessary.	-	-
3	M132 operation check	PCCB CN5-13 (CW/CCW)	PC-410 4-J
4	Replace M132	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.3 PC-410](#))
- Link to the layout drawings for related parts by each trouble code ([S.3.2 PC-410](#))

3.5.4 C0108**(1) Contents**

Trouble type	Tray 4 paper feed motor turning at abnormal timing		
Trouble code	C0108		
Rank	B		
Detection timing	<When PC-210 is installed>	• The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary. • The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.	
Trouble isolation	-		
Relevant electrical parts	• Tray 4 paper feed motor (M121) • PC control board (PCCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M121-PCCB CN9 for proper connection and correct as necessary.	-	-
2	Check the connector of M121 for proper drive coupling and correct as necessary.	-	-
3	M121 operation check	PCCB CN9-5 (CW/CCW)	PC-210 6-K
4	Replace M121	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.2 PC-210](#))

- Link to the layout drawings for related parts by each trouble code ([S.4. C0108](#))

3.5.5 C0109

(1) Contents

Trouble type	Tray 4 vertical transport motor turning at abnormal timing		
Trouble code	C0109		
Rank	B		
Detection timing	<When PC-210 is installed>	• The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary. • The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.	
Trouble isolation	-		
Relevant electrical parts	• Tray 4 vertical transport motor (M122) • PC control board (PCCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M122-PCCB CN9 for proper connection and correct as necessary.	-	-
2	Check the connector of M122 for proper drive coupling and correct as necessary.	-	-
3	M122 operation check	PCCB CN9-13 (CW/CCW)	PC-210 6-K
4	Replace M122	-	-
5	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.2 PC-210](#))
- Link to the layout drawings for related parts by each trouble code ([S.5. C0109](#))

3.5.6 C0202

(1) Contents

Trouble type	Tray 1 feeder up/down abnormality		
Trouble code	C0202		
Rank	B		
Detection timing	The tray 1 upper limit sensor (PS22) is not blocked even after the lapse of a given period of time after the lifting motion has been started.		
Trouble isolation	Tray 1		
Relevant electrical parts	• Tray 1 lift-up motor (M12) • Tray 1 upper limit sensor (PS22) • Printer control board (PRCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M12-PRCB CN25 for proper connection and correct as necessary.	-	-
2	Check the connector of M12 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS25-relay CN30-PRCB CN26 for proper connection and correct as necessary.	-	-
4	PS25 I/O check, sensor check	PRCB CN26-3 (ON)	7-C
5	M12 operation check	PRCB CN25-5 (REM)	1-C
6	Replace M12	-	-
7	PRCB ICP5 conduction check	-	-
8	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.6. C0202](#))

3.5.7 C0204

(1) Contents

Trouble type	Tray 2 feeder up/down abnormality		
Trouble code	C0204		
Rank	B		
Detection timing	The tray 2 upper limit sensor (PS22) is not blocked even after the lapse of a given period of time after the lifting motion has been started.		

Trouble isolation	Tray 2
Relevant electrical parts	• Tray 2 lift-up motor (M13) • Tray 2 upper limit sensor (PS22) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M13-PRCB CN20 for proper connection and correct as necessary.	-	-
2	Check the connector of M13 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS22-relay CN40-PRCB CN19 for proper connection and correct as necessary.	-	-
4	PS22 I/O check, sensor check	PRCB CN19-9 (ON)	9-C
5	M13 operation check	PRCB CN20-5 (REM)	2-C
6	Replace M13	-	-
7	PRCB ICP4 conduction check	-	-
8	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.7. C0204](#))

3.5.8 C0206

(1) Contents

Trouble type	Tray 3 lift-up failure
Trouble code	C0206
Rank	B
Detection timing	The tray 3 upper limit sensor (PS116) is not blocked even after the set period of time has elapsed after the paper lift-up operation for the drawer began.
Trouble isolation	Tray 3
Relevant electrical parts	• Tray 3 lift-up motor (M113) • Tray 3 upper limit sensor (PS116) • PC control board (PCCB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M113-PCCB CN6 for proper connection and correct as necessary.	-	-
2	Check the connector of M113 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS116-relay CN24-PCCB CN4 for proper connection and correct as necessary.	-	-
4	PS116 I/O check, sensor check	PCCB CN4-3 (ON)	PC-110/PC-210 7-C
5	M113 operation check	PCCB CN6-8 to 9	PC-110/PC-210 2-C
6	Replace M113	-	-
7	Replace PCCB	-	-
8	Replace MFPB	-	-

- Link to the wiring diagram ([N.3.1 PC-110](#))
- Link to the wiring diagram ([N.3.2 PC-210](#))
- Link to the layout drawings for related parts by each trouble code ([S.8. C0206](#))

3.5.9 C0208

(1) Contents

Trouble type	Tray 4 lift-up failure
Trouble code	C0208
Rank	B
Detection timing	The tray 4 upper limit sensor (PS126) is not blocked even after the set period of time has elapsed after the paper lift-up operation for the drawer began.
Trouble isolation	• Tray 4
Relevant electrical parts	• Tray 4 lift-up motor (M123) • Tray 4 upper limit sensor (PS126) • PC control board (PCCB)

- MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M123-PCCB CN8 for proper connection and correct as necessary.	-	-
2	Check the connector of M123 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS126-relay CN47-PCCB CN7 for proper connection and correct as necessary.	-	-
4	PS126 I/O check, sensor check	PCCB CN7-3 (ON)	PC-210 8-K
5	M123 operation check	PCCB CN8-8 to 9	PC-210 5-K
6	Replace M123	-	-
7	Replace PCCB	-	-
8	Replace MFPB	-	-

- Link to the wiring diagram ([N.3.2 PC-210](#))
- Link to the layout drawings for related parts by each trouble code ([S.9. C0208](#))

3.5.10 C0210

(1) Contents

Trouble type	LCT lift failure
Trouble code	C0210
Rank	B
Detection timing	• The main tray upper limit sensor (PS136) is not blocked even after the set period of time has elapsed after the paper lift-up operation for the drawer began. • The shifter stop / lower limit position sensor (PS138) is not unblocked even after the set period of time has elapsed after the paper lift-up operation for the drawer began. • The main tray upper limit sensor (PS136) is not blocked even after the set period of time has elapsed after the paper lift-up operating. • The main tray upper limit sensor (PS136) is not unblocked even after the set period of time has elapsed after the paper lift-down operation began. • The shifter stop / lower limit position sensor (PS138) is not blocked even after the set period of time has elapsed after the paper lift-down operation began.
Trouble isolation	LCT
Relevant electrical parts	• Main tray upper limit sensor (PS136) • Shifter stop / lower limit position sensor (PS138) • Elevator motor (M134) • PC control board (PCCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M134-PCCB CN10 for proper connection and correct as necessary.	-	-
2	Check the connector of M134 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS136-relay CN1-PCCB CN4 for proper connection and correct as necessary.	-	-
4	Check the connector between PS138-relay CN16-PCCB CN14 for proper connection and correct as necessary.	-	-
5	PS136 I/O check, sensor check	PCCB CN4-3 (ON)	PC-410 8-J
6	PS138 I/O check, sensor check	PCCB CN14-6 (ON)	PC-410 4-J
7	M134 operation check	PCCB CN10-1 to 2	PC-410 6-J
8	Replace M134	-	-
9	PCCB IC2 conduction check	-	-
10	Replace PCCB	-	-

- Link to the wiring diagram ([N.3.3 PC-410](#))
- Link to the layout drawings for related parts by each trouble code ([S.10. C0210](#))

3.5.11 C0211

(1) Contents

Trouble type	Manual feed up/down abnormality
--------------	---------------------------------

Trouble code	C0211
Rank	B
Detection timing	- Paper does not unblock the bypass lift-up position sensor (PS26) even after the paper feed motor (M22) rotates for a given period of time after the position is switched from stand by position at lift-up plate to the feed position. - The bypass lift-up position sensor (PS26) is not blocked even after the paper feed motor (M22) rotates for a given period of time after the position is switched from stand by position at lift-up plate to the feed position.
Trouble isolation	Manual
Relevant electrical parts	- Paper feed motor (M22) - Bypass pick-up solenoid (SD1) - Bypass lift-up position sensor (PS26) - Printer control board (PRCB) - Expansion control board (EXCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M22-EXCB CN3 for proper connection and correct as necessary.	-	-
2	Check the connector of M22 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS26-relay CN19-PRCB CN27 for proper connection and correct as necessary.	-	-
4	Check the connector between SD1-relay CN21-relay CN19-PRCB CN27 for proper connection and correct as necessary.	-	-
5	PS26 I/O check, sensor check	PRCB CN27-13 (ON)	4-C
6	SD1 operation check	PRCB CN27-10 (ON)	4-C
7	M22 operation check	EXCB CN3-5 to 8	22-P
8	Replace M22	-	-
9	EXCB IC4 conduction check	-	-
10	Replace EXCB	-	-
11	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.11. C0211](#))

3.5.12 C0214

(1) Contents

Trouble type	LCT shift failure
Trouble code	C0214
Rank	B
Detection timing	- The shifter stop / lower limit position sensor (PS138) is not blocked even after the set period of time has elapsed after the shift operation began (shift to the right). - The shifter home sensor (PS139) is not unblocked even after the set period of time has elapsed after the shift operation began (shift to the right). - The shifter stop / lower limit position sensor (PS138) is not unblocked even after the set period of time has elapsed after the return operation began (shift to the left). - The shifter home sensor (PS139) is not blocked even after the set period of time has elapsed after the return operation began (shift to the left).
Trouble isolation	LCT
Relevant electrical parts	- Shifter motor (M133) - Shifter stop / lower limit position sensor (PS138) - Shifter home sensor (PS139) - PC control board (PCCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M133-PCCB CN10 for proper connection and correct as necessary.	-	-
2	Check the connector of M133 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS138-relay CN16-PCCB CN14 for proper connection and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
4	Check the connector between PS139-relay CN16-PCCB CN14 for proper connection and correct as necessary.	-	-
5	PS138 I/O check, sensor check	PCCB CN14-6 (ON)	PC-410 4-J
6	PS139 I/O check, sensor check	PCCB CN14-3 (ON)	PC-410 4-J
7	M133 operation check	PCCB CN10-3 to 4	PC-410 6-J
8	Replace M133	-	-
9	PCCB IC2 conduction check	-	-

3.5.13 C0216

(1) Contents

Trouble type	LCT up/down abnormality
Trouble code	C0216
Rank	B
Detection timing	The upper limit sensor (PS2) is not blocked even after the set period of time has elapsed after the paper lift-up operation began.
Trouble isolation	LCT
Relevant electrical parts	• Upper limit sensor (PS2) • Lift-up motor (M1) • LU drive board (LUDB)

(2) Procedure

When LU-204 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M1-LCDB CN3 for proper connection, and correct as necessary.	-	-
2	Check the connector of M1 for proper drive coupling and correct as necessary.	-	-
3	Check the connectors between PS2-relay CN406-LCDB CN5 for proper connection, and correct as necessary.	-	-
4	PS2 I/O check, sensor check	LUDB CN5-3 (ON)	LU-204 4-G
5	M1 operation check	LUDB CN3-4 (ON)	LU-204 3-G
6	Replace M1	-	-
7	LUDB ICP2 conduction check	-	-
8	Replace LUDB	-	-

- Link to the wiring diagram ([N.3.4 LU-204](#))
- Link to the layout drawings for related parts by each trouble code ([S.13. C0216](#))

When LU-301 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M1-LCDB CN3 for proper connection, and correct as necessary.	-	-
2	Check the connector of M1 for proper drive coupling and correct as necessary.	-	-
3	Check the connectors between PS2-relay CN3-LCDB CN5 for proper connection, and correct as necessary.	-	-
4	PS2 I/O check, sensor check	LUDB CN5-3 (ON)	LU-301 4-G
5	M1 operation check	LUDB CN3-4 (ON)	LU-301 3-G
6	Replace M1	-	-
7	LUDB ICP2 conduction check	-	-
8	Replace LUDB	-	-

3.6 C1***

3.6.1 C1003

(1) Contents

Trouble type	PK communication error
Trouble code	C1003

Rank	B	
Detection timing	<When FS-535+PK-521 is installed>	When a communication error is detected between the FS control board (FSCB) and the punch control board (PKCB).
Trouble isolation	-	
Relevant electrical parts	• Punch control board (PKCB) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace PKCB	-	-
4	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.14. C1003](#))

3.6.2 C1004

(1) Contents

Trouble type	FNS communication error	
Trouble code	C1004	
Rank	C	
Detection timing	<When FS-533, FS-534 or FS-535 is installed>	When the FS control board (FSCB) is receiving data, a communication error is detected.
	<When JS-506 is installed>	When the JS control board (JSCB) is receiving data, a communication error is detected.
Trouble isolation	-	
Relevant electrical parts	<When FS-533, FS-534 or FS-535 is installed>	FS control board (FSCB)
	<When JS-506 is installed>	JS control board (JSCB)

(2) Procedure

When FS-533, FS-534 or FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace FSCB (FS-533/FS-534/FS-535)	-	-

When JS-506 is installed

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace JSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.15. C1004, CC155](#))

3.6.3 C1005

(1) Contents

Trouble type	ZU communication error	
Trouble code	C1005	
Rank	C	
Detection timing	When the ZU control board (ZUCB) is receiving data, a communication error is detected.	
Trouble isolation	-	
Relevant electrical parts	ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace ZUCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.16. C1005, CC157](#))

3.6.4 C1080**(1) Contents**

Trouble type	RU communication error
Trouble code	C1080
Rank	C
Detection timing	When the RU control board (RUCB) is receiving data, a communication error is detected.
Trouble isolation	-
Relevant electrical parts	RU control board (RUCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace RUCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.17. C1080](#))

3.6.5 C1081**(1) Contents**

Trouble type	SD communication error
Trouble code	C1081
Rank	C
Detection timing	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed> When a communication error is detected between the FS control board (FSCB) and the SD control board (SDDB).
Trouble isolation	Half-Fold/Tri-Fold/Center Stapling
Relevant electrical parts	• SD drive board (SDDB) • FS control board (FSCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace SDDB (SD-511/SD-512)	-	-
4	Replace FSCB (FS-534/FS-535)	-	-

- Link to the layout drawings for related parts by each trouble code ([S.18. C1081](#))

3.6.6 C1102**(1) Contents**

Trouble type	Main tray up/down motor's drive malfunction
Trouble code	C1102
Rank	B
Detection timing	<When FS-533 is installed> • While the exit tray is being lifted, the stapler movement motor (M107) is not unblocked after the set period of time has elapsed after the tray lift up motor (M109) is turned ON.

		While the exit tray is being lowered, the stapler movement motor (M107) is not blocked after the set period of time has elapsed after the tray lift up motor (M109) is turned ON
	<When FS-534 is installed>	- While the exit tray is being lifted, the main tray upper position sensor (PS26/PS27) is not blocked and the main tray upper position detect switch (SW2) is not turned ON, even after the main tray up/down motor (M11) turns by the set number of times. - While the exit tray is being lowered, the main tray full detection sensor (PS29) is not blocked after the set period of time has elapsed after the main tray up/down motor (M11) is turned ON.
	<When FS-535 is installed>	- The main tray upper limit sensor (PS44/PS45) is turned ON even after the set period of time has elapsed while the main tray up/down motor (M5) is energized. - The staple paper exit top surface sensor (PS7) is unblocked even after the set period of time has elapsed while the main tray up/down motor (M5) is energized.
Trouble isolation	-	
Relevant electrical parts	<When FS-533 is installed>	- Tray lift up motor (M109) - Stapler movement motor (M107) - FS control board (FSCB)
	<When FS-534 is installed>	- Main tray up/down motor (M11) - Main tray upper position sensor/R (PS26) - Main tray upper position sensor/F (PS27) - Main tray full detection sensor (PS29) - Main tray upper position detect switch (SW2) - FS control board (FSCB)
	<When FS-535 is installed>	- Main tray up/down motor (M5) - Main tray upper limit sensor/in (PS44) - Main tray upper limit sensor/out (PS45) - Staple paper exit top surface sensor (PS7) - FS control board (FSCB)

(2) Procedure

When FS-533 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M109-FSCB CN108 for proper connection and correct as necessary.	-	-
2	Check the connector of M109 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS107-FSCB CN110 for proper connection and correct as necessary.	-	-
4	PS107 I/O check, sensor check	FSCB CN110	FS-533 7-D to E
5	M109 operation check	FSCB CN108	FS-533 10-E

3.6.7 C1103

(1) Contents

Trouble type	Alignment plate motor/Fr's malfunction		
Trouble code	C1103		
Rank	B		
Detection timing	<When FS-533 is installed>	• The alignment plate home sensor/F (PS108) is not unblocked after the set period of time has elapsed after the plate drive starts from the home position. • The alignment plate home sensor/F (PS108) is not blocked after the set period of time has elapsed after the alignment motor/F (M105) is turned ON to return the plate to the home position.	
	<When FS-534 is installed>	• The alignment plate/F home sensor (PS12) is not unblocked after the set period of time has elapsed after the plate drive starts from the home position. • The alignment plate/F home sensor (PS12) is not blocked after the set period of time has elapsed after the alignment motor/front (M7) is turned ON to return the plate to the home position. • The alignment plate/F does not reach the specified position within the set period of time.	
	<When FS-535 is installed>	The alignment plate motor home sensor/Fr (PS17) is not blocked even after the set period of time has elapsed while the alignment plate motor/Fr (M11) is energized.	
Trouble isolation	-		
Relevant electrical parts	<When FS-533 is installed>	• Alignment motor/F (M105) • Alignment plate home sensor/F (PS108) • FS control board (FSCB)	
	<When FS-534 is installed>	• Alignment motor/Front (M7) • Alignment plate/F home sensor (PS12) • FS control board (FSCB)	
	<When FS-535 is installed>	• Alignment plate motor/Fr (M11) • Alignment plate motor home sensor/F (PS17) • FS control board (FSCB)	

(2) Procedure

When FS-533 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M105-FSCB CN102 for proper connection and correct as necessary.	-	-
2	Check the connector of M105 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS108-FSCB CN102 for proper connection and correct as necessary.	-	-
4	PS108 I/O check, sensor check	FSCB CN102	FS-533 7-J
5	M105 operation check	FSCB CN102	FS-533 7-J
6	Replace M105	-	-
7	FSCB CP105 conduction check	-	-
8	Replace FSCB	-	-

3.6.11 C1109

(1) Contents

Trouble type	Stapler motor's drive malfunction	
Trouble code	C1109	
Rank	B	
Detection timing	<When FS-533 is installed>	The stapler home sensor (PS110) is not blocked even after the set period of time has elapsed after the stapler motor turned ON.
	<When FS-534 is installed>	• The stapler home position sensor (Rear) (PS23) is not blocked or unblocked even after the set period of time has elapsed after the stapler motor (M14) turned ON. • The stapler position sensor (Center) (PS24) is blocked, when the stapler motor (M14) is running.
	<When FS-535 is installed>	The home sensor in the staple unit does not turn ON even after the set period of time has elapsed after the stapler motor (M14) turned ON, and the home sensor in the staple unit does not turn ON even after the set period of time has elapsed after the stapler motor (M14) drives to the reverse direction.
Trouble isolation	Staple	
Relevant electrical parts	<When FS-533 is installed>	• Stapler home sensor (PS110) • Stapler unit • Stapler relay board (STREYB) • FS control board (FSCB)
	<When FS-534 is installed>	• Stapler home position sensor (Rear) (PS23) • Stapler unit • Stapler position sensor (Center) (PS24) • FS control board (FSCB)
	<When FS-535 is installed>	• Stapler unit • Stapler motor (M14) • FS control board (FSCB)

(2) Procedure

When FS-533 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between the stapler unit-STREYB CN122 and CN123 for proper connection and correct as necessary.	-	-
2	Check the connector of the stapler unit for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS110-FSCB CN110 for proper connection and correct as necessary.	-	-
4	PS110 I/O check, sensor check	FSCB CN110	FS-533 8-D to E
5	Replace the stapler unit	-	-
6	Replace STREYB	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.7 FS-533](#))
- Link to the layout drawings for related parts by each trouble code ([S.24.1 FS-533](#))

When FS-534 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between the stapler unit-relay CN4-FSCB J11 for proper connection and correct as necessary.	-	-
2	Check the connector of the stapler unit for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS23-relay CN3-FSCB J11 for proper connection and correct as necessary.	-	-
4	Check the connector between PS24-relay CN3-FSCB J11 for proper connection and correct as necessary.	-	-
5	PS23 I/O check, sensor check	FSCB J11-3 (ON)	FS-534 4-C
6	PS24 I/O check, sensor check	FSCB J11-6 (ON)	FS-534 4 to 5-C
7	Replace the stapler unit	-	-
8	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.24.2 FS-534](#))

When FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M14-FSCB CN15 for proper connection and correct as necessary.	-	-
2	Check the connector of M14 for proper drive coupling, and correct as necessary.	-	-
3	Replace the stapler unit	-	-
4	M14 operation check	FSCB CN15-1 to 2	FS-535 8 to 9-D
5	Replace M14	-	-
6	FSCB ICP10 conduction check	-	-
7	Replace FSCB	-	-

3.6.12 C1112

(1) Contents

Trouble type	Stapler motor's malfunction		
Trouble code	C1112		
Rank	B		
Detection timing	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	• The stapler home sensor is not turned ON even after the set period of time has elapsed while the stapler motor is energized. • The stapler home sensor is not turned OFF even after the set period of time has elapsed after the stapler home sensor is turned ON.	
Trouble isolation	• Staple • Half-Fold/Tri-Fold Center Stapling		
Relevant electrical parts	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	• Staple unit • SD drive board (SDDB) • FS control board (FSCB)	

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between the staple unit-SDDB J4 for proper connection and correct as necessary.	-	-
2	Check the connector of the staple unit for proper drive coupling and correct as necessary.	-	-
3	Replace the staple unit	-	-
4	Replace SDDB	-	-
5	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.25.1 SD-511](#))

When FS-535+SD-512 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between the staple unit-SDDB J4 for proper connection and correct as necessary.	-	-
2	Check the connector of the staple unit for proper drive coupling and correct as necessary.	-	-
3	Replace the stapler unit	-	-
4	Replace SDDB	-	-
5	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.25.2 SD-512](#))

3.6.13 C1113

(1) Contents

Trouble type	Center-staple lead edge stopper motor malfunction		
Trouble code	C1113		
Rank	B		
Detection timing	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	The stopper home sensor (PS6) is not blocked or unblocked even after the set period of time has elapsed after the stopper drive motor (M4) is turned ON.	
Trouble isolation	• Staple • Half-Fold/Tri-Fold Center Stapling		

Relevant electrical parts	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	• Stopper drive motor (M4) • Stopper home sensor (PS6) • SD drive board (SDDDB) • FS control board (FSCB)
---------------------------	--	--

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M4-SDDDB J10 for proper connection and correct as necessary.	-	-
2	Check the connector of M4 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS6-SDDDB J10 for proper connection, and correct as necessary.	-	-
4	PS6 I/O check, sensor check	SDDDB J10-5 (ON)	SD-511 2-G
5	M4 operation check	SDDDB J10-6 to 9	SD-511 1 to 2-F to G
6	Replace M4	-	-
7	Replace SDDDB	-	-
8	Replace FSCB	-	-

3.6.14 C1114

(1) Contents

Trouble type	Center-staple front adjust drive motor malfunction	
Trouble code	C1114	
Rank	B	
Detection timing	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	The alignment home sensor (PS4) is not blocked or unblocked even after the set period of time has elapsed after the alignment motor (M3) is turned ON.
Trouble isolation	Half-Fold/Tri-Fold Center Stapling	
Relevant electrical parts	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	• Alignment motor (M3) • Alignment home sensor (PS4) • SD drive board (SDDDB) • FS control board (FSCB)

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M3-relay CN10-SDDDB J7 for proper connection and correct as necessary.	-	-
2	Check the connector of M3 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS4-relay CN10-SDDDB J7 for proper connection, and correct as necessary.	-	-
4	PS4 I/O check, sensor check	SDDDB J7-6 (ON)	SD-511 6-F
5	M3 operation check	SDDDB J7 7 to 10	SD-511 5-F to G
6	Replace M3	-	-

Step	Action	Control signal	Location of electrical components
7	Replace SDDB	-	-
8	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.9 SD-511](#))
- Link to the layout drawings for related parts by each trouble code ([S.27.1 SD-511](#))

When FS-535+SD-512 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M3-relay CN10-SDDB J7 for proper connection, and correct as necessary.	-	-
2	Check the connector of M3 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS4-relay CN10-SDDB J7 for proper connection, and correct as necessary.	-	-
4	PS4 I/O check, sensor check	SDDB J7-6 (ON)	SD-512 5-G
5	M3 operation check	SDDB J7-7 to 10	SD-512 5-F to G
6	Replace M3	-	-
7	Replace SDDB	-	-
8	Replace FSCB	-	-

3.6.15 C1115

(1) Contents

Trouble type	Center fold knife motor's malfunction		
Trouble code	C1115		
Rank	B		
Detection timing	<When FS-534+SD-511 is installed>	The center fold knife home sensor (PS8) is not blocked or unblocked even after the set period of time has elapsed after the center fold knife motor (M9) is turned ON.	
	<When FS-535+SD-512 is installed>	The center fold home sensor (PS8) is not blocked even after the set period of time has elapsed while the center fold knife motor (M9) is energized.	
Trouble isolation	Half-Fold/Tri-Fold Center Stapling		
Relevant electrical parts	<When FS-534+SD-511 is installed>	• Center fold knife motor (M9) • Center fold knife home sensor (PS8) • SD drive board (SDDB) • FS control board (FSCB)	
	<When FS-535+SD-512 is installed>	• Center fold knife motor (M9) • Center fold home sensor (PS8) • SD drive board (SDDB) • FS control board (FSCB)	

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M9-SDDB J11 for proper connection and correct as necessary.	-	-
2	Check the connector of M9 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS8-relay CN10-SDDB J7 for proper connection, and correct as necessary.	-	-
4	PS8 I/O check, sensor check	SDDB J7-3 (ON)	SD-511 6-G
5	M9 operation check	SDDB J11 11 to 20	SD-511 1 to 2-B
6	Replace M9	-	-
7	Replace SDDB	-	-
8	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.9 SD-511](#))
- Link to the layout drawings for related parts by each trouble code ([S.28.1 SD-511](#))

When FS-535+SD-512 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M9-SDDB J11 for proper connection, and correct as necessary.	-	-
2	Check the connector of M9 for proper drive coupling, and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
3	Check the connector between PS8-relay CN10-SDDB J7 for proper connection, and correct as necessary.	-	-
4	PS8 I/O check, sensor check	SDDB J7-3 (ON)	SD-512 5-G
5	M9 operation check	SDDB CN11-11 to 20	SD-512 1-B
6	Replace M9	-	-
7	Replace SDDB	-	-
8	Replace FSCB	-	-

3.6.16 C1124

(1) Contents

Trouble type	Sheet feeder up/down drive failure (lower)	
Trouble code	C1124	
Rank	B	
Detection timing	<When FS-535+PI-505 is installed>	The tray upper limit sensor /Lw (PS209) or tray lower limit sensor /Lw (PS210) are not turned ON even after the set period of time has elapsed after the tray lift motor /Lw (M202) is energized.
Trouble isolation	Post Inserter	
Relevant electrical parts	• Tray lift motor /Lw (M202) • Tray upper limit sensor /Lw (PS209) • Tray lower limit sensor /Lw (PS210) • PI drive board (PIDB) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M202-relay CN206-PIDB CN56 for proper connection, and correct as necessary.	-	-
2	Check the connector of M202 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS209-relay CN237-PIDB CN53<A> for proper connection, and correct as necessary.	-	-
4	Check the connector between PS210-relay CN236-PIDB CN53<A> for proper connection, and correct as necessary.	-	-
5	PS209 I/O check, sensor check	PIDB CN53<A>-8 (ON)	PI-505 8-C to D
6	PS210 I/O check, sensor check	PIDB CN53<A>-11 (ON)	PI-505 9-C to D
7	M202 operation check	PIDB CN56-5 to 6	PI-505 7-C to D
8	Replace M202	-	-
9	PIDB ICP2 conduction check	-	-
10	Replace PIDB	-	-
11	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.13 PI-505](#))
- Link to the layout drawings for related parts by each trouble code ([S.29. C1124](#))

3.6.17 C1125

(1) Contents

Trouble type	Sheet feeder up/down drive failure (upper)	
Trouble code	C1125	
Rank	B	
Detection timing	<When FS-535+PI-505 is installed>	The tray lower limit sensor /Up (PS205) or tray upper limit sensor /Up (PS204) are not turned ON even after the set period of time has elapsed after the tray lift motor /Up (M201) is energized.
Trouble isolation	Post Inserter	
Relevant electrical parts	• Tray lift motor /Up (M201) • Tray upper limit sensor /Up (PS204) • Tray lower limit sensor /Up (PS205) • PI drive board (PIDB) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M201-relay CN203-PIDB CN54 for proper connection, and correct as necessary.	-	-
2	Check the connector of M201 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS204-relay CN235-PIDB CN55 for proper connection, and correct as necessary.	-	-
4	Check the connector between PS205-relay CN235-PIDB CN55 for proper connection, and correct as necessary.	-	-
5	PS204 I/O check, sensor check	PIDB CN55-8 (ON)	PI-505 5-C to D
6	PS205 I/O check, sensor check	PIDB CN55-7 (ON)	PI-505 6-C to D
7	M201 operation check	PIDB CN54-7 to 8	PI-505 4-C to D
8	Replace M201	-	-
9	PIDB ICP2 conduction check	-	-
10	Replace PIDB	-	-
11	Replace FSCB	-	-

3.6.18 C1127**(1) Contents**

Trouble type	Punch oscillating motor's drive malfunction	
Trouble code	C1127	
Rank	B	
Detection timing	<When FS-535+PK-521 is installed>	The PK punch home sensor (PS303) is not turned ON even after the set period of time has elapsed while the punch oscillating motor (M302) is energized.
Trouble isolation	Punch	
Relevant electrical parts	• Punch oscillating motor (M302) • PK punch home sensor (PS303) • Punch control board (PKCB) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M302-relay CN342-relay CN341-PKCB CN37 for proper connection, and correct as necessary.	-	-
2	Check the connector of M302 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS303-relay CN342-relay CN341-PKCB CN34 for proper connection, and correct as necessary.	-	-
4	PS303 I/O check, sensor check	PKCB CN37-2 (ON)	PK-521 5-C
5	M302 operation check	PKCB CN34-1 to 6	PK-521 5-C
6	Replace M302	-	-
7	Replace PKCB	-	-
8	Replace FSCB	-	-

3.6.19 C1130**(1) Contents**

Trouble type	1st stopper motor drive malfunction	
Trouble code	C1130	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	The 1st folding stopper home sensor (PS603) is not turned ON even after the set period of time has elapsed after the 1st stopper motor (M602) starts searching home position.
Trouble isolation	Z fold	

Relevant electrical parts	• 1st stopper motor (M602) • 1st folding stopper home sensor (PS603) • ZU control board (ZUCB)
---------------------------	--

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M602-relay CN30-ZUCB CN15 for proper connection, and correct as necessary.	-	-
2	Check the connector of M602 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS603-relay CN636-ZUCB CN4 for proper connection, and correct as necessary.	-	-
4	PS603 I/O check, sensor check	ZUCB CN4-11 (ON)	ZU-606 5-C
5	M602 operation check	ZUCB CN15-4 to 6	ZU-606 3-C
6	Replace M602	-	-
7	ZUCB ICP7 conduction check	-	-
8	Replace ZUCB	-	-

- Link to the wiring diagram ([N.3.14 ZU-606](#))
- Link to the layout drawings for related parts by each trouble code ([S.32. C1130](#))

3.6.20 C1131**(1) Contents**

Trouble type	2nd stopper motor's drive malfunction	
Trouble code	C1131	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	The 2nd stopper home sensor (PS604) is not turned ON even after the set period of time has elapsed after the 2nd stopper motor (M603) starts searching home position.
Trouble isolation	Z fold	
Relevant electrical parts	• 2nd folding stopper motor (M603) • 2nd folding stopper home sensor (PS604) • ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M603-relay CN675-relay CN30-ZUCB CN15 for proper connection, and correct as necessary.	-	-
2	Check the connector of M603 for proper drive coupling, and correct as necessary.	-	-
3	Check the connectors between PS604-relay CN674-relay CN636-ZUCB CN4 for proper connection, and correct as necessary.	-	-
4	PS604 I/O check, sensor check	ZUCB CN4-5 (ON)	ZU-606 4 to 5-C
5	M603 operation check	ZUCB CN15-7 to 12	ZU-606 4-C
6	Replace M603	-	-
7	ZUCB ICP6 conduction check	-	-
8	Replace ZUCB	-	-

- Link to the wiring diagram ([N.3.14 ZU-606](#))
- Link to the layout drawings for related parts by each trouble code ([S.33. C1131](#))

3.6.21 C1132**(1) Contents**

Trouble type	Punch drive motor's malfunction	
Trouble code	C1132	
Rank	B	
Detection timing	<When FS-533+PK-519 is installed>	• The puncher drive cam sensor (PS203) or puncher home sensor (PS204) is not blocked or unblocked even after the set period of time has elapsed while the punch motor (M201) is energized. • The punch motor sensor (PS202) does not turn ON after the punch motor (M201) stopped.

		The holes with other marketing area is set in [Service Mode] -> [Finisher] -> [Punch Option Setting]
	<When FS-534+PK-520 is installed>	The punch home sensor (PS1) is not blocked or unblocked even after the set period of time has elapsed while the punch drive motor (M1) is energized.
	<When FS-535+PK-521 is installed>	The PK punch home sensor/2 (PS301) is not blocked or unblocked even after the set period of time has elapsed while the punch drive motor (M301) is energized.
Trouble isolation	-	
Relevant electrical parts	<When FS-533+PK-519 is installed>	- Punch motor (M201) - Punch motor sensor (PS202) - Puncher drive cam sensor (PS203) - Puncher home sensor (PS204) - PK control board (PKCB) - FS control board (FSCB)
	<When FS-534+PK-520 is installed>	- Punch drive motor (M1) - Punch home sensor (PS1) - FS control board (FSCB)
	<When FS-535+PK-521 is installed>	- Punch drive motor (M301) - PK punch home sensor/2 (PS301) - Punch control board (PKCB) - FS control board (FSCB)

(2) Procedure

When FS-533+PK-519 is installed

Step	Action	Control signal	Location of electrical components
1	Check the number of the holes in [Service Mode] -> [Finisher] -> [Punch Option Setting]	-	-
2	Check the connector between M201-PKCB CN203 for proper connection, and correct as necessary.	-	-
3	Check the connector of M201 for proper drive coupling, and correct as necessary.	-	-
4	Check the connector between PS202-PKCB CN204 for proper connection, and correct as necessary.	-	-
5	Check the connector between PS203-PKCB CN204 for proper connection, and correct as necessary.	-	-
6	Check the connector between PS204-PKCB CN204 for proper connection, and correct as necessary.	-	-
7	PS202 I/O check, sensor check	PKCB CN204	FS-533 (PK-519) 5-C
8	PS203 I/O check, sensor check	PKCB CN204	FS-533 (PK-519) 6-C
9	PS204 I/O check, sensor check	PKCB CN204	FS-533 (PK-519) 6-C
10	M201 operation check	PKCB CN203-1 to 2	FS-533 (PK-519) 4-C
11	Replace M201	-	-
12	PKCB F201 conduction check	-	-
13	Replace PKCB	-	-
14	Replace FSCB	-	-

3.6.22 C1133

(1) Contents

Trouble type	Punch shift motor's drive malfunction	
Trouble code	C1133	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	The punch shift home sensor (PS605) is not turned ON, or is not turned OFF after it is turned ON, even after the set period of time has elapsed after the punch shift motor (M605) starts searching its home position.
Trouble isolation	Z fold	
Relevant electrical parts	• Punch shift motor (M605) • Punch shift home sensor (PS605) • ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M605-ZUCB CN5 for proper connection, and correct as necessary.	-	-
2	Check the connector of M605 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS605-ZUCB CN3 for proper connection, and correct as necessary.	-	-
4	PS605 I/O check, sensor check	ZUCB CN3-2 (ON)	ZU-606 6-C
5	M605 operation check	ZUCB CN5-1 to 6	ZU-606 2-C
6	Replace M605	-	-
7	ZUCB ICP5 conduction check	-	-
8	Replace ZUCB	-	-

3.6.23 C1134

(1) Contents

Trouble type	Main motor cooling fan's drive malfunction	
Trouble code	C1134	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	Even after the set period of time has elapsed after the main motor cooling fan (FM601) is turned ON, the FM601 EM signal is faulty and the fan is turned OFF; the signal is faulty after each of the following three trials.
Trouble isolation	-	
Relevant electrical parts	• Main motor cooling fan (FM601) • ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM601-relay CN653-ZUCB CN11 for proper connection, and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
2	Check the connector of FM601 for proper drive coupling, and correct as necessary.	-	-
3	FM601 operation check	ZUCB CN11-11 (DRV)	ZU-606 8 to 9-C
4	Replace FM601	-	-
5	ZUCB ICP8 conduction check	-	-
6	Replace ZUCB	-	-

- Link to the wiring diagram ([N.3.14 ZU-606](#))
- Link to the layout drawings for related parts by each trouble code ([S.36. C1134](#))

3.6.24 C1135

(1) Contents

Trouble type	Punch motor's drive malfunction	
Trouble code	C1135	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	The punch motor (M604) is not turned OFF even after the set period of time has elapsed after it is turned ON.
Trouble isolation	-	
Relevant electrical parts	• Punch motor (M604) • ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M604-relay CN644-relay CN638-ZUCB CN11 for proper connection, and correct as necessary.	-	-
2	Check the connector of M604 for proper drive coupling, and correct as necessary.	-	-
3	M604 operation check	ZUCB CN11-2 (DRV)	ZU-606 7-C
4	Replace M604	-	-
5	ZUCB ICP10 conduction check	-	-
6	Replace ZUCB	-	-

- Link to the wiring diagram ([N.3.14 ZU-606](#))
- Link to the layout drawings for related parts by each trouble code ([S.37. C1135](#))

3.6.25 C1136

(1) Contents

Trouble type	Punch switchover motor's drive malfunction	
Trouble code	C1136	
Rank	B	
Detection timing	<When FS-535+ZU-606 is installed>	The punch switchover switch (MS601) is not turned OFF from the ON position, or not turned ON from the OFF position, even after the set period of time has elapsed after the punch switchover motor (M608) is turned ON.
Trouble isolation	Z fold	
Relevant electrical parts	• Punch switchover motor (M608) • Punch switchover switch (MS601) • ZU control board (ZUCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M604-relay CN644-relay CN638-ZUCB CN11 for proper connection, and correct as necessary.	-	-
2	Check the connector of M608 for proper drive coupling, and correct as necessary.	-	-
3	MS601 I/O check, sensor check	ZUCB CN11-9	ZU-606 8-C
4	M608 operation check	ZUCB CN11-8 (DRV)	ZU-606 7 to 8-C
5	Replace M608	-	-
6	ZUCB ICP9 conduction check	-	-
7	Replace ZUCB	-	-

- Link to the wiring diagram ([N.3.14 ZU-606](#))
- Link to the layout drawings for related parts by each trouble code ([S.38. C1136](#))

3.6.26 C1140**(1) Contents**

Trouble type	Alignment plate motor/Rr's malfunction		
Trouble code	C1140		
Rank	B		
Detection timing	<When FS-533 is installed>	• The alignment plate home sensor/R (PS109) is not unblocked after the set period of time has elapsed after the plate drive starts from the home position. • The alignment plate home sensor/R (PS109) is not blocked after the set period of time has elapsed when the plate returns to the home position.	
	<When FS-534 is installed>	The alignment plate/R home sensor (PS13) is not blocked or unblocked even after the set period of time has elapsed while the alignment motor/Rr (M8) is energized.	
	<When FS-535 is installed>	The alignment plate motor home sensor/Rr (PS18) is not blocked even after the set period of time has elapsed while the alignment plate motor/Rr (M12) is energized.	
Trouble isolation	-		
Relevant electrical parts	<When FS-533 is installed>	• Alignment motor/R (M106) • Alignment plate home sensor/R (PS109) • FS control board (FSCB)	
	<When FS-534 is installed>	• Alignment motor/Rear (M8) • Alignment plate/R home sensor (PS13) • FS control board (FSCB)	
	<When FS-535 is installed>	• Alignment plate motor/Rr (M12) • Alignment plate motor home sensor/Rr (PS18) • FS control board (FSCB)	

(2) Procedure

When FS-533 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M106-FSCB CN102 for proper connection and correct as necessary.	-	-
2	Check the connector of M106 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS109-relay CN106-FSCB CN102 for proper connection and correct as necessary.	-	-
4	PS109 I/O check, sensor check	FSCB CN102	FS-533 7-J
5	M106 operation check	FSCB CN102	FS-533 8-J
6	Replace M106	-	-
7	FSCB CP105 conduction check	-	-
8	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.7 FS-533](#))
- Link to the layout drawings for related parts by each trouble code ([S.39.1 FS-533](#))

When FS-534 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M8-FSCB J12 for proper connection, and correct as necessary.	-	-
2	Check the connector of M8 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS13-FSCB J9 for proper connection, and correct as necessary.	-	-
4	PS13 I/O check, sensor check	FSCB J9-9 (ON)	FS-534 9-C
5	M8 operation check	FSCB J12-13 to 16	FS-534 5 to 6-C to D
6	Replace M8	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.39.2 FS-534](#))

When FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M12-FSCB CN2 for proper connection, and correct as necessary.	-	-
2	Check the connector of M12 for proper drive coupling, and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
3	Check the connector between PS18-FSCB CN19 for proper connection, and correct as necessary.	-	-
4	PS18 I/O check, sensor check	FSCB CN20-3 (ON)	FS-535 11-D
5	M12 operation check	FSCB CN19-5 to 8	FS-535 10-D
6	Replace M12	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.10 FS-535](#))

3.6.27 C1141

(1) Contents

Trouble type	Paddle motor's drive malfunction		
Trouble code	C1141		
Rank	B		
Detection timing	<When FS-534 is installed>	The upper paddle home position detection sensor (PS14) is not blocked or unblocked even after the set period of time has elapsed while the FNS paddle motor (M5) is turning.	
	<When FS-535 is installed>	Even after a predetermined period of time has elapsed since the paddle motor (M16) starts operation, the lock signal is not set to L (turning).	
Trouble isolation	Staple		
Relevant electrical parts	<When FS-534 is installed>	• FNS paddle motor (M5) • Upper paddle home position detection sensor (PS14) • FS control board (FSCB)	
	<When FS-535 is installed>	• Paddle motor (M16) • FS control board (FSCB)	

(2) Procedure

When FS-534 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M5-FSCB J4 for proper connection, and correct as necessary.	-	-
2	Check the connector of M5 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS14-FSCB J4 for proper connection, and correct as necessary.	-	-
4	PS14 I/O check, sensor check	FSCB J4-7 (ON)	FS-534 13-C
5	M5 operation check	FSCB J4<A>-5 to 8	FS-534 12-C to D
6	Replace M5	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.40.1 FS-534](#))

When FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M16-relay CN211-FSCB CN21 for proper connection, and correct as necessary.	-	-
2	Check the connector of M16 for proper drive coupling, and correct as necessary.	-	-
3	M16 operation check	FSCB CN21-7 to 14	FS-535 7-L
4	Replace M16	-	-
5	FSCB ICP13 conduction check	-	-
6	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.10 FS-535](#))
- Link to the layout drawings for related parts by each trouble code ([S.40.2 FS-535](#))

3.6.28 C1142

(1) Contents

Trouble type	Trailing paddle up/down motor's malfunction		
Trouble code	C1142		
Rank	B		
Detection timing	<When FS-535 is installed>	The trail edge paddle home sensor (PS20) is not blocked or unblocked even after the set period of time has elapsed after the trail edge paddle up/down motor (M15) is turned ON.	

Trouble isolation	Staple
Relevant electrical parts	- Trail edge paddle up/down motor (M15) - Trail edge paddle home sensor (PS20) - FS control board (FSCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M15-relay CN122-FSCB CN12 for proper connection, and correct as necessary.	-	-
2	Check the connector of M15 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS20-FSCB CN50 for proper connection, and correct as necessary.	-	-
4	PS20 I/O check, sensor check	FSCB CN50-6 (ON)	FS-535 17-D
5	M15 operation check	FSCB CN12-5 to 8	FS-535 5-D
6	Replace M15	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.10 FS-535](#))
- Link to the layout drawings for related parts by each trouble code ([S.41. C1142](#))

3.6.29 C1143**(1) Contents**

Trouble type	Leading edge paddle up/down motor's malfunction	
Trouble code	C1143	
Rank	B	
Detection timing	<When FS-535 is installed>	The leading edge paddle home sensor (PS16) is not blocked or unblocked even after the set period of time has elapsed after the leading edge paddle up/down motor (M18) is turned ON.
Trouble isolation	-	
Relevant electrical parts	- Leading edge paddle up/down motor (M18) - Leading edge paddle home sensor (PS16) - FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M18-relay CN243-FSCB CN24 for proper connection, and correct as necessary.	-	-
2	Check the connector of M18 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS16-relay CN243-FSCB CN24 for proper connection, and correct as necessary.	-	-
4	PS16 I/O check, sensor check	FSCB CN24-16 (ON)	FS-535 9-L
5	M8 operation check	FSCB CN24-17 to 20	FS-535 9-L
6	Replace M18	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.10 FS-535](#))
- Link to the layout drawings for related parts by each trouble code ([S.42. C1143](#))

3.6.30 C1144**(1) Contents**

Trouble type	Pre-eject drive motor's malfunction <When FS-534 is installed>	
	Stacker plate drive motor's malfunction <When FS-535 is installed>	
Trouble code	C1144	
Rank	B	
Detection timing	<When FS-534 is installed>	- The pre-eject home sensor (PS21) is not blocked or unblocked even after the set period of time has elapsed after the pre-eject drive motor (M9) is turned ON. - The pre-eject away sensor (PS22) is not blocked or unblocked even after the set period of time has elapsed after the pre-eject drive motor (M9) is turned ON.
	<When FS-535 is installed>	The stacker plate home sensor (PS11) is not blocked or unblocked even after the set period of time has elapsed while the stacker plate drive motor (M17) is energized.

Trouble isolation	-	
Relevant electrical parts	<When FS-534 is installed>	• Pre-eject drive motor (M9) • Pre-eject home sensor (PS21) • Pre-eject away sensor (PS22) • FS control board (FSCB)
	<When FS-535 is installed>	• Stacker plate drive motor (M17) • Stacker plate home sensor (PS11) • FS control board (FSCB)

(2) Procedure

When FS-534 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M9-relay CN7<A>-FSCB J13 for proper connection, and correct as necessary.	-	-
2	Check the connector of M9 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS21-relay CN8-relay CN7-FSCB J12 for proper connection, and correct as necessary.	-	-
4	Check the connector between PS22-relay CN8-relay CN7-FSCB J12 for proper connection, and correct as necessary.	-	-
5	PS21 I/O check, sensor check	FSCB J12-6 (ON)	FS-534 6-C
6	PS22 I/O check, sensor check	FSCB J12-9 (ON)	FS-534 6-C
7	M9 operation check	FSCB J13-3 to 4	FS-534 8-C to D
8	Replace M9	-	-
9	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.43.1 FS-534](#))

When FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M17-relay CN233-FSCB CN23 for proper connection, and correct as necessary.	-	-
2	Check the connector of M17 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS11-FSCB CN20 for proper connection, and correct as necessary.	-	-
4	PS11 I/O check, sensor check	FSCB CN20-12 (ON)	FS-535 12-D
5	M17 operation check	FSCB CN23-19 to 20	FS-535 13-L
6	Replace M17	-	-
7	FSCB ICP9 conduction check	-	-
8	Replace FSCB	-	-

3.6.31 C1145

(1) Contents

Trouble type	Trailing edge stopper motor's malfunction	
Trouble code	C1145	
Rank	B	
Detection timing	<When FS-534 is installed>	The trailing edge stopper home position detection sensor (PS20) is not blocked or unblocked even after the set period of time has elapsed after the trailing edge stopper motor (M6) is turned ON.
	<When FS-535 is installed>	• The trailing edge stopper home sensor (PS22) is not blocked or unblocked even after the set period of time has elapsed after the trailing edge stopper motor (M19) is turned ON. • The trailing edge stopper standby sensor/1 (PS23) is not blocked or unblocked even after the set period of time has elapsed after trailing edge stopper motor (M19) is turned ON. • The trailing edge stopper standby sensor/2 (PS42) is not blocked or unblocked even after the set period of time has elapsed after the trailing edge stopper motor (M19) is turned ON.
Trouble isolation	-	
Relevant electrical parts	<When FS-534 is installed>	• Trailing edge stopper motor (M6) • Trailing edge stopper home position detection sensor (PS20)

		• FS control board (FSCB)
	<When FS-535 is installed>	• Trailing edge stopper motor (M19) • Trailing edge stopper home sensor (PS22) • Trailing edge stopper standby sensor/1 (PS23) • Trailing edge stopper standby sensor/2 (PS42) • FS control board (FSCB)

(2) Procedure

When FS-534 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M6-FSCB J5 for proper connection, and correct as necessary.	-	-
2	Check the connector of M6 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS20-relay CN22-FSCB J5 for proper connection, and correct as necessary.	-	-
4	PS20 I/O check, sensor check	FSCB J5-9 (ON)	FS-534 9-K
5	M6 operation check	FSCB J5-13 to 16	FS-534 9-K
6	Replace M6	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))

When FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Check the motor and sensor connectors for proper connection, and correct as necessary.	-	-
2	Check the connector of M19 for proper drive coupling, and correct as necessary.	-	-
3	PS22 I/O check, sensor check	FSCB CN20-15 (ON)	FS-535 13-D
4	PS23 I/O check, sensor check	FSCB CN20-18 (ON)	FS-535 13-D
5	PS42 I/O check	FSCB CN20-9 (ON)	FS-535 12-D
6	M19 operation check	FSCB CN19-9 to 12	FS-535 11-D
7	Replace M19	-	-
8	Replace FSCB	-	-

3.6.32 C1152

(1) Contents

Trouble type	Paper transport belt motor's malfunction	
Trouble code	C1152	
Rank	B	
Detection timing	<When FS-535+SD-512 is installed>	Even after a predetermined period of time has elapsed since the paper transport belt motor (M34) starts operation, the lock signal is not set to L (turning).
Trouble isolation	Half-Fold/Tri-Fold Center Stapling	
Relevant electrical parts	• Paper transport belt motor (M34) • SD drive board (SDDB) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connectors between M34-relay CN1-FSCB CN42 for proper connection, and correct as necessary.	-	-
2	Check the connector of M34 for proper drive coupling, and correct as necessary.	-	-
3	M34 operation check	SDDB CN1-1 to 11	SD-512 7-D
4	Replace M34	-	-
5	FSCB ICP12 conduction check	-	-
6	Replace SDDB	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.12 SD-512](#))
- Link to the layout drawings for related parts by each trouble code ([S.45. C1152](#))

3.6.33 C1156**(1) Contents**

Trouble type	SD paddle motor's malfunction (trailing edge)	
Trouble code	C1156	
Rank	B	
Detection timing	<When FS-534+SD-511 is installed>	The paddle home sensor (PS5) is not blocked or unblocked even after the set period of time has elapsed while the SD paddle motor (M7) is energized.
	<When FS-535+SD-512 is installed>	The paddle home sensor (PS5) is not blocked or unblocked even after the set period of time has elapsed while the SD paddle motor (M7) is energized.
Trouble isolation	Half-Fold/Tri-Fold Center Stapling	
Relevant electrical parts	<When FS-534+SD-511 is installed>	• SD paddle motor (M7) • Paddle home sensor (PS5) • SD drive board (SDDDB) • FS control board (FSCB)
	<When FS-535+SD-512 is installed>	• SD paddle motor (M7) • Paddle home sensor (PS5) • SD drive board (SDDDB) • FS control board (FSCB)

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M7-SDDDB J8 for proper connection and correct as necessary.	-	-
2	Check the connector of M7 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS5-SDDDB J8 for proper connection and correct as necessary.	-	-
5	PS5 I/O check, sensor check	SDDDB J8-3 (ON)	SD-511 3 to 4-G
7	M7 operation check	SDDDB J8 4 to 7	SD-511 3-F to G
8	Replace M7	-	-
9	Replace SDDDB	-	-
10	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.9 SD-511](#))
- Link to the layout drawings for related parts by each trouble code ([S.46.1 SD-511](#))

When FS-535+SD-512 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M7-SDDDB J8 for proper connection, and correct as necessary.	-	-
2	Check the connector of M7 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS5-SDDDB J8 for proper connection, and correct as necessary.	-	-
4	PS5 I/O check, sensor check	SDDDB J8-3 (ON)	SD-512 3-G
5	M7 operation check	SDDDB J8-4 to 7	SD-512 3-F to G
6	Replace M7	-	-
7	Replace SDDDB	-	-
8	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.12 SD-512](#))

3.6.34 C1182**(1) Contents**

Trouble type	Shift motor drive malfunction	
Trouble code	C1182	
Rank	B	
Detection timing	<When JS-506 is installed>	• The tray shift home sensor (PS1) is not unblocked after the set period of time has elapsed after the tray shift motor (M1) is turned ON (start of moving to the home position.) • The tray shift home sensor (PS1) is not blocked after the set period of time has elapsed after the tray shift motor (M1) is turned ON (start of moving to the shift position.)
Trouble isolation	Staple	
Relevant electrical parts	• Tray shift motor (M1)	

- Tray shift home sensor (PS1)
- JS control board (JSCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M1-JSCB CN208 for proper connection and correct as necessary.	-	-
2	Check the connector of M1 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS1-JSCB CN208 for proper connection and correct as necessary.	-	-
4	PS1 I/O check, sensor check	JSCB CN208-5 (ON)	JS-506 5-C
5	M1 operation check	JSCB CN208 1 (DRV)	JS-506 4 to 5-C
6	Replace M1	-	-
7	JSCB ICP3 conduction check	-	-
8	Replace JSCB	-	-

- Link to the wiring diagram ([N.3.6 JS-506](#))

3.6.35 C1184

(1) Contents

Trouble type	Paper discharge control motor's malfunction	
Trouble code	C1184	
Rank	B	
Detection timing	<When FS-534 is installed>	The paper delivery control sensor (PS28) is not blocked or unblocked even after the set period of time has elapsed while the paper receiving control motor (M12) is energized.
Trouble isolation	-	
Relevant electrical parts	• Paper receiving control motor (M12) • Paper delivery control sensor (PS28) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M12-relay CN1-FRCB J14 for proper connection, and correct as necessary.	-	-
2	Check the connector of M12 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS28-relay CN1-FRCB J14 for proper connection, and correct as necessary.	-	-
4	PS28 I/O check, sensor check	FSCB J14-3 (ON)	FS-534 2 to 3-C
5	M12 operation check	FSCB J14<A>-9 to 12	FS-534 2-C to D
6	Replace M12	-	-
7	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.48. C1184](#))

3.6.36 C1195

(1) Contents

Trouble type	Paper discharge control motor's malfunction <When FS-534+SD-511 is installed>	
	Paper receiving guide control motor's malfunction <When FS-535+SD-512 is installed>	
Trouble code	C1195	
Rank	B	
Detection timing	<When FS-534+SD-511 is installed>	The curl cover detection sensor (PS2) is not blocked or unblocked even after the set period of time has elapsed after the paper discharge control motor (M2) is turned ON.
	<When FS-535+SD-512 is installed>	The paper receiving guide home sensor (PS2) is not blocked or unblocked even after the set period of time has elapsed after the paper receiving guide control motor (M2) is turned ON.
Trouble isolation	Half-Fold/Tri-Fold Center Stapling	
Relevant electrical parts	<When FS-534+SD-511 is installed>	• Paper discharge control motor (M2) • Curl cover detection sensor (PS2) • SD drive board (SDDB) • FS control board (FSCB)

	<When FS-535+SD-512 is installed>	• Paper receiving guide control motor (M2) • Paper receiving guide home sensor (PS2) • SD drive board (SDDDB) • FS control board (FSCB)
--	-----------------------------------	--

(2) Procedure

When FS-534+SD-511 is installed

Step	Action	Control signal	Location of electrical components
1	Check the connector between M2-relay CN3-relay CN2-SDDDB J5 for proper connection, and correct as necessary.	-	-
2	Check the connector of M2 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS2-relay CN3-relay CN2-SDDDB J5 for proper connection, and correct as necessary.	-	-
4	PS2 I/O check, sensor check	SDDDB J5 3 (ON)	SD-511 3-B
5	M2 operation check	SDDDB J5 4 to 7	SD-511 3-B
6	Replace M2	-	-
7	Replace SDDDB	-	-
8	Replace FSCB	-	-

3.6.40 C11A2

(1) Contents

Trouble type	Accommodation roller pressure/ retraction malfunction	
Trouble code	C11A2	
Rank	B	
Detection timing	<When FS-534 is installed>	The receiving roller retraction sensor (PS11) is not blocked or unblocked even after the set period of time has elapsed after the receiving roller retraction motor (M4) is turned ON.
Trouble isolation	Half-Fold/Tri-Fold Center Stapling	
Relevant electrical parts	• Receiving roller retraction motor (M4) • Receiving roller retraction sensor (PS11)	

- FS control board (FSCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M4-FSCB J4 for proper connection and correct as necessary.	-	-
2	Check the connector of M4 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS11-FSCB J4 for proper connection, and correct as necessary.	-	-
4	PS11 I/O check, sensor check	FSCB J4-16 (ON)	FS-534 13-C
5	M4 operation check	FSCB J4<A>-1 to 4	FS-534 11-C to D
6	Replace M4	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.53. C11A2](#))

3.6.41 C11E1**(1) Contents**

Trouble type	Paper exit switching drive malfunction	
Trouble code	C11E1	
Rank	B	
Detection timing	<When FS-534 is installed>	The exchange folded knife home position sensor (PS30) is not blocked or unblocked even after the set period of time has elapsed after the FNS entry transport motor (M2) is turned ON.
Trouble isolation	-	
Relevant electrical parts	• FNS entry transport motor (M2) • Exchange folded knife home position sensor (PS30) • FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M2-FSCB J9 for proper connection and correct as necessary.	-	-
2	Check the connector of M2 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS30-FSCB J4 for proper connection, and correct as necessary.	-	-
4	PS30 I/O check, sensor check	FSCB J4<A>-15 (ON)	FS-534 12-C
5	M2 operation check	FSCB J9<A>-1 to 4	FS-534 10 to 11-B to C
6	Replace M2	-	-
7	Replace FSCB	-	-

- Link to the wiring diagram ([N.3.8 FS-534](#))
- Link to the layout drawings for related parts by each trouble code ([S.54. C11E1](#))

3.6.42 C1402**(1) Contents**

Trouble type	FS nonvolatile memory error	
Trouble code	C1402	
Rank	C	
Detection timing	<When FS-533 is installed>	When the main power switch is turned ON, malfunctioning of the nonvolatile memory on the FS control board (FSCB) is detected.
Trouble isolation	-	
Relevant electrical parts	FS control board (FSCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Disconnect and then connect the power cord. Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.55. C1402](#))

3.7 C2***

3.7.1 C2152

(1) Contents

Trouble type	Transfer belt pressure welding alienation
Trouble code	C2152
Rank	B
Detection timing	• The 1st transfer pressure sensor (PS39) does not detect "switch from retraction to pressure" within a given period time after 1st transfer pressure clutch (CL5) has started engagement. • The 1st transfer pressure sensor (PS39) is unblocked after the laps of given time after the 1st transfer pressure clutch (CL5) turned OFF when the pressing operation is finished. • The 1st transfer pressure sensor (PS39) does not detect "switch from pressure to retraction" within a given period time after 1st transfer pressure clutch (CL5) has started engagement. • The 1st transfer pressure sensor (PS39) is blocked after the laps of given time after the 1st transfer pressure clutch (CL5) turned OFF when the release operation is finished.
Trouble isolation	-
Relevant electrical parts	• Fusing motor (M3) • 1st transfer pressure clutch (CL5) • 1st transfer pressure sensor (PS39) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M3-PRCB CN2 for proper connection and correct as necessary	-	-
2	Check the connector of M3 for proper drive coupling and correct as necessary.	-	-
3	Check the connector between PS39-relay CN113-PRCB CN13 for proper connection and correct as necessary.	-	-
4	Check the connector between CL5-relay CN118-PRCB CN13 for proper connection and correct as necessary.	-	-
5	PS39 I/O check, sensor check	PRCB CN13-7 (ON)	bizhub C554 25-C bizhub C454 23-C

3.7.2 C2253, C2254

(1) Contents

Trouble type	PC motor's failure to turn
Trouble code	C2253
Rank	B
Detection timing	The motor lock signal remains HIGH for a predetermined continuous period of time while the motor is turning.
Trouble isolation	-
Relevant electrical parts	• PC motor (M2) • Printer control board (PRCB)
Trouble type	PC motor's turning at abnormal timing
Trouble code	C2254
Rank	B
Detection timing	The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.
Trouble isolation	-
Relevant electrical parts	• PC motor (M2) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M2-PRCB CN31 for proper connection and correct as necessary.	-	-
2	Check the M2 connector for proper drive coupling and correct as necessary.	-	-
3	M2 operation check	PRCB CN31-9 (REM) PRCB CN31-12 (LOCK)	bizhub C554 19-J bizhub C454 17-J
4	Replace M2	-	-
5	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.57. C2253, C2254](#))

3.7.3 C2255, C2256**(1) Contents**

Trouble type	Developing motor's failure to turn
Trouble code	C2255
Rank	B
Detection timing	The motor lock signal remains HIGH for a predetermined continuous period of time while the motor is turning.
Trouble isolation	-
Relevant electrical parts	• Developing motor (M21) • Printer control board (PRCB)
Trouble type	Developing motor's turning at abnormal timing
Trouble code	C2256
Rank	B
Detection timing	The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.
Trouble isolation	-
Relevant electrical parts	• Developing motor (M21) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M21-PRCB CN32 for proper connection and correct as necessary.	-	-
2	Check the M21 connector for proper drive coupling and correct as necessary.	-	-
3	M21 operation check	PRCB CN32-2 (REM) PRCB CN32-5 (LOCK)	bizhub C554 19-J bizhub C454 17-J
4	Replace M21	-	-
5	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.58. C2255, C2256](#))

3.7.4 C2350**(1) Contents**

Trouble type	Toner suction fan's failure to turn
Trouble code	C2350
Rank	B
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan is turning.
Trouble isolation	-
Relevant electrical parts	• Toner suction fan (FM11) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connectors between FM11-relay CN62-PRCB CN23 for proper connection, and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM11 operation check	PRCB CN23-10 (REM)	5-C

Step	Action	Control signal	Location of electrical components
		PRCB CN23-12 (LOCK)	
4	Replace FM11	-	-
5	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.59. C2350](#))

3.7.5 C2355

(1) Contents

Trouble type	Transfer belt cleaner cooling fan's failure to turn
Trouble code	C2355
Rank	B
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan is turning.
Trouble isolation	-
Relevant electrical parts	• Transfer belt cleaner cooling fan (FM2) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM2-relay CN115-PRCB CN13 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM2 operation check	PRCB CN13-8 (REM) PRCB CN13-10 (LOCK)	bizhub C554 23-C bizhub C454 25-C
4	Replace FM2	-	-
5	PRCB ICP3 conduction check	-	-
6	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.60. C2355](#))

3.7.6 C2411, C2412, C2413, C2414

(1) Contents

Trouble type	• Developing unit/C new article release • Developing unit/M new article release • Developing unit/Y new article release • Developing unit/K new article release
Trouble code	C2411: Developing unit/C new article release C2412: Developing unit/M new article release C2413: Developing unit/Y new article release C2414: Developing unit/K new article release
Rank	B
Detection timing	The status with the new unit is not cleared after the new developing unit is set.
Trouble isolation	-
Relevant electrical parts	• Developing unit • Front side board (FRB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Reinstall developing unit	-	-
2	Check the connector between developing unit-FRB CN13, CN14, CN15, CN16 for proper connection and correct as necessary.	-	-
3	Check the connector between FRB CN1, CN3-PRCB CN7, CN9 for proper connection and correct as necessary.	-	-
4	Replace the developing unit	-	-
5	Replace FRB	-	-
6	Replace PRCB	-	-

3.7.7 C2551, C2553, C2555, C2557

(1) Contents

Trouble type	• Abnormally low toner density detected cyan TCR sensor • Abnormally low toner density detected magenta TCR sensor • Abnormally low toner density detected yellow TCR sensor • Abnormally low toner density detected black TCR sensor
Trouble code	C2551: Abnormally low toner density detected cyan TCR sensor C2553: Abnormally low toner density detected magenta TCR sensor C2555: Abnormally low toner density detected yellow TCR sensor C2557: Abnormally low toner density detected black TCR sensor
Rank	B
Detection timing	When sampling data is determined in TC ratio calculation control, TCR sensor output is higher than a predetermined value for a predetermined number of times in a row even though there is toner in the sub hopper
Trouble isolation	-
Relevant electrical parts	• Developing unit/C,M,Y,K • Toner cartridge/ C,M,Y,K • Toner empty switch/Y (PS34) • Toner empty switch/M (PS33) • Toner empty switch/C (PS32) • Toner empty switch/K (PS31) • Toner bottle motor (M10) • Toner supply motor/Y (M9) • Toner supply motor/M (M8) • Toner supply motor/C (M7) • Toner supply motor/K (M6) • Front side board (FRB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Perform image troubleshooting procedure if image density is low.	-	-
2	Reinstall developing unit	-	-
3	Reinstall toner cartridge	-	-
4	Check the connector between developing unit-FRB CN13, CN14, CN15, CN16 for proper connection and correct as necessary.	-	-
5	Check the connector between FRB CN1, CN3-PRCB CN7, CN9 for proper connection and correct as necessary.	-	-
6	M10 operation check	PRCB CN14-13 to 16	18-C
7	M6, M7, M8, M9 operation check	PRCB CN14-13 to 16 (M6) PRCB CN14-9 to 12 (M7) PRCB CN14-5 to 8 (M8) PRCB CN14-1 to 4 (M9)	17 to 18-C
8	If the toner empty sensor and its surroundings inside the sub hopper are dirtied with toner, clean them.	-	-
9	Replace the developing unit	-	-
10	Replace FRB	-	-
11	PRCB ICP21, ICP40, ICP41, ICP44, ICP46 conduction check	-	-
12	Replace PRCB	-	-

3.7.9 C2559, C255A, C255B, C255C

(1) Contents

Trouble type	Cyan TCR sensor adjustment failure Magenta TCR sensor adjustment failure Yellow TCR sensor adjustment failure Black TCR sensor adjustment failure
Trouble code	C2559: Cyan TCR sensor adjustment failure
	C255A: Magenta TCR sensor adjustment failure
	C255B: Yellow TCR sensor adjustment failure
	C255C: Black TCR sensor adjustment failure
Rank	B
Detection timing	TCR sensor automatic adjustment does not function properly, failing to adjust to an appropriate value.
Trouble isolation	-
Relevant electrical parts	• Developing unit/Y,M,C,K • Toner bottle motor (M10) • Toner supply motor/Y (M9) • Toner supply motor/M (M8) • Toner supply motor/C (M7) • Toner supply motor/K (M6) • Front side board (FRB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Reinstall developing unit	-	-
2	Check the connector between developing unit-FRB CN13, CN14, CN15, CN16 for proper connection and correct as necessary.	-	-
3	Check the connector between FRB CN1, CN3-PRCB CN7, CN9 for proper connection and correct as necessary.	-	-
4	M10 operation check	PRCB CN14-17 to 20	18-C
5	M6, M7, M8, M9 operation check	PRCB CN14-13 to 16 (M6) PRCB CN14-9 to 12 (M7)	17 to 18-C

Step	Action	Control signal	Location of electrical components
		PRCB CN14-5 to 8 (M8) PRCB CN14-1 to 4 (M9)	
6	Replace the developing unit	-	-
7	Replace FRB	-	-
8	PRCB ICP21, ICP40, ICP43, ICP44, ICP46 conduction check	-	-
9	Replace PRCB	-	-

3.7.11 C2650

(1) Contents

Trouble type	Main backup media access error
Trouble code	C2650
Rank	C
Detection timing	• The re-written data, which has been read out, checked and founded as error, is read out again and found as error. • The error was found when reading out the counter value. • MFP detects that the SSD board is not mounted.
Trouble isolation	-
Relevant electrical parts	• SSD board (SSDB) • MFP board (MFPB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector from SSDB to MFPB for proper connection and correct as necessary.	-	-
2	Check the harness from MFPB to PRCB for proper connection and correct as necessary.	-	-
3	Replace MFPB	-	-
4	Replace PRCB 1. Disconnect the finisher or job separator. 2. Check that the trouble code "C4802" appears and then display service mode. 3. Call the Enhanced Security to the screen. 4. Touch [Engine Data Backup]. 5. Touch [Engine Data Load mode], and press the Start key. 6. Select [Yes], and press the Start key again. 7. Check that the result "OK" appears. 8. Turn OFF the main power switch and turn it ON again more than 10 seconds after. 9. Update the PRCB firmware. 10. Make the specified readjustments.	-	-
5	If the above actions do not solve the problem, contact KMBT.	-	-

3.8 C3***

3.8.1 C3101

(1) Contents

Trouble type	Fusing roller separation failure
Trouble code	C3101
Rank	B
Detection timing	• With the fusing roller being retracted, the fusing pressure home sensor (PS38) is not unblocked even after the specified period of time has passed after the fusing pressure motor (M11) started rotating. • With the fusing roller being pressed, the fusing pressure home sensor (PS38) is not blocked even after the specified period of time has passed after the fusing pressure motor (M11) started rotating.
Trouble isolation	-
Relevant electrical parts	• Fusing pressure motor (M11) • Fusing pressure home sensor (PS38) • Printer control board (PRCB) • Fusing unit

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M11-relay CN112-PRCB CN13 for proper connection and correct as necessary.	-	-
2	Check the connector between fusing unit-relay CN95, CN96-PRCB CN4 for proper connection and correct as necessary. (bizhub C554)	-	-
	Check the connector between fusing unit-relay CN98, CN99, CN104-PRCB CN5 for proper connection and correct as necessary. (bizhub C454)		
3	PS38 I/O check, sensor check	PRCB CN4-9 (ON) (bizhub C554) PRCB CN5-12 (ON) (bizhub C454)	-

- Link to the layout drawings for related parts by each trouble code ([S.77. C3102](#))

3.8.3 C3201, C3202**(1) Contents**

Trouble type	Fusing motor failure to turn	
Trouble code	C3201	
Rank	B	
Detection timing	The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary.	
Trouble isolation	-	
Relevant electrical parts	• Fusing motor (M3) • Printer control board (PRCB)	
Trouble type	Fusing motor turning at abnormal timing	
Trouble code	C3202	
Rank	B	
Detection timing	The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.	
Trouble isolation	-	
Relevant electrical parts	• Fusing motor (M3) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M3-PRCB CN2 for proper connection and correct as necessary.	-	-
2	Check the loading status of the fusing unit drive, and correct the error as necessary.	-	-
3	M3 operation check	PRCB CN2-9 (REM) PRCB CN2-12 (LOCK)	bizhub C554 22-J bizhub C454 21-J
4	Replace M3	-	-
5	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.78. C3201, C3202](#))

3.8.4 C3302**(1) Contents**

Trouble type	Paper cooling fan failure to turn
Trouble code	C3302
Rank	B
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-
Relevant electrical parts	- Paper cooling fan (FM8) - Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM8-relay CN106-PRCB CN12 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM8 operation check	PRCB CN12-1 (REM) PRCB CN12-3 (LOCK)	28-C
4	Replace FM8	-	-
5	PRCB ICP3 conduction check	-	-
6	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.79. C3302](#))

3.8.5 C3425**(1) Contents**

Trouble type	Fusing warm-up trouble
Trouble code	C3425
Rank	A
Detection timing	- Detected temperature of the heating roller temperature sensor (TEMS) does not go up a given range of temperature even after a lapse of given period of time at warm up. - The warm-up is not completed even after the set period of time has elapsed after the warm-up is started. - Less than the predetermined temperature of the heating roller temperature sensor (TEMS), even after a predetermined period of time after warm-up is complete.
Trouble isolation	-
Relevant electrical parts	- Fusing unit - Heating roller temperature sensor (TEMS) - DC power supply (DCPU) - Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the right door.	-	-
3	Check the fusing unit, DCPU and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit (bizhub C554/bizhub C454)	-	-
5	Replace PRCB	-	-
6	Replace DCPU	-	-

- Link to the layout drawings for related parts by each trouble code ([S.80. C3425](#))

3.8.6 C3722, C3725, C3726**(1) Contents**

Trouble type	Fusing abnormally high temperature detection (Edge of the heating side)
Trouble code	C3722
Rank	A
Detection timing	Detected temperature of the heating roller thermistor/1 (TH1) goes beyond a given temperature for a given period of time consecutively.
Trouble isolation	-
Relevant electrical parts	Fusing unit

	• Heating roller thermistor/1 (TH1) • IH power supply (IHPU) (bizhub C554 only) • Printer control board (PRCB)
Trouble type	Fusing abnormally high temperature detection (Main of the heating side)
Trouble code	C3725
Rank	A
Detection timing	• Detected temperature of the heating roller temperature sensor (TEMS) goes beyond a given temperature for a given period of time consecutively. • The hard protector signal error is detected for a given period of time consecutively.
Trouble isolation	-
Relevant electrical parts	• Fusing unit • Heating roller temperature sensor (TEMS) • IH power supply (IHPU) (bizhub C554 only) • Printer control board (PRCB)
Trouble type	Fusing abnormally high temperature detection (Center of the heating side)
Trouble code	C3726
Rank	A
Detection timing	Detected temperature of the heating roller thermistor/2 (TH2) goes beyond a given temperature for a given period of time consecutively.
Trouble isolation	-
Relevant electrical parts	• Fusing unit • Heating roller thermistor/2 (TH2) • IH power supply (IHPU) (bizhub C554 only) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the right door.	-	-
3	Check the fusing unit, IHPU (bizhub C554 only) and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit (bizhub C554/bizhub C454)	-	-
5	Replace IHPU (bizhub C554 only)	-	-
6	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.81. C3722](#))

3.8.7 C3822

(1) Contents

Trouble type	Fusing abnormally low temperature detection (Edge of the heating roller)	
Trouble code	C3822	
Rank	A	
Detection timing	<bizhub C554>	The heating roller thermistor/1 continues to detect a temperature lower than a predetermined one for a predetermined period of time.
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller thermistor/1 (TH1) • IH power supply (IHPU) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the upper right door.	-	-
3	Check the fusing unit, IHPU and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit	-	-
5	Replace IHPU	-	-
6	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.84. C3822](#))

3.8.8 C3825, C3826

(1) Contents

Trouble type	Fusing abnormally low temperature detection (Main of the heating roller)	
Trouble code	C3825	
Rank	A	
Detection timing	The heating roller temperature sensor (TEMS) continues to detect a temperature lower than a predetermined one for a predetermined period of time.	
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller temperature sensor (TEMS) • IH power supply (IHPU) (bizhub C554 only) • Printer control board (PRCB)	
Trouble type	Fusing abnormally low temperature detection (Center of the heating roller)	
Trouble code	C3826	
Rank	A	
Detection timing	<bizhub C454>	The heating roller thermistor/2 (TH2) continues to detect a temperature lower than a predetermined one for a predetermined period of time.
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller thermistor/2 (TH2) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the upper right door.	-	-
3	Check the fusing unit, IHPU (bizhub C554 only) and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit (bizhub C554/bizhub C454)	-	-
5	Replace IHPU (bizhub C554 only)	-	-
6	PRCB ICP15 conduction check	-	-
7	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.82. C3725, C3825](#))

3.8.9 C3922, C3925, C3926

(1) Contents

Trouble type	Fusing sensor wire breaks detection (Edge of the heating roller)	
Trouble code	C3922	
Rank	A	
Detection timing	After a predetermined period of time after the warm-up stage is started, the heating roller thermistor/1 (TH1) voltage does not decrease by predetermined steps (temperature rise) within a predetermined period of time.	
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller thermistor/1 (TH1) • Printer control board (PRCB)	
Trouble type	Fusing sensor wire breaks detection (Center of the heating roller)	
Trouble code	C3925	
Rank	A	
Detection timing	After a predetermined period of time after the warm-up stage is started, the heating roller temperature sensor (TEMS) voltage does not increase by predetermined steps (temperature rise) within a predetermined period of time.	
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller temperature sensor (TEMS) • Printer control board (PRCB)	
Trouble type	Fusing sensor wire breaks detection (Middle of the heating roller)	
Trouble code	C3926	

Rank	A
Detection timing	- After a predetermined period of time after the warm-up stage is started, the heating roller thermistor/2 (TH2) voltage does not decrease by predetermined steps (temperature rise) within a predetermined time. - When a temperature detected by the heating roller thermistor/1 (TH1) is compared with the temperature detected by the heating roller thermistor/2 (TH2) to find out that the difference exceeded the predetermined temperature.
Trouble isolation	-
Relevant electrical parts	- Fusing unit - Heating roller thermistor/1 (TH1) - Heating roller thermistor/2 (TH2) - Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the upper right door.	-	-
3	Check the fusing unit and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit (bizhub C554/bizhub C454)	-	-
5	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.87. C3925](#))
- Link to the layout drawings for related parts by each trouble code ([S.88. C3926](#))

3.8.10 C392A

(1) Contents

Trouble type	Heating roller temperature sensor contamination (Main of the heating side)	
Trouble code	C392A	
Rank	A	
Detection timing	<bizhub C554>	When the machine is in standby mode after a predetermined period of time after the warm-up stage is started, detected temperature of the heating roller temperature sensor (TEMS) lower than a given temperature for a given period of time consecutively.
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • Heating roller temperature sensor (TEMS) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Wipe the TEMS clean of dirt if any.	-	-
	<Cleaning procedure> - Clear away a dirt or a foreign object on the sensor with a cotton swab. - When a dirt is left even if you cleaned the sensor by above procedure, clear away a dirt or a foreign object on the sensor using a cotton swab dampened with the alcohol. And, wipe off the sensor with a dry cotton swab afterwards.		
2	Check the TEMS for installed position and proper connector connection.	-	-
3	Check the connection of the fusing unit.	-	-
4	Check the fusing unit and PRCB for proper connection and correct or change as necessary.	-	-
5	Replace the fusing unit	-	-
6	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.89. C392A](#))

3.8.11 C3B02, C3B03

(1) Contents

Trouble type	IH malfunction (CPU)
Trouble code	C3B02

Rank	A	
Detection timing	<bizhub C554>	A failure in communication with the fusing CPU continues for a predetermined period of time.
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • IH coil unit (IHC) • IH power supply (IHPU) • IH magnetic erasing board (IHMEB) • Printer control board (PRCB)	
Trouble type	IH malfunction (monitor)	
Trouble code	C3B03	
Rank	A	
Detection timing	<bizhub C554>	Though the IH heater is OFF, mechanically, the ON status is detected. (Malfunction of IH heater operation)
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • IH coil unit (IHC) • IH magnetic erasing board (IHMEB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the open/close operation of the upper right door.	-	-
3	Check the fusing unit, IHC, IHPU, IHMEB and PRCB for proper connection and correct or change as necessary.	-	-
4	Replace the fusing unit	-	-
5	Replace IHC	-	-
6	Replace IHPU	-	-
7	Replace IHMEB	-	-
8	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.90. C3B02, C3B03](#))

3.8.12 C3B07, C3B08

(1) Contents

Trouble type	IH input power error	
Trouble code	C3B07	
Rank	A	
Detection timing	<bizhub C554>	• While the IH heater was ON, input power stayed at the high voltage power detection value or over for more than the predetermined period of time. • While the IH heater was ON, input power was at the low power detection value or under for more than the predetermined period of time. • While the IH heater was ON, input power was at the high voltage detection value or over for more than the predetermined period of time. • While the IH heater was ON, input power was below the low voltage detection value or under for more than the predetermined period of time. • While the IH heater was ON, inverter power stayed at the upper limit value or over for more than the predetermined period of time. • While the IH heater was ON, output voltage halt was detected.
Trouble isolation	-	
Relevant electrical parts	• IH coil unit (IHC) • IH power supply (IHPU) • Printer control board (PRCB)	
Trouble type	IH input voltage error	
Trouble code	C3B08	
Rank	B	
Detection timing	<bizhub C554>	• While the IH heater was ON, input power was at the high voltage detection value or over for more than the predetermined period of time. • While the IH heater was ON, input voltage was at the low power detection value or under for more than the predetermined period of time.
Trouble isolation	-	
Relevant electrical parts	• IH coil unit (IHC)	

- IH power supply (IHPU)
- Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connection of the fusing unit.	-	-
2	Check the fusing unit, IHC, IHPU and PRCB for proper connection and correct or change as necessary.	-	-
3	Replace IHC	-	-
4	Replace IHPU	-	-
5	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.91. C3B07](#), [C3B08](#))

3.9 C4*****3.9.1 C4101****(1) Contents**

Trouble type	Polygon motor rotation trouble
Trouble code	C4101
Rank	B
Detection timing	• The polygon motor fails to turn stably even after the lapse of a given period of time after activating and changing rotation speed the polygon motor. • Motor lock signal detects HIGH for a given period time consecutively during the polygon motor is rotating.
Trouble isolation	-
Relevant electrical parts	• PH unit • Front side board (FRB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between PH unit-FRB CN17 for proper connection and correct as necessary.	-	-
2	Replace the PH unit	-	-
3	FRB fuse conduction check	-	-
4	Replace FRB	-	-
5	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.92. C4101](#))

3.9.2 C4501**(1) Contents**

Trouble type	Laser malfunction
Trouble code	C4501
Rank	B
Detection timing	• SOS signal is not detected even after the lapse of a given period of time after starting the laser output. • SOS signal is not detected for a given period of time during printing or IDC sensor adjustment.
Trouble isolation	-
Relevant electrical parts	• PH unit • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between PH unit-relay CN64-PRCB CN24 for proper connection and correct as necessary.	-	-
2	Replace the PH unit	-	-
3	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.93. C4501](#))

3.9.3 C4801**(1) Contents**

Trouble type	Main unit board failure
Trouble code	C4801

Rank	C
Detection timing	MFP detects simultaneous replacement of multiple boards.
Trouble isolation	-
Relevant electrical parts	• SSD board (SSDB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Reinstall the old PRCB.	-	-
2	If the above actions do not solve the problem, contact Konica Minolta Technical Support.	-	-

NOTE

- **Do not replace the printer control board and the SSD board at the same time. The backup data is lost and image failure may be caused.**
- Link to the layout drawings for related parts by each trouble code ([S.94. C4801, CC163](#))

3.9.4 C4802**(1) Contents**

Trouble type	Main unit backup data miscompare
Trouble code	C4802
Rank	C
Detection timing	The replacement of the printer control board is detected.
Trouble isolation	-
Relevant electrical parts	Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	1. Disconnect the finisher or job separator. 2. Call the Enhanced Security in Service mode to the screen. 3. Touch [Engine Data Backup]. 4. Touch [Engine Data Reflect mode], and press the Start key. 5. Select [Yes], and press the Start key again. 6. Check that the result "OK" appears. 7. Turn OFF the main power switch and turn it ON again more than 10 seconds after.	-	-
2	Update the PRCB firmware.	-	-
3	If the above actions do not solve the problem, contact Konica Minolta Technical Support	-	-

- Link to the layout drawings for related parts by each trouble code ([S.1. C0002, C4802, C5601, CC153, CEEE3](#))

3.10 C5*****3.10.1 C5102, C5103****(1) Contents**

Trouble type	Transport motor's failure to turn
Trouble code	C5102
Rank	B
Detection timing	The motor lock signal remains HIGH for a predetermined continuous period of time while the motor remains stationary.
Trouble isolation	-
Relevant electrical parts	• Transport motor (M1) • Printer control board (PRCB)
Trouble type	Transport motor's turning at abnormal timing
Trouble code	C5103
Rank	B
Detection timing	The motor lock signal remains LOW for a predetermined continuous period of time while the motor remains stationary.
Trouble isolation	-
Relevant electrical parts	• Transport motor (M1) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M1-PRCB CN31 for proper connection and correct as necessary.	-	-
2	Check M1 for proper drive coupling and correct as necessary.	-	-
3	M1 operation check	PRCB CN31-2 (REM) PRCB CN31-5 (LOCK)	bizhub C554 18-J bizhub C454 16-J
4	Replace M1	-	-
5	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.95. C5102](#), [C5103](#))

3.10.2 C5304**(1) Contents**

Trouble type	Fusing power supply cooling fan's failure to turn <bizhub C554>	
Trouble code	C5304	
Rank	B	
Detection timing	<bizhub C554>	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-	
Relevant electrical parts	• Fusing power supply cooling fan (FM12) • Expansion control board (EXCB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM12-EXCB CN6 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM12 operation check	EXCB CN6-1 (REM) EXCB CN6-3 (LOCK)	23-T
4	Replace FM12	-	-
5	EXCB ICP1 conduction check	-	-
6	Replace EXCB	-	-
7	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.96. C5304](#))

3.10.3 C5306**(1) Contents**

Trouble type	IH coil cooling fan's failure to turn		
Trouble code	C5306		
Rank	B		
Detection timing	<bizhub C554>	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.	
Trouble isolation	-		
Relevant electrical parts	• IH coil cooling fan (FM7) • Expansion control board (EXCB) • Printer control board (PRCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FS7-relay CN77-EXCB CN5 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM7 operation check	EXCB CN5-1 (REM) EXCB CN5-3 (LOCK)	23-T
4	Replace FM7	-	-
5	EXCB ICP1 conduction check	-	-
6	Replace EXCB	-	-

Step	Action	Control signal	Location of electrical components
7	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.97. C5306](#))

3.10.4 C5351

(1) Contents

Trouble type	Power supply cooling fan motor's failure to turn
Trouble code	C5351
Rank	B
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-
Relevant electrical parts	• Power supply cooling fan (FM1) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM1-relay CN26-PRCB CN18 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM1 operation check	PRCB CN18-13 (REM) PRCB CN18-15 (LOCK)	7-C
4	Replace FM1	-	-
5	PRCB ICP2 conduction check	-	-
6	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.98. C5351](#))

3.10.5 C5354

(1) Contents

Trouble type	Ozone fan's failure to turn
Trouble code	C5354
Rank	B
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-
Relevant electrical parts	• Ozone fan (FM13) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM13-relay CN165-PRCB CN23 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM13 operation check	PRCB CN23-10 (REM) PRCB CN23-12 (LOCK)	5-C
4	Replace FM13	-	-
5	PRCB ICP19 conduction check	-	-
6	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.99. C5354](#))

3.10.6 C5355

(1) Contents

Trouble type	Toner bottle cooling fan's failure to turn
Trouble code	C5355
Rank	B

Detection timing	<bizhub C454>	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-	
Relevant electrical parts	• Toner bottle cooling fan (FM4) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM4-relay CN111-PRCB CN36 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM4 operation check	PRCB CN36-2 (REM) PRCB CN36-3 (LOCK)	26-C
4	Replace FM4	-	-
5	PRCB ICP18 conduction check	-	-
6	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.100. C5355](#))

3.10.7 C5358**(1) Contents**

Trouble type	Fusing power supply cooling fan's failure to turn <bizhub C454>	
Trouble code	C5358	
Rank	B	
Detection timing	<bizhub C454>	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.
Trouble isolation	-	
Relevant electrical parts	• Fusing power supply cooling fan (FM12) • Expansion control board (EXCB) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM12-EXCB CN6 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM12 operation check	EXCB CN6-1 (REM) EXCB CN6-3 (LOCK)	23-T
4	Replace FM12	-	-
5	EXCB ICP1 conduction check	-	-
6	Replace EXCB	-	-
7	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.101. C5358](#))

3.10.8 C5370**(1) Contents**

Trouble type	Rear side cooling fan's failure to turn	
Trouble code	C5370	
Rank	C	
Detection timing	The fan lock signal remains HIGH for a predetermined continuous period of time while the fan remains stationary.	
Trouble isolation	-	
Relevant electrical parts	• Rear side cooling fan (FM3) • MFP board (MFPB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM3-MFPB PJ26 for proper connection and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM3 operation check	MFPB PJ26-3 (LOCK)	7-P
4	Replace FM3	-	-
5	Replace MFPB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.102. C5370](#))

3.10.9 C5372

(1) Contents

Trouble type	MFP control board CPU temperature failure
Trouble code	C5372
Rank	C
Detection timing	Temperature failure of CPU on the MFP board was detected.
Trouble isolation	-
Relevant electrical parts	• CPU cooling fan • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Reboot the machine.	-	-
2	Check the fan connector for proper connection and correct as necessary.	-	-
3	Check the fan for possible overload and correct as necessary.	-	-
4	Fan motor operation check	-	-
5	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.10.10 C5501

(1) Contents

Trouble type	AC signal abnormality	
Trouble code	C5501	
Rank	C	
Detection timing	<bizhub C454>	The zero cross signal is not input during fusing phase control.
Trouble isolation	-	
Relevant electrical parts	• Fusing unit • DC power supply (DCPU) • Printer control board (PRCB)	

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the fusing unit for correct installation (whether it is secured in position).	-	-
2	Check the fusing unit, DCPU and PRCB for proper connection and correct or change as necessary	-	-
3	Replace fusing unit	-	-
4	Replace PRCB	-	-
5	Replace DCPU	-	-

- Link to the layout drawings for related parts by each trouble code ([S.104. C5501](#))

3.10.11 C5601

(1) Contents

Trouble type	Engine control malfunction
Trouble code	C5601
Rank	C
Detection timing	Engine control malfunction is detected with port monitor control.
Trouble isolation	-

Relevant electrical parts	Printer control board (PRCB)
---------------------------	------------------------------

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connectors on the PRCB for proper connection and correct or change as necessary.	-	-
2	Rewrite the firmware.	-	-
3	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.1. C0002](#), [C4802](#), [C5601](#), [CC153](#), [CEEE3](#))

3.10.12 C5603**(1) Contents**

Trouble type	Expansion control board communication error
Trouble code	C5603
Rank	C
Detection timing	Communication error is detected in expansion control board.
Trouble isolation	-
Relevant electrical parts	• Expansion control board (EXCB) • Front side board (FRB) • PH unit • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Reboot the machine.	-	-
2	Check the connector between EXCB-PRCB for proper connection and correct as necessary.	-	-
3	Check the connector between FRB CN5-PH unit for proper connection and correct as necessary.	-	-
4	Check the connector between FRB CN2-PRCB CN8 for proper connection and correct as necessary.	-	-
5	Replace EXCB	-	-
6	Replace FRB	-	-
7	Replace PH unit	-	-
8	Replace PRCB	-	-

3.11 C6*****3.11.1 C6001****(1) Contents**

Trouble type	DF related configuration error 1
Trouble code	C6001
Rank	C
Detection timing	Inconsistency in the configuration with the installed DF is detected on the main body.
Trouble isolation	-
Relevant electrical parts	• DF control board (DFCB) • Dual scan image processing board (DSIPB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the type of the installed DF and replace it if it is a wrong one.	-	-
2	Check to see if the correct firmware is installed and rewrite with the correct one as necessary.	-	-
3	Correct the harness connection between DFCB and DSIPB if faulty.	-	-
4	Correct the harness connection between DSIPB and MFPB if faulty.	-	-
5	Replace DFCB	-	-
6	Replace DSIPB	-	-
7	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.106. C6001](#))

3.11.2 C6002

(1) Contents

Trouble type	DF related configuration error 2
Trouble code	C6002
Rank	C
Detection timing	Inconsistency in the configuration with the installed DF is detected on the DF.
Trouble isolation	-
Relevant electrical parts	• DF control board (DFCB) • Dual scan image processing board (DSIPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the type of the installed DF and replace it if it is a wrong one.	-	-
2	Correct the harness connection between DFCB and DSIPB if faulty.	-	-
3	Check the connectors of the dual scan image processing board (DSIPB) for proper connection, and correct as necessary. (Direction of the point of contact and connection state of the flat cable in particular)	-	-

- Link to the layout drawings for related parts by each trouble code ([S.107. C6002](#))

3.11.3 C6102, C6103

(1) Contents

Trouble type	Drive system home sensor malfunction
Trouble code	C6102
Rank	B
Detection timing	• The scanner home sensor (PS201) is unable to detect the scanner located at its home position. • The scanner home sensor (PS201) is unable to detect a scanner even when the scanner motor has been driven to move the scanner over the maximum travelling distance. • The scanner home sensor (PS201) detects the scanner when the scanner has moved the maximum travelling distance from the position, at which it blocks the scanner home sensor (PS201).
Trouble isolation	Scanner
Relevant electrical parts	• Scanner home sensor (PS201) • Scanner motor (M201) • Scanner drive board (SCDB) • Printer control board (PRCB)

Trouble type	Slider over running
Trouble code	C6103
Rank	B
Detection timing	The scanner home sensor (PS201) detects the scanner at its home position during a period of time that begins with the time when a prescan command and a scan preparation command are executed and ends when a home return command is executed.
Trouble isolation	Scanner
Relevant electrical parts	• Scanner home sensor (PS201) • Scanner motor (M201) • Scanner drive board (SCDB) • Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct or change the scanner drive (pulley, gear, belt) if it is faulty.	-	-
2	Correct the scanner motor set screw if loose.	-	-
3	Adjust [Image Position Leading Edge] and [Feed Direction Adjustment].	-	-
4	Check the connector between M201-SCDB PJ4 for proper connection and correct as necessary.	-	-
5	Check the connector between PS201-SCDB PJ6 for proper connection and correct as necessary.	-	-
6	Check the connector between SCDB PJ2-PRCB CN43 for proper connection and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
7	PS201 I/O check, sensor check	SCDB PJ6-3 (ON)	27-P
8	M201 operation check	SCDB PJ4-1 to 4	27-P
9	Replace SCDB	-	-
10	Replace PRCB	-	-

- Link to the wiring diagram ([N.1. bizhub C554/C454](#))
- Link to the layout drawings for related parts by each trouble code ([S.108. C6102, C6103](#))

3.11.4 C6104, C6105

(1) Contents

Trouble type	Back side cleaning home sensor abnormality (initial)
Trouble code	C6104
Rank	B
Detection timing	• The CIS cleaning sensor (PS7) does not change from H to L even after the lapse of a given period of time after the home position detecting operation is started at the initial operation. • The CIS cleaning sensor (PS7) does not change from L to H even after the lapse of a given period of time after the home position detecting operation is started at the initial operation.
Trouble isolation	Scanner
Relevant electrical parts	• CIS cleaning sensor (PS7) • CIS cleaning motor (M5) • DF control board (DFCB)
Trouble type	Back side cleaning home sensor abnormality (normal)
Trouble code	C6105
Rank	B
Detection timing	At the time of operation other than the initial operation, the CIS cleaning sensor (PS7) error is detected.
Trouble isolation	Scanner
Relevant electrical parts	• CIS cleaning sensor (PS7) • CIS cleaning motor (M5) • DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check if the opening and closing guide is firmly closed.	-	-
2	Check the connector between M5-DFCB J9 for proper connection, and correct as necessary.	-	-
3	Check the connector of M5 for proper drive coupling, and correct as necessary.	-	-
4	Check the connector between PS7-DFCB J13 for proper connection, and correct as necessary.	-	-
5	PS7 I/O check, sensor check	DRCB J13-3 (ON)	DF-701 1-G
6	M5 operation check	DRCB J9-1 to 4	DF-701 6-G
7	Replace M5	-	-
8	Replace DFCB	-	-

- Link to the wiring diagram ([N.2. DF-701](#))
- Link to the layout drawings for related parts by each trouble code ([S.109. C6104, C6105](#))

3.11.5 C6704

(1) Contents

Trouble type	Image input time out
Trouble code	C6704
Rank	C
Detection timing	Image data is not input from the scanner to the MFP board (MFPB).
Trouble isolation	Scanner
Relevant electrical parts	• MFP board (MFPB) • CCD board (CCDB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Select [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [Memory Bus Check] -> [Scanner -> Memory], and conduct the memory bus function.	-	-

Step	Action	Control signal	Location of electrical components
2	Check the connectors between scanner section and MFPB for proper connection and correct as necessary.	-	-
3	Replace MFPB	-	-
4	Replace CCDB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.110. C6704](#), [C6752](#), [CDF50](#), [CDF70](#), [CDFA0](#))

3.11.6 C6751

(1) Contents

Trouble type	CCD clamp/gain adjustment failure
Trouble code	C6751
Rank	B
Detection timing	• The adjustment value is 0 or 255 during a CCD clamp adjustment. • The peak value of the output data is 64 or less during a CCD gain adjustment.
Trouble isolation	Scanner
Relevant electrical parts	• LED exposure unit (LU201) • CCD board (CCDB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between CCDB PJ3-MFPB PJ01 for proper connection and correct as necessary.	-	-
2	Check for possible extraneous light and correct as necessary.	-	-
3	Clean the lens, mirrors, CCD surface, and shading sheet if dirty.	-	-
4	Correct reflective mirror of the scanner if faulty, or change scanner mirror.	-	-
5	Replace CCDB	-	-
6	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.111. C6751](#))

3.11.7 C6752

(1) Contents

Trouble type	ASIC clock input error (front side)
Trouble code	C6752
Rank	C
Detection timing	When starting the machine, verification on reading and writing the predetermined value for image processing ASIC on CCD board (CCDB) was conducted, and verification failure was detected.
Trouble isolation	-
Relevant electrical parts	• CCD board (CCDB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection of CCDB if faulty.	-	-
2	Replace CCDB	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.110. C6704](#), [C6752](#), [CDF50](#), [CDF70](#), [CDFA0](#))

3.11.8 C6753

(1) Contents

Trouble type	ASIC clock input error (back side)
Trouble code	C6753
Rank	C
Detection timing	When starting the machine, verification on reading and writing the predetermined value for image processing ASIC on dual scan image processing board (DSIPB) was conducted, and verification failure was detected.
Trouble isolation	-

Relevant electrical parts	• CIS moduleCIS • Dual scan image processing board (DSIPB) • MFP board (MFPB)
---------------------------	---

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection between DF and DSIPB if faulty.	-	-
2	Correct the harness connection between DSIPB and MFPB if faulty.	-	-
3	Replace CIS	-	-
4	Replace DSIPB	-	-
5	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.112. C6753](#))

3.11.9 C6754, C6755**(1) Contents**

Trouble type	CIS clamp adjustment failure
Trouble code	C6754
Rank	B
Detection timing	After the gain adjustment is performed at the start-up, the CIS clamp adjustment value is too high or too low.
Trouble isolation	Scanner
Relevant electrical parts	• CIS module (CIS) • Dual scan image processing board (DSIPB) • CIS power supply (CISPU) • MFP board (MFPB)
Trouble type	CIS gain adjustment failure
Trouble code	C6755
Rank	B
Detection timing	After the gain adjustment is performed at the start-up, the peak value of the output data is lower than a given value.
Trouble isolation	Scanner
Relevant electrical parts	• CIS module (CIS) • Dual scan image processing board (DSIPB) • CIS power supply (CISPU) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection between CIS and DSIPB if faulty.	-	-
2	Correct the harness connection between CIS and CISPU if faulty.	-	-
3	Check for possible extraneous light and correct as necessary.	-	-
4	Clean the back side reading glass and the shading sheet if dirty.	-	-
5	Replace CIS	-	-
6	Replace DSIPB	-	-
7	Replace CISPU	-	-
8	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.113. C6754, C6755, C9403, C9404](#))

3.11.10 C6756**(1) Contents**

Trouble type	CCD power-supply voltage malfunction
Trouble code	C6756
Rank	C
Detection timing	Power is not supplied to CCD after the lapse of a given period of time after the main power switch or power key is turned ON or the machine recovers from the sleep mode.
Trouble isolation	-
Relevant electrical parts	• CCD board (CCDB) • Scanner drive board (SCDB)

- DC power supply (DCPU)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection between CCDB and SCDB if faulty.	-	-
2	Correct the harness connection between SCDB and DCPU if faulty.	-	-
3	Replace CCDB	-	-
4	Replace SCDB	-	-
5	Replace DCPU	-	-

- Link to the layout drawings for related parts by each trouble code ([S.114. C6756](#))

3.11.11 C6901, C6902, C6903**(1) Contents**

Trouble type	DSC board mount failure 1
Trouble code	C6901
Rank	C
Detection timing	When MFP detects that DSC board/1 (front side) is not properly installed.
Trouble isolation	-
Relevant electrical parts	• DSC board/1 (DSCB/1: SC-508) • MFP board (MFPB)
Trouble type	DSC board bus check NG1-1, DSC board bus check NG1-2
Trouble code	C6902, C6903
Rank	C
Detection timing	When DSC bus check (front side) detects an error.
Trouble isolation	-
Relevant electrical parts	• DSC board/1 (DSCB/1: SC-508) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection of DSCB/1 if faulty.	-	-
2	Replace DSCB/1	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.11.12 C6911, C6912, C6913**(1) Contents**

Trouble type	DSC board mount failure 2
Trouble code	C6911
Rank	C
Detection timing	When MFP detects that DSC board/2 (back side) is not properly installed.
Trouble isolation	-
Relevant electrical parts	• DSC board/2 (DSCB/2; SC-508) • Dual scan image processing board (DSIPB) • MFP board (MFPB)
Trouble type	DSC Bus check NG2-1, DSC Bus check NG2-2
Trouble code	C6912, C6913
Rank	C
Detection timing	When DSC bus check (back side) detects an error.
Trouble isolation	-
Relevant electrical parts	• DSC board/2 (DSCB/2; SC-508) • Dual scan image processing board (DSIPB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection of DSCB/2 if faulty.	-	-

Step	Action	Control signal	Location of electrical components
2	Correct the harness connection of DSIPB if faulty.	-	-
3	Replace DSCB/2	-	-
4	Replace DSIPB	-	-
5	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.115. C6911](#), [C6912](#), [C6913](#), [CDF51](#), [CDF71](#), [CDA1](#))

3.11.13 C6F01

(1) Contents

Trouble type	Scanner sequence trouble 1
Trouble code	C6F01
Rank	C
Detection timing	The original transport interval becomes shorter than the predetermined value due to an original transport control error in original reading in DF.
Trouble isolation	Scanner
Relevant electrical parts	• MFP board (MFPB) • DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection between main body and DF if faulty.	-	-
2	Replace DFCB	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.116. C6F01](#))

3.12 C8***

3.12.1 C8101

(1) Contents

Trouble type	Before reading pressure welding alienation mechanism trouble
Trouble code	C8101
Rank	B
Detection timing	• During a pressure motion being performed, the document reading sensor (PS6) output does not change from H to L. • During a retraction motion being performed, the document reading sensor (PS6) output does not change from L to H.
Trouble isolation	-
Relevant electrical parts	• Reading roller release motor (M4) • Document reading sensor (PS6) • DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M4-DFCB J18 for proper connection and correct as necessary.	-	-
2	Check the connector of M4 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS6-DFCB J10 for proper connection and correct as necessary.	-	-
4	PS6 I/O check, sensor check	DFCB J10-3 (ON)	DF-701 2-G
5	M4 operation check	DFCB J18-4 to 5	DF-701 1-G
6	Replace M4	-	-
7	FSCB F8 conduction check	-	-
8	Replace DFCB	-	-

- Link to the wiring diagram ([N.2. DF-701](#))
- Link to the layout drawings for related parts by each trouble code ([S.117. C8101](#))

3.12.2 C8107

(1) Contents

Trouble type	Glass cleaning mechanism trouble
Trouble code	C8107

Rank	B
Detection timing	The document reading glass cleaning sensor (PS13) is not turned ON after the set period of time has elapsed after the document reading glass cleaning motor (M6) is turned ON.
Trouble isolation	-
Relevant electrical parts	- Document reading glass cleaning motor (M6) - Document reading glass cleaning sensor (PS13) - DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between M6-DFCB J8 for proper connection and correct as necessary.	-	-
2	Check the connector of M6 for proper drive coupling, and correct as necessary.	-	-
3	Check the connector between PS13-DFCB J15 for proper connection and correct as necessary.	-	-
4	PS13 I/O check, sensor check	DFCB J15-5 (ON)	DF-701 3-G
5	M6 operation check	DFCB J8-1 to 4	DF-701 1-B
6	Replace M6	-	-
7	Replace DFCB	-	-

- Link to the wiring diagram ([N.2. DF-701](#))
- Link to the layout drawings for related parts by each trouble code ([S.118. C8107](#))

3.12.3 C8302

(1) Contents

Trouble type	Cooling fan trouble
Trouble code	C8302
Rank	B
Detection timing	- The lock signal continues to detect H during a given time while the DF cooling fan motor (FM1) is spinning. - The lock signal continues to detect L during a given time while the cooling fan (FM1) is during halts.
Trouble isolation	-
Relevant electrical parts	- DF cooling fan motor (FM1) - DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between FM1-DFCB J16 for proper connection and correct as necessary.	-	-
2	Check the fan for possible overload and correct as necessary.	-	-
3	FM1 operation check	DFCB J16-3 (ON)	DF-701 7-G
4	Replace FM1	-	-
5	DFCB F6 conduction check	-	-
6	Replace DFCB	-	-

- Link to the wiring diagram ([N.2. DF-701](#))
- Link to the layout drawings for related parts by each trouble code ([S.119. C8302](#))

3.13 C9***

3.13.1 C9401, C9402

(1) Contents

Trouble type	Exposure LED lighting failure
Trouble code	C9401
Rank	A
Detection timing	The output from the CCD sensor is a predetermined value or less during CCD sensor gain adjustment.
Trouble isolation	Scanner
Relevant electrical parts	- LED exposure unit (LU201) - Flat cable (LED exposure unit) - CCD board (CCDB) - Scanner drive board (SCDB) - Printer control board (PRCB) - MFP board (MFPB)
Trouble type	Exposure LED lighting abnormally

Trouble code	C9402
Rank	A
Detection timing	The average output value of the CCD sensor with the scanner at its standby position is a predetermined value or more at the end of a scan job.
Trouble isolation	Scanner
Relevant electrical parts	• LED exposure unit (LU201) • Flat cable (LED exposure unit) • CCD board (CCDB) • Scanner drive board (SCDB) • Printer control board (PRCB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connection between SCDB PJ3-LU201, and correct if necessary.	-	-
2	Check the connector between SCDB PJ1-PRCB CN43 for proper connection and correct as necessary.	-	-
3	Check the connector between CCDB PJ3-MFPB PJ01 for proper connection and correct as necessary.	-	-
4	Replace the LED exposure unit	-	-
5	Replace CCDB	-	-
6	SCDB F1 conduction check	-	-
7	Replace SCDB	-	-
8	Replace PRCB	-	-
9	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.120. C9401, C9402](#))

3.13.2 C9403, C9404**(1) Contents**

Trouble type	CIS LED lighting failure
Trouble code	C9403
Rank	A
Detection timing	At the CIS gain adjustment, the machine detected that the output of the CIS LED is lower than the specified value.
Trouble isolation	Scanner
Relevant electrical parts	• CIS module (CIS) • CIS power supply (CISPU) • Dual scan image processing board (DSIPB) • MFP board (MFPB)
Trouble type	CIS LED lighting abnormally
Trouble code	C9404
Rank	A
Detection timing	After a scan job is completed, the machine detected that the average output of the CIS LED is greater than the specified value.
Trouble isolation	Scanner
Relevant electrical parts	• CIS module (CIS) • CIS power supply (CISPU) • Dual scan image processing board (DSIPB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Correct the harness connection between CIS and DSIPB if faulty.	-	-
2	Correct the harness connection between CIS and CISPU if faulty.	-	-
3	Replace CIS	-	-
4	CISPU F1, F2 conduction check	-	-
5	Replace CISPU	-	-
6	Replace DSIPB	-	-
7	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.113. C6754, C6755, C9403, C9404](#))

3.14 CA***

3.14.1 CA051, CA052, CA053

(1) Contents

Trouble type	Standard controller configuration failure
Trouble code	CA051
Rank	C
Detection timing	The controller of the MFP board (MFPB) is faulty.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)
Trouble type	Controller hardware error
Trouble code	CA052
Rank	C
Detection timing	A controller hardware error is detected in the network interface.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)
Trouble type	Controller start failure
Trouble code	CA053
Rank	C
Detection timing	A controller start failure is detected in the controller interface.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check to see if the following setting has been correctly made: [Service Mode] -> [System 2] -> [Image Controller Setting]. If changing the setting, turn OFF the main power switch and turn it ON again after 10 seconds or more.	-	-
2	Check the connectors of the MFPB for proper connection and correct as necessary.	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15 CC***

3.15.1 CC001

(1) Contents

Trouble type	Vendor connection failure
Trouble code	CC001
Rank	C
Detection timing	It is detected that communications with the vendor are interrupted for a given period of time or more with "Installed" selected for the setting of vendor installation.
Trouble isolation	-
Relevant electrical parts	• Printer control board (PRCB) • MFP board (MFPB) • Coin vendor (Japan) • Coin vendor kit (North America, Europe)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between vendor-PRCB CN42 for proper connection and correct as necessary.	-	-
2	Check the connector between PRCB CN41-MFPB PJ03 for proper connection and correct as necessary.	-	-
3	Replace MFPB	-	-
4	Replace PRCB	-	-
5	Replace vendor	-	-

- Link to the layout drawings for related parts by each trouble code ([S.121. CC001](#))

3.15.2 CC151, CC152, CC153

(1) Contents

Trouble type	ROM contents error upon startup (MSC)
Trouble code	CC151
Rank	C
Detection timing	A fault is detected in a sequence of ROM contents check of the MFPB during starting.
Trouble isolation	-
Relevant electrical parts	-
Trouble type	ROM contents error upon startup (scanner)
Trouble code	CC152
Rank	C
Detection timing	A fault is detected in a sequence of ROM contents check of the MFPB during starting.
Trouble isolation	-
Relevant electrical parts	-
Trouble type	ROM contents error upon startup (PRT)
Trouble code	CC153
Rank	C
Detection timing	A fault is detected in a sequence of ROM contents check of the PRCB during starting.
Trouble isolation	-
Relevant electrical parts	-

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the ROM version.	-	-
2	Rewrite the firmware.	-	-
3	Replace the appropriate board. MSC: MFP board (MFPB) IR: MFP board (MFPB) PRT: Printer control board (PRCB)	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))
- Link to the layout drawings for related parts by each trouble code ([S.1. C0002, C4802, C5601, CC153, CEEE3](#))

3.15.3 CC155

(1) Contents

Trouble type	Finisher ROM error	
Trouble code	CC155	
Rank	C	
Detection timing	Data of flash ROM of the finishing options is determined to be faulty when the main power swith is turned ON.	
Trouble isolation	-	
Relevant electrical parts	<When FS-533, FS-534 or FS-535 is installed>	FS control board (FSCB)
	<When JS-506 is installed>	JS control board (JSCB)

(2) Procedure

When FS-533, FS-534 or FS-535 is installed

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace FSCB (FS-533/FS-534/FS-535)	-	-

When JS-506 is installed

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-

Step	Action	Control signal	Location of electrical components
2	Rewrite the firmware.	-	-
3	Replace JSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.15. C1004, CC155](#))

3.15.4 CC156

(1) Contents

Trouble type	DF ROM error
Trouble code	CC156
Rank	C
Detection timing	Upgrade of the firmware has not been successful.
Trouble isolation	-
Relevant electrical parts	DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace DFCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.122. CC156, CC165](#))

3.15.5 CC157

(1) Contents

Trouble type	Finisher ROM error (ZU)
Trouble code	CC157
Rank	C
Detection timing	Data of flash ROM of the z-folding unit is determined to be faulty when the power is turned ON.
Trouble isolation	-
Relevant electrical parts	ZU control board (ZUCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace ZUCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.16. C1005, CC157](#))

3.15.6 CC158

(1) Contents

Trouble type	Finisher ROM error (RU)
Trouble code	CC158
Rank	C
Detection timing	When a communication error is detected between the main body and the horizontal transport unit.
Trouble isolation	-
Relevant electrical parts	• RU control board (RUCB) • FS control board (FSCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace RUCB	-	-

Step	Action	Control signal	Location of electrical components
4	Replace FSCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.123. CC158](#))

3.15.7 CC159, CC15A

(1) Contents

Trouble type	ROM contents error upon startup (DSC1), ROM contents error upon startup (DSC2)		
Trouble code	CC159, CC15A		
Rank	C		
Detection timing	A fault is detected in a sequence of ROM contents check of the DSC board during starting.		
Trouble isolation	-		
Relevant electrical parts	• DSC board/1 (DSCB/1; SC-508) • DSC board/2 (DSCB/2; SC-508)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check DSCB/1 or DSCB/2 connector for proper connection and correct as necessary.	-	-
2	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
3	Rewrite the firmware.	-	-
4	Replace DSCB/1 or DSCB/2	-	-

3.15.8 CC15B

(1) Contents

Trouble type	Flash ROM error (saddle)		
Trouble code	CC15B		
Rank	C		
Detection timing	<When FS-534+SD-511 is installed> <When FS-535+SD-512 is installed>	Data of flash ROM of the saddle is determined to be faulty when the main power switch is turned ON.	
Trouble isolation	-		
Relevant electrical parts	SD drive board (SDDB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware.	-	-
3	Replace SDDB (SD-511/SD-512)	-	-

- Link to the layout drawings for related parts by each trouble code ([S.124. CC15B](#))

3.15.9 CC163

(1) Contents

Trouble type	ROM contents error (PRT)		
Trouble code	CC163		
Rank	C		
Detection timing	The wrong model of firmware is detected in the engine during the initial connection to the engine is being checked.		
Trouble isolation	-		
Relevant electrical parts	• SSD board (SSDB) • Printer control board (PRCB)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Rewrite the firmware.	-	-

Step	Action	Control signal	Location of electrical components
2	Replace PRCB	-	-
	1. Turn OFF the main power switch and replace the current PRCB with a new one. 2. Update the PRCB firmware . 3. After completing the firmware update, turn OFF and ON the main power switch and check to see that warm-up is started. 4. When the trouble cannot be solved, reinstall the removed PRCB to the original board.		
	NOTE • When taking the above steps, check whether PRCB is defective or not without replacing the SSDB.		
3	If the above actions do not solve the problem, contact KMBT.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.94. C4801, CC163](#))

3.15.10 CC164

(1) Contents

Trouble type	ROM contents error (MSC)
Trouble code	CC164
Rank	C
Detection timing	• The wrong model of firmware is detected in the MFP board when the main power switch is turned ON. • The machine type information (Machine, Type) registered to the machine differs from the actual machine type.
Trouble isolation	-
Relevant electrical parts	• Printer control board (PRCB) • MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the ROM version.	-	-
2	Check the machine type information registered and re-enter as necessary. For details the machine information, see " J.2.4 Entering the machine type information ".	-	-
3	Rewrite the firmware .	-	-
4	Replace the corresponding board.	-	-
5	If the above actions do not solve the problem, contact KMBT.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.125. CC164](#))

3.15.11 CC165

(1) Contents

Trouble type	ROM contents error (DF)
Trouble code	CC165
Rank	C
Detection timing	When the power is turned ON, DF control board or firmware error is detected.
Trouble isolation	-
Relevant electrical parts	DF control board (DFCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, disconnect and then connect the power cord. Wait for 10 sec. or more after connect the power cord, and turn ON the main power switch.	-	-
2	Rewrite the firmware .	-	-
3	Replace DFCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.122. CC156, CC165](#))

3.15.12 CC170, CC171, CC172, CC173, CC174, CC180, CC181, CC182, CC183, CC184, CC185, CC186**(1) Contents**

Trouble type	Dynamic link error during starting (AP0)
	Dynamic link error during starting (AP1)
	Dynamic link error during starting (AP2)
	Dynamic link error during starting (AP3)
	Dynamic link error during starting (AP4)
	Dynamic link error during starting (LDR)
	Dynamic link error during starting (IBR)
	Dynamic link error during starting (IID)
	Dynamic link error during starting (IPF)
	Dynamic link error during starting (IMY)
	Dynamic link error during starting (SPF)

	CC174
	CC180
	CC181
	CC182
	CC183
	CC184
	CC185
	CC186
Rank	C
Detection timing	A dynamic link error occurs in the program on the MFP board due to an insufficient memory space available, a ROM fault, or other reason when the main power switch is turned ON.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	If the malfunction code "C-C172" has occurred, access [Service Mode] -> [System 2] -> [Image Controller Setting] and check to see if "Controller 2," "Controller 3," or "Others" is set for [Image Controller Setting]. If any of these is set, according to the kind of controller, select "Controller 0" or "Controller 1."	-	-
2	If the malfunction code "C-C180" has occurred, check to install the appropriate loadable device driver for an authentication unit which is installed to the MFP. When the appropriate loadable device driver is not installed, reinstall the appropriate loadable device driver .	-	-
3	Replace MFPB	-	-
4	If the above actions do not solve the problem, contact KMBT.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15.13 CC190**(1) Contents**

Trouble type	Outline font load error
Trouble code	CC190
Rank	C
Detection timing	An error occurred while loading the outline font.
Trouble isolation	-

Relevant electrical parts	• MFP board (MFPB) • Hard disk
---------------------------	---

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between hard disk-MFPB PJ11 for proper connection and correct as necessary.	-	-
2	Format hard disk.	-	-
3	Replace the hard disk.	-	-
4	Replace MFPB	-	-

3.15.14 CC191**(1) Contents**

Trouble type	Setting parameter load error (LDR)
Trouble code	CC191
Rank	C
Detection timing	Upon startup, the processing of the loadable device driver setting data file failed. • RAM disk file creation failed. • Reading from the flash ROM failed. • An error occurred in API of the authentication module.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-
2	Reinstall the loadable device driver.	-	-
3	Rewrite the firmware.	-	-
4	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15.15 CC211**(1) Contents**

Trouble type	Authentication device general error
Trouble code	CC211
Rank	C
Detection timing	When using the authentication device, authentication data is not to meet the specifications.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Authentication device

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the USB cable for proper connection and correct as necessary.	-	-
2	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

Trouble type	User validation error
Trouble code	CC212
Rank	C
Detection timing	• An error occurred while validating the user authentication information. • The loadable device driver is not successfully installed.

Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Authentication device

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	When this trouble code is generated after installing the loadable device driver, check to see if there is any file other than loadable device driver in USB memory used. If there is any file, reinstall the loadable device driver .	-	-
2	Check the USB cable for proper connection and correct as necessary.	-	-
3	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-
4	Re-register the user authentication information.	-	-
5	Replace authentication device.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15.17 CC213**(1) Contents**

Trouble type	• User registration error • Card information setting error
Trouble code	CC213
Rank	C
Detection timing	• IC card advanced settings data is not correct when starting-up the authentication device. • Authentication information data is not correct when starting-up the authentication device. • IC card advanced settings data is not correct when setting the IC card advanced settings. • Authentication information data is not correct when setting the IC card advanced settings. • IC card advanced settings data is not correct when registering the authentication information. • Authentication information data is not correct when registering the authentication information. • IC card advanced settings data is not correct when editing the authentication information. • Authentication information data is not correct when editing the authentication information.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Authentication device

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the USB cable for proper connection and correct as necessary.	-	-
2	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-
3	Reset the authentication settings. (card type, IC card advanced settings, and etc.)	-	-
4	Re-register the user authentication information.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15.18 CC214**(1) Contents**

Trouble type	User information deletion error
Trouble code	CC214
Rank	C
Detection timing	The deletion of the user information is uncompleted.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Authentication device

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the USB cable for proper connection and correct as necessary.	-	-
2	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.15.19 CC216**(1) Contents**

Trouble type	Acquisition failure of the number of trials/Initialize error of number of authentication
Trouble code	CC216
Rank	C
Detection timing	An error occurred during user authentication using optional authentication unit AU-102.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Authentication device

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the USB cable for proper connection and correct as necessary.	-	-
2	Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.	-	-
3	Reset the number of authentication trials.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16 CD*****3.16.1 CD002****(1) Contents**

Trouble type	JOB RAM save error
Trouble code	CD002
Rank	C
Detection timing	The error in save of job data to the memory/ hard disk and its read error are detected.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between hard disk-MFPB PJ11 for proper connection and correct as necessary.	-	-
2	Format hard disk.	-	-
3	Replace the hard disk.	-	-
4	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.126. CC190, CD002, CD004, CD00F, CD020](#))

3.16.2 CD004, CD00F, CD020**(1) Contents**

Trouble type	Hard disk access error (connection failure)
Trouble code	CD004
Rank	C
Detection timing	Unable to communicate between the hard disk and MFP board (MFPB).
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Hard disk
Trouble type	Hard disk data transfer error

Trouble code	CD00F
Rank	C
Detection timing	Data transfer from the hard disk is faulty.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Hard disk
Trouble type	Hard disk verify error
Trouble code	CD020
Rank	C
Detection timing	The data abnormality is detected by the hard disk verify check.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between hard disk-MFPB PJ11 for proper connection and correct as necessary.	-	-
2	Reinstall the hard disk.	-	-
3	Replace the hard disk.	-	-
4	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.126. CC190, CD002, CD004, CD00F, CD020](#))

3.16.3 CD010**(1) Contents**

Trouble type	Hard disk unformat
Trouble code	CD010
Rank	C
Detection timing	Unformatted hard disk is connected.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Select [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [HDD Format] , and conduct the HDD format function.	-	-
2	Replace the hard disk.	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.127. CD010, CD272, CE002](#))

3.16.4 CD011**(1) Contents**

Trouble type	Hard disk out of specifications mounted
Trouble code	CD011
Rank	C
Detection timing	A hard disk that falls outside the specifications is connected.
Trouble isolation	-
Relevant electrical parts	Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the hard disk specifications.	-	-
2	Replace the hard disk.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.128. CD011, CD041, CD042, CD043, CD044, CD045, CD046, CD047, CD048, CD049, CD04A, CD04B](#))

3.16.5 CD030**(1) Contents**

Trouble type	Hard disk management information reading error
Trouble code	CD030
Rank	C
Detection timing	The machine fails to read administrative information data saved in the hard disk.
Trouble isolation	-

3.16.6 CD041, CD042, CD043, CD044, CD045, CD046**(1) Contents**

Trouble type	HDD command execution error
Trouble code	CD041, CD042, CD043, CD044, CD045, CD046
Rank	C
Detection timing	The error occurred inside the hard disk.
Trouble isolation	-
Relevant electrical parts	Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the hard disk specifications.	-	-
2	Format hard disk.	-	-
3	Replace the hard disk.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.128. CD011, CD041, CD042, CD043, CD044, CD045, CD046, CD047, CD048, CD049, CD04A, CD04B](#))

3.16.7 CD047, CD048, CD049, CD04A, CD04B**(1) Contents**

Trouble type	HDD SCSI library error
Trouble code	CD047, CD048, CD049, CD04A, CD04B
Rank	C
Detection timing	The error occurred inside the hard disk.
Trouble isolation	-
Relevant electrical parts	Hard disk

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the hard disk specifications.	-	-
2	Format hard disk.	-	-
3	Replace the hard disk.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.128. CD011, CD041, CD042, CD043, CD044, CD045, CD046, CD047, CD048, CD049, CD04A, CD04B](#))

3.16.8 CD201, CD202, CD203**(1) Contents**

Trouble type	File memory mounting error
Trouble code	CD201
Rank	C
Detection timing	• The file memory is not mounted. • The file has any abnormality.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Memory board/1 (MEMB/1) • Memory board/2 (MEMB/2; UK-204)
Trouble type	Memory capacity discrepancy
Trouble code	CD202
Rank	C
Detection timing	• File memory capacity on the MFP board (MFPB) is not enough. • File memory capacity necessary for duplex printing is not enough.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB)

	• Memory board/1 (MEMB/1) • Memory board/2 (MEMB/2; UK-204)
Trouble type	Memory capacity discrepancy 2
Trouble code	CD203
Rank	C
Detection timing	File memory capacity on the MFP board (MFPB) is not enough.
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Memory board/1 (MEMB/1) • Memory board/2 (MEMB/2; UK-204)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check to see if MEMB/1 or MEMB/2 on MFPB is installed correctly.	-	-
2	Replace MEMB/1 or MEMB/2 on MFPB.	-	-
3	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.129. CD201](#), [CD202](#), [CD203](#))

3.16.9 CD211, CD212**(1) Contents**

Trouble type	PCI-SDRAM DMA operation failure
Trouble code	CD211
Rank	C
Detection timing	Hardware related to the transfer of memory image of the MFP board (MFPB) fails to respond.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)
Trouble type	Compression/extraction timeout detection
Trouble code	CD212
Rank	C
Detection timing	Hardware related to the BTC compression function of the MFP board (MFPB) fails to respond.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372](#), [C6901- C6903](#), [CA051 - CA053](#), [CC151, CC152, CC170 - CC186](#), [CC191 - CC214](#), [CC216, CD211, CD212, CD241, CD242, CD252 - CD271](#), [CD401- CD412](#), [CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.10 CD241, CD242**(1) Contents**

Trouble type	Encryption ASIC setting error
Trouble code	CD241
Rank	C
Detection timing	Initialization error of the encrypted ASIC is detected during the machine is starting.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)
Trouble type	Encryption ASIC mounting error
Trouble code	CD242
Rank	C
Detection timing	The faulty of the installation of encrypted ASIC is detected during the machine is starting.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the MFP board connector for proper connection and correct as necessary.	-	-

Step	Action	Control signal	Location of electrical components
2	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.11 CD252

(1) Contents

Trouble type	No relay circuit boards for IC-414 mounting at IC-414 mount setting		
Trouble code	CD252		
Rank	C		
Detection timing	EFI relay circuit boards (VI-506) are not mounted when the IC-414 is set to mount setting at Service Mode.		
Trouble isolation	-		
Relevant electrical parts	- MFP board (MFPB) - EFI relay board (VI-506)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	If the IC-414 is not mounted, access [Service Mode] -> [System 2] -> [Image Controller Setting] and check to see if "Controller 0" is set for [Image Controller Setting] .	-	-
2	Check the EFI relay board (VI-506) connector for proper connection and correct as necessary.	-	-
3	Replace EFI relay board (VI-506)	-	-
4	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.12 CD261

(1) Contents

Trouble type	USB host board failure		
Trouble code	CD261		
Rank	C		
Detection timing	- When a failure is detected in USB host board included in the local interface kit. - Non-standard USB device is connected.		
Trouble isolation	-		
Relevant electrical parts	- MFP board (MFPB) - USB host board (EK-606) - USB host board (EK-607)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the operation with another USB device.	-	-
2	Check the USB host board connector for proper connection and correct as necessary.	-	-
3	Replace the USB host board	-	-
4	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.13 CD271

(1) Contents

Trouble type	i-Option activated and additional memory not installed		
Trouble code	CD271		
Rank	C		
Detection timing	While the i-Option is activated, the additional memory included in UK-204 is not installed.		
Trouble isolation	-		
Relevant electrical parts	- MFP board (MFPB) - Memory board/2 (MEMB/2; UK-204)		

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the MEMB/2 for proper connection and correct as necessary.	-	-
2	Replace MEMB/2	-	-
3	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.14 CD272**(1) Contents**

Trouble type	i-Option activated and additional memory and HDD not installed
Trouble code	CD272
Rank	C
Detection timing	While the i-Option is activated, the additional memory included in UK-204 and the HDD are not installed.
Trouble isolation	-
Relevant electrical parts	- MFP board (MFPB) - Hard disk - Memory board/2 (MEMB/2; UK-204)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check MEMB/2 for proper connection and correct as necessary.	-	-
2	Access [Service Mode] -> [System 2] -> [HDD] and check to see if "Installed" is selected.	-	-
3	Replace MEMB/2	-	-
4	Replace the hard disk.	-	-
5	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.127. CD010, CD272, CE002](#))

3.16.15 CD3##**(1) Contents**

Trouble type	Nonvolatile data error
Trouble code	CD3##
Rank	-
Detection timing	Abnormality is detected by the abnormal check of each nonvolatile data.
Trouble isolation	-

- Trouble code [C-D370] will be displayed when multiple errors (over 5) of nonvolatile data are detected, which can be restored with one restoration command.
- Data backup will be automatically performed every hour. Backup can also be performed manually with the following setting. [\[Service Mode\] -> \[Enhanced Security\] -> \[Memory Data Back Up\]](#)

1. When a trouble caused by nonvolatile data error occurs, the screen below appears.

- Select [Yes].
- The screen will be shifted to the data restoration screen to perform data restoration.

NOTE

- When the restoration is performed in a short time, data restoration screen may not be displayed.

- Check the message which indicates that the data restoration was successfully conducted. Turn OFF the main power switch and turn it ON again more than 10 seconds after.

NOTE

- In case it failed to restore data, return to the trouble code screen.

3.16.16 CD370**(1) Contents**

Trouble type	Nonvolatile data multiple errors
Trouble code	CD370
Rank	C
Detection timing	Multiple errors (over 5) are detected by the abnormal check of each nonvolatile data.
Trouble isolation	-

3.16.17 CD390**(1) Contents**

Trouble type	Nonvolatile data checksum error
Trouble code	CD390
Rank	C
Detection timing	C-D390 code is normally shown when the MFP board is replaced with a new one.
Trouble isolation	-
Relevant electrical parts	-

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Wait until "Recover Data" appears. (MFP will reboot maximum 2 times by itself, it may take 5 minutes.) Touch the "Recover Data" button and follow the instructions that appear on the control panel to restore (backup) data.	-	-

3.16.18 CD3A0**(1) Contents**

Trouble type	Counter error
Trouble code	CD3A0
Rank	C
Detection timing	The total counter values provided by the MFP board and the SSD board are different.
Trouble isolation	-
Relevant electrical parts	- MFP board (MFPB) - SSD board (SSDB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	If this error occurs temporarily due to the use of the board removed from another machine, reinstall the original board.	-	-
2	Replace the current MFPB with a new one.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.130. CD3A0](#))

3.16.19 CD401, CD402, CD403, CD404, CD405, CD406, CD407, CD411, CD412**(1) Contents**

Trouble type	NACK command incorrect
	ACK command incorrect

Rank	C
Detection timing	When abnormality is found in the communication of controller.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check whether there is a strong electromagnetic noise source near the main body.	-	-
2	Check the connectors on MFPB for proper connection and correct as necessary.	-	-
3	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.16.20 CDC##**(1) Contents**

Trouble type	Trouble related to security
Trouble code	CDC##
Rank	-
Detection timing	Contact the responsible people of KMBT before taking some countermeasures.
Trouble isolation	-

3.16.21 CDF50, CDF70, CDFA0**(1) Contents**

Trouble type	ASIC image version failure ASIC image access failure ASIC image error
Trouble code	CDF50 CDF70 CDFA0
Rank	C
Detection timing	Communication error is detected between the MFP board (MFPB) and the CCD board (CCDB).
Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • CCD board (CCDB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connector between MFPB and CCDB for proper connection, and correct as necessary.	-	-
2	Update the firmware.	-	-
3	Replace CCDB	-	-
4	Replace MFPB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.110. C6704, C6752, CDF50, CDF70, CDFA0](#))

3.17.3 CE101

(1) Contents

Trouble type	Browser finish detected
Trouble code	CE101
Rank	C
Detection timing	• The browser is automatically recovered (restarted) after the main body detected that the browser (separate process) has stopped with fault. • When the "Malfunction finish is detected over predetermined number of times" or "the browser task process is except in idle (printing, etc)".
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connectors on MFPB for proper connection and correct as necessary.	-	-
2	Replace MFPB.	-	-

- Link to the layout drawings for related parts by each trouble code ([S.103. C5372, C6901- C6903, CA051 - CA053, CC151, CC152, CC170 - CC186, CC191 - CC214, CC216, CD211, CD212, CD241, CD242, CD252 - CD271, CD401- CD412, CE001, CE003 - CE007, CE101, CE201, CE301 - CEEE1](#))

3.17.4 CE201

(1) Contents

Trouble type	Transmission operation log storage fault
Trouble code	CE201
Rank	C
Detection timing	When the transmission log storage failed, it repeats retrial until transmission operation log is stored. The trouble is detected when the retrial failed for predetermined number of times.
Trouble isolation	-
Relevant electrical parts	MFP board (MFPB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the connectors on MFPB for proper connection and correct as necessary.	-	-

3.17.8 CEEE3**(1) Contents**

Trouble type	Printer control board malfunction
Trouble code	CEEE3
Rank	A
Detection timing	Printer control board (PRCB) is faulty.
Trouble isolation	-
Relevant electrical parts	Printer control board (PRCB)

(2) Procedure

Step	Action	Control signal	Location of electrical components
1	Check the PRCB connector for proper connection and correct as necessary.	-	-
2	Replace PRCB	-	-

- Link to the layout drawings for related parts by each trouble code ([S.1. C0002](#), [C4802](#), [C5601](#), [CC153](#), [CEEE3](#))

4. ABORT CODE

- The machine displays an abort code (CF####) on the control panel as it becomes unable to process tasks properly through its software control.
- When the system program is aborted, check the electrical component, unit, option, and connection relating to the specific type of the abort condition.

(1) Contents

Trouble type	Abort code
Trouble code	CF001 to CFFA0
Rank	C
Detection timing	-
Trouble isolation	-
Relevant electrical parts	- MFP board (MFPB) - Memory board/1 (MEMB/1) - Memory board/2 (MEMB/2) - EFI board (EFIRYB: VI-506) - Dual scan image processing board (DSIPB) - DSC board/1 (DSCB/1: Security kit SC-508) - DSC board/2 (DSCB/2: Security kit SC-508) - Hard disk (HDD)

(2) Procedure

- When an abort code occurs, take a check and action in the following procedure.

Step	Section	Check Item	Result	Action
1	Main power switch	Turn OFF and ON the main power switch, and check if the Abort code appears again.	NO	When not reappearing, continuous use is carried out, and it is checked whether an abort code occurs.
2	Connector connection	Check the connector for proper connection and correct as necessary. - MFP board (MFPB) - Memory board/1 (Standard memory: MEMB/1) - Memory board/2 (Expansion memory: MEMB/2) - EFI board (EFIRYB: VI-506) - Dual scan image processing board (DSIPB) - DSC board/1 (DSCB/1: SC-508) - DSC board/2 (DSCB/2: SC-508) - Hard disc (HDD)	NO	It will correct, if connector connection has abnormalities.
3	Firmware	Update the firmware to the latest version, and check if the Abort code appears again.	NO	After conducting firmware updating, check the firmware version No. and confirm that the firmware has been normally updated.
4	Memory Check	Conduct the following setting. [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [Memory Check] -> [Rough Check].	NO	When "NG" is displayed, replace the appropriate memory or PWB. - WORK0: Standard memory (MEMB/1) - WORK1: Expansion memory (MEMB/2) - FILE0,1: MFP board (MFPB) - FILE2,3: EFI board (EFIRYB: VI-506) - FILE4,5: Dual scan image processing board (DSIPB)
5	HDD R/W Check	Conduct the following setting. [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [HDD R/W Check].	NO	When "NG" is displayed, replace the hard disk (HDD).
6	JPEG Check	Conduct the following setting. [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [JPEG Check].	NO	When "NG" is displayed, Check the MFPB.
7	MFP board	Replace MFPB	NO	Other electric parts indicated to Component of abort code list are replaced.

Trouble isolation	-
Relevant electrical parts	• MFP board (MFPB) • Memory board/1 (MEMB/1) • Memory board/2 (MEMB/2) • EFI relay board (VI-506) • Dual scan image processing board (DSIPB)

4.17.2 Procedure

Step	Action	Control signal	Location of electrical components
1	Check the MFPB connector for proper connection and correct as necessary.	-	-
2	Conduct the following setting. [Service Mode] -> [State Confirmation] -> [Memory/HDD Adj.] -> [Memory Check] -> [Detail Check]. When "NG" is displayed, replace the appropriate memory or PWB. WORK0: Standard memory (MEMB/1) WORK1: Expansion memory (MEMB/2) FILE0,1: MFP board FILE2,3: EFI relay board FILE4,5: Dual scan image processing board	-	-
3	Replace MFPB	-	-

5. ERROR CODE FOR THE INTERNET ISW

5.1 Error code list for the Internet ISW

- When a trouble occurred while conducting the Internet ISW and it was not normally connected, the message on the status and the error code will be displayed on the control panel.
When updating with CS Remote Care, the error code will be sent to the CS Remote Care center.

NOTE

- When a code other than the error code list is displayed, contact and inform the error code.

5.2 0x0*

Error code	Description	Countermeasure
0x00000001	Illegal error on the control	- Check if the following setting is set to "ON". [Service Mode] -> [Internet ISW] -> [Internet ISW setting] - Check the status of the following setting. [Service Mode] -> [Internet ISW] -> [Forwarding Access Setting] - If the above process does not solve the problem, inform the corresponding error code to the KONICA MINOLTA.
0x00000010	Parameter error	- Check if the following setting is set to "ON". [Service Mode] -> [Internet ISW] -> [Internet ISW setting] - If the above process does not solve the problem, inform the corresponding error code to the KONICA MINOLTA.
0x00111000	Error concerning the network • Connection has been completed.	- Check the User's network environment. (LAN cable's connection) - Check the status of the following setting. [Service Mode] -> [Internet ISW] -> [Forwarding Access Setting] - Check to see if the FTP server operates normally.
0x00111001	Error concerning the network • It cannot be connected to the server.	- Check the network environment of the User. - Check to see if the FTP server operates normally. - Check whether the URL of the data transfer server includes http://, ftp://, or the like to specify a protocol in [Service Mode] -> [Internet ISW] -> [Forwarding Access Setting]. - Check the network environment of the User. - Check to see if the FTP server operates normally.
0x00111100	Error concerning the network • Communication timeout.	
0x00111101	Error concerning the network • Disconnection occurred.	
0x00111110	Error concerning the network • The network is not connected.	
0x00110010	Error concerning the network • Others	
0x00001###	FTP error • Reply code when it failed to be connected.	- Check to see if FTP server normally operates. - Check the IP address, user's name, etc.
0x00002###	FTP error • Error reply code for the user command or pass command.	Check to see if FTP server operates normally.
0x00003###	FTP error • Error reply code for CWD command.	Check to see if FTP server operates normally.
0x00004###	FTP error • Error reply code for the TYPE command.	
0x00005###	FTP error • Error reply code for the PORT command.	

Error code	Description	Countermeasure
0x00006###	FTP error • Error reply code for the PASV command.	• Check to see if FTP server operates normally. • Set the PASV mode to "Invalid", and try it again.
0x00007###	FTP error • Error reply code for the RETR command.	• Check to see if FTP server operates normally. • Wait for about 30 minutes and try it again.

5.3 0x1*

Error code	Description	Countermeasure
0x10000100	• It cannot be accepted because of the job currently being executed. • ISW being executed by other method.	• Wait for the current job to be completed and try it again.
0x10000101	It cannot be accepted because the sub power is OFF.	• Turn power key ON and try it again.
0x10000102	The Internet ISW is already being executed.	• Wait for the current Internet ISW to be completed.
0x10000103	It failed to prohibit the job. (It failed to lock the operation.) -> It failed to lock the job because the operation is already locked with PSWC, etc.	• Check if the following setting is set to "ON." [Service Mode] -> [Internet ISW] -> [Internet ISW setting] • If the above process does not solve the problem, inform the corresponding error code to the KONICA MINOLTA.
0x10000104	There is no space for firmware data to be downloaded.	
0x10000106	Check sum error	
0x10000107	File access error • The file downloaded has an error. • The header of the file which has been read has an error. • The size of the file to be downloaded is too large. • When it is identified to be the different type of firmware.	• Check to see if the downloaded firmware is of the correct type.
0x10000108	The area firmware is stored is destroyed, and another ISW is necessary.	• Wait until ISW is automatically executed on MFP side.

5.4 0x2*

Error code	Description	Countermeasure
0x20000000	The temporary error when running the subset • When starting the Internet ISW in a normal program, the rebooting will start and the Internet ISW will be executed with the subset program. During the process by the subset program, it has to be in the "Failed" status unless the Internet ISW is successfully conducted. This code is used temporarily to make it in error status.	• Wait until ISW is automatically executed on MFP side.

6. CS Remote Care ERROR CODE

6.1 Troubleshooting for CS Remote Care

If communication is not done properly, check the condition by following the procedures shown below.

1. Shift the screen in the order of [\[Service Mode\]](#) -> [\[CS Remote Care\]](#) -> [\[Detail Setting\]](#).

At this time, in the cases of initial transmitting / administrator transmitting / maintenance start transmitting / maintenance finish transmitting, the communication result will be displayed at the top of the screen.

NOTE

- For the communication result, the following message will be displayed based on its success or failure.

Display of communication result	Cause	Solution
Communicating	-	-
Communication trouble with the center	Although the machine tries to communicate with the center, there is any trouble and the communication completes unsuccessfully.	See the list of error message and confirm the corresponding point.
Complete successfully	-	-
Modem trouble	Although the machine tries to communicate with the center, there is any trouble in the modem.	• Check if the power of modem is ON. • Check if there is any problem in connection between the modem and the main body.
Busy line	Although the machine tries to communicate with the center, the line to the center is busy.	Communicate with the center again.
No response	Although the machine tries to communicate with the center, there is no response from the center.	• Communicate with the center again. • Check the communication environment of the center side.

6.2 CS Remote Care Operation under Enhanced Security Mode

CS Remote Care can be used even when "ON" is selected in [\[Administrator Settings\]](#) -> [\[Security Settings\]](#) -> [\[Enhanced Security Mode\]](#).

However, to keep the enhanced security level, the following restrictions are accompanied.

- Only SSL communication is available.
- Error occurs if the Center tries to send the following commands.
 - Firmware update command
 - Command of reading and updating account track information
 - Machine settings update command
 - Command of reading and updating Internet ISW setting information

6.3 List of the CS Remote Care error code

6.3.1 When connecting by modem

NOTE

- When a code other than the ones listed below is displayed, contact KMBT and inform the error code.

Error code	Error	Solution
0001	The line is busy (Busy detection)	• Transmit again manually.
0002	Failure of the Modem default setting at transmitting (When the transmission completes with modem initial setting failed)	• Check if the power of the modem is ON. • Check the connecting condition between the modem and the main body.
0003	Timeout of CONNECT at transmitting (No response to ATD)	• Transmit again manually. • Check if the power of the modem is ON. • Check the connecting condition between the modem and the main body.
0005	Timeout of CONNECT at receiving (No response to ATA)	• Check if the power of the modem is ON. • Check the connecting condition between the modem and the main body.
0006	Shut down of the data modem line (Host) (Carrier OFF is detected)	• No solution, because the line is shut down at the host side.
0008	Timeout of start request telegram delivery (Start request telegram is not delivered after line connection)	• Transmit again manually.
0009	Timeout of finish request telegram delivery (Finish request telegram is not delivered (Start of shut down).)	• Transmit again manually.
000A	Receiving rejection (Receiving is made when the main body is set to reject receiving.)	• Check the setting condition of the host side. • Check the setting condition of the main body side.
000B	RS232C driver over run (When the modem detects over run.)	• If the same error is detected several times, turn the modem power OFF and ON.
000C	If the same error is detected several times, turn the modem power OFF and ON.	• If the same error is detected several times, turn the modem power OFF and ON.
000D	Break Interrupt (BI) indicator (When the modem detects Break Interrupt (BI) indicator.)	• If the same error is detected several times, turn the modem power OFF and ON.
0011	Baud rate ERROR (When selected baud rate is out of the specification (9600 bps to 38400 bps).)	• Check the baud rate of the software DipSW.
0016	Status error (upon data arrival)	• Transmit again manually.

Error code	Error	Solution
0018	Machine ID has already been registered (Request telegram 2 (SET-UP) comes from the main body that has already registered machine ID.)	Set the initial registrations again for all including the host side.
0019	Center ID error (Center ID of the host is not identical with the one of start request telegram.)	- Check center ID setting of the main body side. - Check the setting condition of the host side.
001A	Device ID inconsistency (Device ID of the host is not identical with the one of start request telegram.)	- Check device ID setting of the main body side. - Check the setting of the host side.
001B	Device ID unregistered (Request telegram 2 (Constant data transmitting, emergency call) comes from the main body that has not registered machine ID yet.)	- Check device ID setting of the main body side. - Check the setting of the host side.
001C	Grammar error (The specified format is not used in the received reply telegram.)	Check the settings for CSRC application.
001D	Change unavailable (Item where change is prohibited) (Host inquires change of the setting of the item not allowed to be changed.)	Check the settings for CSRC application.
001E	Impossible to change (during printing) (Setting cannot be changed because the setting change is made during the machine is printing or starts printing.)	Try again when the machine is not printing.
001F	Change unavailable (unread item) (Host attempts to write data to the item of which current value has not been read.)	Check the settings for CSRC application.
0020	Timeout of telegram delivery (At waiting mode of telegram delivery the machine fails to receive the telegram in a given time.)	Try communication again.
0021	Telegram longer than the specified length. (A telegram longer than the specified length is received.)	Check the settings for CSRC application.
0027	Transmission / receiving collision (Receiving is detecting during transmitting processing)	Try communication again.

6.3.2 When connecting by e-mails

NOTE

- When a code other than the ones listed below is displayed, contact KMBT and inform the error code.

(1) 0***

Error code	Error	Solution
0###	Transmission error ###: SMTP responding code (hexadecimal) For SMTP responding code, see RFC issued by IETF after converting hexadecimal number into decimal one.	Check the SMTP server on User side.

(2) 1***

Error code	Error	Solution
1030	Machine ID mismatching Received an e-mail which tells that machine ID mismatches.	- Check the machine ID setting. - Check the machine ID setting on host side.
1050	Grammar error - Received mail did not define the CS Remote Care command (2 digits). - The Type of Subject and the command of attached file are not consistent.	Check mail content.
1061	Modifying not allowed The host sent a command mail that asked modifying data of item where setting change is not allowed.	Ask the host to send another instruction mail for modifying.
1062	Modifying not available due to the copy job currently performing When informing the host that it cannot be modified due to the copy job currently performing.	Ask the host to send another instruction mail for modifying.
1080	Data length problem LEN value of TEXT data and actual data length are not consistent.	Ask the host to send another instruction mail for modifying.
1081	Frame No. error - The last frame has not been received. - There are missing frame No.	Check the status of the machine registration on host side.
1082	Subject Type problem Received code did not define the Type of Subject.	Ask the host to send another instruction mail for modifying.
1084	Date expired Expiration date for data modification command has passed.	Ask the host to send another instruction mail for modifying.

Error code	Error	Solution
1091	Oversized command • Received attached file exceeds the machine's receive buffer size.	• Ask the host to send another instruction mail for modifying.
1092	Received an error mail when center setup is not complete	• Check the status of the machine registration on host side.
1199	Illegal request • Status not predicted in design is detected.	• Contact KMBT and inform the error code.

(3) 2***

Error code	Error	Solution
2039	Socket is not connected • LAN cable on the copier side is detached.	• Check the SMTP server and POP3 server on user side.
203C	Connection timeout	• Check timeout setting.
203E	Network is down • LAN cable on MFP side is detached.	• Check the connection between MFP on the user's side and the network connector. • Check the network environment on the user's side.

(4) 3***

Error code	Error	Solution
3001	POP3_AUTHORIZATION_ERR	• Check the POP3 server environment on user's side.
3002	POP3_TRANSACTION_ERR	• Check the POP3 server environment on user's side.
3003	POP3_CONNECT_ERR	• Check the POP3 server environment on user's side.
3004	POP3_TIMEOUT_ERR	• Check the POP3 server environment on user's side.
3005	POP3_FORMAT_ERR	• Check the POP3 server environment on user's side.
3006	POP3_MEMORY_ERR	• Check the POP3 server environment on user's side.
3007	POP3_JOBID_ERR	• Check the POP3 server environment on user's side.
3008	POP3_NO_DATA_ERR	• Check the POP3 server environment on user's side.
3009	POP3_DELETE_FAIL_ERR	• Check the POP3 server environment on user's side.
3010	POP3_MAILBOX_FULL	• Check the POP3 server environment on user's side.

(5) 4***

Error code	Error	Solution
4103	During polling from MFP, MIO is not active and MFP cannot start communication.	• Wait for a while and try transmitting again.
4104	During e-mail transmission from MFP to the center, the SMTP channel is not in the "Ready" status and MFP cannot send e-mail.	• Wait for a while and try transmitting again.
4105	During polling from MFP, the POP3 channel is not in the "Ready" status and MFP cannot receive e-mail.	• Wait for a while and try transmitting again.
4106	During e-mail transmission from MFP to the center, MIO is not active and MFP cannot start communication.	• Wait for a while and try transmitting again.
41F9	Control error • In the CS Remote Care's internal sequence, message transfer failed.	• Turn the main power switch OFF and then ON.
41FA	Control error • MIO response timed out.	• Turn the main power switch OFF and then ON.
41FB	Control error • As the file descriptor of the e-mail that MFP receives from MIO is invalid, MFP cannot receive the e-mail.	• Turn the main power switch OFF and then ON.
41FC	Control error • During the creation of data to be sent by e-mail, the CS Remote Care's internal status error occurs or the data that need to be sent has not been created.	• Turn the main power switch OFF and then ON.
41FD	Control error • During e-mail reception, the parameter sent from MIO to the CS Remote Care is invalid and MFP cannot receive the e-mail.	• Turn the main power switch OFF and then ON.
41FE	Control error • After the completion of e-mail transmission, MFP received the transmission completion message from MIO. However, the CS Remote Care's internal status was not the status of transmission completion.	• Turn the main power switch OFF and then ON.
41FF	Control error • During e-mail reception, MIO became inactive.	• Turn the main power switch OFF and then ON.

Error code	Error	Solution
4210	Control error • E-mail sent from MIO could not be properly handled in the CS Remote Care.	• Turn the main power switch OFF and then ON.

(6) 5***

Error code	Error	Solution
5***	MIO detects error when sending an attached file.	• Check the SMTP server /POP3 server environment on user's side.

(7) 6***

Error code	Error	Solution
6***	MIO detects error during a sending sequence.	• Check the SMTP server /POP3 server environment on user's side.

6.3.3 When connecting by http**NOTE**

- When a code other than the ones listed below is displayed, contact KMBT and inform the error code.

(1) 0***

Error code	Error	Solution
0***	Transmission error ###: http responding code (hexadecimal) For http responding code, see RFC issued by IETF after converting hexadecimal number into decimal one.	• Check the http server.

(2) 1***

Error code	Error	Solution
1030	Machine ID mismatching • Received file which tells that machine ID mismatches.	• Check the machine ID setting. • Check the machine ID setting on host side.
1050	Grammar error • Received file did not define the CS Remote Care command (2 digits). • The Type of Subject and the command of file are not consistent.	• Check file content.
1061	Modifying not allowed • The host sent a command file that asked modifying data of item where setting change is not allowed.	• Ask the host to send another instruction file for modifying.
1062	Modifying not available due to the copy job currently performing • When informing the host that it cannot be modified due to the copy job currently performing.	• Ask the host to send another instruction file for modifying.
1080	Data length problem • LEN value of TEXT data and actual data length are not consistent.	• Ask the host to send another instruction file for modifying.
1081	Frame No. error • The last frame has not been received. • There are missing frame No.	• Check the status of the machine registration on host side.
1082	Subject Type problem • Received code did not define the Type of Subject.	• Ask the host to send another instruction file for modifying.
1084	Date expired • Expiration date for data modification command has passed.	• Ask the host to send another instruction file for modifying.
1091	Oversized command • Received file exceeds the machine's receive buffer size.	• Ask the host to send another instruction file for modifying.
1099	Illegal request • Status not predicted in design is detected.	• Contact KMBT and inform the error code.

(3) 2***

Error code	Error	Solution
2001	http request result problem • Internal status error	• Check user network environment. • Check http server environment.
2002	http request result problem • File list acquisition result problem	
2003	http request result problem • Request header transmission failure	
2004	http request result problem • Request body transmission failure	

Error code	Error	Solution
2005	http request result problem • Response header receive response failure	
2006	http request result problem • Response body receive response failure	
2007	http request result problem • Session ID inconsistent	

(4) 3***

Error code	Error	Solution
3002	http request result problem • Unopened client ID was specified	• Check user network environment. • Check http server environment.
3003	http request result problem • Receive time out occurred	
3004	http request result problem • Receive error occurred. Or wrong request URL was specified.	
3005	http request result problem • Content-Length or receive size exceeded the specified max. transfer size. Message body size was too large.	
3006	http request result problem • Due to reset, process was stopped. Or message body size exceeded the specified max. transfer size.	
3007	http request result problem • Internal error occurred. Or due to internal reset, process was stopped.	
3008	http request result problem • Connection to WebDAV server failed.	
3009	http request result problem • Error occurred during transmission to the WebDAV server.	
3010	http request result problem • Time out occurred during transmission to the WebDav server.	
3011	http request result problem • Connection to the proxy server failed.	
3012	http request result problem • The proxy server refused CONNECT request.	
3013	http request result problem • The proxy server was set to enabled, but the proxy server host was not set.	
3014	http request result problem • Proxy server authentication failed.	
3015	http request result problem • Other errors were sent from the proxy server.	
3016	http request result problem • Internal error occurred.	
3017	http request result problem • As the device application specified MIO_REQBODY_ERROR, process was stopped.	

(5) 4***

Error code	Error	Solution
4103	After the power is switched ON, HTTP communication is attempted under the condition where HTTP communication is not ready.	• Wait for a while and try transmitting again.
4106	When data is uploaded from MFP to the web server, the network connection is not enabled and MFP cannot start communication.	• Wait for a while and try transmitting again.
41FA	Control error • MIO response timed out.	• Turn the main power switch OFF and then ON.

Error code	Error	Solution
7000	Failure occurs when a certificate for product authentication is acquired from a USB flash drive.	Acquire a new certificate (within 6 days after the issue).

6.3.4 When connecting by Fax modem**NOTE**

- When a code other than the ones listed below is displayed, see the FK-502 Service Manual.

Error code	Error	Solution
T50	Host terminal ID not correct	Check the telephone number set for host.
R80	Serial number received from the host not correct.	Check the status of the Machine registration on host side.
R81	Disconnection of writing instruction from host during machine is running.	Wait for a while and try transmitting again.
R82	Disconnection of FAX-CSRC instruction when FAX-CSRC is not allowed.	Check the status of the Machine registration on host side.
R83	Host command error.	Contact KMBT and inform the error code.
R84	NVRAM writing error.	Contact KMBT and inform the error code.

7. NETWORK ERROR CODE

7.1 Display procedure

- It displays the error code when a network error occurred.
- Network error code is displayed only when the following setting is in "Display."
[\[Administrator Settings\]](#) -> [\[Network Settings\]](#) -> [\[Detail Settings\]](#) -> [\[Error Code Display Setting\]](#)

7.2 IEEE802.1X

Code	Description
1	• Connection has already been established.
2	• Parameter error.
3	• Unable to find the destination AP (SSID).
4	• The authentication mode does not match the AP (IEEE802.1X/WPA-EAP/WPA-PSK/NONE).
5	• Negotiation of the EAP method failed.
6	• The EAP authentication failed (user ID, password, certificate, etc.)
7	• Encryption negotiation with the AP failed (TKIP/CCMP).
8	• Failed to retrieve the client certificate.
9	• The client certificate has expired.
10	• Verification error of the server certificate (EAP-TLS/EAP-TTLS/PEAP).
11	• Although the WPA-PSK mode is selected, the Pre-Shared Key is not specified.
12	• An authentication error occurred in the WPA-PSK mode (un-matched Pre-Shared Key).
13	• The phase 2 method is not specified (PEAP).
14	• Negotiation of the phase 2 method failed (PEAP).
15	• Response from the server has timed out.
16	• Failed to allocate memory.
17	• Failed to start the supplicant task.
18	• The driver does not work.
19	• The server certificate has expired (EAP-TLS/EAP-TTLS/PEAP).
20	• CA verification error of the server certificate (EAP-TLS/EAP-TTLS/PEAP).
21	• Server ID verification error of the server certificate (EAP-TLS/EAP-TTLS/PEAP).
22	• The CA certificate is not specified (EAP-TLS/EAP-TTLS/PEAP).
23	• The server ID is not specified (EAP-TLS/EAP-TTLS/PEAP).
24	• The setting combination is correct.
25	• Connection and authentication are complete.
26	• The server certificate does not have the expected usage (EAP-TLS/EAP-TTLS/PEAP).
27	• The server certificate has expired (EAP-TLS/EAP-TTLS/PEAP).
28	• Access to the server to check for expiration of the server certificate is rejected (EAP-TLS/EAP-TTLS/PEAP).
29	• Access to the server to check for expiration of the server certificate has timed out (EAP-TLS/EAP-TTLS/PEAP).
30	• Unable to check for expiration because the CRL size that has been retrieved to check for the expiration of the server certificate exceeds the maximum capacity that can be retained (1MB) (EAP-TLS/EAP-TTLS/PEAP).
31	• Incorrect format of the server certificate (EAP-TLS/EAP-TTLS/PEAP).
32	• Verification of the server certificate is invalid (EAP-TLS/EAP-TTLS/PEAP).
33	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified (EAP-TLS/EAP-TTLS/PEAP).
34	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20) (EAP-TLS/EAP-TTLS/PEAP).
35	• Parameter error of the certificate (EAP-TLS/EAP-TTLS/PEAP).
36	• Internal error of the certificate verification (EAP-TLS/EAP-TTLS/PEAP).

7.3 LDAP

Code	Description
1	• An invalid operation occurred.
4	• The number of search results has exceeded the maximum number of items allowed.
7	• The LDAP server does not support SASL.
10	• Unable to trace the link although Referral is specified.
32	• Cannot find the search route.
49	• Failed to log in to the LDAP server.
80	• An unexpected error occurred.
85	• The connection has timed out.
86	• The supported SASL does not match the LDAP server side.

Code	Description
88	• Cancelled by the user.
90	• A memory shortage occurred.
91	• Unable to connect to the LDAP server.
92	• The supported LDAP version does not match the LDAP server side.
128	• Failed to resolve the LDAP server name using the DNS server.
129	• The certificate of the LDAP server has expired.
130	• Mutual authentication using GSS-SPNEGO (Kerberos v5) failed.
131	• The search result remains.
2238	• The CN field of the LDAP server certificate does not match the server address.
2239	• The LDAP server certificate does not have the expected usage for a server.
2240	• The LDAP server certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
2241	• The LDAP server certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the LDAP server certificate is invalid.
2263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.
10000	• Failed in authentication using a PKI card (PKI token).
12236	• The ticket certificate has expired.
12239	• The ticket certificate does not have the expected usage for a server.
12240	• The ticket certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
12241	• The ticket certificate has expired.
12242	• The CA server rejected the connection.
12243	• The connection to the server that checks for expiration of the certificate has timed out.
12244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
12261	• The format of the ticket certificate is invalid.
12263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
12264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
12266	• Internal error of the certificate verification/management module.

7.4 E-Mail/Internet Fax

Code	Description
1	• Failed to log in to the E-mail server.
2	• An internal error occurred.
3	• Failed to connect to the server.
4	• The connection has timed out.
5	• Decoding failed due to invalid MIME format or S/MIME format.
6	• Available free memory is insufficient. Reception is not possible.
9	• Failed to delete an E-mail message.
10	• The mail box is full.
11	• Failed to search the certificate.
12	• Failed to retrieve the device certificate or private key.
13	• An I/O error occurred. • An HDD operation error occurred, or memory capacity of the computer may be insufficient.
14	• The S/MIME function is disabled.
15	• The HDD is disabled.
16	• The format of the certificate from the E-mail sender is invalid.
2236	• The certificate has expired, or the validity period has not yet started.
2238	• The CN field of the certificate does not match the server address.

Code	Description
2239	• The certificate does not have the expected usage.
2240	• The certificate is not trusted. To trust the certificate, the certificate must be registered to the system.
2241	• The certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the certificate is invalid.
2263	• Failed to initialize the certificate verification.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.

7.5 FTP transmission

Code	Description
22	• Parameter error (e.g. the file name is NULL).
27	• Parameter is invalid.
42	• The specified protocol is unavailable.
52	• The process is cancelled by a device reset.
55	• A buffer shortage occurred.
56	• The FTP connection is already open.
57	• Failed to connect to the server.
60	• The connection has timed out.
61	• The connection has been interrupted.
62	• The device is not connected to the network.
70	• The network connection is busy.
450	• The file has not been deleted.
451	• The file transfer failed (e.g. due to insufficient server capacity).
452	• The file transfer failed (e.g. due to insufficient server capacity).
501	• Syntax error in parameters or arguments.
530	• Incorrect login name or password.
550	• The specified folder does not exist.
552	• The file operation failed (e.g. due to insufficient server capacity).

7.6 SMB transmission

Code	Description
42	• The specified protocol is unavailable.
52	• The process is cancelled by a device reset.
55	• A buffer shortage occurred.
57	• Failed to connect to the server.
62	• The device is not connected to the network. • The connection has been interrupted.
70	• The network connection is busy.
4096	• The host name is not specified. • The specified host name does not exist on the network.
4097	• The user name is not specified. • Unable to log in with the specified user name and password. • The user does not have write permission to the folder. • Failed to log in due to an SMB protocol error.
4098	• The folder name is not specified. • The specified folder does not exist.
4099	• The user name is not specified. • Unable to log in with the specified user name and password. • The user does not have write permission to the folder. • Failed to log in due to an SMB protocol error.
4100	• The specified file name is invalid.
4101	• The specified file already exists and is write-protected. • The folder and the disk are write-protected.
4102	• The specified media to be written is not formatted.

Code	Description
	• The file system of the specified media to be written is faulty.
4103	• The server capacity is full.
4104	• The server capacity has become full while writing data.
4105	• Other errors to which an error code is not assigned.
10000	• Failed in authentication using a PKI card.
12236	• The certificate has expired, or the validity period has not yet started.
12239	• The certificate does not have the expected usage.
12240	• The certificate is not trusted. To trust the certificate, the certificate must be registered to the system.
12241	• The certificate has expired.
12242	• The CA server rejected the connection.
12243	• The connection to the server that checks for expiration of the certificate has timed out.
12244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
12263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
12264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
12266	• Internal error of the certificate verification.
12267	• The device certificate does not exist.
12268	• No certificate is sent from the server.

7.7 SMTP transmission

Code	Description
22	• Invalid argument.
27	• The file size is too large.
28	• Insufficient memory of the device.
32	• The pipe is broken.
42	• The specified protocol is unavailable.
51	• Unable to reach the destination network.
52	• The connection aborted by the network.
55	• A buffer shortage occurred.
57	• The socket is not connected.
58	• The connection has been interrupted.
60	• The operation has timed out.
61	• The connection is rejected.
62	• The device is not connected to the network.
67	• The host is shut down.
70	• The operation is expected to be blocked.
421	• SMTP server error. Since the service is unavailable, the transfer channel is closed.
432	• SMTP server error. The password must be changed.
450	• SMTP server error. Unable to access to the mail box.
451	• SMTP server error. The requested action has been cancelled because an error occurred while processing a job.
452	• SMTP server error. Shortage of the system storage capacity.
453	• SMTP server error. No E-mail message.
454	• SMTP server error. Temporary authentication failure.
458	• SMTP server error. Unable to queue a message to the node.
459	• SMTP server error. The node is not permitted.
499	• SMTP server error. An unsupported SMTP error code of 400s is received from the SMTP server.
500	• SMTP server error. Syntax error (command unrecognized).
501	• SMTP server error. Syntax error in parameters or arguments.
502	• SMTP server error. The command is not implemented.
503	• SMTP server error. Bad sequence of commands.
504	• SMTP server error. The command parameter is not implemented.
521	• SMTP server error. The server does not receive E-mail messages.
530	• SMTP server error. The access is rejected.
534	• SMTP server error. The authentication mechanism is too weak.
535	• SMTP server error. Authentication error.
538	• SMTP server error. The requested authentication mechanism requires encryption.
550	• SMTP server error. The requested action is not executed.

Code	Description
551	• SMTP server error. The user is not connected locally.
552	• SMTP server error. The requested E-mail action is cancelled.
553	• SMTP server error. The requested action is not accepted.
554	• An SMTP server error, or an internal error when sending data. The transaction failed.
555	• SMTP server error. MAIL/RCPT parameter error.
599	• SMTP server error. An unsupported SMTP error code of 500s is received from the SMTP server.
2236	• The certificate has expired, or the validity period has not yet started.
2238	• The CN field of the certificate does not match the server address.
2239	• The certificate does not have the expected usage.
2240	• The certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
2241	• The certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the certificate is invalid.
2263	• Failed to initialize the certificate verification.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.
3000	• An unexpected error occurred.
3001	• An unexpected error occurred within the library being used.
3002	• An invalid channel is specified.
3003	• SMTP server address is invalid.
3004	• Parameter error (MIMEBodyHeader).
3005	• Parameter error (DisplayName).
3006	• Parameter error (character set).
3007	• Parameter error (From address).
3008	• Parameter error (To address).
3009	• Parameter error (CC address).
3010	• Parameter error (BCC address).
3011	• Parameter error (pEmailSet is NULL).
3012	• Parameter error (destination certificate is NULL).
3013	• Parameter error (E-mail body).
3014	• The HDD is disabled.
3015	• The S/MIME function is disabled.
3016	• The device certificate cannot be used in S/MIME (e.g. self-signed certificate error, the private key type is not RSA).
3018	• An invalid encryption algorithm is specified.
3019	• An invalid signature algorithm is specified.
3020	• The E-mail address included in the destination certificate does not match the destination address (To/Cc/Bcc).
3021	• The E-mail address included in the certificate does not match the sender (From) address.
3022	• Format error of the certificate.
3023	• Parameter error (Disposition-Notification-To).
3024	• Message syntax error of the receiver side.
3025	• The SMTP server does not support the STARTTLS command.
3026	• PKI card access error.

7.8 WebDAV transmission

Code	Description
22	• The format of the URL of the target resource is invalid. • Parameter error.
27	• Attempted to send data that exceeds the maximum transferrable size for transfer coding.
42	• The specified protocol is unavailable.
52	• The process is cancelled by a device reset.
55	• A buffer shortage occurred.
56	• The connection has already been established.

Code	Description
57	• The connection to the WebDAV server failed (including connection time out).
62	• The device is not connected to the network.
70	• The network connection is busy.
72	• The connection has been interrupted with the condition that is insufficient to the specified size.
401	• Authentication error.
407	• Proxy authentication error.
1001	• The server does not support WebDAV. • Unable to upload data to the server.
1002	• The intermediate resource is not a collection (directory) (e.g. the specified folder does not exist).
1003	• The target resource is a collection (directory).
1011	• Although "https" is specified for the resource URL, it is unavailable because the SSL library is not included for the modularity.
1012	• Although "https" is specified for the resource URL, the connection is interrupted because the WebDAV server certificate has expired.
1013	• The CONNECT method is issued to the proxy server to establish an SSL connection via a proxy, but it is rejected.
1017	• A communication error occurred while sending a request.
1018	• A communication error occurred while receiving a response.
1027	• nContentLength exceeds the maximum transferable size.
1030	• Although use of a proxy has been specified, the proxy setting information is unavailable.
1031	• The connection to the proxy server failed (including connection time out).
1098	• Failed in chunk TX to SharePoint Server.
1099	• Other internal error occurred (e.g. memory shortage).
2236	• The certificate has expired, or the validity period has not yet started.
2238	• The CN field of the certificate does not match the server address.
2239	• The certificate does not have the expected usage.
2240	• The certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
2241	• The certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the certificate is invalid.
2263	• Failed to initialize the certificate verification.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.

7.9 SMB browsing

Code	Description
32	• The connection has been interrupted.
42	• The specified protocol is unavailable.
57	• Failed to connect to the server.
62	• The device is not connected to the network. • The internal channel detected an error immediately before establishing communication.
67	• The host is shut down.
4096	• The group name/host name is not specified. • The specified group name/host name does not exist on the network.
4097	• The user name is not specified. • Unable to log in with the specified user name and password. • Failed to log in due to an SMB protocol error.
4098	• Administrative shares do not exist. • The shared resource name is not specified. • The shared resource does not exist.
4099	• The user name is not specified. • Unable to log in with the specified user name and password. • Failed to log in due to an SMB protocol error.
4102	• The specified media to be written is not formatted. • The file system of the specified media to be written is faulty.
4105	• Other errors to which an error code is not assigned.
4352	• The browser machine (master browser/backup browser) is not found.

Code	Description
4353	• Unable to log in to the browser machine (master browser/backup browser).
4354	• The sub folder does not exist.
4355	• The request is not accepted due to an invalid call sequence etc.
4368	• The number of groups is too large.
4369	• The number of host PCs is too large.
4370	• The number of shared resources is too large.
10000	• Failed in authentication using a PKI card.
12236	• The certificate has expired, or the validity period has not yet started.
12239	• The certificate does not have the expected usage.
12240	• The certificate is not trusted. To trust the certificate, the certificate must be registered to the system.
12241	• The certificate has expired.
12242	• The CA server rejected the connection.
12243	• The connection to the server that checks for expiration of the certificate has timed out.
12244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
12263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
12264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
12266	• Internal error of the certificate verification.
12267	• The device certificate does not exist.
12268	• No certificate is sent from the server.

7.10 User authentication

Code	Description
1	• Invalid parameter (e.g. the number of characters exceeds the limit, blank). • The authentication function setting is disabled.
2	• Failed to resolve the name using the DNS server.
3	• Unable to find the authentication server.
4	• Failed to authenticate.
5	• Failed to allocate memory. • An unexpected error occurred (which does not occur under normal usage conditions).
6	• An authentication request is received while an internal task of the user authentication client is being performed.
7	• The connection was interrupted while the user authentication was being performed.
10000	• Failed in authentication using a PKI card.
12236	• The certificate has expired, or the validity period has not yet started.
12239	• The certificate does not have the expected usage.
12240	• The certificate is not trusted. To trust the certificate, the certificate must be registered to the system.
12241	• The certificate has expired.
12242	• The CA server rejected the connection.
12243	• The connection to the server that checks for expiration of the certificate has timed out.
12244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
12261	• The format of the certificate is invalid.
12263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
12264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
12266	• Internal error of the certificate verification.

7.11 WebDAV client

Code	Description
2	• The ID of the client that is not opened is specified.
3	• The reception has timed out.
4	• A reception error occurred. • An invalid request URL is specified.
5	• Content-Length or the received data size exceeds the maximum transferable size. • The size of the message body is too large.
6	• The process is cancelled by a device reset. • The size of the message body exceeds the maximum transferable size.
7	• An internal error occurred. • The process is cancelled by an internal reset.

Code	Description
8	• Failed to connect to the WebDAV server.
9	• An error occurred while sending data to the WebDAV server.
10	• A timeout occurred while sending data to the WebDAV server.
11	• Failed to connect to the proxy server.
12	• The proxy server rejected the connection request.
13	• Although use of a proxy has been specified, the proxy setting in-formation is unavailable.
14	• Failed to authenticate the proxy server.
15	• Other error was returned from the proxy server.
16	• An internal error occurred.
17	• The process is cancelled because MIO_REQBODY_ERROR is specified by the device application.
2236	• The certificate has expired, or the validity period has not yet started.
2238	• The CN field of the certificate does not match the server address.
2239	• The certificate does not have the expected usage.
2240	• The certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
2241	• The certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the certificate is invalid.
2263	• Failed to initialize the certificate verification.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.

7.12 WS scan

Code	Description
1	• The specified client is not registered.
2	• Parameter is invalid.
3	• The Web service or WS scan function is disabled.
4	• The device is not connected to the network.
5	• Waiting for connection from CP.
6	• The certificate of the destination computer is not valid when the validity period of a certificate is checked.
22	• Invalid argument.
42	• The specified protocol is unavailable.
52	• The connection aborted by the network.
53	• The connection has been interrupted.
55	• A buffer shortage occurred.
57	• The socket is not connected.
60	• The operation has timed out.
70	• The operation is expected to be blocked.
72	• The RetrievalImage waiting period has timed out.
2236	• The certificate has expired, or the validity period has not yet started.
2238	• The CN field of the certificate does not match the server address.
2239	• The certificate does not have the expected usage.
2240	• The certificate is not trusted. • To trust the certificate, the certificate must be registered to the system.
2241	• The certificate has expired.
2242	• The CA server rejected the connection.
2243	• The connection to the server that checks for expiration of the certificate has timed out.
2244	• Unable to check for expiration because the CRL size exceeds the maximum capacity that can be retained (1MB).
2261	• The format of the certificate is invalid.
2263	• Although the environment is configured to use the HDD, it is unable to perform verification because the HDD path has not been specified.
2264	• Unable to perform verification because there are too many certificates to be verified (the maximum number of certificates that can be verified at a time is 20).
2265	• Parameter of the certificate verification is invalid.

Code	Description
2266	• Internal error of the certificate verification.
2267	• The device certificate does not exist.
2268	• No certificate is sent from the server.

8. FAX TROUBLE CODE

The error in the transmission/reception system

- The error in the Txx/Rxx system may be caused under the effect of line noise, etc. even in usual operating condition.
- If the error arises often, output the activity report, fax setting list, protocol trace list, parameter list, address book list, group address list and program list and obtain detailed information on the error status, conditions which may cause the error, etc. from the user and contact the support center.

8.1 B0-**

Code No.	Category	Contents of error	How to correct
B0-01	FAX board error	FAX board error 1 (FAX ROM check sum error)	• Pull out and insert the connector of FAX board to check its installation. • If the trouble is not yet corrected, hardware of the FAX board may be defective. Replace the FAX board in such a case.
B0-02		FAX board error 2 (DPRAM check error)	
B0-03		FAX board error 3 (FAX initialization NG)	
B0-51		FAX board installation error (Line 1).	• Pull out and insert the connector of FAX board to check its installation. • If the trouble is not yet corrected, check if the fax (main) is set to [Unset] on the [System 2] -> [Option board Status] screen in the service mode. • If it is set to [Unset], set to [Set].
B0-52		FAX board installation error (Line 2).	• Pull out and insert the connector of FAX board to check its installation. • If the trouble is not yet corrected, check if the fax (sub) is set to [Unset] on the [System 2] -> [Option board Status] screen in the service mode. • If it is set to [Unset], set to [Set].

8.2 B1-1*

Code No.	Category	Contents of error	How to correct
B1-10	FAX driver error	Instance generation error or observer registration error	Turn OFF/ON the main power switch.
B1-11		Configuration space initialization NG	
B1-12		Semaphore acquisition, release error	
B1-13		Sequence error among main body tasks	
B1-14		Message queue control error	Pull out and insert the connector of FAX board to check its installation.
B1-15		Main body - sequence error among FAX boards	
B1-16		FAX board nonresponse (Nonresponse after initialization)	
B1-17		ACK waiting timeout error	
B1-18		Receiving undefined frame	
B1-19		DMA transfer error	

8.3 B1-2*

Code No.	Category	Contents of error	How to correct
B1-20	JC	Soft error (FAX board side)	Turn OFF/ON the main power switch.
B1-22		Device error (GA LOCAL SRAM)	• Turn OFF/ON the main power switch. • If the trouble is not yet corrected, hardware of the FAX board may be defective. Replace the FAX board in such a case.
B1-23		Device error (DRAM)	
B1-25		Device error (GA)	
B1-26		Timeout error due to nonresponse from codec control during suspension process	Turn OFF/ON the main power switch.
B1-27		Timeout error due to nonresponse from communication control during suspension process	
B1-28		Timeout error due to nonresponse from LINE control during suspension process	

8.4 B1-3*

Code No.	Category	Contents of error	How to correct
B1-30	Driver error (FAX board side)	Driver soft error	Turn OFF/ON the main power switch.
B1-31		Reception frame length error from main	
B1-32		Reception frame header error from main	
B1-33		232C i/f sequence error	
B1-34		DPRAM i/f sequence error	

Code No.	Category	Contents of error	How to correct
B1-35		DPRAM CTL/STS register error	
B1-36		ACK waiting timeout	
B1-37		DPRAM RESET reception	

8.5 B1-4*

Code No.	Category	Contents of error	How to correct
B1-40	Soft error (FAX board side)	MSG I/F error with job control	Turn OFF/ON the main power switch.
B1-41	Soft error	I/F error with driver	
B1-42	I/F error with main	Undefined command reception	
B1-43		Command frame length error	
B1-44		Command parameter length error	
B1-45		Undefined parameter	
B1-46		Command/response sequence error	

8.6 B1-5*

Code No.	Category	Contents of error	How to correct
B1-50	Line control	External class instance acquisition error	Turn OFF/ON the main power switch.
B1-51		Job start error (starting job parameter error/child job generation error)	
B1-52		Doc access error (report buf access error)	
B1-53		Response wait timeout from external task	
B1-54		Internal que table control error (create/enque/deque)	

8.7 B1-6*

Code No.	Category	Contents of error	How to correct
B1-60	1 destination control	Instance generation error	Turn OFF/ON the main power switch.
B1-61		Timeout error	
B1-62		Interface error	
B1-63		Message que control error	
B1-64		Semaphore acquisition release error	
B1-65		Observer registration error	
B1-66		Reception resource check error	
B1-67		Deployment error of sending image information	
B1-68		Serialization error of receiving image	
B1-69		Access error to quick memory data	

8.8 B1-7*

Code No.	Category	Contents of error	How to correct
B1-70	Page control	Internal que table control error (create/enque/deque)	Turn OFF/ON the main power switch.
B1-71		Instance generation error	
B1-72		Timeout error	
B1-73		Interface error	
B1-74		Semaphore acquisition release error	
B1-75		Observer registration error	
B1-76		Unable to secure TTI domain	
B1-77		Error return from TTI rasterizer	
B1-78		Receiving job generation error	

8.9 B1-8*

Code No.	Category	Contents of error	How to correct
B1-80	Page control	Access error to quick sending memory data	Turn OFF/ON the main power switch.

Code No.	Category	Contents of error	How to correct
B1-81		BlockBuf acquisition error	
B1-82		Sending block image error (Req, restore)	
B1-83		Receiving block image error (Req, store)	
B1-84		Storage error of receiving image information	
B1-85		Receiving data size logic error (Receiving data are not multiples of dotline)	
B1-86		ImageBuf acquisition (alloc) error	
B1-87		Error return from compressor	
B1-88		BandBuf control error (newInstance/get/free)	

8.10 B1-9*

Code No.	Category	Contents of error	How to correct
B1-90	USB	USB IF error (OS notifies an error during configuration setting after recovery from the sleep or attach.)	Turn OFF the main power switch, then check the connection of USB, turn ON the main power switch.
B1-91		USB IF error (EndPoint1: Bulk Out (command, transmitted image data)) (error retry 1 min. timeout)	
B1-92		USB IF error (EndPoint2: Bulk In (response, received image data)) (error retry 5 sec. timeout)	
B1-93		USB IF error (EndPoint3: Interrupt In (fax board status)) (error retry 1 min. timeout)	
B1-94		USB IF error (EndPoint4: Bulk Out (main body status)) (error retry 3 sec. timeout)	
B1-95		USB IF error (Attach not detected for 1 min. after recovery from sleep)	
B1-96		USB IF error (Detach not detected for 1 min. after recovery from sleep)	

8.11 T0*

Code No.	Category	Contents of error	How to correct
T00	Sending	T1 timeout. no response obtained from the machine on the other end of the line. (35 second)	Check that the address number is correct.
T01		T1 over after the mode has been changed (35 seconds)	-
T02		DCN reception in DIS waiting	The remote station may not receive the data due to paper shortage, full memory, etc.
T03		Unexpected command reception in DIS waiting	-
T04	Not used		
T05	Sending	FIF not matching with the remote station (remote station without the function).	-
T06		DCN reception in CFR/FTT waiting	-
T07	Not used		
T08	Sending	Training failure at 2400 bps	The line may be in trouble. Check the line noise.
T09		No response to DCS	The line may be disabled because the user on the remote station disconnected it.

8.12 T1*

Code No.	Category	Contents of error	How to correct
T10	Not used		
T11	Sending	DCN reception while waiting for post message responses	The remote station may not receive the data due to paper shortage, full memory, etc.
T12		Unexpected command reception while waiting for post message responses	-
T13		No response while waiting for post message responses	The remote station may not receive the data due to paper shortage, full memory, etc.
T14	Not used		
T15	Not used		

Code No.	Category	Contents of error	How to correct
T16	Not used		
T17	Not used		
T18	Sending	No reception ability in a remote station	The remote station may not receive the data due to paper shortage, full memory, etc.
T19	Not used		

8.13 T2*

Code No.	Category	Contents of error	How to correct
T20	Not used		
T21	Not used		
T22	Not used		
T23	Not used		
T24	Not used		
T25	Not used		
T26	Not used		
T27	Not used		
T28	ECM sending	Timeout by RR/RNR (60 seconds)	-
T29	Not used		

8.14 T3*

Code No.	Category	Contents of error	How to correct
T30	Not used		
T31	Not used		
T32	ECM sending	Fall back over by CTC	The line may be in trouble. Check the line noise.
T33	Not used		
T34	Not used		
T35	ECM transmission	No responses to RR	-
T36		DCN reception to RR	-
T37	Not used		
T38	F code polling TX	SID is received when SEP is received	-
T39	Not used		

8.15 T4*

Code No.	Category	Contents of error	How to correct
T40	Calling	Software error at calling	-
T41	Not used		
T42	Sending	RTN/PIN reception	-
T43		Three continuous CRP signal reception	-
T44		Time error between frames at transmission	-
T45	Not used		
T46	Not used		
T47	Not used		
T48	Check Destination	Line disconnected due to no match as a result of CSI check.	Telephone number may not be set on the remote station. Check the CSI signal of the remote station in the protocol trace list.
T49	Not used		

8.16 T5*

Code No.	Category	Contents of error	How to correct
T50	FAX-CSRC	Host terminal ID inconsistency	-
T51	Not used		
T52	Not used		
T53	Not used		
T54	Not used		
T55	Not used		
T56	Not used		
T57	Not used		

Code No.	Category	Contents of error	How to correct
T58	Polling reception	Calling by polling reception, but a remote station does not have polling transmission documents	Polling original may not be set on the remote station.
T59	Not used		

8.17 T6*

Code No.	Category	Contents of error	How to correct
T60	Polling transmission	Received the polling transmission request (DTC), but there are no polling transmission documents	Polling original may not be set on your machine. Polling TX is enabled only when the polling transmission original is registered.
T61	F-code polling transmission	Unsatisfactory conditions for receive polling TX request.	Bulletin board original may not be set. Bulletin board TX is enabled only when the bulletin board transmission original is registered.
T62	F-code polling transmission	Box number specified by SEP is not valid.	Bulletin board box number from the remote station may be incorrect.
T63	Not used		
T64	Not used		
T65	Not used		
T66	Not used		
T67	Not used

T69	Not used		

8.18 T7*

Code No.	Category	Contents of error	How to correct
T70	Not used		
T71	Not used		
T72	Not used		
T73	Transmission	Modem response waiting T.0 (60 seconds)	-
T74	V34	No changes in the V34 modem status	-
T75		V34 signal sending error	-
T76		CS2 is not turned to ON	-
T77	Not used		
T78	Transmission	Codec control software error	-
T79		Job control software error at transmission	-

8.19 T8*

Code No.	Category	Contents of error	How to correct
T80	Call control	LOOP current detection NG when CML is turned ON at calling	- The line may not be connected. - Check the line connection status.
T81		Dial Tone detection NG when CML is turned ON at calling	
T82		Answer tone (CED/DIS) waiting timeout after dialing at calling	-
T83		Busy tone detection at calling	-
T84		Line control dial error	-
T85		Short disconnection was detected after LOOP current detection at calling	-
T86		Dial tone continues after dialing	-
T87	Not used		
T88	Not used		
T89	Control unit	When the control unit is connected, a communication error is caused due to capacity shortage and communication is finished.	-

8.20 T9*

Code No.	Category	Contents of error	How to correct
T90	Not used		
T91	Not used		

Code No.	Category	Contents of error	How to correct
T92	Not used		
T93	Not used		
T94	Not used		
T95	Call control	When called, short disconnection of LOOP current was detected during a call	-
T96	Not used		
T97	Transfer	Transmission request was received with no FAX board installed. *	-
T98		Transmission request of images that cannot be transmitted were received. (Color images) *	-
T99	Call control	Remote stations number is deleted while waiting for abbreviated or one-touch re-dialing (redial / transmission / polling reception) *	-

- *: The corresponding error code is not displayed on the control panel even if the error occurs.

8.21 R0*

Code No.	Category	Contents of error	How to correct
R00	Reception	DCS was not received within 35 seconds (T1 over)	The dialed telephone number may be incorrect.
R01		T1 timeout after EOM sending	-
R02		DCN reception in DCS waiting	The line may be disabled because the user on the remote station disconnected it.
R03		Unexpected command reception in DCS waiting	-
R04		FIF error of DCS	-
R05	Not used		
R06	Not used		
R07	Reception	Image information does not come in image information waiting	The line may be disabled because the user on the remote station disconnected it.
R08		CD OFF while receiving image information	
R09		DCN reception in post message waiting	

8.22 R1*

Code No.	Category	Contents of error	How to correct
R10	Reception	Unexpected command reception in post message waiting	-
R11		Command was not received which waiting for post message	The line may be disabled because the user on the remote station disconnected it.
R12		Timeout during EOL-EOL	-
R13	Not used		
R14	Not used		
R15	Not used		
R16	Not used		
R17	Not used		
R18	Reception	Resource check error (line disconnected due to ongoing communication)	Space in the hard disk may become short. Unnecessary data should be deleted to secure the space in the hard disk.
R19	Not used		

8.23 R2*

Code No.	Category	Contents of error	How to correct
R20	Reception	Line disconnection by receive reject function	Call was received from a user who is in the register of addresses to be rejected.
R21	CUG reception	No match of password in the closed network RX setting	Check the password.
R22		No password received in the closed network RX setting	Check the setting of closed network RX.
R23	Not used		
R24	ECM reception	RR-RNR repeats for 2 minutes	-

Code No.	Category	Contents of error	How to correct
R25		Command was not received while waiting for responses to RNR	-
R26		Unexpected command was received while waiting for responses to RNR	-
R27		DCN reception while waiting for responses to RNR	-
R28		The counter is abnormal of the post messages received (PC/BC).	-
R29		Timeout (35 seconds) between frames occurred	-

8.24 R3*

Code No.	Category	Contents of error	How to correct
R30	Not used		
R31	Not used		
R32	Reception	Line disconnected because there is no appropriate confidential user box while automatic user box generation is inhibited.	Confidential box No. received from the remote station may be incorrect.
R33		DIS reception to DTC (German specifications only)	-
R34	F code confidential reception	PWD was received when SUB was received.	-
R35	Not used		
R36	Not used		
R37	V34	CS2 is not turned to ON.	-
R38		No change in V34 modem and status	-
R39	Not used		

8.25 R4*

Code No.	Category	Contents of error	How to correct
R40	When called	Soft error when called	-
R41	Not used		
R42	Not used		
R43	Not used		
R44	Not used		
R45	Reception	Phase C timeout (NonECM reception only)	-
R46	Not used		
R47	Not used		
R48	Not used		
R49	Reception	DCN reception while waiting for image information	The line may be disabled because the user on the remote station disconnected it.

8.26 R5*

Code No.	Category	Contents of error	How to correct
R50	Reception	No. of error lines exceeds.	• The line may be in trouble. • Check the line noise.
R51	Not used		
R52	Not used		
R53	Not used		
R54	Not used		
R55	Not used		
R56	Not used		
R57	Not used		
R58	Not used		
R59	Not used		

8.27 R6*

Code No.	Category	Contents of error	How to correct
R60	Reception	Reception image error (RTN/PIN sending)	- The line may be in trouble. - Check the line noise.
R61	Not used		
R62	Not used		
R63	Reception	Three continuous CRP signal reception	-
R64	Not used		
R65	Not used		
R66	SEP polling	SEP polling transmission request was received without SEP polling transmission ability	-
R67	SUB reception	SUB was directed without SUB reception ability	-
R68	Not used		
R69	ECM reception	Communications are cut when EOR is received.	- The line may be in trouble. - Check the line noise.

8.28 R7*

Code No.	Category	Contents of error	How to correct
R70	ECM reception	Decode error occurred in ECM	-
R71	Reception	RTC detection error (No. of EOL is smaller than FP.)	-
R72		Long original larger than the allowable value is received.	Longer original than specified is received from the remote station.
R73		Modem response waiting T.0 (60 seconds)	-
R74		Reception byte size error	-
R75	V34	V34 signal sending error	-
R76		Unexpected command was received in V34 mode phase C reception	-
R77	Reception	Codec control middle ware error	-
R78		Codec control software error	-
R79		Job control soft error during reception	-

8.29 R8*

Code No.	Category	Contents of error	How to correct
R80	Not used		
R81	Not used		
R82	Not used		
R83	Not used		
R84	Not used		
R85	-	R-ISW request received when a machine is running in case of either reserved job exists, image exists in memory, or jam happened.	-
R86	Not used		
R87	Not used		
R88	Not used		
R89	Not used		

8.30 R9*

Code No.	Category	Contents of error	How to correct
R90	Not used		
R91	Not used		
R92	Turnaround	When the turnaround function is not provided, the line is disconnected if a turnaround order (DTC) is received.	-
R93	F-code reception	Unsatisfactory conditions for confidential RX request	Check the Confidential password.

Code No.	Category	Contents of error	How to correct
R94		Unsatisfactory conditions for relay request	Check the Relay password.
R95		Unsatisfactory conditions for forwarding request	-
R96		Confidential box number specified by SUB is not valid.	Confidential box No. received from the remote station may be incorrect.
R97		Unsatisfactory conditions for PC-FAX RX request (Function, PW unmatching)	-
R98	Not used		
R99	Others	Reception command was received from the whole control side before reception signals were detected.	-

8.31 Others

Code No.	Category	Contents of error	How to correct
-	Others	Despite the FAX board is installed in line 2, FAX (circuit2) of [Service Mode] -> [System 2] -> [Option Board Status] is "Unset", if it is set to When the main body is in the sleep mode, line 1 can not receive faxes.	- When using the line 2, make sure that the FAX (system) for line 2 is set up correctly. - When not using the line 2, remove all wirings of the FAX board for line 2.
-		When the main body recovers from the sleep mode while receiving a fax, the ring tone is generated more than the set number of times. (2 to 3 times)	This error is avoidable with any one of the following settings. - Set [Administrator Settings] -> [System Settings] -> [Power Supply/Power Save Settings] -> [Power Consumption in Sleep Mode] to "Disabled". - Set [Administrator Settings] -> [Fax Settings] -> [Line Parameter Setting] -> [Number of RX Call Rings] to "0 x".

9. DIAGNOSTIC CODES

9.1 Outline

- The diagnostic code is a 22-digit hexadecimal code indicating a communication conditions and status.
- The diagnostic code is printed on the activity report.
- The purpose of the diagnostic code is to obtain detailed information of communication results and conditions so as to analyze communication troubles.

9.2 Explanation

9.2.1 The diagnostic code

XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX	XX
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)	(17)	(18)	(19)	(20)	(21)	(22)

9.2.2 Information of communication results and conditions

Item	Description							
	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0
(1) Types of call out / called	F network (Japan)	PSTN	Dial-in (Japan)	Telephone	Group	One-touch dialing	Abbreviated dialing	Key pad dialing
(2) Communication mode	Sending	Error page resending	Forwarding transmission	Polled transmission	Receiving	Recovery transmission	Called turnaround	Polling RX
(3) Applied function specification	Mixed size transmission All pages/cover	Frame erasure transmission	Book mode transmission	2in1 transmission	Original size appointing TX	Upside down	Special scanning non standard/Z-fold/Long	Line used line 1 / 2
(4) One-time communication parameter specification	Timer TX	(not used)	CSRC	PC-Fax transmission (RX/V2)	V.34 appoint transmission	F-code transmission	ECM specification TX	International mode transmission
(5) Box Type/No. (9th digit)	Relay	Confidential	Manual transmission	Bulletin	BOX No. 9th digit [BCD] (Top)			
(6) BOX No. (8th & 7th digits)	BOX No. 8th digit [BCD]				BOX No. 7th digit [BCD]			
(7) BOX No. (6th & 5th digits)	BOX No. 6th digit [BCD]				BOX No. 5th digit [BCD]			
(8) H_RES specification 1 (HR)	400 dpi	300 dpi	200 dpi	(not used)	16 pels/mm	not used	8 pels/mm	(not used)
(9) V_RES specification 1	400 dpi	300 dpi	200 dpi	100 dpi	15.4 l/mm	(not used)	7.7 l/mm	3.85 l/mm
(10) Coding specification/H_RES specification (600 dpi)	600 dpi (H)	(not used)	(JPEG)	JBIG	MMR	MR	MH	THRU
(11) Original length specification/V_RES specification (600 dpi)	600 dpi (V)	(not used)	(Legal)	(Letter)	A3	B4	A4	(not used)
(12) Original length specification	(not used)	No limits	(Legal)	(Letter)	(not used)	B4	A4	(not used)
(13) Speed specification 0	(not used)	(not used)	(not used)	V.29-96	V.29-72	(not used)	V.27-48	V.27-24

10. NETWORK FAX ERROR CODE

- When there occurs any trouble with this machine, the error screen is displayed. And on this error screen, the following error message is shown. Take a necessary step referring to the table given below.

10.1 Error code list of the transmission system

Code	Classification	Details of the error	Redial	Corrective action
N10	Connection error	Server connection error	No	- Check the condition of the other party machine. - Check the network setting of local machine. - Ask the network administrator if the network is operating normally.
N11		Connection declined by the other party machine	No	- Reception is declined. - Check the condition of the other party machine.
N12		Disconnection of the line	Yes	Check to see if there occurs any abnormal condition with the network, such as the disconnection of a cable.
N13		No response received from the network	No	- Check the condition of the other party machine. - Check the network setting of local machine. - Ask the network administrator if the network is operating normally.
N14		Mail delivery error	No	Check the condition of the other party machine. Send it again after waiting for a while.
N15	Remote reset	Connection reset by the other party machine	Yes	Check the condition of the other party machine. Send it again after waiting for a while.
N16	Remote busy	Remote machine is busy	Yes	Check the condition of the other party machine. Send it again after waiting for a while.
N17	LAN access	Communication time out	Yes	Check the condition of the other party machine. Send it again after waiting for a while.
N18	Network	Network	No	- Check the each settings. - Check to see if there occurs any abnormal condition with the network, such as the disconnection of a cable. - After turning off and on the main power switch, send it again.
N20	Memory error	Memory overflow	No	- The memory is full. - Check to see if there is any other job being handled. - With the number of transmission sheets reduced or the resolution for read reduced, send it again.
N21	HDD error	HDD error	No	- HDD is full. - Delete unnecessary files. - With the number of transmission sheets reduced or the resolution for read reduced, send it again.
N22	Conversion error	Conversion error	No	After turning off and on the main power switch, send it again.
N25	Memory overflow	Memory overflow	No	- The memory is full. - Check to see if there is any other job being handled. - With the number of transmission sheets reduced or the resolution for read reduced, send it again.
N35	Forward TX	A request for transmission has been received with the NetFAX with the Function Settings OFF. (A request for transfer of the IP address FAX while the IP Address FAX function is being OFF in the service mode.)	No	-
N36		A request has been received for transmission of images that cannot be sent.	No	-

10.2 Error code list of the reception system

Code	Classification	Details of the error	Corrective action
N50	SMTP reception	SMTP reception error	When the SMTP reception does not start in 60 minutes after connection for an incoming call, this error may be resulted. Ask the sender to send it again.
N51	Decode	In excess of the length specified for reception	Ask the sender to send it again after the length of the text being reduced.
N52		In excess of the number of pages specified for reception	Ask the sender to send it again after the number of text sheets being reduced.
N53		File error	Ask the sender to send it again in a correct file format as shown below. • Internet Fax: TIFF • IP Address Fax: PDF or TIFF
N54		Decode error	The data has been received in an incorrect format. Ask the sender to send it again in a correct format.

11. Open API RELATED TROUBLE

11.1 Outline

- Through the Certification Management System provided by OpenAPI, if error is found in communication between the machine and interacting applications developed by company other than KMBT, an error message is displayed.

11.2 Types of Trouble

- The Certification Management System provided by OpenAPI certifies and manages communication between MFP and non-KMBT applications that run on the computer connected to the machine. If trouble is detected, the trouble message is displayed on the control panel of the machine or the screen of the computer on which the applications run. Trouble messages displayed on the control panel of the machine and actions are described below.

NOTE

- A message that appears on the computer screen may be different depending on the application being used for communication. The corresponding action may be different, so contact the application vendor for an appropriate action.

<Examples of trouble messages>

11.3 Solution

- The below describes the OpenAPI certification related trouble messages displayed on the control panel of the machine and actions, dividing them by possible situation.

11.3.1 When using an application

No.	Symptom and message	Action
1	When starting an application, the following message is displayed: Application has expired. Failed to start the registered application.	1. In [Administrator Settings] -> [System Settings] -> [Date/Time Settings] , check that the date and time that is set is same as the actual date and time. If a wrong date and time is set, correct it. 2. Contact the application vendor and obtain a new Solution Key (or the application software itself). Using it, perform the steps below. 1) Delete the application. 2) Using the Solution Key (or the application software itself), register the application again.
	When starting the machine, the following message is displayed: The Enhanced Server Authentication application has expired. Change the User Authentication method to one other than Enhanced Server Authentication.	
2	When starting an application, the following message is displayed: Failed to start the registered application. Please contact your service representative.	In [System1] -> [Marketing Area] , change the marketing area of the machine to the one that was selected when the application was registered.
	When starting the machine, the following message is displayed: The enhanced server authentication application cannot be used. Please contact your service representative.	

3	In the screen saver application, after a time set, the screen saver does not work.	1. In [Administrator Settings] -> [System Settings] -> [Date/Time Settings], check that the date and time that is set is same as the actual date and time. If a wrong date and time is set, correct it. 2. Contact the application vendor and obtain a new Solution Key (or the application software itself). Using it, perform the steps below. 1) Delete the application. 2) Using the Solution Key (or the application software itself), register the application again. 3. In [System1] -> [Marketing Area], change the marketing area of the machine to the one that was selected when the application was registered.
---	--	--

11.3.2 After rewriting the firmware of the machine

No.	Symptom and message	Action
1	When starting an application, the following message is displayed: Failed to start the registered application. Please contact your service representative.	• After deleting the application in question, register the application again.
	When starting the machine, the following message is displayed: The enhanced server authentication application cannot be used. Please contact your service representative.	
	In the screen saver application, after a time set, the screen saver does not work.	

12. TROUBLES THAT DO NOT DISPLAY THE TROUBLE CODE

12.1 Machine is not energized at all (DCPU operation check)

12.1.1 Contents

Trouble type	Machine is not energized at all
Trouble code	-
Rank	-
Detection timing	-
Trouble isolation	-
Relevant electrical parts	• Main power switch (SW1) • Printer control board (PRCB) • DC power supply (DCPU)

12.1.2 Procedure

Step	Check item	Location of electrical components	Result	Action
1	Is a power voltage supplied across CN001- 1 and 2 on DCPU?	18-T	NO	Check the WIRING from the wall outlet to SW1 CN001.
2	Are the fuses on DCPU conducting?	-	NO	Replace DCPU.
3	Is DC24 V being output from CN007-1, 3 on DCPU?	22-R	NO	Replace DCPU.
4	Is DC5 V being input to CN006-5 to 7 on DCPU?	22-R	NO	Replace DCPU.

- [N.1. bizhub C554/C454](#)

12.2 Fusing heaters do not operate

12.2.1 Contents

Trouble type	Fusing heaters do not operate
Trouble code	-
Rank	-
Detection timing	-
Trouble isolation	-
Relevant electrical parts	• Main power switch (SW1) • Right door switch (SW3) • DC power supply (DCPU) • Printer control board (PRCB) • Fusing unit

12.2.2 Procedure

Step	Check item	Location of electrical components	Result	Action
1	Is the power source voltage applied across CN008-5 on DCPU? During this time, the right door should be closed.	21-R	NO	Check wiring from power outlet to SW1 to CN008 to SW3.
2	Is the power source voltage applied across PRCB CN5-6, 9?	27-E	YES	Replace the fusing unit. (bizhub C554/ bizhub C454)
			NO	Replace DCPU. Replace PRCB.

- [N.1. bizhub C554/C454](#)

12.3 Power is not supplied to DF

12.3.1 Procedure

Step	Check item	Location of electrical components	Result	Action
1	Is DC24 V being output from CN1DF-1 on DF-701/DF-624?	15-I	YES	Malfunction in DF-701.
2	Is DC24 V being output from CN004-1 on DCPU?	17-F	NO	Check wiring from DCPU to DF-701.
3	Is the fuse on DCPU conducting?	-	YES	Replace DCPU.
			NO	Malfunction in DF-701.

- [N.1. bizhub C554/C454](#)
- [N.2. DF-701](#)

12.4 Power is not supplied to option**12.4.1 PC-110/PC-210/PC-410****(1) Procedure**

Step	Check item	Location of electrical components	Result	Action
1	Is DC24 V being applied to CN65?	13-D	NO	Malfunction in cabinet.
2	Is DC24 V being output from CN28-1 on PRCB?	13-E	NO	Check wiring from DCPU to CN28 to cabinet.
3	Is the fuse on DCPU conducting?	-	YES	Replace DCPU.
			NO	Malfunction in cabinet.

- [N.1. bizhub C554/C454](#)
- [N.3.1 PC-110](#)
- [N.3.2 PC-210](#)
- [N.3.3 PC-410](#)

12.4.2 LU-204/301**(1) Procedure**

Step	Check item	Location of electrical components	Result	Action
1	Is DC24 V being applied to hookup connector CN425?	12 to 13-W	NO	Malfunction in LU-204/301
2	Is DC24 V being output from CN23 on PFTDB?	12 to 13-U	NO	Check wiring from PFTDB to CN23 to LU-204/301.
3	Is the fuse on DCPU conducting?	-	YES	Replace DCPU.
			NO	Malfunction in LU-204/301

- [N.3.4 LU-204](#)
- [N.3.5 LU-301](#)

12.4.3 FS-533/FS-534/FS-535**(1) Procedure**

Step	Check item	Location of electrical components	Result	Action
1	Are DC24 V being applied to CN1FN?	17-I	NO	Malfunction in finisher.
2	Are DC24 V being applied to CN004-5 on DCPU?	17-F	NO	Check wiring from DCPU to finisher.
3	Is the fuse on DCPU conducting?	-	YES	Replace DCPU.
			NO	Malfunction in finisher.

- [N.1. bizhub C554/C454](#)
- [N.3.7 FS-533](#)
- [N.3.8 FS-534](#)
- [N.3.10 FS-535](#)

13. OTHER TROUBLE

13.1 Firmware error warning

- While the enhanced security mode is enabled, if MFP is restarted by turning the main power switch OFF and ON or other operations, self-testing is performed internally. If the self-testing detects firmware error, this warning appears.

13.1.1 Action

1. Set Enhanced Security Mode to "OFF" in Administrator Settings and touch "OK."
2. Turn OFF the main power switch, wait for 10 sec. or more, and turn ON the main power switch.
3. Check that the warning screen is not displayed.
4. Rewrite the firmware.
5. Set the Enhanced Security Mode.

14. TROUBLESHOOTING OF i-Option

14.1 Structure of license management

- The functions available with i-Option can be activated by entering “License code” to the MFP.
- License code is issued and controlled by License Management System (LMS).
To prevent unauthorized use of the license code, each MFP is identified individually so that the license code cannot be activated unless it matches with the authorized MFP.

14.2 License management information

- Since license code needs to identify each MFP, it is issued using the serial number of MFP and “unique value” that is generated inside MFP.
 - The “unique value” is stored to the memory region on the MFP board and at the same time some parts of it are memorized by SSD board. The activated function cannot be used unless the both figures conform.
- Since these figures are out of target of [Memory Data Backup], when any trouble occurs at either nonvolatile memory, “License Management Error” is generated due to discordance of the figures.

14.3 Error message

14.3.1 License management error

- When abnormal value is detected in the license management information that is stored to the MFP board or SSD board, or some values are detected cleared, warning is issued to let the user know the abnormality.
- The abnormality is detected at the timing of start-up or restart due to any condition.
- When the abnormality is detected, the corresponding i-Option function cannot be used, other ordinal functions, however, such as copy, scanning, print or etc. can be used without interruption. (Error message is displayed on the Service Mode screen.)

(1) Example of error message

(2) Main reasons of trouble

- The following shows the possible trouble factors and their countermeasure.

Board replacement	Countermeasure
• When MFP board and SSD board are replaced with the new ones at the same time.	Install firmware, follow the setup procedure.
• When mounting the MFP board of the machine whose function(s) have already been activated and a new SSD board.	Install firmware, then restore the data using restore procedure.

15. IMAGE QUALITY PROBLEM

15.1 How to read element data

- As part of troubleshooting procedures, the numeric values set for "State Confirmation" available from "Service Mode" can be used to isolate the cause of the image problem.

15.1.1 Table number

State Confirmation					END
Table No.					
	Signal	Thick 1/1+	Thick 2/3/4	Black	
Vdc-C	- 371	371	371	371	
Vdc-M	- 401	401	401	401	
Vdc-Y	- 355	355	355	355	
Vdc-K	- 361	361	361	361	
Vg-C	- 470	461	475	476	
Vg-M	- 494	440	437	464	
Vg-Y	- 464	447	460	467	
Vg-K	- 450	450	446	440	

Vdc-C Vdc-M Vdc-Y Vdc-K	- Shows the developing bias value of toner when an image is produced. - Standard values: around 400 V (100 V to 800 V) - A correction is made to make the image lighter when the numeric value is greater. - A correction is made to make the image darker when the numeric value is smaller. - Relevant components: Developing unit, drum unit, high voltage unit (HV)
Vg-C Vg-M Vg-Y Vg-K	- Shows the grid voltage value of each color of toner when an image is produced. - Standard values: around 500 V (200 V to 1200 V) - A correction is made to make the image lighter when the numeric value is greater. - A correction is made to make the image darker when the numeric value is smaller. - Relevant components: Developing unit, drum unit, high voltage unit (HV)

15.1.2 Level history 1

State Confirmation

END

Level History 1

TCR-C	-	9.90 %	IDC1	-	3.18 V
TCR-M	-	10.00 %	IDC2	-	3.28 V
TCR-Y	-	9.99 %	Middle Heating Temperature	-	184 b
TCR-K	-	9.99 %	Medium Heating Temperature	-	168 b
			Heat Edge Temperature	-	154 b
			Main Heating Temperature	-	173 b

• TCR-C • TCR-M • TCR-Y • TCR-K	• Shows the T/C ratio (in 0.01 % increments). • Standard value: 6 to 8 % • Relevant components: TCR sensor
• IDC1 • IDC2	• Shows the IDC bare surface output value (in 0.01 V increments). • It should normally be around 3.0 V. • The output range is 0 V to 9.99 V. • Relevant components: IDC sensor, transfer belt unit
• Middle heat temperature • Medium Heating Temperature • Heat edge temperature • Main Heating Temperature	• Shows the temperature of the drum unit (in 1 °C increments). • Relevant components: Fusing unit

15.1.3 Level history 2

State Confirmation

END

Level History 2

IDC Sensor Adjust 1 -	73	ATVC-C	-	0
IDC Sensor Adjust 2 -	70	ATVC-M	-	0
		ATVC-Y	-	0
		ATVC-K	-	0
		ATVC-2nd	-	0

IDC Sensor Adjust 1 IDC Sensor Adjust 2	• Shows the IDC intensity adjustment value. • It should normally be around 70 and can range from 0 to 255. • The value becomes greater as the transfer belt unit has been used more. • Relevant components: IDC sensor, transfer belt unit
ATVC -C ATVC -M ATVC -Y ATVC -K ATVC -2nd	• Shows the latest ATVC level (which varies according to the paper type). • 10 µA to 100 µA (ATVC-C/-M/-Y/-K) • 300 V to 5000 V (ATVC-2nd) • Relevant components: Transfer belt unit, High voltage unit (HV), 2nd transfer roller

15.2 How to identify problematic part

- This chapter is divided into two parts: "Initial check items" and "Troubleshooting procedure by a particular image quality problem."

- When an image quality problem occurs, first go through the “Initial check items” and, if the cause is yet to be identified, go to “Troubleshooting procedure by a particular image quality problem.”

15.2.1 Initial check items

(1) Initial check items 1

- Check first to see if image data is properly transmitted between scanner and memory, and between memory and printer.

Action	Result	Next Step
Enter the Service Mode, select [State Confirmation] -> [Memory/ HDD Adj.] -> [Memory Bus Check], and select and carry out [Scanner->Memory] and [Memory->PRT] checks.	OK	Initial check items 2
NOTE For the bus check as the internal process between the scanner and the memory, there are two types, “scanner internal check” and “check for the scanner and the memory.” NG1 or NG2 is displayed depending on the type of NG detected.	NG	K.3.11.5 C6704 (action as instructed)

(2) Initial check items 2

- Let the machine produce a test print and determine whether the image problem is attributable to the scanner or printer system.

[1] Scanner system	[2] Printer system
[3] Document scan	[4] CCD board (CCDB)
[5] I/F cable (Only front side when DF is used)	[6] MFP board (MFPB)
[7] PH relay board (PHRYB)	[8] Print output
[9] DF-701	[10] CIS module (CIS)
[11] Dual scan image processing board (DSIPB)	[12] I/F cable (only rear side for DF scanning)

Evaluation procedure

Image problem	Action	Result	Cause	Next step
Lines, bands	From [Service Mode], select [Test Mode] -> [Halftone Pattern] -> [SINGLE] -> [HYPER] -> [Gradation] -> [C -> M -> Y -> K] -> [Density 64], and produce a test print. Is image problem evident?	YES	Printer	Initial check items 3
		NO	Scanner	K.15.3 Solution

(3) Initial check items 3

- If the printer is responsible for the image problem, let the machine produce a test print and determine whether the image problem occurs in a specific single color or four colors.

[1]	Mono color	[2]	4 colors	
Evaluation procedure				
Image problem	Action	Result	Cause	Next step
Lines, bands	From [Service Mode], select [Test Mode] -> [Halftone Pattern] -> [SINGLE] -> [HYPER] -> [Gradation] -> [C -> M -> Y -> K] -> [Density 64], and produce a test print. Is image problem evident in each of all four colors?	YES	Printer, 4 colors	K.15.4.13 Printer 4-color: white lines, white bands, colored lines and colored bands in sub scan direction
		NO	Printer, single color	K.15.4.1 Printer monochrome: white lines, white bands, colored lines and colored bands in sub scan direction

15.3 Solution (Scanner system)

Solution

NOTE

- Typical faulty image samples shown in the following are all copied or scanned with A3 setting.

15.3.1 Scanner system: White lines, White bands, colored lines and colored bands in sub scan direction

(1) Typical faulty images

[1]	White lines	[2]	White bands
[3]	Color lines	[4]	Color bands

(2) Troubleshooting procedure

(a) When the original glass is used

Step	Section	Check Item	Result	Action
1	Original	Original is damaged or dirty.	YES	Change original.
2	DF	Original pad is dirty.	YES	Clean.

Step	Section	Check Item	Result	Action
3	Original glass	Original glass is dirty.	YES	Wipe the surface clean with a soft cloth.
4	Shading sheet	Shading sheet is dirty.	YES	Wipe the surface clean with a soft cloth.
5	Mirror, lens, light guide, and reflectors	Mirror is dirty	YES	Clean.
		Lens is dirty	YES	Clean.
		Light guide is dirty	YES	Clean.
		Reflectors are dirty	YES	Clean.
6	Machine -> Scan Area -> Image Position: Centering (Service Mode)	The adjustment value for [Image Position: Centering] falls within the specified range.	NO	Readjust.
7		The white lines/bands or colored lines/bands are blurry.	YES	• Replace the LED exposure unit. • Replace the CCD board.

(b) When the DF is used

Step	Section	Check Item	Result	Action
1	Original	Original is damaged or dirty.	YES	Change original.
2	DF reading section	Glass is dirty.	YES	Clean.
3	DF scanning guide	DF scanning guide is damaged or dirty.	YES	Clean.
4	Shading sheet	Shading sheet is dirty.	YES	Wipe the surface clean with a soft cloth.
5	Mirror, lens, light guide, and reflectors	Mirror is dirty	YES	Clean.
		Lens is dirty	YES	Clean.
		Light guide is dirty	YES	Clean.
		Reflectors are dirty	YES	Clean.
6	ADF -> Original Stop Position (Service Mode)	The adjustment value for [Main Scanning] falls within the specified range.	NO	Readjust.
7	DF read position	The white lines/bands or colored lines/bands occurs when reading the original from ADF.	YES	Readjust.
8		The white lines/bands or colored lines/bands are blurry.	YES	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.2 Scanner system: white lines, white bands, colored lines and colored bands in main scan direction**(1) Typical faulty images**

[1]	White lines	[2]	White bands
[3]	Color lines	[4]	Color bands

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Original	Original is damaged or dirty.	YES	Change original.
2	DF	Original pad is dirty.	YES	Clean.
3	Original glass	Original glass is dirty.	YES	Wipe the surface clean with a soft cloth.
4	Machine -> Scan Area -> Image Position: Leading Edge (Service Mode)	The adjustment value for [Image Position: Leading Edge] falls within the specified range.	NO	Readjust.

Step	Section	Check Item	Result	Action
5		The problem has been eliminated through the checks of steps up to 4.	NO	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.3 Scanner system: color spots

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Original	Original is damaged or dirty.	YES	Change original.
2	DF	Original pad is dirty.	YES	Clean.
3	Original glass	Original glass is dirty.	YES	Wipe the surface clean with a soft cloth.
4		The problem has been eliminated through the checks of steps up to 3.	NO	• Replace the exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.4 Scanner system: fog

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Original	Original is damaged or dirty.	YES	Change original.
2	DF	Original pad is dirty.	YES	Clean.
3		DF does not lie flat.	YES	• Adjust the DF height. • Replace DF if it is deformed or hinges are broken.
4	Original glass	Original glass is dirty.	YES	Wipe the surface clean with a soft cloth.
5	Shading sheet	Shading sheet is dirty.	YES	Wipe the surface clean with a soft cloth.
6	Mirror, lens, light guide, and reflectors	Mirror is dirty	YES	Clean.
7		Lens is dirty	YES	Clean.
8		Light guide is dirty	YES	Clean.
9		Reflectors are dirty	YES	Clean.
10	Function 2 -> Density	The problem is eliminated when the image is produced in the manual exposure setting.	NO	Try another exposure level in manual.

Step	Section	Check Item	Result	Action
11		The problem has been eliminated through the checks of steps up to 10.	YES	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.5 Scanner system: blurred image, blotchy image

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Original	Original does not lie flat.	YES	Change original.
2	DF	DF does not lie flat.	YES	• Adjust the DF height. • Replace DF if it is deformed or hinges are broken.
3	Original glass	Original glass tilts.	YES	Position original glass correctly. Check original loading position.
4		The problem has been eliminated through the checks of steps up to 3.	YES	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.6 Scanner system: incorrect color image registration, sync shift (lines in main scan direction)

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Original	Original does not lie flat.	YES	Change original.
2	DF	DF does not lie flat.	YES	Replace DF if it is deformed or hinges are broken.
3	Scanner rails	Foreign matter on rails.	YES	Clean and apply lubricant.
4	Drive cables	Cable kinks or is damaged.	YES	Correct or change.
5	LED exposure unit	Scanner moves smoothly.	NO	• Adjust the scanner motor timing belt. • Replace the bushing. • Replace the scanner motor. • Replace the scanner drive board.
6		The problem has been eliminated through the checks of steps up to 5.	NO	Replace the CCD board.

15.3.7 Scanner system: moire**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Original	Moiré distortions recur even after the orientation of original has been changed.	NO	Change the original mode (select one other than that resulted in moiré).
2	Function 1 -> Original Type	Moiré distortions recur even after the original mode has been changed.	YES	Select "Text Mode" or "Photo Mode".
3	Function 1 -> Zoom	The problem has been eliminated through the checks of steps up to 2.	NO	Replace the zoom ratio.

15.3.8 Scanner system: skewed image**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Original	Original is skew.	YES	Reposition original.
2	Original glass	Original glass is in positive contact with the flat spring without being tilt.	NO	• Reinstall the glass. • Check the original loading position.
3	Back side scanning section	The CIS module is tilted.	YES	Adjust the back side skew feed on the DF.
4		The problem has been eliminated through the checks of steps up to 3.	NO	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.9 Scanner system: distorted image**(1) Typical faulty images**

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Installation	Machine is installed on a level surface.	NO	Reinstall.
2	Back side scanning section	The CIS module is tilted.	YES	Adjust the back side skew feed on the DF.
3		The problem has been eliminated through the checks of steps up to 2.	NO	• Replace the LED exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.10 Scanner system: low image density, rough image**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Original glass	Original Glass is dirty.	YES	Wipe the surface clean with a soft cloth.
2	Shading sheet	Shading sheet is dirty.	YES	Perform "Focus positioning of the scanner and 2nd/3rd mirrors carriage" and "Scanner Position Adjustment."
3	Mirror, lens, light guide, and reflectors	Mirror is dirty.	YES	Clean.
4		Lens is dirty.	YES	Clean.
5		Light guide is dirty.	YES	Clean.
6		Reflectors are dirty.	YES	Clean.
7		The problem has been eliminated through the checks of steps up to 6.	NO	• Replace the exposure unit. • Replace the CCD board. • Replace the CIS module.

15.3.11 Scanner system: defective ACS**(1) Typical faulty images**

[1]	Colored area of original	[2]	Black-and-white area of original
-----	--------------------------	-----	----------------------------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	[Utility] -> [User settings] -> [System Settings] -> [Auto Color Level Adjust.]	The problem persists even after the ACS determination level adjust function has been changed.	YES	• Change the original loading direction. • Make manual settings according to the type of original. (If the original contains a colored area in one of its corners, the machine may fail to properly detect the colored area.)

15.3.12 Scanner system: blank copy, black copy**(1) Typical faulty images**

[1]	Blank copy	[2]	Black copy
-----	------------	-----	------------

(2) Troubleshooting procedure**(a) When the original glass is used**

Step	Section	Check Item	Result	Action
1	Cable connecting scanner and printer	Connector is connected properly with no pins bent.	NO	Reconnect.
2	CCD Unit	Connectors of the CCD board are connected properly.	NO	Reconnect.
3	Service Mode -> [Test Mode]	The problem is eliminated as checked with the image on a test pattern produced.	NO	Replace I/F connection cable.
4	MFP board (MFPB)	The problem is eliminated after the I/F connection cable has been changed.	NO	Replace MFPB.

(b) When the DF is used

Step	Section	Check Item	Result	Action
1	CIS module (CIS)	Connectors on the CIS module unit are connected properly.	NO	Reconnect.
2	CIS power supply (CISPU)	Connectors of the CIS power supply are connected properly.	NO	Replace I/F connection cable.
3		The problem has been eliminated through the checks of steps up to 2.	NO	Replace CIS. Replace CISPU.

15.3.13 Scanner system: abnormal image**(1) Typical faulty images**

[1]	Data on previous page	[2]	Data on current page
-----	-----------------------	-----	----------------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Cable connecting scanner and printer	Connector is connected properly with no pins bent.	NO	Reconnect.
2	MFP board (MFPB)	Connectors on the MFP board are connected properly.	NO	Reconnect.
3	MFP board (MFPB)	Data on previous page is mixed with data on current page.	NO	Reinstall the memory.
4	Test Mode [Service Mode]	The problem is eliminated as checked with the image on a test pattern produced.	NO	Replace the I/F connection cable.
5	MFP board (MFPB)	The problem is eliminated after the interface connection cable has been changed.	NO	Replace the MFP board.

Step	Section	Check Item	Result	Action
6	Printer control board (PRCB) PH relay board (PHRYB)	Check the connection of connectors, harness, and flat cables between PRCB and PHRYB, and correct if necessary.	NO	- Replace the printer control board. - Replace the PH relay board.

15.3.14 Scanner system: uneven density

(1) Typical faulty images

(2) Troubleshooting procedure

(a) When the original glass is used

Step	Section	Check Item	Result	Action
1	Scanner motor	Scanner motor turns smoothly.	NO	- Replace the scanner motor belt. - Replace the scanner motor.
2		The problem has been eliminated through the checks of steps up to 1.	NO	- Replace the LED exposure unit. - Replace the CCD board.

(b) When DF is used

Step	Section	Check Item	Result	Action
1	DF read position	The uneven density occurs when reading the original from DF.	YES	Readjust.
2	Back side scanning section	The CIS module is tilted.	YES	Adjust the back side skew feed on the DF. (when DF-701 is installed)

15.4 Solution (Printer system)

Solution

NOTE

- Typical faulty image samples shown in the following are all printed with A3 setting.

15.4.1 Printer monochrome: white lines, white bands, colored lines and colored bands in sub scan direction

(1) Typical faulty images

[1]	White lines	[2]	White bands
[3]	Colored lines	[4]	Colored bands

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image check	A white line or black line in sub scan direction is sharp.	YES	Clean the electrostatic charger wire.
2	Drum unit/ developing unit	The surface of the PC drum is scratched.	YES	Replace drum unit.
3		Dirty on the outside.	YES	Clean.
4		Contact terminals make good connection between each drum unit and machine.	NO	Clean contact terminals.

Step	Section	Check Item	Result	Action
5		Developing bias contact terminal makes good connection.	NO	• Clean contact terminal. • Check terminal position.
6	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
7		The problem has been eliminated through the checks of steps up to 6.	NO	• Replace the developing unit. • Replace the image transfer belt unit. • Replace the PH unit.

15.4.2 Printer monochrome: white lines, white bands, colored lines and colored bands in main scan direction

(1) Typical faulty images

[1]	White lines	[2]	White bands
[3]	Colored lines	[4]	Colored bands

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image check	A white line or black line in sub scan direction is sharp.	NO	Clean the electrostatic charger wire.
2	Drum unit/ developing unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
3		Dirty on the outside.	YES	Clean.
4		Contact terminals make good connection between each drum unit and machine.	NO	Clean.
5		Developing bias contact terminal makes good connection.	NO	Clean contact terminal and check terminal position.
6	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
7		The problem has been eliminated through the checks of steps up to 6.	NO	• Replace the developing unit. • Replace the image transfer belt unit. • Replace the PH unit.

15.4.3 Printer monochrome: uneven density in sub scan direction

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	High image density original	Uneven density in sub scan direction occurs at a pitch of 40 mm to 50 mm when a multi-copy cycle is run using an original with high image density (50% or more).	YES	Feed 10 to 20 blank sheets of paper with no originals placed, as the developing unit fails to keep up with a high demand for toner.
2	[Service Mode] -> [Machine] -> [LD	The problem has been eliminated through the LD lightness balance adjust.	NO	Go to next step.

Step	Section	Check Item	Result	Action
	adjustment] -> [LD 1/2 Balance Adj.]			
3	Drum unit/developing unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
4		Dirty on the outside.	YES	Clean.
5	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
6	Transfer roller	Image transfer roller is installed properly.	NO	Reinstall.
7		Image transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
8	Transfer belt unit	Is abnormality found in the cam gear?	YES	Replace the transfer belt unit.
9		The problem has been eliminated through the checks of steps up to 8.	NO	• Replace the developing unit. • Replace the PH unit. • Replace the High voltage unit. • Replace the printer control board.

15.4.4 Printer monochrome: uneven density in main scan direction

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	[Service Mode] -> [Machine] -> [LD adjustment] -> [LD 1/2 Balance Adj.]	The problem has been eliminated through the LD lightness balance adjust.	NO	Go to next step.
2	Drum unit/ developing unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
3		Dirty on the outside.	YES	Clean.
4	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
5	Transfer roller unit	Check that the spring does not come off during the pressure operation of the transfer roller.	NO	• Correct. • Replace the transfer roller unit.
6	Transfer belt unit	Transfer belt unit makes positive contact with plates on rails.	NO	Check and correct contacts.
7		Is abnormality found in the cam gear?	YES	Replace the image transfer belt unit.
8		The problem has been eliminated through the checks of steps up to 7.	NO	• Replace the developing unit. • Replace the PH unit. • Replace the high voltage unit.

15.4.5 Printer monochrome: low image density

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Warning display	The maintenance call mark is displayed on the panel.	YES	Take action according to the warning code shown on the state confirm screen.
2	Service Mode -> State Confirm -> Table Number	Check data for Vg and Vdc. Color • Vdc: around 400 V • Vg : around 500 V Black • Vdc: around 400 V • Vg : around 500 V	-	Go to next step.
3	Service Mode -> State Confirmation -> Level History 1	Check TCR data. (specified rang: 6 to 8 %)	NO	Go to next step.
4		IDC output value is around 4.3 V.	NO	• Clean IDC sensor and execute the image stabilization. • Check image transfer belt for damage and correct as necessary.
5	Level history data check results	Low TCR and low Vg and Vdc	YES	Go to step 10.
6		Low TCR and high Vg and Vdc	YES	Go to step 14.
7		TCR falling within specified range and low Vg and Vdc	YES	Go to step 10.
8		TCR falling within specified range and high Vg and Vdc	YES	Go to step 14.
9		The situations other than the abovementioned.	YES	Go to step 10.
10	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
11	Transfer belt unit	Transfer belt unit makes positive contact with plates on rails.	NO	Check and correct contacts.
12		Is abnormality found in the cam gear?	YES	Replace the image transfer belt unit.
13	Hopper unit	Connectors are loose.	YES	Reconnect.
14		Gear is cracked.	YES	Replace the gear.
15	Service Mode -> Image Process Adjustment -> Manual Toner Add	Toner is properly supplied when Manual Toner Add is run.	NO	Go to next step.
16	Service Mode -> Image Process Adjustment -> Gradation Adjust	"Conv. Value" falls within the specified range as checked through gradation adjust.	YES	Go to step 19.
		Dark: 0 ± 100 Highlight: 0 ± 60		
17	Service Mode -> Image Process Adjustment -> Max Imge Density Adj	The problem has been eliminated through the adjustment of Max Image Density.	NO	Go to next step.
18	Service Mode -> Image Process Adjustment -> Stabilizer -> Initialize + Image Stabilization	After the Initialize + Image Stabilization sequence has been completed, run gradation adjust.	NO	Go to next step.
19		The problem has been eliminated through the checks of steps up to 18.	NO	• Replace the drum unit. • Replace the developing unit. • Replace the printer control board. • Replace the PH unit. • Replace the high voltage unit.

15.4.6 Printer monochrome: gradation reproduction failure**(1) Typical faulty images**

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Warning display	The maintenance call mark is displayed on the panel.	YES	Take action according to the warning code shown on the state confirm screen.
2	Function 1 -> Original Type	Original type and screen pattern are selected properly.	NO	Change screen pattern.
3	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
4	Service Mode -> State Confirmation -> Level History 1	IDC output value is around 4.3 V.	NO	• Clean IDC sensor and execute the image stabilization. • Check image transfer belt for damage and correct as necessary.
5	Service Mode -> Image Process Adjustment -> Gradation Adjust	"Conv. Value" falls within the specified range as checked through gradation adjust. Dark: 0 ± 100 Highlight: 0 ± 60	YES	Go to step 8.
6	Service Mode -> Image Process Adjustment -> Max Image Density Adj	The problem has been eliminated through the adjust of Max Image Density.	NO	Go to next step.
7	Service Mode -> Image Process Adjustment -> Stabilizer -> Initialize + Image Stabilization	After the Initialize + Image Stabilization sequence has been completed, run gradation adjust;	NO	Go to next step.
8		The problem has been eliminated through the checks of steps up to 7.	NO	• Replace the drum unit. • Replace the printer control board. • Replace the PH unit. • Replace the high voltage unit.

15.4.7 Printer monochrome: foggy background**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Warning display	The maintenance call mark is displayed on the panel.	YES	Take action according to the warning code shown on the state confirm screen.
2	Service Mode -> State Confirmation -> Table Number	Check data for Vg and Vdc. Color • Vdc: around 400 V • Vg : around 500 V Black • Vdc: around 400 V • Vg : around 500 V	NO	Go to next step.
3	Service Mode -> State Confirmation -> Level History 1	Check TCR data. (specified rang: 6 to 8 %)	NO	Go to next step.
4		IDC output value is around 4.3 V.	NO	• Clean IDC sensor and execute the image stabilization. • Check image transfer belt for damage and correct as necessary.
5	Level history data check results	Low TCR and low Vg and Vdc	YES	Go to step 10.
6		Low TCR and high Vg and Vdc	YES	Go to step 11.
7		TCR falling within specified range and low Vg and Vdc	YES	Go to step 10.
8		TCR falling within specified range and high Vg and Vdc	YES	Go to step 11.
9		The situations other than the abovementioned.	YES	Go to step 10.
10	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.

Step	Section	Check Item	Result	Action
11	Service Mode -> Image Process Adjustment -> Image Background Adj	The problem is eliminated after Image Background Adj has been adjusted.	NO	Go to next step.
12	Service Mode -> Image Process Adjustment -> Gradation Adjust	"Conv. Value" falls within the specified range as checked through gradation adjust. Dark: 0 ± 100 Highlight: 0 ± 60	YES	Go to step 17.
13	Service Mode -> Image Process Adjustment -> Max Image Density Adj	The problem has been eliminated through the adjust of Max Image Density.	NO	Go to next step.
14	Service Mode -> Image Process Adjustment -> Stabilizer -> Initialize + Image Stabilization	After the Initialize + Image Stabilization sequence has been completed, run gradation adjust.	NO	Go to next step.
15	Printer control board (PRCB) PH relay board (PHRYB)	Check the connection of flat cables between PRCB and PHREYB, and correct if necessary.	NO	- Replace the printer control board. - Replace the PH relay board.
16		The problem has been eliminated through the checks of steps up to 15.	NO	- Replace the drum unit. - Replace the PH unit. - Replace the high voltage unit.

15.4.8 Printer monochrome: void areas, white spots

(1) Typical faulty images

[1]	Void areas	[2]	White spots
-----	------------	-----	-------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image Check	There are void areas at the front side or high density section.	YES	K.15.4.5 Printer monochrome: low image density
2		There is void area at the rear side section.	YES	Perform [Transfer Voltage Fine Adj-Secondary transfer adj.] of [Image Process Adjustment] under Service Mode.
3	Drum unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
4	Toner cartridge	Foreign matter or caked toner in the toner cartridge.	YES	Remove foreign matter.
5	Installation environment	Is the atmospheric pressure at the installation site low?	YES	Make the following adjustment: [Service Mode] -> [Image Process Adjustment] -> [Grad/Dev AC Bias V Selection].

15.4.9 Printer monochrome: colored spots**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Drum unit/ developing unit	Developing bias applied voltage terminal makes good connection.	NO	Clean applied voltage terminal and check terminal position.
2		The surface of the PC drum is scratched.	YES	Replace the drum unit.
3		Dirty on the outside.	YES	Clean.

15.4.10 Printer monochrome: blurred image**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	PH unit	The surface of the PH window is dirty.	YES	Clean with cleaning jig.
2	Drum unit	Dirty on the outside.	YES	Clean.
3		The problem has been eliminated through the checks of steps up to 2.	NO	• Replace the drum unit. • Replace the PH unit.

15.4.11 Printer monochrome: blank copy, black copy**(1) Typical faulty images**

[1]	Blank copy	[2]	Black copy
-----	------------	-----	------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image check	A blank copy occurs.	YES	Check PH unit connector for proper connection.

Step	Section	Check Item	Result	Action
2	Drum unit	Coupling of drum unit drive mechanism is installed properly.	NO	• Check and correct drive transmitting coupling. • Replace the drum unit.
3		The PC drum charge corona voltage contact or PC drum ground contact of the imaging unit is connected properly.	NO	Check, clean, or correct the contact.
4	High voltage unit	Connector is connected properly.	NO	Reconnect.
5		The problem has been eliminated through the check of step 4.	NO	• Replace the high voltage unit. • Replace the printer control board. • Replace the PH unit.

15.4.12 Printer monochrome: uneven image

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Toner cartridge	The toner cartridge of every color is surely installed.	NO	Re-install it.
2	PH unit	The PH unit is surely installed.	NO	Re-install it.
3	Toner cartridge	There is any stain or breakage on the drive section of the toner cartridge.	YES	Clean/replace the toner cartridge.
4	Drum unit	There is any stain, damage or abrasion on the PC drum.	YES	Replace the drum unit.
5	Transfer roller	There is any stain, damage, deformation or abrasion on the transfer roller.	YES	Replace the transfer roller.
6	Fusing unit	There is any stain, damage, deformation or abrasion on the roller and drive section of the fusing unit.	YES	Replace the fusing unit.
7		The problem has been eliminated through the check of step 6.	NO	Replace the image transfer belt unit.

15.4.13 Printer 4-color: white lines, white bands, colored lines and colored bands in sub scan direction

(1) Typical faulty images

[1]	White lines	[2]	White bands
[3]	Colored lines	[4]	Colored bands

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image check	A white line or colored line in sub scan direction.	YES	Clean the comb electrode.
2	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit

Step	Section	Check Item	Result	Action
3		Transfer belt is dirty or scratched.	YES	- Clean dirty with the hydro-wipe. H.1.3.1 Transfer belt unit - Replace the transfer belt unit if belt is damaged.
4		Cleaning blade is not effective in removing toner completely.	YES	Replace the transfer belt unit.
5	Transfer roller unit	Transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
6	Paper path	There is foreign matter on paper path.	YES	Remove foreign matter.
7	Fusing unit	Image transfer paper separator fingers are damaged or dirty.	YES	Clean or change.
8		Fusing entrance guide plate is dirty or damaged.	YES	- Clean. - Replace the fusing unit.
9		Fusing paper separator fingers are dirty.	YES	Clean.
10		The problem has been eliminated through the checks of steps up to 9.	NO	Replace the printer control board.

15.4.14 Printer 4-color: white lines, white bands, colored lines and colored bands in main scan direction

(1) Typical faulty images

[1]	White lines	[2]	White bands
[3]	Colored lines	[4]	Colored bands

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
2		Transfer belt is dirty or scratched.	YES	- Clean dirty with the hydro-wipe. H.1.3.1 Transfer belt unit. - Replace the transfer belt unit if belt is damaged.
3		Cleaning blade is not effective in removing toner completely.	YES	- Clean cleaning blade. - Replace the transfer belt unit.
4	Transfer roller unit	Transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
5	Paper path	There is foreign matter on paper path.	YES	Remove foreign matter.
6	Fusing unit	Image transfer paper separator fingers are damaged or dirty.	YES	Clean or change.
7		Fusing entrance guide plate is dirty or damaged.	YES	- Clean. - Replace the fusing unit.
8		Fusing paper separator fingers are dirty.	YES	Clean.
9		The problem has been eliminated through the checks of steps up to 8.	NO	Replace the printer control board.

15.4.15 Printer 4-color: uneven density in sub scan direction**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
2		Transfer belt is dirty or scratched.	YES	• Clean dirty with the hydro-wipe. H.1.3.1 Transfer belt unit • Replace the transfer belt unit if belt is damaged.
3		Terminal is dirty.	YES	Clean.
4	Transfer roller unit	Image transfer roller is installed properly.	NO	Reinstall.
5		Image transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
6		The problem has been eliminated through the checks of steps up to 5.	NO	Replace the transfer belt unit.

15.4.16 Printer 4-color: uneven density in main scan direction**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
2		Transfer belt is dirty or scratched.	YES	• Clean dirty with the hydro-wipe. H.1.3.1 Transfer belt unit • Replace the transfer belt unit if belt is damaged.
3		Terminal is dirty.	YES	Clean.
4	Transfer roller unit	Image transfer roller is installed properly.	NO	Reinstall.
5		Image transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
6		The problem has been eliminated through the checks of steps up to 5.	NO	• Replace the transfer belt unit. • Replace the high voltage unit.

15.4.17 Printer 4-color: low image density**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Paper	Paper is damp.	YES	Change paper to one just unwrapped from its package.
2	Transfer belt unit	Terminal is dirty.	YES	Clean.
3	Transfer roller unit	Transfer roller is installed properly.	NO	Reinstall.
4		Charge neutralizing needle is not separated and ground terminal is connected properly.	NO	Correct or change.
5	IDC sensor	Sensor is dirty.	YES	Clean IDC sensor and execute the image stabilization.
6	Service Mode -> Image Process Adjustment -> Gradation Adjust	"Conv. Value" falls within the specified range as checked through gradation adjust.	YES	Go to step 9.
		Dark: 0 ± 100 Highlight: 0 ± 60		
7	Service Mode -> Image Process Adjustment -> Max Image Density Adj	The problem has been eliminated through the adjust of Max Image Density.	NO	Go to next step.
8	Service Mode -> Image Process Adjustment -> Stabilizer -> Reset + Stabilizer	After the Initialize + Image Stabilization sequence has been completed, run gradation adjust.	NO	Go to next step.
9		The problem has been eliminated through the checks of steps up to 8.	NO	• Replace the image transfer belt unit. • Replace the printer control board. • Replace the high voltage unit.

15.4.18 Printer 4-color: poor color reproduction**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Paper	Paper is damp.	YES	Change paper to one just unwrapped from its package.
2	Transfer belt unit	Terminal is dirty.	YES	Clean.
3	Transfer roller unit	Transfer roller is installed properly.	NO	Reinstall.
4		Charge neutralizing needle is not separated and ground terminal is connected properly.	NO	Correct or change.
5	IDC sensor	Sensor is dirty.	YES	Clean IDC sensor and execute the image stabilization.

Step	Section	Check Item	Result	Action
6	Service Mode -> Image Process Adjustment -> Gradation Adjust	"Conv. Value" falls within the specified range as checked through gradation adjust.	YES	Go to step 9.
		Dark: 0 ± 100 Highlight: 0 ± 60		
7	Service Mode -> Image Process Adjustment -> Max Image Density Adj	The problem has been eliminated through the adjustment of Max Image Density.	NO	Go to next step.
8	Service Mode -> Image Process Adjustment -> Stabilizer -> Reset + Stabilizer	After the Reset + Stabilizer sequence has been completed, run gradation adjust.	NO	Go to next step.
9		The problem has been eliminated through the checks of steps up to 8.	NO	• Replace the image transfer belt unit. • Replace the printer control board. • Replace the high voltage unit.

15.4.19 Printer 4-color: incorrect color image registration

(1) Typical faulty images

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Warning display	The maintenance call mark is displayed on the panel.	YES	Take action according to the warning code shown on the state confirm screen.
2	Machine condition	Vibration is given to the machine after main power switch has been turned ON.	YES	Turn off the main power switch and turn it on again more than 10 seconds after.
3	Transfer roller unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
4		Transfer belt is dirty or scratched.	YES	• Clean dirty with the hydro-wipe. H.1.3.1 Transfer belt unit • Replace the transfer belt unit if belt is damaged.
5		Drive coupling to the machine is dirty.	YES	Clean.
6	Drum unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
7	Transfer roller unit	Transfer roller is installed properly.	NO	Reinstall.
8		Transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
9	Service Mode -> Machine -> Fusing Transport Speed	Brush effect or blurred image occurs.	YES	Readjust fusing transport speed.
10	Service Mode -> Machine -> Color registration Adjustment	Check the specific color in which color shift occurs.	YES	Perform "Color registration Adjustment." If color shift is not corrected even with a correction of ± 1 dot, go to next step.
11	Skew correction motor	Skew correction motor/C, M, Y functions correctly.	NO	Replace the PH unit.
12		The problem has been eliminated through the checks of steps up to 11.	NO	• Replace the transfer belt unit. • Replace the printer control board.

15.4.20 Printer 4-color: void areas, white spots**(1) Typical faulty images**

[1]	Void areas	[2]	White spots
-----	------------	-----	-------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Image check	There are void areas at the front side or high density section.	YES	K.15.4.18 Printer 4-color: poor color reproduction
2		There are void areas in the trailing edge.	YES	Perform [Transfer Voltage Fine Adj-Primary transfer adj.] of [Image Process Adjustment] under Service Mode.
3	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
4		Transfer belt is dirty or scratched.	YES	• Clean dirty with the hydro-wipe. • H.1.3.1 Transfer belt unit • Replace the transfer belt unit if belt is damaged.
5	Transfer roller unit	Transfer roller is dirty or scratched.	YES	Replace the 2nd transfer roller unit.
6		Charge neutralizing needle is not separated and ground terminal is connected properly.	NO	Correct or change.
7	Paper path	There is foreign matter on paper path.	YES	Remove foreign matter.
8		Pre-image transfer guide plate is damaged or dirty.	YES	Clean or change.
9		The problem has been eliminated through the checks of steps up to 8.	NO	Replace the transfer belt unit.

15.4.21 Printer 4-color: colored spots**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Drum unit	The surface of the PC drum is scratched.	YES	Replace the drum unit.
2	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the image transfer belt.	YES	Clean with the hydro-wipe. H.1.3.1 Transfer belt unit
3		Transfer belt is dirty or scratched.	YES	• Clean dirty with the hydro-wipe. • H.1.3.1 Transfer belt unit • Replace the transfer belt unit if belt is damaged.
4	Transfer roller unit	Transfer roller is dirty or scratched.	YES	Replace the transfer roller unit.
5	Paper path	There is foreign matter on paper path.	YES	Remove foreign matter.
6	Fusing unit	Fusing belt is dirty or scratched.	YES	Replace the fusing unit.

Step	Section	Check Item	Result	Action
7		The problem has been eliminated through the checks of steps up to 6.	NO	Replace the transfer belt unit.

15.4.22 Printer 4-color: poor fusing performance, offset

(1) Typical faulty images

[1]	Poor fusing performance	[2]	Offset
-----	-------------------------	-----	--------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Paper	Paper type does not match.	YES	Change the setting.
2	Service Mode -> Machine -> Fusing Temperature	Changing fusing temperature eliminates the problem of poor fusing performance and offset.	YES	Readjust the fusing temperature.
3		The problem has been eliminated through the checks of steps up to 2.	NO	Replace the fusing unit.

15.4.23 Printer 4-color: brush effect, blurred image

(1) Typical faulty images

[1]	Brush effect	[2]	Blurred image
-----	--------------	-----	---------------

(2) Troubleshooting procedure

Step	Section	Check Item	Result	Action
1	Paper	Paper is damp.	YES	Change paper to one just unwrapped from its package.
2		Paper type does not match.	YES	Change the setting.
3	Fusing unit	Fusing unit is installed properly.	NO	Reinstall.
4		Fusing entrance guide plate is dirty.	YES	Clean.
5		Fusing belt is dirty or scratched.	YES	Replace the fusing unit.
6	Service Mode -> Machine -> Fusing Transport Speed	Changing fusing speed eliminates the problem of brush effect and blurred image.	YES	Readjust fusing transport speed.

15.4.24 Printer 4-color: back marking**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Transfer roller unit	Transfer roller is scratched or dirty.	YES	Replace the transfer roller unit.
2	Paper path	There is foreign matter on paper path.	YES	Remove foreign matter.
3	Fusing unit	Fusing entrance guide plate is scratched or dirty.	YES	Clean or change.
4		Lower fusing roller is scratched or dirty.	YES	Replace the fusing unit.
5	Transfer belt unit	Fingerprints, oil, or other foreign matter is evident on the transfer belt.	YES	Clean it with the tender cloth or paper which is dusted with the toner.
6		The problem has been eliminated through the checks of steps up to 5.	NO	• Replace the transfer belt unit. • Replace the high voltage unit.

15.4.25 Printer 4-color: uneven image**(1) Typical faulty images****(2) Troubleshooting procedure**

Step	Section	Check Item	Result	Action
1	Toner cartridge	The toner cartridge of every color is surely installed.	NO	Re-install it.
2	PH unit	The PH unit is surely installed.	NO	Re-install it.
3	Toner cartridge	There is any stain or breakage on the drive section of the toner cartridge.	YES	Clean or replace the toner cartridge.
4	Drum unit	There is any stain, damage or abrasion on the PC drum.	YES	Replace the drum unit.
5	Transfer roller	There is any stain, damage, deformation or abrasion on the transfer roller.	YES	Replace the transfer roller unit.
6	Fusing unit	There is any stain, damage, deformation or abrasion on the roller and drive section of the fusing unit.	YES	Replace the fusing unit.
7		The problem has been eliminated through the check of step 6.	NO	Replace the image transfer belt unit.

16. IC PROTECTOR

16.1 Outline

- To increase product safety, this MFP has an IC protector (ICP) installed in each board. ICP is a component that protects IC. If the amount of the current supplied to the electrical parts such as motor exceeds the set level, ICP trips to protect IC from over current. The following list contains ICP installed in each board, related devices, and symptoms that occur when ICP trips.

16.2 IC protector list

16.2.1 bizhub C554/C454

(1) Printer control board

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	-	LCC, cabinet	No operation	-
ICP2	FM1	Power supply cooling fan	Power supply cooling fan motor's failure to turn	C5351
ICP3	FM2	Transfer belt cleaner cooling fan	Transfer belt cleaner cooling fan's failure to turn	C2355
	FM8	Paper cooling fan	Paper cooling fan failure to turn	C3302
	SD3	Gate switch solenoid	Misfeed at exit section	-
	CL5	1st transfer pressure clutch	Transfer belt pressure welding alienation	C2152
	CL6	ADU transport clutch	Misfeed at duplex transport section	-
	CL8	Paper exit clutch	Misfeed at exit section	-
ICP4	CL1	Tray 2 paper feed clutch	Misfeed at tray 2 feed section	-
	CL2	Tray 2 vertical transport clutch	Misfeed at tray 2 feed section	-
	M13	Tray 2 lift-up motor	Tray 2 feeder up/down abnormality	C0204
ICP5	CL3	Tray1 paper feed clutch	Misfeed at tray 1 feed section	-
	CL7	Bypass paper feed clutch	Misfeed at manual bypass feed section	-
	SD1	Bypass pick-up solenoid	Manual feed up/down abnormality	C0211
	M12	Tray 1 lift-up motor	Tray 1 feeder up/down abnormality	C0202
ICP6	FRB	Front side board	Polygon error	-
ICP8	HV	High voltage unit	Faulty image (uneven density, low image density)	-
ICP9	EXCB	Expansion control board	Expansion control board communication error	-
ICP11	-	DC to DC converter for 5V power supply	Freeze control panel (Printer control board communication error)	-
ICP12	FRB	Front side board	Front side communication error	-
	EXCB	Expansion control board	Expansion control board communication error	-
	LDDb	Laser drive board	Laser malfunction	-
ICP13	FRB	Front side board	Front side communication error	-
ICP14	PCCB	PC control board	No operation	-
ICP15	TEMS	Heating roller temperature sensor	Fusing abnormally low temperature detection (Main of the heating roller)	C3825
	PCCB	PC control board	No operation	-
ICP16	USBB	USB board	No operation	-
ICP17	-	DF	Unable to be detected	-
	-	Scanner unit	Freeze control panel	-
	DCPU	DC power supply	Freeze control panel (Printer control board to stop operation)	-
	-	IH relay	Fusing motor's failure to turn	C3201
ICP18	FM4	Toner bottle cooling fan	Toner bottle cooling fan's failure to turn	C5355
ICP19	FM13	Ozone fan	Ozone fan's failure to turn	C5354
IC21	M9	Toner supply motor/Y	Abnormally low toner density detected yellow TCR sensor/Yellow TCR sensor adjustment failure	C2555/C255B
IC26	M11	Fusing pressure motor	Fusing roller separation failure	C3101
IC27	M5	ADU transport motor	ADU transport motor rotation stop	-
			Misfeed at duplex transport section	-
IC28	M4	Switchback motor	Misfeed at exit section	-
IC33	PS20	Tray 2 paper feed sensor	Main power switch is OFF.	-
	PS22	Tray 2 upper limit sensor		-
IC40	M8	Toner supply motor/M	Abnormally low toner density detected magenta TCR sensor/Magenta TCR sensor adjustment failure	C2553/C255A

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
IC43	M7	Toner supply motor/C	Abnormally low toner density detected cyan TCR sensor/Cyan TCR sensor adjustment failure	C2551/C2559
IC44	M6	Toner supply motor/K	Abnormally low toner density detected black TCR sensor/Black TCR sensor adjustment failure	C2557/C255C
IC46	M10	Toner bottle motor	Abnormally low toner density detected yellow TCR sensor/Yellow TCR sensor adjustment failure Abnormally low toner density detected magenta TCR sensor/Magenta TCR sensor adjustment failure Abnormally low toner density detected cyan TCR sensor/Cyan TCR sensor adjustment failure Abnormally low toner density detected black TCR sensor/Black TCR sensor adjustment failure	C2555/C255B C2553/C255A C2551/C2559 C2557/C255C
LV(24V-16)	KCT	Key counter	Unable to count	-
	TCT	Total counter	Unable to make a copy	-
	FRB	Front side board	Front side communication error	-

(2) Front side board

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP6	CL4	Registration clutch	Occurrence of JAM when the output	-
	SD2	IDC sensor shutter solenoid	Occurrence of warning code	P-5/P-28
	EL/Y	Erase LED/Y	Occurrence of faulty image	-
	EL/M	Erase LED/M		-
	EL/C	Erase LED/C		-
	EL/K	Erase LED/K		-
ICP12	LDDB	Laser drive board	Laser malfunction	-
	DCSB/Y	DC set board/Y	- Freeze control panel - Polygon motor rotation trouble	-
	DCSB/M	DC set board/M		
	DCSB/C	DC set board/C		
	DCSB/K	DC set board/K		
ICP13	TEM/HUM	Temperature/humidity sensor	Occurrence of faulty image SIO receiving port (ENG)	CF902
	PEIB/2	Tray 2 empty indicator board	No light up of LED when empty toner	-
Fuse	M14	Polygon motor	Polygon motor rotation trouble	C4101
	M15	Skew correction motor/C	No skew correction operation. Resist failure.	-
	M16	Skew correction motor/M	No skew correction operation. Resist failure.	-
	M17	Skew correction motor/Y	No skew correction operation. Resist failure.	-

(3) Expansion control board

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	FM7	IH coil cooling fan	IH coil cooling fan's failure to turn	C5306
	FM12	Fusing power supply cooling fan	Fusing power supply cooling fan's failure to turn	C5304
	FM11	Toner suction fan	Toner suction fan's failure to turn	C2350
ICP13	-	-	Freeze control panel	-
IC4	M22	Paper feed motor	Paper feed motor's failure to turn	C5102
			Misfeed at paper feed section	-
IC5	M24	Registration motor	Registration motor's failure to turn	-
			Misfeed at paper feed section	-
			Misfeed at vertical conveyance section	
IC6	M23	Tray2 vertical transport motor	Misfeed at 2ns transfer section	-
			Tray2 vertical transport motor's failure to turn	

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
			Misfeed at vertical conveyance section	-

(4) Scanner drive board

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F1	LU201	LED exposure unit	Exposure LED lighting failure	C9401

16.2.2 DF-701**(1) DF control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F1	-	DC to DC converter input section 24V line	Unable to produce DC24V in DF and MFP unable to detect DF	-
F2	-	DC to DC converter input section 5V line	Unable to produce DC5V in DF and MFP unable to detect DF	-
F3	M2	Document feed motor	Misfeed at feed section	-
F4	M3	Registration motor	Misfeed at transport section	-
F5	M1	Document reading motor	Misfeed at transport section	-
F6	FM1	DF cooling fan motor	Cooling fan trouble	C8302
F8	M4	Document reading glass cleaning motor	Before reading pressure welding alienation mechanism trouble	C8101
F9	-	Stamp solenoid	Unable to place a stamp	-

(2) CIS power supply

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F1	-	DC to DC converter input section 12V line	CIS LED lighting failure	C9403
F2	-	DC to DC converter input section 5V line	CIS LED lighting failure	C9403

16.2.3 PC-410**(1) PC control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
IC2	M133	Shifter motor	LCT lift failure	C0214
	M134	Elevator motor	LCT shift failure	C0210

16.2.4 LU-204/LU-301**(1) LU drive board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP2	M1	Lift-up motor	LCT up/down abnormality	C-0216
ICP3	M3	Transport motor	LCT transport section JAM	-
ICP4	M2	Paper feed motor	LCT feed section JAM	-
ICP5	PS3	Paper feed sensor	LCT feed section JAM	-

16.2.5 JS-506**(1) JS control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	-	CPU power supply	No operation (Due to no power supply to CPU, FS connection not detected)	-

ICP2	-	DC to DC converter input section 24V line	Unable to produce DC24V in FS and MFP unable to detect FS	-
ICP3	M1	Tray shift motor	Shift motor drive malfunction	C-1182

16.2.6 FS-533**(1) FS control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F1	-	All ICs and actuators	No operation (Due to no power supply to CPU, FS connection not detected)	-
CP1	-	DC to DC converter input section 5V line	No operation (Due to no power supply to CPU, FS connection not detected)	-
CP2	-	Regulator	No operation (Due to no power supply to CPU, FS connection not detected)	-
CP3	-	DC to DC converter input section 24V line	No operation (Due to no power supply to CPU, FS connection not detected)	-
CP21	SD101	Paper surface detect solenoid	No operation	-
CP22	SD102	Batch solenoid	No operation	-
CP23	SD103	Paper exit roller solenoid	No operation	-
CP101	M101	Paper conveyance motor	Misfeed at transport section	-
CP102	M102	Paper exit motor	Misfeed at transport section	-
CP103	M103	Alignment roller motor	Misfeed at transport section	-
CP104	M104	Exit roller lift up motor	Exit roller pressure/ retraction malfunction	C11A1
CP105	M105	Alignment motor/F	Alignment motor/Fr's malfunction	C1103
	M106	Alignment motor/R	Alignment plate motor/Rr's malfunction	C1140
CP107	M107	Stapler movement motor	Stapler movement motor's malfunction	C1106
CP109	M109	Tray lift up motor	Main tray up/down motor's drive malfunction	C1102

16.2.7 PK-519**(1) PK control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F201	M201	Punch motor	Punch drive motor's malfunction	C1132

16.2.8 FS-534**(1) FS control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F1	-	Between connection with MFP and 24V power line	No operation (Due to no power supply to CPU, FS connection not detected)	-

16.2.9 SD-511**(1) SD drive board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
F2	-	24V to 5V DC to DC converter	No operation (Due to no power supply to CPU, SD connection is not detected)	-

16.2.10 FS-535**(1) FS control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	M5	Main tray up/down motor	Main tray up/down motor malfunction	C1102
ICP7	-	DC3.3V sensor and others in the board	Unable to be detected	-
ICP9	M17	Stacker plate drive motor	Stacker plate drive motor malfunction	C1144
ICP10	M14	Stapler motor	Sstapler motor drive malfunction	C1109

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP12	M34	Paper transport belt motor (SD-512)	Paper transport belt motor malfunction	C1152
ICP13	M16	Paddle motor	Paddle motor malfunction	C1141
ICP14	M4	Exit roller motor	Exit roller motor malfunction	C1104
	SD1	Center staple switching gate solenoid	SD staple section JAM	-
	SD2	Bypass switching gate solenoid	Bypass transport JAM	-
	SD3	Sub tray switching gate solenoid	Sub tray exit JAM	-
	SD4	Switchback gate solenoid	JAM during saddle stitch with paper fed from PI	-
	SD404	3rd entrance switching solenoid	Job tray paper exit JAM	-
ICP15	-	24V to 5V DC to DC converter	Unable to be detected	-
ICP16	-	DC3.3V sensor and others in the board	Unable to be detected	-
ICP17				
ICP18	M13	Stapler movement motor	Stapler movement motor malfunction	C1106
ICP19	M6	Paper output roller motor	Paper output roller motor malfunction	C1105

(2) RU control board

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	PS60	RU transport sensor	Unable to be detected	-
	PS61	RU door open/close sensor		

16.2.11 PK-521**(1) Punch control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	M302	Punch oscillating motor	Punch oscillating motor's drive malfunction	C1127
ICP2	-	DC3.3V sensor and others in the board	Unable to be detected	-
ICP4	M301	Punch drive motor	Punch drive motor's malfunction	C1132

16.2.12 ZU-606**(1) ZU control board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	-	DC5V sensor and others in the board	Unable to be detected	-
ICP3	M601	Registration motor	Entrance JAM	-
ICP4	M606	Main motor	Folding section JAM	-
ICP5	M605	Punch shift motor	Punch shift motor drive malfunction	C-1133
ICP6	M603	2nd stopper motor	2nd stopper motor drive malfunction	C-1131
ICP7	M602	1st stopper motor	1st stopper motor drive malfunction	C-1130
ICP8	SD601	Gate solenoid/Lw	Main motor cooling fan drive malfunction	C-1134
	SD602	Gate solenoid/Up		
	CL601	Punch clutch		
	FM601	Main motor cooling fan		
ICP9	M608	Punch switchover motor	Punch switchover motor drive malfunction	C-1136
ICP10	M604	Punch motor	Punch motor drive malfunction	C-1135
ICP12	M607	Punch scraps conveyance motor	Punch scraps full	-

16.2.13 PI-505**(1) PI drive board**

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
ICP1	CL201	Transfer clutch /Up	Paper feed JAM	-
	CL202	Transfer clutch /Lw		-

ICP No.	Symbol	Target part name	When ICP trips	
			Symptom in each load	Trouble code and others
	CL203	Registration clutch		-
	SD201	Pick-up solenoid /Up		-
	SD202	Pick-up solenoid /Lw		-
ICP2	M201	Tray lift motor /Up	Sheet feeder up/down drive failure (upper)	C-1125
	M202	Tray lift motor /Lw	Sheet feeder up/down drive failure (lower)	C-1124
ICP3	-	DC5V sensor and others in the board	Unable to be detected	-
ICP4	M203	Transfer motor	Paper feed JAM	-

L PARTS/CONNECTOR LAYOUT DRAWING

1. PARTS LAYOUT DRAWING

1.1 bizhub C554/C454

1.1.1 Scanner section

[1]	Angle sensor (PS202)	[2]	Original size sensor/2 (PS205)
[3]	CCD board (CCDB)	[4]	Original cover sensor (RS201)
[5]	Control panel unit	[6]	LED exposure unit (LU201)
[7]	Scanner home sensor (PS201)	[8]	Scanner drive board (SCDB)
[9]	Scanner motor (M201)	[10]	Original size sensor/1 (PS204)

1.1.2 Front side

(1) Board/switch/sensor/others

[1]	Right door switch (SW3)	[2]	USB board (USBB)
[3]	Machine condition monitor board (MCMB)	[4]	Total counter (TCT)
[5]	Toner empty sensor/K (PS31)	[6]	Toner empty sensor/C (PS32)
[7]	Toner empty sensor/M (PS33)	[8]	Front side board (FRB)

[9]	Main power switch (SW1)	[10]	Front door switch (SW2)
[11]	Front upper door sensor (PS43)	[12]	Toner empty sensor/Y (PS34)
[13]	Erase LED/Y (EL/Y)	[14]	Erase LED/M (EL/M)
[15]	Erase LED/C (EL/C)	[16]	Erase LED/K (EL/K)

(2) Load

[1]	Toner supply motor/K (M6)	[2]	Power supply cooling fan (FM1)
[3]	Transfer belt cleaner cooling fan (FM2)	-	-

1.1.3 Back side**(1) Board****(a) C554**

[1]	ERP board (ERPB)	[2]	Expansion control board (EXCB)
[3]	Printer control board (PRCB)	[4]	High voltage unit (HV)
[5]	Hard disk (HDD)	[6]	SSD board (SSDB)
[7]	Memory board/1 (MEMB/1)	[8]	MFP board (MFPB)
[9]	Dual scan image processing board (DSIPB)	[10]	NF board (NFB)
[11]	IH magnetic erasing board (IHMEB)	[12]	IH power supply (IHPU)

(b) C454

[1]	ERP board (ERPB)	[2]	Expansion control board (EXCB)
[3]	Printer control board (PRCB)	[4]	High voltage unit (HV)
[5]	Hard disk (HDD)	[6]	SSD board (SSDB)
[7]	Memory board/1 (MEMB/1)	[8]	MFP board (MFPB)
[9]	Dual scan image processing board (DSIPB)	[10]	Fusing power supply (FUPU)

(2) Switch/sensor/others

[1]	1st transfer pressure sensor (PS39)	[2]	Developing solenoid (SD4)
[3]	Service port sensor (PS50)	-	-

(3) Load

[1] Toner bottle motor (M10)	[2] Fusing power supply cooling fan (FM12)
[3] Toner supply motor/Y (M9)	[4] PC motor (M2)
[5] Toner suction fan (FM11)	[6] Developing motor (M21)
[7] Ozone fan (FM13)	[8] Rear side cooling fan (FM3)
[9] Tray2 vertical transport motor (M23)	[10] Paper feed motor (M22)
[11] Registration motor (M24)	[12] 1st transfer pressure clutch (CL5)
[13] Toner supply motor/C (M7)	[14] Paper cooling fan (FM8)
[15] Toner supply motor/M (M8)	- -

1.1.4 Left side

[1]	PH unit	[2]	PH relay board (PHRYB)
[3]	DC power supply (DCPU)	-	-

1.1.5 Right side

(1) C554

[1]	IDC sensor/Rr (IDCS/Rr)	[2]	Fusing loop sensor (PS2)
[3]	IDC sensor/Fr (IDCS/Fr)	[4]	IDC sensor shutter solenoid (SD2)
[5]	Registration sensor (PS1)	[6]	Temperature/humidity sensor (TEM/HUMS)
[7]	Paper exit clutch (CL8)	-	-

(2) C454

[1]	IDC sensor/Rr (IDCS/Rr)	[2]	Fusing loop sensor (PS2)
[3]	IDC sensor/Fr (IDCS/Fr)	[4]	IDC sensor shutter solenoid (SD2)
[5]	Registration sensor (PS1)	[6]	Temperature/humidity sensor (TEM/HUMS)
[7]	Toner bottle cooling fan (FM4)	[8]	Paper exit clutch (CL8)

1.1.6 Manual bypass tray

[1]	Bypass lift-up position sensor (PS26)	[2]	Bypass FD paper size sensor/2 (PS29)
[3]	Bypass FD paper size sensor/1 (PS28)	[4]	Bypass CD paper size VR (VR1)
[5]	Bypass paper empty sensor (PS27)	[6]	Bypass pick-up solenoid (SD1)
[7]	Bypass paper feed clutch (CL7)	-	-

1.1.7 Tray 1

[1]	Tray 1 paper feed clutch (CL3)	[2]	Tray 1 paper feed sensor (PS23)
[3]	Tray 1 empty indicator board (PEIB/1)	[4]	Tray 1 paper empty sensor (PS24)
[5]	Tray 1 upper limit sensor (PS25)	[6]	Paper temperature sensor (TH4)
[7]	Tray 1 FD paper size board (FDPSB/1)	[8]	Tray 1CD paper size board (CDPSB/1)
[9]	Tray 1 lift-up motor (M12)	[10]	Tray 1 paper near empty sensor (PS11)

1.1.8 Tray 2

[1]	Tray 2 vertical transport sensor (PS19)	[2]	Tray 2 paper feed sensor (PS20)
[3]	Tray 2 empty indicator board (PEIB/2)	[4]	Tray 2 paper empty sensor (PS21)
[5]	Tray 2 upper limit sensor (PS22)	[6]	Tray 2 FD paper size board (FDPSB/2)
[7]	Tray 2 CD paper size board (CDPSB/2)	[8]	Tray 2 lift-up motor (M13)
[9]	Tray 2 paper near empty sensor (PS12)	[10]	Tray 2 paper feed clutch (CL1)

1.1.9 Fusing/paper exit section**(1) C554**

[1]	Heating roller thermistor/2 (TH2)	[2]	Heating roller thermistor/3 (TH3)
[3]	Paper exit sensor (PS3)	[4]	Heating roller thermostat (TS1)
[5]	Gate switch solenoid (SD3)	[6]	Heating roller rotation sensor (PS37)
[7]	Fusing pressure home sensor (PS38)	[8]	Heating roller thermistor/1 (TH1)

[9]	Heating roller temperature sensor (TEMS)	[10]	IH coil cooling fan (FM7)
[11]	Fusing motor (M3)	[12]	Fusing pressure motor (M11)

(2) C454

[1]	Heating roller thermostat (TS1)	[2]	Heating roller temperature sensor (TEMS)
[3]	Paper exit sensor (PS3)	[4]	Heating roller thermistor/2 (TH2)
[5]	Gate switch solenoid (SD3)	[6]	Fusing pressure home sensor (PS38)
[7]	Heating roller thermistor/1 (TH1)	[8]	Fusing motor (M3)
[9]	Fusing pressure motor (M11)	-	-

1.1.10 Duplex section

[1]	Switchback motor (M4)	[2]	ADU transport motor (M5)
[3]	ADU paper passage sensor/1 (PS40)	[4]	ADU paper passage sensor/2 (PS41)
[5]	Transport motor (M1)	[6]	ADU transport clutch (CL6)

1.2 DF-701/SP-501

[1]	DF control board (DFCB)	[2]	CIS module (CIS)
[3]	CIS power supply (CISPU)	-	-

[1]	Document reading motor (M1)	[2]	Document feed motor (M2)
[3]	CIS cleaning motor (M5)	[4]	DF cooling fan motor (FM1)
[5]	Stamp solenoid (SD1) *	[6]	Document reading glass cleaning motor (M6)
[7]	Registration motor (M3)	[8]	Reading roller release motor (M4)

• *: Option

[1]	Document length sensor/1 (PS8)	[2]	Document length sensor/2 (PS9)
[3]	Document width sensor (VR1)	[4]	CIS cover sensor (PS15)
[5]	Document reading glass cleaning sensor (PS13)	[6]	Mixed original sensor/3 (PS12)
[7]	Mixed original sensor/2 (PS11)	[8]	Document reading sensor (PS6)
[9]	Mixed original sensor/1 (PS10)	[10]	After separate sensor (PS2)
[11]	Reading roll position sensor (PS4)	[12]	Registration sensor (PS3)
[13]	CIS cleaning sensor (PS7)	[14]	Upper door sensor (PS14)
[15]	Document exit sensor (PS5)	[16]	Document empty sensor (PS1)

1.3 PC-210/PC-110 (Option)**1.3.1 Board/switch/sensor/others**

[1] Right bottom door sensor (PS111)	[2] Tray 3 upper limit sensor (PS116)
[3] Tray 3 vertical transport sensor (PS113)	[4] Tray 4 vertical transport sensor (PS123)
[5] Tray 3 paper feed sensor (PS112)	[6] Tray 3 paper empty sensor (PS114)
[7] Tray 4 paper feed sensor (PS122)	[8] Tray 3 paper empty indicator board (PEIB/3)
[9] Tray 4 paper empty indicator board (PEIB/4)	[10] Tray 4 paper empty sensor (PS124)
[11] Tray 4 upper limit sensor (PS126)	[12] Tray 4 CD paper size board (CDPSB/4)
[13] Tray 4 FD paper size board (FDPSB/4)	[14] Tray 3 FD paper size board (FDPSB/3)
[15] PC control board (PCCB)	[16] Tray 3 CD paper size board (CDPSB/3)
[17] Tray 4 paper near empty sensor (PS125)	[18] Tray 3 paper near empty sensor (PS115)

1.3.2 Load

[1] Tray 3 vertical transport motor (M112)	[2] Tray 4 vertical transport motor (M122)
[3] Tray 4 paper feed motor (M121)	[4] PC dehumidifier heater (DH111)
[5] Tray 4 lift-up motor (M123)	[6] Tray 3 lift-up motor (M113)
[7] Tray 3 paper feed motor (M111)	- -

1.4 PC-410 (Option)**1.4.1 Board/switch/sensor/others**

[1]	Right bottom door sensor (PS131)	[2]	Main tray upper limit sensor (PS136)
[3]	Main tray upper paper empty sensor (PS137)	[4]	Vertical transport sensor (PS133)
[5]	Paper feed sensor (PS132)	[6]	Tray3 paper empty indicator board (PEIB/3)
[7]	Cassette set sensor (PS143)	[8]	Main tray paper empty sensor (PS134)
[9]	Shifter stop / lower limit position sensor (PS138)	[10]	Division board sensor (PS142)
[11]	Shifter home sensor (PS139)	[12]	Sub tray paper empty sensor (PS140)
[13]	Sub tray paper remaining amount sensor (PS141)	[14]	PC control board (PCCB)
[15]	Main tray paper near empty sensor (PS135)	-	-

1.4.2 Load

[1]	Vertical transport motor (M132)	[2]	Elevator motor (M134)
[3]	PC dehumidifier heater (DH111)	[4]	Shifter motor (M133)
[5]	Paper feed motor (M131)	-	-

1.5 LU-204 (Option)

[1]	LU door switch (MS1)	[2]	Near empty sensor /2 (PS6)
[3]	Paper empty sensor (PS4)	[4]	Tray LED (LED)
[5]	Dehumidification heater (DH)	[6]	Tray set sensor/2 (PS7)
[7]	Paper feed sensor (PS3)	[8]	Upper limit sensor (PS2)
[9]	Tray set sensor/1 (PS1)	[10]	Lift-up motor (M1)
[11]	Paper feed motor (M2)	[12]	Transport motor (M3)
[13]	LU drive board (LUDB)	[14]	Near empty sensor /1 (PS5)

1.6 LU-301 (Option)

[1]	LU door switch (MS1)	[2]	Near empty sensor /2 (PS6)
[3]	Paper empty sensor (PS4)	[4]	Tray LED (LED)
[5]	Dehumidification heater (DH)	[6]	Paper feed sensor (PS3)
[7]	Upper limit sensor (PS2)	[8]	Tray set sensor (PS1)

[9]	Lift-up motor (M1)	[10]	Paper feed motor (M2)
[11]	Transport motor (M3)	[12]	LU drive board (LUDB)
[13]	Near empty sensor /1 (PS5)	-	-

1.7 JS-506 (Option)

[1]	Exit tray1 full sensor (PS2)	[2]	Tray shift motor (M1)
[3]	Tray shift home sensor (PS1)	[4]	JS control board (JSCB)

1.8 FS-533 (Option)

[1]	Paper conveyance motor (M101)	[2]	Stapler movement motor (M107)
[3]	Alignment roller motor (M103)	[4]	Paper exit motor (M102)
[5]	Exit roller lift up motor (M104)	[6]	Paper exit roller solenoid (SD103)
[7]	Alignment motor/F (M105)	[8]	Alignment motor/R (M106)
[9]	Paper surface detect solenoid (SD101)	[10]	Tray lift up motor (M109)
[11]	Batch solenoid (SD102)		

[1]	Paper feed sensor (PS101)	[2]	Alignment plate home sensor/F (PS108)
[3]	Pick up roller position sensor (PS105)	[4]	Stapler relay board (STREYB)
[5]	Stapler home sensor (PS110)	[6]	Finisher lock switch (SW1)
[7]	Paper exit tray home sensor (PS107)	[8]	Paper surface detect sensor/2 (PS104)
[9]	Paper weight lever sensor (PS103)	[10]	Paper surface detect sensor/1 (PS102)
[11]	Alignment plate home sensor/R (PS109)	[12]	FS control board (FSCB)

1.9 PK-519 (Option)

[1]	Punch motor (M201)	[2]	Paper feed sensor (PS201)
[3]	PK control board (PKCB)	[4]	Punch dust full sensor (PS205)
[5]	Puncher drive cam sensor (PS203)	[6]	Puncher home sensor (PS204)
[7]	Punch motor sensor (PS202)	-	-

1.10 FS-534 (Option)

[1]	Main tray up/down motor (M11)	[2]	FNS discharge motor (M3)
[3]	FNS entry transport motor (M2)	[4]	FNS paddle motor (M5)
[5]	Receiving roller retraction motor (M4)	[6]	Trailing edge stopper motor (M6)
[7]	Alignment motor/Front (M7)	[8]	Bundle eject motor (M10)
[9]	Pre-eject drive motor (M9)	[10]	Paper receiving control motor (M12)
[11]	Side stapler movement motor (M13)	[12]	Alignment motor/Rear (M8)

[1]	Stacker motor sensor (PS25)	[2]	Sub tray full detection sensor/out (PS9)
[3]	Main tray upper position detect switch (SW2)	[4]	Pre-eject away sensor (PS22)
[5]	Sub tray exit sensor (PS8)	[6]	Main tray exit sensor (PS16)
[7]	Pre-eject home sensor (PS21)	[8]	Trailing edge stopper home position detection sensor (PS20)
[9]	FNS entrance sensor (PS4)	[10]	Upper cover open/close detection sensor (PS32)
[11]	Sub tray full detection sensor/in (PS10)	[12]	Exchange folded paper output sensor (PS30)
[13]	Saddle exit sensor (PS5)	[14]	Receiving roller retraction sensor (PS11)
[15]	Upper paddle home position detection sensor (PS14)	[16]	Front door open detect switch (SW1)
[17]	Alignment plate/F home sensor (PS12)	[18]	Main tray upper sensor/in (PS7)
[19]	Paper delivery control sensor (PS28)	[20]	Stapler position sensor (Center) (PS24)
[21]	Gripper motor sensor (PS17)	[22]	Main tray upper position sensor/F (PS27)
[23]	Main tray full detection sensor (PS29)	[24]	Pre-eject encoder sensor (PS15)

[25]	Staple stacker paper detection sensor (PS31)	[26]	Gripper position detection sensor (PS19)
[27]	Stapler home position sensor (Rear) (PS23)	[28]	Main tray upper position sensor/R (PS26)
[29]	Main tray upper sensor/out (PS6)	[30]	Alignment plate/R home sensor (PS13)
[31]	Gripper home position sensor (PS18)	[32]	FS control board (FSCB)

[1]	3rd exit tray full sensor (PS1)	[2]	RU entrance sensor (PS2)
[3]	RU cover open/close detection sensor (PS3)	[4]	RU transport motor (M1)

1.11 PK-520 (Option)

[1]	Punch dust full sensor/out (PS4)	[2]	Punch dust full sensor/in (PS5)
[3]	Punch motor sensor (PS3)	[4]	Punch drive motor (M1)
[5]	Punch position sensor (PS2)	[6]	Punch home sensor (PS1)

1.12 SD-511 (Option)

[1]	Alignment motor (M3)	[2]	SD transport motor (M1)
[3]	Paper discharge control motor (M2)	[4]	Center fold guide motor (M8)
[5]	Tri-folding guide motor (M6)	[6]	SD paddle motor (M7)
[7]	Stopper solenoid (SD1)	[8]	Stopper drive motor (M4)
[9]	Center fold knife motor (M9)	[10]	Center fold roller motor (M5)

[1]	SD entrance sensor (PS1)	[2]	Center staple/fold stacker paper detect sensor (PS3)
[3]	Curl cover detection sensor (PS2)	[4]	Alignment home sensor (PS4)
[5]	Tri-folding gate home sensor (PS11)	[6]	Guide home sensor (PS7)
[7]	Paddle home sensor (PS5)	[8]	Stopper home sensor (PS6)
[9]	Booklet tray empty detection sensor/out (PS14)	[10]	Fold exit sensor (PS12)
[11]	Booklet tray empty detection sensor/in (PS13)	[12]	Center fold knife home sensor (PS8)
[13]	SD drive board (SDDDB)	-	-

1.13 FS-535 (Option)

[1]	Sub tray switching gate solenoid (SD3)	[2]	Bypass transport motor (M3)
[3]	2nd transport motor (M2)	[4]	Stacker transport motor (M10)
[5]	Trailing edge paddle up/down motor (M15)	[6]	1st transport motor (M1)
[7]	Center staple switching gate solenoid (SD1)	[8]	Main tray up/down motor (M5)
[9]	Bypass switching gate solenoid (SD2)	[10]	Stapler movement motor (M13)
[11]	Switchback gate solenoid (SD4)	[12]	Alignment plate motor/Fr (M11)
[13]	Alignment plate motor/Rr (M12)	[14]	Trailing edge stopper motor (M19)
[15]	Stacker plate drive motor (M17)	[16]	Paddle motor (M16)
[17]	Exit roller motor (M4)	[18]	Leading edge paddle up/down motor (M18)
[19]	Paper output roller motor (M6)	-	-

[1]	Shutter open/close switch (SW2)	[2]	Leading edge paddle home sensor (PS16)
[3]	Paper output roller home sensor (PS10)	[4]	Trailing edge paddle home sensor (PS20)
[5]	Trailing edge stopper standby sensor/2 (PS42)	[6]	Trailing edge paddle sensor (PS19)
[7]	Stapler position sensor/1 (PS50)	[8]	PK punch scraps box set sensor (PS304)
[9]	FS control board (FSCB)	[10]	FNS Entrance sensor (PS1)
[11]	Z-fold punch regist sensor (PS2)	[12]	SD exit sensor (PS12)
[13]	Main tray lower limit sensor (PS5)	[14]	Trailing edge stopper standby sensor/1 (PS23)
[15]	FNS door open/close switch (SW1)	[16]	Stapler position sensor/2 (PS51)
[17]	Trailing edge stopper home sensor (PS22)	[18]	Stapler position sensor/4 (PS53)
[19]	Stapler position sensor/3 (PS52)	[20]	Alignment plate motor home sensor/Fr (PS17)
[21]	Main tray upper limit sensor/in (PS44)	[22]	Staple paper exit top surface sensor (PS7)
[23]	Stacker plate home sensor (PS11)	[24]	Shutter open/close sensor (PS24)
[25]	Staples stacker empty sensor (PS15)	[26]	Stacker entrance sensor (PS3)

[27]	Main tray top surface sensor (PS4)	[28]	Alignment plate motor home sensor/Rr (PS18)
[29]	Sub tray full sensor (PS9)	[30]	Sub tray exit sensor (PS8)
[31]	Main tray upper limit sensor/out (PS45)	[32]	Main tray empty sensor (PS6)

[1]	RU transport sensor (PS60)	[2]	RU door open/close sensor (PS61)
[3]	RU transport motor (M35)	[4]	RU control board (RUCB)

1.14 PK-521 (Option)

[1]	Punch drive motor (M301)	[2]	PK punch hole position sensor/1 (PS307)
[3]	PK punch scraps box set sensor (PS304)	[4]	Punch control board (PKCB)
[5]	PK punch hole scraps box full sensor (PS302)	[6]	Paper size detect board (PSDTB)
[7]	Punch oscillating motor (M302)	[8]	PK punch home sensor (PS303)
[9]	PK punch hole position sensor/2 (PS301)	-	-

1.15 SD-512 (Option)

[1]	Alignment motor (M3)	[2]	SD transport motor (M1)
[3]	Paper receiving guide control motor (M2)	[4]	Tri-fold guide motor (M6)
[5]	Center fold change motor (M8)	[6]	SD paddle motor (M7)
[7]	Stopper drive motor (M4)	[8]	Stopper solenoid (SD1)
[9]	Paper transport belt motor (M34)	[10]	Center fold roller motor (M5)
[11]	Center fold knife motor (M9)	-	-

[1]	SD entrance sensor (PS1)	[2]	Stacker paper sensor (PS3)
[3]	Alignment home sensor (PS4)	[4]	Paper receiving guide home sensor (PS2)
[5]	Center fold change gate home sensor (PS11)	[6]	Tri-fold guide home sensor (PS7)
[7]	Paddle home sensor (PS5)	[8]	Stopper home sensor (PS6)
[9]	SD exit full sensor (PS35)	[10]	SD exit tray lift sensor (PS43)
[11]	SD exit tray limit sensor (PS41)	[12]	SD exit sensor (PS12)
[13]	Center fold home sensor (PS8)	[14]	SD drive board (SDDDB)

1.16 JS-602 (Option)

[1]	3rd Entrance switching solenoid (SD401)	[2]	Job tray paper exit sensor (PS402)
[3]	Job tray full sensor (PS403)	[4]	Job tray cover sensor (PS401)

1.17 PI-505 (Option)

[1]	PI drive board (PIDB)	[2]	Transfer clutch /Lw (CL202)
[3]	Registration clutch (CL203)	[4]	Paper empty sensor /Up (PS202)
[5]	Paper size VR /Up (VR201)	[6]	Paper entrance sensor /Up (PS201)
[7]	Tray upper limit sensor /Up (PS204)	[8]	Paper entrance sensor /Lw (PS206)
[9]	Pick-up solenoid /Lw (SD202)	[10]	PI control board (PIOB)
[11]	Pick-up solenoid /Up (SD201)	[12]	Upper door open/close switch (MS205)
[13]	Tray upper limit sensor /Lw (PS209)	[14]	Paper size VR /Lw (VR202)
[15]	Paper empty sensor /Lw (PS207)	[16]	Paper set sensor /Lw (PS208)
[17]	Paper set sensor /Up (PS203)	[18]	L size sensor /Lw (PS212)
[19]	Tray lift motor /Lw (M202)	[20]	Tray lower limit sensor /Lw (PS210)
[21]	Tray lower limit sensor /Up (PS205)	[22]	Transfer motor (M203)
[23]	Tray lift motor /Up (M201)	[24]	Transfer clutch /Up (CL201)

1.18 ZU-606 (Option)

[1]	Main motor cooling fan (FM601)	[2]	Punch shift motor (M605)
[3]	Punch shift home sensor (PS605)	[4]	ZU control board (ZUCB)
[5]	Circuit breaker/2 (CBR2)	[6]	Circuit breaker/1 (CBR1)
[7]	Power relay (RY1)	[8]	Noise filter (NF1)
[9]	Coil (COIL)	[10]	DC power supply/1 (DCPU1)
[11]	Door switch (MS602)	[12]	DC power supply/2 (DCPU2)
[13]	Punch scraps box set sensor (PS607)	[14]	Punch scraps full sensor (PS608)
[15]	Punch scraps conveyance motor (M607)	-	-

[1]	Main motor (M606)	[2]	Conveyance encoder sensor (PS610)
[3]	Gate solenoid/Lw (SD601)	[4]	Registration motor (M601)
[5]	2nd folding stopper home sensor (PS604)	[6]	Exit sensor (PS609)
[7]	2nd folding stopper motor (M603)	[8]	Gate solenoid/Up (SD602)
[9]	Conveyance sensor (PS601)	[10]	1st folding stopper motor (M602)
[11]	1st folding stopper home sensor (PS603)	-	-

[1]	Punch motor (M604)	[2]	Punch home sensor (PS606)
[3]	Paper size detect board (PSDTB)	[4]	Punch switchover switch (MS601)
[5]	Punch switchover motor (M608)	[6]	Punch clutch (CL601)

O THEORY OF OPERATION bizhub C554/C454

1. INTERFACE SECTION

1.1 Configuration

1.1.1 Front side

[1]	Control panel	[2]	IC card reading position *
[3]	Total counter	[4]	Lower front door
[5]	Remaining paper level display (Blinking: near empty, Lit up: empty)	[6]	Main power switch (SW1)
[7]	Upper front door	-	-

• *: When a MFP main body is equipped with an optional authentication unit AU-201 and MK-735.

(1) Front door inside

[1]	Total counter	[2]	Lower front door (open position)
[3]	Main power switch (SW1)	[4]	Upper front door (open position)

(2) Control panel section

[1]	Keypad (when the touch panel is opened)	[2]	Start key (Lit up blue: Job is enabled, Lit up orange: Job is disabled)
[3]	Status indicator (Blinking: During printing)	[4]	Data indicator (Blinking: Receiving a job, Lit up: Job is currently)
[5]	Power key (Lit up blue: Sub power is turned ON, Blinking in blue: Low power/Sleep mode, Lit up orange: Sub power is turned OFF, Blinking in orange: ErP auto power off mode)	[6]	Status indicator (Blinking: Warning occurring, Lit up: Abnormal occurring)
[7]	Touch panel	-	-

1.1.2 Right side

[1]	Rear upper side	[2]	Rear right cover
[3]	Rear lower side	[4]	Front side

(1) Front side

NOTE

- Use utmost care when unplugging or plugging the cable. If the USB cable extended from the USB port at the rear portion is unplugged, the USB port at the front side is no longer operational.

[1]	Stylus pen	[2]	USB port (Type-B, standard)
[3]	Voice guidance output terminal *	[4]	USB port (Type-B, optional) *

- *: When the optional local interface kit EK-606/EK-607 is mounted.

(2) Rear upper side

[1]	LINE terminal 1 (for telephone main line) *1	[2]	TEL terminal 1 (for external telephone main line) *1
[3]	FAX kit FK-511 (for main line) *1	[4]	FAX kit FK-511 (for line 2) *2
[5]	Not used	[6]	LINE terminal 2 (for telephone line 2) *2

- *1: When only one optional FK-511 unit is mounted
- *2: When two optional FK-511 units are mounted

NOTE

- If only one optional FK-511 is to be mounted, be sure to use the right-hand side for the main line use.

(3) Rear lower side

NOTE

- The USB cable is extended up to the USB port at the front side. If the cable is unplugged from the USB port, therefore, the USB port at the front side is no longer operational. Use utmost care when unplugging or plugging the cable.
- Sliding the service port cover will reveal the service port dedicated to firmware upgrading.
- The service port cover is provided with a service port sensor that detects that the cover is opened or closed.
- When the service port sensor is blocked, the machine determines that the cover is closed.

NOTE

- For details of "firmware upgrading", see "[J REWRITING OF FIRMWARE](#)".
- Be sure to close the service port cover after the firmware upgrading is completed.

• *: Option

2.2 Drive

[1] Scanner motor (M201)	[2] Scanner drive cable/R
[3] Mirror unit	[4] LED exposure unit (LU201)
[5] Scanner drive cable/F	- -

2.3 Operation

2.3.1 LED exposure unit

- LEDs (Light Emitting Diodes) are used for the light source of the scanner section for power saving.
- The LED exposure unit has an LED board at both ends, and the LED emit light from both ends.
- Light emitted from the LED travels along the light guide.
- The original is irradiated with direct light that has traveled along the light guide and indirect light reflected from the reflector, which ensures that the original is exposed to steady, uniform light.

[1]	Light guide	[2]	Original glass
[3]	Original	[4]	Direct light
[5]	Indirect light	[6]	Reflector
[7]	LED board	-	-

2.3.2 When the power is ON

1. When the power is turned ON, the LED exposure unit moves to the home position.
2. With the LED exposure unit located at the home position, the LEDs are turned ON and then the exposure unit moves to the shading position (under the shading correction sheet).
3. The gain value of the CCD sensor output voltage to R, G, and B is adjusted.
4. After adjusting the gain value, a shading correction is performed.
5. The LED exposure unit moves in the return direction and stops at the home position.
6. When the DF is opened placement of the original, the LED exposure unit moves to the original size detection position.

[1]	Original size detection position	[2]	Shading position
[3]	Home position	[4]	LED exposure unit (LU201)
[5]	Shading correction	[6]	The LED turns ON

2.3.3 Control when the Start key is pressed

(1) Original scanning mode

- Original scanning mode has two types: Original cover mode and DF mode.

(a) Original cover mode

1. Turning the Start key ON will turn the LED ON.
2. The LED exposure unit moves in the return direction and stops at the shading position. At the shading position, the gain adjustment is made.
3. The LED exposure unit moves in the return direction and stops at the scan start position.
4. To start a scan, the LED exposure unit moves from the scan start position to the leading edge of an original while performing shading correction.
The exposure unit will start reading the original image from the leading edge.
The unit will finish reading the image at the trailing edge of the original.
5. The LED will turn OFF when the reading is complete.

6. The LED exposure unit returns from the position of the trailing edge of the original to the shading position, and then stops at original size detection position.
It scans only once even for the color-copies, since R, G, and B data will all be memorized in one scanning.

[1]	Original size detection position	[2]	Shading position
[3]	Scan start position	[4]	Home position
[5]	Gain adjustment	[6]	Read original
[7]	Return to shading position	[8]	The LED turns ON
[9]	Trailing edge of the image	-	-

(b) DF mode

- The original fed by the document feeder will be read at the DF original glass for. The LED exposure unit will move to the reading position and stops. The original will be read as the paper is transferred.

[1]	Shading position	[2]	Home position
[3]	Original reading position	[4]	Shading correction
[5]	Read original	[6]	The LED turns ON

(2) Original scanning control

- The light reflected off the exposed original reaches the CCD sensor via the lens.
- The CCD sensor outputs an electric signal (analog) that varies according to the intensity of the light.
- One CCD sensor has a photoreceiver that individually responds to each of the three primary colors of R, G, and B.
- The electric signal is converted to digital data for each of R, G, and B by the CCD board (CCDB), becoming individual digital signals.
- Analog-to-digital conversion is made according to an instruction given by the MFP board (MFPB).

[1]	CCD sensor	[2]	Scanning direction
[3]	Sub scanning direction	[4]	Main scanning direction

(a) Calibration

The following adjustment and correction (calibration) are made before the original is scanned, so that the image of the original can be adequately read. For details, see "O.19.1 Scanner section image processing block diagram".

- Gain adjustment
- Shading correction

2.3.4 Original scanning area

- Original scanning areas vary depending on a scanning mode.

(1) Original cover mode

- Main scanning direction: Max. 297.0 mm
- Sub scanning direction: Max. 431.8 mm

(2) DF mode

(a) Scanning at 400 dpi or less

- Main scanning direction: Max. 297.0 mm
- Sub scanning direction: Max. 1,000.0 mm

(b) Scanning at 600 dpi

- Main scanning direction: Max. 297.0 mm
- Sub scanning direction: Max. 432.0 mm

2.3.5 Original size detection control

(1) Detection method

- For the sub-scanning (length) direction, the fixed reflective original size sensor (one beam) is used.
- For the main scanning (width) direction, the CCD is used.
- A standard original size is determined by the state of the original size sensor, either the activated or deactivated state, and the width detected by the CCD.
- For a nonstandard size, the control sets a smallest possible standard size that is larger than the nonstandard size in question to thereby prevent void image.

[1]	CCD board (CCDB)	[2]	Original size sensor/1 (PS204)

-	ON	A3	-	-	-	-	8 ¹ / ₂ x 14	-	B4	11 x 17	A3

- *: Option

(3) Detection timing

- For the sub-scanning (length) direction, the LED is turned ON when the angle sensor is activated from the deactivated state and timing is established according to the state of the original size sensor.
- Detection is made twice for the main scanning (width) direction, one when the angle sensor is activated and the other when the original cover sensor is activated.
- The original size is reset when the original cover sensor is deactivated from activated state as a result of the DF being raised.

2.3.6 Image processing

The image processing has following items. For details, see “O.19.1 Scanner section image processing block diagram”.
Scanner section image processing block diagram

- Photoelectric conversion
- Analog-to-digital conversion

3. WRITE SECTION (PH SECTION)

3.1 Configuration

[1]	G3 lens	[2]	Skew correction motor/C (M15)
[3]	Skew correction motor/M (M16)	[4]	Skew correction motor/Y (M17)
[5]	G2 lens	[6]	G1 lens
[7]	Polygon motor (M14, for C554)	[8]	Cylindrical lens
[9]	Synthetic mirror (Y,M,C,K)	[10]	Laser drive board (LDDDB)
[11]	Return mirror (light source)	[12]	Index board (INDEXB)
[13]	Index lens	[14]	Index mirror

3.2 Operation

3.2.1 Outline

- The surface of the photo conductor is irradiated with a laser light and an electrostatic latent image is thereby formed.
- The PH unit has a four color exposure unit single-piece configuration. A semiconductor laser is provided for each of four different colors. A single polygon motor is used to make a scan.
- In order to reduce the noise when rotating the polygon motor, the C554 has a motor case and the C454 has a glass plate installed.
- The polygon mirror has seven faces.
- A rotating polygon mirror is irradiated with a laser light emitted from the laser diode on the laser drive board to let the laser light scan.
- To achieve a resolution of 1200 dpi, the PH unit incorporates the two-beam array LD.
- The two-beam array laser diode consists of two elements arranged vertically. Two lines are scanned with two laser beams emitted from these two elements through a single face of the polygon mirror.

[1]	Transfer belt	[2]	Photo conductor K
[3]	Two line, One scan	[4]	Photo conductor rotation direction
[5]	Return mirror/1	[6]	G2 lens
[7]	G1 lens	[8]	Polygon mirror
[9]	Laser diode	[10]	Return mirror/3
[11]	G3 lens	[12]	Return mirror/2
[13]	Photo conductor	[14]	Beam

3.2.2 Laser exposure process

(1) Operation

1. The laser light of each color enters the cylindrical lens via the synthetic mirror and return mirror (light source).
2. At the cylindrical lens, each laser light is condensed in the vicinity of the polygon mirror.
3. Since the angle of incidence for each color of laser light varies, the laser light reflected by the polygon mirror is reflected in a different angle for each color.
4. The condensing angle of each color of laser light is corrected by the G1 and G2 lenses and then reaches each return mirror.
5. The K laser light is condensed on the photo conductor surface via the G3 lens and return mirror/1. The Y laser light is condensed on the photo conductor surface via the return mirror/1, G3 lens, and return mirror/2. The M laser light is condensed on the photo conductor surface via the return mirror/1, G3 lens, and return mirror/2. The C laser light is condensed on the photo conductor surface via the return mirror/1, G3 lens, return mirror/2, and return mirror/3.

[1] Laser diode/K (LD/K)	[2] Laser diode/C (LD/C)
[3] Laser diode/M (LD/M)	[4] Laser diode/Y (LD/Y)
[5] Return mirror (light source)	[6] Index board (INDEXB)
[7] Index lens	[8] Index mirror

[11] G2 lens	[12] Return mirror/1
[13] G3 lens	[14] Return mirror/2
[15] Return mirror/3	- -

3.2.3 Laser emission timing

- After a print cycle has been started, when the stable rotation signals of photo conductor and polygon motor are detected, a laser ON signal is output from the printer control board.
- The laser ON signal causes each laser diode to turn ON and emit a laser beam.
- After passing through the return mirror (light source), cylindrical lens, polygon mirror, G1 lens, G2 lens, index mirror, and index lens, the K laser light is applied to the index board. This generates an index signal.
- This index signal has a function of keeping the same laser light emission timing per every one line in the main scanning direction.
- The index signal is generated with the K laser light only. The laser light emission timing for other colors is determined with reference to K.
- If the index signal is not detected within a predetermined period of time, the machine determines that it is a laser emission fault, displaying "trouble code: C4501 laser malfunction".
- The machine continuously monitors the index signal. If the index signal cannot be detected at regular intervals, the machine determines that it is a laser emission fault, displaying "trouble code: C4501 laser malfunction".

[1] Laser diode/K (LD/K)	[2] Laser diode/C (LD/C)
[3] Laser diode/M (LD/M)	[4] Laser diode/Y (LD/Y)
[5] Index board (INDEXB)	[6] Index lens

[7] G2 lens	[8] Polygon motor (M14)
-------------	-------------------------

3.2.4 Laser emission stop

Emission of the laser beam is stopped if any of the following conditions is encountered during printing:

- End of a print job
- Laser emission of Y, M, and C is stopped if the print mode is changed from color to black during printing.
- The lower front door or any other door is opened.
- A misfeed occurs.
- A malfunction occurs.

3.2.5 Laser emission area

(1) Main scanning direction

- The print start position in the main scanning direction is determined by the main scanning print start signal (/HSYNC) that is output from the printer control board and the width of the paper.
- The laser emission area is determined by the paper size. The area of 3 mm/0.118 inch on both edges of the paper is, however, the void image area.

(2) Sub scanning direction

- The print start position in the sub scanning direction is determined by the image write start signal (/TOD) that is output from the printer control board and the length of the paper.
- The laser emission area is determined by the paper size. However, there are void areas that are 4.2 mm/0.165 inch from the leading edge and 3 mm/0.118 inch from the trailing edge of paper. (With the thin paper, the area of 4.2 mm/0.165 inch from the leading edge of paper is the void image area.)

[1] Void width: 3 mm/0.118" *	[2] Void width: 3 mm/0.118" *
[3] Void width: 4.2 mm/0.165"	[4] Void width: 3 mm/0.118" *

- *: Void width is 4.2 mm/0.165" during PC print.

3.2.6 Color registration control (color shift correction) system

(1) Overview of the registration control

- In a tandem engine, each four different color has an independent image reproduction process. Color shift may occur because of variations in part accuracy. The color registration control system automatically detects color shift and correct color shift in the main and sub scanning directions.
- The color shift detection sequence proceeds as follows. A pattern each is produced at the front and rear on the transfer belt. Each of IDC sensors at the front and rear reads the corresponding pattern. The amount of color shift in each of the sub-scanning and main scanning directions is then calculated and stored in memory.
- The amount of color shift in the sub scanning direction is read from the pattern falling within the sub scanning detection range. That in the main scanning direction is read from the entire pattern.
- From data readings, the machine calculates how much the position of each of the different colors should be corrected. Based on the calculated data, the machine controls each dot during image output, thereby correcting the color shift amount.

[1]	Detection area for sub scanning direction	[2]	Movement direction of the transfer belt
[3]	Detection area for main scanning direction	-	-

[1]	IDC sensor/Rr (IDCS/Rr)	[2]	IDC sensor/Fr (IDCS/Fr)
-----	-------------------------	-----	-------------------------

(2) Types of color shift

- Color shift is misalignment of the images of three different colors, yellow (Y), magenta (M), and cyan (C), with respect to the image of black (K).
- Four different types of color shift can occur: color shift in the main scan direction, color shift due to overall scaling error in the main scan direction, color shift in the sub scan direction, and image skew.

(3) Correction of color shift in the main scan direction

- If the image of each color (Y, M, C) is misaligned with respect to the image of black (K) in the main scan direction, changing the write start timing in the main scan direction can correct the color shift. Color shift correction needs to be performed separately for the respective colors (Y, M, C).
- Color shift correction control is activated when the image stabilization sequence is started.

* When the image of magenta is misaligned with respect to the image of black (K)

[1]	Rotational direction of the transfer belt	[2]	Transfer belt
[3]	Color shift	[4]	Black (K)

[5] Magenta (M)	[6] No color shift
[7] Before correction	[8] After correction

(4) Correction of color shift due to overall scaling error in the main scan direction

- If the image of each color (Y, M, C) and the image of black (K) vary in length in the main scan direction, changing the clock frequency of the laser diode can correct the length difference in the main scan direction. Color shift correction needs to be performed separately for the respective colors (Y, M, C).
 - Color shift correction control is activated when the image stabilization sequence is started.
- * When the image of magenta is longer than the image of black (K)

[1] Rotational direction of the transfer belt	[2] Transfer belt
[3] Color shift	[4] Color shift
[5] Magenta (M)	[6] Black (K)
[7] No color shift	[8] Before correction
[9] After correction	- -

(5) Correction of color shift in the sub scan direction

- If the image of each color (Y, M, C) is misaligned with respect to the image of black (K) in the sub scan direction, changing the write start timing in the sub scan direction can correct the color shift. Color shift correction needs to be performed separately for the respective colors (Y, M, C).
 - Color shift correction control is activated when the image stabilization sequence is started.
- * When the image of magenta is misaligned with respect to the image of black (K) in the sub scan direction

[1] Rotational direction of the transfer belt	[2] Transfer belt
[3] Black (K)	[4] Color shift
[5] Magenta (M)	[6] No color shift
[7] Before correction	[8] After correction

(6) Skew (image skew)

- If the image of each color (Y, M, C) is tilted against the image of black (K) in the sub scanning direction, the image skew can be corrected by tilting the G3 lens of the print head unit. Image skew correction needs to be performed separately for the respective colors (Y, M, C).
- Image skew is adjusted at timing when the image stabilization sequence is started.

* When the image of magenta is tilted against the image of black (K)

[1]	Rotational direction of the transfer belt	[2]	Transfer belt
[3]	Color shift	[4]	Black (K)
[5]	No color shift	[6]	Magenta (M)
[7]	Before correction	[8]	After correction

3.2.7 Color skew correction control

- Temperature may change inside the print head unit and the components can change over time. This may cause color skew problems. To prevent the problems, individual G3 lenses that correspond to Y, M, and C respectively have a color skew auto adjustment mechanism.
- When the skew correction motor runs, the G3 lenses moves up and down to perform an automatic color skew correction.

[1]	G3 lens	[2]	Skew correction motor
-----	---------	-----	-----------------------

[1]	G3 lens tilting shaft	[2]	G3 lens: The lens is tilted to correct color skew.
[3]	Skew correction motor	[4]	Drive gear
[5]	G3 lens drive cam	-	-

(1) Skew adjustment method

- By turning the skew correction motor, the G3 lens moves in the direction of the arrow, moving the beam position on the photo conductor.
- Only cyan uses a greater number of turnover mirrors, one more than yellow or magenta does, which results in the direction in which the beam moves being different from that of yellow and magenta.

Skew adjustment direction: Direction in which the beam moves when the skew correction motor/Y, M, C rotates clockwise

(2) Skew correction motor adjustment value panel display

Panel display in [Service Mode] -> [Machine] -> [Print Head Skew Adj.].

[1]	This displays the initial fixed value of the print head, in steps.	[2]	Shows the skew correction value after the image stabilization process, in steps.
[3]	Shows the skew correction value after the image stabilization process relative to that of the last image stabilization process, in steps.	-	-

(3) Operation timing

- The color registration control (color shift correction) and the color skew correction control operate at one time.
- The color skew amount is calculated for each color using the numeric value calculated with the sub-scanning registration pattern detected and based on the previous correction data.

3.2.8 Skew adjustment/skew adjustment reset

- If the "skew correction control" cannot be run for some reason, perform a "Print Head Skew Adj./Print Head Skew Reset" in Service Mode.
- For details of the adjusting procedures, see "I.11.3.9 Print Head Skew Adj."

(1) Possible conditions and causes

- The print head unit is replaced with a new one.
- The alarm code "P-14: skew correction trouble" is displayed.
- A door is opened or the main power switch is turned OFF during color skew correction control, causing the skew correction sequence to be halted; as a result, the current position of the skew correction motor is unknown.

3.2.9 PH unit temperature detection control

- The temperature inside the PH unit is measured at intervals of 30 sec. by the PH temperature sensor mounted in the PH unit. The mounting location of the PH temperature sensor is differ from bizhub C554 and bizhub C454.
- The detected temperature data is recorded to form part of the environmental information data and used for controlling, for example, color registration, 1st transfer output determination, and transfer roller cleaning.

[1]	G1 lens	[2]	PH temperature sensor (TH5, for C454)
-----	---------	-----	---------------------------------------

3.2.10 PH window cleaning

- The PH window, if contaminated, blocks the path of the laser beam and the surface of the photo conductor can no longer be exposed properly. This could result in image problems, including white bands or white lines on the print image.
- The PH window is provided with a cleaning guide that prevents any image problem caused by a dirty PH window from occurring.

[1]	PH window cleaning tool	-	-
-----	-------------------------	---	---

(1) PH window cleaning procedures

- By slowly pulling the PH window cleaning tool and pushing it back to its original position, the cleaning materials in the PH window cleaning tool remove any foreign matter attached to the surface of the PH window.
- The machine is not equipped with any mechanism that automatically cleans the PH window. This makes it necessary to clean the PH window manually at regular intervals.

(2) PH window cleaning timing

- Clean the PH window of each color when the drum unit/K is replaced with a new one.

3.2.11 Image processing

The following image processing procedures relating to the write section are available. For details, see "[O.19.1 Scanner section image processing block diagram](#)".

(1) Write section image processing block diagram

- Resolution conversion processing in the main scanning direction/movement processing
- Resolution conversion processing in the sub scanning direction
- Main scanning position correction
- Speed conversion
- Modulation

4. PHOTO CONDUCTOR SECTION

4.1 Configuration

[1]	Drum unit	[2]	Transfer belt
[3]	Photo conductor	[4]	Erase LED
[5]	Toner collecting screw	[6]	Cleaning blade
[7]	Charge corona	[8]	Developing unit

[1]	Transport motor (M1)	[2]	Photo conductor/K
[3]	Photo conductor/C	[4]	Photo conductor/M
[5]	Photo conductor/Y	[6]	PC motor (M2)

4.3 Operation

4.3.1 Photo conductor drive mechanism

- Two independent photo conductor motors (for color and black) are used for the drive mechanism to suppress incorrect color registration and uneven pitch.

(1) Photo conductor/K drive mechanism

- The transport motor drives the photo conductor/K.
- The transport motor is the common source that provides drive to transfer belt and lower ADU transport roller.
- Drive is transmitted to the photo conductor when the triangular-prism-shaped shaft is engaged with the mating coupling part.

[1]	Transport motor (M1)	[2]	Coupling
[3]	Photo conductor/K	[4]	Photo conductor drive gear/K

(2) Photo conductor/Y, M, C drive mechanism

- The photo conductors/Y, M, C are driven by the PC motor.
- Drive is transmitted to each of the photo conductors when the triangular-prism-shaped shaft is engaged with the mating coupling part.

[1]	PC motor (M2)	[2]	Color photo conductor drive gear/C
[3]	Coupling	[4]	Photo conductor/C
[5]	Photo conductor/M	[6]	Photo conductor/Y
[7]	Color photo conductor drive gear/Y	[8]	Color photo conductor drive gear/M

4.3.2 Photo conductor small amount rotation control

- To prevent the same surface of the photo conductor from being left to stand for a long time, the photo conductor is rotated through a small amount so that its surface sensitivity can be kept uniform.
- The following image problems can be prevented by letting the photo conductor rotate:
 - “A difference in sensitivity among different areas of the photo conductor produced as a result of humidity around the drum unit can cause a black band to occur in the image.”
 - “Ozone that stagnates near the charge corona can reduce sensitivity of the photo conductor, resulting in a white band occurring in the image.”
 - “Nitrogen oxides produced near the charge corona can cause light foggy background to occur.”
- If the Photo conductor/K is slightly rotated, the developing solenoid is switched ON and the transport motor detached, and the developing unit/K is not driven.

(1) Start timing

- The control is started under any of the following conditions:
 - “An environmental change is detected”

[1]	Photo conductor	[2]	Approximately 45 degrees
-----	-----------------	-----	--------------------------

4.3.3 Erase LED control

- The toner image on the photo conductor is transferred to the transfer belt (1st transfer).
 - The potential left on the photo conductor after the toner image is transferred is neutralized by turning ON the erase LED and any potential left on the surface of the photo conductor is neutralized.
- The neutralization of any residual potential on the photo conductor helps improve cleaning performance of toner left on the surface of the photo conductor.

[1]	Transfer belt	[2]	Erase LED
[3]	Photo conductor	-	-

(1) Erase LED ON timing

- The erase LED is turned ON when the photo conductor starts rotating.

(2) Erase LED OFF timing

- The erase LED is turned OFF after the lapse of a predetermined period of time after the corona charge output has been shut down (that is, the erase lamp is turned OFF after all charge left on the surface of the photo conductor is neutralized).

4.3.4 Photo conductor cleaning

- The toner image on the photo conductor is transferred to the transfer belt (1st transfer). Part of the toner image that is not transferred is left on the surface of the photo conductor. The residual toner is scraped off by the cleaning blade.
- Toner, which has been scraped off the surface of the photo conductor, is conveyed by the toner collecting screw toward to the front of the machine. It is discharged in the waste toner box.
- The waste toner collected in the waste toner box is disposed of when a waste toner box which is detected to be full of waste toner is replaced with a new one and the used waste toner box is discarded.

[1]	Transfer belt	[2]	Waste toner
[3]	Toner collecting screw	[4]	Cleaning blade
[5]	Photo conductor	-	-

(1) Cleaning blade

- The cleaning blade is pressed up against the surface of the photo conductor at all times. No cleaning blade retraction mechanism is provided.
- The cleaning blade scrapes residual toner off the surface of the photo conductor as the photo conductor is rotated.
- The toner collecting screw conveys the toner scraped off the surface of the photo conductor.

(2) Toner conveyance/collection mechanism

- The toner collecting screw is driven by the same motor as the photo conductor. (The toner collecting screw rotates in time with the rotation of the photo conductor.)
- Rotation of the toner collecting screw conveys toner scraped off the surface of the photo conductor toward the front of the machine.
- The toner conveyed to the front of the machine is discharged via the toner collecting port into the waste toner box.
- The toner collecting port is provided with a shutter mechanism. Mounting the waste toner box pushes the shutter at the toner collecting port, opening the toner collecting port. Removing the waste toner box, on the other hand, closes the shutter and toner is thereby prevented from spilling from the toner collecting port.

[1]	Toner collecting screw	[2]	Shutter open
[3]	Shutter	[4]	Shutter close

4.3.5 Charge corona control

- A high voltage DC negative charge is applied to the comb electrode and charge corona control plate (grid mesh) inside the charge corona. Charge discharged from the comb electrode causes the surface of the photo conductor to become uniformly charged via the charge corona control plate.
- The charge applied to the charge corona control plate is called the grid voltage (Vg) which is adjusted to an optimum value through image stabilization control.
- The comb electrode is used for the electrode. The electrode of the comb electrode type can discharge in one direction only, which helps reduce the amount of ozone produced as compared with the wire electrode.
- The charge corona voltage supplied from the high voltage unit is applied to the comb electrode and charge corona control plate of each color.

[1]	Charge corona control plate charge corona application terminal	[2]	Comb electrode charge corona application terminal
-----	--	-----	---

(1) Charge application start timing

- Charge is applied to the comb electrode and the charge corona control plate when the drive motor of the photo conductor (transport motor and PC motor) starts rotating at a steady speed stably.

(2) Charge application end timing

- Application of the charge to the comb electrode and charge corona control plate is terminated at timing when the surface of the photo conductor that faces the transfer belt as the 1st transfer output is turned OFF moves past the charge corona control plate.

4.3.6 Charge corona cleaning

- If the comb electrode becomes contaminated, the surface of the photo conductor can no longer be charged uniformly, so that uneven charge occurs. Uneven charge of the photo conductor results in irregular streaks or other print image defects.
- The comb electrode is provided with a cleaning mechanism to prevent uneven charge of the photo conductor from occurring.

[1]	Electrode cleaning tool (cleaning portion)	[2]	Comb electrode
[3]	Electrode cleaning tool (handle portion)	-	-

(1) Electrode cleaning procedures

- Slowly pull to the front the electrode cleaning tool provided for the drum unit of each color and push it back into the original position. This allows the cleaning material mounted on the electrode cleaning tool to remove any foreign matter from the leading edge portion of the comb electrode.
- The machine is not equipped with any mechanism that automatically cleans the electrode. This makes it necessary to clean the comb electrode manually at regular intervals.

(2) Electrode cleaning timing

- Clean the electrode of the drum unit when the toner cartridge/K is replaced with a new one.

4.3.7 Ozone filter

- The comb electrode generates ozone as it discharges.
- When the photo conductor is exposed to a predetermined amount of ozone for a predetermined period of time, the sensitivity of the surface of the photo conductor becomes no longer uniform, resulting in uneven sensitivity. Uneven sensitivity on the surface of the photo conductor results in white bands or other print image defects.
- To prevent the photo conductor from developing the uneven sensitivity problem, the ozone fan is provided with an ozone filter that removes ozone from the area around the photo conductor.

[1]	Ozone filter	[2]	Air exhaust port
[3]	Exhaust path	[4]	Exhaust duct
[5]	Ozone fan (FM13)	-	-

(1) Exhaust path

- Air is drawn through the air inlet port disposed at the front side of the photo conductor charge corona.
- The air that contains ozone in it flows through the path near the comb electrode and is discharged from the air exhaust port located at the back side of the photo conductor charge corona into the exhaust duct.
- The air containing ozone flows through the exhaust duct. The ozone filter located at the distal end of the exhaust duct decomposes the ozone into oxygen.
- The air, which is now harmless, is discharged out of the machine.

(2) Ozone fan rotation start timing

- The ozone fan rotates at under any of the following conditions:
 - “Initial movement”
 - “Transfer cleaning”
 - “During execution of image stabilization control”
 - “Part of operations in the Service Mode is performed”

(3) Ozone fan rotation stop timing

- The ozone fan stops rotating after the lapse of a predetermined period of time after the ozone fan rotation conditions have ended.

(4) Ozone fan stop time setting (Service Mode)

- The time to bring the ozone fan to a stop from full-speed rotation is delayed to thereby exhaust ozone from the area around the photo conductor. It can be adjusted to fall within the range of between 0 min. and 15 min. using the Service Mode (default value 0 sec.).

(5) Ozone filter replacement timing

- Replace the ozone filter with a new one at the same time that the transfer belt unit is replaced. The replacement transfer belt unit is shipped with a replacement ozone filter.

4.3.8 Drum unit detection

The drum unit of each color of toner is provided with a DC set board. The board detects set of the corresponding drum unit.

[1]	Drum unit	[2]	DC set board
-----	-----------	-----	--------------

(1) Unit mounting detection

(a) Detection timing

- The unit mounting detection control is performed under any of the following conditions:
 - “The power switch is turned ON (with the front door and right door are closed)”
 - “The front door or right door is opened and closed with the power switch in ON position”

(b) Operation when it is detected that no units are mounted

- The message “Drum Unit Installation Error” appears on the control panel and the machine prohibits initiation of any new print cycle. The message “Drum Unit Installation Error” disappears as soon as a drum unit is mounted.

(2) New article detection

(a) Detection timing

- The new article detection control is performed if it is determined through the "unit mounting detection" control that the drum unit is correctly mounted in place.

(b) Operation when the drum unit is determined not to be new

- The new article detection control is terminated.

(c) Operation when the drum unit is determined to be new

- The life counter of the drum unit is reset to zero and the control proceeds to the life detection control.
- The result of the new article detection is recorded in the SSD board of the machine.
- The life counter is available for the drum unit of each color. The counter value is recorded in the SSD board of the machine.

(3) New article detection-disabled mode

- No new article detection control is performed for the drum unit when the new article detection-disabled mode is used.
- The new article detection-disabled mode should be used only for troubleshooting purposes.

NOTE

- See "I.12.3.9.(3).(a) New Release Disable mode" for more detailed operating precautions.

4.3.9 Drum unit life detection

(1) Counter life determination

- Each of the printed counter and the drum rotation time counter has its own threshold value to determine its own life. If the printed counter or drum rotate time counter value reaches the threshold, the machine determines that the drum unit has reached a new state.

[1]	Reaching life display (reaching life threshold value)	[2]	Life stop display (life stop threshold value)
[3]	Drum unit (new article)	[4]	Image guaranteed range
[5]	Outside image guaranteed range	[6]	Drum unit (life end)

(2) Drum unit life determination timing

- The life determination control is performed under any of the following conditions:
 - "The power switch is turned ON (with the front door and right door are closed)"
 - "The machine exits the sleep mode"
 - "The front door or right door is opened and closed with the power switch in ON position"
 - "Every print"

(3) Drum unit life display

- The life reaching screen appears when the count of the printed counter or the drum rotation time counter reaches the reaching life threshold (print enabled, outside image guaranteed range).
- The life stop screen appears when the count of the printed counter or the drum rotation time counter reaches the life stop threshold (print prohibited).
- The life stop screen differ from the screen that "User" is selected on System2/Unit Change in Service Mode.
- Only L code will be displayed instead of life reaching or life stop screen by changing the Software Switch Setting in Service Mode.
(In [Service Mode] -> [System 2] -> [Software Switch Setting], set the switch No.51 to [00010000] at Bit assignment/[10] at HEX assignment.)

[1] New article	[2] Reaching life
[3] Life stop	[4] Default setting
[5] Normal display	[6] Reaching life display
[7] Life stop display	[8] Image is guaranteed
[9] Image is not guaranteed	[10] L code display (when software switch setting is changed)
[11] Normal display	[12] L code display
[13] Life stop	- -

NOTE

- If the color drum unit reaches the life stop condition and the machine prohibits initiation of any new print cycle, touching the Continue key on the screen allows a black print cycle to be initiated.

4.3.10 Ozone filter new article detection

- The ozone filter is not provided with any new article detection mechanism. If the ozone filter is replaced with a new one, therefore, the following setting must be made in "Counter/ Life" of the Service Mode: perform "New Release" of "Image Transfer Belt Unit". The life counter of the ozone filter is reset to zero by performing "New Release" of "Image Transfer Belt Unit".

4.3.11 Ozone filter life detection

- The life counter of the ozone filter controls detection of life of the transfer belt (transport motor). The life counter of the transfer belt unit is cleared, the life counter of the ozone filter is also cleared at the same time.
- The counter value is recorded in the SSD board of the machine.
- The ozone filter is shipped with the transfer belt unit.

(1) Life determination

- If the count of the transfer belt rotation time counter reaches the threshold, the machine determines that the ozone filter has reached a new state.

[1]	Reaching life display (reaching life threshold value)	[2]	Life stop display (life stop threshold value)
[3]	Ozone filter (new article)	[4]	Image guaranteed range
[5]	Outside image guaranteed range	[6]	Ozone filter (life end)

4.3.12 Number of field standard printed pages

- The number of field standard printed pages is specified for this machine based on calculation made by assuming field standard job modes as determined using the print volume and use conditions of the user. Note, however, that the number of printed pages of the drum unit varies depending on how the user uses the machine.
- For details, see ["F.5.1 Life value of consumables and parts"](#).

5. DEVELOPING SECTION

5.1 Configuration

[1]	Developing unit	[2]	Doctor blade
[3]	Photo conductor	[4]	TCR sensor
[5]	Toner supply screw 1	[6]	Toner supply screw 2
[7]	Developing roller	-	-

[1]	Doctor blade	[2]	Developing roller
[3]	Toner supply screw 2	[4]	TCR sensor
[5]	Toner supply screw 1	-	-

5.2 Drive

5.2.1 Developing section/K drive mechanism

- Drive force from the transport motor is transmitted to each gears so that the developing roller/K is driven.

[1]	Developing solenoid (SD4)	[2]	Developing drive gear/K
[3]	Transport motor (M1)	[4]	Developing roller/K

5.2.2 Developing section/Y, M, C drive mechanism

- Drive force from the developing motor is transmitted to the color dev. unit engaged gear so that the developing section/Y, M, C is driven.
- Rotation of the developing motor transmits drive to the developing drive gear Y/M/C, which drives each of the developing rollers.

[1]	Developing roller/Y	[2]	Developing drive gear/Y
[3]	Developing drive gear/M	[4]	Developing motor (M21)
[5]	Developing drive gear/C	[6]	Developing roller/C
[7]	Developing roller/M	-	-

5.3 Operation

5.3.1 Developing unit pressure/releases mechanism

- A mechanism is provided that releases the developing unit from the PC drum to prevent the photo conductor from being damaged when the drum unit is to be removed.
- Rotating the release lever clockwise will cause the rib fixed to the lever to fit into the groove in the developing unit, so that the developing unit is pressed against the drum unit.
- Rotating the release lever counterclockwise will cause the rib fixed to the lever to leave the groove in the developing unit, so that the developing unit is released from the drum unit.

NOTE

- Whenever operating the release lever, be sure to place the charger cleaning tool in its home position (pushed in position). A charger cleaning tool, withdrawn from its home position, interferes with the release lever and can therefore be damaged.

[1]	Photo conductor	[2]	Lib
[3]	Release lever	[4]	Groove

5.3.2 Developer flow

1. Toner replenished via the toner replenishing port located at the front side of the machine is fed to the toner supply screw 1.
2. The developer is conveyed toward the rear of the unit, while being agitated and electrically charged, by the toner supply screw 1.
3. The TCR sensor installed on the underside of the developing unit detects toner to carrier (T/C) ratio during this time. If the T/C ratio is lower than a predetermined value, toner is replenished.
4. The developer, fed to the rear of the developing unit, is conveyed further onto the toner supply screw 2.
5. The developer fed to the toner supply screw 2 is conveyed onto the developing roller because of the magnetic pole positioning of the developing roller.
6. The doctor blade then controls the height of the developer brush to ensure that the developer on the developing roller levels out.
7. Only the toner contained in the developer sticks to the electrostatic latent image on the surface of the photo conductor. The developer that is left on the developing roller is returned to the toner supply screw 2 by the magnetic pole positioning of the developing roller.

8. The part of the circulating developer is collected in the waste toner box through the toner collecting port located at the front side of the toner supply screw 2. The toner collecting port is provided with a shutter mechanism. Mounting the waste toner box pushes the shutter at the toner collecting port, opening the toner collecting port. Removing the waste toner box, on the other hand, closes the shutter and toner is thereby prevented from spilling from the toner collecting port. (For more details, see [O.5.3.3 Auto refining developing system](#) and [O.9.3.6 Waste toner spillage prevention shutter.](#))

NOTE

- The toner replenishing port of the developing unit is not provided with a shutter mechanism (but the toner hopper section is provided with a shutter).
- When removing the developing unit, the developing unit must be held in a horizontal position with care not to allow toner to spill from the toner replenishing port.

[1]	Toner supply screw 2	[2]	Developing roller
[3]	Toner replenishing port	[4]	Toner supply screw 1
[5]	TCR sensor	-	-

5.3.3 Auto refining developing system

- The developing unit (Y/M/C/K) incorporates the auto refining developing system.
- The bottle of toner cartridge is packed with both toner and carrier and the developing unit is replenished with fresh carrier at the same time that it is replenished with toner.
- Excess carrier in the developing unit is discharged, thereby inhibiting carrier left in the developing unit from being deteriorated and maintaining stable image quality for an extended period of time.

[1]	Toner bottle	[2]	Toner
[3]	New carrier	[4]	Low degree of deterioration of entire carrier
[5]	Circulation and agitation	[6]	Developing unit
[7]	Waste toner box	-	-

5.3.4 Developing bias

- The developing bias voltage (Vdc) is applied to the developing roller so that an adequate amount of toner is attracted onto the surface of the photo conductor.
- In addition to the negative DC component, AC voltage is applied during development to help toner to be attracted more easily to the surface of the PC drum. This AC component is applied only while development is taking place. At any other timing, only the DC (-) Vdc is applied.
- The developing bias (Vdc) is supplied from high voltage unit.
- The developing bias voltage supplied from the high voltage unit is applied to the developing roller of each color of toner via the metal shaft of the developing drive gear.

[1]	Developing bias voltage application terminal/Y	[2]	Developing bias voltage application terminal/M
[3]	Developing bias voltage application terminal/C	[4]	Developing bias voltage application terminal/K
[5]	Developing roller/K	[6]	Developing roller/C
[7]	Developing roller/M	[8]	Developing roller/Y

(1) Service Mode

(a) Grad/Dev AC Bias V Selection

- The "Grad/Dev AC Bias V" can be changed by changing the setting of "Imaging Process Adjustment/ Grad/Dev AC Bias V Selection" of the Service Mode. This provides development performance that responds to various types of environment of the users.
- Turning ON the "Grad/Dev AC Bias V Selection" allows the "Grad/Dev AC Bias V" to be decreased down to a voltage value lower than the ordinary specified value.
- With the ordinary specified value set for the "Grad/Dev AC Bias V" in low atmospheric pressure environments, such as at high altitudes, leak could occur, resulting in white dots. Leak, and thus white dots on the image, can be prevented from occurring by lowering the "Grad/Dev AC Bias V".
- For details of the Service Mode, see "[I.11.5.11 Grad/Dev AC Bias V Selection](#)".

5.3.5 Toner scattering prevention

- The scattered toner around the developing roller is sucked with the toner suction fan.
- The toner suction fan is equipped with a toner filter to collect the sucked toner.
- The toner filter is supplied with the transfer belt unit and should be replaced at the same time when the transfer belt unit is replaced.
- The exhaust air of the toner suction fan is blown into the developing section where it is used for internal cooling of the machine.
- The toner scattering prevention sheet is provided in an area around the developing roller to prevent toner from scattering.

[1]	Toner suction port	[2]	Connection to main body
[3]	Developing roller	[4]	Toner scattering prevention sheet
[5]	Developing unit	[6]	Duct
[7]	Main body side intake	[8]	Drum drive unit
[9]	Duct for drive section	[10]	Recirculate exhaust air for cooling the machine interior
[11]	Toner suction fan (FM11)	[12]	Toner filter

5.3.6 Developing cooling

- The transfer belt cleaner cooling fan is provided to circulate air through the inside of the machine, so that the areas around the developing unit, drum unit, toner hopper, and the transfer belt unit can be cooled.

5.3.7 Toner density control

- The TCR sensor is mounted on the underside of each of the developing sections. The TCR sensor for C, M, Y and K is a non-contact magnetic type. Each of these sensors detects toner-to-carrier ratio (T/C) of the developer. The reading is used for determining the amount of toner supplied.
- Only when a new developing unit is installed in the machine, an automatic adjustment (calibration) is made of each of these TCR sensors. The automatic adjustment of TCR sensors cannot be done at your own discretion.
- The target T/C ratio is $6.5 \pm 1.5\%$.
- The magnetic permeability (powder density) of the carrier in the developer is measured to determine the T/C.
- The TCR sensor is integrated with the developing unit. When the TCR sensor is to be replaced with a new one, the entire developing unit must be replaced.
- For replenishment of toner to the developing unit, see "[O.6.3.4 Auxiliary toner replenishing control for toner hopper](#)".

[1]	Toner supply screw1	[2]	TCR sensor
-----	---------------------	-----	------------

[1]	Magnetic TCR sensor	-	-
-----	---------------------	---	---

5.3.8 Developing unit detection

- The developing unit of each color of toner is provided with a TCR sensor. The sensor detects different states of the corresponding developing unit.

[1]	TCR sensor	-	-
-----	------------	---	---

(1) Unit mounting detection

- The TCR sensor detects the mounting condition of the developing unit.
- When developing unit is detected in the mounted condition, control now proceeds to the “new article detection control”.

(a) Detection timing

- The unit mounting detection control is performed under any of the following conditions:
 - “The power switch is turned ON (with the front door and right door are closed)”
 - “The front door or right door is opened and closed with the power switch in ON position”

(b) Operation when it is detected that no units are mounted

- The message “Developing Unit Installation Error” appears on the control panel and the machine prohibits initiation of any new print cycle.
The message “Developing Unit Installation Error” disappears as soon as a developing unit is mounted.

(2) New article detection

- The TCR sensor detects whether the developing unit is new or not.

(a) Detection timing

- The new article detection control is performed if it is determined through the “unit mounting detection” control that the developing unit is correctly mounted in place.

(b) Operation when the developing unit is determined not to be new

- The new article detection control is terminated.

(c) Operation when the developing unit is determined to be new

- The TCR sensor automatic adjustment control (calibration) is performed.
- The image stabilization control is performed.
- The life counter of the developing unit is reset to zero.
- After the above controls are performed, the operation proceeds to the life detection control.
- The result of the new article detection is recorded in the SSD board of the machine.
- The life counter is available for the developing unit of each color. The counter value is recorded in the SSD board of the machine.

(3) New article detection-disabled mode

- The new article detection-disabled mode is used when a new developing unit is temporarily used for performing troubleshooting procedures of a machine, etc.
- No new article detection control is performed for the developing unit when the new article detection-disabled mode is used.
- The new article detection-disabled mode should be used only for troubleshooting purposes.

NOTE

- See “[I.12.3.9.\(3\) Details of Each Function](#)” for more detailed operating precautions.

5.3.9 Developing unit life detection

(1) Life determination

- If the count of either one of these counters reaches the threshold, the machine determines that the developing unit has reached a new state.

[1]	Reaching life display (reaching life threshold value)	[2]	Life stop display (life stop threshold value)
[3]	Developing unit (new article)	[4]	Image guaranteed range
[5]	Outside image guaranteed range	[6]	Developing unit (life end)

(2) Life determination timing

- The life determination control is performed under any of the following conditions:
 - "The power switch is turned ON (with the front door and right door are closed)"
 - "The machine exits the sleep mode"
 - "The front door or right door is opened and closed with the power switch in ON position"
 - "Every print"

(3) Developing unit life display

- When the printed counter value is reached at reaching life threshold value, the life reaching screen will be displayed. (Print cycle is enabled but the image is not guaranteed)
- When the printed counter value is reached at life stop threshold value, the life stop screen will be displayed. (Print cycle is inhibited)
- Only L code will be displayed instead of life reaching or life stop screen by changing the Software Switch Setting in Service Mode. (In [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#), set the switch No.51 to [00100000] at Bit assignment/[20] at HEX assignment.)

[1] New article	[2] Reaching life threshold
[3] Life stop threshold	[4] Default display
[5] Normal display	[6] Reaching life display
[7] Life stop display	[8] Image is guaranteed
[9] Image is not guaranteed	[10] L code display (when software switch setting is changed)
[11] Normal display	[12] L code display
[13] Life stop display	- -

5.3.10 Toner filter life detection

- The life counter of the toner filter controls detection of life of the transfer belt (transport motor). The life counter of the transfer belt unit is cleared, the life counter of the toner filter is also cleared at the same time.
- The counter value is recorded in the SSD board of the machine.
- The toner filter is shipped with the transfer belt unit.

(1) Life determination

- If the count of the transfer belt rotation time counter reaches the threshold, the machine determines that the toner filter has reached a new state.

[1] Reaching life display (reaching life threshold value)	[2] Life stop display (life stop threshold value)
[3] Toner filter (new article)	[4] Image guaranteed range
[5] Outside image guaranteed range	[6] Toner filter (life end)

5.3.11 Number of field standard printed pages

- The number of field standard printed pages is specified for this machine based on calculation made by assuming field standard job modes as determined using the print volume and use conditions of the user. Note, however, that the number of printed pages of the developing unit varies depending on how the user uses the machine.
- For details, see ["F.5.1 Life value of consumables and parts"](#).

6. TONER SUPPLY SECTION

6.1 Configuration

Toner cartridge

[1]	Toner bottle motor (M10)	[2]	Toner supply motor/M (M8)
[3]	Toner supply motor/C (M7)	[4]	Toner bottle/K
[5]	Toner bottle/C	[6]	Toner supply motor/K (M6)
[7]	Toner empty sensor/K (PS31)	[8]	Toner empty sensor/C (PS32)
[9]	Toner empty sensor/M (PS33)	[10]	Toner empty sensor/Y (PS34)
[11]	Toner bottle/M	[12]	Toner bottle/Y
[13]	Toner supply motor/Y (M9)	-	-

6.2 Drive

6.2.1 Toner bottle drive

- The toner bottle motor causes the toner bottle to rotate. The interior of the toner bottle is in spiral form. As the toner bottle rotates, toner inside the toner bottle is conveyed toward the toner replenishing port located at the front side, so that the toner hopper is replenished with toner from the toner bottle.

[1]	Toner bottle drive gear/Y	[2]	Toner bottle drive gear/M
[3]	Toner bottle motor (M10)	[4]	Toner bottle drive gear/C
[5]	Toner bottle drive gear/K	[6]	Toner bottle/K
[7]	Toner bottle/C	[8]	Toner bottle/M
[9]	Toner bottle/Y	-	-

6.2.2 Toner hopper drive

- The toner supply motor causes the toner agitating blade and toner conveying screw inside the toner hopper to rotate.
- Toner conveyed into the toner hopper is agitated by the toner agitating blade.
- As the toner conveying screw rotates, toner is conveyed onto the toner replenishing port located at the front side inside the toner hopper, so that the toner is fed into the developing unit via the toner replenishing pipe.

[1]	Toner supply motor/Y (M9)	[2]	Toner supply motor/M (M8)
[3]	Toner supply motor/C (M7)	[4]	Toner supply motor/K (M6)
[5]	Toner conveying screw/K	[6]	Toner agitating blade/K
[7]	Toner conveying screw/C	[8]	Toner agitating blade/C
[9]	Toner conveying screw/M	[10]	Toner agitating blade/M
[11]	Toner conveying screw/Y	[12]	Toner agitating blade/Y

6.3 Operation

6.3.1 Toner replenishing overview

(1) Toner replenishing mechanism

- The toner replenishment mechanism is a two-stage mechanism that supplies toner from the toner bottle to the toner hopper, and then supplies toner from the toner hopper to the developing unit.
- Where there is no more toner in the toner bottle, the toner cartridge can be replaced, even while printing.
- The supply of toner from the toner hopper to the developing unit is carried out with the upper front door open so that the toner cartridge can be exchanged.

[1] Toner cartridge	[2] Toner bottle
[3] Developing unit	[4] Toner replenishing from the toner hopper to the developing unit
[5] Toner hopper	[6] Toner replenishing from the toner bottle to the toner hopper

(2) Toner Replenishment Control

- Change the toner replenishment control based on the amount remaining in the toner bottle and toner hopper.
- Normal Control: There is sufficient toner remaining in the toner bottle, and the toner hopper is full.
- Near Empty Control: There is a small amount of toner left in the toner bottle, but the toner hopper is full.
- Empty Print Permitted Control: There is no toner left in the toner bottle, but there is a small amount of toner left in the toner hopper.
- Empty Print Prohibited Control: There is no toner left in the toner bottle or the toner hopper.

[1] Toner cartridge new article detection control	[2] Normal control
[3] Near empty detection control	[4] Toner empty printing permission control
[5] Toner empty printing prohibition control	[6] Status of toner remaining amount
[7] Toner bottle	[8] Toner hopper
[9] Toner remaining amount (coated back side)	- -

6.3.2 Toner replenishing from toner bottle to toner hopper

(1) Detecting Remaining Toner in Toner Bottle

- There are no sensors to detect the amount of toner left in the toner bottle.
- The amount of toner remaining in the toner bottle is calculated based on the amount of toner supplied from the toner hopper to the developing unit after a new toner bottle has been detected.

(2) Detecting Remaining Toner in Toner Hopper

- The presence of toner in the toner hopper is detected based on the transparency or shading of the toner empty sensor.
- Where the toner empty sensor has been blocked a predetermined period of times, there is determined to be no toner, and toner is replenished.
- The toner hopper for each color of toner is provided with a toner empty sensor.

- Each toner empty sensor is blocked or unblocked by an actuator dedicated to it. The actuator is moved up or down by a cam disposed coaxially on the toner agitating blade and the vertical movement of the cam is transmitted to the detection plate. The actuator mounted on the detection plate is operatively associated with the vertical movement of the detection plate, which blocks or unblocks the toner empty sensor.

[1] Toner hopper	[2] Detection plate
[3] Toner empty sensor/K (PS31)	[4] Toner empty sensor/C (PS32)
[5] Actuator	[6] Toner empty sensor/M (PS33)
[7] Toner empty sensor/Y (PS34)	- -

(3) Toner replenishing control

- The toner replenishing control is started when the drive of the toner bottle motor is started.
- The output of the toner empty sensor is monitored for a predetermined period of time. If the toner empty sensor is turned ON from the OFF state, during the predetermined period of time, the machine determines that the "toner hopper runs out of toner (or there is only a small amount of toner left in the toner hopper)" and increments the near empty counter by one. The toner bottle motor is then rotated for a predetermined period of time, so that toner is supplied from the toner bottle to the toner hopper.
- If the toner empty sensor remains OFF, the machine determines that "toner is still available for use in the toner hopper", resetting the near empty counter to zero.
- These operations are repeated and, when the near empty counter reaches 3 or more, the machine determines that the toner hopper is in empty printing permission state.

[1] Toner empty sensor: OFF	[2] Toner
[3] Toner empty sensor: ON	- -

6.3.3 Toner replenishing from toner hopper to developing unit

(1) Toner replenishing control

- Control of replenishing the developing unit with toner from the toner hopper is performed only when the developing unit is driven.
- The toner replenishing time (the amount of toner supplied) during the toner replenishing control is determined based on the T/C ratio detected by the TCR sensor (noncontact magnetic type) disposed at the developing unit for each color of toner and the amount of toner to be consumed (estimated) for the image to be printed.
- If replenishing is interrupted by a paper misfeed, the front door opened or closed, or any similar event, the required replenishing time is carried forward to the next replenishing control sequence.
- For details of the TCR sensor, see "O.5.3.7 Toner density control".

(2) Toner replenishing mechanism

- Toner supply motors drive the toner conveying screws and the toner agitating blades provided in the toner hoppers.
- The toner agitating blade rotates to agitate toner in the toner hopper.
- The toner conveying screw rotates to replenish the developing unit with toner.

[1]	Drive from toner supply motor/Y	[2]	Drive from toner supply motor/M
[3]	Drive from toner supply motor/C	[4]	Toner supply motor/K (M6)
[5]	Toner conveying screw/K	[6]	Toner agitating blade/K
[7]	Toner conveying screw/C	[8]	Toner agitating blade/C
[9]	Toner conveying screw/M	[10]	Toner agitating blade/M
[11]	Toner conveying screw/Y	[12]	Toner agitating blade/Y

(3) Toner agitating blade drive

1. Toner conveying screw is rotated by the driving of the toner supply motor.
2. The rotation of the toner conveying screw is transmitted to the toner agitating blade drive gear, which results in the toner agitating blade being rotated. The toner agitating blade rotates to agitate toner in the toner hopper.
3. The cam mounted coaxially with the toner agitating blade moves the detection plate and actuator up and down.

[1]	Detection plate	[2]	Toner agitating blade shaft
[3]	Toner conveying screw	[4]	Cam (operatively connected to toner agitating blade shaft)
[5]	Actuator	[6]	Toner empty

6.3.4 Auxiliary toner replenishing control for toner hopper

- If the amount of toner available in the toner hopper is likely to be decreasing, control is performed to supply toner forcibly from the toner bottle to the toner hopper.
- The machine can print while toner replenishing is being executed forcibly.

(1) Toner hopper auxiliary toner replenishing control execution timing

- The toner bottle motor is rotated for a predetermined period of time to supply toner from the toner bottle to the toner hopper under any of the following conditions:
 - “The toner replenishing menu is performed from the Service Mode”
 - “The toner cartridge is replaced with a new one after a toner empty condition is detected in the toner cartridge (toner empty reset control is performed)”
 - “The toner replenishing menu is manually performed from the Service Mode”

(2) Toner hopper auxiliary toner replenishing control end timing

- The auxiliary toner replenishing control is terminated under any of the following conditions:
 - "A predetermined period of time elapses after the toner bottle motor has been energized"
 - "The front door is opened and closed"
 - "An error or malfunction occurs"
 - "The machine enters the power save or sleep mode"

6.3.5 Auxiliary toner replenishing control for developing unit

- When the print process begins, if the T/C ratio is lower than the designated value, toner is forced to be replenished from the toner hopper to the developing unit until the designated T/C ratio is reached.
- Printing is disabled while the toner supply is being replenished.
- In the following conditions, forced toner replenishment stops.
 - Where the T/C ratio reaches the designated value
 - Where the forced toner replenishment to the developing unit has been repeated for 10 sets
 - Where the toner bottle is detected to be empty

(1) Operation flow

- When the auxiliary toner replenishing control is performed, the toner hopper is agitated, the T/C ratio is calculated by the TCR sensor for each color of toner, and toner is replenished from the toner bottle.
- The auxiliary toner replenishing control is performed for a maximum of about 4 min.

- *1: If a predetermined T/C is not reached, return to replenishing control (a maximum of 10 times).
- *2: Agitate developing unit during replenishing
- *3: Agitate developing unit after replenishing

6.3.6 Toner spillage prevention shutter**(1) Toner cartridge****(a) Mounting**

- The shutter of the toner replenishing port is opened when the handle of the toner cartridge is rotated clockwise to the toner replenishing position after the toner cartridge has been inserted into the toner cartridge mounting portion.
- Rotation of the toner bottle motor causes the toner bottle to rotate.
- As the toner bottle rotates, toner inside the toner bottle is conveyed toward the toner replenishing port located at the front side, so that the toner hopper is replenished with toner from the toner bottle.

(b) Removal

- The shutter at the toner replenishing port must be closed when the toner cartridge is to be removed.
- Rotating the handle of the toner cartridge counterclockwise to the cartridge removal position closes the shutter of the toner replenishing port. The toner cartridge can be removed when the toner replenishing port of the toner cartridge is closed.

[1]	Toner cartridge positioning protrusion	[2]	Toner cartridge handle
[3]	Toner cartridge removal position	[4]	Toner cartridge toner replenishing position
[5]	Toner cartridge toner spillage prevention shutter	[6]	Toner hopper toner spillage prevention shutter

(2) Toner hopper

- The toner replenishing port of the toner hopper of each color of toner is provided with a toner spillage prevention shutter that prevents toner from spilling during removal or reinstallation of the developing unit.
- Mounting the developing unit pushes the shutter at the toner replenishing port, opening the toner replenishing port. Removing the developing unit, on the other hand, closes the shutter and toner is thereby prevented from spilling from the toner replenishing port.

[1]	Toner replenishing port	[2]	Toner hopper toner spillage prevention shutter (open: toner replenishing position)
[3]	Toner hopper toner spillage prevention shutter (closed: developing unit removal position)	-	-

6.3.7 Front door mechanism

- The front doors are divided into the upper front door and lower front door.

[1] Upper front door	[2] Door lock magnets
[3] Lower front door	[4] Main power switch
[5] Front door switch	[6] Front upper door sensor
[7] Toner cartridge mounting position	[8] Toner cartridge positioning protrusion

(1) Front door locking mechanism

- The upper front door and lower front door are provided with a locking mechanism.
- When the door is closed in its correct position, the door lock magnets (two) lock the door.
- The upper front door has a toner cartridge positioning protrusion, and if the toner cartridge supply position is not set correctly the upper front door will not close properly.

(2) Upper front door opening/closing detection

- The opening and closing of the upper front door is detected by the front upper door sensor.
- While printing, the printing will not stop, even if the upper front door is opened.

(3) Lower front door opening/closing detection

- The opening and closing of the lower front door is detected by the front door switch.
- When the lower front door is opened, the front door switch is turned OFF, and a message is displayed to close the lower front door.
- When it is determined that the lower front door has been opened, all jobs other than receiving faxes will be disabled. Also, opening the lower front door during a print job can result in printing cancelation and paper jams.

6.3.8 Life control

(1) New Toner Cartridge Detection

- Detects new toner cartridges when a new toner cartridge is installed.
- When a toner cartridge is determined to be new, near empty control, empty printing permitted control and empty printing prohibited control are all cleared, and the transition is made to normal control.
- Under normal control, after the new toner cartridge has been detected, the amount of toner remaining in the toner bottle is calculated based on the amount supplied from the toner hopper to the developing unit.
The Amount of Toner Remaining = bottle capacity - amount supplied from the toner hopper to the developing unit.
- When normal control is returned after the detection of a new toner cartridge, the toner counter is reset.

(2) Near empty control

- Near empty control comes into effect when the remaining toner counter of the toner bottle reaches about 3,000 sheets (A4).
- Under near empty control, printing can be continued.
- If the toner cartridge is replaced under near empty control with a toner cartridge that has already been detected as new, new empty control is maintained.

(a) Near empty message display

- Under near empty control, the control panel will display the message "Please prepare a spare toner cartridge (Color: X)".
- You can set whether or not to display near empty messages under "System Setting 2/Select Unit Replacement/Warning - Near Empty" in "Service Mode".
- When the warning screen display is set to No, the message notifying the user that the toner cartridge needs replacing soon is not displayed.
- For the setting of the message, refer to [O.6.3.2 Toner replenishing from toner bottle to toner hopper](#).

(b) Near empty display timing

- The timing of displaying near empty on the control panel can be changed depending on the user usage status and the period of availability of toner cartridges.
- You can set the timing for display under "System Setting 2/Select Unit Replacement/Near Empty Display Timing" in "Service Mode".

- Values for Remaining Toner Counter (A4): [-2] = about 1,000 sheets, [0] = about 3,000 sheets (initial), and [+2] = about 5,000 sheets.
- For the details of the near empty display timing, refer to [O.6.3.2 Toner replenishing from toner bottle to toner hopper](#).

(3) Empty Printing Permitted Control

- The toner empty sensor detects the amount of toner remaining in the toner hopper, and when it reaches predetermined level, empty printing permitted control is engaged.
- When the toner empty sensor detects blocked, the empty counter is increased by 1.
- During predetermined toner replenishment control, if the empty counter advances to a count of 3, empty printing permitted control is engaged.
- Under empty printing permitted control, the control panel will display "Replace Toner Cartridge (Color X)".
- After empty printing permitted control is engaged, printing can be continued for about 1,000 sheets (A4).
- If the toner empty sensor remains OFF, the machine determines that "toner is still available for use in the toner hopper", resetting the near empty counter to zero.

(4) Toner Empty Printing Prohibited Control

- When the empty counter in the toner hopper reaches a count of 6, it is determined that there is no longer any toner in the toner hopper.
- After the toner in the toner hopper has been exhausted, when a predetermined amount of toner is consumed or the T/C ratio decreases, toner empty printing prohibited control is engaged.

(a) Toner empty display timing

- After toner near empty detection, the toner is determined to be empty where any of the following conditions are detected, and the control panel will display "The Toner Cartridge needs to be replaced".
 1. Where the toner replenishment motor rotation time (toner replenishment amount) exceeds a predetermined value.
 2. Where a T/C ratio is detected which is below the designated TCR sensor value.

(b) Toner empty display

- The screen mode to be displayed when a toner empty is detected can be selected by specifying the person who replaces the unit in the "System 2/ Unit Change" in the Service Mode.
- When User is selected as the person, the message requesting toner cartridge replacement by user is displayed when a toner empty condition is detected. (Toner has been depleted. Replace the toner cartridge.)
- When Service is selected as the person, the message prompting service engineer to replace the toner cartridge is displayed. (Out of toner. Contact your service representative.)

(5) Near empty display timing

- Either the "auxiliary toner replenishing control for toner hopper" or "auxiliary toner replenishing control for developing unit" is performed (both may be performed in some cases) after a toner near empty condition and a toner empty condition have been detected.
- The toner near empty/empty display is reset when the control is normally terminated.
- Initiation of a new print cycle is prohibited during execution of the "auxiliary toner replenishing control for toner hopper" and "auxiliary toner replenishing control for developing unit".
- See the relevant pages for more details of the ["O.6.3.4 Auxiliary toner replenishing control for toner hopper"](#) and ["O.6.3.5 Auxiliary toner replenishing control for developing unit"](#).

List of controls

Control name	Parts to be controlled			Description	
Auxiliary toner replenishing control for developing unit	Developing unit			Recovers the T/C ratio of the developer in the developing unit.	
Auxiliary toner replenishing control for toner hopper	Toner hopper			Recovers the amount of toner in the toner hopper.	

Condition	Toner in unit			Control to be executed	Printing after the end of the control
	Toner bottle	Toner hopper	Developing unit		
Near empty	Decreasing	Available	Available	None	Near empty display
Toner empty printing permission	Not available	Decreasing	Available	Auxiliary toner replenishing control for toner hopper	Empty display is reset if the amount of toner in the toner hopper is recovered.
Toner empty printing prohibition 1	Not available	Not available	Available		Empty display stays put if the amount of toner in the toner hopper is not recovered.
Toner empty printing prohibition 2	Not available	Not available	Not available	Auxiliary toner replenishing control for toner hopper + auxiliary toner replenishing control for developing unit	Empty display is reset if the T/C ratio is recovered.
					Empty display stays put if the T/C ratio is not recovered.

(a) Toner empty condition resetting timing

- The "auxiliary toner replenishing control for toner hopper" or "auxiliary toner replenishing control for developing unit" is executed under any of the following conditions after a toner near empty/toner empty condition has been detected:
 - "The main power switch is turned ON"
 - "Release in sub power supply off-mode"
 - "The upper front door or the like is opened and closed"

7. 1ST TRANSFER SECTION

7.1 Configuration

[1]	Cleaning blade	[2]	Transfer belt
[3]	1st transfer roller pressure mechanism	[4]	1st transfer roller pressure cam
[5]	Separation claw	[6]	1st transfer roller/K
[7]	1st transfer roller/C	[8]	1st transfer roller/M
[9]	1st transfer roller/Y	-	-

7.2 Drive

[1]	1st transfer pressure clutch (CL5)	[2]	Fusing motor (M3)
[3]	Transport motor (M1)	[4]	Transfer belt drive roller
[5]	Transfer belt driven roller	-	-

7.3 Operation

7.3.1 Transfer belt drive

- The transfer belt drive roller is rotated by the driving force of the transport motor.

- Rotation of the transfer belt causes the transfer belt driven roller to rotate. The drive transmission gear located at the transfer belt driven roller rotates the waste toner conveying screw of the cleaning mechanism.

[1]	Transport motor (M1)	[2]	Transfer belt drive roller
[3]	Waste toner conveying screw	[4]	Transfer belt driven roller
[5]	Drive gear	[6]	Transfer belt

7.3.2 1st transfer roller control

- Pressure mechanism is equipped for pressing the 1st transfer rollers (Y, M, C) to inside the transfer belt at the 1st transfer.
- The 1st transfer roller (K) does not have pressure retraction mechanism. The 1st transfer roller (K) always presses the transfer belt to the PC drum (K).
- The driving force of the fusing motor is transmitted to the fusing drive release gear and transfer belt retraction clutch, thereby pressing the 1st transfer roller. The fusing drive release gear is moved to the drive coupling position when the right door is closed, so that the driving force can be transmitted. For more details of the fusing drive release mechanism, see "O.14.3.1 Heating roller assy heating control".

(1) 1st transfer roller pressure

- Rotation of the fusing motor is transmitted to the transfer belt retraction clutch via the fusing drive release gear.
- When the 1st transfer pressure clutch is turned ON, the rotation of the fusing motor is transmitted to the drive gear.
- Rotation of the drive gear rotates the pressure cam, so that the position of contact between the slide plate and the cam is varied.
- The 1st transfer roller pressure spring provided for the slide plate causes the slide plate to move to the pressure position (toward the transfer belt driven roller side).
- The movement of the slide plate results in the 1st transfer roller drive arm being rotated. The rotation of the 1st transfer roller drive arm lowers the 1st transfer roller (Y, M, C), so that the transfer belt is pressed against the PC drum.
- When the slide plate moves to the pressure position, the leading edge of the slide plate pushes the actuator of the 1st transfer pressure sensor.
- The actuator blocks the 1st transfer pressure sensor and the slide plate movement is detected.
- The 1st transfer pressure clutch is turned OFF.
- The cam will stop rotating and the slide plate will stop.
- The 1st transfer roller (Y, M, and C) will stay being pressed.

[1]	1st transfer roller Y/M/C/K	[2]	Slide plate
-----	-----------------------------	-----	-------------

[3]	Pressure cam	[4]	1st transfer pressure clutch (CL5)
[5]	Fusing motor (M3)	[6]	Pressure cam
[7]	1st transfer roller drive arm Y/M/C/K	-	-

[1]	Slide plate	[2]	1st transfer pressure sensor (PS39)
[3]	Actuator	-	-

7.3.3 Pressure/retraction control by print mode

- To extend the service life of the PC drum/Y, M, C, the transfer belt is retracted from the color PC drum in the black mode.
- In the black mode, the 1st transfer roller/Y, M, C is retracted and the color drum unit and color developing unit are stopped.
- The 1st transfer roller/K is pressed against the PC drum/K at all times in both black and color modes.

(1) Color mode

- In the color mode, the transfer roller is where the PC drum is pressed against the transfer belt for all four colors of toner

(2) Black mode

- In the black mode, the transfer roller /Y, M, C is where the PC drum/Y, M, C leaves the transfer belt, while the transfer roller /K is where the PC drum/K is pressed against the transfer belt. This allows the PC drum/Y, M, C to stop rotating in this mode.

Color mode

[1]	Transfer belt	[2]	1st transfer roller/M
[3]	1st transfer roller/C	[4]	1st transfer roller/K
[5]	PC drum/K	[6]	PC drum/C
[7]	PC drum/M	[8]	PC drum/Y
[9]	1st transfer roller/Y	-	-

Black mode

[1]	Transfer belt (retraction position)	-	-
-----	-------------------------------------	---	---

(3) ACS mode

(a) ACS mode overview

- When making a copy, any desired copy mode can be selected from the control panel. (The default setting is the "auto color mode".) The auto color mode is called the ACS (auto color selection) mode. (In PC print job, auto color as the setting item in the printer driver corresponds to the ACS.)

- In ACS mode, the machine analyzes the image data of the original scanned by the “scanner section” to determine whether the image data is colored or in black.
- Determining that it is a color original, the machine presses the 1st transfer roller and runs a color print job.
- Determining that it is a black original, the machine retracts the 1st transfer roller and runs a black print job.

(b) Control of 1st transfer roller in ACS mode

- The number of sheets of continuous series of black originals is counted when color originals are changed to black originals.
- Pressure of the 1st transfer roller is controlled according to the number of sheets of continuous series of black originals during a multi-print cycle, thereby achieving both high print productivity and extended service life of consumables.
- “Control of 1st transfer roller in ACS mode” is executed only when a copy is made with “Auto Color” selected from the control panel. It is not executed when “Full Color”, “Black”, “2 Color”, or “Single Color” is selected.
- The control is executed, for “PC print”, only if the print cycle is run with “Auto Color” selected from the printer driver screen. It is not executed when “Full Color” or “Grayscale” is selected.
- The 1st transfer roller /Y, M, C is in the pressed position (color mode) in its initial state.

NOTE

- **The control of 1st transfer roller in the ACS mode is enabled only after the number of sheets of continuous series of black originals has been counted. It is therefore not an effective control for a copy print job involving only one copy set/stack. The control is effectively operable for the following print jobs: Since on the first copy, the control can be performed only for where the original is read and counted.**
 “Copy print of the second copy set/stack and onward”
 “Copy print from a registered job”
 “PC print job”

(c) When the number of multi-copies is as specified or under

- ACS control starts counting the number of multi-copies of the black original when switched from the color original to the black original.
 - The black printing will start with color mode. (with the 1st transfer roller /Y/M/C being pressed)
- Developing or transfer does not take place with the developing unit (Y, M, C), but, since the transfer belt is pressed, the PC drum and the developing roller are rotated as the transfer belt rotates.
- An advantage during pressure of the 1st transfer roller/Y, M, C is that the loss time produced as a result of retraction of the 1st transfer roller can be reduced relative to print productivity.

(d) When the number of multi-copies is as specified or over

- The black printing will start when the color mode is complete and the 1st transfer roller /Y/M/C is retracted to be switched to the black mode.
- An advantage during retraction of the 1st transfer roller is that chance of the developing unit (Y, M, C) and drum unit (Y, M, C) being worn as a result of wasteful rotation can be reduced.

When printing in black with color mode (effecting black printing with the four PC drums rotating)

[1]	Color mode	[2]	Color mode
[3]	Color mode	-	-

Printing after switched to black mode

[1]	Color mode	[2]	Black mode
[3]	Black mode	-	-

(e) C554 black original specified values

- Number of multiple black originals during plain paper printing

Paper length	Black printing in color mode	Black printing after switched to black mode
216 mm or under	4 sheets or less	5 sheets or more
Over 216 mm up to 297 mm	3 sheets or less	4 sheets or more
Over 297 mm and up to 381 mm	3 sheets or less	4 sheets or more

Paper length	Black printing in color mode	Black printing after switched to black mode
Over 381 mm and up to 432 mm	2 sheets or less	3 sheets or more
Over 432 mm and up to 457 mm	2 sheets or less	3 sheets or more
Over 457 mm	Switched to black mode	

(f) C454 black original specified values

Paper length	Black printing in color mode	Black printing after switched to black mode
216 mm or under	4 sheets or less	5 sheets or more
Over 216 mm up to 297 mm	3 sheets or less	4 sheets or more
Over 297 mm and up to 381 mm	2 sheets or less	3 sheets or more
Over 381 mm and up to 432 mm	2 sheets or less	3 sheets or more
Over 432 mm and up to 457 mm	2 sheets or less	3 sheets or more
Over 457 mm	Switched to black mode	

(4) ACS mode control change with the software SW

- By changing the software SW 50 setting from "[00000000] at Bit assignment/ [00] at HEX assignment" to "[00000001] at Bit assignment/ [01] at HEX assignment", you can change the pressure control of the 1st transfer rollers.
- When the software SW 50 is set to "[00000001] at Bit assignment/ [01] at HEX assignment", the 1st transfer roller's default position is changed to the black mode (retracted position). When the setting is "[00000000] at Bit assignment/ [00] at HEX assignment", the default position of the 1st transfer roller/Y, M, C is at the color mode (pressed position).
- For users who mainly produce black prints, when "[00000001] at Bit assignment/ [01] at HEX assignment" is selected, the 1st transfer roller/Y, M, C can be at the retracted position more frequently, which helps to reduce the wearing out of PC drums caused by unnecessary rotation of color developing units and color drum units. The disadvantage of the setting ("[00000001] at Bit assignment/ [01] at HEX assignment") is that the first copy time becomes longer for color print as the 1st transfer roller/Y, M, C is moved from the color mode to the black mode. Reduced productivity of the multi-print cycle could result depending on the condition.

(a) Case 1

Scan originals

Print outline by ACS control (Setting: HEX assignment 00) *1

Print outline by ACS control (Setting: HEX assignment 01) *2

- *1: After printing black originals in the color mode, if the machine judges there are black originals more than a specified number, the 1st transfer roller/Y, M, C are switched to the black mode and black printing is resumed.
- *2: The 1st transfer rollers/Y, M, C remain in the black mode and black printing is made.

(b) Case 2

- *1: The 1st transfer roller/Y, M, C remains at the color mode and the color originals are printed in the color mode. If a machine interprets that there are black originals more than a predetermined number, the 1st transfer roller/Y, M, C is switched to the black mode and black printing is resumed.
- *2: The 1st transfer roller/Y, M, C is switched to the color mode and the color originals are printed in the color mode. If a machine interprets there are black originals more than a predetermined number, the 1st transfer roller/Y, M, C is switched to the black mode and black printing is resumed.

7.3.4 1st transfer control

- To transfer the toner image formed on the surface of the PC drum onto the transfer belt, the transfer current supplied from the high voltage unit is applied to the 1st transfer roller of each color.

[1]	1st transfer current application terminal/Y	[2]	1st transfer current application terminal/M
[3]	1st transfer current application terminal/C	[4]	1st transfer current application terminal/K
[5]	1st transfer roller/K	[6]	1st transfer roller/C
[7]	1st transfer roller/M	[8]	1st transfer roller/Y

7.3.5 Transfer belt cleaning

- The toner image on the surface of the transfer belt is transferred onto the paper (2nd transfer).
- Part of the toner image is left on the surface of the transfer belt after the 2nd transfer. A cleaning blade is provided on the transfer belt. It functions to remove the residual toner (waste toner).

[1]	Drive transmission gear	[2]	Transfer belt
[3]	Transfer belt driven roller	[4]	Caking-of-toner prevention blade
[5]	Cleaning blade	[6]	Toner collecting screw

[1]	Toner collecting screw	[2]	Transfer belt
[3]	Transfer belt driven roller	[4]	Transfer belt rotative direction (forward rotation)
[5]	Cleaning blade	-	-

(1) Cleaning blade

- The cleaning blade, of a fixed blade type, is pressed up against the surface of the transfer belt at all times. No cleaning blade retraction mechanism is provided.
- The waste toner on the surface of the transfer belt is scraped off as the transfer belt is rotated.

(2) Waste toner conveying/collecting mechanism

- Drive for the toner collecting screw comes from the transfer belt driven roller. (The toner collecting screw rotates in time with rotation of the transfer belt.)
- The rotation of the toner collecting screw conveys waste toner scraped off the surface of the transfer belt toward the front of the machine.
- There is a caking-of-toner prevention blade installed. It prevents waste toner from caking at the toner collecting screw portion.
- The waste toner is discharged through the toner collecting port into the waste toner box.
- The waste toner is disposed of when a waste toner box which is detected to be full of waste toner is replaced with a new one and the used waste toner box is discarded.

[1]	Drive engaged gear	[2]	Transfer belt
[3]	Transfer belt driven roller	[4]	Toner collecting screw

[1]	Toner collecting screw	[2]	Drive engaged gear
[3]	Transfer belt driven roller	[4]	Transfer belt

7.3.6 Waste toner spillage prevention shutter

- The toner collecting port is provided with a waste toner spillage prevention shutter that prevents waste toner from spilling during removal or reinstallation of the waste toner box.
- Mounting the waste toner box in place pushes the shutter at the toner collecting port, thus opening the toner collecting port. The shutter is closed by the waste toner box removal and prevents the toner overspill from the toner collecting port.

[1]	Toner collecting screw	[2]	Toner collecting port
-----	------------------------	-----	-----------------------

[3]	Shutter	-	-
-----	---------	---	---

[1]	Toner collecting screw	[2]	Shutter (open)
-----	------------------------	-----	----------------

7.3.7 Transfer belt cooling

- The transfer belt cleaner cooling fan is provided to circulate air through the inside of the machine, so that the areas around the developing unit, drum unit, toner hopper, and the transfer belt unit can be cooled.

(1) Air flow path

- Air around the developing unit and drum unit is drawn in.
- The air drawn in flows between the toner bottle and the transfer belt unit and is blown against the toner bottle/K.

(2) Transfer belt cleaner cooling fan rotation start timing

- The transfer belt cleaner cooling fan rotates at full speed under any of the following conditions:
 - “During a print cycle”
 - “During predrive after the power is turned ON”
 - “During execution of image stabilization control”

(3) Transfer belt cleaner cooling fan rotation stop timing

- The transfer belt cleaner cooling fan stops rotating under any of the following conditions:
 - “Upon completion of a print cycle”
 - “Upon completion of predrive performed when the power is turned ON”
 - “Upon completion of image stabilization control”

[1]	Transfer belt cleaner cooling fan (FM2)	-	-
-----	---	---	---

[1]	Toner cartridge	[2]	Transfer belt unit
[3]	Developing unit	[4]	Drum unit
[5]	Transfer belt cleaner cooling fan (FM2)	-	-

7.3.8 Cleaning blade foreign matter removal control

- The transfer belt is rotated backward to a small extent and then rotated forward to remove foreign matter (dust, toner, etc.) wedged between the transfer belt and the edge of the cleaning blade.

(1) Operation timing

- The backward rotation control is provided at the completion of every print job.

[1]	Toner collecting screw	[2]	Backward rotation
[3]	Transfer belt	[4]	Transfer belt driven roller
[5]	Forward rotation	[6]	Cleaning blade

7.3.9 Transfer belt new article detection

- The transfer belt unit is not provided with any new article detection mechanism. If the transfer belt is replaced with a new one, therefore, “New Release” must be performed in “Counter/ Life” of the Service Mode. For detailed operating procedures, see “I.11.16.2 Life”.

7.3.10 Transfer belt life detection

(1) Counter life determination

- Each of the printed counter and the transfer belt rotation time counter has its own threshold value to determine its own life. If the printed counter or transfer belt rotate time counter reaches the threshold, the machine determines that the transfer belt unit has reached a new state.

[1]	Reaching life display (reaching life threshold value)	[2]	Life stop display (life stop threshold value)
[3]	Transfer belt unit (new article)	[4]	Image guaranteed range
[5]	Outside image guaranteed range	[6]	Transfer belt unit (life end)

(2) Transfer belt life determination timing

- The life determination control is performed under any of the following conditions:
 - "The power switch is turned ON (with the front door and right door are closed)"
 - "The machine exits the sleep mode"
 - "The front door or right door is opened and closed with the power switch in ON position"
 - "New Release" of "Transfer Belt Unit" is performed in life counter of the service mode"
 - "Every print"

(3) Transfer belt unit life display

- The life reaching screen appears when the count of the printed counter or the transfer belt rotation time counter reaches the reaching life threshold (print enabled, outside image guaranteed range).
- The life stop screen appears when the count of the printed counter or the transfer belt rotation time counter reaches the life stop threshold (print prohibited).
- Only L code will be displayed instead of life reaching or life stop screen by changing the Software Switch Setting in Service Mode. (In [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#), set the switch No.51 to [01000000] at Bit assignment/[40] at HEX assignment.)

8. 2ND TRANSFER SECTION

8.1 Configuration

[1]	2nd transfer roller	[2]	Fusing loop sensor (PS2)
[3]	IDC sensor/Fr (IDCS/Fr)	[4]	IDC sensor shutter solenoid (SD2)
[5]	Temperature/humidity sensor (TEM/HUMS)	[6]	IDC sensor/Rr (IDCS/Rr)

[1]	Separation claw	[2]	Charge neutralizing needle
[3]	2nd transfer roller	[4]	2nd transfer roller lock release lever
[5]	Transfer belt	-	-

8.2 Drive

[1]	Transport motor (M1)	[2]	2nd transfer roller
[3]	Transfer belt	-	-

8.3 Operation

8.3.1 2nd transfer control

- To transfer the toner image formed on the transfer belt onto the paper, the 2nd transfer voltage supplied from the high voltage unit is applied to the 2nd transfer roller.
- Resistance of the 2nd transfer roller changes with an environmental change, durability, and other factors. To maintain an optimum output voltage, fixed current is passed through the 2nd transfer roller and the voltage being outputted at that time is detected. An appropriate 2nd transfer voltage is determined based on the measured voltage and other information such as "type of paper used", "temperature and humidity", "color mode or black mode", and "1-sided/2-sided".

[1]	2nd transfer roller	[2]	2nd transfer voltage conductive plate
[3]	2nd transfer voltage application terminal	-	-

(1) Execution timing

- The 2nd transfer control is executed when a print job is received under any of the following conditions:
 - "Main power switch is turned ON"
 - "Power key is pushed"
 - "The machine exits the sleep mode"
 - "The threshold value of a change in machine interior temperature is exceeded."

(2) 2nd transfer control during image stabilization control

- In this machine, the 2nd transfer roller does not have a retraction mechanism, so that the transfer belt and 2nd transfer roller are pressed up against each other at all times.
- During image stabilization control, a toner image for adjustment purpose is formed on the surface of the transfer belt. A negative voltage is therefore applied to the 2nd transfer roller during image stabilization control. The amount of toner sticking to the 2nd transfer roller is thereby reduced.

8.3.2 Control of toner application to 2nd transfer roller

- In this machine, the 2nd transfer roller does not have a retraction mechanism, so that the transfer belt and 2nd transfer roller are pressed up against each other at all times.
- If a new 2nd transfer roller that has replaced an old one is left to stand idle for a long period of time, a substance contained in the new roller sticks to the surface of the transfer belt, which could result in noise in the print image.

- To prevent the substance contained in the 2nd transfer roller from sticking to the transfer belt, Y toner is applied to the surface of a new 2nd transfer roller at the time of replacement. (The Y toner image that corresponds to two complete revolutions of the transfer roller is formed on the surface of the transfer belt and is then transfer red onto the surface of the 2nd transfer roller.)
- The Y toner that is less noticeable is used for the toner to be applied, in consideration of back marking.

(1) Execution timing

- The control is executed when the life counter of the 2nd transfer roller in the service mode is reset to zero.

8.3.3 2nd transfer roller cleaning

- In order to remove the remaining toner on the 2nd transfer roller, -/+ (DC) charge is applied alternately to transfer the remaining toner on the 2nd transfer roller to the transfer belt. (The number of times that electrical charge is applied to the 2nd transfer roller is different depending on each situation.)
- The cleaning blade then scrapes off the toner on the surface of the transfer belt.

[1]	Transfer belt	[2]	2nd transfer roller
[3]	Cleaning blade	-	-

8.3.4 Charge neutralization and separation of paper

- To neutralize any residual potential on the paper which has undergone the 2nd transfer process, there is a charge neutralizing needle mounted on the guide plate after the 2nd transfer roller. There is a resin guide that prevents the electrode from directly contacting the paper.
- The residual potential neutralized by the charge neutralizing needle is applied to bias voltages.
- In order to separate the paper from the transfer belt without fail after the 2nd transfer, a separation claw is mounted (center one point.)

[1]	Transfer belt	[2]	Paper winding prevention guide
[3]	Separation claw	[4]	Charge neutralizing needle
[5]	2nd transfer roller	-	-

[1]	Charge neutralizing needle conductive plate	[2]	Transfer paper guide conductive plate (ground)
-----	---	-----	--

[3]	Charge neutralizing needle	[4]	Transfer paper guide
-----	----------------------------	-----	----------------------

[1]	Charge neutralizing needle	[2]	Resin guide
-----	----------------------------	-----	-------------

8.3.5 Paper winding prevention guide

- The paper winding prevention guide prevents paper from being wound around the transfer belt again after its being separated from the transfer belt by the separation claw.

[1]	Transfer belt	[2]	Paper winding prevention guide
[3]	Separation claw	[4]	Charge neutralizing needle
[5]	2nd transfer roller	-	-

[1]	Transfer belt	[2]	Paper winding prevention guide
-----	---------------	-----	--------------------------------

8.3.6 IDC sensor protection

- The IDC sensor can be contaminated with toner since it is located under the transfer belt. There is a shutter mechanism provided for the sensor to prevent it from being contaminated.
- The shutter is opened or closed by the IDC sensor shutter solenoid.

IDC sensor shutter solenoid (SD2)		Shutter
OFF		Closed
ON		Open

[1]	IDC sensor shutter (open position)	[2]	IDC sensor/Fr (IDCS/Fr)
[3]	IDC sensor shutter solenoid (SD2)	[4]	Actuator for shutter
[5]	IDC sensor/Rr (IDCS/Rr)	-	-

[1]	IDC sensor shutter (close position)	[2]	IDC sensor shutter solenoid: OFF
[3]	IDC sensor shutter (open position)	[4]	IDC sensor shutter solenoid: ON

8.3.7 2nd transfer roller new article detection

- The 2nd transfer roller (hereinafter referred to as the “transfer roller”) is not provided with any new article detection mechanism. If the transfer roller is replaced with a new one, therefore, “New Release” must be performed of the “Image Transfer Belt Unit” in “Counter/ Life” of the Service Mode. Performing “New Release” of the “Image Transfer Belt Unit” in life counter of the Service Mode will also reset the life counter of the transfer roller to zero.

8.3.8 2nd transfer roller life detection

- The life counter of the transfer roller controls detection of life of the 2nd transfer roller (hereinafter referred to as the “transfer roller”).
- The counter value is recorded in the SSD board of the machine.

(1) Life determination

- If the count of the transfer roller counter reaches the threshold, the machine determines that the transfer roller has reached a new state.

[1]	Reaching life display (reaching life threshold value)	[2]	Life stop display (life stop threshold value)
[3]	2nd transfer roller (new article)	[4]	Image guaranteed range
[5]	Outside image guaranteed range	[6]	2nd transfer roller (life end)

9. TONER COLLECTING SECTION

9.1 Configuration

[1]	Toner collecting screw (Transfer belt section)	[2]	Toner collecting screw (Drum unit/Y,M,C,K)
[3]	Toner collecting port (Drum unit/Y,M,C,K)	[4]	Toner collecting screw (Waste toner box)
[5]	Toner agitating blade	[6]	Toner supply screw (Developing unit)

9.2 Drive

[1]	Registration motor (M24)	[2]	Registration roller
[3]	Waste toner box drive gear	[4]	Waste toner box
[5]	Toner collecting screw	[6]	Toner agitating blade

9.3 Operation

9.3.1 Waste toner box drive mechanism

- The waste toner box is driven by the registration motor.
- The registration motor drive is transmitted to the waste toner box toner collecting screw, through the registration roller and the waste toner box drive gear.

(1) Execution timing

- The waste toner box rotates in synchronism with the registration roller.

9.3.2 Control of waste toner conveyance through waste toner box

- Waste toner in the transfer belt unit and drum units, and excess toner in the developing unit are conveyed onto the waste toner box by the toner collecting screw.
- Waste toner and waste developer (waste carrier + waste toner) are collected through the toner collecting ports for the each units.
- The waste toner collecting port is provided with a toner agitating blade that prevents toner from stagnating.
- The toner agitating blade is moved up and down as the toner collecting screw rotates.
- * The toner collecting port for the developing unit is not provided with any toner agitating blade.
- Toner collecting screw 1 and toner collecting screw 2 (dedicated to the transfer belt toner collecting port) are installed in the waste toner box.
- The screws provided on toner collecting screw 1 function to convey waste toner stagnant in the box uniformly onto the central portion of the box.
- Toner collecting screw 2 functions to convey toner conveyed from the transfer belt unit uniformly onto the central portion of the box.
- There is a detection window for detecting a waste toner full condition provided at the central portion of the box. When the waste toner conveyed onto the central portion of the box exceeds a predetermined height, waste toner spills over the waste toner full condition detection window. For details, see “O.9.3.4 Waste toner box full detection”.

[1]	Toner agitating blade	[2]	Toner collecting screw 2 (dedicated to the transfer belt toner collecting port)

-----	--	-----	-----------------------

[1]	Toner collecting port (Developing unit)	[2]	Toner collecting port (Drum unit)
-----	---	-----	-----------------------------------

[1]	Waste toner full condition detection window	-	-
-----	---	---	---

9.3.3 Waste toner box-in-position detection

- The waste toner box set sensor provided on the front side board detects mounting condition of the waste toner box. It prevents the machine from being operated with the waste toner box yet to be mounted in place.
- When the waste toner box is removed, the waste toner box set sensor is unblocked, which causes the machine to determine that the waste toner box is yet to be mounted.
- The machine, on determining that the waste toner box is yet to be mounted in place, prohibits initiation of a new print cycle.
- When the waste toner box is mounted, the waste toner box set sensor is blocked, which causes the machine to determine that the waste toner box is mounted in place.
- The machine, on determining that the waste toner box is mounted in place, resets the waste toner box yet-to-be-mounted display, enabling initiation of a new print cycle.

[1]	Front side board (FRB)	[2]	Waste toner box set sensor (PS100)
[3]	Waste toner full sensor (PS101)	-	-

[1]	Waste toner full box detection plate	-	-
-----	--------------------------------------	---	---

(1) Execution timing

- The waste toner box full detection control is performed under any of the following conditions:
 "The power switch is turned ON"
 "The front door or right door is closed"

(2) Waste toner box yet-to-be-mounted display

9.3.4 Waste toner box full detection

- The waste toner full sensor provided on the front side board is used to determine the amount of waste toner accumulated in the waste toner box.

(1) Waste toner near-full condition

- The toner collecting screw provided in the waste toner box conveys waste toner in the box onto the central portion of the box. For more details, see "[O.9.3.2 Control of waste toner conveyance through waste toner box](#)".
- There is the detection window for detecting a waste toner full condition provided at the central portion of the waste toner box. When the waste toner conveyed onto the central portion of the box exceeds a predetermined height, waste toner spills over the waste toner full condition detection section.
- The machine determines that there is a waste toner near-full condition, if the waste toner full sensor is blocked by the waste toner stagnant over the waste toner full condition detection section for a predetermined period of time or longer.

(a) Execution timing

- The waste toner box near-full detection control is performed under any of the following conditions:
 "The machine determines that the waste toner box is mounted in place using the waste toner box set sensor."
 "During a print cycle"
 "During execution of image stabilization control"

[1]	Waste toner box	[2]	Waste toner
[3]	Waste toner	[4]	Waste toner full condition detection window

(2) Waste toner full condition

- When a waste toner near-full condition is detected, the "waste toner full detection counter" is incremented according to the image density information of the print image during each of subsequent print jobs.
- When the waste toner full detection counter reaches a threshold value, the machine determines that there is a waste toner full condition.

(a) Execution timing

- The waste toner box full detection control is performed under any of the following conditions:
 - "The machine determines that the waste toner box is mounted in place using the waste toner box set sensor."
 - "The waste toner full sensor detects a waste toner near-full condition."
 - "During a print cycle"
 - "During execution of image stabilization control"

(3) Waste toner box life detection

Waste toner near-full	C554: 36,000 sheets, C454: 37,000 sheets
Waste toner full	C554, C454: 40,000 sheets

NOTE

- The number of printed pages represents a value calculated from the toner consumption recorded when the machine is used in the standard job mode. It varies depending on how the user uses the machine.
- For details, see ["F.5.2 Details of the life specifications"](#).

(4) Waste toner near-full and full displays

- The waste toner near-full display is given if the waste toner full sensor is blocked by the waste toner stagnant over the waste toner full condition detection section for a predetermined period of time or longer (though initiation of a new print cycle is enabled).
- When the waste toner full detection counter reaches the threshold value, the waste toner full display appears (and initiation of a new print cycle is prohibited).

NOTE

- The contents of the waste toner near-full and waste toner full displays vary depending on the settings made in Consumable Life Reminder of the Service Mode.

(a) Typical waste toner near-full display (typical)**(b) Typical waste toner full display (typical)****9.3.5 Waste toner box new article detection**

- The waste toner box is not provided with any new article detection mechanism. Detection made by the waste toner full sensor is used for detecting a new waste toner box.
- When the waste toner full display appears, the existing waste toner box is replaced with a new one. When the waste toner full sensor remains unblocked for a predetermined period of time or more, the machine determines that the normal state is recovered (the old waste toner box is replaced with a new one).
- Determining that a new waste toner box has been mounted, the machine resets the waste toner full display, allowing the initiation of a new print cycle.

(1) Timing at which to reset the waste toner full display

- The waste toner box full detection control is performed under any of the following conditions:
 - “The waste toner full sensor detects a waste toner full condition.”
 - “The power switch is turned ON”
 - “The lower front door is closed”

9.3.6 Waste toner spillage prevention shutter

- The toner collecting port for the transfer belt unit is provided with a waste toner spillage prevention shutter that prevents waste toner that is transported from the transfer belt from spilling during removal or reinstallation of the waste toner box.
- Inserting the waste toner box into its mounting position pushes the shutter at toner collecting port of the waste toner box, thus opening the toner collecting port.
- Removing the waste toner box allows the shutter spring to close the shutter at the toner collecting port.

[1]	Toner collecting port	-	-
-----	-----------------------	---	---

10. PAPER FEED SECTION (MANUAL BYPASS TRAY)

10.1 Configuration

[1]	Bypass FD paper size sensor/2 (PS29)	[2]	Bypass FD paper size sensor/1 (PS28)
[3]	Bypass pick-up solenoid (SD1)	[4]	Bypass lift-up position sensor (PS26)
[5]	Bypass paper feed clutch (CL7)	[6]	Bypass paper empty sensor (PS27)
[7]	Manual bypass tray feed roller	[8]	Manual bypass tray separation roller
[9]	Bypass CD paper size VR (VR1)	-	-

10.2 Drive

[1]	Paper feed motor (M22)	[2]	Bypass paper feed clutch (CL7)
[3]	Manual bypass tray separation roller	[4]	Manual bypass tray feed roller

10.3 Operation

10.3.1 Up/down control

- The paper lift-up plate is moved up and down by the paper feed motor.

(1) Up operation

- The bypass pick-up solenoid is energized for a predetermined period of time during rotation of the paper feed motor. This unlocks the paper lift-up plate clutch and the driving force of the paper feed motor is transmitted to the paper lift-up cam.
- As the paper lift-up cam rotates, the paper lift-up plate which has so far been pushed down by the paper lift-up cam is raised to the paper feed position by the spring.

(2) Down operation

- The bypass pick-up solenoid is energized for a predetermined period of time during rotation of the paper feed motor. This rotates the paper lift-up cam, so that the cam pushes the paper lift-up plate down into its standby position.

[1]	Paper feed motor (M22)	[2]	Bypass lift-up position sensor (PS26)
[3]	Paper lift-up plate clutch (mechanical)	[4]	Bypass pick-up solenoid (SD1)
[5]	Paper lift-up cam	[6]	Paper lift-up plate
[7]	Manual bypass tray feed roller	-	-

(3) Operation timing

(a) Move to paper feed position (up)

- At the start of a manual bypass paper feed sequence, the paper lift-up plate is raised to the paper feed position.
- After the lapse of a predetermined period of time, the bypass pick-up solenoid is deenergized. The paper lift-up plate is stopped at the paper feed position.
- The actuator of bypass lift-up position sensor rotates in synchronism with the paper lift-up cam. When the paper lift-up plate is raised, the actuator rotates to thereby unblock the bypass lift-up position sensor. Then, the machine determines that the paper lift-up plate is raised to the paper feed position.
- If the bypass lift-up position sensor remains unblocked even after the bypass pick-up solenoid has been deenergized, the machine determines that the paper lift-up plate is at the paper feed position.
- As the paper level lowers during paper feed, the spring pushes up the paper lift-up plate, so that the paper stack is pushed up to the optimum paper feed position.

[1]	Paper lift-up cam	[2]	Paper lift-up plate (standby position)
[3]	Paper lift-up plate (paper feed position)	-	-

(b) Move to standby position (down)

- The paper lift-up plate is lowered if there is no print job that uses the manual bypass trays and the paper exit sensor detects a sheet of paper fed from the manual bypass tray.
- The paper lift-up plate is lowered if the above conditions are met even during execution of another job.
- If a bypass paper empty condition is detected at the paper feed position, the paper lift-up plate is lowered to the standby position.
- If a paper misfeed occurs, the paper lift-up plate is stopped at the paper feed position. When the paper feed motor rotates stably after the misfeed is cleared, the paper lift-up plate is lowered to the standby position.
- After the lapse of a predetermined period of time, the bypass pick-up solenoid is deenergized. The paper lift-up plate is stopped at the standby position. As the paper lift-up plate lowers, the bypass lift-up position sensor is blocked. The machine determines that the paper lift-up plate is at the standby position based on the fact that the bypass lift-up position sensor is blocked even after the bypass pick-up solenoid has been deenergized.

10.3.2 Paper feed control

(1) Pick-up control

- Paper feed operations of the manual bypass tray are driven by the paper feed motor.
- The bypass pick-up solenoid is energized by a print start signal and the paper is raised to the paper feed position.
- After the paper is raised to the paper feed position, the bypass paper feed clutch is energized.

- When the bypass paper feed clutch is energized, the drive from the paper feed motor is transmitted to the manual bypass tray paper feed roller, so that the paper can be fed in.
- The manual bypass tray paper feed roller feeds the paper onto the registration roller.
- When the paper fed from the manual bypass tray is reached onto the registration roller, the bypass paper feed clutch is deenergized to stop the manual bypass tray paper feed roller from rotating.
- The bypass pick-up solenoid is energized and the paper is lowered to the standby position.
- If the registration sensor does not detect paper even after the lapse of a predetermined period of time, the machine determines that there is a paper misfeed at the manual bypass tray. Note, however, that the paper feed sequence is repeated a second time if a paper misfeed is detected. If the registration sensor is still unable to detect paper, the machine determines that there is a paper misfeed at the manual bypass tray (paper feed retry control).

[1]	Paper feed motor (M22)	[2]	Bypass paper feed clutch (CL7)
[3]	Manual bypass tray feed roller	[4]	Manual bypass tray separation roller
[5]	Paper	-	-

(2) Separation control

- The manual bypass tray separation roller is pressed up against, and driven by, the manual bypass tray feed roller. A torque limited is mounted on the shaft of the manual bypass tray separator roller.
- The acting pressure of the manual bypass tray feed roller/manual bypass tray separation roller/torque limiter serves as the limit torque for preventing double feed.
- When there is no sheet of paper or only one sheet of paper between the manual bypass tray separation roller and manual bypass tray feed roller, the limit torque is exceeded and the manual bypass tray separation roller follows the rotation of the manual bypass tray paper feed roller.
- If there are two or more sheets of paper between the manual bypass tray separation roller and manual bypass tray feed roller, the limit torque is greater than the friction force of the paper, so that the manual bypass tray separation roller stops rotating.
- Because of the stationary manual bypass tray separation roller, the lower sheet of paper in contact with the manual bypass tray separation roller is not fed in, so that the first sheet of paper is properly separated from the second sheet of paper.

(3) Periodically replaced parts

- The manual bypass tray feed roller and manual bypass tray separation roller are periodically replaced parts. These two rollers must be replaced with new ones at the same time.
- Neither the manual bypass tray feed roller nor manual bypass tray separation roller is provided with a new article detection mechanism. When the two rollers are replaced with new ones, the "Manual Tray" counter must be reset to zero using "Counter/Life" of the Service Mode.
- The number of times the manual bypass tray has been subjected to paper feed operations can be checked with the "Manual Tray" counter of the Service Mode.

- For details of the applicable replacement procedures for the manual bypass tray feed roller and manual bypass tray separation roller and the Service Mode, see [“F.6.9.3 Replacing the manual bypass tray feed roller, manual bypass tray separation roller assy”](#).

Manual bypass tray feed roller

Manual bypass tray separation roller assy

10.3.3 Paper size detection control

- The standard size of the paper loaded in the manual section is detected automatically by the combination of ON or OFF positions of the two bypass FD paper size sensors and the bypass CD paper size VR.
- The two bypass FD paper size sensors are disposed at positions at which they can detect length even the sub tray not opened.
- The paper width is calculated as follows. Moving the paper guide rotates the size detection gear and the bypass CD paper size VR disposed on the same axis of rotation as the size detection gear. With the rotation of the bypass CD paper size VR, a value is detected and used to calculate the paper width.

- The machine supports detection of SRA3 size.
- Irregular paper sizes and postcard can be used by entering the custom size.

SRA3			312.5 to 330 inclusive

10.3.4 Paper empty detection control

- When the paper is loaded in the manual bypass tray, the paper empty detection actuator is pressed by the leading edge of the paper. The paper empty detection actuator is pressed to unblock the bypass paper empty sensor.
- When there is no paper on the manual tray, the paper empty detection actuator is raised. The paper empty detection actuator is returned to its original position to thereby block the bypass paper empty sensor.

[1]	Bypass paper empty sensor (PS27)	[2]	Actuator
[3]	Manual bypass tray feed roller	-	-

10.3.5 Adjustment for compatibility with heavy paper

- As a field service response to paper misfeed that may occur when heavy paper (300 g/m² (79 3/4 lb)) is used, pressure of the manual bypass tray separation roller against the manual bypass tray feed roller can be increased by changing the mounting position of the spring. Changing the separation roller pressure may solve the paper misfeed problem occurring with a specific type of heavy paper (300 g/m² (79 3/4 lb)).
- For details of procedure changing the mounting position of the spring, see “[I.16.3.3 Separator roller pressure adjustment of the bypass tray](#)”.

NOTE

- If plain paper is used under high-temperature, high-humidity environment after the mounting position of the spring has been changed, double feed may at times occur.

11. PAPER FEED SECTION

11.1 Configuration

11.1.1 Tray1

[1]	Tray 1 separation roller	[2]	Tray 1 feed roller

11.2 Drive

11.2.1 Drive

- Drive parts are arranged in the same way in tray 1 and tray 2. If the description that follows is not identified with tray 1 or tray 2, it is applicable to both tray 1 and tray 2 in terms of mechanism and control.
- Paper feed motor drives the tray1 and 2 paper feed roller section.
- The drive section of each tray has a clutch that controls rotation of the paper feed roller section.

11.3 Operation

11.3.1 Up/down control

- Tray 1 and Tray 2 are controlled in the same control procedure.

(1) Up operation

- paper lift-up plate B is located under paper lift-up plate A.
- The lift-up plate drive shaft of the tray 1/2 lift-up motor is connected to paper lift-up plate B.
- When the drive shaft of the tray 1/2 lift-up motor rotates, paper lift-up plate B raises paper lift-up plate A.

[1] Tray 1 upper limit sensor (PS25) Tray 2 upper limit sensor (PS22)	[2] Tray 1 lift-up motor (M12) Tray 2 lift-up motor (M13)
[3] Paper	[4] Lift-up plate drive shaft
[5] Paper lift-up plate B	[6] Paper lift-up plate A

(2) Down operation

- When the tray is slid out of the machine, the coupling of the paper feed tray 1/2 lift-up motor and the lift-up plate drive shaft are disconnected from each other.
- When the driving force of the paper feed tray 1/2 lift-up motor is released from the lift-up plate drive shaft, the paper lift-up plate starts lowering by its own weight.

[1] Pick-up roller	[2] Light blocking plate of upper limit sensor
[3] Tray 1 upper limit sensor (PS25) Tray 2 upper limit sensor (PS22)	[4] Tray 1 lift-up motor (M12) Tray 2 lift-up motor (M13)
[5] Paper	[6] Paper lift-up plate B
[7] Paper lift-up plate A	- -

(3) Operation timing

(a) When the tray is slid in

- When the tray is slid into the machine, the sensor on the tray 1/2 FD paper size board is blocked. The machine then determines that the tray is slid into position.
- The paper lift-up plate is lowering when the tray is slid out, so that the tray 1/2 upper limit sensor is unblocked.
- Determining after tray insertion that the tray 1/2 upper limit sensor is unblocked, the machine lets the tray 1/2 lift-up motor rotate to start the up operation of the paper lift-up plate.
- When the paper stack is raised to a predetermined height after the up operation of the paper lift-up plate has been started, the tray 1/2 upper limit sensor is blocked.
- Determining that the tray 1/2 upper limit sensor is blocked, the machine stops the tray 1/2 lift-up motor to complete the up operation of the paper lift-up plate.
- Control is provided to make sure that only one tray performs the up operation at one time.

- If the tray is slid out during the up operation of the paper lift-up plate and accordingly the sensor on the tray 1/2 FD paper size board is unblocked, the up operation of the paper lift-up plate is terminated.

(b) During a print cycle

- When the amount of paper decreases as the unit keeps printing, the pick-up roller will gradually come down to unblock the tray 1/2 upper limit sensor. The tray 1/2 lift-up motor will rotate again to lift up the paper lift-up plate.
- When the tray 1/2 upper limit sensor is blocked, the tray 1/2 lift-up motor will stop to stop lift-up the paper lift-up plate.
- The sequence of these operations is repeated to keep constant the pressure between the pick-up roller and paper stack (paper take-up pressure) regardless of the amount of paper still available for use.

11.3.2 Paper feed control

- Tray 1 and tray 2 are controlled in the same control procedure.

(1) Pick-up control

- The paper feed clutch is energized after the lapse of a predetermined period of time after the print start signal.
- The driving force of the paper feed motor is transmitted to the pick-up roller and paper feed roller when the paper feed clutch is energized. These rollers rotate to pick up and feed a sheet of paper into the machine.

(2) Separation control

- The separation roller is pressed up against the feed roller by the pressure of a spring and an acting pressure generated from torque of the torque limiter.
- The acting pressure of the feed roller/separation roller/torque limiter serves as the limit torque for preventing double feed.
- When there is no sheet of paper or only one sheet of paper between the separation roller and feed roller, the limit torque is exceeded and the separation roller follows the rotation of the feed roller.
- If there are two or more sheets of paper between the separation roller and feed roller, the limit torque is greater than the friction force of the paper, so that the separation roller is not rotated.
- The separation roller causes the lower sheet of paper in contact with the separator roller to be pushed backward in the direction of the tray, so that the lower sheet of paper is properly separated.

[1]	Feed roller	[2]	Separation roller
[3]	Paper	[4]	Pick-up roller

(3) Paper feed retry control

- If the specified sensor is unable to detect the paper even after the lapse of a predetermined period of time after the start of the paper feed sequence, the machine determines that there is a paper misfeed. To reduce possibility of paper misfeed, if a paper misfeed is detected during a print job under the following conditions, the paper feed sequence is performed again (retry) only once. The feed roller is temporarily stopped, and is then turned again. A paper misfeed results if the specified sensor is still unable to detect the paper even after the paper feed retry sequence, the machine determines that there is a paper misfeed.

(4) Feed roller speed reduction control

- To achieve high productivity at low system speed during multi-print cycles, variations in transport speed is corrected to thereby maintain a proper paper-to-paper distance.
- The feed roller speed reduction control is performed only during paper feed from tray 1 or tray 2 of bizhub 364/284.
- Time it takes the paper feed sensor to be activated after the start of a paper feed sequence is measured. If the distance between two sheets of paper is determined to be narrow, the feed roller is decelerated for a predetermined period of time, so that a proper paper-to-paper distance can be achieved.

[1]	Preceding sheet	[2]	Sheet of paper being controlled
[3]	Paper feed sensor	-	-

(5) Vertical transport roller speed reduction control

- In the same manner as with the feed roller speed reduction control, control is performed to reduce the speed of the vertical transport roller during a multi-print cycle, thereby maintaining a proper paper-to-paper distance.
- The vertical transport roller speed reduction control is performed during paper feed from tray 2, tray 3, tray 4, or LCT.

- Time it takes the vertical transport sensor to be activated after the start of a paper feed sequence is measured. If the distance between two sheets of paper is determined to be narrow, the vertical transport roller is decelerated for a predetermined period of time, so that a proper paper-to-paper distance can be achieved.

(6) Paper feed control

(a) Tray 1

- The tray 1 feed roller feeds the paper onto the registration roller.
- The tray 1 paper feed sensor located downstream of the tray 1 feed roller detects the paper fed from the feed roller.
- When the paper fed from the feed roller moves past the registration roller and reaches a predetermined position, the tray 1 paper feed clutch is deenergized to disconnect the driving force of the paper feed motor.
- If the registration sensor is unable to detect paper even after the lapse of a predetermined period of time, the machine determines that there is a paper misfeed at tray 1.

(b) Tray 2

- The tray 2 feed roller feeds the paper onto the tray 2 vertical transport roller.
- The tray 2 paper feed sensor located downstream of the tray 2 feed roller detects the paper fed from the tray 2 feed roller.
- When the tray 2 vertical transport sensor located downstream of the tray 2 vertical transport roller along the paper path detects the leading edge of the paper fed from the feed roller, the tray 2 paper feed clutch is deenergized to disconnect the driving force of the transport motor.
- If the tray 2 vertical transport sensor is unable to detect the leading edge of paper even after the lapse of a predetermined period of time, the machine determines that there is a paper misfeed at tray 2.

(7) Paper misfeed display

NOTE

- The setting for the paper misfeed display can be made using "System 2/JAM Code Display Setting" of the Service Mode, by either enabling or disabling the JAM code display.

(8) Downstream exit control during multi-print cycle

- The following terms are used for convenience' sake throughout this chapter.
Upstream: Refers to the source side of paper supply relative to the paper feeding direction
Downstream: Refers to the destination side of paper transport relative to the paper feeding direction
- If a paper misfeed occurs at the paper feed section which is upstream in paper transport, the print cycle is not brought to an immediate stop; rather, the machine allows a sheet of paper, for which the print cycle is to be completed at a downstream side, to continue undergoing the current print cycle and feeds the printed page out after completion of the current print cycle.

(a) Types of paper misfeed governed by downstream exit control

Misfeed at tray 1 paper feed section	Misfeed at manual bypass tray paper feed section
Misfeed at tray 2 paper feed section	Misfeed at vertical transport section
Misfeed at tray 3 paper feed section	
Misfeed at tray 4 paper feed section	

(b) 1-sided printing

- In consecutive 1-sided printing, the paper causes a jamming at the paper feed tray section.
- 1st sheet after an image transfer is remained at the paper exit section.
- 2nd sheet before an image transfer is remained at the fusing section and the vertical conveyance section.

[1]	Sheet after a 1-sided image transfer	[2]	Sheet before a 1-sided image transfer
[3]	Jamming paper	[4]	Jamming

Operation

- Stop feed/transport operation for jamming paper [3].
- Exit paper [1].
- Transfer and fuse image onto, and exit, sheet [2].

(c) 2-sided printing

- In consecutive 2-sided printing, the paper causes a jamming at the paper feed tray section.
- One sheet after a 2-sided image transfer is remained at the paper exit section.
- Two sheets before a 1-sided image fusing is remained at the duplex section.
- One sheet before an image transfer is remained at the vertical conveyance section and the registration section.

[1]	Sheet after a 2-sided image transfer	[2]	Sheet before a 1-sided image transfer
[3]	Sheet after a 1-sided image transfer	[4]	Jamming paper
[5]	Sheet after a 1-sided image transfer	[6]	Jamming

- Operation
- Stop feed/transport operation for jamming paper [4].
 - Exit paper [1].
 - Transfer and fuse 2-side image onto, and exit, sheets [3] and [5] located at the reverse/duplex section.
 - Print 2-side image onto, and exit, sheet [2] located before image transfer.

(9) Periodically replaced parts

- The pick-up roller, feed roller, and separation roller are periodically replaced parts. These three rollers must be replaced with new ones at the same time.
- None of the pick-up roller, feed roller, and separation roller is provided with a new article detection mechanism. When the three rollers are replaced with new ones, the “1st.” or “2nd.” counter must be reset to zero using “Counter/ Life” of the Service Mode.
- The number of times tray 1/tray 2 has been subjected to paper feed operations can be checked with the “1st./2nd.” counter of the Service Mode.

Periodical replacement cycle	Paper feed operations 300,000 times
------------------------------	-------------------------------------

- For details of the applicable replacement procedures for the pick-up roller, feed roller, and separation roller and the Service Mode, see [F.6.9.1 Replacing the tray 1 feed roller, tray 1 pick-up roller, tray 1 separation roller](#), [F.6.9.2 Replacing the tray 2 feed roller, tray 2 pick-up roller, tray 2 separation roller](#).

11.3.3 Paper size detection control

(1) Main scanning direction

- The size in the main scanning direction is detected based on the combination of transmission type photosensors 1 and 2 mounted on the CD paper size board being unblocked or blocked.
- The CD paper size sensor is unblocked or blocked according to the position of the paper width detection plate connected to the paper width guide plate.

(2) Sub scanning direction

- The size in the sub scanning direction is detected based on the combination of ON or OFF position of interrupter-type photosensor 1 to 4 mounted on FD paper sensor board.
- Each of switches 1 to 4 is unblocked or blocked by the paper length detection plate connected to the paper length guide plate.
- The sensor on the FD paper size board also functions to detect whether the tray is mounted.

- *1: SRA3 and A3 Wide are support only from the tray 2 and the bypass tray.
- *2: Detected is Invoice S for the destination of North America and A5S for other destinations.
- *3: One of the following paper sizes can be selected to be set for FLS. 8 1/2×13 1/2, 8×13, 8 1/4×13, 8 1/2×13

(a) Sensor states

Sensor	Physical state	
	HIGH signal	LOW signal
FD paper size board : Sensors 1 to 4	Blocked	Unblocked
CD paper size board: Sensor 1 or 2		

11.3.4 Remaining paper detection control

- The remaining paper detection control is performed under any of the following conditions:
“Tray 1/tray 2 is closed in position”
“The up/down control of the paper lift-up plate is completed”

(1) Paper near-empty detection

- The tray 1/2 near empty sensor detects a paper near-empty condition of the tray.
 - As paper is consumed, the paper lift-up plate is raised. This raises the near empty detection actuator provided at the lift-up plate drive shaft of the lift-up motor.
 - When the near empty detection actuator is raised to a position at which the tray 1/2 near empty sensor is blocked, the machine detects a near-empty condition.
 - A near-empty condition is detected when the amount of paper still available for use becomes about 50 sheets.
- When a sufficient amount of paper is loaded

Near empty condition

[1]	Actuator	[2]	Tray 1/2 paper near empty sensor (PS11/PS12)
[3]	Tray 1/2 lift-up motor (M12/M13)	[4]	Paper
[5]	Paper lift-up plate	-	-

(2) Paper empty detection

- Tray 1 and tray 2 use the same control system to detect a paper empty condition.
- A paper empty condition is detected by the tray 1/2 paper empty sensor.

[1] Actuator	[2] Tray 1/2 paper empty sensor (PS24/PS21)
--------------	---

(3) Remaining paper level display

- The amount of remaining paper is indicated by the LED on the right side of each tray and by the screen of the control panel.
- The following shows how the level is displayed.

Tray condition	Empty	Near empty	Other statuses (Including during lift-up and no tray conditions)
LED	ON	OFF/Blinking *	OFF

- *: LED turns blinking when Paper Remainder is set to Type 2: Service Mode → System 1 → Machine State LED Setting → Paper Remainder.

[1] Tray 1 empty display window	[2] Tray 2 empty display window
---------------------------------	---------------------------------

11.3.5 Paper feed tray locking mechanism

- The paper feed tray is provided with a locking mechanism.

(1) Unlocking the paper feed tray

- Withdrawing the lever of the paper feed tray to the front will disengage the tray lock lever provided on the right side of the paper feed tray.
- The paper feed tray can be pulled out of the machine by continuing pulling the lever with the tray lock lever disengaged.
- Rollers are provided for the right and left tray rails. They reduce the operating force required for sliding in/out the paper feed tray.

(2) Locking the paper feed tray

- Pushing the lever of the paper feed tray all the way toward the rear will allow the paper feed tray to be slid into the machine.
- When the paper feed tray is inserted all the way in place, the tray lock lever provided on the right side of the paper feed tray locks the tray in place.
- To prevent false detection, the paper feed tray is provided with a spring in the rear that pushes the tray back out if the tray is not inserted all the way in place.

[1]	Lever of the paper feed tray
-----	------------------------------

[2]	Lock lever
-----	------------

11.3.6 Spring for thin paper use

- A paper misfeed may infrequently occur, if lightweight 52 g/m² (13 13/16 lb) recycled paper or the like is used under high temperature, high humidity environment. Occurrence of paper misfeed can be reduced by using the pick-up spring mounted in the paper feed unit 2.
- A paper misfeed may occur when plain paper is used under high temperature, high humidity environment or thick paper is fed through the machine after the pick-up spring has been replaced with one for thin paper use.
- For details, see "[I.16.3.2 Pick-up pressure adjustment of the tray 1/2](#)".

12. VERTICAL TRANSPORT SECTION

[5] Tray 2 vertical transport motor (M23)	[6] Paper feed motor (M22)
[7] Transport motor (M1)	[8] Fusing motor (M3)
[9] Paper path	-

12.3 Operation

12.3.1 Vertical transport control

- The vertical transport section transports paper fed from tray 1, 2, or optional paper feed unit onto the registration section.
- The paper fed from tray 1 is transported onto the registration section by the tray 1 feed roller.
- The paper fed from the manual bypass tray is transported onto the registration section by the manual bypass tray feed roller.

- The paper fed from tray 2 is transported onto the registration section by the tray 2 vertical transport roller.

12.3.2 Transport motor control

(1) Tray 2 vertical transport motor

- The tray 2 vertical transport motor is connected to the tray 2 vertical transport roller. When the tray 2 vertical transport motor is energized, the tray 2 vertical transport roller is rotated.

12.3.3 Operation timing

(1) Tray 2 vertical transport roller

- The tray 2 paper feed sensor located downstream of the tray 2 feed roller detects the paper fed from the tray 2 feed roller.
- When the tray 2 vertical transport sensor located downstream of the tray 2 vertical transport roller along the paper path detects the leading edge of the paper fed from the feed roller, the tray 2 paper feed clutch is deenergized to disconnect the driving force of the tray 2 vertical transport motor. The pick-up roller and feed roller follow the movement of the paper, continuing rotating. The pick-up roller and feed roller stop rotating as soon as the paper moves past them.
- If the tray 2 vertical transport sensor is unable to detect the leading edge of paper even after the lapse of a predetermined period of time, the machine determines that there is a paper misfeed at tray 2.

12.3.4 Right door mechanism

- The machine has the right door to enable easy access into the inside of the machine for clearing a paper misfeed or performing other service jobs.
- The right door is mounted with the mechanisms of the vertical transport section, paper feed section (manual bypass tray), and the duplex section. For detailed functions of the paper feed section (manual bypass tray) and the duplex section, see the corresponding chapters.
- The registration unit (2nd transfer section, registration section, and duplex section) is found inside the right door when opened.
- The registration unit is not provided with a locking mechanism or open/close detection mechanism. The locking mechanism and open/close detection mechanism provided for the right door are used also for the registration unit. For details of the registration unit, see “O.13.1 Configuration”.

[1]	Right door section	[2]	Registration unit
Registration unit (registration section/ 2nd transfer section)			

[1]	Registration unit	-	-
-----	-------------------	---	---

Registration unit (duplex section)

(1) Right door locking mechanism

- The right door is provided with a locking mechanism.

(a) Unlocking the right door

- Withdrawing the lever of the right door to the front will disengage the door lock pawls (three) provided at the front side of the right door.

(b) Locking the right door

- Close the registration unit and then close the right door. When the right door is closed in its correct position, the door lock pawls (three) provided at the front side of the right door lock the right door in place.

[1]	Door lock pawl (upper)	[2]	Right door lever
[3]	Door lock pawl (lower)	[4]	Door lock pawl (center)

(2) Registration unit lock mechanism

1. When the right door is opened, the registration unit that is left locked to the right door is also opened.
- The registration unit can be separated from the right door when the registration unit lever is disengaged from the door lock pawl disposed on the right door side.

[1]	Door lock pawl	[2]	Lever
-----	----------------	-----	-------

(3) Right door open/close detection mechanism

- The right door switch detects that the right door is opened or closed.
- When the right door is closed, the open/close detection plate provided at an upper portion at the front of the right door presses the actuator of the right door switch. This turns ON the right door switch and the machine determines that the right door is closed.
- When the right door is opened, the actuator of the right door switch is released. This turns OFF the right door switch and the machine determines that the right door is opened, giving a message that prompts the operator to close the right door.
- On determining that the right door is open, the machine prohibits the use of all jobs but the fax reception job. A paper misfeed results if the right door is opened during a print cycle.

[1]	Right door	[2]	Open/Close detection plate

13.2 Drive

[1]	Registration roller	[2]	Registration sensor actuator
[3]	Registration sensor (PS1)	[4]	Registration motor (M24)

13.3 Operation

13.3.1 Registration control

- At the registration section, a loop is formed in the paper between the tray 1 paper feed roller (or tray 2 vertical transport roller or bypass paper feed clutch) and the registration roller to thereby minimize skew in paper.

(1) Control

- When the registration motor is energized, the registration roller is rotated.

[1]	Registration roller rotating	[2]	Paper
[3]	Tray 1 feed roller	[4]	Actuator
[5]	Registration sensor (PS1)	-	-

- When the paper reaches the registration sensor actuator, the registration sensor output changes and the registration roller is stopped.

[1] Paper reaching registration sensor	[2] Registration sensor unblocked
[3] Registration sensor (PS1)	[4] Registration roller stopping

3. Because the registration roller stops, a loop is formed in the paper, which minimizes skew in the paper.

[1] Registration roller stopping rotating	[2] Loop formed in paper
---	--------------------------

4. The registration roller starts rotating again at timing at which to synchronize the image start position with paper position.

[1] Registration roller starting rotating again	[2] Transporting paper to 2nd transfer section
---	--

(2) Adjustment

- The amount of the loop of the paper can be adjusted in the [Service Mode] -> [Machine] -> [Printer Reg. Loop Adj.].

Changing the adjustment value will vary timing at which the tray 1 paper feed clutch (or tray 2 vertical transport clutch) is deenergized, which results in the length of loop being varied.

14.3 Operation

14.3.1 Heating roller assy heating control

(1) Heating control

- The heating roller assy consists of the fusing belt (cylindrical shape) into which the fusing roller is inserted.
- The inside surface of the fusing belt is formed with Ni layer and Cu layer.
- The IH coil unit located beside the heating roller assy radiates magnetic flux to the fusing belt when energized.
- The IH coil unit consists of two different types of coil: main coil and demagnetization coil.
- The fusing belt is heated by the main coil. The demagnetization coil controls the heating zone.
- Ni layer and Cu layer of the fusing belt is the conducting layer in which eddy current is generated with magnetic flux. The eddy current generated in the conducting layer produces Joule heat to heat the heating roller.
- The main coil is provided only on one side of the heating roller assy, so that the heating roller generates heat from a local surface of the fusing belt close to the main coil. The heating roller assy is therefore rotated to ensure that the entire periphery of the roller is heated to an adequate temperature.
- The heating roller temperature sensor and heating roller thermistor/1, to /3 measure the temperature of the fusing belt.

[1]	Heating roller assy	[2]	Fusing roller
[3]	Ni layer and Cu layer (coated back side)	[4]	Fusing belt
[5]	Demagnetization coil	[6]	Main coil
[7]	IH coil unit	[8]	Fusing unit

(2) Whole area heating control

- During printing, the whole area of the fusing belt is heated by the main coil.

(3) Center heating switch control

- The temperature on ends of the fusing belt is measured with the heating roller thermistor/1.
- When the temperature of ends of the fusing belt exceeds a predetermined value during printing using paper of a small size or in the standby state, the demagnetization coil comes into play in inhibiting heating of roller ends and only the center portion of the roller is heated.
- When the demagnetization coil is energized, the magnetic flux from the main coil is cancelled by the repulsive magnetic flux induced from the demagnetization coil.
- The IH coil unit is provided with one type of demagnetization coil.
- The ON/OFF control of the demagnetization coil is performed depending on the paper width (CD: main scanning length), the temperature on sides of the fusing belt, and the type of paper to be fed.

[1]	Demagnetization coil	[2]	Main coil
-----	----------------------	-----	-----------

(4) Detection of rotation of the heating roller assy

- The heating roller assy is rotated while it is being heated to ensure that the entire periphery of the fusing belt reaches an adequate temperature.
- If the heating roller assy does not rotate while the IH coil unit (main coil) is energized, the temperature of the entire periphery of the fusing belt cannot be measured and thus proper temperature control cannot be provided. At this time, only the half surface of the fusing belt is heated. If the main coil is energized with the heating roller assy remaining stationary, the roller can be damaged.
- Rotation of the heating roller results in the cylinder actuator being rotated.
- As the heating roller rotation sensor alternates between unblocked and blocked states at regular intervals, the machine determines that the heating roller assy is rotating.
- If the heating roller rotation sensor remains unblocked or blocked for a predetermined period of time during printing, the machine determines that a paper misfeed occurs at the exit, displaying a corresponding message on the control panel.
- If the heating roller rotation sensor remains unblocked or blocked for a predetermined period of time during a warm-up cycle, standby state, or any other timing than a print cycle, the machine displays the malfunction code “C3102 : Heating roller’s failure to turn” on the control panel.

[1]	Heating roller rotation sensor (PS37)	[2]	Cylinder actuator
[3]	Heating roller assy	-	-

14.3.2 Fusing drive release mechanism

- At the fusing drive position, transmit the driving force of the fusing motor to the pressure roller by a fusing drive release gear.
- Opening the right door places the fusing drive release lever in the fusing drive release position.
- With the fusing drive release lever in the fusing drive release position, the fusing drive release gear is disconnected from the fusing motor and, instead, connected to the jam removal dial.
- If a paper misfeed occurs in the fusing section, opening the right door allows the jam removal dial to be used for removing the misfed paper.

[1]

[1]	Fusing drive position	[2]	Fusing motor (M3)
[3]	Fusing drive release gear	[4]	Fusing drive release lever
[5]	Right door close position	[6]	Connected to fusing motor
[7]	Fusing pressure roller	[8]	Fusing drive release position
[9]	Jam removal dial	[10]	Connected to jam removal dial
[11]	Right door open position	-	-

14.3.3 Fusing speed correction

(1) Adjustment of paper loop amount

- To prevent double transferred images and brush effects that occur due to a difference in speed between paper transport during image transfer and fusing, a loop is formed in the paper between the 2nd transfer and fusing sections.
- The fusing loop sensor detects the length of the loop formed in the paper between the 2nd transfer section and the fusing pressure roller.
- The fusing motor increases or decreases the fusing speed according to the length of loop in the paper, thereby ensuring that the length of loop falls within a predetermined range.

Fusing loop sensor	Loop amount	Fusing speed
Blocking	large	Speed-up
Unblocking	small	Slowdown

[1]	Loop amount: large	[2]	Actuator
[3]	Fusing loop sensor (PS2)	[4]	2nd transfer roller
[5]	Loop amount: small	[6]	Fusing pressure roller

(a) Operation timing

- It starts controlling when the front-edge of the paper reaches to the predetermined position before the fusing roller.
- The fusing speed is decelerated so that a loop is formed in the paper between the 2nd transfer roller and the fusing roller.
- When the paper loop amount is large, the fusing loop sensor is blocked, and the fusing speed is increased.
- When the paper loop amount is small, the fusing loop sensor is unblocked, and the fusing speed is decreased.
- The fusing speed is increased or decreased as necessary to make sure that the paper loop amount falls within a predetermined range, thereby absorbing a difference between the fusing speed and image transfer speed.
- The fusing loop control will finish after the trailing of the paper passes the 2nd transfer roller.

(b) Fusing speed adjustment

- If double transferred images or brush effects occur due to inadequate paper loop before fusing, adjust the fusing speed using [Service Mode] -> [Machine] -> [Fusing transport speed].

14.3.4 Fusing pressure/retraction control

- To maintain durability of the fusing belt, the fusing pressure roller is retracted *1 from the fusing belt during any time other than a print cycle. (The roller is, however, retracted during a print cycle using envelopes.)
- *1: The pressure roller does not completely retract from the fusing belt but is slightly pressed to the fusing belt.
- The fusing pressure roller is pressed against, and retracted from, the fusing belt by rotating the pressure cam through forward or backward rotation of the fusing pressure motor.
- The fusing pressure home sensor detects the pressure roller at its pressure position.
- The position at which the fusing pressure roller is retracted is controlled by the period of time (number of pulses) through which the fusing pressure motor is rotated.
- When there is no change in the output of the fusing pressure home sensor even after the lapse of a predetermined period of time after the fusing pressure motor has started rotating, the machine determines that there is a pressure/retraction fault and displays the "Trouble code C3101: Fusing roller separation failure" message.

[1]	Fusing belt	[2]	Pressure roller
[3]	Pressure lever	[4]	Fusing pressure home sensor (PS38)
[5]	Pressure cam	[6]	Fusing pressure motor (M11)
[7]	Pressure position	[8]	Release position

(1) Operation timing

Conditions		Pressure roller position
Warm-up	At the start of a warm-up cycle	Retraction
Pre-standby	At the start of the pre-standby	Pressure
Standby	At the start of the standby	Retraction
Printing	For envelopes	Retraction
	For paper types other than envelopes	Pressure
When printing the multi jobs	When current printing is for other than envelopes and the next job is for the envelopes.	Pressure -> Retraction *
	When current printing is for the envelopes and the next job is for other than envelopes.	Retraction -> Pressure *
Energy save mode (lower power mode, sleep mode)		Retraction
When a malfunction or misfeed occurs		Retraction
When the fusing heater lamp is turned OFF (a door opened, a malfunction occurs, or other factors.)		Stop

- *: Pressure/retraction will be conducted after the currently printed paper passes between the fusing belt and the pressure roller. The timing for the next paper to be fed will be delayed during the pressure/retraction and keep the certain period of time between feeding the papers.

14.3.5 Fusing paper transport control

- The 2nd transfer roller transports paper onto the fusing unit.
- The fusing unit uses the fusing motor to drive the fusing pressure roller, thereby transporting paper onto the exit/reverse section.
- Fusing motor speed control is completed before the paper enters the fusing unit.
- The paper fed into the exit/reverse section is detected by the paper exit sensor before being transported by the paper exit roller.
- The fusing motor is deenergized after the last sheet of paper is fed into the finisher or out into the exit tray.

[1]	Actuator	[2]	Paper exit sensor (PS3)
[3]	Pressure roller	[4]	2nd transfer roller
[5]	Fusing roller	[6]	Exit tray front roller
[7]	Exit roller	-	-

14.3.6 Paper separation mechanism

- Paper separator claws are provided on the fusing pressure roller side and the fusing belt side in order to separate the sheet of paper reliably after the fusing process.
- Three contact type paper separator claws are installed on the fusing pressure roller side.
- Five noncontact type paper separator claws are installed on the fusing belt side.

[1]	Fusing belt	[2]	Paper separator claws (noncontact type)
[3]	Paper separator claws (contact type)	[4]	Pressure roller

14.3.7 Fusing temperature control

- The surface temperature of the fusing belt is detected to control the amount of the heat of the IH coil in order to maintain the appropriate fusing temperature.

[1] Heating roller assy	[2] Fusing pressure roller
[3] Soaking roller	[4] Heating roller rotation sensor (PS37)
[5] Fusing pressure home sensor (PS38)	[6] Heating roller thermistor/1 (TH1)
[7] Heating roller thermostat (TS1)	[8] Heating roller thermistor/3 (TH3)
[9] Heating roller temperature sensor (TEMS, Fixed at the main body side)	[10] Heating roller thermistor/2 (TH2)

[9] Standby (normal operation)	[10] Start of low power mode
[11] Low power mode	[12] Start of sleep mode
[13] Sleep mode	[14] Temperature
[15] Time	- -

(2) IH coil control

- Electric energy of the IH coil is controlled so that the temperature of the fusing belt falls within a predetermined temperature range.
- The temperature of the fusing belt is measured with the heating roller temperature sensor to thereby determine a possible change in the temperature (increase or decrease).
- The following types of control are available for the control of the electric energy of the IH coil.
 - Fixed control: The electric energy of the IH coil is controlled with a predetermined value; the control is performed for temperature control during warm-up.
 - PID control: The electric energy of the IH coil is controlled through a combination of the P control, I control, and D control; Used for temperature control in the normal standby state, during a print cycle, and in the low power mode.
 - P control: The electric energy of the IH coil is controlled according to the difference between a target temperature and a detected temperature; used for temperature control in the pre-standby state and before printing.

4. I control: Temperature errors arising from individual variability in the IH coil and fusing unit are corrected; not to be performed individually.
5. D control: The electric energy of the IH coil is corrected to respond to sudden changes in temperature; not to be performed individually.

(3) Fusing temperature control during warm-up

- To prevent image fixability from being degraded due to environmental changes when the main power switch is turned ON, three different warm-up modes are incorporated for fusing temperature control.
- The warm-up mode is performed "at low temperatures", "at ordinary temperatures", or "under high humidity condition".
- In the warm-up mode under high humidity condition, the warm-up time is extended to prevent paper from curling and the difference in temperature between the fusing belt and fusing pressure roller is minimized.
- When the temperature of the fusing belt reaches the warm-up completion temperature, control is passed onto the pre-standby process.
- A print cycle is started if so requested. If there is no print request, the machine enters the "temperature control under pre-standby".
- If the fusing pressure roller presses the heating roller assy, the fusing pressure motor is energized to let the fusing pressure roller retract from the heating roller assy.

Warm up mode (C554)	Environment	
	Machine interior Warm up time paper temperature	Machine interior humidity (absolute humidity *1)
Warm-up at low temperatures	18°C or less	Not judged by absolute humidity
Warm-up at ordinary temperatures	More than 18°C	Less than a predetermined value
Warm-up under high humidity condition	More than 18°C	Predetermined value or more

- *1: Absolute humidity: water content contained in the air (1 m³) as steam regardless of the temperature

[1] Machine interior paper temperature 18°C or less	[2] Machine interior paper temperature exceeding 18°C
[3] Absolute humidity, specified value or more	[4] Absolute humidity, less than the specified value
[5] Warm-up at low temperatures	[6] Warm-up under high humidity condition
[7] Warm-up at ordinary temperatures	- -

(4) Temperature control in standby state

- If no print request is received after the temperature control in the pre-standby state is started, control is passed onto the standby process.
- The temperature is controlled by normal mode, after predetermined time from pre-standby control start.
- For a predetermined period of time after the machine has started to enter the standby temperature control, control is provided with the target temperature of each of low temperature, normal, and high humidity modes.
- The standby temperature control ensures that the temperature of fusing belt in the standby state is not decreased.

* Counted period for standby control includes the printing time.

(5) Temperature control during printing

- Temperature control is provided in order to keep optimum fusing performance with various factors, such as the type of paper, print mode, paper temperature*1, use of paper of small size, decreased temperature during paper passage, and warm-up carried out with a cool fusing unit.
- *1: For paper temperature, "the machine interior temperature at the paper feed section" detected by the paper temperature sensor located in the paper feed section is used as a data for controlling a fusing temperature.

(6) Temperature control under low power mode

- The temperature of the fusing belt is decreased to thereby reduce power consumption during the low power mode.
- If the fusing pressure roller is in a pressed condition, the fusing pressure motor is energized to release the pressure.
- The heating roller assy is rotated by the fusing motor at the same time that the IH coil is energized and stopped when the IH coil is deenergized. The speed of the heating roller assy at this time is lower than that during a print cycle.

- When the temperature of the fusing belt is decreased to the starting temperature of the low power mode temperature control, the IH coil and the fusing motor are energized; when the temperature exceeds the ending temperature, the IH coil and the fusing motor are deenergized.
- During the low power mode, ON/OFF control is repeated between the starting and ending temperatures of the low power consumption control.

(7) Temperature control in sleep mode

- The main coil and demagnetization coil are deenergized to stop heating the fusing belt, thereby reducing power consumption in the sleep mode.
- The fusing motor is also deenergized to keep all rollers stationary.
- In the sleep mode, two different types of control are performed: engine ON sleep and engine OFF sleep. Either one of these is selected depending on the elapsed time after the print cycle.
- The machine enters the engine ON sleep mode, if a sleep mode start command is received during a period of less than 15 min. after the end of the print cycle.
 - The fusing temperature control is stopped, though a rotating fan, if any, is kept driven.
- The machine enters the engine OFF sleep mode, if a sleep mode start command is received after the lapse of a period of 15 min. or more after the end of the print cycle.
- In the sleep mode, the fusing belt temperature may be decreased down to room temperature because the fusing belt is not heated. A maximum time equivalent to the warm-up time may be required before the fusing belt temperature is increased to the print enable temperature from the room temperature.

(8) Low power consumption mode control

- If the power consumption of the main unit cannot be ensured because the optional device is mounted, control is performed such that the power supply to the IH coil is decreased during warm-up.
- This control is only provided for the C554 intended for Japanese and Taiwanese markets.
- The method of this control can be changed by changing the setting of "Service Mode/System 1/Warm Up/Low Power Consumption Mode."
- Warm-up priority mode (default): Printing starts after the warm-up time of the specified value even when the optional part is mounted. Productivity may be decreased because PPM control is performed after the start of printing.
- Productivity priority mode: When the optional device is mounted, the warm-up time is increased so as to decrease the power supply to the IH coil. The productivity after the start of printing is the same as that at the time the optional device is not mounted.

14.3.8 Protection against abnormal temperature

- The machine provides protection against abnormally high temperature of the fusing unit in the following three steps.

(1) Soft protection

- When the temperature higher than the control range at heating roller assy is detected more than 1 second, the temperature is judged to be abnormally high, and the trouble code appears.
- When the trouble code is displayed, printing will be prohibited.

Roller name	Sensor name: symbol	Detected temperature (Degrees centigrade)	Trouble code	
Heating roller assy	Heating roller temperature sensor: TEMS	225	C3725	Fusing abnormally high temperature detection (Center of the heating roller)
	Heating roller thermistor/2: TH2	285	C3726	Fusing abnormally high temperature detection (Middle of the heating roller)
	Heating roller thermistor/1: TH1	290	C3722	Fusing abnormally high temperature detection (Edge of the heating roller)

(2) Hard protection

- Next level is provided when the level 1 cannot detect due to CPU overrun.
- The heater relay, through the printer control board, is turned OFF in the second level operation to block the power supply to the IH coil.
- When the controlled temperature of heating roller assy is detected higher than the predetermined value, the temperature is judged to be abnormally high, and the trouble code appears.
- Through these control procedures, the power supply to the IH coil can be shut down before the thermostat is activated in the third level. It thereby suppresses damage to the fusing unit itself.

Roller name	Sensor name: symbol	Detected temperature (Degrees centigrade)	Trouble code	
Heating roller assy	Heating roller temperature sensor: TEMS2	225	C3725	Fusing abnormally high temperature detection (Center of the heating roller)
	Heating roller thermistor/1: TH1			
	Heating roller thermistor/2: TH2	230	C3726	Fusing abnormally high temperature detection (Middle of the heating roller)

Roller name	Sensor name: symbol	Detected temperature (Degrees centigrade)	Trouble code	
	Heating roller thermistor/3: TH3	230	C3722	Fusing abnormally high temperature detection (Edge of the heating roller)

(3) Overheat protection

- If the abnormal high temperature of soft protection/hard protection cannot be detected due to a faulty temperature sensor or thermistor, thermostat blocks the power supply to the IH coil.
- The thermostat rating is 210 degrees centigrade for the heating roller thermostat. The ratings do not, represent the actual surface temperature of the fusing belt, since the thermostats are installed in a non-contact with respect to heating roller assy.

14.3.9 IH power supply control

1. IH power supply abnormal temperature detection

- The IH power supply is equipped with a thermal fuse that prevents an IH power supply malfunction from occurring due to increased temperature inside the IH power supply.
- The IH power supply is equipped with a thermistor that monitors temperature inside the IH power supply. If the temperature inside the power unit increases, control is performed to bring down the temperature.
- Specific controls performed upon detection of high temperatures

Fault name	Detected temperature	Mode	Specific controls	Trouble code	
High temperature 1	92 °C detected for 10 sec. or more	During print cycle	Decrease productivity down from 100 % to 50 %.	Not detected.	
			Return productivity back to 100 % when 90 °C is detected for 30 sec. or more.		
		Standby	Increase the speed of the IH power supply cooling fan from 50 % to 100 %.		
			Return the speed back to 50 % when 90 °C is detected for 30 sec. or more.		
High temperature 2	97 °C detected for 10 sec. or more	All mode	Trouble code is displayed.	C3B02	IH malfunction (CPU)

2. Abnormal power supply input detection

- If the voltage applied to the IH power supply is decreased, the IH power supply reduces the amount of electricity supplied to the IH coil. Since good fusing performance cannot be maintained because of the reduced amount of electricity supplied to the IH coil, PPM control is performed in which print productivity is decreased from 100 % down to 40 % in a stepwise fashion.
- The IH power supply displays a malfunction code when the electricity or voltage input is abnormal.

Fault name	Detection method	Specific controls	Trouble code	
Faulty input electricity	The current or electricity to be input exceeds an upper limit value.	Trouble code is displayed.	C3B07	IH input power error
	The current or electricity to be input falls below a lower limit value.			
Faulty input voltage	The voltage to be input exceeds an upper limit value.	Trouble code is displayed.	C3B08	IH input voltage error
	The voltage to be input falls below a lower limit value.			

14.3.10 Temperature sensor control

- A non-contact type thermopile sensor is used for heating roller temperature sensor (hereinafter referred to as "temperature sensor"). The temperature sensor detects the temperature of the fusing belt through infrared rays and controls the surface temperature. A non-contact type thermopile sensor is used for heating roller temperature sensor (hereinafter referred to as "temperature sensor"). The temperature sensor detects the temperature of the fusing belt through infrared rays and controls the surface temperature.
- The temperature sensor is provided with a lens. For its structural reason, therefore, the temperature sensor can be dirtied by dew condensation formed or foreign matter deposited on the lens.
- The temperature sensor, if contaminated with dew drops or dirt on the lens, becomes unable to detect the temperature accurately, since the contaminants blocks the infrared rays that are otherwise detected by the sensor.
- If temperature control is provided under such conditions, the temperature sensor detects a temperature that is lower than the actual temperature of the fusing belt. Then, the fusing belt temperature is controlled based on a temperature higher than the target one.

(1) Heating roller temperature sensor condensation detection

- The control of detection of condensation on the heating roller temperature sensor is to determine degradation of detection accuracy of the temperature sensor caused by condensation or dirt.
- When the difference in temperature between that detected by heating roller thermistor/3 and that detected by heating roller temperature sensor is equal to, or more than, a specified value and that condition lasts for predetermined period of time or more, the machine determines that the heating roller temperature sensor lens has condensation on it.
- When condensation on the temperature sensor is detected and the control is switched to "alternative temperature control", the machine displays the corresponding P code "P-32 Heating roller temperature sensor temperature detection failure" on the control panel.

(2) Heating roller temperature sensor contamination detection control

- The contamination detection control is to determine degradation of detection accuracy of the heating roller temperature sensor caused by contamination.
- The contamination detection control is performed only in the standby state. No control is provided during the alternative temperature control initiated by condensation of the temperature sensor.
- If contamination of the lens of the heating roller temperature sensor is detected, the machine displays the corresponding malfunction code "C-392A heating roller temperature sensor contamination (Main of the heating roller)" on the control panel. It then shuts down the circuit to the main coil and terminates fusing unit temperature control.
- If, after the start of the contamination detection control, the difference in temperature between that detected by heating roller thermistor/3 and that detected by heating roller temperature sensor is equal to, or more than, a specified value and that condition lasts for 10 min. or more, the machine determines that the heating roller temperature sensor lens is contaminated.
- The contamination detection control is terminated if, at any timing within 10 min. after the contamination detection control has been started, the difference in temperature between that detected by heating roller thermistor/1 and that detected by heating roller temperature sensor is equal to, or less than, a specified value.
- The contamination detection control is terminated if the machine enters any mode other than the current one, including the warm-up or the low power mode as initiated by the start of a print cycle or restart.

(3) Heating roller alternative temperature control

- If condensation on the heating roller temperature sensor is detected, the heating roller temperature control is provided based on the temperature detected by the heating roller thermistor/3, instead of that detected by the heating roller temperature sensor. This control is referred to as the heating roller alternative temperature control.
- When the control is switched to the alternative temperature control, the machine displays the corresponding P code "P-32 Heating roller temperature sensor temperature detection failure" on the control panel.
- If the difference in temperature between that detected by heating roller thermistor/3 and that detected by heating roller temperature sensor becomes less than a specified value during the alternative temperature control, the machine determines that condensation on the heating roller temperature sensor has been eliminated and resumes the temperature control based on the temperature detected by the heating roller temperature sensor.
- If the difference in temperature between that detected by heating roller thermistor/3 and that detected by heating roller temperature sensor is not improved even after the lapse of 10 min. after the alternative temperature control has been initiated, the machine determines that the cause is not condensation, but contamination, on the lens and terminates the alternative temperature control.
- If a print job is received during the alternative temperature control, control is performed according to the settings made in "Enhanced Security" of "Service Mode".

Reference: [\[Service Mode\]](#) -> [\[Enhanced Security\]](#) -> [\[Engine FW DipSW\]](#) -> [\[Switch No. 4/Fusing unit alternative temperature control\]](#)

(4) Sensor disconnection detection control

- If the temperature of the temperature sensor or thermistor fails to reach the specified temperature in the given period after the warm-up started, the sensor is judged to have disconnection, and the trouble code will appear.

Roller name	Sensor name: symbol	Trouble code	
Heating roller assy	Heating roller temperature sensor: TEMS	C3925	Fusing sensor wire breaks detection (Center of the heating roller)
	Heating roller thermistor/2: TH2	C3926	Fusing sensor wire breaks detection (Middle of the heating roller)
	Heating roller thermistor/1: TH1	C3922	Fusing sensor wire breaks detection (Edge of the heating roller)

14.3.11 Fusing PPM control**(1) PPM control**

- To achieve the intended level of fixability of printed images, the PPM control reduces the number of printed pages per minute by widening the distance between sheets of paper.

PPM mode	Control execution conditions	Purpose	Specific controls	Print productivity *1
Low temperature environment mode	Room temperature at the start of the print cycle is 18°C or less	To achieve the intended level of fixability under low temperature environment	To prevent fixability from being degraded in a multi-print cycle, paper-to-paper distance is widened to thereby limit a decrease in the fusing temperature.	100% 90% 80% 70%: default value 60% 50%
High humidity environment mode *2	Environmental humidity at the start of the print cycle is a predetermined value or more	To suppress occurrence of paper curl under high humidity environment	Paper-to-paper distance is widened in a multi-print cycle run under high humidity environment so as to prevent paper from curling, thereby achieving a required fusing temperature.	100%: default value 70% 50%
Paper curl suppression mode	"Mode 3" is selected for "Change Warm Up Time" of the service mode	To suppress occurrence of paper curl under conditions other than high humidity environment	Paper-to-paper distance is widened in a multi-print cycle run under any condition other than high humidity environment so as to prevent paper from curling, thereby achieving a required fusing temperature.	100%: default value 50%
Heating roller end temperature	Print request is received for paper with a paper width of 209 mm or less	To suppress inordinate rise in temperature on heating roller ends in a	Paper-to-paper distance is widened in a multi-print cycle so as to prevent the temperature on ends of the heating	100%: default value 90% 80% 70%

PPM mode	Control execution conditions	Purpose	Specific controls	Print productivity *1
rise suppression mode	Temperature of the heating roller ends becomes a predetermined value or more	print cycle using paper of a small size	roller from increasing, thereby promoting reduction in temperature.	60% 50% 40% 30%
Reduced power supply mode	Only an insufficient power is supplied to the IH coil, resulting in a fusing temperature lower than a predetermined value	To achieve the intended level of fixability under low power supply condition	To prevent fixability from being degraded in a multi-print cycle, paper-to-paper distance is widened to thereby limit a decrease in the fusing temperature.	70%: default value 50%
Thin paper mode	"100%" is selected for "PPM Control Choice" of the service mode	To increase productivity during printing using thin paper. *The choice of 100% may result in paper curling.	Paper-to-paper distance is narrowed to thereby increase productivity.	100% 70%: default value
Low-power Support Selection *33	Where the DipSW setting is set to "OFF" (prioritizing productivity)	To increase productivity when optional devices are installed. *The choice of 100% may result in warm up time lengthening.	Paper-to-paper distance is narrowed to thereby increase productivity.	100% 70%: default value

- *1: Exemplary calculation of print speed: If 55 ppm can be achieved at a print productivity of 100% on A4 plain paper, a change in print productivity to 90% results in 49.5 ppm.
- *2: Execution of the control for the high humidity environment mode can be prohibited by turning ON "No. 5 PPM control (high humidity environment mode) prohibited" of Engine FW DIP switch of Enhanced Security of the service mode.
- *3: By setting the "Service Mode/Security Selection/Engine FW Dip SW" "No. 11: Low Power Support Selection" to "ON", the low power support selection can prohibit the execution of controls.

14.3.12 Fusing unit new article detection

- The fusing unit is not provided with any new article detection mechanism. If the fusing unit is replaced with a new one, therefore, "New Release" of "Fusing Unit" must be performed in "Counter/ Life" of the service mode.

14.3.13 Fusing unit life detection

- The life counter of the fusing unit controls the life of the fusing unit.
- The counter value is recorded in the SSD board of the machine.

Controlled item	Counting unit
Printed page count	Count

[1] Normal display (less than life threshold)	[2] Reaching life display (reaching life threshold value)
[3] Life stop display (life stop threshold value)	[4] Fusing unit (new article)
[5] Image guaranteed range	[6] Outside image guaranteed range
[7] Fusing unit (life end)	- -

(1) Determination of life by the printed counter

- When the printed counter value reaches the threshold value, the machine determines that the fusing unit has entered a new state.

(a) Fusing unit printed counter life criteria

State	Display	Criteria
Normal	Normal (print enabled: within image guaranteed range)	Less than reaching life threshold
Reaching life	Reaching life display (print enabled: outside image guaranteed range)	Equal to or more than reaching life threshold and less than life stop threshold
Life stop	Life stop display (print prohibited)	Equal to or more than life stop threshold

For more details, see ["F.5.2 Details of the life specifications"](#).

(2) Fusing unit life determination timing

- The life determination control is performed under any of the following conditions:
 - "Power is turned ON (with the front door or right door closed)"
 - "The machine exits the sleep mode"
 - "The front door or right door is opened and closed with the power switch in ON position"
 - "Every print"

(3) Life display

(a) Life reaching display (typical)

- The life reaching screen appears when the count of the printed counter or the fusing rotation time counter reaches the reaching life threshold (print enabled, outside image guaranteed range).

(b) Life stop display (typical)

- The life stop screen appears when the count of the printed pages counter reaches the life stop threshold (print prohibited).

(c) L code display

- Only L code will be displayed instead of life reaching or life stop screen by changing the Software Switch Setting in Service Mode. (In [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#), set the switch No.51 to [10000000] at Bit assignment/[80] at HEX assignment.)

[11]	Normal display	[12]	L code display
[13]	Life stop display	-	-

14.3.14 Fusing cooling control

(1) Cooling of the IH coil unit

- The machine is provided with the IH coil cooling fan for cooling the IH coil that heats the heating roller assy and heat accumulated in and around the toner cartridge/K.
- Cool the IH unit by sucking out the air near the toner cartridge/K, and ventilating the inside of the IH coil unit.
- Heated air flowing through the IH coil unit is discharged through the slit in the upper surface of the unit. It is then discharged to the outside of the machine by way of the exit section.

[7]	Fusing unit side	[8]	Main body side
[9]	Fusing pressure motor (M11)	-	-

15.3 Operation

15.3.1 Fusing drive release mechanism

- At the fusing drive position, transmit the driving force of the fusing motor to the pressure roller by a fusing drive release gear.
- Opening the right door places the fusing drive release lever in the fusing drive release position.
- With the fusing drive release lever in the fusing drive release position, the fusing drive release gear is disconnected from the fusing motor and, instead, connected to the jam removal dial.
- If a paper misfeed occurs in the fusing section, opening the right door allows the jam removal dial to be used for removing the misfed paper.

[9]	Jam removal dial	[10]	Connected to jam removal dial
[11]	Right door open position	-	-

15.3.2 Fusing speed correction

(1) Fusing loop control

- To prevent double transferred images and brush effects that occur due to a difference in speed between paper transport during image transfer and fusing, a loop is formed in the paper between the 2nd transfer and fusing sections.
- The fusing loop sensor detects the length of the loop formed in the paper between the 2nd transfer section and the fusing roller.
- The fusing motor increases or decreases the fusing speed according to the length of loop in the paper, thereby ensuring that the length of loop falls within a predetermined range.

Fusing loop sensor	Loop amount	Fussing speed
Blocking	large	Speed-up
Unblocking	small	Slowdown

[1]	Loop length: large	[2]	Actuator
[3]	Fusing loop sensor (PS2)	[4]	2nd transfer roller
[5]	Loop length: small	[6]	Fusing roller

(a) Operation timing

- It starts controlling when the front-edge of the paper reaches to the predetermined position before the fusing roller.
- The fusing speed is decelerated so that a loop is formed in the paper between the 2nd transfer roller and the fusing roller.
- When the paper loop amount is large, the fusing loop sensor is blocked, and the fusing speed is increased.
- When the paper loop amount is small, the fusing loop sensor is unblocked, and the fusing speed is decreased.
- The fusing speed is increased or decreased as necessary to make sure that the paper loop amount falls within a predetermined range, thereby absorbing a difference between the fusing speed and image transfer speed.
- The fusing loop control will finish after the trailing of the paper passes the 2nd transfer roller.

(b) Fusing speed adjustment

- If double transferred images or brush effects occur due to inadequate paper loop before fusing, adjust the fusing speed using [Service Mode] -> [Machine] -> [Fusing transport speed].

15.3.3 Fusing pressure/retraction control

- To maintain durability of the fusing belt, the fusing pressure roller is retracted *1 from the fusing belt during any time other than a print cycle. (The roller is, however, retracted during a print cycle using envelopes.)
- *1: The pressure roller does not completely retract from the fusing belt but is slightly pressed to the fusing belt.
- The fusing pressure roller is pressed against, and retracted from, the fusing belt by rotating the pressure cam through forward or backward rotation of the fusing pressure motor.
- The fusing pressure home sensor detects the pressure roller at its pressure position.
- The position at which the fusing pressure roller is retracted is controlled by the period of time (number of pulses) through which the fusing pressure motor is rotated.
- When there is no change in the output of the fusing pressure home sensor even after the lapse of a predetermined period of time after the fusing pressure motor has started rotating, the machine determines that there is a pressure/retraction fault and displays the "Trouble code C3101: Fusing roller separation failure" message.

[1]	Fusing belt	[2]	Pressure roller
[3]	Pressure lever	[4]	Fusing pressure home sensor (PS38)
[5]	Pressure cam	[6]	Fusing pressure motor (M11)
[7]	Pressure position	[8]	Release position

(1) Operation timing

Conditions		Pressure roller position
Warm-up	At the start of a warm-up cycle	Pressure
Pre-standby	At the start of the pre-standby	Pressure
Standby	At the start of the standby	Retraction
Printing	For envelopes	Retraction
	For paper types other than envelopes	Pressure
When printing the multi jobs	When current printing is for other than envelopes and the next job is for the envelopes.	Pressure -> Retraction *
	When current printing is for the envelopes and the next job is for other than envelopes.	Retraction -> Pressure *
Energy save mode (lower power mode, sleep mode)		Retraction
When a malfunction or misfeed occurs		Retraction
When the fusing heater lamp is turned OFF (a door opened, a malfunction occurs, or other factors.)		Stop

- *: Pressure/retraction will be conducted after the currently printed paper passes between the fusing belt and the pressure roller. The timing for the next paper to be fed will be delayed during the pressure/retraction and keep the certain period of time between feeding the papers.

15.3.4 Fusing paper transport control

- The 2nd transfer roller transports paper onto the fusing unit.
- The fusing unit uses the fusing motor to drive the fusing pressure roller, thereby transporting paper onto the exit/reverse section.
- Fusing motor speed control is completed before the paper enters the fusing unit.
- The paper fed into the exit/reverse section is detected by the paper exit sensor before being transported by the paper exit roller.
- The fusing motor is deenergized after the last sheet of paper is fed into the finisher or out into the exit tray.

[1]	Actuator	[2]	Paper exit sensor (PS3)
[3]	Pressure roller	[4]	2nd transfer roller
[5]	Fusing roller	[6]	Exit tray front roller
[7]	Exit roller	-	-

15.3.5 Paper separation mechanism

- Paper separator claws are provided on the fusing pressure roller side and the fusing belt side in order to separate the sheet of paper reliably after the fusing process.
- Three contact type paper separator claws are installed on the fusing pressure roller side.
- Five noncontact type paper separator claws are installed on the fusing belt side.

[1]	Fusing belt	[2]	Paper separator claws (noncontact type)
[3]	Paper separator claws (contact type)	[4]	Pressure roller

15.3.6 Fusing temperature control

- Fusing temperature control uses the heating roller temperature sensor and the heating roller thermistor that detect the surface temperature of the fusing belt to turn ON or OFF the fusing heater lamp as necessary.
The fusing heater lamp when turned ON heats the fusing belt to a set temperature.

[1]	Fusing belt	[2]	Pressure roller
[3]	Fusing roller	[4]	Fusing heater lamp assy
[5]	Heating roller	[6]	Heating roller thermistor/1 (TH1)
[7]	Heating roller thermistor/2 (TH2)	[8]	Heating roller temperature sensor (TEMS)
[9]	Heating roller thermostat (TS1)	-	-

(1) Fusing heater lamp

- The heating roller contains a fusing heater lamp assy in it. The fusing heater lamp turns ON to generate heat, which heats the heating roller and fusing belt.
- The fusing heater lamp consists of two heaters, each having a unique heating range different from each other.
 - The fusing heater lamp/1 (long) uniformly heats the entire area of the heating roller
 - The fusing heater lamp/2 (short) heats only the central portion of the heating roller.
 - The fusing heater lamp/3 (long 2) evenly heats the entire area of the heating roller. (Taiwan and Japan Only)
 - The reason for dividing the fusing heater lamp that is used to heat the entire area into two is in order to keep the power capacity below 15A (for one outlet, Taiwan and Japan Only).
- The fusing heater lamp is turned ON or OFF according to the width of the paper and the surface temperature of the fusing belt.
 - For a paper width of 209 mm or less, the fusing heater lamp/2 is used to heat the central portion.
 - For a paper width exceeding 209 mm, the surface temperature of the fusing belt is measured and the fusing heater lamp/1, the fusing heater lamp/2 and the fusing heater lamp/3 are alternately turned ON.

[3]	Warm-up completed	[4]	Pre-standby control
[5]	Standby control (including a countermeasure against overshoot)	[6]	Print request
[7]	Print control	[8]	Standby
[9]	Low power mode	[10]	Entry in sleep mode
[11]	In sleep state	[12]	Fusing belt temperature

(3) Fusing temperature control during warm-up

- To prevent image fixability from being degraded due to environmental changes when the main power switch is turned ON, three different warm-up modes are incorporated for fusing temperature control.
- The warm-up mode is performed “at low temperatures”, “at ordinary temperatures”, or “under high humidity condition”.
- In the warm-up mode under high humidity condition, the warm-up time is extended to prevent paper from curling and the difference in temperature between the fusing belt and fusing pressure roller is minimized.
- When the temperature of the fusing belt reaches the warm-up completion temperature, control is passed onto the pre-standby process.

Warm up mode (C454)	Environment	
	Machine interior Warm up time paper temperature	Machine interior humidity (absolute humidity *1)
Warm-up at low temperatures	18°C or less	Not judged by absolute humidity
Warm-up at ordinary temperatures	More than 18°C	Less than a predetermined value
Warm-up under high humidity condition	More than 32°C	Predetermined value or more

- *1: Absolute humidity: water content contained in the air (1 m³) as steam regardless of the temperature

[1]	Machine interior paper temperature 18°C or less	[2]	Machine interior paper temperature exceeding 18°C
-----	---	-----	---

[3]	Absolute humidity, specified value or more	[4]	Absolute humidity, less than the specified value
[5]	Warm-up at low temperatures	[6]	Warm-up under high humidity condition
[7]	Warm-up at ordinary temperatures	-	-

(4) Temperature control during pre-standby

- After the warm-up completion temperature is reached, control is then passed onto the pre-standby process.
- The temperature control in the pre-standby state turns ON or OFF the fusing heater lamp as necessary in order to maintain the fusing belt temperature at a level that enables printing.
- A print job, when received during the pre-standby state, can be started without waiting.

(5) Temperature control during stand-by

- If no print request is received after the temperature control in the pre-standby state is started, control is passed onto the standby process.
- The temperature control in the standby state maintains the fusing belt temperature at a level lower than the temperature that enables printing.
- The control is intended to shorten time it takes the temperature to reach the printable level when a print request is received.
- An overshoot preventive process may be performed before control is passed onto the temperature control in the standby state.
- For a 30-min. period following the start of the standby process, the fusing motor alternately repeats rotation (at low speed) and stop cycles. After the 30-min. period, the fusing motor is deenergized.

(6) Temperature control during the print cycle

(a) Temperature control

- The machine enters a print state as it receives a print control and carries out a print cycle at a set temperature corresponding to the type of paper selected for the job.
- The fusing temperature is measured during the print cycle and temperature control suitable for the print condition is performed accordingly.

(b) Service Mode

- The machine has a fusing temperature adjustment function in order to prevent image fixability from being degraded depending on the type of paper and reduce such phenomena as paper curl, uneven wax, and offset.
- The fusing temperature can be varied using the setting made in "Machine/ Fusing Temperature" of the service mode.

Paper type	Heating side
Plain paper	- 20 °C to + 10 °C (step: 5 °C)
Thin paper	
Recycled paper	
OHP film	
Thick paper 1, 1+	
Thick paper 2	
Thick paper 3	
Thick paper 4	
Postcard	- 5 °C to + 5 °C (step: 5 °C)
Envelopes	

(7) Energy save mode

- The machine enters the energy save mode from any standby state to thereby reduce power consumption (TEC value).
- TEC value (typical electricity consumption): Energy saving criteria for copiers and printers to comply with the Energy Start program. Power consumption (kWh) at the office assuming operation of a product for one week (5 working days + 2 holidays) is calculated from the print speed and power consumption of the product.

- The energy save mode may be either the low power mode or sleep mode, whichever is enabled depending on the set conditions.

(a) Temperature control during low power mode

- To reduce power consumption in the low power mode, the surface temperature of the fusing belt is made lower than the controlled temperature under "temperature control during the standby state".
- In the low power mode, the printable temperature can be recovered within a period of time shorter than warm-up.

(b) Temperature control during sleep mode

- To reduce power consumption during the sleep mode, power to the fusing heater lamp is shut down to stop heating the fusing belt.
- If the fusing belt temperature is decreased to room temperature, the printable temperature can be recovered within the same period of time as that of warm-up.

(8) Fusing-related control

- The following types of control are available as they relate to fusing temperature:
 - In Service Mode, "System 1/Change Warm Up Time" and "Machine/Heater Control Level"
 - In enhanced security, "Engine FW Dip SW/No. 5 PPM control (high humidity environment mode) prohibited"

(a) Change Warm Up Time

With Change Warm Up Time, a different type of control during the warm-up cycle is performed depending on the set mode.

- Mode 1: Default setting; the warm-up time during the black print is the shortest.
- Mode 2: The warm-up time of the specifications value is set both for black and color.
- Mode 3: Print productivity is reduced through PPM control in order to prevent paper from curling immediately following the warm-up cycle. The specifications value is set for the warm-up time.
- Mode 4: The warm-up time is extended to thereby heat the fusing unit, so that the paper can be prevented from curling immediately following the warm-up cycle. The warm-up time is 65 sec. or less.
- Following are characteristics of each of these modes.

Warm-up	Intended user profiles	Advantages	Disadvantages
Mode 1	• Heavy users of black • Want to start printing as soon as possible	Shortest warm-up time for black.	Concern about occurrence of curl under high humidity environment
Mode 2	• Heavy users of color • Want to print quickly	The specifications values are set for the warm-up time for black and color.	Concern about occurrence of curl under high humidity environment
Mode 3	• Want to prevent paper curl immediately after warm-up • Want to start printing as soon as possible	• The specifications values are set for the warm-up time for black and color. • Reduced chances of curl occurring under normal environment.	• Reduced productivity immediately following warm-up • Concern about occurrence of curl under high humidity environment
Mode 4	Want to prevent paper curl immediately after warm-up	Reduced occurrence of curl	Long warm-up time (65 sec. or less)

(b) High humidity environment mode prohibited choice

The high humidity environment mode prohibited choice is used to shorten the warm-up time under high humidity environment.

- ON: Shortens the warm-up time under high humidity environment, but more chance of occurrence of paper curl
- OFF: Default setting; Longer warm-up time, but no occurrence of curl even under high humidity environment

(c) Heater Control Level

The supplied electricity is controlled so as to limit flickering of a fluorescent lamp connected to the power source from which the machine derives its power, the flickering otherwise occurring when the fusing heater lamp is turned ON and OFF.

- When the fluorescent lamp flickers, reduce the level to a smaller number. E.g.: Level 2 -> 1
- If the DC power source produces noise, increase the level to a larger number. E.g.: Level 2 -> 3

NOTE

- Reducing the level can cause the DC power source to produce noise, and increasing the level can cause the fluorescent lamp to flicker.

Whenever changing the level, make sure that the newly set level does not result in the fluorescent lamp flickering or DC power source producing a lot of noise.

(d) Low power consumption mode control

- If the power consumption of the main unit cannot be ensured because the optional device is mounted, control is performed such that the number of lighted lamps is changed (2 lamps will be lighted normally).
- This control is only provided for the C554 intended for Japanese and Taiwanese markets.
- The method of this control can be changed by changing the setting of "Service Mode/System 1/Warm Up/Low Power Consumption Mode."
- Warm-up priority mode (default): Printing starts after the warm-up time of the specified value even when the optional part is mounted. Productivity may be decreased because PPM control is performed after the start of printing.
- Productivity priority mode: When the optional device is mounted, the warm-up time is increased so as to decrease the power supply to the IH coil. The productivity after the start of printing is the same as that at the time the optional device is not mounted.

15.3.7 Protection from abnormal temperatures

(1) First approach: software protection

- If the heating roller temperature sensor detects a predetermined temperature or more continuously, the temperature is determined to be abnormally high and a "trouble code C3725: Fusing abnormally high temperature detection (Main of the heating side)" will be displayed.
- If the heating roller thermistor/1 detects a predetermined temperature or more continuously, the temperature is determined to be abnormally high and a "trouble code C3722: Fusing abnormally high temperature detection (Edge of the heating side)" will be displayed.

- If the heating roller thermistor/2 detects a predetermined temperature or more continuously, the temperature is determined to be abnormally high and a "trouble code C3726: Fusing abnormally high temperature detection (Center of the heating side)" will be displayed.
- When the trouble code is displayed, printing will be prohibited.

(2) Second approach: hardware protection

- A different protection is provided when the CPU overruns, becoming unable to detect the malfunction of an abnormally high temperature. If the heating roller temperature sensor detects an abnormal temperature, the heater relay of the DC power supply is turned OFF through the printer control board. Power supply to the fusing heater lamp is then shut down.
- When the hardware circuit in the DC power unit detects the heater relay being OFF, the temperature is judged to be abnormally high. Trouble code C3725: Fusing abnormally high temperature detection (Main of the heating side) will be displayed.
- Through these control procedures, the power supply to the heater lamps can be shut down before the thermostat is activated. It thereby suppresses damage to the fusing unit itself.

(3) Third approach: thermostat protection

- If detection of the abnormally high temperature through approaches 1 and 2 above is not possible due to a defective the heating roller temperature sensor, heating roller thermistor or other reason, the thermostat comes into play to shut down the power supply to the heater lamp.

15.3.8 Fusing PPM control

(1) PPM control

- To achieve the intended level of fixability of printed images, the PPM control reduces the number of printed pages per minute by widening the distance between sheets of paper.

PPM mode	Control execution conditions	Purpose	Specific controls	Print productivity *1
Low temperature environment mode	Room temperature at the start of the print cycle is 18°C or less	To achieve the intended level of fixability under low temperature environment	To prevent fixability from being degraded in a multi-print cycle, paper-to-paper distance is widened to thereby limit a decrease in the fusing temperature.	100%: default value 90% 80% 70% 60% 50%
High humidity environment mode *2	Environmental humidity at the start of the print cycle is a predetermined value or more	To suppress occurrence of paper curl under high humidity environment	Paper-to-paper distance is widened in a multi-print cycle run under high humidity environment so as to prevent paper from curling, thereby achieving a required fusing temperature.	100%: default value 70% 50%
Paper curl suppression mode	"Mode 3" is selected for "Change Warm Up Time" of the service mode	To suppress occurrence of paper curl under conditions other than high humidity environment	Paper-to-paper distance is widened in a multi-print cycle run under any condition other than high humidity environment so as to prevent paper from curling, thereby achieving a required fusing temperature.	100%: default value 50%
Heating roller end temperature rise suppression mode	Print request is received for paper with a paper width of 209 mm or less Temperature of the heating roller ends becomes a predetermined value or more	To suppress inordinate rise in temperature on heating roller ends in a print cycle using paper of a small size	Paper-to-paper distance is widened in a multi-print cycle so as to prevent the temperature on ends of the heating roller from increasing, thereby promoting reduction in temperature.	100%: default value 90% 80% 70% 60% 50% 40% 30%
Reduced power supply mode	Only an insufficient power is supplied to the fusing heater lamp, resulting in a fusing temperature lower than a predetermined value	To achieve the intended level of fixability under low power supply condition	To prevent fixability from being degraded in a multi-print cycle, paper-to-paper distance is widened to thereby limit a decrease in the fusing temperature.	70%: default value 50%
Thin paper mode	"100%" is selected for "PPM Control Choice" of the service mode	To increase productivity during printing using thin paper. *The choice of 100% may result in paper curling.	Paper-to-paper distance is narrowed to thereby increase productivity.	100% 70%: default value

- *1: Exemplary calculation of print speed: If 55 ppm can be achieved at a print productivity of 100% on A4 plain paper, a change in print productivity to 90% results in 49.5 ppm.
- *2: Execution of the control for the high humidity environment mode can be prohibited by turning ON "No. 5 PPM control (high humidity environment mode) prohibited" of Engine FW DIP switch of Enhanced Security of the service mode.

15.3.9 Fusing unit new article detection

- The fusing unit is not provided with any new article detection mechanism. If the fusing unit is replaced with a new one, therefore, "New Release" of "Fusing Unit" must be performed in "Counter/ Life" of the service mode.

15.3.10 Fusing unit life detection

- The life counter of the fusing unit controls the life of the fusing unit.
- The counter value is recorded in the SSD board of the machine.

Controlled item	Counting unit
Printed page count	Count

[1]	Normal display (less than life threshold)	[2]	Reaching life display (reaching life threshold value)
[3]	Life stop display (life stop threshold value)	[4]	Fusing unit (new article)
[5]	Image guaranteed range	[6]	Outside image guaranteed range
[7]	Fusing unit (life end)	-	-

(1) Determination of life by the printed counter

- When the printed counter value reaches the threshold value, the machine determines that the fusing unit has entered a new state.

(a) Fusing unit printed counter life criteria

State	Display	Criteria
Normal	Normal (print enabled: within image guaranteed range)	Less than reaching life threshold
Reaching life	Reaching life display (print enabled: outside image guaranteed range)	Equal to or more than reaching life threshold and less than life stop threshold
Life stop	Life stop display (print prohibited)	Equal to or more than life stop threshold

For more details, see ["F.5.2 Details of the life specifications"](#).

(2) Fusing unit life determination timing

- The life determination control is performed under any of the following conditions:
 - "Power is turned ON (with the front door or right door closed)"
 - "The machine exits the sleep mode"
 - "The front door or right door is opened and closed with the power switch in ON position"
 - "Every print"

(3) Life display

(a) Life reaching display (typical)

- The life reaching screen appears when the count of the printed counter or the fusing rotation time counter reaches the reaching life threshold (print enabled, outside image guaranteed range).

- (b) Life stop display (typical)
- The life stop screen appears when the count of the printed pages counter reaches the life stop threshold (print prohibited).

- (c) L code display
- Only L code will be displayed instead of life reaching or life stop screen by changing the Software Switch Setting in Service Mode. (In [\[Service Mode\]](#) -> [\[System 2\]](#) -> [\[Software Switch Setting\]](#), set the switch No.51 to [10000000] at Bit assignment/[80] at HEX assignment.)

[1]	New article	[2]	Reaching life threshold value
[3]	Life stop threshold value	[4]	Default setting
[5]	Normal display	[6]	Reaching life display
[7]	Life stop display	[8]	Image is guaranteed
[9]	Image is not guaranteed	[10]	L code display (when software switch setting is changed)

[11]	Normal display	[12]	L code display
[13]	Life stop display	-	-

15.3.11 Fusing cooling control

(1) Fusing unit cooling

- The machine is used the toner bottle cooling fan for cooling the machine interior around the fusing unit.
- Outside air is drawn in through the rear portion of the machine to thereby blow air in an area between the fusing unit and toner bottle unit, thus cooling.

[1]	Fusing unit	[2]	Duct
[3]	Toner bottle cooling fan (FM4)	-	-

16. PAPER EXIT/REVERSE SECTION

16.1 Configuration

[1]	Reverse roller	[2]	Paper exit roller
[3]	Gate switch solenoid (SD3)	[4]	Fusing motor (M3)
[5]	Paper exit clutch (CL8)	[6]	Switchback motor (M4)

16.2 Drive

[1]	Switchback motor (M4)	[2]	Paper exit clutch (CL8)
[3]	Fusing motor (M3)	[4]	Paper exit/reverse switch gate
[5]	Gate switch solenoid (SD3)	[6]	Paper exit roller
[7]	Reverse roller	-	-

16.3 Operation

16.3.1 Transport control

(1) Paper exit by paper exit roller

- If the paper is fed out by way of the paper exit roller, the paper exit roller is rotated forward to transport the paper.
- The initial position of the paper exit/reverse switch gate establishes a paper path through the paper exit roller, so that its position is not changed.
- The paper exit roller is driven by controlling rotation of the fusing motor with the paper exit clutch.
- The paper exit clutch is energized at timing at which the leading edge of the paper enters the fusing unit.
- The paper exit clutch is deenergized when the paper is fed a predetermined distance after the paper exit roller after the paper exit sensor has detected the trailing edge of the paper.

[1] Actuator	[2] Paper exit sensor (PS3)
[3] 2nd transfer roller	[4] Fusing unit
[5] Transported to paper exit tray or finisher	[6] Paper exit roller
[7] Paper exit/reverse switch gate: solenoid OFF position	- -

(2) Paper exit by reverse roller

- The paper is fed from the reverse roller to the paper exit tray, only if FS-534/JS-506 capable of feeding paper out through the reverse roller is mounted.
- When the paper is to be fed out via the reverse roller, the switchback motor is rotated forward to thereby transport the paper.
- The gate switch solenoid is energized in order to establish a paper path through the reverse roller by changing the position of the paper exit/reverse switch gate.
- The reverse roller is started at timing at which the leading edge of the paper enters the paper exit/reverse section.
- The reverse roller is stopped when the paper is fed a predetermined distance after the reverse roller after the paper exit sensor has detected the trailing edge of the paper.

[3] 2nd transfer roller	[4] Fusing unit
[5] Paper exit/reverse switch gate: solenoid ON position	[6] Paper exit to paper exit tray

[7] Reverse roller	-	-
--------------------	---	---

(3) Duplex section transport

- When the paper is to be fed into the duplex section, the reverse roller is rotated forward to transport the paper to the reverse position and then rotated backward, thereby transporting the paper onto the duplex section.
- Until the paper is transported up to the reverse stop position, the gate switch solenoid is energized to place the paper exit/reverse switch gate in a position at which the paper path through the reverse roller is established.
- When the paper reaches the reverse stop position, the paper exit/reverse switch gate returns to its original position to thereby prevent the paper from moving backward into the fusing section.
- The reverse roller is started to rotate forward at timing at which the leading edge of the paper enters the paper exit/reverse section.
- The reverse roller is stopped from forward rotation at timing at which the paper reaches the reverse stop position after the paper exit sensor has detected the trailing edge of the paper.
- The reverse roller is started to rotate backward at timing at which the preceding paper moves past a predetermined position of the duplex section.
- The reverse roller is stopped from backward rotation at timing at which the trailing edge of the paper enters the duplex section.

[3] Fusing unit	[4] Paper exit/reverse switch gate: solenoid ON position
[5] Paper exit/reverse switch gate: solenoid OFF position	[6] Transporting to reverse stop position
[7] Reverse roller	[8] Reverse stop position

16.3.2 Exit paper cooling mechanism

(1) Paper exit/reverse section cooling

- The paper cooling fan cools the paper after fusing and the paper exit/reverse section.
- The paper cooling fan draws outside air through a rear portion of the machine and feeds the air through the duct to cool the paper exit path and reverse path.

[1] Blowing air to reverse roller path	[2] Blowing air to paper exit roller path

17. DUPLEX SECTION

17.1 Configuration

[1]	Paper exit/reverse switch gate	[2]	Fusing unit
[3]	Registration unit (Duplex section)	[4]	Right door

[1]	Switchback motor (M4)	[2]	ADU transport motor (M5)
[3]	ADU paper passage sensor/1 (PS40)	[4]	ADU paper passage sensor/2 (PS41)
[5]	Transport motor (M1)	[6]	ADU transport clutch (CL6)
[7]	Duplex pre-registration section	[8]	ADU transport roller/4
[9]	Registration unit (duplex section)	[10]	ADU transport roller/3
[11]	Fusing unit	[12]	ADU transport roller/2
[13]	ADU transport roller/1	[14]	Paper exit/reverse switch gate
[15]	Reverse roller	-	-

17.2 Drive

[1]	ADU transport motor (M5)	[2]	ADU paper passage sensor/1 (PS40)
[3]	ADU transport roller/2	[4]	Jam removal dial
[5]	ADU transport roller/1	-	-

[1]	ADU paper passage sensor/2 (PS41)	[2]	ADU transport roller/3
[3]	ADU transport roller/4	[4]	Transport motor (M1)
[5]	ADU transport clutch (CL6)	-	-

17.3 Operation

17.3.1 Paper transport control

- In duplex transportation, the paper transported from the reverse roller is transported to the internal duplex section by the ADU transport roller/1 and ADU transport roller/2.
- In duplex pre-registration, the paper is conveyed to the registration roller at the vertical transport section by the ADU transport roller/3 and ADU transport roller/4.

[1]	Stop position 1	[2]	ADU transport roller/1
[3]	ADU paper passage sensor/1 (PS40)	[4]	ADU transport roller/2
[5]	Stop position 2	[6]	ADU transport roller/3
[7]	ADU paper passage sensor/2 (PS41)	[8]	ADU transport roller/4
[9]	Stop position 3	[10]	Registration roller
[11]	2nd transfer roller	[12]	Fusing unit (C454)
[13]	Paper exit roller	[14]	Reverse roller

(1) Transport roller control

- The ADU transport motor drives the ADU transport roller/1 and ADU transport roller/2.
- The ADU transport roller/3 and ADU transport roller/4 are driven by controlling rotation of the transport motor with the ADU transport clutch.

(2) Paper entrance control

- The switchback motor at the paper exit/reverse section is deenergized to stop transport of the paper temporarily (stop position 1). When the condition for starting reverse into the duplex section is met, the switchback motor rotates backward to transport the paper into the duplex section.
- At the same time of backward rotation of the switchback motor, the ADU transport motor is energized and the ADU transport roller/1 and ADU transport roller/2 start rotating.
- The ADU paper passage sensor/1 located downstream of the ADU transport roller/1 detects the leading edge of the paper transported to the duplex section.
- If a preceding sheet of paper being transported through the duplex section is yet to reach a predetermined position downstream of the registration roller, the ADU transport motor is deenergized to stop transport of the paper temporarily. (stop position 2)
- When the advanced sheet of paper moves past the specified position, the ADU transport motor is energized to resume the transport of paper.
- If the ADU paper passage sensor/2 does not detect the leading edge of the paper even after the lapse of a predetermined period of time after the ADU paper passage sensor/1 has detected the leading edge of the paper, the machine determines that a paper misfeed occurs at the duplex transport part.

(3) Duplex paper feed control

- When the leading edge of the paper reaches the specified position, the ADU transport clutch is energized and the ADU transport roller/3 and ADU transport roller/4 start rotating.
- The ADU paper passage sensor/2 detects the leading edge of the paper transported from the ADU transport roller/3.
- When the paper moves past the ADU transport roller/4 and reaches the specified position, the ADU transport clutch is deenergized to stop the transport of the paper temporarily (stop position 3).
If, in this case, the paper has a length of more than 286.3 mm in the sub scanning direction, the ADU transport motor is also deenergized.
- At predetermined paper feed timing, the ADU transport clutch is energized to resume the transport of the paper.
The ADU transport motor is also energized if it has been deenergized.
- The paper is fed from the ADU transport roller/4 onto the registration roller at the vertical transport part.

17.3.2 Duplex circulation control

- The duplex circulation control is performed differently according to the sub scanning direction length of the paper.

Sub scanning direction paper length	Duplex circulation control
More than 458 mm	Can not print 2-sided
433 mm to 458 mm	One-sheet circulation operation
217 mm to 432 mm	Two-sheet circulation operation
216 mm or less	Three-sheet circulation operation

(1) One-sheet circulation operation

Operation 1

- One sheet of paper is supplied and the image of the second page is printed.

Operation 2

- After the paper transported to the paper exit/reverse section stops at the stop position 1 [1] (reverse roller), the reverse roller turns around to send the sheet to the duplex section (paper reversed).

Operation 3

- The paper transported to the duplex section is transported onto, and stopped at the stop position 3 [1] (ADU transport roller/4).

Operation 4

- The image of the first page is printed on the paper re-supplied from the duplex section.

Operation 5

- The first sheet of the paper is fed out.
- The image of fourth page is printed on the second sheet.

- Steps 2 through 5 are repeated.

(a) Operation timing

One A4-size original for 2-sided printing

NOTE

- Only the ADU transport clutch is energized, if the length of the paper to be taken up and fed into the duplex section is less than 291.8 mm.

(2) Two-sheet circulation operation

Operation 1

- The first sheet of paper is supplied and the image of the second page is printed.

Operation 2

- After the first sheet of paper stops at the stop position 1 [1], the reverse roller turns around to send the sheet to the duplex section (paper reversed).
- The second sheet of paper is supplied.

Operation 3

Operation 4

- The first sheet of the paper is sent through the duplex section and stops at the stop position 3 [1] (ADU transport roller/4).
- The image of the fourth page is printed on the second sheet of paper.

Operation 5

- The first sheet of the paper is re-supplied and an image of the first page is printed on.
- The second sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex section.
- The third sheet of paper is supplied.

Operation 6

- The first sheet of paper is fed out.
- The second sheet of paper is transported onto, and stopped at stop position 3 [1].
- The image of the sixth page is printed on the third sheet of paper.

Operation 7

- The second sheet of the paper is re-supplied.
- The third sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex section.

Operation 8

- The image of the third page is printed on the second sheet of paper.
- The third sheet of paper is transported in the duplex section.
- The fourth sheet of paper is supplied.

- Steps 6 through 8 are repeated.

(3) Three-sheet circulation operation

Operation 1

- The first sheet of paper is supplied and the image of the second page is printed.

Operation 2

- The first sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex section.
- The second sheet of paper is supplied and the image of the fourth page is printed.
- The third sheet of paper is supplied.

Operation 3

- The first sheet of the paper is transported onto, and stopped at, stop position 3 [1].
- The second sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex part.
- The image of the sixth page is printed on the third sheet of paper.

Operation 4

- The first sheet of paper is transported onto the vertical transport section.
- The second sheet of paper is transported into the duplex section.
- The third sheet of paper is transported onto the paper exit/reverse section.

Operation 5

- The image of the first page is printed on the first sheet of paper.
- The second sheet of the paper is transported onto, and stopped at stop position 3 [1].
- The third sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex section.
- The fourth sheet of paper is supplied.

Operation 6

- The first sheet of paper is fed out.
- The second sheet of paper waits at stop position 3 [1].
- The third sheet of the paper is transported onto, and stopped at, stop position 2 [2] (ADU transport roller/2).
- The image of the eighth page is printed on the fourth sheet of paper.

Operation 7

- The second sheet of paper is transported onto the vertical transport section.
- The third sheet of paper is transported into the duplex section.
- The fourth sheet of paper is transported onto the paper exit/reverse section.

Operation 8

- The image of the third page is printed on the second sheet of paper.
- The third sheet of the paper is transported onto, and stopped at, stop position 3 [1].
- The fourth sheet of paper is reversed at the paper exit/reverse section and transported onto the duplex section.
- The fifth sheet of paper is supplied.

Operation 9

- The second sheet of paper is fed out.
- The third sheet of paper waits at stop position 3 [1].
- The fourth sheet of the paper is transported onto, and stopped at stop position 2 [2].
- The image of the tenth page is printed on the fifth sheet of paper.

Operation 10

- The third sheet of paper is transported onto the vertical transport section.
- The fourth sheet of paper is transported onto the duplex section.
- The fifth sheet of paper is transported onto the paper exit/reverse section.

- Steps 8 through 10 are repeated.

18. IMAGE STABILIZATION CONTROL

18.1 Overview

- The machine provides the following image stabilization control to ensure stabilized copy image.

Purpose	Control	Control means
To stabilize image density To stabilize gradation	- IDC sensor adjustment control - Max. density adjustment control - LD intensity adjustment control - Registration control (color shift correction) - Gamma correction control	IDC sensor Temperature/humidity sensor PH temperature sensor
To stabilize toner density	* TCR control (Y,M,C,K)	TCR sensor
To stabilize image transfer	* Transfer output control 2nd transfer ATVC	Temperature/humidity sensor

- * An explanation is given of the control for each section.

18.2 Description of control

18.2.1 IDC sensor adjustment control

- Controls changes in characteristics due to change with time and contamination of the transfer belt and IDC sensor, part-to-part variations in the sensors, and change of environment.
- The intensity (current value) of the IDC sensor is adjusted on the surface of the transfer belt, on which no toner sticks (background level).

18.2.2 Max. density adjustment control

- The developing bias (Vdc) is adjusted to control changes in the solid density resulting from variations in developing characteristics and IDC sensor intensity, variations in sensitivity of the photo conductor, and changes in the environment, durability, and the amount of charge in toner.
- Patterns are produced on the surface of the transfer belt and the IDC sensor detects the amount of toner sticking to them.
- Referring to the detected data and the environment data taken by the temperature/ humidity sensors, the developing bias value that results in the appropriate maximum density is calculated and stored in memory.
- Thereafter, the grid voltage (Vg) value, including the background margin adjustment value, is calculated and stored in memory.

18.2.3 LD (laser diode) intensity adjustment control

- It adjusts the variation in reproducibility of the thin line and the reverse outline, which is resulting from the variations in electrostatic characteristics of the photo conductor, developing characteristics and transfer characteristics in terms of individual difference, environment and durability, to make it the target level.
- It produces detection patterns on the surface of the transfer belt with the given level of LD intensity and detects the output value of IDC sensor.
- LD intensity is calculated from the detected IDC sensor data.

18.2.4 Color registration control (color shift correction)

- In a tandem engine, each four different color has an independent image reproduction process. Color shift may occur because of variations in part accuracy. The color registration control system automatically detects color shift and correct color shift in the main and sub scanning directions.
- The color shift is detected as follows. A pattern is produced at each of front and rear ends of the transfer belt. The IDC sensors at the front and rear ends read respective patterns to thereby calculate and store color shift amounts in the sub-scanning and main scanning directions.
- From data readings, the machine calculates how much the position of each of the different colors should be corrected. Based on the calculated data, the machine controls each dot during image output, thereby correcting the color shift amount.

18.2.5 Gamma correction control

- The intensity of LD in all gradation levels is adjusted to correct changes in gradation characteristics to a linear one. The changes in gradation characteristics are caused by variations in the photo conductor sensitivity and developing characteristics and changes with time and in environment.
- It produces gradation patterns on the transfer belt and calculates gradation characteristics output by the current engine with the IDC sensor.
- The gamma correction data is calculated using the density measurements of different gradation levels. The optimum LD intensity is set for each of the different gradation levels.

18.3 Control contents

18.3.1 Image stabilization type (mode)

- Six different modes of image stabilization are available.
- A specific mode is selected according to the environmental conditions and print requirements, thereby achieving stabilized image at all times.

Stabilization type	Description
Mode 1 (initialization and image stabilization)	Executed when "Initialize + Image Stabilization" is selected from the control panel.
Mode 1 (long image stabilization)	Executed mainly when there is a change in environmental condition
Mode 2 (short image stabilization)	Executed mainly after the main power switch is turned ON
Mode 3 (gamma correction + color registration control)	Executed when the count of the number of printed pages during a print cycle reaches 400 and there is a change in machine interior temperature.
Mode 4 (color registration control)	Executed when there is a change in machine interior temperature.
Mode 5 (monochrome, long image stabilization)	Dedicated to monochrome and executed when there is a change in environmental condition
Mode 6 (monochrome, short image stabilization)	Dedicated to monochrome and executed when the number of printed pages during a print cycle reaches 1000 or there is a change in machine interior temperature

18.3.2 Control sequence by mode

- A different control sequence applies according to the mode of image stabilization.
- Control is performed in the specified sequence for each mode.

Sequence	Mode 1	Mode 2	Mode 3	Mode 4	Mode 5 *4	Mode 6 *4
1	IDC sensor adjustment	IDC sensor detection *1	IDC sensor detection *1	IDC sensor detection *1	IDC sensor detection	IDC sensor detection
2	Dmax density adjustment	Dmax density adjustment	Color registration adjustment *2	Color registration adjustment *2	Dmax density adjustment	Dmax density adjustment
3	LD light intensity adjustment	Color registration adjustment *2	Gamma correction *3	-	LD light intensity adjustment	-
4	Color registration adjustment	Gamma correction *3	-	-	Gamma correction *3	-
5	Dmax density adjustment	-	-	-	-	-
6	LD light intensity adjustment	-	-	-	-	-
7	Gamma correction	-	-	-	-	-

- *1: The IDC sensor uses the output value calculated in the last IDC registration sensor adjustment and check that the value measured on the surface of the transfer belt (background level) is within the specified range. If the measured value is out of the specified range, mode 1 is used when the next image stabilization is carried out.
- *2: Unlike the color registration adjustment of mode 1, simplified color registration control is performed.
- *3: Unlike the gamma correction of mode 1, simplified gamma correction control is performed.
- *4: Monochrome-only mode

18.4 Operation timing

18.4.1 Predrive operation

- The following describe the stabilization operations executed when, for example, the main power switch is turned ON, the sleep mode is canceled, the front door is closed, or a malfunction is reset.

Mode	Operation condition	Image stabilization setting
Mode 1	• A new drum unit or a new developing unit is detected. • A new transfer belt is detected • The machine recovers from a toner empty condition.	Not specified

Mode	Operation condition	Image stabilization setting
	• While a warning code is being displayed.	
	• In the last image stabilization, the value of IDC sensor detection was out of the specified range.	Standard or Color priority selection
	• A change in environment is detected (a change in environment exceeding the threshold value is detected since the last image stabilization sequence).	
	• The count of the number of printed pages is 10,000 as counted from the last LD adjustment.	
Mode 2	• After skew adjustment reset (service mode).	
	• A Dmax adjustment request is received as a result of the last gamma correction.	Standard or Color priority selection
	• The count of the number of printed pages after the gamma adjustment is 400 or more.	
	• Information is provided indicating that the last stabilization control was discontinued.	Only Color priority selection
	• There is a change in temperature after the lapse of a predetermined period of time after a developing drive stop.	
Mode 4	The stabilization is executed when the main power switch is turned ON even without the operating condition	Only Color priority selection
Mode 5	There is a change of a predetermined value or more in temperature after the color registration adjustment (when exiting from the sleep mode).	Only Color priority selection
Mode 5	• In the last image stabilization, the value of IDC sensor detection was out of the specified range.	Only Black priority selection
	• A change in environment is detected (a change in environment exceeding the threshold value is detected since the last image stabilization sequence).	
	• The count of the number of printed pages is 10,000 as counted from the last LD adjustment.	
	• A predetermined period of time or more elapses after a developing drive stop.	
Mode 6	• A Dmax adjustment request is received as a result of the last gamma correction.	Only Black priority selection
	• The count of the number of printed pages after the gamma adjustment is 1000 or more.	
	• Information is provided indicating that the last stabilization control was discontinued.	

(1) Stabilization mode setting

- Optimum image stabilization control can be selected using the administrator mode or service mode according to user's use condition.
- Three options available are the standard, color priority, and black priority modes.
- Mode of image stabilization setting is provided to maintain image quality and achieve the following purposes.
 1. To reduce frequency at which the stabilization control is performed in order to reduce cost per print for users who have a low print volume and low color ratio
 2. To shorten time between when the machine is turned ON and when it is ready for printing
 3. To maintain convenience for users having a high color frequency

Mode	Control
Standard	Color stabilization is executed if image adjustments are necessary for color print or black print during predrive.
Color priority	• Color stabilization is executed if image adjustments are necessary for color print or black print during predrive. • Stabilization is executed unconditionally when the main power/sub power switch is turned ON. Warm-up time takes about 60 sec. when the main power switch is turned ON with the sub-power key ON.
Black priority	• Black stabilization is executed if image adjustments are necessary for black print during predrive. • Color stabilization is executed before color print if image adjustments are necessary for color print.

18.4.2 During a print cycle

- When the stabilization execution condition is met during printing, a specific image stabilization mode according to the condition is selected and executed.

Operating conditions						Stabilization (mode)	Operation timing during print
Stabilization execution condition *1	Dmax adjustment request based on last gamma correction result	Print count after gamma correction	Change of a predetermined value or more in temperature after last stabilization *2	The number of pages yet to be printed of the current print job	Print count after last stabilization *3		
Any of the conditions is met	-	-	Change	A predetermined number of pages or more	-	Mode 1 is executed	Executed by interrupting the print cycle
				Less than a predetermined number of pages			Executed after a print cycle
				-	800 to 1000 sheets or more		Executed by interrupting the print cycle
				-	400 sheets or more		Executed after a print cycle
None of the conditions is met	Yes	-	Change	A predetermined number of pages or more	-	Mode 2 is executed	Executed by interrupting the print cycle
				Less than a predetermined number of pages			Executed after a print cycle
				-	800 to 1000 sheets or more		Executed by interrupting the print cycle
				-	400 sheets or more		Executed after a print cycle
	No	400 sheets or more	Change	A predetermined number of pages or more	-	Mode 3 is executed	Executed by interrupting the print cycle
				Less than a predetermined number of pages			Executed after a print cycle
				-	800 to 1000 sheets or more		Executed by interrupting the print cycle
				-	400 sheets or more		Executed after a print cycle
		400 sheets or less	Change	A predetermined number of pages or more	-	Mode 4 is executed	Executed by interrupting the print cycle
				Less than a predetermined number of pages			Executed after a print cycle
				-			
				-			
	Yes *4	-	-	-	-	Mode 5 is executed	Executed by interrupting the print cycle
	-	1000 sheets or more *5	-	-	-	Mode 6 is executed	

• *1: Stabilization execution condition:

- In the last image stabilization, the value of IDC sensor detection was out of the specified range.
- The last warning code occurs.
- A change in environment is detected (a change in environment exceeding the threshold value is detected since the last image stabilization sequence)
- The count of the number of printed pages is 10,000 as counted from the last LD adjustment.

• *2: Detected by both the PH temperature sensor and temperature/humidity sensor

• *3: Counting method of printed pages

Paper length in the sub scanning direction	Count	
	Color mode	Monochrome mode
216 mm or less	2	1
Over 216 mm	4	2

- *4: Dmax adjustment request during monochrome printing
- *5: Monochrome print count value

18.4.3 Service Mode

- Types (modes) of image stabilization to be executed with the menu of the service mode will be described.

Menu of service mode	Gradation Adjust (Service Mode -> Imaging Process Adjustment -> Gradation Adjust)	
Type (mode) of image stabilization to be executed	Mode 2	
Menu of service mode	Stabilizer (Service Mode -> Imaging Process Adjustment -> Stabilizer)	
Type (mode) of image stabilization to be executed	Initialize + Image Stabilization	Mode 1
	Stabilization Only	Mode 2

18.4.4 Expert Adjustment

- Types (modes) of image stabilization to be executed with the menu of the expert mode will be described.

Menu of expert mode	Gradation Adjustment (Utility -> Administrator Settings-> System Settings -> Expert Adjustment -> Gradation Adjustment)	
Type (mode) of image stabilization to be executed	Mode 2	
Menu of expert mode	Image Stabilization (Utility -> Administrator Settings-> System Settings -> Expert Adjustment -> Image Stabilization)	
Type (mode) of image stabilization to be executed	Initialize + Image Stabilization	Mode 1
	Image Stabilization Only	Mode 2

18.4.5 Stabilization time

States		Time
Mode 1	bizhub C554	Approx. 26 sec.
	bizhub C454	Approx. 30 sec.
Other than the above	bizhub C554	Approx. 26 sec. or less
	bizhub C454	Approx. 30 sec. or less

19. IMAGE PROCESSING

19.1 Scanner section image processing block diagram

- A reduction type CCD sensor is used to read the light reflected off the original and convert the optical data to a corresponding electric signal. To make data processing faster, data transfer and output are done through two channels, one for even-numbered pixels and the other for odd-numbered pixels.
 1. A reduction type CCD sensor is used to read the light reflected off the original and convert the optical data to a corresponding electric signal. To make data processing faster, data transfer and output are done through two channels, one for even-numbered pixels and the other for odd-numbered pixels.
 2. The odd and even analog signals output from the CCD sensor chips are synthesized to form a single string of signal data which is in turn converted to 10-bit digital signals (1024 gradation levels).
- The image data is transmitted to MFP board on the write section through the interface cable.

19.2 Write section image processing block diagram

- The following detail the image processing operations performed by MFP board on the Write section.

1. Correct variations in reading caused by pixel-to-pixel variations in sensitivity of the CCD sensor and uneven light distribution by the exposure LED. A peak-hold-type shading correction is performed, in which the maximum value of two or more readings of two or more lines is taken to prevent effect due to dust or dirt on the shading sheet. (only image data from scanner section)
2. To correct differences in the position of each chip of CCD sensors R, G, and B, FIFO memory is adopted to match the output timing. Also correct color aberration of the lens.
3. The security pattern created during printing on this machine is detected and copying is enabled or disabled through a password (when the security kit SC-508 is mounted).
4. If outer document elimination is selected from the control panel, document area determination processing is performed for each line within the document area data acquired during prescan. Then, the START and END positions of the document area in the main scanning direction are detected and the area outside the START and END positions is erased as the outside-the-document area.
5. The scanning area is divided into multiple blocks. The ratio of color or monochrome is calculated for each of these blocks. The machine then determines whether the entire original is colored or monochrome.
6. A histogram of lightness for AE processing is generated. The AE level of the document is determined based on this histogram and AE processing is performed.
7. R, G, and B data are then converted to value and color component data for adjustments of saturation, lightness, and hue.
8. Each image area, whether it is a color edge area, black edge area, dot area, or a continuous gradation area, is discriminated.
9. Other types of processing performed are the improved reproduction of black text, edge emphasis, smoothing and color balance.
10. Each image data of R, G, and B is compressed to reduce the consumption of data capacity.
11. Temporarily stores the BTC-compressed image data.
12. The stored image data is compressed in the JBIG (Joint bi-level image experts group) format.
13. Each image data of R, G, and B in the copy, print, scan, and fax mode is stored. In PS printing, multi-valued data of Y, M, C, and K is stored.
14. The image data read from the file memory is uncompressed through a method in a reverse way of JBIG compression. At this time, image rotating or sorting processing is conducted.
15. JBIG image data are expanded in the frame memory.
16. Each image data of R, G, and B is stored in frame memory.
17. Temporarily stores the image data output from the frame memory.
18. The image data is expanded through a method opposite to that used in the BTC compression.
19. FIFO memory is used to enlarge or reduce images in the main scanning direction. The image is enlarged by increasing the number of data readings and reduced by decreasing the number of data readings.
20. Reduction processing is conducted in sub scanning direction. No processing is done at same size or zoom, but at reduction, the lines are thinned out.
21. The R, G, and B data is converted to the Y, M, C, and K density data. Also, the masking processing, which compensates for the deviation in the spectral reflection characteristics of the toner, and UCR/BP processing are performed on the image data.
22. The security pattern is embedded in the image data. Either enabling copying through a password or unconditionally prohibiting copying can be selected from the control panel for the security pattern to be embedded (when the security kit SC-508 is mounted).
23. Edge of letter and lineal drawing gets area discrimination and FEET processing is conducted according to the discrimination result.
24. When FEET processing is conducted, interpolation is done so that no influence is given to continuous gradation portion.
25. Makes the necessary corrections so that the printed gradations have linear characteristics, since the image density of the input image data is not directly proportional to that of the printed image because of the changing developing and photo conductor characteristics.
26. In photo mode during copying and PC print, the image is processed as multi-valued data (8-bit data). In any mode other than photo, the error diffusion method is employed to process the image as binary (1-bit) data.
27. Creates the density distribution of a predetermined pattern to enable outstanding gradation reproduction.
28. For 1200 dpi writing, the 600 dpi image data is converted to corresponding 1200 dpi image data.
29. Image data of the file memory is developed to the frame memory and output delay control for the interval of photo conductors, Y, M, C, K is conducted.
30. Correct the shear in printing start position in the main scanning direction, which occurs when each PH unit of Y, M, C, K is exposed on the photo conductor. Adjust the processing speed in the board (main scanning) to conform to the input processing speed.

20. POWER SUPPLY SECTION

20.1 Main power switch

[1]	Main power switch	-	-
-----	-------------------	---	---

NOTE

- To turn OFF and ON the main power switch, first turn OFF the main power switch and wait for 10 sec. or more before turning it ON again. If a setting value or values in the service mode are changed, it takes 10 sec. or more to incorporate the setting changes properly in the machine.

20.2 Power key

20.2.1 Configuration

[1]	Power key	-	-
-----	-----------	---	---

20.2.2 Operation

(1) Power key functions

- The power key offers two functions, serving as the power save button and the sub-power switch found in conventional models, depending on how long it is held down.
- In the default setting, holding down the power key for a short time sets the machine into the sub power OFF mode and holding it down for a long time sets the machine into the ErP auto power off mode.
- “[I.7.1 System Settings-Power Supply/Power Save Settings](#)” allows the setting to be changed as follows: holding down the power key for a short time sets the machine into the power save mode (low power mode or sleep mode) and holding it down for a long time sets the machine into the sub power OFF mode.

How long the power key is held down	Default setting	Settings changed by Administrator Settings	
Short time	Sub power OFF mode	Power save mode*	Low power mode**
			Sleep mode**
Long time	ErP auto power off mode	Sub power OFF mode*	

- *: [I.7.1.3 Power Key Setting](#)
- **: [I.7.1.4 Power Save Settings](#)

(2) Status in each mode

Mode		Status	Power key LED	Power consumption
Standby		All functions are ready to accept and ready to perform jobs.	Lit up blue	
Power save mode	Low power mode	Power consumption is limited to a level lower than the standby state with the fusing temperature control minimized; reset when a job is received or the machine is operated.	Blinking in blue	100.0 W or less
	Sleep mode	Power is supplied only to a portion of the MFP board required for receiving a job; reset when a job is received or the machine is operated.	Blinking in blue	3.0 W or less
Sub power OFF mode		Power is supplied only to the MFP board; a job can be received, but printing is performed when power is turned ON; reset only by the power key.	Lit up orange	3.0 W or less
ErP auto power off mode		Power consumption to the lowest level; reset only by the power key or the weekly timer setting; no jobs can be received*	Blinking up orange	0.5 W

- *: In ErP auto power OFF mode, this machine cannot receive data or faxes, and also it cannot scan or print an original.

(3) Power supply

Power is supplied only to the following portions in the sleep mode and the sub power OFF mode.

5.1V	• MFP controller • FAX CPU • HDD • USB board
	• Angle sensor • The cover is opened or closed • Control panel key

20.3 Power cables

20.3.1 Configuration

[1]	Power supply: • 100V 15A • 110V 15A • 120V 12A • 230V 8A	-
-----	--	---

20.3.2 Operation

- The main body uses a single outlet.

21. FAN CONTROL

21.1 Configuration

21.1.1 bizhub C554

[1]	Fusing power supply cooling fan (M12)	[2]	Paper cooling fan (FM8)
[3]	IH coil cooling fan (FM7)	[4]	Ozone fan (FM13)
[5]	Rear side cooling fan (FM3)	[6]	Power supply cooling fan (FM1)
[7]	Transfer belt cleaner cooling fan (FM2)	[8]	Toner suction fan (FM11)

21.1.2 bizhub C454

[1]	Paper cooling fan (FM8)	[2]	Toner bottle cooling fan (FM4)
[3]	Rear side cooling fan (FM3)	[4]	Ozone fan (FM13)
[5]	Power supply cooling fan (FM1)	[6]	Transfer belt cleaner cooling fan (FM2)
[7]	Toner suction fan (FM11)	[8]	Fusing power supply cooling fan (M12)

21.2 Function

Motor name	Control conditions
Paper cooling fan (FM8)	When the paper with toner heated at fusing section exit while still at high temperature, toner may be transferred to other paper on the exit tray. In order to avoid this, air is applied to cool the toner and paper.
Transfer belt cleaner cooling fan (FM2)	Draws air from the drum unit and developing unit area to prevent the temperature of the process section and transfer cleaner section from rising.
Power supply cooling fan (FM1)	Draws outside air into the inside of the machine to prevent the temperature around the DC power supply, PH section, developing/drum unit.
Ozone fan (FM13)	A white belt may occur on the image because of the lower sensitivity of the PC drum due to ozone accumulated around the PC drum charge corona. In order to avoid this trouble, ozone filter removes the ozone inside the PC drum charge corona to keep the sensitivity of the PC drum.

Motor name	Control conditions
	• Ozone accumulated around PC drum charge corona will be absorbed by ozone filter and be removed.
Rear side cooling fan (FM3)	• Blows outside air against around the MFP board, HV board and drive unit to prevent the temperature of the board from rising.
Toner bottle cooling fan (FM4) *1	• Draws outside air into the inside of the machine to prevent the temperature of the toner cartridge from rising.
IH coil cooling fan (FM7) *2	• Discharges heat accumulated inside the machine (near the IH coil and black toner bottle) • The air curtain protects heat from the fusing unit side.
Toner suction fan (FM11)	• Lets the filter trap toner particles leaked into the machine inside.
Fusing power supply cooling fan (M12)	• In order to avoid the temperature increase around power supply board used for the fusing part, the outside air is sucked into the unit to cool it.

- *1: bizhub C454 only

- *2: bizhub C554 only

21.3 Fan control

Motor name	Control		Control conditions (outline)
Power supply cooling fan (FM1)	STOP		• At paper-jam, in trouble, or when the door is open • When updating the firmware • In standby *2 • In low-power or sleep
	Full speed		• At warm-up • At initial operation, image stabilization, transfer cleaning, function *1 • When printing
Rear side cooling fan (FM3)	STOP		• Other than those below
	30% air flow relative to that of full speed		• At paper-jam, in trouble • At warm-up • In low-power • In standby
	Full speed		• When printing • At initial operation, image stabilization, transfer cleaning, function *1
Paper cooling fan (FM8)	STOP		• Other than those below
	Full speed		• When printing • In standby *2
Transfer belt cleaner cooling fan (FM2)	STOP		• Other than those below
	Full speed		• At warm-up • At initial operation, image stabilization, transfer cleaning, function *1 • When printing • In standby *2
Toner bottle cooling fan (FM4) *4	STOP		• Other than those below
	Full speed		• When printing • In standby *2 • At initial operation, image stabilization, transfer cleaning, function *1
Ozone fan (FM13)	STOP		• Other than those below
	Full speed		• At initial operation, image stabilization, transfer cleaning, function *1 • Predetermined period of time after end of print cycle • When printing
IH coil cooling fan (FM7) *5	STOP		• Other than those below
	Half speed		• At initial operation, function *1 • In standby • At warm-up • In low-power
	Full speed		• When printing
Toner suction fan (FM11)	STOP		• Other than those below
	Full speed		• When printing • At initial operation, image stabilization, transfer cleaning, function *1
Fusing power supply cooling fan (M12)	bizhub C554	STOP	• At paper-jam, in trouble • In sleep • In low-power
		Full speed	• At warm-up • When printing • In standby *2 • At initial operation, image stabilization, transfer cleaning, function *1
	bizhub C454	STOP	• Other than those below
		Full speed	• At warm-up • When printing • In standby *2 • At initial operation, image stabilization, transfer cleaning, function *1

- *1: Some operations selected in the service mode (Paper path check etc.)
- *2: If the machine enters the "standby" state, the fan motor turns at full speed for predetermined time before stopping.
- *3: Half speed rotation after the lapse of the predetermined period of time of full speed rotation
- *4: bizhub C454 only
- *5: bizhub C554 only

22. COUNTER CONTROL

22.1 Configuration

[1]	Printer control board (PRCB)	[2]	MFP board (MFPB)
[3]	Electronic counter	[4]	Total counter
[5]	Key counter (option)	-	-

22.2 Operation

Name	Function/system
Total counter	- Displays the cumulative number of copies and prints of all jobs. - A mechanical counter driven by an electric signal - Counts one when an exit signal is applied to it
Electronic counter	- Number of total in copy/print/fax/scan mode will be displayed on the screen as described below. - Black, full color, mono color, and 2 color - Total counter, large size counter, color total (copy + printer), scan counter, fax TX counter, fax RX counter, No. of originals counter, No. of prints counter, total duplex counter - Counts one when an exit signal is applied to it
Key counter (option)	- When charging prints by using the key counter, copies cannot be made without the key counter. However PC prints and fax TX/RX service are available without the key counter. - Displays the cumulative number of copies while the key counter is being mounted. - A mechanical counter driven by an electric signal - Counts one when a paper take-up start signal or image forming start signal, whichever occurs earlier, is applied to it

NOTE

- The counting modes can be selected at [billing setting] of service mode. For details, see [“1.13.3.1 Counter Setting”](#).

PA THEORY OF OPERATION DF-701

1. CONFIGURATION

1.1 Section configuration

[1]	Document feed section	[2]	Document registration section
[3]	Document reading section	[4]	Document exit section

1.2 Paper path

- The same paper path is established in the 1-sided mode and 2-sided mode.
- In 1-sided mode, the CCD at the scanner section reads the image of the original. In 2-sided mode, at the same timing as that when the front side of the original is read by the CCD at the scanner section, the CIS in the DF reads the back side of the original. The speed at which the original is read in the 2-sided mode is, therefore, the same that in the 1-sided mode.

1.3 Configuration

[1]	DF control board (DFCB)	[2]	DF cooling fan motor (FM1)
[3]	CIS cleaning motor (M5)	[4]	Document feed motor (M2)
[5]	Document reading motor (M1)	[6]	Reading roller release motor (M4)
[7]	Registration motor (M3)	[8]	Document reading glass cleaning motor (M6)
[9]	CIS power supply (CISPU)	[10]	CIS module (CIS)
[11]	Stamp unit (SP-501) * option	-	-

[1]	Document pick-up roller	[2]	Document separation roller
[3]	Document feed roller	[4]	Registration roller
[5]	Document reading roller/1	[6]	Document reading glass cleaning roller
[7]	Document reading roller/2	[8]	CIS module (CIS)
[9]	CIS cleaning brush	[10]	Document reading roller/3
[11]	Document exit roller	-	-

2. DRIVE

2.1 Paper feed drive

[1]	Upper door sensor (PS14)	[2]	Document feed motor (M2)
[3]	After separate sensor (PS2)	[4]	Document feed roller
[5]	Document separation roller	[6]	Document pick-up roller
[7]	Document empty sensor (PS1)	[8]	Document pick-up roller

- The document feed section consists of the document pick-up roller, document feed roller as well as the document separation roller, and is directly driven by the document feed motor.
- When the start key is pressed, the document pick-up roller lowers to press the original and the original is taken up and fed in. The original is transported to the registration roller by the document pick-up roller and document feed roller.
- After the take-up and feeding sequence, the document feed motor is rotated backward, which raises the document pick-up roller.

2.2 Registration drive

[1]	Registration roll	[2]	Registration sensor (PS3)
[3]	Registration motor (M3)	[4]	Registration roller
[5]	Mixed original sensor/3 (PS12)	[6]	Mixed original sensor/2 (PS11)
[7]	Mixed original sensor/1 (PS10)	-	-

- Timing at which to start transporting the original is controlled using the registration motor.
- The original is pressed against the registration roller and registration roll. This forms a loop in the original to thereby correct any skew in the original.
- Mixed original sensors/1, 2/, and 3/ detect width of the originals in the mixed original mode.

2.3 Document reading drive

[1]	Document reading motor (M1)	[2]	Reading roller release motor (M4)
[3]	Reading roll position sensor (PS4)	[4]	Document reading roll
[5]	Document reading roller/1	[6]	Document reading sensor (PS6)
[7]	Document reading roller/2	[8]	Document reading roller/3
[9]	Document exit roller	[10]	Document exit sensor (PS5)

- The document reading motor drives the document reading section and document exit section.
- The document reading roll is equipped with a pressure/release mechanism. The pressure is released when the trailing edge of the original moves past the roller.

2.4 Document reading /CIS glass cleaning drive

[1]	CIS cleaning motor (M5)	[2]	CIS module (CIS)
[3]	Document reading glass cleaning motor (M6)	[4]	Document reading glass cleaning sensor (PS13)
[5]	Document reading glass cleaning brush	[6]	CIS glass cleaning brush
[7]	CIS cleaning sensor (PS7)	-	-

- The document reading glass cleaning brush is rotated by the document reading glass cleaning motor and the glass surface is thereby cleaned.
- The CIS cleaning brush is rotated by the CIS cleaning motor and the CIS surface is thereby cleaned.
- The position of the cleaning brush is detected by the document reading glass cleaning sensor and the CIS cleaning sensor.

3. OPERATION

3.1 Document feed section

3.1.1 Document set/empty detection

- When original is loaded on the document feed tray, the document empty sensor detects that there is original.
- If no original is loaded when the document pick-up roller is in the standby position, the actuator blocks the document empty sensor and it is detected that no original is loaded.
- When original is loaded on the document feed tray, the leading edge of the original pushes the actuator so that the document empty sensor is unblocked. It is detected that original is loaded.
- When all pages of the original are fed in, the document empty sensor detects that there is no original on the document feed tray.

[1]	Document empty sensor (PS1)	[2]	Original
-----	-----------------------------	-----	----------

3.1.2 Document size detection mechanism

[1]	Document length sensor/2 (PS9)	[2]	Document length sensor/1 (PS8)
[3]	Document width sensor (VR1)	[4]	Mixed original sensor/1 (PS10)
[5]	Document reading sensor (PS6)	[6]	Mixed original sensor/3 (PS12)
[7]	Mixed original sensor/2 (PS11)	[8]	Document width guide

[1]	Adjust the document width guide plates (center alignment)	[2]	Document width guide plates
[3]	Original (standard mode)	[4]	Align the original with narrow width with the rear side of the document width guide plates (rear alignment)
[5]	Original with narrow width (mixed original mode)	[6]	Original with wide width (mixed original mode)

(1) Detecting the width of the original

- The width of the original is set on the document feed tray will be detected by the document width sensor.
- A variable resistor is incorporated in the document width size sensor. Its resistance value varies in association with the movement of the document width guide.
- The original is to be loaded in the document feed tray by aligning it with reference to the center of the document feed tray in the standard mode. In the mixed original mode, however, the original is aligned with reference to the rear side of the document width guide plates.

(2) Detecting the length of the original

- The length of the original is set on the document feed tray will be detected by the document length sensors/1 and /2.
- The document length sensor/1 is a transmission type, while document length sensor/2 is a reflection type. The document length sensor/1 is detected by two actuators, that is, actuator/1 and actuator/2.
- When the document feed tray is not loaded with any originals, document length sensor/1 is blocked. When an original is loaded and only actuator/1 is pressed, document length sensor/1 is unblocked. When both actuator/1 and actuator/2 are pressed, a blocked document length sensor/1 is detected by actuator/2.

[1]	Document length sensor/1 (PS8)	[2]	Actuator/1
[3]	Document length sensor/2 (PS9)	[4]	Actuator/2

(3) Detecting the width of the original (in the mixed original/AMS mode)

- In the mixed original/AMS mode, no width is determined on the document feed tray; rather, the width is detected while the originals are being fed. Three mixed original sensors are disposed at positions immediately after the document feed section, functioning to detect the width of the original.

(4) Detecting the length of the original (in the mixed original/AMS mode)

- In the mixed original/AMS mode, no length is determined on the document feed tray; rather, the length of the original is calculated and determined based on the period of time during which the document reading sensor remains activated.

(5) Document feed tray size detection

- The original size is determined by the combination of the results of detection made of the width and length of the original.

3.1.3 Pick-up roller up/down control

(1) Up control

- When a job is completed, the document feed motor starts rotating backward. Then, the swing arm mounted on the same shaft as the document feed roller is rotated backward to thereby raise the document pick-up roller to the standby position.
- The document pick-up roller is fixed at the raised position by a torque limiter of the paper drive section.
- When the swing arm is raised to the standby position, the document stopper is lowered by its own weight and fixed by the lock pawl of the swing arm. The document stopper is unlocked when the swing arm lowers.
- The document stopper has two functions: one, to align the leading edges of the originals loaded in the standby state; and, two, to prevent the leading edge of the original from advancing over the pick-up position into the feed section.

[1]	Swing arm (standby position)	[2]	Document stopper
[3]	Swing arm (feed position)	[4]	Document pick-up roller

(2) Down control

- When the start key is pressed, the document feed motor starts rotating forward. The rotation shaft of the swing arm mounted on the same shaft as the document feed roller is rotated forward, so that the document pick-up roller is lowered to the feed position.
- The document stopper is unlocked when the swing arm lowers.

3.1.4 Document feed/separation control

- When the start key is pressed, the document feed motor starts rotating forward, so that the document feed roller rotates forward.

- The rotation shaft of the swing arm mounted on the same shaft as the document feed roller is rotated forward, so that the document pick-up roller is lowered to the feed position. The document pick-up roller is rotated by a drive belt to thereby feed the original onto the document feed roller.

(1) Separation/feed operation

1. The document separation roller is pressed up against, and driven by, the document feed roller. A torque limiter is mounted on the shaft of the document separation roller.
2. The acting pressure of the document feed roller/document separation roller/torque limiter serves as the limit torque for preventing double feed.
3. When there is no original or only one sheet of original between the document separation roller and the document feed roller, the limit torque is exceeded and the separation roller follows the rotation of the document feed roller.
4. If there are two or more sheets of original between the original separation roller and the document feed roller, the limit torque is greater than the friction force of the original, so that the document separation roller stops rotating.
5. Because of the stationary document separation roller, the lower sheet of original in contact with the separation roller is not fed in, so that the first sheet of original is original separated from the second sheet of original.

[1]	Document feed motor (M2)	[2]	Document feed roller
[3]	Document separation roller	[4]	Original

(2) Periodically replaced parts

- The document pick-up roller, document feed roller, and document separation roller are periodically replaced parts. These three rollers must be replaced with new ones at the same time.
- None of the document pick-up roller, document feed roller, and document separation roller is provided with a new article detection mechanism. When the three rollers are replaced with new ones, the “ADF Feed” counter must be reset to zero using “Counter/ Life” of the Service Mode.
- The number of times the DF has been subjected to paper feed operations can be checked with the “ADF Feed” counter of the Service Mode.

Periodical replacement cycle	Paper feed operations 200,000 times
------------------------------	-------------------------------------

- For details of the applicable replacement procedures for the document pick-up roller, document feed roller, and document separation roller and the Service Mode, see “F.7.1.3 Replacing the pick-up roller/feed roller” and “F.7.1.4 Replacing the separation roller assy.”

[1]	Document feed roller	[2]	Document separation roller assy
[3]	Document pick-up roller	[4]	Service Mode/Counter reset screen

3.2 Document registration section

3.2.1 Document registration outline

- The registration motor provides the drive for the registration roller.
- The original will create a loop between the document feed roller and the registration roller when the original is being conveyed in order to correct the skew.

3.2.2 Document registration loop formation process

1. The registration sensor detects the leading edge of the original.
2. The registration roller remains stationary.
3. Because the document feed roller continues rotating to feed the original, a loop is formed at the leading edge of the original.
4. The loop corrects skew in the original.
5. The registration roller is started to rotate to transport the original.

[1]	Original	[2]	Document pick-up roller
[3]	Document separation roller	[4]	Document feed roller
[5]	Loop formation	[6]	Registration sensor (PS3)
[7]	Registration roll	[8]	Registration roller

3.3 Document reading section

3.3.1 Document reading section

- The document reading motor provides the drive for the document reading roller/1/2/3, and document exit roller.
- The original transported from the document registration section will be transported to the document exit section by the document reading roller/1/2/3, and the document exit roller.
- When the leading edge of the original moves past the document reading roller/1, the document reading sensor (reflector type) disposed downstream of the roller detects the original. The length of the original is also detected based on the period of time during which the sensor remains activated.

[1]	Document reading motor (M1)	[2]	Document reading roll
[3]	Document reading roller/1	[4]	Document reading sensor (PS6)
[5]	Document reading roller/2	[6]	Document reading roller/3
[7]	Document exit roller	-	-

3.3.2 Document reading roll pressure/release control

- When the trailing edge of the original moves past the document reading roller/1, the document reading roller/1 acts to push the original, so that the document transport speed increases instantaneously. This results in an image being read unevenly. (Fluctuations in the document transport speed)
To prevent this problem from occurring, the document reading roll is released using the reading roller release motor. When the document reading roll is released, no thrust force is transmitted to the original.
- After the document reading roll is released, the original is transported only by rollers locating downstream of a reading position.

(1) Pressure/release operation

- When the reading roller release motor is energized, the pressure/release gear is rotated and the cam mounted on the same shaft as the pressure/release gear is rotated.
- Then, the cam pushes down the rotation shaft of the document reading roll, so that the document reading roll is released from the document reading roller.
- The pressure/release gear is provided with a semi-circular light blocking plate. When the gear rotates a half turn, the reading roll position sensor is unblocked and blocked. Then, a condition is detected in which the document reading roll is released. (Blocked: released; unblocked: pressed)

[1]	Reading roller release motor (M4)	[2]	Pressure/release gear
[3]	Reading roll position sensor (PS4)	[4]	Document reading roller/1
[5]	Document reading roll	[6]	Document reading sensor (PS6)

3.3.3 Document reading glass cleaning mechanism

(1) DF original glass cleaning

- A line can occur in the image read from the original if the DF original glass is contaminated with dust or dirt. The DF original glass cleaning mechanism prevents this fault from occurring.
- A half face of the document reading glass cleaning roller is provided with the document reading glass cleaning brush. While the original is being read, the document reading glass cleaning brush faces up. When the DF original glass is to be cleaned, the document reading glass cleaning roller rotates, so that the document reading glass cleaning brush faces the DF original glass.
- The document reading glass cleaning roller rotates to remove dust sticking to the DF original glass.
- The document reading glass cleaning roller is rotated by the document reading glass cleaning motor. During cleaning, the document reading glass cleaning roller rotates forward (counterclockwise in the illustration) and, when the job is completed, it rotates backward (clockwise in the illustration).
- The drive coupling gear is provided with a light blocking plate. As the gear rotates, the document reading glass cleaning sensor is unblocked and blocked. This detects the document reading glass cleaning brush at its home position. (Unblocked: original reading position; Blocked: home position)

[1]	Document reading glass cleaning brush	[2]	Document reading glass cleaning sensor (PS13)
[3]	Document reading glass cleaning motor (M6)	[4]	Document reading glass cleaning roller (home position)
[5]	Document reading glass cleaning roller (cleaning position)	[6]	DF original glass

(2) DF original glass cleaning operation

Condition		Cleaning operation
Predrive	Power ON	Rotates the document reading glass cleaning brush one complete turn to check for its correct operation. (forward rotation)
	Existing from sleep	
Start key ON	Before starting reading	Rotates the document reading glass cleaning brush one complete turn to perform cleaning. (forward rotation: default setting)
	During reading	Rotates the document reading glass cleaning brush one complete turn to perform cleaning for every two originals during continuous reading of originals. (forward rotation)
		Rotates the document reading glass cleaning brush three complete turns to perform cleaning for each original during continuous reading of originals, if [Original Settings] -> [Despeckle] * ¹ is selected. (forward rotation) Because the document reading glass cleaning brush is rotated three complete turns to perform the cleaning, however, the original-to-original distance is widened than at normal timing. This results in reduced productivity in reading the originals.
		No original glass cleaning sequence is performed between originals during continuous reading of originals, if [System2] -> [ADF Scan Glass Contamin. Set.] -> [Feed Cleaning Settings] -> [0] * ² is selected in the Service Mode.
	After completing reading last original	The document reading glass cleaning brush tends to curl if repeatedly operated in one direction only, resulting in poor cleaning performance. To straighten the brush, it is rotated one complete turn in the backward direction when reading of the last original is completed. (backward rotation)

1: Despeckle mode setting screen**2: Feed cleaning settings screen****3.3.4 CIS original reading control**

- The back side of the original is read by the CIS (contact image sensor) module. The image data read by the CIS is transferred to the main body.
- The CIS original reading section consists of the CIS module and CIS power supply.
- The light source of CIS module has used LED.

[1]	CIS module (CIS)	[2]	Cleaning brush
[3]	CIS cleaning motor (M5)	-	-

- A cleaning brush to which a white plate is affixed is disposed on the side opposite the CIS module.
- “Document passage” is performed at the home position.
- “Shading correction”, “gain adjustment”, and “ADF Scan Glass Contamin. Sensitivity” are made using the shading surface.

[1]	White plate affixed	[2]	CIS module (CIS)
[3]	CIS glass	[4]	Cleaning brush (Home position)
[5]	Cleaning brush (Shading correction surface)	-	-

3.3.5 CIS control when power is turned ON

1. The LEDs of CIS are turned ON.
 2. The cleaning brush is detected at its home position.
 3. The cleaning brush is rotated and brought to a stop at the gain adjustment position.
The gain adjustment is made twice with the cleaning brush at that position.
 4. After the adjustments, the LEDs are turned OFF.
 5. The cleaning brush is rotated and brought to a stop at the home position.
- * The same control is performed when the main body exits from the sleep mode.

[1] CIS module (CIS)	[2] Cleaning brush
----------------------	--------------------

3.3.6 CIS control when the document is loaded

1. The cleaning brush is detected at its home position.
2. The LEDs of CIS are turned ON.
3. The cleaning brush is rotated one complete turn.
4. The LEDs are turned OFF.
5. The cleaning brush is rotated and brought to a stop at the home position.

NOTE

- No operation is performed when the document is loaded if the following function is selected using the service mode: [System 2] -> [ADF Scan Glass Contamin. Set.] -> [Back Side] -> [ADF Scan Glass Contamin. Sensitivity] -> [Not Set].

3.3.7 CIS control when the start key is pressed

- This control is performed only in the 2-sided original reading mode.

(1) Before a print cycle / back side reading

1. The cleaning brush is detected at its home position.
2. The LEDs of CIS are turned ON.
3. The cleaning brush is rotated three complete turns.
The cleaning brush cleans the CIS glass during its first turn.
The cleaning brush uses the shading correction surface to perform the shading correction during its second and third turn.
4. With the LEDs ON, the cleaning brush is brought to a stop at its home position (waiting for the original).
5. The back side of the original is read as the original moves over the CIS.

(2) During a print cycle (operation between originals after reading)

The brush cleaning operation is normally performed each time the original is read.

If a print cycle produces a large number of printed pages continuously, however, either the cleaning operation or the shading correction operation is performed.

The shading correction operation is performed at predetermined intervals during a multiprint cycle in order to maintain an appropriate shading correction value.

(a) Cleaning operation

1. The cleaning brush is rotated one complete turn.
(The cleaning brush normally makes one turn, but makes three turns in the despeckle mode.)
2. With the LEDs ON, the cleaning brush is brought to a stop at its home position (waiting for the original).

(b) Shading correction operation

1. The cleaning brush is rotated three complete turns.
The cleaning brush cleans the CIS glass during its first turn.
The cleaning brush uses the shading correction surface to perform the shading correction during its second and third turn.
The shading correction is performed (a total of twice).
2. With the LEDs ON, the cleaning brush is brought to a stop at its home position (waiting for the original).

[1] CIS module (CIS)	[2] CIS glass
[3] Cleaning brush	- -

(c) After the print cycle

- 1. After the reading sequence, the LEDs are turned OFF.
- 2. The cleaning brush is turned backward (to tame the brush).
- 3. The cleaning brush is brought to a stop when its home position is detected.
- 4. The cleaning brush perform “ADF Scan Glass Contamin. Sensitivity”.
 - The LEDs are turned ON. The cleaning brush is rotated four complete turns.
 - The cleaning brush cleans the CIS glass during its first turn.
 - The cleaning brush uses the shading correction surface to perform the shading correction during its second and third turn. The shading correction is performed (a total of twice).
 - The cleaning brush uses the shading correction surface to perform “ADF Scan Glass Contamin. Sensitivity” during its fourth turn.
 - The cleaning brush is brought to a stop at its home position.
 - The LEDs are turned OFF.

NOTE

- Steps of 4 is not performed if the following function is selected using the service mode: [System 2] -> [ADF Scan Glass Contamin. Set.] -> [Back Side] -> [ADF Scan Glass Contamin. Sensitivity] -> [Not Set].

3.3.8 CIS glass contamination prevention control

(1) CIS glass cleaning

- The CIS glass is cleaned only when two sides of the original are to be read.
- When the back side cleaning motor is energized, the cleaning brush is rotated to remove dust and dirt from the surface of the CIS glass.
- Cleaning of the front side takes place at timing different from that of cleaning of the back side and the cleaning of the back side sources its power drive differently from the front side.
- The cleaning brush at its home position is detected by the CIS cleaning sensor.
- For more details, see “PA.3.3.7 CIS control when the start key is pressed”.

[1]	Cleaning brush	[2]	CIS cleaning motor (M5)
[3]	CIS cleaning sensor (PS7)	[4]	CIS module (CIS)

3.3.9 CIS cover

- During a misfeed clearing procedure, the CIS cover can be opened by releasing the lever.
- The CIS cover sensor is unblocked when the lever is released.

[1]	CIS module (CIS)	[2]	CIS cover sensor (PS15)
-----	------------------	-----	-------------------------

[3] Lever	[4] CIS cleaning roller
-----------	-------------------------

3.4 Document exit section

3.4.1 Document exit mechanism

- The document reading motor provides the drive for the document exit roller. (the same drive source as that for the document reading section)
- As the document exit roller rotates forward, the original fed off from the document reading section is fed into the document exit tray.
- The original is exit to be detected by the document exit sensor.

[1] Document reading motor (M1)	[2] Document reading roller/1
[3] Document reading roller/2	[4] Document reading roller/3
[5] Document exit roller	[6] Document exit sensor (PS5)

3.4.2 Faxed document stamp function

- Mounting the optional "Stamp unit SP-501" allows a stamp to be placed on a faxed document.
- The stamp solenoid located upstream of the document exit roller is energized when the original is about to be fed out and the stamp mounted on the solenoid plunger is pressed against the surface of the original. This places a faxed mark (+) on the surface of the original.
- This function is enabled when "System2/Stamp/Set*1 (default setting: Unset)" is turned ON using the Service Mode and the user selects "Application/TX Stamp*2 (default setting: OFF)" on the "Scan/Fax" screen.
- This function is not used for "Copy" or "Scan".

[1] Original	[2] Document switchback exit roller
[3] Stamp unit (SP-501)	- -

*1: Stamp mounting setting screen

*2: TX Stamp setting screen

3.5 Paper path operation

Reading of the back side of the original by the CIS is not done in the 1-sided mode. All other paper feed operations in the 1-sided mode are the same as those in the 2-sided mode.

[1]	Document Pick-up roller	[2]	Document feed roller
[3]	Registration roller	[4]	Document reading roller/1
[5]	Document reading roller/2	[6]	CIS module (CIS)
[7]	Document reading roller/3	[8]	Document exit roller

1. When the original is set, the document empty sensor detects the leading edge of the original.
2. Pressing the start key will lower the document pick-up roller and the document reading roller/1 will be pressed.
3. The document feed motor is energized, and the document pick-up roller and document feed roller are rotated to start feeding the first original.
4. When the registration sensor detects the leading edge of the original, a loop is formed in the original.

5. After the loop has been formed in the original, the registration motor is energized. The drive of the registration motor rotates the registration roller, so that the original is transported onto the reading section.
6. The document reading motor is energized after the lapse of a predetermined period of time after the registration motor has been energized. The drive of the document reading motor rotates document reading roller/1, document reading roller/2, document reading roller/3, and document exit roller.
7. After the lapse of a predetermined period of time after the document reading sensor has detected the leading edge of the original, reading of the front side of the original is started by the scanner.
8. The document reading roller/1 is retracted immediately before the trailing edge of the original moves past document reading roller/1. The document reading roller/1 in the retracted position is pressed again as soon as the trailing edge of the original moves past the front side reading position so as to be prepared for the next original.
9. When the leading edge of the original moves past the document reading roller/2, reading of the back side of the original is started by the CIS. (Reading of the back side of the original is done only in the 2-sided mode.)
10. The document reading roller/3 is driven to transport the original onto the document exit section.
11. The document exit roller is driven to feed the original out.
12. The document reading motor is deenergized after the lapse of a predetermined period of time after the trailing edge of the original has deactivated the document exit sensor.

3.6 DF open/close detection mechanism

3.6.1 Document exchange detection control

- An angle detection mechanism is provided to detect the operation of exchanging originals when the DF is used as the original cover of the main body.
- When the DF is raised to an angle of about 14.5 degrees or more, the detection lever is pushed up by a spring. The angle sensor that has been blocked by the detection lever is now unblocked. It is, as a result, detected that the DF "is raised to an angle of 14.5 degrees or more".
- When, on the other hand, the DF is lowered to an angle of about 14.5 degrees or less, the detection lever is pushed down. Then, the angle sensor, which has been unblocked, is blocked, so that it is detected that the DF "is lowered to an angle of 14.5 degrees or less".
- When the DF state undergoes changes from a condition of being fully lowered to a condition of "being raised to an angle of 14.5 degrees or more" and then to a condition of "being lowered to an angle of 14.5 degrees or less", it is determined that "an original is placed manually on the original glass". Then the original size detection control will be started.

3.6.2 DF open/close detection

- The magnet is installed to detect the open/close of the DF on the main body side.
- The original cover sensor on the main body will turn ON by the magnet when lowering DF.

[1]	Angle sensor (PS202)	[2]	Original cover sensor (RS201)
[3]	Magnet	-	

3.7 Cooling inside the unit mechanism

- The DF cooling fan motor functions to cool the inside of DF, DF control board, and document feed motor in the DF.
- It discharges heat generated inside the DF out through the exhaust port.

[1]	DF cooling fan motor (FM1)	[2]	DF control board (DFCB)
-----	----------------------------	-----	-------------------------

3.8 Document separation roller pressure switching mechanism

- As a solution to misfeed problems when they occur, the pressure of the document separation roller can be changed over as necessary.
- Inserting a spacer into a space below the spring that applies pressure to the document separation roller will increase the pressure.
- The pressure may be set in two steps selectable according to the direction in which the spacer is inserted.
- The spacer is disposed beside the document separation roller.

- For details, see [“I.17.1.4 Adjusting the pressure of the separation roller”](#).

[11]	Tray 3 vertical transport motor (M112)	-	-

4. OPERATION

4.1 Papar feed section

4.1.1 Paper feed drive mechanism

- Tray 3 has a paper feed drive mechanism having the same arrangement as that of tray 4. The paper feed drive mechanism is structured in the same manner as in tray 1 and tray 2 of the main body.
- Whereas operation is controlled using a clutch in tray 1 and tray 2, tray 3 and tray 4 incorporates a paper feed motor that drives the pick-up roller and feed roller to feed the paper.
- Then, the vertical transport motor transports the paper through the vertical transport section.
- The pick-up roller takes up sheets of paper and the feed roller and separation roller ensure that only one sheet of paper is separated and fed into the main body.
- When the drawer is slid in, the lever is pushed to lower the pick-up roller.
- The tray is raised to cause the paper to push the feed roller. This raises the upper limit detection actuator, so that the upper limit is detected.
- The paper empty sensor detects when paper in the drawer runs out.

[1]	Tray 3/4 vertical transport sensor (PS113/PS123)	[2]	Vertical transport roller
[3]	Upper limit detection actuator	[4]	Lever
[5]	Tray 3/4 upper limit sensor (PS116/PS126)	[6]	Tray 3/4 paper empty sensor (PS114/PS124)
[7]	Empty detection actuator	[8]	Pick-up roller
[9]	Separation roller	[10]	Tray 3/4 paper feed sensor (PS112/PS122)
[11]	Feed roller	-	-

4.1.2 Paper lifting motion

- The FD paper size board of each tray detects whether the drawer is slid in or out.
- When the FD paper size board is activated, the lift-up motor is energized to thereby raise the paper lifting plate.
- The paper stack of the tray pushes up the pick-up roller.
- When the upper limit position is detected by the upper limit sensor, it stops raising the paper lifting plate.
- As paper is consumed during the print cycle and the pick-up roller is lowered, the lift-up motor is energized until the upper limit sensor is blocked again.

(1) When the drawer is slid in

1. The paper lifting plate goes up and the top surface of the paper stack pushes up the pick-up roller.
2. The lifting motion stops as soon as the upper limit sensor detects the upper limit position.

[1]	Tray 3/4 upper limit sensor (PS116/PS126)	[2]	Pick-up roller
[3]	Paper lifting plate B	[4]	Paper lifting plate A

(2) During a print cycle

1. As the paper is consumed, the upper limit sensor is unblocked. Then the paper lifting plate goes up.

[1]	Tray 3/4 upper limit sensor (PS116/PS126)	-	-
-----	---	---	---

4.2 Cassette section

4.2.1 Paper size detection

- When the paper length guide of the drawer is moved, the circular paper length detection plate located on the bottom of the drawer turns, allowing four paper length detection sensors on the FD paper size board.
- Moving the paper width guide activates or deactivates two paper width detection sensors on the CD paper size board through the cutout in the lever.
- The combination of the four paper length detection sensors and two paper width detection sensors that are either activated or deactivated determines the size of the paper loaded in the drawer.
- The FD paper length detection sensor detects that the drawer is slid into position as it is slid in.

[1]	Paper width guide (front)	[2]	Paper width guide (rear)

[5]	Paper length detection plate	[6]	Paper length guide

4.2.2 Remaining paper display mechanism

- The amount of remaining paper is indicated by the LED on the right side of each tray and by the screen of the control panel.
- The estimate amount of paper for near empty is around 50 sheets.

Tray status	Empty	Near empty	Other status (During lifting-up and with tray not being set included)
LED status	ON	OFF/Blink *	OFF

- The near empty display may be OFF or Blink as set for “Machine State LED Setting” of the service mode (the default setting is OFF).

[3]	Tray 4 paper remaining amount display LED	-	-

Display on the control panel when paper empty is occurred

4.3 Dehumidifier heater control (HT-509)

- An optional dehumidifier heater may be added to the upper surface of the paper feed cabinet.
- When energized, the dehumidifier heater generates heat and prevents the paper stack loaded in the tray from becoming damp.
- The dehumidifier heater is turned ON when the engine is in a standby state or in the energy save mode, or when the engine is stationary with the cover open or a malfunction or a misfeed occurring, with the dehumidifier heater switch provided on the back of the cabinet turned ON.
- The dehumidifier heater is not turned ON if the dehumidifier heater switch is in the OFF position.

4. OPERATION

4.1 Paper feed section

4.1.1 Paper feed drive mechanism

- The same paper feed drive mechanism as that found in PC-210/110 is incorporated.
- The paper feed motor drives the pick-up roller and feed roller to take up and feed a sheet of paper into the main body.
- Then, the vertical transport motor transports the paper through the vertical transport section.
- The pick-up roller takes up sheets of paper and the feed roller and separation roller ensure that only one sheet of paper is separated and fed into the main body.
- When the drawer is slid in, the lever is pushed to lower the pick-up roller.
- The tray is raised to cause the paper to push the feed roller. The tray is brought to a stop when the main tray upper limit sensor detects the upper limit.
- The main tray upper paper empty sensor detects whether paper is loaded on the main tray at the upper limit position.

[11]	Feed roller	[12]	Vertical transport roller

4.2 Main tray section

4.2.1 Main tray up / down mechanism

- The elevator tray is suspended by the cables at the front and rear.
- As the elevator motor turns forward or backward, the cables are wound to raise or lower the tray.
- The amount of paper left in the main tray is calculated using time for the lifting motion (period of time through which the elevator motor is kept energized).
- When the amount of paper becomes small, the near empty detection actuator blocks the main tray paper near empty sensor.
- When paper in the main tray runs out, the main tray paper empty sensor detects that condition and a descent motion of the main tray is started.
- The shifter stop/lower limit position sensor detects the main tray at its lower limit position.

[1]	Main tray paper near empty sensor (PS135)	[2]	Elevator motor (M134)
[3]	Near empty detection actuator	[4]	main tray

[5]	Shifter stop/lower limit position sensor (PS138)	[6]	Main tray paper empty sensor (PS134)
[7]	Wire	-	-

4.2.2 Main tray lower limit detection

(1) Main tray lower limit detection

- If the sub tray is detected to be loaded with paper when paper on the main tray runs out, the descent motion of the main tray is started.
- The shifter stop/lower limit position sensor detects the lower limit position of the main tray.
- This sensor has two functions and detects also the stop position of the shifter.
- The shift stop position detection actuator portion detects the shifter stop position when it is pushed as a result of the lever being pushed by the shifter.

[1]	Lower limit detection actuator portion	[2]	Shifter stop position detection actuator portion
[3]	Shifter stop/lower limit position sensor (PS138)	[4]	Lever

(2) Main tray lower operation

- If the sub tray is detected to be not loaded with paper when paper on the main tray runs out, the descent motion of the main tray is not performed. The main tray is lowered when the drawer is slid out.
- When the drawer is slid out, the elevator motor is disengaged from the gear, so that the main tray lowers by its own weight.
- At this time, an effect of the damper connected to the gear prevents the main tray from lowering swiftly and ensures a slow descent motion.

[1]	Elevator motor (M134)	[2]	Damper
[3]	Main tray	-	-

4.3 Sub tray section

4.3.1 Shifter drive mechanism

- If the main tray runs out of paper, while the sub tray is loaded with paper, the paper stack on the sub tray is moved to the main tray.
- The shifter motor drives the belt, which moves the shifter to thereby move the paper stack.
- The shifter moves to the position of the shifter stop/lower limit position sensor. Then, the shifter motor is rotated backward to return the shifter to, and stop it at, the position at which the shifter home sensor is blocked.

[1]	Shifter motor (M133)	[2]	Division board sensor (PS142)
[3]	Sub tray paper remaining amount sensor (PS141)	[4]	Sub tray paper empty sensor (PS140)
[5]	Shifter	[6]	Shifter home sensor (PS139)
[7]	Belt	[8]	Shifter stop/lower limit position sensor (PS138)

4.3.2 Sub tray paper remaining amount

- The amount of paper left on the sub tray is detected by the combination of states of the sub tray paper remaining amount sensor and the sub tray paper empty sensor. The amount of paper left is detected in three different levels.
- Roughly speaking, the sub tray paper remaining amount sensor is deactivated from the activated state when the amount of paper left is about half the capacity of the tray.

Paper remaining amount	Sub tray paper remaining amount sensor	Sub tray paper empty sensor
Large	ON	ON
Small	OFF	ON
None	OFF	OFF

[1]	Sub tray paper remaining amount sensor (PS141)	[2]	Sub tray paper empty sensor (PS140)
[3]	Paper	-	-

4.4 Remaining paper amount displayed mechanism

- The amount of remaining paper is indicated by the LED on the right side of each tray and by the screen of the control panel.
- The estimate amount of paper for near empty is around 100 as 64 g/m² (17 lb) paper.

Tray status	Empty	Near empty	Other status (During lifting-up and with tray not being set included)
LED status	ON	OFF/Blink *	OFF

NOTICE

- The near empty display may be OFF or Blink as set for "Machine State LED Setting" of the service mode (the default setting is OFF).
- The LED is OFF regardless of the amount of paper left in the tray in the energy save mode.

Tray paper remaining amount display LED
PC-410

[1]	Tray paper remaining amount display LED	-	-
-----	---	---	---

Display on the control panel when paper empty is occurred

4.5 Dehumidifier heater control (HT-509)

- An optional dehumidifier heater may be added to the upper surface of the paper feed cabinet and desk DK-510.
- When energized, the dehumidifier heater generates heat and prevents the paper stack loaded in the tray from becoming damp.
- The dehumidifier heater is turned ON when the engine is in a standby state or in the energy save mode, or when the engine is stationary with the cover open or a malfunction or a misfeed occurring, with the dehumidifier heater switch provided on the back of the cabinet turned ON.
- The dehumidifier heater is not turned ON if the dehumidifier heater switch is in the OFF position.

4. DRIVE

[1]	Feed roller	[2]	Transport roller
[3]	Paper feed motor (M2)	[4]	Transport motor (M3)

5. OPERATION

5.1 Paper feed and transport control

- The feed roller rotates and feeds paper at a predetermined timing.
- The LCT transport rollers rotate and convey paper at a predetermined timing.
- In consecutive print, when the interval between the preceding and following sheets is below the specified value, the LCT transport rollers temporarily stop to ensure a predetermined interval.
- The paper transport speed is faster than the system speed.

Layout of sensors and rollers

[1]	Paper feed sensor (PS3)	[2]	Transport roller
[3]	Feed roller	[4]	Tray2 vertical transport roller
[5]	Tray2 vertical transport sensor (PS12)		

5.2 Paper level detection

- The level of the paper still available for use is determined based on the outputs from near empty sensor/1 and sensor/2.
- The estimate amount of paper for near empty is around 50.

Reference data: plain paper	Paper full	Paper near full	Paper available	Near empty
Paper level	2500 to 2000 sheets	2000 to 1000 sheets	1000 to 50 sheets	50 to 1 sheets
Near empty sensor /1	blocking	blocking	unblocking	unblocking
Near empty sensor /2	unblocking	blocking	blocking	unblocking

[1]	Paper level detection plate	[2]	Notch
[3]	Near empty sensor /1 (PS5)	[4]	Near empty sensor /2 (PS6)

5.3 Paper empty detection

- The paper empty sensor detects a paper empty condition.

[1]	Paper empty sensor (PS4)	[2]	Upper limit sensor (PS2)
[3]	Paper still available	[4]	Paper empty condition

5.4 Paper level indicator

- The level of the paper still available for use is indicated by the LED provided on the right-hand side of the unit as viewed from the front, and displayed on the control panel.
- Following describe different paper level conditions.

Paper condition	Empty	Near empty	Other than empty and near empty conditions, during lift-up
LED display	ON	blinking	OFF

[1]	Tray LED	-	-
-----	----------	---	---

5.5 Tray lift-up control

5.5.1 Tray ascend/descend mechanism

- The tray is suspended by the wires at the front and rear.
- Rotation of the lift-up motor winds the wires, which causes the tray to go up.
- Opening the LU door disconnects the lift-up motor from the tray ascend/descend mechanism, causing the tray to lower by its own weight.
- There is a drive assist spring used for bringing the tray to a stop at an appropriate height.

[1]	LU door	[2]	Paper tray
[3]	Drive assist spring	[4]	Lift-up axis
[5]	Wire	[6]	Lift-up motor (M1)
[7]	Coupling		

(1) Closing the LU door

- The condition of the upper limit sensor signal is checked when the LU door is closed. If the upper limit sensor is unblocked, the lift-up motor is energized so that lifting of the tray is started.
- When the upper limit sensor is blocked after the lifting of the tray has been started, the lift-up motor is deenergized to complete the lifting of the tray.

[1]	Upper limit sensor (PS2)	[2]	Paper tray
-----	--------------------------	-----	------------

(2) During a print cycle

- As the paper is consumed for a number of print cycles carried out, the pickup roller gradually lowers and eventually unblocks the upper limit sensor. The lift-up motor is then energized again and the lifting of the tray is started.

- When the upper limit sensor is blocked, the lift-up motor is deenergized to complete the lifting of the tray.
- The sequence of these operations is repeated. This maintains the pressure (paper take-up pressure) between the pickup roller and the paper stack at a constant level regardless of the level of the paper stack left.

[1] Pick-up Roller	[2] Upper limit sensor (PS2)
--------------------	------------------------------

5.5.2 Paper size detection

- The LCT is not capable of detecting the paper size.
- The paper size is set by [Service Mode] -> [System 2] -> [LCT Paper Size Setting].

5.6 Dehumidification heater control

- The LCT is equipped with a dehumidification heater as standard.
- ON/OFF control of the dehumidification heater is operatively associated with turning on or off of the dehumidifier heater of the machine. See [“PB.4.3 Dehumidifier heater control \(HT-509\)”](#).

PF THEORY OF OPERATION JS-506

1. CONFIGURATION

1.1 Paper path

1.1.1 Paper feed to the exit tray

[1]	Paper feed to the exit tray 1	[2]	Paper feed to the exit tray 2
-----	-------------------------------	-----	-------------------------------

1.2 Section configuration

[1]	Exit tray 1 (sensor assy)	[2]	Exit tray 1 (exit tray)
[3]	Exit tray 2	[4]	Paper exit/reverse section at the main body

1.3 Configuration

- JS-506 has the exit tray 1 (upper) and the exit tray 2 (lower).

- JS-506 does not have the paper transport function and only has the shift function.

[1]	Exit tray 1 full detection lever	[2]	Exit tray 1 full sensor (PS2)
[3]	Tray shift home sensor (PS1)	[4]	Exit tray 2 (lower)
[5]	Tray shift motor (M1)	[6]	JS control board (JSCB)
[7]	Exit tray 1 (upper)	-	-

2. DRIVE

2.1 Transportation to exit tray 1

- The transportation to the exit tray 1 uses the reverse roller on the main body.

[1]	Switchback motor (main body: M4)	[2]	Reverse roller (main body)
[3]	Paper exit/reverse switch gate (main body)	[4]	Gate switch solenoid (main body: SD3: ON)
[5]	Exit tray 1	-	-

2.2 Transportation to exit tray 2

- The transportation to the exit tray 2 uses the paper exit roller on the main body.

[1]	Paper exit clutch (main body: CL8)	[2]	Fusing motor (main body: M3)
[3]	Exit tray 2	[4]	Paper exit roller

2.3 Exit tray 2 shift mechanism

- The shift drive for the exit tray 2 uses the shift tray motor.

[1]	Shift control actuator	[2]	Tray shift home sensor (PS1)
[3]	Exit tray 2	[4]	Tray shift motor (M1)
[5]	Tray shift projection	[6]	Exit tray support rolls (6 points)

3. OPERATION

3.1 Exit tray 1

3.1.1 Paper transport

- Since the exit tray 1 does not have the paper transport function, the reverse rollers for the main body exit/reverse section are used to exit the paper to the tray.
- The paper exit/reverse switch gate is switched to the reverse side when transporting the paper to the reverse roller.
- The reverse roller stops after the predetermined period of time when the exit sensor on the main body detects the trailing edge of the last paper.

[1]	Paper exit/reverse switch gate (reverse side)	[2]	Paper exit sensor (main body: PS3)
[3]	Exit tray 1	[4]	Exit tray 1 full detection lever
[5]	Reverse roller (main body)	-	-

3.1.2 Paper full detection

- The exit tray 1 has the exit tray 1 full sensor which detects paper full.
The sensor detects paper full with either 100 sheets of plain paper or stack height of 22.5 mm or less.
- Since the exit tray 2 does not have the paper full detect function, paper jam may occur when the paper exceeds the maximum number of sheets stacked.
The maximum number of sheets stacked for the exit tray 2 is 150 sheets for plain paper.

NOTE

- Number of sheets detected may differ depending on the equipment circumstances or the paper curled amount.

[1]	Exit tray 1: No exit paper	[2]	Exit tray 1: paper exit full detection
[3]	Exit tray 1	[4]	Exit tray1 full sensor (PS2)
[5]	Exit tray 1 full detection lever: unblocked	[6]	Exited paper
[7]	Exit tray 1 full detection lever: blocked	-	-

3.2 Exit tray 2

3.2.1 Paper transport

- Since the exit tray 2 does not have the paper transport function, the paper exit rollers for the main body exit/reverse section are used to exit the paper to the tray.
- The paper exit/reverse switch gate does not shift since it is in the default position.
- The paper exit roller stops after the predetermined period of time when the paper exit sensor on the main body detects the trailing edge of the last paper.

[1]	Paper exit/reverse switch gate (exit side)	[2]	Paper exit sensor (main body: PS3)
[3]	Exit tray 2	[4]	Exit roller

3.2.2 Paper shift mechanism

- Sorting is conducted by shifting the exit tray 2 back and forth.
- The shift mechanism operates when the "Shift output each job" is selected in default setting or when the offset function is selected on the control panel.
- The exit tray 2 shifts with the tray shift motor.
- The shift default setting for the exit tray 2 is detected by the tray shift home sensor.
- The exit tray 2 shifts to the front side when the power is on and the printing starts for the 1st job.
- When sort is selected, the exit tray 2 shifts as follows for each set: rear side -> front side -> rear side -> ...

[1]	The exit tray 2 default position: front side	[2]	The exit tray 2 shift position: rear side
[3]	Shift control actuator	[4]	Tray shift projection: default position
[5]	Tray shift home sensor (PS1): unblocked	[6]	Tray shift motor (M1)
[7]	Tray shift projection: shift position	[8]	Tray shift home sensor (PS1): blocked

PG THEORY OF OPERATION FS-533/PK-519

1. FINISHER OUTLINE

- "Sort function, Sort offset function", "Group function, Group offset function", "Staple function" and "Sort staple function" can be added by installing the finisher FS-533 to the main body (bizhub C364/C284/C224).
- The "Punch function" can be added by installing the optional function (Punch Kit PK-519).

Option	Summary of the additional functions
PK-519	Punch function

4. UNIT OPEN/CLOSE SECTION

4.1 Unit open/close mechanism

- The finisher (FS-533) and punch kit (PK-519) are provided in the each unit lock mechanism.
- Overall view

[1]	Punch unit lock mechanism	[2]	Finisher unit lock mechanism
-----	---------------------------	-----	------------------------------

4.1.1 Finisher unit lock mechanism

- Releasing the finisher release lever at the front side of the finisher releases the locking claws at the front and rear sides of the finisher from the finisher slide rail. The finisher and the main body will be disconnected to enable the finisher to slide leftward.
- When the finisher is slid, the finisher lock switch turns off to detect that the finisher is opened.
- When the finisher is detected to be opened, the warning message will be displayed on the screen to inform that the unit is open. Following jobs will then be prohibited.
- Closing the finisher releases the warning screen to releases the job prohibition.

Front view

[1]	Finisher release lever	[2]	Finisher lock switch (SW1)
[3]	Lock claw	-	-

Warning screen

4.1.2 Punch unit lock mechanism (PK-519)

- When the finisher is opened, the release lever for the punch unit will be exposed. (only when the optional punch kit PK-519 is installed)
- The punch unit does not have a switch to detect open/close of the unit.

NOTE

- The function to detect open/close of the punch unit is not installed since the finisher needs to be opened to open the punch unit.

Front view

[1]	Punch kit release lever	[2]	Lock claw
-----	-------------------------	-----	-----------

5. PUNCH SECTION (PK-519)

5.1 Configuration

- The punch function can be added to the finishing mode by installing the optional punch kit PK-519 to the finisher FS-533.
- At the punch section, the holes are punched at the paper transported from the main body paper exit section when the paper is fed into the finisher.
- When punching the holes on the paper, the paper transported to the transport section will be switchbacked to the punching section to [correct the paper skew](#) before [punching the holes](#). Punching is conducted paper by paper. The punched paper will be transported from the punch section to the transport section.
- When the number of punch holes is not commanded at "finish", the paper will be transported to inside the finisher without switchback of the paper and punching.
- 2 holes/3 holes punch kit as well as 2 holes/4 holes punch kit have mechanisms to switch the number of punch holes.

NOTE

- **2 holes punch kit and 4 holes punch kit do not have the function to switch the number of punch holes.**
 - **"Finishing" cannot be selected using a different punch kit. (Example: Three holes punch mode cannot be selected when the 4 holes punch kit is installed.)**
- Punch dust generated by punching is received in the punch dust box.

[1]	Punch unit	[2]	Punch dust box
-----	------------	-----	----------------

- *1: The number of the puncher is varied depending on the type of punch kit.
- *2: The shape of the puncher frame is varied depending on the type of punch kit.

5.1.1 Punch kit type

2 holes/3 holes kit (Selectable the hole number)

- Attachable marketing area: Europe, US, Others 1-5

2 holes/4 holes kit (Selectable the hole number)

- Attachable marketing area: Europe, US, Others 1-5
- 2 holes punch kit

- Attachable marketing area: Japan
- 4 holes punch kit

- Attachable marketing area: Europe

5.2 Drive

- The drive source for the punch section is a punch motor. It drives the puncher and the punch dust agitating blade.
- The puncher is driven via the puncher drive cam.
- The punch dust agitating blade is driven via the agitating blade drive connecting lever. The agitating blade drive connecting lever has the [function to detect punch dust full](#).

Overall view

[1]	Puncher frame *1	[2]	Registration guide
[3]	Puncher *2	[4]	Paper feed sensor (PS201)
[5]	Slide came	[6]	Puncher home sensor (PS204)
[7]	Cam slide shaft	[8]	Puncher drive cam
[9]	Puncher drive cam sensor (PS203)	[10]	Punch dust full sensor (PS205)
[11]	Punch motor (M201)	[12]	Punch dust agitating blade
[13]	Punch dust box	-	-

- *1: The shape of the puncher frame is varied depending on the type of punch kit.
- *2: The number of the puncher is varied depending on the type of punch kit.

NOTE

- The illustration explains with an example for "2 holes/4 holes kit".
- The slide cam has a guide. The shape of the guide and the different shift value of the puncher frame [enable only the specified puncher to move down](#).
- The "2 holes kit" and the "4 holes kit" do not have the punch hole switching function.

Enlarged view of the punch dust agitating blade drive section

[1]	Punch motor sensor (PS202)	[2]	Encoder
[3]	Punch dust agitating blade	[4]	Punch dust agitating blade drive connecting lever
[5]	Punch dust full sensor (PS205)	[6]	Punch motor (M201)

5.3 Operation

5.3.1 Skew correction mechanism

- When in punch mode, the paper is transported to the paper transportation section of the finisher once and switchbacked to make the paper contact the registration guide. This process will correct the skew at the rear edge of the paper (tilt) to enable punching at the proper position.
- Overall view

[1]	Puncher	[2]	Paper feed sensor (PS201)
[3]	Registration guide	[4]	Paper feed sensor (PS101)
[5]	Receiving roller	[6]	Paper conveyance roller

Front view

[1]	Paper feed sensor (PS201)	[2]	Puncher
[3]	Paper conveyance motor (M101)	[4]	Paper feed sensor (PS101)
[5]	Receiving roller	[6]	Paper conveyance roller
[7]	Punch motor (M201)	[8]	Registration guide

(1) Skew correction process

1. The paper conveyance motor [2] of the finisher will rotate forward, and the transportation roller [4] will rotate forward. The paper will be transported for the punching section to the transportation section.
2. The paper feed sensor [3] (PS101) will detect the front edge of the paper, and the paper feed sensor [1] (PS201) will detect the rear edge of the paper.
3. When the paper feed sensor [1] (PS201) detects the rear edge of the paper and the specified period of time has passed, the transportation motor will rotate in reverse direction.
4. The paper will be switchbacked [5] once, and the rear edge of the paper contacts the registration guide [6].
5. When the paper is switchbacked, the paper forms a loop [1] between the transport roller and the registration guide, and corrects the paper skew (tilt).
6. The paper feed sensor at the punching section detects the rear edge of the paper, and the paper conveyance motor stops after the specified period of time to stop the switchback of the paper.
7. The switchback of the paper stops, and the puncher [1] moves down to punch the hole on the paper.
8. After punching the hole, the conveyor motor rotates forward to transport the paper into the finisher.

5.3.2 Punch control

- The holes are punched on the paper by switchback of the paper into the punch unit and by moving the puncher up/down by the punch motor.

[1]	Puncher slide pin	[2]	Puncher
[3]	Puncher frame	[4]	Puncher home sensor (PS204)
[5]	Puncher frame slide pin	[6]	Puncher drive cam
[7]	Puncher drive cam sensor (PS203)	[8]	Encoder
[9]	Punch motor sensor (PS202)	[10]	Punch motor (M201)
[11]	Slide cam	-	-

(1) Paper punching process

1. The puncher frame waits at the home position to make the puncher waits at the upper position.
Position of the puncher frame is detected by the puncher home sensor.
2. Paper feed sensor at the punch section detects the rear edge of the paper, and stops switchback of the paper after a specified period of time.
3. The punch motor rotates forward to rotate the puncher drive cam forward. The punch frame then will move towards the front side. When the puncher frame moves towards the front side, the slide cam moves the puncher down by its cam shape.
The rotation value of the punch motor is detected by the number of times light shielding plate blocks the punch encoder sensor. The value the slide cam moves back and forth differs depending on the value the punch motor rotates. When the value the slide cam moves changes, the value of the puncher moves in vertical direction also changes. The position of the puncher is judged in process. The rotating position of the puncher driven cam is detected by the puncher drive cam sensor.

Example: Figure for 2 holes punching operation for 2 holes/3 holes kit

[1]	Puncher	[2]	Slide cam
[3]	Puncher frame (home position)	[4]	Puncher frame (Punching position)

- The left side of the cross section shows the far side of the punch unit. The right side shows the front side.
4. When the puncher frame moves to the front side, the slide cam pushes the puncher down to punch the holes at the rear edge of the paper. (The holes are punched paper by paper.)
The holes are judged to be punched according to the rotation value of the punch motor.
- NOTE**
- The number of the punchers (number of the holes) differs depending on the type of the punch kit.
 - The number of the punch holes is switched according to the shift value of the puncher frame for the 2 holes/3 holes kit as well as 2 holes/4 holes kit.
For details, see “PG.5.3.3 Punch holes switch control”.
5. When the holes are punched, the punch motor rotates in reverse direction, and the puncher drive cam rotates in reverse direction. This process leads the puncher frame to return to the home position to move the puncher up.

5.3.3 Punch holes switch control

- 2 holes/3 holes punch kit as well as 2 holes/4 holes punch kit have mechanisms to switch the number of punch holes.

(1) Number of punch holes switch mechanism

- The slide cam has a guide. With the shape of the guide and the shift value of the puncher frame, only the specified puncher can be moved down.

- The shift value of the puncher frame is judged by the rotation value of the punch motor. The rotation value of the punch motor is detected by the punch motor sensor.
- The number of the punch holes can be selected when selecting the punch mode.

NOTE

- When the second type of punch hole (3 holes on the illustration) is selected, the puncher frame shifts to the waiting position 2 from the waiting position 1 (home position) and waits prior to the job.

- The number of the puncher and the guide shape of the slide cam differ depending on the type of the punch kit.

Example: cross section of the 2 holes/3 holes kit

[1]	Waiting position 1 (home position)	[2]	Puncher frame shift value: Small (Example: 2 holes punching position)
[3]	Waiting position 2 (puncher frame shift value: medium)	[4]	Puncher frame shift value: Large (Example: 3 holes punching position)
[5]	Puncher	[6]	Slide cam

(2) Puncher frame position detect mechanism

[1]	Puncher slide pin	[2]	Puncher
[3]	Slide cam	[4]	Puncher frame
[5]	Puncher home sensor (PS204)	[6]	Puncher frame slide pin
[7]	Puncher drive cam	[8]	Puncher drive cam sensor (PS203)
[9]	Encoder	[10]	Punch motor sensor (PS202)
[11]	Punch motor (M201)	-	-

(a) Puncher position detect control

- The waiting position 1 (home position) and the waiting position 2 are judged by the assembly of the detecting result of the punch home sensor and the puncher drive cam sensor.

Puncher retract position	Puncher home sensor	Puncher drive cam sensor
Waiting position 1 (puncher retract position)	Blocked	1st light block

Puncher retract position	Puncher home sensor	Puncher drive cam sensor
Punching position 1 (Example: 2 holes punching)	Unblocked	1st light unblock
Waiting position 2 (puncher retract position)		2nd light block
Punching position 2 (Example: 3 holes punching)		2nd light unblock

(b) Puncher shift value detect mechanism

- The shift value of the puncher frame is judged by the number of times the encoder blocks the punch motor sensor.

5.3.4 Punch dust full detection control

- The punch dust box section has the punch dust full sensor. When the job is commanded with the punch dust exceeding the specified value, a warning message for the punch dust full is displayed on the operation panel.
- The punch dust full sensor detects the volume of the punch dust with the position of the agitating blade drive connecting lever.
- The punch dust full sensor also detects if the punch dust box is installed.
- If the punch dust box is not installed when the punch job is commanded, the warning message for the punch dust full will be displayed on the operation panel.
- Even when the "punch dust full" is detected, printing is not prohibited. All the jobs except punching holes will be conducted until finished.

Punch dust box over view

[5]	Punch dust full sensor (PS205)	[6]	Punch motor (M201)

(1) Punch dust full detect operation

Punch dust agitating blade home position view

In normal operation

When the punch dust is full

1. The drive transmission gear [2] stops while the punch motor [1] is in halt.
The punch dust agitating blade [3] in the punch dust box [6] waits at the home position.
The agitating blade drive connecting lever [4] blocks the punch dust full sensor [5] during that time.

2. When the punch motor rotates forward, the drive transmission gear rotates forward.
3. When the drive transmission gear rotates forward, the agitating blade drive connecting lever rotates forward to rotate the punch dust agitating blade forward.
When the agitating blade drive connecting lever rotates, the punch dust full sensor is unblocked.
The punch dust agitating blade rotates to level the punch dust in the punch dust box.

4. When punching holes is complete, the punch motor starts rotating in reverse direction.
When the punch motor rotates in reverse direction, the punch dust agitating blade rotates in reverse direction and tries to return to the home position.

NOTE

In normal operation:

- The agitating blade drive lever [2] and the punch dust agitating blade [1] return to their home positions by the punch motor's drive force.
- By the agitating blade drive connecting lever [2] returning to the home position, the punch dust full sensor [3] will block the light. The punch dust [4] then is judged not to be full.

NOTE

When the punch dust is full:

- The agitating blade drive lever [4] and the punch dust agitating blade [1] cannot return to their home positions due to the punch dust [3].
- The torque limiter function is installed to the drive transmission gear to prohibit transmission of the drive force more than specified.
- With the agitating blade drive connecting lever [4] not returning to the home position, the punch dust full sensor [2] keeps being unblocked. When the transmission status is detected for 10 consecutive times during punching operation, the punch dust [3] is detected to be full to display the message warning that the punch dust is at full level.

Punch dust full message: typical

Punch dust full message: typical

(2) Punch dust box not installed detect control

1. When the punch dust box is installed, the agitating blade drive connecting lever waits at the home position. (blocks the punch dust full sensor)
2. When the punch dust box is removed, the punch dust full sensor is unblocked.
3. When the finisher is closed and the punch job is commanded with the above status, the punch dust box is detected to be uninstalled to display the message warning that the punch dust box is full.

NOTE

- Even when the "punch dust box not installed" is detected, printing is not prohibited. All other jobs except punching holes will be conducted and continued until finished.
- Punching the holes to the paper will be conducted only when the punch dust box is installed.

(3) Unit change function

- The screen to be displayed when a punch dust full is detected can be enabled or disabled in the "Unit Change" in the Service Mode.

Service Mode/System Input screen: typical

System 2/Unit Change screen: typical

NOTE

- For details of the Service Mode, see "1.11.15.5 Unit Change"

6. TRANSPORT SECTION

6.1 Configuration

- The transportation section will transport the paper from the paper exit section of the MFP main body (punching section when the punch kit is installed) to inside the finisher as well as to the alignment section.

[1]	Jam removal dial	[2]	Paper conveyance roller
[3]	Paper feed sensor (PS101)	[4]	Receiving roller
[5]	Paper conveyance motor (M101)	[6]	Exit roller/upper
[7]	Exit roller/lower	[8]	Paper exit roller solenoid (SD103)
[9]	Exit roller lift up motor (M104)	[10]	Paper exit motor (M102)
[11]	Pick up roller position sensor (PS105)	-	-

6.2 Drive

6.2.1 Drive outline

The driving source of the transport section is the paper conveyance motor, paper exit motor, and exit roller lift up motor, and the following parts are driven.

Section	Driving source	Driving parts	Function
Transport/receiving roller section	Paper conveyance motor	- Transport roller - Receiving roller	- Transports the paper to inside the finisher - Transports the paper to the alignment section - Switchbacks the paper to the punching section (when in punch mode)
Exit roller section	Paper exit motor	- Exit roller/upper - Exit roller/lower - Paper exit paddle	- Rotates the exit roller/upper in reverse direction to transport the paper to the alignment tray (when in sort/group mode) - Rotates the exit roller/upper and the exit roller/lower in forward direction to exit the paper to the paper exit tray.
	Exit roller lift up motor	- Exit roller/upper - Paper guide	- Moves the exit roller/upper and the paper guide up/down - Moves the exit roller/upper down to transport the paper to the alignment tray (when in sort/group mode) - Moves the exit roller/upper down to exit the paper to the paper exit tray

6.2.2 Paper conveyance/receiving roller section drive

- The drive source for the paper conveyance and the receiving roller section is the paper conveyance motor which drives paper conveyance roller and the receiving roller.
- The paper conveyance roller and the receiving roller can be manually rotated (forward/reverse) by manually rotating the process dial for the paper clog. This dial is to be used when the paper is clogged inside the finisher.

[1]	Jam removal dial	[2]	Paper conveyance roller
[3]	Paper feed sensor (PS101)	[4]	Paper conveyance motor (M101)
[5]	Receiving roller	-	-

6.2.3 Paper exit roller section drive

- The exit roller section has 2 types of drive mechanisms.

[1]	Pick up roller position sensor (PS105)	[2]	Direction of the transport (transport section)
[3]	Paper lift-up cam	[4]	Paper exit roller/upper
[5]	Paper exit roller/lower	[6]	Direction of the paper exit (receive section)
[7]	Paper guide	[8]	Paper guide
[9]	Paper exit roller solenoid (SD103)	[10]	Exit roller lift up motor (M104)
[11]	Paper exit motor (M102)	-	-

(1) Paper exit motor

- The paper exit motor drives the exit roller/upper and the exit roller/lower.
- The paper exit roller/upper is connected to the paper exit motor. Rotation of the paper exit motor rotates the exit roller/upper.
- The connection of the exit roller/lower and the exit motor is released while waiting. Turning on/off of the exit roller solenoid [connects the exit roller/lower drive gear](#) to rotate (forward direction*) the exit roller/lower.

NOTE

- The paper exit roller/lower has the torque limiter. Therefore, when the reverse rotation force of over the predetermined value is applied from the paper exit roller/upper which is pressed at the time of [FD alignment](#), the paper exit roller/lower rotates in reverse direction as the paper exit roller/upper rotates.

Paper exit motor drive view

[1]	Paper exit roller/upper	[2]	Paper exit motor (M102)
[3]	Paper exit roller solenoid (SD103)	[4]	Paper exit roller/lower

Paper exit roller/lower drive front view

[1]	Paper exit roller/lower drive gear	[2]	Paper exit roller/lower drive gear lock plate
[3]	Rotation lock claw	[4]	Paper exit roller solenoid (SD103)

(2) Paper exit roller lift up motor

- The exit roller lift up motor drives the up/down operation of the paper exit roller/upper. It also drives the paper guide (2 points) and the paper guide (2 points). The paper exit roller/upper waits at the upper position. Rotation of the exit roller lift up motor moves the paper exit roller/lower down. (Drive source for rotating the paper exit roller/upper is the paper exit motor.)
- The exit roller lift up motor rotates the cam (4 points). When the cam rotates, the paper guide pushed up by the cam will be unlocked to move the paper guide down by its own weight.

Exit roller lift up motor drive view

[1]	Cam	[2]	Exit roller lift up motor (M104)
[3]	Paper guide	[4]	Paper guide
[5]	Exit roller/upper	-	-

6.3 Operation

6.3.1 Paper conveyance/receiving roller section paper transport control

- The paper conveyance roller sends the paper transported from the paper exit section of the main body (or from the punch section) to the receiving roller.
- The receiving roller sends the paper transported from the transport roller to the receiving section or the alignment section.
- The paper feed sensor detects the front edge and the rear edge of the paper. This will make the unit to detect the transportation and path of the paper.
- When in punch mode, the paper conveyance roller and the receiving roller rotate in reverse direction to switchback the paper and punch the holes at the punching section.

When the holes are punched, the paper conveyance roller and the receiving roller rotate in forward direction to send the paper to the receiving section or to the alignment section.

For details on punching operation, see "PG.5.3.2 Punch control".

[1]	Paper feed sensor (PS101)	[2]	Receiving roller
[3]	Paper conveyance roller	[4]	Paper

6.3.2 Paper exit roller section paper transport control

(1) Non sort mode, Non group mode, Non staple mode, Sort mode, Group mode

- The paper guide waits at the upper position by the cam. When the cam rotates by the exit roller lift up motor, the paper guide will be unlocked and moves down to the lower position. The paper sent from the transport section will be led to the exit roller by the paper guide.
- The paper exit roller/upper moves down to hold the paper from the transport section with the exit roller/lower to discharge it to the exit tray.
- The paper surface detect sensor/1 detects that the paper is discharged to the exit tray by the actuator being pushed down while the paper passes through and then returned to the original position.

[1] Paper	[2] Paper guide
[3] Paper exit roller/upper	[4] Exit roller/lower
[5] Paper surface detect sensor/1 (PS102)	[6] Paper surface detect sensor/1 actuator
[7] Batch weight guide	[8] Alignment roller

(2) Sort offset function mode, Group offset function mode Staple mode

1. The paper exit roller/upper stops rotating at the upper position and waits.
The paper exit roller/lower waits at the halt status.
2. The first paper is discharged [2] by the receiving roller [1], and moves down to the alignment tray by its own weight. [3]

NOTE

- The paper surface detect sensor/1 [4] detects that the paper is discharged to the alignment tray when the actuator [5] is pressed down by the paper.

3. The paper exit roller/upper [1] moves down to hold the first paper on the alignment tray [2] with the paper exit roller/lower [3] to rotate rollers* in reverse direction and transport the paper to the alignment roller [5].

NOTE

- *: The paper exit roller/lower [3] rotates in reverse direction driven by the paper exit roller/upper [1] rotates.

4. The paper exit roller/upper [1] moves up and stops rotating.
5. The alignment roller [5] contacts the rear edge of the paper to the alignment plate [6] to align the paper. (paper FD alignment)
6. The alignment plate moves back and forth to align right and left of the paper. (paper CD alignment)
7. The batch weight guide [4] moves down to hold the rear end [2] of the aligned paper.
For drive of the batch weight guide, see "PG.7.2.2.(3) Batch solenoid".

NOTE

- The batch weight guide [4] prevent the second paper and after to misalign the aligned paper [2].
For details, see “PG.7.3.2 Paper alignment control (paper FD alignment)”.

- 8. The second paper will be discharged over the first paper on the alignment tray.
- 9. The batch weight guide [4] moves up to release the rear end of the paper.
- 10. The paper exit roller/upper [1] moves down to hold the first and the second paper on the alignment tray with the paper exit roller/lower to rotate the paper exit roller/upper [1] in reverse direction, and transport it to the alignment roller [5] to align the rear edge of the paper.
- 11. The alignment plate moves back and forth to align the paper.

NOTE

- The second paper and after will be transported in the same way.
- For details of the paper alignment control, see “PG.7.3.1 Paper alignment overview”

- 12. When the last paper is aligned, the paper exit roller/upper [2] will move down to hold all the paper on the alignment tray [3] with the exit roller/lower [4].

NOTE

- When in staple mode, stapling is conducted after paper alignment is finished. For details on stapling control, see “PG.8.2.2 Stapling control”.
- For control after the paper is discharged to the exit tray, refer to the receiving section.

- 13. The batch weight guide [5] moves up to release the rear edge of the paper [2].
- 14. The paper exit roller/upper [2], exit roller/lower [4], and the alignment roller [1] rotate to discharge the paper [3] to the exit tray. (The paper exit roller/upper [2] and paper exit roller/lower [4] rotate in forward direction, and the alignment roller [1] rotates in reverse direction.)

6.3.3 Paper exit roller up/down control

The paper exit roller moves up/down when transporting the paper from the paper conveyance or receiving roller section to the receiving section or to the alignment section.

[1]	Exit roller lift up gear	[2]	Pick up roller position sensor (PS105)
[3]	Exit roller lift up motor (M104)	[4]	Paper exit roller/lower

(1) Lift up control in non-sort mode, non-group mode, non-staple mode, sort mode, and group mode

1. The paper exit roller/upper is moved down from the upper position (home position) to the lower position (press position) to hold the paper with the exit roller/upper and the paper exit roller/lower to rotate the roller forward and to discharge the paper to the exit tray.
2. The paper exit roller/upper moves up when the paper transportation is complete. (returns to the home position)

(2) Lift up control in sort offset mode, group offset mode, and staple mode

1. The paper exit roller/upper waits at the upper position (home position) and discharges the paper to the alignment tray.
2. The paper exit roller/upper moves down from the upper position to the lower position (press position).
3. The paper exit roller/upper rotates in reverse direction and [sends the paper to the alignment section](#).

NOTE

- When transporting the paper to the alignment section, only the exit roller/upper rotates in reverse direction.

4. [The paper is aligned at the alignment section](#). When aligning the paper, the paper exit roller/upper waits at the upper position.
5. When aligning and stapling are finished, the paper exit roller/upper moves down to hold the paper with the paper exit roller/upper and the paper exit roller/lower, and rotates the roller in forward direction to discharge the paper to the exit tray.
6. When the paper transportation is finished, the paper exit roller/upper moves up. (returns to the home position)

(3) Paper exit roller position detect control

1. The paper exit roller/upper waits at the upper position [7]. (home position)
The light shield plate [2] of the gear [8] installed on the lift up shaft for the paper exit roller/upper blocks the pick up roller position sensor [1] and detects that the paper exit roller/upper is at the home position [7].
2. When the lift up motor of the paper exit roller rotates, the gear on the lift up shaft for the exit roller rotates [3] to move the paper exit roller/upper [4] down to be pressed [6] to the paper exit roller/lower [5]. (Paper exit roller/upper at press position)
When the gear [3] rotates, the light shielding plate [2] also rotates to unblock the pick up roller position sensor [1]. This process detects that the paper exit roller/upper [4] position is at the press position.

Paper exit roller/upper position	Pick up roller position sensor
Upper position (home position)	Blocked
Lower position (pressure position)	Unblocked

6.3.4 Paper exit roller/lower drive connecting control

- It rotates the paper exit roller/lower when transporting the paper from the transport section to the receiving section or to the alignment section.
- The connection of the paper exit roller/lower and the paper exit motor is released by the paper exit roller solenoid when waiting. On/off of the paper exit roller solenoid connects the paper exit roller/lower to the paper exit motor, and rotates as the paper exit motor rotates. When the paper exit roller/lower and the paper paddle rotate one revolution clockwise (forward direction), the connection with the paper exit motor will be released and stop.

NOTE

- For details of the paper weight paddle control, see [“PG.9.3.1 Paper exit paddle control”](#)

[1]	Paper exit motor (M102)	[2]	Paper exit roller/lower drive gear
[3]	Paper exit roller/lower	[4]	Paper exit roller solenoid (SD103)

(1) Paper exit roller/lower drive connecting process

1. Connection of the paper exit roller/lower with the exit motor is released while waiting. On/off of the paper exit roller solenoid [4] operates the rotation lock claw [3] for the paper exit roller solenoid to release the lock plate [2] installed on the paper exit roller/lower drive gear [1].

2. By the paper exit roller/lower drive gear [3] being rotated by the spring force [2], it will be connected to the drive mechanism [4]. This process transfers drive force to the paper exit roller/lower drive gear to rotate the paper exit roller/lower.

3. The paper exit roller/lower will be released from the paper exit motor [1] drive mechanism by the shape of the paper exit roller/lower drive gear [4] after rotating about one revolution. (Connection between the paper exit roller/lower and the paper exit motor [1] will be released.)
4. The paper exit roller/lower drive gear [4] will be locked to prohibit rotation by the rotation lock claw [2] of the paper exit roller solenoid [3]. (The exit roller/lower stops rotating.)

7. ALIGNMENT SECTION

7.1 Configuration

- In the alignment section, paper transported from the transport section is aligned and delivered to the paper exit tray.

[1]	Alignment roller motor (M103)	[2]	Alignment roller
[3]	Drive connecting belt	[4]	Batch weight guide
[5]	Receiving roller	[6]	Paper conveyance motor (M101)
[7]	Batch solenoid (SD102)	[8]	Alignment plate home sensor/R (PS109)
[9]	Paper exit roller/lower	[10]	Alignment motor/R (M106)
[11]	Paper surface detect sensor/1 (PS102)	[12]	Alignment motor/F (M105)
[13]	Paper exit roller solenoid (SD103)	[14]	Alignment plate home sensor/F (PS108)
[15]	Alignment plate/Fr	-	-

7.2 Drive

7.2.1 Drive outline

The driving source of the alignment section is the paper conveyance motor, alignment roller motor, batch solenoid, alignment motor, and paper exit motor, and the following parts are driven.

Section	Driving source	Driving parts	Function
Alignment roller section	Paper conveyance motor	Receiving roller	Transports paper to the alignment tray.
	Alignment roller motor	Alignment roller	- Switchbacks the paper to align the rear edge of the paper. (FD alignment operation) - The aligned paper will be discharged to the exit tray.
	Batch solenoid	Batch lever	It holds the rear edge of the paper on the alignment tray. It prevents the aligned paper to be misaligned by the paper that follows.
Alignment tray section	Alignment motor	Alignment plate /Fr	It moves the alignment plate/Fr forward and backward to align the paper. (CD alignment operation)
		Alignment plate /Rr	It moves the alignment/Rr forward and backward to align the paper. (CD alignment operation)
	Paper exit motor	Paper exit roller/lower	- It transports the paper to the alignment tray. (switchback) - Exits paper to the paper exit tray.
		Paper exit roller/upper	Exits paper to the alignment tray.
		Paper exit paddle	

7.2.2 Alignment roller section

There are 3 types of drive mechanisms for the alignment roller section.

[1]	Direction of the paper exit (receive section)	[2]	Receiving roller
[3]	Alignment roller motor (M103)	[4]	Alignment roller
[5]	Paper weight guide	[6]	Direction of the paper transport (transport section)
[7]	Batch solenoid (SD102)	[8]	Paper conveyance motor (M101)

(1) Paper conveyance motor

- The receiving roller is driven by the paper conveyance motor.
- For details of the receiving roller drive, see "[PG.6.2.2 Paper conveyance/receiving roller section drive](#)".
- The receiving roller is installed on the drive shaft for the receiving roller. It rotates by the drive force of the transport motor.

NOTE

- The drive transmission pulley is not fixed to the receiving roller's drive shaft. Therefore, the alignment roller does not rotate even when the transport motor rotates.

[1]	Paper conveyance motor (M101)	[2]	Receiving roller drive shaft
[3]	Drive connecting pulley	[4]	Receiving roller
[5]	Alignment roller	-	-

(2) Alignment roller motor

- The alignment roller is driven by the alignment roller motor.
- The alignment roller rotates by the drive force of the alignment roller motor through the drive transmission pulley on the drive shaft for the receiving roller.

NOTE

- The drive transmission pulley is not fixed to the receiving roller's drive shaft. Therefore, the receiving roller does not rotate even when the alignment roller motor rotates.

[3] Drive connecting pulley	[4] Receiving roller
[5] Drive connecting gear	- -

(3) Batch solenoid

- The batch lever is driven by the batch solenoid.
- The batch lever and the batch guide wait at the upper position by the spring force. (home positions)
- When the batch solenoid turns on, the drive shaft for the batch lever rotates to rotate the batch lever downward.
- The batch guide is pressed down by the batch lever moving downward.
- When the batch solenoid turns off, the drive shaft for the batch lever rotates by the spring force to return the batch lever and the batch guide to the upper position.

[1] Batch solenoid (SD102)	[2] Batch guide
[3] Batch lever	- -

(a) Batch guide drive section front view

[1]	Batch lever	[2]	Batch guide
[3]	Batch solenoid (SD102)	-	-

7.2.3 Alignment tray section

- The alignment tray section has 2 types of drive mechanisms

(1) Alignment motor

- The alignment motor drives the alignment plate back and forth.
- The alignment plate/Fr, and the alignment plate/Rr have individual alignment motors. This enables each alignment plate to independently move back and forth.

[1]	Alignment plate/Fr	[2]	Paper stopper
[3]	Alignment plate/Rr	[4]	Alignment plate home sensor/R (PS109)
[5]	Paper exit roller/lower	[6]	Alignment motor/R (M106)
[7]	Paper surface detect sensor/1 actuator	[8]	Paper surface detect sensor/1 (PS102)
[9]	Alignment motor/F (M105)	[10]	Paper exit roller solenoid (SD103)
[11]	Alignment plate home sensor/F (PS108)	-	-

(2) Paper exit motor

- The paper exit roller/lower is driven by the paper exit motor.
For details of the paper exit roller/lower, see [“PG.6.2.2 Paper conveyance/receiving roller section drive”](#) and [“PG.6.3.4.\(1\) Paper exit roller/lower drive connecting process”](#).

7.3 Operation**7.3.1 Paper alignment overview**

- At the alignment section, the paper is aligned for the jobs in sort offset mode, group offset mode, and staple mode.
- The paper is discharged to the exit tray without being alignment for non-sort mode, non-group mode, non-staple mode, sort mode, and group mode.
- When the paper is aligned, it is switchbacked to the alignment section individually. When alignment is finished, the paper or the batch is discharged to the exit tray.
- There are two types for paper alignment as described below.
 - Paper FD alignment:** The alignment operation which aligns the rear edge of the paper in transportation direction is called "paper FD alignment".
 - Paper CD alignment:** The alignment operation which aligns both sides of the paper in width direction is called "paper CD alignment".

7.3.2 Paper alignment control (paper FD alignment)

- The operation to align rear edge of the paper in transportation direction is called "paper FD alignment".
- The [paper from the transport section](#) will be transported to the alignment tray by the alignment roller. The rear edge of the paper then is aligned by contacting the rear edge of the paper to the paper stopper.

- The batch guide moves down to hold the rear edge of the aligned paper.

NOTE

- The batch guide moves up when the next paper is transported to the alignment tray as well as when the paper is discharged from the alignment tray to release the paper.
- The batch guide moves up when the next paper is transported to the alignment tray as well as when the paper is discharged from the alignment tray to release the paper.

[1]	Alignment roller	[2]	Batch guide
[3]	Paper exit roller/upper	[4]	Paper
[5]	Paper stopper	-	-

7.3.3 Paper alignment control (paper CD alignment)

- The operation to align both sides of the paper in width direction is called "paper CD alignment".
- The [paper from the transport section](#) is transported to the alignment tray by the alignment roller. The paper is aligned by contacting the alignment plate/Fr and Rr to both sides (forward-backward direction) of the paper.
- The home position of the alignment plate is detected by the alignment plate home sensor. (alignment plate home sensor/F, R)

[1]	Alignment plate/Fr	[2]	Paper stopper
[3]	Paper	[4]	Alignment plate /Rr
[5]	Alignment plate home sensor/R (PS109)	[6]	Slide gear/Rr
[7]	Alignment motor/R (M106)	[8]	Slide gear/Fr
[9]	Alignment motor/F (M105)	[10]	Alignment plate home sensor/F (PS108)

(1) Alignment plate control when in staple mode

- When the staple mode is commenced, the alignment plate/Fr and the alignment plate/Rr shift according to the paper width. The paper is aligned by the alignment plates contacting from both front and rear sides.
- The above alignment operation will be conducted for the paper for every job to align the edges of the paper batch. When the alignment is finished, [stapling process](#) will be conducted.

NOTE

- When printed in staple mode, paper batch will be stapled and be discharged to the exit tray without being shifted.

[1]	Paper	[2]	Alignment plate/Rr (shifting to the front side)
[3]	Alignment plate/Fr (shifting to the rear side)	-	-

(2) Alignment plate control for sort offset mode and group offset mode

- When commanding offset in sort mode or group mode, the alignment plate/Fr or the alignment plate/Rr presses the paper from one side to the far side (or front side) depending on the paper width. This process shifts the paper position.
- The paper batches will be sorted out by repeating the process above.

NOTE

- The offset value (shift value) of the paper is 30 mm.
- When "sort out" is not commanded in the sort mode or the group mode, only the sort print/group print will be conducted, and the paper will be discharged to the exit tray without being shifted.

[1]	Alignment plate/Rr	[2]	Paper
[3]	Alignment plate/Fr	-	-

(a) Operation when shifting the paper to the front side

- The alignment plate/Fr [3] will shift to the reference position at the front side. (The reference position differs depending on the paper size.)
- The alignment plate/Rr [2] shifts according to the paper width. The paper [1] is pressed by the alignment plate/Rr [2] to be shifted to the front side.

(b) Operation when shifting the paper to the rear side

- The alignment plate/Rr [2] will shift to the reference position at the rear side. (The reference position differs depending on the paper size.)
- The alignment plate/Fr [3] shifts according to the paper width. The paper [1] is pressed by the alignment plate/Fr [3] to be shifted to the rear side.

(c) Paper receiving quantity

- When the quantity of the paper received to the alignment tray in sort offset mode or in group offset mode reaches to the set value, the paper batch in the alignment tray [will be discharged to the exit tray](#).

NOTE

Sample process for sort out:

- When the job requires making of two copies with 10 sheets A4 size document in sort offset mode, the paper batch is discharged when the sheet quantity reached 5 for the first copy.
- The remaining 5 sheets will be aligned to be discharged with the same shift position. This will make 10 aligned and discharged sheets on the exit tray.
- Then the shift position will be changed from the 1st copy to sort out the 2nd copy.
- The process for the second copy leaves 2 copies with 10 sheets each on the exit tray.

Maximum batch discharge quantity for sort out

Paper size	Paper type	
	Thin paper (52 g/m ² to 59 g/m ²) Plan paper (60 g/m ² to 90 g/m ²) Recycled paper (52 g/m ² to 90 g/m ²)	Thick paper (91 g/ m ² to 300 g/ m ²)
216 mm or less	5 sheets	3 sheets
More than 216 mm	4 sheets	

- When the "Paper load quantity" or "Paper load height" of the paper in the exit tray reaches to the specified value during sort offset mode or group offset mode, the exit tray is judged to be full.

Amount of paper stacking

NOTE

- The paper load height is detected by the paper level detection function.
For details, see ["PG.9.3.3 Paper level detect control"](#).

7.3.4 Alignment tray paper detect control

- The alignment tray has the paper surface detect sensor/1 which detects the paper path and the paper receiving in the alignment tray.
- The paper surface detect sensor/1 detects that the paper is transported to the alignment tray by the actuator being pressed down by the paper which passes it.

[1]	Receiving roller	[2]	Paper exit roller/upper
[3]	Paper exit roller/lower	[4]	Paper surface detect sensor/1 actuator
[5]	Paper surface detect sensor/1 (PS102)	[6]	Alignment roller

[1]	Paper surface detect sensor/1 actuator: The paper is stored (blocked)	[2]	Paper surface detect sensor/1 actuator: Paper is not stored (unblocked)
[3]	Paper surface detect sensor/1 (PS102)	[4]	

(1) When in non-sort mode, non-group mode, non-staple mode, sort mode, and group mode

- The paper surface detect sensor/1 detects that the paper is transported to the paper exit roller /lower by the actuator being pressed down by the paper which passes it.
- When the paper alignment is finished, the sensor detects that the paper is discharged to the exit tray by the actuator returned to the original position with the paper discharged from the alignment tray.

(2) When in sort offset mode, group offset mode, and staple mode

- The paper surface detect sensor/1 detects that the paper is stored to the alignment tray by the actuator being pressed down by the switchbacked paper.
- When the alignment is finished, the sensor detects that the paper is discharged to the exit tray by the actuator returned to the original position.

8. STAPLER SECTION

8.1 Configuration/Drive

- The stapler waits at the home position at the front side.
- The stapler movement motor moves the stapler.
- When the stapler movement motor installed on the stapler mounting table rotates, the drive connecting gear rotates. When the drive connecting gear rotates, the stapler mounting plate with the stapler shifts back and forth along the slide gear.

[1]	Stapler	[2]	Stapler movement motor (M107)
[3]	Slide gear	[4]	Stapler home sensor (PS110)

8.1.1 Stapler drive section top view

[1]	Stapler unit	[2]	Stapler drive connecting gear
[3]	Stapler movement motor (M107)	[4]	Slide gear
[5]	Stapler home sensor (PS110)	-	-

8.2 Operation

8.2.1 Stapler positioning control

- The home position of the stapler is detected by the stapler home sensor.
- When in corner staple mode, the stapler waits at the home position and staples when the paper alignment is finished.
- When in 2 points staple mode, the stapler shifts to the first stapling position to conduct stapling. Then the stapler shifts to the second stapling position to conduct stapling. When the stapling is finished, the stapler returns to the home position.
- The stapling position is controlled based on the number of pulses generated by the stapler movement motor. No position sensors are provided for corner staple and two-point staple.

8.2.2 Stapling control

(1) Stapling operation

- Stapling operation is driven by the stapler motor.
- In the stapling operation, the clincher staple arm is lowered by the stapler motor. The clincher staple arm presses the sheets. (This is called clamp operation.) Then a staple is pushed up by the staple arm from the stapler side. The staple is pressed through the sheets and bent from the clincher staple arm side so that the sheets are fastened together.
- Then the stapler motor lifts the clincher staple arm and lowers the staple arm to complete the stapling operation.
- The number of sheets that user wishes to staple are placed into the alignment tray and the stapling operation is performed. However, if the number exceeds the upper limit, the set of sheets is delivered to [the exit tray without being stapled](#).

Maximum stapling quantity

Paper size	Maximum stapling quantity
A4S or less (small size)	50 sheets *
Foolscap or more (large size)	30 sheets

- *: When there are small size sheets and large size sheets with same width at the same time, they are judged as large size, and the maximum staple quantity becomes 30.
Example: When there are A4 LEF and A3 SEF, the maximum stapling quantity is 30.

Overall view

[1]	Clincher staple arm	[2]	Staple cartridge
[3]	Stapler motor	-	-

Front view

[1]	Staple cartridge	[2]	Clincher staple arm
[3]	Paper bunch	[4]	Staple sheet (staple)
[5]	Stapler	[6]	Stapler motor (M14)

8.2.3 Staple empty detection control

(1) Staple cartridge

- The stapler is provided with the staple cartridge used only for the stapler.
- To supply staples, the staple cartridge is loaded with staples (staple sheet type: 5000 staples) and then the stapler is loaded with the cartridge.
For information on how to load staplers, refer to the user's guide.

[1]	Staple cartridge	[2]	Clincher staple arm
[3]	Paper bunch	[4]	Stapler sheet (Staple)
[5]	Stapler	[6]	Stapler motor

(2) Staple empty detection mechanism

- The stapler includes the self-priming sensor and staple empty sensor to detect the status of the staple cartridge and staples.
- The staple cartridge is loaded with staple sheets, and a staple sheet is conveyed to the clinch position (staple position) from the lowest one.

State where staple sheets are loaded

[1]	Staple cartridge (loaded with staple sheets)	[2]	Staple sheet fed from the cartridge
[3]	Self-priming sensor (blocked)	[4]	Staple empty sensor (unblocked)

- While the staple cartridge is loaded, if the trailing edge of the last staple sheet in the cartridge passes the actuator of the staple empty sensor, the actuator is raised by the spring force.
- When the actuator is raised, the staple empty sensor is blocked and machine determines that the cartridge is empty. The control panel displays to warn of the staple empty message.

State where the last staple sheet is fed

[1]	Staple cartridge (staple empty)	[2]	Staple sheet (remainder)
[3]	Self-priming sensor (blocked)	[4]	Staple empty sensor (blocked)

State where staple sheet runs out

[1]	Staple cartridge (empty)	[2]	Self-priming sensor (unblocked)
[3]	Staple empty sensor (blocked)	-	-

- Even when the staple empty sensor detects the trailing edge of the last staple sheet, the staple sheet (staples: about 20) fed from the cartridge remains at the cartridge's front section. In this case, the actuator of the self prime sensor is pressed down by the leading edge of the staple sheet.
- If the actuator is pressed down, the self prime sensor is blocked and machine determines that the staple sheet is fed to the clinch position (staple position).
- Even when staple empty is detected, printing is not disabled. Paper is delivered without being stapled.
- After staple empty is detected, when the staple cartridge is loaded with staple sheets and the stapler is loaded with the cartridge, the actuator of the staple empty sensor is pressed down by the staple sheets.
- When the actuator is pressed down, the staple empty sensor is unblocked and staple empty condition is cleared. At this point, the staple empty sensor detects the staple sheets (unblocked). However, if the leading edge of the staple sheet cannot be detected by the self-priming sensor (unblocked), the clinch operation is repeated up to 20 times to feed the leading edge of the staple sheet to the position (clinch position) where it can be detected by the self-priming sensor.

State where staple sheet runs out

[1]	Staple cartridge (loaded with staple sheets)	[2]	Staple sheet is fed by clinch operation.
[3]	Self-priming sensor (unblocked)	[4]	Staple empty sensor (unblocked)

- If the self prime sensor cannot detect the leading edge of the staple sheet after clinch operations, machine determines that the staple sheet is not properly fed (staple sheet is not properly set) and the control panel displays to warn of the staple empty message.
- If the staple empty message appears even after staple sheets are loaded, check whether the staple sheets is properly set in the staple cartridge. If the cartridge is clogged with a staple sheet, clear the sheet.
- If staple empty occurs, the stapler stays at the [stapler home position](#) (position where staples can be supplied only by opening the front door).

(a) When the staple cartridge is not loaded

[1]	Staple cartridge (not mounted)	[2]	Self prime sensor (unblocked)
[3]	Staple empty sensor (blocked)	-	-

- The actuator of the staple empty sensor is raised by the spring force. The staple empty sensor is blocked.
- If the staple empty message appears even after staple sheets are loaded, check whether the staple sheets is properly set in the staple cartridge. If the cartridge is clogged with a staple sheet, clear the sheet.

- The message to warn the staple empty is displayed on the control panel.

8.2.4 Clogged staple detection control

- Stapling operation is performed by [lowering of the clincher staple arm and lifting of the staple arm](#).
- The staple arm position is detected by the stapler home sensor located in the stapler.
- The stapler determines that the stapling operation is completed if the staple arm returns to the home position within the specified time after the stapling operation. If the staple arm does not return to the home position after the specified time has passed, the machine determines that staple trouble occurs and the [trouble code C1109](#) appears on the control panel.

9. RECEIVING SECTION

9.1 Configuration

- In the receiving section, paper transported into the finisher is placed into each tray. As the tray has the up/down mechanism, the tray moves down depending on the amount of paper loaded so that **can place up to 500 sheets of paper**. The tray also includes **the mechanism for detecting the amount of loaded paper**.

[1]	Tray lift up motor (M109)	[2]	Shaft
[3]	Paper exit roller/lower	[4]	Paper exit tray
[5]	Paper exit tray home sensor (PS107)	[6]	Paper exit roller solenoid (SD103)
[7]	Paper surface detect sensor/2 (PS104)	[8]	Paper weight lever sensor (PS103)
[9]	Paper surface detect lever	[10]	Paper surface detect solenoid (SD101)

9.2 Drive

9.2.1 Drive outline

- The driving source of the receiving section is the tray lift up motor, paper surface detect solenoid, and paper exit motor, and the following parts are driven.

Section	Driving source	Driving parts	Function
Tray lift up section	Tray lift up motor	Paper exit tray	The exit tray will be moved up/down according to the discharged paper load.
Paper level detect section	Paper surface detect solenoid	Paper surface detect lever	- The paper surface level detect lever is moved up/down to detect the paper load discharged to the exit tray. - For consecutive printing, the rear edge of the paper discharged to the exit tray will be held by the paper surface level detect lever. It prevents the discharged paper from being misaligned by the paper that follows.
Paper exit section	Paper exit motor	Paper roller/lower	The paper is discharged to the exit tray.
		Paper exit paddle	It rotates so that the rear edge of the paper which passed through the exit roller/lower will be held to be discharged to the exit tray/upper without fail.

9.2.2 Tray lift up section

- The drive source is the tray lift up motor which moves the exit tray up/down.

[1]	Paper exit tray home sensor (PS107)	[2]	Shaft
[3]	Tray lift up motor (M109)	[4]	Tray lifter

9.2.3 Paper level detect section

- The paper surface detect solenoid drives the paper surface level detect lever.
- The paper surface detect solenoid turns on to rotate the paper surface level detect lever downward.
- The paper surface detect solenoid turns off to return the paper surface level detect lever by the spring force and to move to upward.

[1]	Paper surface detect sensor/2 (PS104)	[2]	Paper weight lever sensor (PS103)
[3]	Paper surface detect lever	[4]	Paper surface detect solenoid (SD101)

[1]	Paper surface detect sensor	[2]	Paper surface detect lever (upper position: when solenoid is turned OFF)
[3]	Paper surface detect lever (lower position: when solenoid is turned ON)	-	-

9.2.4 Paper exit roller section

- The paper exit motor drives the paper exit roller/lower.
For details of the paper exit roller/lower, see "[PG.6.2.2 Paper conveyance/receiving roller section drive](#)" and "[PG.6.3.4.\(1\) Paper exit roller/lower drive connecting process](#)".
- The paper exit paddle (4 points) on the drive shaft at the paper exit roller/lower also rotates with the paper exit roller/lower.

(1) Overall view

[1]	Paper exit paddle	[2]	Paper exit roller solenoid (SD103)
[3]	Paper exit motor (M102)	[4]	Paper exit roller/lower drive gear
[5]	Paper exit roller/lower	-	-

(2) Paper press down paddle front view

[1]	Paper exit paddle (home position)	[2]	Paper on the exit tray
-----	-----------------------------------	-----	------------------------

9.3 Operation

9.3.1 Paper exit paddle control

- There are paper exit paddles (4 points) installed on the exit roller/lower shaft. It rotates so that the paper exit paddle holds the rear edge of the paper when the paper passes through the paper exit roller/lower, and to discharge the paper to the exit tray without fail.

(1) Paper discharge process

- When the last paper is aligned, the paper exit roller/upper moves down to hold all the paper on the alignment tray with the paper exit roller/lower and to discharge the paper to the exit tray with paper exit roller/upper, paper exit roller/lower and the alignment roller.

[1]	Alignment roller	[2]	Paper exit roller/upper
[3]	Paper	[4]	Paper exit roller/lower
[5]	Paper exit paddle	-	-

- The paper exit paddle pushes out the rear edge of the paper which passed through the exit roller/lower to press the paper over the exit tray.

NOTE

- The paper exit paddle is installed on the exit roller/lower shaft. It rotates one revolution and stops as the exit roller/lower does.
For details of the paper exit roller/lower operation mechanism, see “[PG.6.3.4.\(1\) Paper exit roller/lower drive connecting process](#)”.

- The paper exit paddle presses the paper and returns to the home position.

[1]	Paper paddle (home position)	[2]	Paper on the exit tray
-----	------------------------------	-----	------------------------

NOTE

- The paper exit paddle is made from soft rubber. It curves after discharging the paper to the exit tray to return to the home position inside the machine.

- After the paper exit paddle is retracted, the paper surface detect lever rotates to press the rear edge of the discharged paper.

For details of the paper surface detect lever operation mechanism, see “[PG.9.3.3 Paper level detect control](#)”

9.3.2 Paper exit tray lift up control

- The up/down motion of the exit tray is conducted by the tray lift up motor.
 - When the tray lift up motor rotates forward, the tray drive belt rotates forward through the gear to lift up the exit tray.
 - When the tray lift up motor rotates in reverse direction, the tray drive belt rotates in reverse direction through the gear to move down the exit tray.
 - The home position of the tray is detected by the tray home position sensor.
 - The height of the tray is detected by [the paper level detect mechanism](#). When the job is commanded, the paper surface detect lever operates to move the exit tray up/down according to the detected result.
- For details of the control, see “[PG.9.3.3 Paper level detect control](#)”.

[1]	Paper exit tray home sensor (PS107)	[2]	Shaft
[3]	Tray lift up motor (M109)	[4]	Tray lifter

9.3.3 Paper level detect control

- The paper level is detected by the paper weight lever sensor and the paper surface detect sensor/2. The height of the exit tray is controlled according to the detected result.
- The paper surface detect actuator rotates when the paper surface detect solenoid turns on to hold the rear top face of the paper on the exit tray. The rotation value of the paper surface detect lever changes at this point according to the paper load and the height of the exit tray.
- The paper weight lever sensor and the paper surface detect sensor/2 are installed at different heights. (Paper weight lever sensor: high, paper surface detect sensor/2: low) The paper surface detect lever has two light shield plates with different length which enables to provide different detection result for each sensor with the rotation value found by the paper surface detect lever. The current paper level is judged according to the result so that the exit tray will be [controlled to move up/down](#) to the suitable height.
- The paper level is detected every time the paper is discharged to monitor the paper height. For the consecutive printing, it also prevents discharged paper from being misaligned by the following paper discharged.
- When the paper exit tray home sensor detects the exit tray while the exit tray is moving down, the exit tray is judged to be full and the warning message will be displayed on the operation panel informing that the exit tray is full.
- The paper surface detect lever moves down when the paper is removed from the exit tray. When the lever moves down, the paper is detected to be removed, and the exit tray full display will be released.

Paper level detect table

Paper surface detect sensor/2	Paper weight lever sensor	Paper level	Exit tray lift up control
Unblocked	Blocked	High	• The exit tray is at the higher position than the reference position. The tray lift up motor will be rotated in reverse direction and move the tray down to the reference position. • When the paper exit tray home sensor detects the exit tray while the exit tray is moving down, the exit tray is judged to be full, and the following printing job will be prohibited.
Blocked	Blocked		
Blocked	Unblocked	Reference position	• Reference position. The exit tray will not move up/down.
Unblocked	Unblocked	Low	• The exit tray is at the lower position than the reference position. The tray lift up motor will rotate to move the exit tray up to the reference position.

PH THEORY OF OPERATION FS-534/PK-520/SD-511

1. FINISHER OUTLINE

- "Sort function, Sort offset function", "Group function, Group offset function", "Staple function", "Sort staple function", "Large capacity receiving function" and other functions can be added by installing the staple finisher FS-534 to the main body (bizhub C554 /C454 /C364 /C284 / C224).
- The "Punch function" can be added by installing the optional function (Punch Kit PK-520).
- The "Saddle stitching function, Tri-folding function" can be added by installing the optional function (Saddle Stitcher SD-511).

Option	Summary of the additional functions
PK-520	Punch function
SD-511	Folding function, Saddle stitching function, Tri-folding function

3. CONFIGURATION

3.1 Section configuration

- The staple finisher FS-534 has the finisher body fixed on the left side of the main body. The RU section doors can be opened and closed for maintenance and other operation. It is not configured in the way that the finisher can be detached from the main body by sliding it off.
- The staple finisher has the sort out configuration and the staple configuration as standard. Also, optional punch kit PK-520 and the saddle stitcher SD-511 can be added inside the unit. For maintenance and other operations of the saddle stitcher, slide the saddle stitcher out from the finisher to the front side to conduct operation.

FS-534

Front door inner section of the FS-534

4. FNS SECTION

4.1 Front door open/close detection mechanism

- The front door open detect switch installed at the front right of the FNS section detects open/close of the finisher's front door.
- Opening the front door displays the warning screen on the control panel. All the setting operations and jobs are disabled while the warning screen is displayed. The printing job is interrupted, and the paper being transported causes paper jam. The warning screen can be cancelled by closing the door.

[1]	Front door open detect switch (SW1)	[2]	Front door
-----	-------------------------------------	-----	------------

Warning screen

5. RU SECTION (HORIZONTAL TRANSPORT SECTION)

5.1 Configuration

- The RU section (horizontal transport section) transfers paper fed out from the exit section of main body to the paper feed section of optional finisher.
- The RU door is installed at the upper part of the RU section. Access to the horizontal transportation roller is enabled by opening the door upward. It is used for periodical cleaning of the roller and dealing with the paper jam at the RU section and other necessary operations.

NOTE

- The "3rd exit tray full sensor (sensor unit)" does not need to be installed on the MFP body's exit part since the 3rd tray is not used for bizhub C754/C654.

5.1.1 Exclusive parts

(1) Exclusive parts for bizhub C554 /C454 /C364 /C284 /C224

For installing the finisher FS-534 to bizhub C554 /C454 /C364 /C284 /C224, the sensor unit (3rd exit tray full sensor/ 3rd exit tray full sensor actuator) needs to be installed to the exit section of the main body of the MFP. For the replacing process, refer to the "INSTALLATION MANUAL".

NOTE

- **Parts included in FS-534 should be used for installation.**
 - **Special parts for bizhub C754/C654 should be saved when there is a possibility to install the finisher to other type of machines.**
- Standard parts

[1]	Guide plate	[2]	Sensor unit (3rd exit tray full sensor/ 3rd exit tray full sensor actuator)
[3]	Rear cover	[4]	Mounting bracket plate/Z (R)
[5]	Mounting bracket plate/Z (F)	[6]	Front cover

(2) Exclusive parts for bizhub C754/C654

For installing the finisher FS-534 to bizhub C754/C654, exclusive parts for bizhub C364/C284/C224 need to be replaced with the parts correspond to bizhub C754/C654. For the replacing process, refer to the "INSTALLATION MANUAL".

NOTE

- **Parts included in FS-534 should be used for installation/replacing.**
- **When there is any possibility to install the finisher to the bizhub C364/ C284/ C224, keep the removed parts.**

Exclusive parts for bizhub C754/C654

[1]	Guide plate/A	[2]	Guide plate/B
[3]	Mounting bracket/M (R)	[4]	Mounting bracket/M (F)

5.2 Drive

- The RU transport motor drives the RU section. It drives three RU section horizontal transport roller.
- The RU section horizontal transport roller is driven using the drive belt.

[1]	RU section horizontal transport roller/1	[2]	RU section horizontal transport roller/2
[3]	RU section horizontal transport roller/3	[4]	RU transport motor (M1)

5.3 Operation

5.3.1 Paper transport control

- It transports the paper discharged from the lower exit of the main body exit section to the RU section using the feed guide.
- It transports the paper to the FNS section using three RU section horizontal transport roller.
- The RU entrance sensor detects the paper transportation status.

Perspective view

[1]	3rd exit tray full sensor (PS1)	[2]	3rd exit tray full sensor actuator
[3]	RU section horizontal transport roller	[4]	RU transport motor (M1)
[5]	RU cover open/close detection sensor (PS3)	[6]	RU entrance sensor (PS2)

[3]	RU section horizontal transport roller/1	[4]	RU section horizontal transport roller/2
[5]	RU section horizontal transport roller/3	[6]	RU entrance sensor (PS2)

5.3.2 RU section door open/close detection mechanism

- The RU cover open/close detection sensor installed at the front left of the RU detects open/close of the RU door.
- Opening the RU door displays the warning screen on the control panel. All the setting operations and jobs are disabled while the warning screen is displayed. The printing job is interrupted, and the paper being transported causes paper jam. The warning screen can be cancelled by closing the door.

[1]	RU cover open/close detection sensor (PS3)	-	-
-----	--	---	---

[1]	RU section door	[2]	RU cover open/close detection sensor (PS3)
-----	-----------------	-----	--

Warning screen

5.3.3 3rd exit tray full detection mechanism

- When **predetermined quantity** of paper is discharged to the 3rd tray, the 3rd exit tray full sensor actuator will be pushed up by the discharged paper. When the actuator is pushed up to the predetermined position, the 3rd exit tray full sensor will be unblocked by the actuator to detect the exit tray full.
- The warning message will be displayed on the operation panel when the 3rd tray full is detected. All setting operations and jobs will be disabled when the warning message is displayed on the screen. The warning message will be released by removing the paper on the 3rd tray.

[1]	3rd exit tray full sensor (PS1)	[2]	3rd exit tray full sensor actuator (no paper)
[3]	Paper	[4]	3rd exit tray full sensor actuator (paper exit tray full)

6. PUNCH SECTION (PK-520)

6.1 Configuration

- The punch function can be added to the finishing mode by installing the optional punch kit PK-520 to the finisher FS-534.
 - At the punch section, the holes are punched at the trailing edge of the paper transported from the RU section (horizontal transport section) when the paper is fed into the FNS section (finisher section). Holes are punched sheet by sheet.
 - The punch kits for North America, Europe and other market areas have the configuration to switch the number of punch holes.
- NOTE**
- **2 holes punch kit and 4 holes punch kit do not have the function to switch the number of punch holes.**
 - **"Finishing" cannot be selected using a different punch kit. (Example: Three holes punch mode cannot be selected when the 4 holes punch kit is installed.)**
- Punch dust generated by punching is received in the [punch dust box](#).
 - The paper with punched holes is transported to the transporting section from the punch section.
 - When the punch holes are not specified at "Finishing", the paper is transported to the transportation section from the FNS paper feed section without punching holes.

[1] Punch unit	[2] Punch dust box
----------------	--------------------

- *1: The shape of the puncher frame is varied depending on the type of punch kit.
- *2: The number of the puncher is varied depending on the type of punch kit.
- *3: The shape of the puncher frame is varied depending on the type of punch kit. 2 holes punch kit does not have the puncher frame 2.

6.1.1 Punch kit type

2 holes/3 holes kit (Selectable the hole number)

- Attachable Marketing area: Europe, US, Others 1-5
- 2 holes/4 holes kit (Selectable the hole number)

- Attachable Marketing area: Europe, US, Others
- 2 holes punch kit

- Attachable Marketing area: Japan

4 holes punch kit

- Attachable Marketing area: Europe

6.2 Drive

- The drive source for the punch section is the punch drive motor. The puncher frame is driven in forward/reverse direction by rotating the punch drive motor in forward/reverse direction.
- When the puncher frame moves in forward/reverse direction, the puncher moves up/down by the cam of the puncher frame to punch the holes on the paper.
- The puncher frame 1 and the puncher frame 2 have cams with different shapes. It enables different timings of the puncher to move up/ down.
- When the puncher drive gear rotates clockwise, the puncher frame 1 shifts to the front side, and the puncher frame 2 shifts to the back side. When the puncher drive gear rotates counter-clockwise, the puncher frame 1 shifts to the back side, and the puncher frame 2 shifts to the front side. The puncher connected to the puncher frame then moves up/down with the cam. Switching the forward/reverse direction of the Punch drive motor switches the number of punch holes.

Front view

[1]	Puncher frame 1 *1	[2]	Puncher *2
[3]	Puncher drive gear	[4]	Punch drive motor (M1)
[5]	Puncher frame 2 *1	-	-

- *1: The shape of the puncher frame is varied depending on the type of punch kit.
- *2: The number of the puncher is varied depending on the type of punch kit.

NOTE

- The illustration explains with an example for "2 holes/3 holes kit".
- With "2 holes/3 holes kit", the 2 holes puncher moves down when the puncher drive gear rotates clockwise. When the puncher drive gear rotates counter-clockwise, the 3 holes puncher moves down. The number of the punch holes is switched by the same configuration for "2 hoes/4 holes kit".
- The "2 holes kit" and the "4 holes kit" do not have the punch hole switching function.

[1]	Punch home sensor (PS1)	[2]	Punch position sensor (PS2)
[3]	Puncher frame 1	[4]	Puncher frame 2
[5]	Puncher drive gear	-	-

6.3 Operation

6.3.1 Skew correction mechanism

- When punching holes, punch resist loop is formed upstream of the FNS section transport roller/1 to remove the skew of the paper.

[1]	FNS section paper feed roller	[2]	RU section horizontal transport roller/3
[3]	FNS entrance sensor (PS4)	[4]	Puncher
[5]	RU transport motor (M1)	[6]	FNS entry transport motor (M2)
[7]	Main tray exit sensor (PS16)	[8]	FNS section transport roller

(1) Skew correction process

- The paper is transported to the FNS section (finisher section) by the RU transport motor driving the RU section horizontal transport roller/3.
- When the leading edge of the paper reaches to the FNS section paper feed roller, it is detected by the FNS entrance sensor.
- The paper is pressed to the FNS section paper feed roller which is at a halt to form the loop at the leading edge of the paper to remove the skew of the paper.
- The FNS entry transport motor is turned ON when the specified period of time has passed after the leading edge of the paper turns the FNS entrance sensor ON, to start rotating the FNS section paper feed roller and the FNS section transportation roller.
- The paper which skew is removed is transported to the punch section by the FNS section paper feed roller, and then stop the specified position.
- The holes are punched by the puncher.
- The punched paper is transported to inside the transport section by the FNS section transportation roller.

[1]	FNS section paper feed roller	[2]	Paper
[3]	The resist loop is created at the leading edge of the paper	[4]	FNS entrance sensor (PS4)
[5]	Puncher	[6]	Main tray exit sensor (PS16)
[7]	FNS section transport roller	-	-

(2) Punch Resist Loop Size Adjustment function

- Then the punch holes tilt, punch resist value for the Service Mode can be adjusted to adjust the punch holes.
- Punch resist value (resist loop value) changes by changing the timing the FNS section paper feed roller starts rotating. Tilt of the punch holes can be adjusted by removing the skew of the paper at the resist loop.
- For details of the adjustment procedures, see "[Service Mode/Finisher/FS-FN adjustment/Punch Registration Loop Adj](#)"

(a) Setting range

- -4.0 to +4.0

6.3.2 Puncher up/down status detection configuration

- When the puncher drive gear rotates clockwise, the puncher frame 1 shifts to the front side, and the puncher frame 2 shifts to the back side. When the puncher drive gear rotates counter-clockwise, the puncher frame 1 shifts to the back side, and the puncher frame 2 shifts to the front side. The puncher which is connected to the puncher frame then moves up/down by the cam. Switching the forward/reverse rotation of the punch drive motor switches the number of the punch holes.
- The puncher frame 1 has two light-blocking plates to detect the position of the puncher frame.
- The punch drive motor has a round light-blocking plate and the puncher motor sensor on the same shaft to detect the rotation value (pulse) of the punch drive motor.
- Up/down status of the puncher is detected by the coordination of the detection result found by the puncher position sensor, punch home sensor and the punch motor sensor.

[5]	Puncher frame 2	-	-

6.3.3 Punch dust box full detection mechanism

- Punch dust created when punching holes on the paper are collected in the punch dust box.
- The punch unit has the sensor to detect the punch dust full at the front side (emission) and the back side (receiving). The sensor detects the status of the punch dust.
- When the punch dust is accumulated inside the punch dust box, the sensor light on the punch dust full sensor/out side is interfered by the punch dust. The punch dust box is determined to be full when the sensor light is interfered. The message is displayed on the operation panel to inform the "punch dust full" when the punch dust box full is detected.

NOTE

- When the punch dust box is removed, the sensor light on the punch dust full sensor/out side is interfered by the actuator on the punch unit. When the front door is closed at that point and then set the punch job, the message is displayed on the operation panel to inform that the "Punch dust full".
- When the empty punch dust box is installed, the sensor light interfered by the actuator reaches to the punch dust full sensor/in. The message is disappeared on the operation panel of the "punch dust full".

7. TRANSPORT SECTION

7.1 Configuration

The transport section transports the paper transported from the RU section (horizontal transport section) to the three paper paths within the FNS section (finisher section).

Paper transport to the sub tray

- The paper path switching gate moves the paper transported from the RU section to the sub tray paper path to deliver the paper to the sub tray.

NOTE

- The paper is directly delivered to the sub tray without passing through the alignment and exit sections. If “Sub Tray” is selected as exit tray for a print job, the offset option (sort/group/staple) is unavailable.

Paper transport to the main tray

- The paper path switching gate moves the paper transported from the RU section to the main tray paper path. The paper passes through the alignment and exit sections and then moves to the main tray.

Paper transport to the saddle section

- The paper path switching gate moves the paper transported from the RU section to the main tray paper path. Switchback of the paper is done at the transport section and then the paper passes through the vertical transport section and moves to the saddle section.

NOTE

- Paper can be transported to the saddle section only when the optional **saddle stitcher SD-511** is added to the finisher FS-534.

7.2 Drive

The driving source of the FNS section is the FNS entry transport motor, FNS discharge motor, and receiving roller retraction motor, and the following parts are driven.

Driving source	Driving parts	Function
FNS entry transport motor (M2)	FNS section paper feed roller	Feeds paper to the FNS section

Driving source	Driving parts	Function
	FNS section vertical transport roller	Transports paper to each paper path in the FNS section.
	Paper path switching gate	Switches paper path by the paper path switching gate up/down movement triggered by the cam.
	Sub tray section vertical transport roller	Transports paper to the sub tray section exit roller. (sub tray paper path)
FNS discharge motor (M3)	Sub tray section exit roller	Transports paper to the sub tray. (sub tray paper path)
	Receiving roller	• Normal rotation: Transports paper to alignment section. (main tray paper path) • Reverse rotation: Transports paper to the saddle section. (saddle section paper path)
	FNS section exit roller	Transports paper from the alignment section to the saddle section via the switchback. (saddle section paper path)
Receiving roller retraction motor (M4)	Receiving roller pressure roll	The receiving roller pressure roll is moved up/down by the cam. (main tray paper path) • When the pressure roll is lowered, the paper on the receiving roller is pressed against the receiving roller. When the receiving roller rotates in the normal direction, the paper is transported to the alignment section. When the receiving roller rotates in the reversed direction, the paper is conveyed to the path to the saddle section via the switchback. • When the pressure roll moves up, the paper on the receiving roller is released. The paper is not transported and brought into a standby state.

7.2.1 FNS entry transport motor

[1]	FNS entry transport motor (M2)	[2]	Sub tray section vertical transport roller
[3]	Paper path switching gate	[4]	FNS section transport roller

[3]	Receiving roller	[4]	FNS section exit roller

7.2.3 Receiving roller retraction motor

[1]	Receiving roller pressure cam	[2]	Receiving roller retraction motor (M4)
[3]	Receiving roller *	[4]	Receiving roller pressure roll

- *: The driving source of the receiving roller is the FNS discharge motor. The driving source of the receiving roller pressure roll is the receiving roller retraction motor.

7.3 Operation

7.3.1 Paper path switching mechanism

- Paper path is switched by the up/down operations of the paper path switching gate to transport paper to each tray or the saddle section.
- The up/down operations of the paper path switching gate is driven by the FNS entry transport motor.
- The position of the paper path switching gate is detected by the exchange folded knife home position sensor.

Front perspective view

[1]	FNS entry transport motor (M2)	[2]	Sub tray section vertical transport roller
[3]	Paper path switching gate	[4]	FNS section transport roller
[5]	FNS section paper feed roller	-	-

(1) Gate lower position (paper path: sub tray)

- When the cam rotates, the paper path switching gate moves down to block the paper path to the main tray. The paper passes on the top of the paper path switching gate and is transported to the sub tray.
- When the detection plate located on the shaft, on which the cam is located, rotates, the exchange folded paper output sensor is unblocked. This causes machine to determine that the gate is at the lower position.
- When the paper is transported through the sub tray paper path, the sub tray exit sensor located downstream of the paper path switching gate detects the paper conveyance.

Front view: Illustration on the relationship between the cam and paper path switching gate

[3]	Lever	[4]	Cam

Front view: Illustration on the relationship between the detection plate and exchange folded knife home position sensor

[1] Paper	[2] Exchange folded knife home position sensor (PS30)
[3] Detection plate	- -

(2) Gate upper position (paper path: main tray)

- When the cam rotates, the paper path switching gate moves up to block the paper path to the sub tray. The paper passes on the bottom of the paper path switching gate and is transported to the main tray.
- When the detection plate located on the shaft, on which the cam is located, rotates, the exchange folded paper output sensor is blocked. This causes machine to determine that the gate is at the upper position.
- When the paper is transported through the sub tray paper path, the staple stacker paper detection sensor located downstream of the paper path switching gate detects the paper conveyance.

[3] Paper	[4] Cam

Front view: Illustration on the relationship between the detection plate and exchange folded knife home position sensor

[1] Paper	[2] Exchange folded paper output sensor(PS30)
[3] Detection plate	- -

7.3.2 Receiving roller section up/down function

- The up/down movement of the receiving roll switches the timing of transporting the paper to the alignment section.
(Buffer control)
- The up/down operations of the receiving roll are driven by the receiving roller retraction motor.
- The position of the receiving roll is detected by the receiving roller retraction sensor.

Front perspective view

[1] Receiving roller	[2] Receiving roll
[3] Receiving roller pressure cam	[4] Detection plate

[5] Receiving roller retraction motor (M4)	[6] Receiving roller retraction sensor (PS11)
--	---

(1) Receiving roller: pressure position

- When the cam rotates, the receiving roll is lowered and pressed against the receiving roller. The paper is transported to the alignment section by the receiving roller.
- When the detection plate located on the shaft, on which the cam is located, rotates, the receiving roller retraction sensor is unblocked. This causes machine to determine that the receiving roll moves down (pressed).

Front view: Illustration on the relationship between the cam and roll

[1] Receiving roller pressure cam (pressure position)	[2] Receiving roll (pressure position)
[3] Receiving roller	- -

Front view: Illustration on the relationship between the detection plate and sensor

[1] Detection plate (pressure position)	[2] Receiving roller retraction sensor (PS11) (unblocked)
[3] Receiving roll (pressure position)	[4] Receiving roller

(2) Receiving roller: release position

- The receiving roll is lifted by the cam and retracted from the receiving roller. The paper is brought to a standby state on the transport paper path.
- The detection plate located on the shaft, on which the cam is located, rotates and blocks the receiving roller retraction sensor. This causes machine to determine that the receiving roll moves up (retracted).

Front view: Illustration on the relationship between the cam and roll

[1] Receiving roller pressure cam (release position)	[2] Receiving roll (release position)
[3] Receiving roller	- -

Front view: Illustration on the relationship between the detection plate and sensor

[1]	Detection plate (release position)	[2]	Receiving roller retraction sensor (PS11) (blocked)
[3]	Receiving roll (release position)	[4]	Receiving roller

7.3.3 Buffer control

- The receiving roller section up/down mechanism is provided to achieve high productivity by eliminating the time loss for the next paper during the offset and staple operations.
- This allows handling a print job without reducing the paper transport speed even under the condition where the preceding sets of sheets are being aligned and stapled.

Front view

[1]	FNS section transport roller	[2]	Paper path switching gate
[3]	Movable paper guide	[4]	Receiving roll
[5]	Receiving roller	[6]	Alignment tray
[7]	Staple unit	[8]	FNS section exit roller

(1) Paper transport operation

- The following explains the example of a print job where 5 sheets of paper is stapled together and 2 sets are output.
 - When the first set of paper passes, the receiving roll transports the paper to the alignment section without being lifted. The 5 sheets of the first set are aligned and then stapled.

[1]	First sheet in the second set	[2]	FNS section transport roller (forward rotation)
[3]	Paper path switching gate (upper position)	[4]	Receiving roll (pressure, forward rotation)
[5]	First set of sheets (transported to the alignment section)	-	-

2. While the first set of sheets is being aligned, the first sheet in the second set causes the receiving roller to rotate in the reverse direction when the trailing edge of the sheet passes the movable paper guide. This causes the first sheet to move on the switchback until its trailing edge reaches the path to the saddle unit. (This operation is performed to avoid blocking the paper path for the second sheet.)

[1]	Movable paper guide	[2]	Receiving roll (pressure, reverse rotation)
[3]	First sheet in the second set (switchback)	[4]	FNS section exit roller (reverse rotation)

3. The receiving roll is lifted. The first sheet of paper that lost the force of being transported stays on the transport path.
4. While the first set is being stapled, the second sheet of the second set is transported and it is placed on the top of the first sheet of the second set.

[1]	Second sheet of the second set	[2]	FNS section transport roller (forward rotation)
[3]	Paper path switching gate (upper section)	[4]	Receiving roll (release, stop)
[5]	First sheet (staple)	-	-

5. The receiving roll is lowered onto the 2nd set. Two sheets of the second set are transported to the alignment section. (Paper transport time is reduced by moving multiple sheets in one paper transport operation.)
6. While the first and second sheets of the second set are transported to the alignment section, the stapled first set is delivered to the main tray.

[1]	FNS section transport roller (forward rotation)	[2]	Receiving roll (pressure, forward rotation)
[3]	Second sheet of the second set	[4]	First sheet in the second set
[5]	First set of sheets	[6]	FNS section exit roller (forward rotation)

7. The receiving roll is not lifted when the third to fifth sheets of the second set passes through the roller. These sheets are transported to the alignment section in the normal manner.
8. When the fifth sheet of the second set is transported to the alignment tray, the second set is stapled.
9. The operations described above are repeated when multiple staple jobs are performed.

7.3.4 Sub tray exit mechanism

- Paper transported from the RU section is delivered to the sub tray by the sub tray section exit roller via the FNS section paper feed roller, FNS section transport roller, and sub tray section vertical transport roller.
- To transport paper to the sub tray, the paper path switching gate also operates.
- The sub tray section exit roller is driven by the FNS discharge motor.

[1]	FNS entry transport motor (M2)	[2]	FNS discharge motor (M3)

[9]	Sub tray exit sensor (PS8)	-	-

8. ALIGNMENT SECTION

8.1 Configuration

In the alignment section, paper transported from the transport section is aligned and delivered to the main tray.

Upper paddle section

- Paper ejected from the receiving roller in the transport section is guided to the alignment section by the lowered paper guide.
- The paper led to the alignment section will be switchbacked to the alignment tray by the upper paddle. The paper is aligned at its rear edge by being pressed to the rear edge stopper. (FD alignment operation of the paper)

Exit section (Receiving operation)

- The paper is switchbacked to the alignment tray by the lower paddle and the upper paddle. The paper is aligned at its rear edge by being pressed to the rear edge stopper. (FD alignment operation of the paper)

Exit section (Exit operation)

- When paper alignment is completed, the trailing edge of the paper is gripped by the gripper.
- The rear stopper/C is shifted to press the paper out, and then the gripper receives the paper. The gripper then discharges the paper to the main tray.

Stopper section

- The paper is pressed against the stopper by the upper paddle so that the trailing edges of the paper are aligned. (paper alignment operation in FD)
- If paper is stapled (2-point stapling), the stopper is retracted to the position where it does not interfere with the trailing edge stopper/F and trailing edge stopper/R.

Alignment tray section

- The alignment plates are moved to the center so that they can support paper that passes on their top surface. (Alignment plates are used as paper guide.)
- If paper is not offset stacked, it is placed between the alignment plates so that both ends of the paper are aligned at the center position of the alignment tray. (Paper alignment operation in CD)
- The paper gathered at the front or rear side on the alignment plate will be aligned on both sides of the paper. This process is repeated to sort out the paper. (CD alignment and shift operation of the paper)

8.2 Drive

8.2.1 Drive outline

The driving source of the alignment section is the FNS paddle motor, pre-eject drive motor, bundle eject motor, trailing edge stopper motor, alignment motor, and the following parts are driven.

Driving source	Driving parts	Function
FNS paddle motor (M5)	Paper guide	Transports paper to the alignment tray.
	Upper paddle	Draws and drops paper to the alignment tray.
Pre-eject drive motor (M9)	Lower paddle	Presses paper against the stopper in the alignment tray.
	Trailing edge stopper/C	- Aligns the trailing edge of paper (Alignment operation in FD) - Pushes paper out to the main tray after alignment.
Bundle eject motor (M10)	Paper transport belt	Moves the gripper..
	Gripper	Grips the trailing edge of paper and delivers it to the main tray.
Trailing edge stopper motor (M6)	Trailing edge stopper /Fr	Moves the trailing edge stopper/Fr forward. It moves back and forth according to the paper width to keep the rear edge of the paper batch at the front side.
	Trailing edge stopper /Rr	Moves the trailing edge stopper/Rr backward. It moves back and forth according to the paper width to keep the rear edge of the paper batch at the back side.
Alignment motor/Front (M7)	Alignment plate/Fr	- Aligns both ends of paper (Alignment operation in CD) - Pushes paper to the front or rear. (Shift operation)
Alignment motor/Rear (M8)	Alignment plate/Rr	

8.2.2 Upper paddle section

- When the FNS paddle motor rotates, the upper paddles (3 pieces) located on the upper paddle shaft rotates to draw and drop the paper to the alignment tray.
 - If sheets are not aligned, the upper paddles stay at the upper position (home position).
 - If sheets are aligned, the upper paddles rotate to draw and drop the sheets. After the paddles make a turn, they stay at the upper position (home position).
- The cam located on the upper paddle shaft rotates to move the paper guide up and down.
 - If sheets are not aligned, the paper guide stays at the upper position (home position).
 - If sheets are aligned, the paper guide moves down to guide the sheets to the alignment tray. When the cam makes a turn, the paper guide moves up to the upper position (home position) and stays at the position.

[1]	Paper guide (upper position: home position)	[2]	Cam (upper position)
[3]	Cam (lower position: home position)	[4]	Paper guide (lower position)

8.2.3 Exit section

- When the pre-eject drive motor rotates clockwise, the lower paddle rotates to press the paper against the trailing edge stopper.
- When the pre-eject drive motor rotates counterclockwise, the trailing edge stopper moves from the home position to the paper exit position to deliver paper to the main tray. When the drive gear makes a turn, the stopper moves from the paper exit position to the home position and is brought into a standby state.

[3] Drive gear	[4] One-way clutch (for trailing edge stopper driving: transmit driving force only to counterclockwise rotation)
[5] Pre-eject drive motor (M9): counterclockwise rotation	- -

(2) Gripper section

- The bundle eject motor rotates to turn the paper transport belt. This causes the gripper fixed to the paper transport belt to rotate.

Front perspective view

[1] Gripper position detection sensor (PS19)	[2] Gripper home position sensor (PS18)
[3] Gripper	[4] Bundle eject motor (M10)
[5] Gripper motor sensor (PS17)	[6] Paper drive belt

- The gripper stays at the home position (inside the exit section). It rotates at the position [1] shown in the illustration to grip the trailing edge of paper and transport the paper while keeping the state [2]. The gripper rotates at the position [3] in the illustration to release the paper. When the paper transport belt makes a turn, the gripper returns to the home position [5] and is brought into a standby state.

Gripper drive front view

[5] Gripper (home position)	[6] Bundle eject motor (M10)
[7] Gripper home position sensor (PS18)	[8] Gripper position detection sensor (PS19)

8.2.4 Stopper section

- The shaft for stopper movement has a different spiral between the front and rear sides. This causes the trailing edge stopper/Fr to move forward and the trailing edge stopper/Rr to move backward when the trailing edge stopper motor rotates in the normal direction.
- The rear edge stopper/F and the rear edge stopper/R shift according to the paper width before starting a job to hold the rear edge of the paper.
- For 2-point staple jobs, the trailing edge stoppers/Fr and /Rr are retracted to the position where they do not interfere with the stapler.
- After the job is completed, the trailing edge stopper motor reverses the rotation to return the trailing edge stopper to the home position.

Front perspective view

[1]	Stopper moving shaft	[2]	Trailing edge stopper home position detection sensor (PS20)
[3]	Trailing edge stopper motor (M6)	[4]	Trailing edge stopper/Fr: home position
[5]	Trailing edge stopper/Rr: home position	-	-

8.2.5 Alignment tray section

- The normal or reverse rotation of the alignment motor allows the normal or reverse rotation of the drive belt. This causes the alignment plates to move forward or backward.
- The alignment plates/Fr and /Rr is equipped with each drive motor, allowing them to operate independently. This enables paper alignment to the center as well as paper shift to the front and rear.

Front perspective view

[1]	Alignment motor/Rear (M8)	[2]	Alignment plate/R home sensor (PS13)
[3]	Alignment plate /Rr: home position	[4]	Alignment plate /Fr: home position
[5]	Alignment plate/F home sensor (PS12)	[6]	Alignment motor/Front (M7)

8.3 Operation

8.3.1 Paper transport control in alignment section

Paper transported to the alignment section is conveyed and aligned with the following operations.

- The receiving roller in the transport section ejects paper *1.

NOTE

- *1: For plain paper, due to the buffer control, the first and second sheets of paper are ejected at the same time. For paper other than plain paper, the first paper is ejected.
For details of the buffer control, see "[PH.7.3.3 Buffer control](#)".
- The description below explains the paper transport control for plain paper.

- The alignment plates/Fr and /Rr are moved to the center.
- The first and second sheets are transported onto the top of the alignment plates.

NOTE

- This is to prevent the leading edge of the sheets from touching the lower paddle and being folded.

[1]	Receiving roller	[2]	First and second sheets (for plain paper)
[3]	Receiving roll	[4]	Alignment plate/Fr, Alignment plate/Rr (moved to the center)

4. The alignment plates return their home position. The alignment plate/F and the alignment plate/R shift to the waiting position according to the paper width immediately before the rear edge of the paper passes the receiving roller.
5. When the trailing edge of the sheet passes through the receiving roller, the paper guide is lowered to guide the trailing edge of the sheet to the alignment tray.
6. The upper paddle rotates, and the upper and lower paddles grip the sheet. The sheet is transported into the alignment tray. (Operation on switchback)
- The sheets are transported into the alignment tray and are stopped by the trailing edge stopper. (paper alignment operation in FD)

[1]	Receiving roller	[2]	Receiving roll
[3]	First and second sheets	[4]	Alignment plate/Fr, Alignment plate/Rr (Retracted to the home position)
[5]	Lower paddle (rotation)	-	-

7. The alignment plates move to align the ends of the sheets. (Paper alignment in CD)
- The sheets are placed between the alignment plates/Fr and /Rr corresponding to the paper width so that their both ends are aligned.
- Upper view

[1]	Paper	[2]	Alignment plate /Rr (moving forward to front side)
[3]	Alignment plate/Fr (moving backward to rear side)	-	-

- The alignment operations described above are performed for all sheets of paper in the job to align the ends of the sets of paper.

8. When offset is selected as finishing option, the alignment plates are moved to shift the sets of paper.
- Depending on the width of paper, the alignment plate Fr or Rr pushes the sets of paper to the rear side (or to the front side) from one side so that the sets of the paper are shifted.

Upper view

[1]	Alignment plate /Rr	[2]	Paper
[3]	Alignment plate /Fr	-	-

NOTE

- The offset of paper (amount of shift) is 20 mm.
- The sheets are shifted by alternatively repeating the above operation.
9. The third sheet is ejected by the receiving roller of the transport section.

[1]	Receiving roller	[2]	Third sheet
[3]	Receiving roll	[4]	Paper guide (upper position)

10. When the trailing edge of the sheet passes through the receiving roller, the paper guide is lowered to guide the trailing edge of the sheet to the alignment tray.
11. The upper paddle rotates. The sheet is transported into the alignment tray. (Operation on switchback)

NOTE

- When the switchback operation for the 3rd sheet or later, the lower paddle does not rotate.

[1]	Trailing edge stopper	[2]	Upper paddle (rotation)
-----	-----------------------	-----	-------------------------

[3] Paper	[4] Lower paddle (rotation)
-----------	-----------------------------

12. The sheet is stopped by the trailing edge stopper. This allows aligning the trailing edge of the sheets. (Paper alignment operation in FD)
13. The alignment plates move to align the ends of the sheets. (Paper alignment in CD)

NOTE

- CD alignment operation is omitted since it is described in steps 7 to 8.

14. For staple mode, the trailing edges of the sheets are stapled at this timing.
15. When all paper alignment is completed, the trailing edge stopper pushes the sheets to the position where the gripper can grip them.
16. The gripper grips the trailing edges of the sets of paper in the alignment tray and transports them to the paper exit position.

[1] Trailing edge stopper/C (paper gripping position)	[2] Paper guide (upper position: home position)
[3] Upper paddle (upper position: home position)	[4] Gripper (move)
[5] Paper bunch	[6] Paper transport belt (rotation)

17. The gripper releases the sets of paper to deliver them to the main tray. The gripper is moved to the home position and brought into a standby state.

9. STAPLER SECTION

9.1 Configuration/Drive

In the stapler section, staples are pressed through the sheets aligned in the alignment section so that the sheets are fastened together as a batch.

9.1.1 Configuration

Front perspective view

[1]	Side stapler movement motor (M13)	[2]	Stapler home position sensor (Rear) (PS23)
[3]	Shaft	[4]	Stapler unit
[5]	Stapler position sensor (Center) (PS24)	[6]	Stapler move dial
[7]	Staple cartridge	-	-

Front view

[1]	Stapler unit	[2]	Stapler home position sensor (Rear) (PS23)
[3]	Stapler position sensor (Center) (PS24)	[4]	Side stapler movement motor (M13)
[5]	Shaft	[6]	Stapler holder

9.1.2 Drive

- The driving source of the staple section is the side stapler movement motors, stapler motor built into the staple unit, and the following parts are driven.

Driving source	Driving parts	Function
Side stapler movement motor (M13)	Staple cartridge	Back and forth movement and rotation of the stapler unit
Stapler	Clincher staple arm	Fastening of sheets with staples

- When the side stapler movement motor rotates, the belt is driven by the belt and the stapler holder attached to the belt moves back and forth along the shaft.
- When the stapler unit moves to the stapler home position, the staple cartridge replacement or the corner staple position, the shape of the slide guide plate causes the stapler unit to rotate.

NOTE

- The stapler unit is rotated at the staple cartridge replacement position to ease replacement work.

[1]	Stapler home position sensor (Rear) (PS23)	[2]	Stapler unit (home position)
[3]	Stapler unit (2-staple position)	[4]	Stapler unit (2-staple position)
[5]	Stapler position sensor (Center) (PS24)	[6]	Stapler unit (staple cartridge replacement position)
[7]	Slide glass plate	[8]	Side stapler movement motor (M13)

9.2 Operation

9.2.1 Stapler positioning control

(1) Stapler home position detection control

- The stapler home position sensor (rear) detects the stapler home position. The stapler's staple position is detected by the amount of motor rotation provided by the stapler home position sensor (rear) and stapler position sensor (center).
- In the corner staple mode, the stapler moves to the corner staple position and staples paper.
- In the 2-staple mode, the stapler moves to the 2-staple position (rear) and staples paper. Then it moves to the next 2-staple position (front) and staples the paper. After the stapling operation is completed, the stapler returns to the home position.

Upper view

[1]	Stapler home position sensor (Rear) (PS23)	[2]	Stapler unit (home position)
[3]	Stapler unit (2-staple position: rear)	[4]	Stapler unit (2-staple position: front)
[5]	Stapler position sensor (Center) (PS24)	[6]	Stapler unit (staple cartridge replacement position)
[7]	Slide guide plate	[8]	Side stapler movement motor (M13)

(2) Staple cartridge replacement position detection control

- The stapler position sensor (center) detects the staple cartridge replacement position. (The stapler determines that it arrives at the replacement position based on how much the side stapler movement motor rotates after the stapler passes the stapler position sensor (center).)
- In the corner staple mode, the stapler moves to the staple cartridge replacement position, rotates, and stays at the position. When alignment of sheets is completed, the sheets are stapled. After they are stapled, the stapler returns to the home position.
- When staple empty is detected, the stapler unit moves to the staple cartridge replacement position, rotates, and stays at the position.
- User can replace the staple cartridge by opening the front door.

NOTE

- Using the stapler move dial, user can replace the staple cartridge without moving the stapler unit.

- When staple cartridge replacement is completed and the front door is closed, the stapler returns to the home position.

9.2.2 Stapling control

(1) Stapling operation

- Stapling operation is driven by the stapler motor.
- In the stapling operation, the clincher staple arm is lowered by the stapler motor. The clincher staple arm presses the sheets. (This is called clamp operation.) Then a staple is pushed up by the staple arm from the stapler side. The staple is pressed through the sheets and bent from the clincher staple arm side so that the sheets are fastened together. Then the stapler motor lifts the clincher staple arm and lowers the staple arm to complete the stapling operation.
- The number of sheets that user wishes to staple are placed into the alignment tray and the stapling operation is performed. However, if the number exceeds the upper limit, the set of sheets is delivered to the exit tray without being stapled.

Type	Basis weight	No. of sheets to be stapled	Max. capacity (Number of stacked sheets / Height of stacked sheets)*	
			• A4S or less • 8 1/2 x 11S or less	• B4 or greater • 8 1/2 x 14 or greater
• Thin paper • Plain paper • Recycled paper	52 to 90 g/m ²	2 sheets to 9sheets	100 copies / 375mm	100 copies / 187.5mm
		10 sheets to 20 sheets	50 copies / 375mm	50 copies / 187.5mm
		21 sheets to 30 sheets	30 copies / 375mm	30 copies / 187.5mm
		31 sheets to 40 sheets	25 copies / 375mm	25 copies / 187.5mm
		41 sheets or greater	20 copies / 375mm	20 copies / 187.5mm
Thick 1	91 to 120 g/m ²	30 sheets or less	20 copies / 375mm	20 copies / 187.5mm
Thick 1+	121 to 157 g/m ²	15 sheets or less	20 copies / 375mm	20 copies / 375mm
Thick 2	158 to 209 g/m ²	15 sheets or less	20 copies / 375mm	20 copies / 375mm
Thick 3	210 to 256 g/m ²	-	-	-
Thick 4	257 to 300 g/m ²	-	-	-

• For details on the specifications, refer to [C.10.3.3 Sort staple](#).

[3] Paper bunch	[4] Staple sheet (staple)

[5] Stapler	[6] Stapler motor (M14)
-------------	-------------------------

9.2.3 Staple empty detection control

(1) Staple cartridge

- The stapler is provided with the staple cartridge used only for the stapler.
 - To supply staples, the staple cartridge is loaded with staples (staple sheet type: 5000 staples) and then the stapler is loaded with the cartridge.
- For information on how to load staplers, refer to the user's guide.

[1] Staple cartridge	[2] Clincher staple arm
[3] Paper bunch	[4] Stapler sheet (Staple)
[5] Stapler	[6] Stapler motor

(2) Staple empty detection mechanism

- The stapler includes the self-priming sensor and staple empty sensor to detect the status of the staple cartridge and staples.
- The staple cartridge is loaded with staple sheets, and a staple sheet is conveyed to the clinch position (staple position) from the lowest one.

State where staple sheets are loaded

[1] Staple cartridge (loaded with staple sheets)	[2] Staple sheet fed from the cartridge
[3] Self-priming sensor (blocked)	[4] Staple empty sensor (unblocked)

- While the staple cartridge is loaded, if the trailing edge of the last staple sheet in the cartridge passes the actuator of the staple empty sensor, the actuator is raised by the spring force.
- When the actuator is raised, the staple empty sensor is blocked and machine determines that the cartridge is empty. The control panel displays the staple empty message.

State where the last staple sheet is fed

[1]	Staple cartridge (staple empty)	[2]	Staple sheet (remainder)
[3]	Self-priming sensor (blocked)	[4]	Staple empty sensor (blocked)

State where staple sheet runs out

[1]	Staple cartridge (empty)	[2]	Self-priming sensor (unblocked)
[3]	Staple empty sensor (blocked)	-	-

- Even when the staple empty sensor detects the trailing edge of the last staple sheet, the staple sheet (staples: about 20) fed from the cartridge remains at the cartridge's front section. In this case, the actuator of the self-priming sensor is pressed down by the leading edge of the staple sheet.
- If the actuator is pressed down, the self-priming sensor is blocked and machine determines that the staple sheet is fed to the clinch position (staple position).
- Even when staple empty is detected, printing is not disabled. Paper is delivered without being stapled.
- After staple empty is detected, when the staple cartridge is loaded with staple sheets and the stapler is loaded with the cartridge, the actuator of the staple empty sensor is pressed down by the staple sheets.
- When the actuator is pressed down, the staple empty sensor is unblocked and staple empty condition is cleared. At this point, the staple empty sensor detects the staple sheets (unblocked). However, if the leading edge of the staple sheet cannot be detected by the self-priming sensor (unblocked), the clinch operation is repeated up to 20 times to feed the leading edge of the staple sheet to the position (clinch position) where it can be detected by the self-priming sensor.

State where staple sheet is not fed

[1]	Staple cartridge (loaded with staple sheets)	[2]	Staple sheet is fed by clinch operation.
[3]	Self-priming sensor (unblocked)	[4]	Staple empty sensor (unblocked)

- If the self-priming sensor cannot detect the leading edge of the staple sheet after clinch operations, machine determines that the staple sheet is not properly fed (staple sheet is not properly set) and the control panel displays the staple empty message.
- If the staple empty message appears even after staple sheets are loaded, check whether the staple sheets is properly set in the staple cartridge. If the cartridge is clogged with a staple sheet, clear the sheet.
- If staple empty occurs, the stapler stays at the [staple cartridge replacement position](#) (position where staples can be supplied only by opening the front door).

(a) When the staple cartridge is not loaded

[1]	Staple cartridge (not mounted)	[2]	Self-priming sensor (unblocked)
[3]	Staple empty sensor (blocked)	-	-

- The actuator of the staple empty sensor is raised by the spring force. The staple empty sensor is blocked.
- The actuator of the self-priming sensor is raised by the spring force. The sub priming sensor is unblocked.
- MFP determines that the cartridge is empty and the control panel displays the staple empty message.

9.2.4 Clogged staple detection control

- Stapling operation is performed by [lowering of the clincher staple arm and lifting of the staple arm](#).
- The staple arm position is detected by the staple home sensor located in the stapler.
- The stapler determines that the stapling operation is completed if the staple arm returns to the home position within the specified time after the stapling operation. If the staple arm does not return to the home position after the specified time has passed, the machine determines that [staple trouble](#) occurs and an error message appears on the control panel.

10. RECEIVING SECTION

10.1 Configuration

10.1.1 Configuration outline

In the receiving section, paper transported into the finisher is placed into each tray.

- **Main tray:**

- Paper aligned in the alignment section is placed.
- As the tray has the up/down mechanism, the tray moves down depending on the amount of paper loaded so that a large capacity of paper can be placed. The tray also includes the mechanism for detecting the amount of loaded paper.
- The number of sheets that can be placed on the tray changes depending on whether the saddle stitcher SD-511 is installed or not.

State	Capacity
Standard (Saddle stitcher is not mounted)	3,000 sheets (in the case of plain paper of which size is A4S or smaller) or up to 375 mm *1 in height of stacked paper
Saddle stitcher is mounted	2,000 sheets (in the case of plain paper of which size is A4S or smaller) or up to 250 mm *1 in height of stacked paper

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- For details on the specifications, refer to [C.10. FS-534](#).

- **Sub tray:**

- Paper that does not pass the alignment section is transported to the tray.
- The tray is a fixed type without the up/down mechanism. The tray includes the mechanism for detecting the amount of loaded paper.

Paper	Capacity
Plain paper (less than A4S size)	200 sheets or up to 35 mm *1 in height of stacked paper

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- For details on the specifications, refer to [C.10. FS-534](#).

- **3rd tray:**

- It receives the paper transported from the exit section of the MFP main body.
- The upper part of the RU section door can be used as the exit tray. The tray includes the mechanism for detecting the amount of loaded paper.

Paper	Capacity
Plain paper (less than A4S size)	100 sheets or up to 22.5 mm *1 in height of stacked paper

- *1: If either the number or height of stacked sheets reaches the specified value, "Tray paper full" is determined.
- For details on the specifications, refer to [C.10. FS-534](#).

- **Saddle tray:**

- Paper center-stapled in the saddle section is placed in the tray.
- The tray is a fixed type without the up/down mechanism. The tray does not have the sensor for detecting the amount of loaded paper. (To detect paper full, the number of sets delivered to the tray is counted.)

No. of sheets to center staple/center folding (Plain paper (less than A4S size))	Capacity
1 to 3 sheets	20 copies
4 to 10 sheets	10 copies
11 to 20 sheets	5 copies

- For details on the specifications, refer to [C.12. SD-511](#).

10.2 Drive

The driving source of the main tray section is the main tray up/down motor, paper receiving control motor, and the following parts are driven.

Driving source	Driving parts	Function
Main tray up/down motor (M11)	Main tray	- Normal rotation: The main tray is lowered depending on the number of sheets delivered into the main tray. - Reverse rotation: After paper is removed, the main tray is lifted to the home position.
Paper receiving control motor (M12)	Paper detection lever	The height of stacked paper (amount of stacked paper) delivered to the main tray is detected.

(1) Mechanism for protecting main tray drive section

CAUTION

- When the drive connection in the torque limiter is released, the main tray moves down under its own weight.
- To avoid finisher breakage and your injury, before releasing the drive connection in the torque limiter, be sure to support the main tray with your hand.

- The drive connection section of the main tray up/down drive mechanism has a torque limiter to prevent breakage.
- There may be an obstacle below the main tray during its downward movement. If the tray touches the obstacle and the force required to stop the lowering operation exceeds the specified value, the teeth of the drive gear rotates in the reverse direction and the driving force cannot be transmitted to the main tray. The torque limiter is used to prevent this situation from causing the breakage of the main tray drive mechanism and the main tray up/down motor.
- The main tray can be moved only upward with your hands. By manually pushing it upward with the force exceeding the specified value, the main tray can be raised. In contrast, as the torque limiter is not provided for the downward movement, the main tray cannot be lowered by pushing it down. If the tray is forcibly pushed downward, the main tray drive mechanism can be damaged.
- If the main tray needs to be manually lowered for maintenance and repair, the tray can be lowered by releasing the drive connection in the torque limiter.

Front perspective view

[1] Main tray driving shaft	[2] Main tray up/down motor drive connecting gear
[3] Torque limiter	- -

Method for releasing the drive connection

1. [Remove the rear cover.](#)
2. Support the main tray with your hand so that it does not fall down.
3. Slide the area of the torque limiter located on the main tray driving shaft as shown to the front side of the main unit. The connection of the drive gears is released and the main tray is lowered.

Side view

[1] Main tray driving shaft	[2] Main tray up/down motor drive connecting gear
[3] Torque limiter	- -

10.2.2 Sub tray section

NOTE

- For information on the drive in the sub tray (between transport section and sub tray section), refer to [PH.7.2 Drive](#) in the transport section.

10.2.3 3rd tray section

NOTE

- The 3rd tray does not have drive parts which requires drives source such as drive motor.

10.2.4 Saddle tray section

NOTE

- For information on the drive in the sub tray (between transport section and sub tray section), refer to [PH.11.2.1 Drive](#) in the transport section.

10.3 Operation

10.3.1 Sub tray exit mechanism

- Paper transported from the RU section is delivered to the sub tray by the sub tray exit roller via the FNS paper feed roller, FNS transport roller, and sub tray vertical transport roller.
- To transport paper to the sub tray, the paper path switching gate also operates.
- The sub tray exit roller is driven by the FNS discharge motor.

[1]	FNS entry transport motor (M2)	[2]	FNS discharge motor (M3)
[3]	Sub tray full detection sensor/out (PS9)	[4]	Sub tray section exit roller
[5]	Paper	[6]	Sub tray
[7]	Upper cover open/close detection sensor (PS32)	[8]	Sub tray full detection sensor (PS10)
[9]	Sub tray exit sensor (PS8)	-	-

10.3.2 Main tray paper level detection control

- The height of paper stacked on the main tray is always controlled to the specified level by lowering the main tray depending on the amount of paper delivered to the tray.
- The paper level is detected by the main tray upper position sensors/Fr and /Rr. Based on the detection results, the main tray height is controlled.
- The top end of the paper detection lever is lifted when the paper detection lever drive gear makes a half-turn. When the paper receiving control motor makes another half-turn, the end of the lever presses down the top of the trailing edge of the paper stacked on the main tray. Depending on the number of the sheets stacked or the height of the exit tray, the position of the paper detection lever changes.
- When the paper detection lever is at the home position, the main tray upper position sensor is unblocked. When the top end of the lever is lifted, the main tray upper position sensor is blocked. If the amount of stacked paper increases while the end of the lever presses down the top of the trailing edge of the paper stacked on the main tray, the paper detection lever becomes unable to return to the home position and the main tray upper position sensor is blocked. This causes machine to determine that the height of stacked paper exceeds the specified height. In this case, the main tray up/down motor is rotated and the main tray is lowered until the main tray upper position sensor is unblocked. When the main tray is lowered to the main tray full detection sensor, MFP determines that the main tray is full and the control panel displays the main tray full message.
- When main tray full is detected, the control panel displays the warning message. In this state, any main tray related configurations and jobs that use the main tray cannot be performed. The warning screen is cleared by removing the paper on the main tray. By removing the paper, the paper detection lever is lowered. This causes machine to determine that the paper is removed and the "main tray full" message disappears.
- When the paper detection lever drive gear makes a turn, paper receiving control motor stops. The position of the paper detection lever drive gear is detected by the paper delivery control sensor.
- The paper level detection control is performed each time when paper is delivered to the tray to always monitor the height of paper. This control also serves as the function of preventing paper stacked on the tray from being disturbed by the paper delivered next.

- *2: Standard

(3) Amount of paper placed on the main tray

- The amount of paper placed on the main tray is different depending on the mode.

(a) Amount of paper placed on the main tray in sort or group mode

- When either the number or height of stacked sheets reaches the specified value, the main tray full is detected.

Number of stacked sheets

Paper size	Paper type	
	- Thin paper - Plain paper - Recycled paper - Basis weight: 52 g/m² to 90 g/m² (13 13/16 lb to 23 15/16 lb)	- Envelope - OHP film - Label - Letterhead - Thick paper (91 g/m² to 300 g/m², 24 3/16 lb to 79 13/16 lb)
- A5/A5S or less - Invoice/Invoice S or less	500 sheets	20 sheets
- A4S or less, B5/B5S or greater - Letter S or less	3,000 sheets	
- B4S or greater - Legal S or greater	1,500 sheets	

Height of stacked sheets

Paper length (FD length)	Height of stacked sheets	
	Standard	Saddle stitcher is mounted
- A4S or less - Letter S or less	375 mm (14.8 inch)	250 mm (9.8 inch)
- B4S or greater - Legal S or greater	187.5 mm (7.4 inch)	187.5 mm (7.4 inch)

- The height of stacked paper is detected by the paper detection lever.

(b) Amount of paper placed on the main tray in sort offset or group offset mode

- When either the number or height of stacked sheets reaches the specified value, the main tray full is detected.

Number of stacked sheets

Paper size	Paper type	
	Thin paper • Plain paper • Recycled paper (52 g/m ² to 90 g/m ² (13 13/16 lb to 23 15/16 lb))	Thick paper (91 g/m ² to 300 g/m ² , 24 3/16 lb to 79 13/16 lb)
• Less than B5	500 sheets	20 sheets
• A4/A4S	3,000 sheets	
• B5		
• Letter/Letter S		
• B5S	1,500 sheets	
• B4 or greater		
• Legal		

Height of stacked sheets

Paper size	Height of stacked sheets	
	Standard	Saddle stitcher is mounted
• A4S or less • Letter S or less	375 mm (14.8 inch)	250 mm (9.8 inch)
• B4S or greater • Legal S or greater	187.5 mm (7.4 inch)	187.5 mm (7.4 inch)

- The height of stacked paper is detected by the paper detection lever.

(c) Amount of paper placed on the main tray in staple mode

- When either the number or height of stacked sheets reaches the specified value, the main tray full is detected.

Number of stacked sheets

No. of sheets to be stapled	Paper size	
	Thin paper • Plain paper • Recycled paper (52 g/m ² to 90 g/m ² (13 13/16 lb to 23 15/16 lb))	Thick paper (91 g/m ² to 300 g/m ² , 24 3/16 lb to 79 13/16 lb)
2 to 9 sheets	100 copies	20 copies
10 to 20 sheets	50 copies	
21 to 30 sheets	30 copies	
31 to 40 sheets	25 copies	
41 or greater	20 copies	

Height of stacked sheets

Paper size	Height of stacked sheets	
	Standard	Saddle stitcher is mounted
• A4S or less • Letter S or less	375 mm (14.8 inch)	250 mm (9.8 inch)
• B4S or greater • Legal S or greater	187.5 mm (7.4 inch)	187.5 mm (7.4 inch)

- The height of stacked paper is detected by the paper detection lever.

10.3.3 Main tray upper detection mechanism

- The main tray includes the upper limit detection mechanism. The mechanism is to avoid malfunction and breakage of the main tray up/down mechanism that may be caused by the tray being lifted higher than the specified position.
- While paper is stacked on the main tray, if the main tray moves up and the top of the stack pushes the alignment plate up, the main tray upper position detect switch cover is raised and the main tray upper position detect switch is pressed. This causes the main tray up/down motor to stop rotating and the main tray to stop moving upward.

NOTE

- In the case of small paper of which width is shorter than the distance formed between the alignment plates when the alignments are at home position, the paper may directly push up the main tray upper position detect switch cover. In that case, the main tray upward movement is also stopped.
- While the main tray is moving upward, if user press the main tray upper position detect switch cover by mistake, the main tray upward movement is also stopped. In this case, when the main tray upper position detect switch cover is released, if the top surface of the main tray does not reach the specified height, the main tray moves up again. When the top surface of the main tray reaches the specified height, the upward operation stops.
- For details of the main tray up/down operation, refer to [PH.10.3.2 Main tray paper level detection control](#).

[1]	Main tray upper position detect switch (SW2)	[2]	Main tray upper switch cover
[3]	Paper	[4]	Main tray
[5]	Alignment plate	-	-

10.3.4 Tray full detection mechanism

(1) Main tray

- The main tray has two types of paper detection mechanism. When paper full is detected in either way, the warning message appears on the control panel. In this state, any main tray related configurations and jobs that use the main tray cannot be performed. The warning screen is cleared by removing paper from the main tray.

(a) Paper full detection mechanism 1

- When machine determines that the amount of paper stacked on the main tray exceeds the specified height, the paper detection lever causes the main tray up/down motor to rotate to lower the main tray to the specified position. When the main tray is lowered to the position of the main tray full detection sensor, the main tray full is determined.
For details of main tray up/down control, refer to [PH.10.3.2 Main tray paper level detection control](#).

(b) Paper full detection mechanism 2

- When multiple stapled sets of sheets are placed on the tray, the edge of the sheets may be higher than upper limit of the area that can be detected by the paper detection lever, and the height of the stack edge may exceed the specified value. To avoid this, the main tray upper sensor is mounted.
- When the paper delivered to the main tray blocks light from the main tray upper sensor, the main tray up/down motor is rotated and the main tray is lowered to the specified position. When the main tray is lowered to the main tray full detection sensor, the main tray full is determined.
For details of main tray up/down control, refer to [PH.10.3.2 Main tray paper level detection control](#).

Left side view

[1]	Paper	[2]	Main tray upper sensor (PS7)
[3]	Paper detection lever	[4]	Main tray upper sensor/out (PS6)
[5]	Main tray	-	-

(2) Sub tray

- When the [specified amount of paper](#) is delivered to the sub tray, the light from the sub tray full detection sensor is blocked by the stacked paper and the exit tray full is detected.
- When the sub tray full is detected, the warning message appears on the control panel. In this state, any sub tray related configurations and jobs that use the sub tray cannot be performed. The warning screen can be cleared by removing the paper on the sub tray.

[1]	Sub tray paper transport route	[2]	Sub tray section exit roller
[3]	• Sub tray full detection sensor/out (PS9) • Sub tray full detection sensor/in (PS10)	[4]	Paper
[5]	Sub tray	[6]	Sub tray exit sensor (PS8)

(3) 3rd tray

- When **predetermined quantity** of paper is discharged to the 3rd tray, the 3rd exit tray full sensor actuator will be pushed up by the discharged paper. When the actuator is pushed up to the predetermined position, the 3rd exit tray full sensor will be unblocked by the actuator to detect the exit tray full.
- The warning message will be displayed on the operation panel when the 3rd tray full is detected. All setting operations and jobs will be disabled when the warning message is displayed on the screen. The warning message will be released by removing the paper on the 3rd tray.

[1]	3rd exit tray full sensor (PS1)	[2]	3rd exit tray full detection actuator (no paper)
[3]	Paper	[4]	3rd exit tray full detection actuator (paper exit tray full)

(4) Saddle tray

- When paper is delivered to the saddle tray, the light from the saddle tray exit sensor is blocked. When the stacked sheets are removed, the sensor light is unblocked.
- After the **specified sets of sheets** are delivered to the saddle tray, if the light from the saddle tray exit sensor is blocked, the saddle tray full is detected.

NOTE

- For a tri-fold job, if paper is present in the saddle tray when the job is started, the saddle tray full is detected, (Even only one set of sheets remains, tray full is detected.)**
- When the saddle tray full is detected, the warning message appears on the control panel. In this state, any saddle unit related configurations and jobs that use the saddle unit cannot be performed. The warning screen is cleared by removing the paper placed on the saddle unit.

11.2 Transport section

11.2.1 Drive

[1]	SD transport motor (M1)	[2]	Curl cover detection sensor (PS2)
[3]	Paper discharge control motor (M2)	[4]	Curl cover
[5]	SD transport roller	[6]	SD entrance sensor (PS1)
[7]	FNS discharge motor (M3)	-	-

11.2.2 Paper transport

- The FNS discharger motor rotates in reverse direction, and the paper is transported from the transport section of the finisher to the saddle stitcher.
- The paper then is transported to the alignment section by SD transport roller.
- The SD transport roller rotates when the SD transport motor is driven.

11.2.3 Curl cover

- The paper is transported to the alignment section one by one. A paper which is curled may cause paper jam at the entrance of saddle stitcher.
- In order to prevent this paper jam, the curl cover is installed so that each paper is transported to the alignment section without fail.
- The curl cover is operated by the paper discharge control motor. Paper receiving opens/closes the feeding port inside the saddle unit entrance when the paper discharge control motor rotates in forward/reverse direction.

[1]	SD transport motor (M1)	[2]	Curl cover detection sensor (PS2)

[5]	Paper transportation from within the finisher	[6]	Curl cover operation
[7]	Next paper standby (moves curl cover to the home position)	-	-

11.3 Alignment section

11.3.1 Drive

[1]	Center folding section upper paddle	[2]	Alignment plate/Fr
[3]	SD paddle motor (M7)	[4]	Stopper guide
[5]	Stopper drive motor (M4)	[6]	Paper grip
[7]	Center folding section lower paddle	[8]	Alignment plate/Rr

11.3.2 Alignment

- It aligns the paper transported to the alignment section.
- The paper CD alignment is conducted by the alignment plate/Fr and the alignment plate/Rr. The alignment plate shifts by forward/reverse rotation of the alignment motor to align the paper edge.
- The paper FD alignment is conducted by the stopper guide, center folding section upper paddle and center folding section lower paddle.
- The stopper guide moves up when the stopper drive motor rotates in forward/reverse direction to stop at the position which suits the length of the paper transported. The leading edge of the paper stops by the stopper guide to align the leading edge.
- When the paper is transported, the stopper drive motor rotates in forward/reverse direction to operate the stopper guide drive belt, and moves the stopper guide up/down.
- The center folding section upper paddle and the center folding section lower paddle are installed in order to receive the transported paper to the receiving section without fail.
- The paddle is driven by the SD paddle motor.

[1]	Center staple/fold stacker paper detect sensor (PS3)	[2]	Alignment home sensor (PS4)
[3]	Alignment plate/Fr	[4]	SD paddle motor (M7)
[5]	Stopper guide	[6]	Stopper drive motor (M4)
[7]	Stopper guide drive belt	[8]	Center folding section lower paddle
[9]	Alignment motor (M3)	[10]	Alignment plate/Rr
[11]	Center folding section upper paddle	-	-

(1) Alignment operation

- When the saddle exit sensor of the finisher detects the leading edge of the paper, the alignment motor starts rotating in the direction to close the alignment plate, and the alignment plate/Fr and the alignment plate/Rr stop at the position where it is slightly wider than the paper width.
- When the specified period of time has passed after the SD entrance sensor detects the trailing edge of the paper, the alignment motor rotates in forward/reverse direction to do oscillation of the alignment plate to align paper.
- The oscillation of the alignment plate is conducted each time a sheet of paper is transported, and the alignment plate is shifted to the standby position after the alignment operation is finished.
- The home position of the alignment plate is detected by the alignment home sensor.

(2) Stopper guide operation

- The stopper guide is moved up according to the paper size.
- The stopper guide moves up and stops at the specified position after the leading edge of the paper passes the saddle exit sensor.

(3) Paddle operation

- The up/down paddle is driven by the SD paddle motor. The up/down paddle is driven when the specified period of time has passed after the leading edge of the paper passed the saddle exit sensor of the finisher.
- The up/down paddle stops after the paper trailing edge passes the finisher's saddle exit sensor and the paddle rotates for the specified number of times.

11.3.3 Stopper guide

- At the stopper guide, papers are aligned in FD direction, and papers conveyed to the aligning section are conveyed to the specified position.
- The exit grip holds the paper when shifting it to the specified position and when stapling papers.
- The alignment section, staple position and other positions (center folding, saddle folding, tri-folding) have their own up/down stop positions. They are controlled by the pulse number of the stopper drive motor.

(1) Stopper operation

- The stopper drive motor moves the stopper guide up and down in accordance with the paper size. The stopper home sensor detects the home position.

[1] Stopper guide	[2] Exit grip/Fr
[3] Stopper drive motor (M4)	[4] Stopper home sensor (PS6)
[5] Exit grip/Rr	- -

(2) Stopper control

[1]	Center folding knife assy	[2]	Stopper guide
[3]	Exit grip/Fr	[4]	Exit grip/Rr
[5]	Center folding roller/2	[6]	Center folding roller /1

(a) Folding mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.
- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the folding position.

(b) Saddle stitching mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.
- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the saddle stitching position.
- After a specified period of time since stapling operation was completed, the alignment motor opens the alignment plates and the stopper drive motor starts rotating to move the stopper guide further down and lower the paper to the folding position.

(c) Tri-folding mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.
- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the 1st folding position in the tri-folding.

11.4 Stapler

11.4.1 Drive

[1]	Stapler unit	[2]	Stopper drive motor (M4)
-----	--------------	-----	--------------------------

[3]	Stopper home sensor (PS6)	[4]	Stopper guide
[5]	Alignment tray	-	-

11.4.2 Operation

- The stapling operation is performed by the stapler motor.

(1) Stapling operation

- In the stapling operation, the stapler motor in the stapler pushes out the paper press section to the clincher by the drive gear to hold the paper and punch out the staple. Then, the clincher motor in the stapler bends the staple.
- The drive gear pushes out the pressed part of the paper toward the clincher to hold the paper, and the pin will then be pushed out.
- When the pin penetrates the paper batch, the pin will be bent to staple the paper batch at the clincher section.

[1]	Clincher	[2]	Drive gear
[3]	Stapler motor	[4]	Staple
[5]	Stapler	-	-

(2) Staple control

- (a) Stapling
 - After completing the alignment operation of the alignment plate, the staple motor performs the stapling operation.
 - The stapling operation is completed when the stapler home position sensor (rear) detects the home position and turn ON.
- (b) Clogged staple detection
 - When the stapler home position sensor (rear) does not turn ON after the specified period of time after it turned OFF during stapling, it is determined that the staple motor has the trouble, and stops the stapler motor.
- (c) Cartridge detection
 - The cartridge set switch detects the presence of a cartridge or the incorrect setting of a cartridge.
 - When no cartridge is set or it is set incorrectly, the main body displays the error message on its display panel.
- (d) Staple detection control
 - When the staples run out, the staple empty switch turns ON and the main body displays the error message on its display panel.

11.5 Folding/Saddle stitching

11.5.1 Drive

[1]	Center fold guide motor (M8)	[2]	Tri-folding roller
[3]	Center fold knife motor (M9)	[4]	Center fold roller motor (M5)
[5]	Saddle section exit roller	-	-

[1]	Center fold roller/1	[2]	Center folding roller/2
[3]	Center fold knife home sensor (PS8)	[4]	Fold drive gear/Rr
[5]	Center fold knife motor (M9)	[6]	Center folding knife assy
[7]	Fold drive gear/Fr	[8]	Center fold guide motor (M8)

11.5.2 Folding knife

- The center fold knife motor drives the folding knife.
- The folding knife is used in the folding/saddle stitching/tri-folding mode.
- In the tri-folding mode, it is used at the 1st folding.

(1) Folding knife operation

- The center fold knife motor rotates the crank shaft a half turn via the gear and pushes the paper to the nip section with the folding knife.
- The folding rollers draw and fold the paper.
- The position of the stopper guide controls the folding position.

[1]	Before folding	[2]	Folding knife
[3]	Center fold knife home sensor (PS8)	[4]	Center folding roller/2
[5]	Center folding roller/1	[6]	Folding operation
[7]	Crank shaft/Rr	[8]	Fold knife assy drive gear/Rr
[9]	Fold knife assy drive gear/Fr	[10]	Crank shaft/Fr

(2) Folding knife control

- The center fold knife motor turns ON and sticks out the folding knife to the paper after a specified period of time since the stopper guide stops at the folding position.
- The center fold knife motor stops when the folding knife reciprocates after fold operation is completed and the center fold knife home sensor turns OFF.

11.6 Tri-folding

11.6.1 Drive

[1]	Tri-folding knife assy	[2]	Center fold guide motor (M8)
[3]	Guide home sensor (PS7)	[4]	Tri-fold guide motor (M6)
[5]	Tri-folding gate home sensor (PS11)	[6]	Center folding change gate
[7]	Tri-folding roller	[8]	Fold exit sensor (PS12)
[9]	Tri-folding knife	-	-

11.6.2 Tri-folding operation

1. When the center fold guide motor drives, the tri-folding gate rotates. The edge of the paper to which the first folding was applied at the center folding section will be transported to the tri-folding path.
2. When the tri-folding guide motor drives, the tri-folding knife assy drive gear rotates to move down the tri-folding knife assy. The paper to which the first folding is applied at the center folding section will be pushed out to the tri-folding roller.
3. The paper is pulled into the tri-folding roller to tri-fold the paper.
4. When tri-folding is finished, the tri-folding gate will return to the home position. The home position of the tri-folding gate is detected by the tri-folding gate home sensor.

[1]	Tri-folding knife assy	[2]	Tri-folding knife assy drive gear
[3]	Center folding roller/1	[4]	Paper
[5]	Center folding roller/2	[6]	Tri-folding roll
[7]	Tri-folding roller	[8]	Tri-folding gate
[9]	Tri-folding knife	-	-

11.7 Exit section

11.7.1 Drive

[1] Center fold guide motor (M8)	[2] Tri-fold guide motor (M6)
[3] Tri-folding gate home sensor (PS11)	[4] Center folding roller/2
[5] Center folding roller/1	[6] Fold exit sensor (PS12)
[7] Booklet tray empty detection sensor/in (PS13)	[8] Center fold roller motor (M5)
[9] Booklet tray empty detection sensor/out (PS14)	[10] Paper press
[11] Saddle tray	[12] Tri-folding roller
[13] Saddle section exit roller	[14] Guide home sensor (PS7)

11.7.2 Paper exit

- Center folded, saddle folded, or tri-folded paper is discharged to the saddle tray.
- The paper that is center folded and saddle folded are sent through the upper route, and the tri-folded paper is sent through the lower route to be discharged.
- The paper is discharged by driving the exit roller and the tri-fold roller. Both rollers are driven by the center fold roller motor.

(1) Paper exit for center fold / saddle fold

- The center fold roller motor is driven after the center fold or the saddle fold, and discharges the paper to the saddle tray by the paper exit roller.

A3EPEPGC607.

2. CONFIGURATION

2.1 Finisher main body

- The following sections are combined in a single unit: the horizontal transport section, transport section, alignment section, exit tray section (main tray/sub tray), and stapler section.

[1]	Exit tray section (Sub tray)	[2]	Alignment section
[3]	Transport section	[4]	Horizontal transport section
[5]	Stapler section	[6]	Exit tray section (Main tray)

2.2 Horizontal transport section

- The horizontal transport section is composed of the RU control board, RU transport motor, RU door open/close sensor, and RU transport sensor.

[1]	RU transport motor (M35)	[2]	RU control board (RUCB)
[3]	RU transport sensor (PS60)	[4]	RU door open/close sensor (PS61)

3. HORIZONTAL TRANSPORT SECTION

3.1 Drive

- The RU transport motor drives the drive of the RU transport roller1/2/3/4.

[1]	RU transport motor (M35)	[2]	RU transport roller/1
[3]	RU transport roller/2	[4]	RU transport roller/3
[5]	RU transport roller/4		

3.2 Operation

3.2.1 Paper horizontal transport operation

- The horizontal transport section transfers paper fed out from the main body to the finisher.
- The RU transport motor provides drive for the RU transport rollers.
- On the finisher side, drive from the RU transport motor transfers the paper into the finisher.

[1]	Finisher side	[2]	Horizontal transport section
[3]	Main body side	[4]	RU transport motor (M35)
[5]	RU transport roller/1	[6]	RU transport roller/2
[7]	RU transport roller/3	[8]	RU transport roller/4

4. TRANSPORT SECTION

4.1 Drive

[1]	Sub tray switching gate solenoid (SD3)	[2]	2nd transport motor (M2)
[3]	1st transport motor (M1)	[4]	Center staple switching gate solenoid (SD1)
[5]	Switchback gate solenoid (SD4) *	[6]	Bypass switching gate solenoid (SD2)
[7]	Stacker transport motor (M10)	[8]	Stacker plate drive motor (M17)
[9]	Exit roller motor (M4)	[10]	Bypass transport motor (M3)

- *: It is used for transporting the paper from PI-505 to SD-512.

4.2 Operation

4.2.1 Paper transport (from the horizontal transport section to the route switching gate)

- The paper transported from the horizontal transport section is transported to the finisher.
- Each roller starts driving when the finisher starts operating to transport the paper from the horizontal transport section, and to transport the paper inside the finisher.
- Tilt of the paper is adjusted by driving the entrance roller within the specified period of time. It is controlled only in punch operation (PK-521 is installed).

[1]	FNS entrance sensor (PS1)	[2]	Entrance roller
[3]	1st transport motor (M1)	[4]	Transport roller/1
[5]	Center staple switching gate solenoid (SD1)	[6]	Route switching gate

[1]	1st transport motor (M1)	[2]	Entrance roller
[3]	FNS entrance sensor (PS1)	[4]	Transport roller/1
[5]	Route switching gate	[6]	Center staple switching gate solenoid (SD1)

4.2.2 Route switching gate

- The route switching gate switches paper to different routes that go to individual trays and SD-512.
- The FS control board controls the center staple switching gate solenoid.
- The FS operation signal from the main body makes the route switching gate move up or down.

(1) Route switching gate operation

- The center staple switching gate solenoid drives the route switching gate.

[1]	Paper transportation to the inner of the finisher	[2]	Gate move up
[3]	Center staple switching gate solenoid (SD1)	[4]	Paper transportation to SD-512
[5]	Gate move down		

4.2.3 Paper transport (from the route switching gate to the sub tray switching gate)

- The paper transported to the finisher is transported to the main tray, sub tray and JS-602 by the drive of the 2nd transport motor.
- The drive of the 2nd transport motor drives the transport roller2/3/4 to transport the paper.
- The FS control board controls the 2nd transport motor drive.

[1]	Sub tray exit roller/1	[2]	Sub tray switching gate
[3]	JS switching gate *	[4]	Transport roller/3
[5]	2nd transport motor (M2)	[6]	Bypass gate
[7]	Transport roller/2	[8]	Switchback gate solenoid (SD4)
[9]	Switchback gate	[10]	Bypass switching gate solenoid (SD2)
[11]	Sub tray switching gate solenoid (SD3)	[12]	Transport roller/4

- *: It is used when JS-602 is installed.

4.2.4 Switchback gate

- The switchback gate is used when PI-505 is installed.
 - For transporting the paper from PI-505 to SD-512, the paper is turned over inside the finisher to be transported to SD-512.
 - The paper from PI-505 is transported to the normal transportation path once. When the specified period of time has passed after the trailing edge of the paper passed Z-fold punch register sensor, the 2nd transport motor and the bypass transport motor are driven in reverse direction to transport the paper to SD-512.
- The switchback gate solenoid drives the switchback gate at the same time to open the transportation path for SD-512.

[1]	2nd transport motor (M2)	[2]	Switchback gate
[3]	Z-fold punch regist sensor (PS2)	[4]	Switchback gate solenoid (SD4)

4.2.5 Paper transport (sub tray exit/Bypass route)

- The drive of the bypass transport motor transports the paper which was transported to the finisher to the paper bypass route and to the sub tray.
- Paper route is switched by the bypass gate and the sub tray switching gate on the paper path.
- For details, refer to the bypass gate and the sub tray switching gate.

[1]	Sub tray switching gate	[2]	Bypass transport roller
[3]	Bypass gate	[4]	Bypass transport motor (M3)
[5]	Sub tray exit roller/2		

4.2.6 Bypass gate

- The bypass route is provided to eliminate loss of time spent for the subsequent paper and to increase productivity during stapling.
- The bypass route is provided at the place where the regular paper route and the bypass route join.

(1) Bypass gate operation

- The bypass switching gate solenoid drives the bypass gate.
- Paper sizes subject to this operation are 8 1/2 x 11, A4, 16K, Executive, and B5.
The bypass gate operates only for the 1st page of the 2nd and following copies to transfer paper to the bypass route.
- The 2nd page of the 2nd and following copies is transferred to the regular paper route and then the transferred to the alignment section.

[1]	Regular paper route	[2]	Bypass route
[3]	Bypass gate		

(2) Bypass gate control

- The bypass gate only operates for the plain paper (8 1/2 x 11, A4, 16K, Executive, and B5).
- The FS control board controls the bypass switching gate solenoid.
- When stapling two sheets of paper for three copies, the bypass switching gate solenoid operates as follows.

(a) For the 1st copy

- When the paper for the 1st copy is transferred, the bypass gate solenoid does not operate.

(b) For the 2nd copy

- At the moment when the z-fold punch regist sensor detects the leading edge of the 1st paper of the 2nd copy, the bypass switching gate solenoid is turned ON to transfer the 1st paper of the 2nd copy to the bypass route.
- The bypass switching gate solenoid turns OFF after a specified period of time since the z-fold punch regist sensor detects the trailing edge of the 1st paper of the 2nd copy.

(c) For the 3rd and following copies

- The same operation as the one for the 2nd copy is repeated.

4.2.7 Sub tray switching gate

- The paper transported into the finisher is transported to the sub tray by switching the transportation route by the sub tray switching gate.
- The sub tray switching gate is driven by the sub tray switching gate solenoid.
- The sub tray switching gate transfers the paper to the sub tray by moving up and down.

[1] Regular paper route	[2] Sub tray paper route
[3] Sub tray switching gate	[4] Sub tray switching gate solenoid (SD3)

4.2.8 Sub tray exit

- The paper transported by the sub tray switching gate is discharged to the sub tray by the drive of the sub tray transport roller/1 and the sub tray transport roller/2.
- The sub tray exit roller/1 is driven by the 2nd transport motor.
- The sub tray exit roller/2 is driven by the bypass transport motor.

[1] Sub tray exit roller/1	[2] Sub tray exit sensor (PS8)
[3] Sub tray full sensor (PS9)	[4] Sub tray
[5] Sub tray exit roller/2	[6] Bypass transport motor (M3)
[7] 2nd transport motor (M2)	

(1) Sub tray exit roller drive

- The sub tray exit roller/1 is driven by the 2nd transport motor.
- The sub tray exit roller/2 is driven by the bypass transport motor.
- The bypass transport motor rotates in low speed after a specified period of time since the sub tray exit sensor detects the leading edge of the paper.
- The sub tray exit roller/2 rotates in high speed after a specified period of time since the z-fold punch regist sensor detects the trailing edge of the paper.
- The 2nd transport motor stops after a specified period of time since the sub tray exit sensor detects the trailing edge of the paper.

(2) Sub tray full detection

- When the exited paper on the sub tray reached to a specified thickness, the sub tray full sensor turns ON and the sub tray full information is sent to the main body. Then, the main body displays the message on its display panel.

4.2.9 Paper transport (from the sub tray switching gate to transport roller/5)

- It transports the paper transported from the finisher to the main tray.
- The stacker transport motor is driven by the command of the finisher operation start command, and rotates the transport roller/5 to transport the paper.

[1]	Transport roller/5	[2]	Stacker transport motor (M10)
-----	--------------------	-----	-------------------------------

5. ALIGNMENT SECTION

5.1 Drive

- The paper transported from inside the finisher is transported to the alignment section.
- The paper is aligned, stapled or shifted (offset) at the alignment section to be transported to the main tray.

[1]	Paper output roller motor (M6)	[2]	Paddle motor (M16)
[3]	Trailing edge stopper motor (M19)	[4]	Alignment plate motor/Fr/Rr (M11/M12)
[5]	Stacker plate drive motor (M17)	[6]	Exit roller motor (M4)

[1]	Alignment plate/Fr	[2]	Alignment plate/Rr
[3]	Exit roller motor (M4)	[4]	Leading edge paddle up/down motor (M18)
[5]	Paper output roller motor (M6)	[6]	Paddle motor (M16)
[7]	Stacker plate drive motor (M17)		

5.2 Operation

5.2.1 Paper transport (from the transport roller/5 to the alignment section)

- The paper transported from inside the finisher is transported to the alignment section.
- The paper transported goes to the alignment section once by its gravity. The exit roller and the paddle are actuated so that the paper is sent to the alignment section without fail.

[1]	Paper output driven roller assy	[2]	Transport roller/5
[3]	Trailing edge paddle	[4]	Exit roller
[5]	Stack support plate	[6]	Leading edge paddle

(1) Exit roller control

- The exit roller motor drives the exit roller.
- The exit roller motor is driven when the stacker entrance sensor detects the leading edge of the paper.
- The paper output roller motor is driven in reverse direction when the specified period of time has passed after the stacker entrance sensor detects the trailing edge of the paper.
- When the exit roller motor rotates in reverse direction, the paper output roller motor is driven at the same time to move the paper output driven roller assy down.
- By driving the exit roller motor in reverse direction and moving down the paper output driven roller assy, the paper is transported to the alignment section without fail.

[1]	Leading edge paddle up/down motor (M18)	[2]	Paper output driven roller assy
[3]	Exit roller	[4]	Exit roller motor (M4)
[5]	Paper output roller motor (M6)

[3]	Paper output driven roller assy	[4]	Leading edge paddle assy
[5]	Stacker entrance sensor (PS3)	[6]	Leading edge paddle assy move up
[7]	Leading edge paddle assy move down		

(2) Paddle Drive Control

- The leading edge paddle and the trailing edge paddle are driven by the paddle motor.
- The alignment plate paddle motor is driven when a specified period of time has passed after the alignment plate stacker entrance sensor turns ON.
- The leading edge paddle transports the paper received by its gravity to the alignment section without fail.
- The leading edge paddle is driven by the alignment paddle motor. The up/low motor of the alignment plate edge paddle is driven so that the leading paddle contacts the paper for setting the paper to the alignment section.
- When the paddle up/down motor at the leading edge is driven, the lift arm moves down to move the leading edge paddle down.
- The paper is transported one by one, and the leading edge paddle moves up and down every time the paper is transported.

[1]	Leading edge paddle home sensor (PS16)	[2]	Leading edge paddle up/down motor (M18)
[3]	Paper output roller motor (M6)	[4]	Paddle motor (M16)
[5]	Trailing edge paddle sensor (PS19)	[6]	Trailing edge paddle
[7]	Leading edge paddle		

5.2.2 Alignment plate

- The alignment plate aligns and shifts (offset) the paper.
- The alignment plate is driven by the forward/reverse rotation of the alignment plate motor/Fr and the alignment plate motor/Rr.
- There are two alignment plates installed. The alignment plate/Fr is driven by the alignment plate motor/Fr, and the alignment plate Rr is driven by the alignment plate motor/Rr.
- The alignment plate is driven according to the size and width of the paper discharged to align the paper to the center of the main tray.

[1]	Alignment plate/Rr	[2]	Alignment plate/Fr
[3]	Alignment plate motor home sensor/Fr (PS17)	[4]	Alignment plate/Fr drive belt
[5]	Alignment plate motor/Fr (M11)	[6]	Alignment plate motor/Rr (M12)
[7]	Trailing edge stopper home sensor (PS22)	[8]	Trailing edge stopper standby sensor/1 (PS23)
[9]	Trailing edge stopper standby sensor/2 (PS42)	[10]	Trailing edge stopper motor (M19)
[11]	Alignment plate/Rr drive belt	[12]	Alignment plate motor home sensor/Rr (PS18)

(1) Alignment plate operation

- The alignment plate motor/Fr rotates to move the alignment plate/Fr via the alignment plate/Fr drive belt.
- The alignment plate motor home sensor/Fr detects the home position of the alignment plate/Fr.
- The alignment plate motor/Rr rotates to move the alignment plate/Rr via the alignment plate/Rr drive belt.
- The alignment plate motor home sensor/Rr detects the home position of the alignment plate/Rr.

(2) Shift (offset) operation

- For the normal print and staple, the paper is discharged to the center of the main tray. The alignment plate shifts for sort and group exit.
- The alignment plate/F/R is driven according to the size and the width of the paper to move the position the paper is to be discharged.

5.2.3 Trailing edge stopper

- The trailing edge stopper holds the trailing edge of the paper.
- The trailing edge stopper is structured by four stoppers. Two parts of the trailing stopper is shifted according to the paper size and the paper width so that the edge of the paper in any size will not be caught at the trailing stopper to cause paper jam or misalignment.
- The trailing edge stopper home sensor checks the position of the trailing edge stopper.
- The trailing edge stopper motor is driven according to the paper size and the paper width, and stops the trailing edge stopper at the position detected by the trailing edge stopper standby sensor/1 or the trailing edge stopper standby sensor/2.

[1]	Trailing edge stopper	[2]	Trailing edge stopper drive belt
[3]	Trailing edge stopper home sensor (PS22)	[4]	Trailing edge stopper standby sensor/1 (PS23)
[5]	Trailing edge stopper standby sensor/2 (PS42)	[6]	Trailing edge stopper motor (M19)

5.2.4 Paper transport (from the alignment section to the main tray section)

- The paper aligned at the alignment section is transported to the main tray.

- When the paper is aligned, the exit roller motor and the paper output roller motor are driven to drive the exit roller and to press exit roller by the paper output driven roller, and to discharge the paper to the main tray.

[1]	Leading edge paddle up/down motor (M18)	[2]	Paper output driven roller assy
[3]	Exit roller motor (M4)	[4]	Paper output roller motor (M6)

5.2.5 Stack support plate control

- When the paper is transported to the alignment section, the paper may go off the alignment tray depending on the paper size or the printing direction which may cause the paper to be misaligned.
- In order to prevent the paper from being off the alignment tray, the stack support plate is installed.
- When the specified period of time has passed after the paper passed the stacker entrance sensor, the stacker plate drive motor is driven to protrude the stack support plate.
- When the specified period of time has passed after the process above is finished, the stacker plate drive motor is driven to retract the stack support plate.
- The stacker plate home sensor detects the home position of the stack support plate.

[1]	Alignment tray	[2]	Stacker plate home sensor (PS11)
[3]	Stack support plate	[4]	Stacker plate drive motor (M17)

6. EXIT TRAY SECTION

6.1 Drive

- The exit tray is composed of the main tray and sub tray.
- The main tray has the lifter which moves the tray down every time the paper is discharged.
- The sub tray is a fixed-type and does not have a lifter.

[1]	Lift wire/Fr	[2]	Main tray up/down motor (M5)
[3]	Lift wire/Rr	[4]	Main tray
[5]	Exit roller	[6]	Sub tray
[7]	Sub tray exit roller		

6.2 Operation

6.2.1 Tray lift

- The worm gear installed in the shaft of the main tray up/down motor winds up the lift wire.
- It lifts up or down the main tray depending on the winding direction.
- Rotating the lift pulley/Fr clockwise and counterclockwise in view of front, the main tray is lifted up and down respectively.

[1]	Lift wire/Fr	[2]	Lift pulley/Fr
[3]	Main tray up/down motor (M5)	[4]	Lift pulley/Rr
[5]	Lift wire/Rr	[6]	Main tray

6.2.2 Paper detection

- The main tray top surface sensor, the staple paper exit top surface sensor and the main tray upper limit sensor keep the specified distance between the upper surface of the paper exited to the main tray and the paper exit opening to eliminate the misalignment of the exited paper.
 - The main tray top surface sensor detects the top face of the paper during normal paper discharge.
 - The staple paper exit top surface sensor detects the top face of the paper which is stapled.
 - The main tray upper limit sensor is equipped with luminescence and light-receiving LED sensor. It detects the top face of the paper which is stapled.
- Since up to 2 sheets: 200 copies can be loaded for stapling, the staple paper exit top surface sensor may not be able to detect the top face of the paper when many copies of corner staple paper are discharged. The main tray top surface sensor therefore is used to detect the top face of the paper.
- In other words, the main tray is operated by combination of the staple paper exit top surface sensor and the main tray upper limit sensor.
- During the consecutive printing operation, FS counts the number of exited paper and stops the printing when it reaches the maximum capacity.
 - If the exited paper is ejected during the printing operation, the tray moves up and the main tray empty sensor turns ON and resets the counter. It makes possible to exit paper with no limitation.
 - The main tray lower limit sensor detects the lower limit of the tray.
 - During the intermittent printing operation, the main tray lower limit sensor controls the capacity of the paper exit because the counter does not integrate the total number of exited paper.

[1]	Staple paper exit top surface sensor (PS7)	[2]	Main tray upper limit sensor/in (PS44)
[3]	Main tray	[4]	Main tray upper limit sensor/out (PS44)
[5]	Main tray empty sensor (PS6)	[6]	Main tray top surface sensor (PS4)

[1]	Main tray	[2]	Main tray up/down motor (M5)
[3]	Main tray lower limit sensor (PS5)		

7. STAPLER SECTION

7.1 Drive

- It staples the paper in the alignment section.
- The stapler moved when the stapler movement motor is driven, and the corner one point staple (front/rear) or the center two point staple will be conducted.
- The stapler position sensor (four points) is installed in order to specify the stapler's stop position (stapling position).
- The sensors are used to stop the stapler at the place suitable for each stapling.

[1]	Stapler position sensor/1 (PS50)	[2]	Stapler position sensor/2 (PS51)
[3]	Stapler position sensor/3 (PS52)	[4]	Stapler movement motor (M13)
[5]	Stapler position sensor/4 (PS53)	[6]	Stapler

7.2 Operation

7.2.1 Stapler movement

(1) Stapler movement operation

- The stapler movement motor moves the stapler.
- The rotation of the stapler movement motor makes the belt rotate the stapler movement gear, and it operates with the stapler.
- Four sensors are used for the position the stapler stops. The stapler position sensor/4 detects stapling position at the back corner, the stapler position sensor/3 and the stapler position sensor/2 detect stapling position for two points parallel stapling (side stitching), and the stapler position sensor/1 detects stapling position at the front corner.

[1]	Stapler position sensor/4 (PS53)	[2]	Actuator (for PS52 detection)
[3]	Stapler movement motor (M13)	[4]	Actuator (for PS51/PS52 detection)
[5]	Stapler position sensor/3 (PS52)	[6]	Stapler position sensor/2 (PS51)
[7]	Stapler position sensor/1 (PS50)	[8]	Stapler movement gear

(2) Stapler movement control

- With the FS start signal from the main body, the stapler movement motor is turned ON and the stapler moves to the standby position and stops.

7.2.2 Stapler control

- The stapling operation is performed by the stapler motor.

(1) Stapling operation

- In the stapling operation, the stapler motor drives the clincher side to press the paper. Then, the staple is pushed out from the stapler side and bent at the clincher side.

[1]	Stapler (clinch side)	[2]	Stapler motor (M14)
[3]	Stapler (stapler side)	[4]	Paper

(2) Staple control

(a) Stapling

- After completing the alignment operation of the alignment plate, the stapler motor performs the stapling operation.
- The stapling operation is completed when the stapler position sensor in the stapler detects the home position and turn ON.

(b) Clogged staple detection

- During the stapling operation, it is determined that the staple has been clogged and the stapler motor turns OFF if the stapler position sensor does not turn ON after a specified period of time since they turn OFF.

(c) Cartridge detection

- The staple empty detect sensor in the staple detects the presence of a cartridge or the incorrect setting of a cartridge.
- When no cartridge is set or it is set incorrectly, the main body displays the error message on its display panel.

(d) Staple detection control

- When the staples run out, the self-priming sensor turns ON and the main body displays the error message on its display panel.

8. Z-FOLDING SECTION ZU-606

------------------------	--

8.3 Operation

8.3.1 Conveyance path switching

- The gates/Lw and /Up switch the conveyance path.
- The gate solenoid/Lw and the gate solenoid/Up drive the gate/Lw and the gate/Up respectively.

(1) Gate/Lw

- The gate/Lw switches the paper path between the straight conveyance path and the upper conveyance path.
- The gate/Lw is set to the straight conveyance path when the gate solenoid/Lw turns OFF.
- The gate/Lw is set to the upper conveyance path when gate solenoid/Lw turns ON.

[1]Straight conveyance path	[2]Gate solenoid/Lw (SD601)
[3]Upper conveyance path	[4]Gate/Lw

(2) Gate/Up

- The gate/Up switches the paper path of the paper that was conveyed to the upper conveyance path by the gate/Lw.
- The gate/Up is set to the paper path to the exit side when the gate solenoid/Up turns OFF.
- The gate/Up is set to the paper path to the 1st folding stopper when gate solenoid/Up turns ON.

[1]Gate solenoid/Up (SD602)	[2]Gate/Up
-----------------------------	------------

[3] Conveyance path to the exit side	[4] 1st folding stopper
[5] Conveyance path to the 1st folding stopper	

(3) Operation timing

(a) Z-folding mode

1. In the Z-folding mode for the all paper size, the gate solenoid/Lw and the gate solenoid/Up turn ON when the paper size detect board detects the leading edge of the paper.
2. The gate/Lw is set to the upper conveyance path and the gate/Up is set to the conveyance path to the 1st folding stopper.
3. The gate solenoid/Lw and the gate solenoid/Up turn OFF a specified period of time after the last paper turns OFF the exit sensor.

(b) Punch mode for the small size paper (A5, 5-1/2 x 8-1/2)

- Gate solenoids/Lw and gate solenoids/Up always remain OFF, and never turn ON.
- The gate/Lw remains being set to the straight conveyance path.

(c) Punch mode for the large size paper (other than the small size paper)

- The gate solenoid/Lw turns ON when the paper size detect board detects the leading edge of the paper, and then the gate/Lw is set to the upper conveyance path. The gate solenoid/Up remains OFF and the gate/Up remains being set to the paper path to the exit side.
- The gate solenoid/Lw turns OFF a specified period of time after the last paper turns OFF the exit sensor.

(d) Straight exit mode

- Gate solenoid/Lw and gate solenoid/Up always remain OFF, and never turn ON.
- The gate/Lw remains being set to the straight conveyance path.

8.3.2 Conveyance line speed switching

- The main motor drives the conveyance drive roller, the 1st folding roller, and the 2nd folding roller, which perform the folding operation, as well as the conveyance roller and the exit roller.
- The paper size detect board, the conveyance sensor, and the exit sensor detect the paper.

[1] Conveyance drive roller	[2] 1st folding roller
[3] Conveyance roller	[4] Paper size detect board (PSDTB)
[5] Registration roller	[6] Exit sensor (PS609)
[7] Exit roller	[8] Conveyance sensor (PS601)

[9] 2nd folding roller

(1) Operation timing**(a) Z-folding**

1. Transmitting the paper pass signal from the horizontal transfer, the main motor turns ON and rotates in high speed.
2. The main motor rotates in low speed and perform the 1st and 2nd folding operations a specified period of time after the paper size detect board detects the leading edge of the paper.
3. The main motor rotates in high speed to perform the paper exit operation of the 1st paper and to convey the 2nd paper in sync with the paper exit speed of the main body when the conveyance sensor detects the leading edge of the paper and turns ON after the 2nd folding operation.
4. The main motor turns OFF when the exit sensor detects the trailing edge of the last paper.

**(b) Punch + Z-folding**

1. Transmitting the paper pass signal from the horizontal transfer, the main motor turns ON and rotates in high speed.
2. The main motor rotates in low speed and perform the 1st folding operation a specified period of time after the paper size detect board detects the leading edge of the paper.
3. The main motor turns OFF for the punching operation a specified period of time after paper size detect board detects the trailing edge of the paper.
4. After the punching operation, the main motor turns ON and perform the 2nd folding operation.
5. The main motor rotates in high speed to perform the paper exit operation of the 1st paper and to convey the 2nd paper in sync with the paper exit speed of the main body when the conveyance sensor detects the leading edge of the paper and turns ON after the 2nd folding operation.
6. The main motor turns OFF when the exit sensor detects the trailing edge of the last paper.

**8.3.3 Registration control**

- The registration control corrects paper skew in the Z-folding mode and the punch mode.
- The paper exited from the main body is pressed against the stopped registration roller and forms a loop to correct skew of the paper, and then the paper is conveyed with its leading edge nipped.
- The registration motor drives the registration roller.

[1]	Leading edge of the paper	[2]	Loop
[3]	Registration motor (M601)	[4]	Registration roller

(1) Operation timing

(a) Punch + Z-folding

1. Transmitting the paper pass signal from the horizontal transfer, the registration motor turns ON.
2. The registration motor stops a specified period of time after the paper size detect board detects the leading edge of the paper conveyed from the main body.
3. The paper is pressed against the registration roller and forms a loop to correct paper skew.
4. The registration motor turns ON and the conveyance is restarted a specified period of time after the paper contacts with the registration roller.
5. The registration motor turns OFF a specified period of time after the paper is exited.
 - No registration control is conducted in the straight mode.

8.3.4 Punch section operation outline

- The punch operation is conducted for every paper.
- The controls related to the punch operation is the punch control, the punch position movement control, and the punch hole switching control.

8.3.5 Punch control

- The punch operation is conducted by transmitting the rotation of the punch motor to the eccentric cam by the punch clutch and reciprocating the punch edges connected to the cam holder once.
- The punch motor drives the eccentric cam and performs the punch operation when punch clutch turns ON.
- The punch motor rotates clockwise from the view of the rear.
- The punch motor keeps rotating during the punch operation.
- The punch home sensor detects the home position of the punch edges.

[1]	Eccentric cam	[2]	Cam holder
[3]	Punch home sensor (PS606)	[4]	Punch motor (M604)
[5]	Punch clutch (CL601)	[6]	Punch edges
[7]	Paper		

(1) Operation timing

- The registration motor and the main motor turn OFF to stop the conveyance during the punch operation.
- 1. The punch motor turns ON when the paper size detect board detects the leading edge of the paper.
- 2. The punch clutch turns ON and performs the punch operation a specified period of time after the paper size detect board detects the trailing edge of the paper.
- 3. The punch clutch turns OFF after a specified period of time.
- 4. The punch motor turns OFF a specified period of time after the punch clutch turns OFF.
- 5. After the punch operation, the registration motor and the main motor turn ON to exit the paper.

8.3.6 Punch position movement control

- The punch shift motor moves the punch unit to move the punch hole position in the main scan direction.
- The registration motor controls the punch position in the sub scan direction by its stop position.
- 5 sensors of the paper size detect board detects the punch hole position.
- The front side sensor among 5 sensors detects the leading/trailing/side edge of the paper and the other 4 sensors detect the side edge of the paper. The different sensor is used depending on the paper size.
- The punch shift home sensor detects the home position.

[1]	Belt	[2]	Punch shift motor (M605)
[3]	Punch shift home sensor (PS605)	[4]	Punch unit
[5]	Side edge sensors	[6]	Leading/trailing/side edge sensor
[7]	Paper size detect board (PSDTB)		

(1) Standby position movement of the punch unit

- In the punch mode, the punch unit is set to the standby position in accordance with the paper size before the paper is conveyed.
- The punch shift motor moves the punch unit so that the sensor corresponding to the paper size among 5 sensors of the paper size detect board (in case of A4 paper, the sensor is used) is positioned 5 mm inward from the side edge of the paper.
- This operation is not conducted in the no punch mode.

[1]	Side edge of the paper	[2]	Punch shift motor (M605)
[3]	Punch unit	[4]	Punch blade
[5]	Paper size detect board (PSDTB)	[6]	Standby position

(2) Punch position correction

- The punch unit positioned 5 mm inward from the side edge of the paper conducts the punch position correction operation by moving the punch unit back and forth while conveying the paper to correct the misalignment between the conveyed paper and the punch position.
1. Move the punch unit backward until the certain side edge sensor (in case of A4 paper) detects the side edge of the paper.
 2. Then, move the punch unit forward until the side edge sensor detects the side edge of the paper (the side edge reference position detection).
 3. Move the punch unit forward further so that the center of the punch edges is positioned to the center of the paper.

[1]	Side edge of the paper	[2]	Paper size detect board (PSDTB)
[3]	Center of the paper	[4]	Paper conveyance direction
[5]	Punch edges	[6]	Punch unit
[7]	Center of the punch	[8]	Standby position

8.3.7 Punch hole switching control

1. Transmitting the paper pass signal from the horizontal transfer, the punch switchover motor switches the number of holes in the punch mode.
2. The punch switchover motor rotates the punch switchover cam clockwise and moves the eccentric cams and back and forth via the cam cover.
3. When switching between the 2 holes punching and the 4 holes punching in Metric Type, 2 eccentric cams in the middle remain being held in the cam holders because they are shared in both cases.
4. When the cam cover moves forward, the eccentric cams at the outside for the 4 holes punching are held in the cam holder so that the total of 4 eccentric cams are driven.
5. When the cam cover move backward, 2 outside eccentric cams are disengaged.
6. For the switchover between the 2 holes punching and the 3 holes punching in Inch Type, the 2 holes eccentric cams and the 3 holes eccentric cams work exclusively.
7. When the cam cover moves forward, the 3 holes eccentric cams are held in the cam holder and the 2 holes eccentric cams are disengaged.
8. This operation is not conducted if the number of holes is same with the previous printing.

<Upper side view>

<Right side view>

[1]	Cam cover	[2]	Cam holder
[3]	Eccentric cam (4 holes)	[4]	Eccentric cam (2 holes/4 holes)
[5]	Punch switchover motor (M608)	[6]	Punch switchover switch (MS601)
[7]	Punch switchover cam		

8.3.8 Punch scraps conveyance control

- The punch scraps are conveyed by the punch scraps conveyance screw driven by the punch scraps conveyance motor.
- They are conveyed to the punch scraps box via the punch scraps collective duct.
- The punch scraps conveyance motor turns ON to rotate the punch scraps conveyance screw a specified period of time after the paper edge sensor detects the trailing edge of the paper in the punch mode.
- The punch scraps are sent to the forward by the rotation of the screw and collected in the punch scraps box via the punch scraps collective duct.

[1]	Punch scraps conveyance screw	[2]	Punch scraps conveyance motor (M607)
[3]	Punch scraps box	[4]	Punch scraps collective duct

8.3.9 Punch scraps control

- The punch scraps box set sensor and the punch scraps full sensor monitor the punch scraps box.

[1]	Punch scraps full sensor (PS608)	[2]	Punch scraps box
[3]	Punch scraps box set sensor (PS607)		

(1) Punch scraps full detection

- The punch scraps full sensor detects whether the punch scraps box is full or not.
- The punch scraps full sensor turns ON and transmits the “punch scraps full” signal to the main body when the punch scraps box becomes full of punch scraps, and then the main body displays the message on its operation panel.

(2) Punch scraps box detection

- The punch scraps box set sensor detects whether the punch scraps box is housed or not.
- The punch scraps box set sensor turns ON and transmits the “no punch scraps box” signal to the main body when the punch scraps box is not set, and then the main body displays the message on its operation panel.

8.3.10 1st folding control

1. The registration roller, the conveyance roller, and the 1st folding roller convey the paper to the 1st folding stopper section via the gate/Up.
2. A loop is formed between the 1st folding roller and the conveyance drive roller when the leading edge of the paper is pressed against the 1st folding stopper.
3. The loop grows, and then it is caught by these rollers and the 1st folding is conducted.
4. The paper is then conveyed to the 2nd folding stopper section.
5. The position of the 1st folding depends on the position of the 1st folding stopper.
6. The 1st folding stopper motor sets the position in accordance with the number of steps from the 1st folding stopper home sensor.
7. In the Z-folding mode with the punch mode, the registration motor and the main motor stops to conduct the punch operation after the 1st folding operation, and then the registration motor and the main motor turns ON to conduct the 2nd folding operation.

[1]	1st folding stopper	[2]	Gate/Up
[3]	Conveyance roller	[4]	Registration roller
[5]	1st folding roller	[6]	Loop
[7]	Conveyance drive roller	[8]	1st folding stopper home sensor (PS603)

(1) Operation timing

1. The 1st folding stopper motor turns ON to drive the 1st folding stopper to the appropriate position in accordance with the paper size a specified period of time after transmitting the paper pass signal from the horizontal transfer.
2. Transmitting the termination signal from the main body, the 1st folding stopper motor replaces the 1st folding stopper to the home position.

8.3.11 2nd folding control

1. The paper conveyed from the 1st folding section to the 2nd folding section is stopped by the 2nd folding stopper and forms a loop between conveyance drive roller and the 2nd folding roller.
2. The loop grows, and then it is caught by these rollers and the 2nd folding is conducted.
3. The 2nd folding stopper motor turns ON to move the 2nd folding stopper to the evacuation position for the paper conveyance when the trailing edge of the paper (1st folding) conveyed to the 2nd folding direction passes the conveyance sensor.
4. The 2nd folding is not conducted for 8.5 x 14 paper.

[1]	Conveyance drive roller	[2]	1st folding roller
[3]	2nd folding stopper (Home position)	[4]	Exit sensor (PS609)
[5]	2nd folding stopper (Folding position)	[6]	2nd folding stopper home sensor (PS604)
[7]	Conveyance sensor (PS601)	[8]	2nd folding roller
[9]	Loop	[10]	Paper exit direction

(1) Operation timing

1. The 2nd folding stopper motor turns ON to drive the 2nd folding stopper to the appropriate position in accordance with the paper size when the paper size detect board detects the leading edge of the paper. (first sheet)
2. The 2nd folding stopper motor rotates in the reverse direction to move the 2nd folding stopper to the home position when the conveyance sensor detects the trailing edge of the paper after the 2nd folding. It opens the paper exit path.
3. The 2nd folding stopper motor turns ON to replace the stopper to the original position for the subsequent Z-folding when the exit sensor detects the trailing edge of the paper. (Preparation for the second sheet and after)

9. PUNCH SECTION PK-521

9.1 Configuration

[1]	Punch unit	[2]	Punch scraps box
[3]	Punch control board (PKCB)		

NOTE

- North America, Europe and Sweden are same configuration except for a number of blades.

9.2 Drive

9.2.1 Punch shift section

[1]	Punch oscillating assy shift	[2]	Punch oscillating assy gear
[3]	Punch oscillating motor (M302)	[4]	PK punch home sensor (PS303)

9.2.2 Punch section

[1]	Punch motor pulse sensor (PS306)	[2]	Punch drive motor (M301)
[3]	Punch blade drive guide/R	[4]	Punch blade
[5]	Punch blade drive guide/L		

9.2.3 Punch scraps box section

- The punch scraps box section comprises no moving parts.

9.3 Operation

9.3.1 Punch standby position movement control

- Turning ON the device, the punch oscillating motor rotates to move the punch unit to the home position until the PK punch home sensor turns ON.
- After selecting a punch mode, one of five sensors corresponded to each paper size detects a paper and the punch unit is shifted.
- The punch unit returns to the home position at the end of the job.
- When the punch is not used, the punch oscillating part is driven at the specified position so that paper jam does not occur.

<Example: A4 size>

[1]	Side edge reference position	[2]	Paper size detect board (PSDTB)
[3]	Punch blade	[4]	Punch unit
[5]	Paper	[6]	Paper transfer direction

9.3.2 Punch position correction control

For the punch unit positioned from the side edge of the paper to the inside, the punch position is adjusted in the following procedure so that punching is made to the center of paper at all times. The punch position correction is operated by moving the punch unit back and forth while conveying the paper.

- When the punch unit starts operating and the paper size detection or the punch operation is finished, the punch unit is moved to the front side until the paper size detect board detects the side edge of the paper. Then, the punch unit is moved to the rear side until the paper size detect board detects the side edge of the paper (the side edge reference position detection).
- Once it detects the side edge reference position, the punch unit is moved further so that the center of the punch blade is positioned to the center of the paper. The moving distance and its direction are depending on the paper size.

<Example: A4 size>

[1]	Side edge reference position	[2]	Paper size detect board (PSDTB)
[3]	Center of the punch blade	[4]	Punch blades
[5]	Punch unit	[6]	Front side
[7]	Rear side	[8]	Punch unit moving direction
[9]	Paper	[10]	Center of the paper
[11]	Paper transfer direction		

9.3.3 Punch control

(1) Registration loop control

The 1st transport motor (FS-535) turns OFF temporarily to stop conveyance of paper when the specified time has passed since paper exit sensor detected the leading edge of the paper. Thus the paper is pressed against the entrance roller forming a loop to correct the bend. When the specified time has passed, the 1st transport motor (FS-535) turns ON to restart conveying the paper.

[1]	Entrance roller	[2]	PK-521
[3]	Loop		

(2) Punch control

Transmitting the start signal from the main body, the 1st transport motor (FS-535) rotates.
In the punch mode, the 1st transport motor (FS-535) stops temporarily a specified period of time after the FNS entrance sensor detects the trailing edge of the paper.
At the same time, the punch drive motor is driven to move the punch blade drive guide/L/R horizontally. The punch blade drive guide has slots to shift punch blades up and down. Punch blades moving downward conduct the punch operation. The punch drive motor stops and the punch operation is completed when the PK punch hole position sensor turns ON.
The 1st transport motor (FS-535) rotates again to convey the paper a specified period of time after it stops temporarily.

[1]	Right side view	[2]	Punch blade (for 3 holes)
[3]	Punch blade drive guide/R	[4]	Punch drive motor (M301)
[5]	PK punch hole position sensor/1 (PS307)	[6]	PK punch hole position sensor/2 (PS301)
[7]	Punch drive plate (for 2 holes)	[8]	Left side view
[9]	Punch blade drive guide/L	[10]	Punch drive plate (for 3 holes)
[11]	Punch blade (for 2 holes)		

9.3.4 Punch scraps box control

(1) Punch scraps box full detection

The punch scraps generated by the punch operation falls in the punch scraps box. The PK punch hole scraps box full sensor turns ON and transmits the “punch dust full” information to the main body when the punch scraps box becomes full of punch scraps.

(2) Punch scraps box detection

The PK punch scraps box set sensor detects whether the punch scraps box is set or not. The PK punch scraps box set sensor turns OFF and transmits the “no punch scraps box” information to the main body if the punch scraps box is not set.

10. SADDLE SECTION SD-512

10.1 Configuration

[1]	Stapler unit	[2]	Center fold roller/2
[3]	Center fold section lower paddle	[4]	Tri-folding roller
[5]	Paper transport belt	[6]	Saddle section exit roller
[7]	Center fold roller/1	[8]	SD drive board (SDDb)
[9]	Saddle section paper feed roller		

[1]	Center staple alignment plate drive gear/Rr	[2]	Center fold knife assy
[3]	Center staple alignment plate drive gear/Fr		

10.2 Transport section

10.2.1 Drive

[1]	FNS entrance sensor (PS1) *	[2]	SD entrance sensor (PS1)
[3]	SD transport motor (M1)	[4]	Paper receiving guide home sensor (PS2)
[5]	Paper receiving guide control motor (M2)	[6]	Paper receiving guide
[7]	SD transport roller	[8]	SD exit sensor (PS12)
[9]	1st transport motor (M1) *		

- *: Sensor and motor installed in FS-535.

10.2.2 Paper transport

- The center staple switching gate solenoid turns ON when the specified period of time has passed after the paper passed through the RU transport sensor to transport the paper to SD-512.
- The paper then is transported to the alignment section by SD transport roller.
- The SD transport roller rotates when the SD transport motor is driven.

10.2.3 Paper receiving guide

- The paper is transported to the alignment section one by one. A paper which is curled may cause paper jam at the entrance of SD-512.
- In order to prevent this paper jam, the paper receiving guide is installed so that each paper is transported to the alignment section without fail.
- The paper receiving guide is operated by the paper receiving guide control motor. Paper receiving opens/closes the upper side of the paper route inside the SD-512 when the paper receiving guide control motor rotates in forward/reverse direction.

[1]	SD transport motor (M1)	[2]	Paper receiving guide home sensor (PS2)
[3]	Paper receiving guide control motor (M2)	[4]	Paper receiving guide

[1]	SD transport roll	[2]	Paper receiving guide
[3]	Paper	[4]	SD transport roller
[5]	Paper transportation from within the finisher	[6]	Receiving paper guide operation
[7]	Next paper standby (moves receiving paper guide to the home position)		

10.3 Alignment section

10.3.1 Drive

[1]	Center folding section upper paddle	[2]	Alignment plate/Fr
[3]	SD paddle motor (M7)	[4]	Stopper guide
[5]	Stopper drive motor (M4)	[6]	Exit grip/Rr
[7]	Center folding section lower paddle	[8]	Alignment plate/Rr

10.3.2 Alignment

- It aligns the paper transported to the alignment section.
- The paper CD alignment is conducted by the alignment plate/Fr and the alignment plate/Rr. The alignment plate shifts by forward/reverse rotation of the alignment motor to align the paper edge.
- The paper FD alignment is conducted by the stopper guide, center folding section upper paddle and center folding section lower paddle.
- The stopper guide moves up when the stopper drive motor rotates in forward/reverse direction to stop at the position which suits the length of the paper transported. The leading edge of the paper stops by the stopper guide to align the leading edge.
- When the paper is transported, the stopper drive motor rotates in forward/reverse direction to operate the stopper guide drive belt, and moves the stopper guide up/down.
- The center folding section upper paddle and the center folding section lower paddle are installed in order to receive the transported paper to the receiving section without fail.
- The paddle is driven by the SD paddle motor.

[1]	Stacker paper sensor (PS3)	[2]	Alignment home sensor (PS4)
[3]	Alignment plate/Fr	[4]	SD paddle motor (M7)
[5]	Stopper guide	[6]	Stopper drive motor (M4)
[7]	Stopper guide drive belt	[8]	Center folding section lower paddle
[9]	Alignment motor (M3)	[10]	Alignment plate/Rr
[11]	Center folding section upper paddle	-	-

(1) Alignment operation

- When the SD exit sensor of the finisher detects the leading edge of the paper, the alignment motor starts rotating in the direction to close the alignment plate, and the alignment plate/Fr and the alignment plate/Rr stop at the position where it is slightly wider than the paper width.
- When the specified period of time has passed after the SD entrance sensor detects the trailing edge of the paper, the alignment motor rotates in forward/reverse direction to do oscillation of the alignment plate to align paper.
- The oscillation of the alignment plate is conducted each time a sheet of paper is transported, and the alignment plate is shifted to the standby position after the alignment operation is finished.
- The home position of the alignment plate is detected by the alignment home sensor.

(2) Stopper guide operation

- The stopper guide is moved up according to the paper size.
- The stopper guide moves up and stops at the specified position after the leading edge of the paper passes the SD exit sensor.

(3) Paddle operation

- The up/down paddle is driven by the SD paddle motor. The up/down paddle is driven when the specified period of time has passed after the leading edge of the paper passed the SD exit sensor of the finisher.
- The up/down paddle stops after the paper trailing edge passes the finisher's SD exit sensor and the paddle rotates for the specified number of times.

10.3.3 Stopper guide

- At the stopper guide, papers in sub scanning direction are aligned, and papers conveyed to the aligning section are conveyed to the specified position.
- The exit grip holds the paper when shifting it to the specified position and when stapling papers.
- The alignment section, staple position and other positions (center folding, saddle folding, tri-folding) have their own up/down stop positions. They are controlled by the pulse number of the stopper drive motor.

(1) Stopper operation

- The stopper drive motor moves the stopper guide up and down in accordance with the paper size. The stopper home sensor detects the home position.

[1]	Stopper guide	[2]	Exit grip/Fr
[3]	Stopper drive motor (M4)	[4]	Stopper home sensor (PS6)
[5]	Exit grip/Rr		

(2) Stopper control

[1]	Center fold knife assy	[2]	Stopper guide
[3]	Exit grip/Fr	[4]	Exit grip/Rr
[5]	Center fold roller/2	[6]	Center fold roller /1

(a) Folding mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.
- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the folding position.

(b) Saddle stitching mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.
- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the saddle stitching position.
- After a specified period of time since stapling operation was completed, the alignment motor opens the alignment plates and the stopper drive motor starts rotating to move the stopper guide further down and lower the paper to the folding position.

(c) Tri-folding mode

- After a specified period of time since the last sheet of paper was aligned, the stopper solenoid is turned ON and the sheets of paper are held in place.

- After the sheets are held in place, the stopper drive motor rotates to move the stopper guide down and lower the sheets to the 1st folding position in the tri-folding.

10.4 Stapler

10.4.1 Drive

[1]	Stapler unit	[2]	Stopper drive motor (M4)
[3]	Stopper home sensor (PS6)	[4]	Stopper guide
[5]	Alignment tray		

10.4.2 Operation

- The stapling operation is performed by the stapler motor.

(1) Stapling operation

- In the stapling operation, the stapler motor in the stapler pushes out the paper press section to the clincher by the drive gear to hold the paper and punch out the staple. Then, the clincher motor in the stapler bends the staple.
- The drive gear pushes out the pressed part of the paper toward the clincher to hold the paper, and the pin will then be pushed out.
- When the pin penetrates the paper batch, the pin will be bent to staple the paper batch at the clincher section.

[1]	Clincher	[2]	Drive gear
[3]	Stapler motor	[4]	Staple
[5]	Stapler	-	-

(2) Staple control

(a) Stapling

- After completing the alignment operation of the alignment plate, the staple motor performs the stapling operation.
- The stapling operation is completed when the stapler home position sensor (rear) detects the home position and turn ON.

(b) Clogged staple detection

- When the stapler home position sensor (rear) does not turn ON after the specified period of time after it turned OFF during stapling, it is determined that the staple motor has the trouble, and stops the stapler motor.

(c) Cartridge detection

- The cartridge set switch detects the presence of a cartridge or the incorrect setting of a cartridge.
- When no cartridge is set or it is set incorrectly, the main body displays the error message on its display panel.

(d) Staple detection control

- When the staples run out, the staple empty switch turns ON and the main body displays the error message on its display panel.

10.5 Folding/Saddle stitching**10.5.1 Drive**

[1]	Center fold change motor (M8)	[2]	Tri-folding roller
[3]	Center fold knife motor (M9)	[4]	Center fold roller motor (M5)
[5]	Saddle section exit roller		

[1]	Center fold roller/1	[2]	Center fold roller/2
[3]	Center fold home sensor (PS8)	[4]	Fold drive gear/Rr
[5]	Center fold knife motor (M9)	[6]	Center fold knife assy
[7]	Fold drive gear/Fr	[8]	Center fold change motor (M8)

10.5.2 Folding knife

- The center fold knife motor drives the folding knife.
- The folding knife is used in the folding/saddle stitching/tri-folding mode.
- In the tri-folding mode, it is used at the 1st folding.

(1) Folding knife operation

- The center fold knife motor rotates the crank shaft a half turn via the gear and pushes the paper to the nip section with the folding knife.
- The folding rollers draw and fold the paper.
- The position of the stopper guide controls the folding position.

[1]	Before folding	[2]	Folding knife
[3]	Center fold home sensor (PS8)	[4]	Center fold roller/2
[5]	Center fold roller/1	[6]	Folding operation
[7]	Crank shaft/Rr	[8]	Fold knife assy drive gear/Rr
[9]	Fold knife assy drive gear/Fr	[10]	Crank shaft/Fr

(2) Folding knife control

- The center fold knife motor turns ON and sticks out the folding knife to the paper after a specified period of time since the stopper guide stops at the folding position.
- The center fold knife motor stops when the folding knife reciprocates after fold operation is completed and the center fold home sensor turns OFF.

10.6 Tri-folding

10.6.1 Drive

[1]	Tri-fold knife assy	[2]	Center fold change motor (M8)
[3]	Tri-fold guide home sensor (PS7)	[4]	Tri-fold guide motor (M6)
[5]	Center fold change gate home sensor (PS11)	[6]	Center fold change gate
[7]	Tri-fold roller	[8]	SD exit sensor (PS12)
[9]	Tri-fold knife		

10.6.2 Tri-folding operation

1. When the center fold change motor drives, the center fold change gate rotates. The edge of the paper to which the first fold was applied at the center fold section will be transported to the tri-fold path.
2. When the tri-fold guide motor drives, the tri-fold knife assy. drive gear rotates to move down the tri-fold knife assy. The paper to which the first folding is applied at the center fold section will be pushed out to the tri-fold roller.
3. The paper is pulled into the tri-fold roller to tri-fold the paper.
4. When tri-fold is finished, the center fold change gate will return to the home position. The home position of the center fold change gate is detected by the center fold change gate home sensor.

[1]	Tri-fold knife assy	[2]	Tri-fold knife assy drive gear
[3]	Center fold roller/1	[4]	Paper
[5]	Center fold roller/2	[6]	Tri-fold roll
[7]	Tri-fold roller	[8]	Center fold change gate
[9]	Tri-fold knife	-	-

10.7 Exit section

10.7.1 Drive

[1] Center fold roller/1	[2] Center fold change motor (M8)
[3] Tri-fold guide home sensor (PS7)	[4] Tri-fold roller
[5] Paper transport belt/Fr	[6] Paper transport belt motor (M34)
[7] Paper transport belt/Rr	[8] Center fold roller motor (M5)
[9] Paper exit roller	

10.7.2 Paper exit

- Center folded, saddle folded, or tri-folded paper is discharged to the saddle tray.
- The paper that is center folded and saddle folded are sent through the upper route, and the tri-folded paper is sent through the lower route to be discharged.
- The paper is discharged by driving the exit roller and the tri-fold roller. Both rollers are driven by the center fold roller motor.

(1) Paper exit for center fold / saddle fold

- The center fold roller motor is driven after the center fold or the saddle fold, and discharges the paper to the saddle tray by the paper exit roller.

[1] Paper exit roller	[2] Saddle exit tray
[3] Center fold roller motor (M5)	

(2) Paper exit for tri-fold

- Since the paper is tri-folded by the tri-fold roller, the paper is transported through the lower route.

[1] Tri-fold gate	[2] Center fold roller motor (M5)
[3] Tri-fold roller	

10.7.3 Paper transport belt

- The paper which came through the necessary process is transported to the tray edge by the paper transportation belt. Also, the paper jam at the tray's rear edge is prevented by driving the paper transportation belt.

(1) Transportation

- When the specified period of time has passed after the leading edge of the paper passed the SD exit sensor, the paper transport belt motor is driven to drive the paper transport drive belt.
The timing the belt starts and stops differ for center folding and tri-folding since they have different paper exit route.
- The paper exit tray has the SD exit full sensor which detects the paper (exists or not exist) at the paper exit.
The belt is driven before the leading edge of the paper reaches to the exit when there is no paper at the exit, and the belt is driven after the paper edge reached the exit when there is a paper.

[1]	Paper retainer	[2]	Paper route for center fold / saddle fold
[3]	SD exit sensor (Position for center fold / saddle fold)	[4]	Paper route for tri-fold
[5]	SD exit sensor (Position for tri-fold)	[6]	Paper transport drive belt
[7]	SD exit full sensor (PS35)	[8]	Actuator to detect paper exit tray-full

(2) Exit tray upper limit detection

- The exit tray has the SD exit tray limit sensor which detects the load of the exit tray.
- It starts counting when the SD exit tray limit sensor turns ON, and the finisher stops when it reaches to the exit tray upper limit with the specified number of copies.
- When printings with different modes are conducted in series, the sensor detects the upper limit of the mode which upper limit is the lowest.

(3) Universal design

- As the universal design, the exit tray can be lifted up to drive the paper transport drive belt to shift the paper at the exit to the front edge of the exit tray.
- The exit tray is normally secured with the screw. The exit tray can be lifted by removing the tray lock screw (one point) at the rear side of the exit tray.

[1]	Exit tray's normal position	[2]	Exit tray
-----	-----------------------------	-----	-----------

[3]	SD exit tray lift sensor (PS43)	[4]	Exit tray lifted status
-----	---------------------------------	-----	-------------------------

[1]	Paper exit tray's lock screw
-----	------------------------------

11. JOB TRAY JS-602

11.1 Configuration

[1]	Job tray	[2]	Job separator cover
-----	----------	-----	---------------------

11.2 Drive

[1]	Job separator exit roller	[2]	Job separator transport roller
[3]	Bypass transport motor (FS-535)	[4]	3rd entrance switching solenoid (SD404)

11.3 Operation

11.3.1 Job tray paper transport mechanism

- The job separator transport roller and job separator exit roller turn to transport the paper into the job tray as the motor is energized.
- The 3rd entrance switching solenoid is energized to select the paper path into the job tray.

[1]	Job separator exit roller	[2]	Job separator transport roller
[3]	Paper	[4]	Bypass transport motor (M3-FN)
[5]	3rd entrance switching solenoid (SD404)		

12. POST INSERT SECTION PI-505

12.1 Configuration

[1]	Tray /Up section	[2]	Pick-up /Up section
[3]	Separation /Up section	[4]	Transfer section
[5]	Separation /Lw section	[6]	Pick-up /Lw section
[7]	Tray /Lw section		

12.2 Drive

12.2.1 Paper feed drive

[1]	Pick-up roller /Lw	[2]	Pick-up roller /Up
[3]	Pick-up solenoid /Up (SD201)	[4]	Paper feed roller /Up
[5]	Transfer clutch /Up (CL201)	[6]	Separation roller /Up
[7]	Transfer clutch /Lw (CL202)	[8]	Transfer roller /Up
[9]	Registration clutch (CL203)	[10]	Paper feed roller /Lw
[11]	Transfer roller /Lw	[12]	Separation roller /Lw
[13]	Pick-up solenoid /Lw (SD202)	[14]	Transfer motor (M203)
[15]	Paper feed roller /Up and /Lw	[16]	Pick-up solenoid /Up, /Lw (SD201, SD202)
[17]	Pick-up roller /Up and /Lw		

12.2.2 Tray lift drive

[1]	Tray lift motor /Up (M201)	[2]	Tray lift motor /Lw (M202)
-----	----------------------------	-----	----------------------------

12.3 Operation

12.3.1 Tray lift mechanism

- The tray lift motors /Up and /Lw move up and down the trays /Up and /Lw by rotating in the forward and reverse direction to drive the lift arms /Up and /Lw and move up and down the lift plates /Up and /Lw, respectively.
- At the upper limit positions, the tray upper limit sensors /Up and /Lw detect the actuators lifted up by the lift plates.
- At the lower position of the tray, the tray lower limit sensors /Up and /Lw detect the actuators coupled with the lift arms /Up and /Lw.

[1]	Tray lift plate /Up	[2]	Tray lower limit sensor /Up (PS205)
[3]	Lift arm /Up	[4]	Tray upper limit sensor /Up (PS204)
[5]	Tray lift motor /Up (M201)	[6]	Tray upper limit sensor /Lw (PS209)
[7]	Lift arm /Lw	[8]	Tray lower limit sensor /Lw (PS210)
[9]	Tray lift plate /Lw	[10]	Tray lift motor /Lw (M202)

12.3.2 Pick-up mechanism

- The pick-up solenoids /Up and /Lw turn ON to pick up the paper.
- The release arm held upward by the spring lifts up the pick-up roller mounting plate to release the pick-up roller.
- When the pick-up solenoids /Up and /Lw turn ON, the release arm moves backward, and then the pick-up roller mounting plate and the pick-up roller fall down by their own weight.
- The pick-up roller driven by the transfer motor presses the paper and picks it up to transfer it to the separation section.

[1]	Pick-up roller mounting plate	[2]	Release arm
[3]	Spring	[4]	Pick-up solenoid /Up (SD201)
[5]	Pick-up roller		

12.3.3 Separation mechanism

- The separation roller is driven to rotate in the opposite direction from the paper transfer direction. When transferring no or 1 sheet of paper, the separation roller rotates in the paper transfer direction to transfer the paper to the paper transfer section because the frictional force between the paper feed roller or the paper and the separation roller is stronger than the frictional force of the torque limiter.
- When transferring 2 or more sheets of paper, the separation roller rotates in the reverse direction to prevent the bottom sheet from being transferred because the frictional force between the sheets is smaller than the frictional force of the torque limiter.

[1]	Paper feed roller	[2]	Paper transfer direction
[3]	Torque limiter	[4]	Separation roller
[5]	2nd sheet	[6]	1st sheet
[7]	Pick-up roller		

12.3.4 Registration control

- Transmitting the FS start signal, the transfer motor rotates in low speed and the pick-up solenoids /Up and /Lw turn ON. At the time, the tray lift motors /Up and /Lw rotate in the forward direction to lift up the trays /Up and /Lw.
- The tray lift motors /Up and /Lw stop when the tray upper limit sensors /Up and /Lw turn ON, and after a specified period of time, the transfer clutches /Up and /Lw turn ON and the paper is picked up from the tray. Only 1 sheet of paper is transferred by the transfer roller because of the separation roller.
- The transportation motor is switched to high speed when the specified period of time has passed after the paper reached to the paper entrance sensor/Lw. When the punch operation is conducted at this point, registration clutch is turned OFF and stops the transportation roller to create the loop. After a specified period of time, the registration clutch turns ON and the transfer motor drives the paper to FS.
- The transfer motor switches to rotate in low speed to feed the subsequent paper since the paper passed the paper entrance sensors /Up and /Lw, and then the registration clutch turns OFF after a specified period of time.

12.3.5 Paper size detection control

- The paper size VRs /Up and /Lw coupled with the side guide detects the paper size in the main scan direction.
- The paper set sensors /Up and /Lw and the L size sensor /Lw detects the paper size in the sub scan direction.

[1]	Paper size VR /Up (VR201)	[2]	Side guide plate
[3]	Paper size VR /Lw (VR202)	[4]	Paper set sensor /Lw (PS208)
[5]	Paper set sensor /Up (PS203)	[6]	L size sensor /Lw (PS212)

PJ THEORY OF OPERATION AU-102/AU-201/OT-503

1. AU-102

1.1 Configuration

[1]	Authentication unit (AU-102)	[2]	Finger
[3]	Vein image	-	-

1.2 Operation

- A finger vein pattern is used for personal identification.
- Vein patterns are inside the body and cannot be visually recognized. This makes vein patterns extremely difficult to forge or falsify. The vein pattern authentication system can provide high security.
- With ultra-red LED radiation, a finger vein pattern is captured by camera and its image is created. The vein pattern image is registered and a person can be identified if the person's vein pattern matches the registered one at the time of user authentication.

2. AU-201

2.1 Configuration

[1]	Authentication unit (AU-201)	[2]	Non-contact IC card
-----	------------------------------	-----	---------------------

- 2.2 Operation
- A non-contact IC card, such as an employee ID card, is used for personal identification.
 - The system supports the communications protocol in compliance with Type A and Felica (Type C) of ISO14443.
 - It can be used that the card corresponded to Felica, TypeA, SSFC (Shared Security Formats Cooperation), FCF (Felica common-use format), or FCF campus.
 - Simply placing the IC card on the authentication unit will let the unit read the data from the card.

3. OT-503

3.1 Configuration

[1]	Fan unit	[2]	Paper exit tray
-----	----------	-----	-----------------

3.2 Operation

- Output Tray OT-503 is comprised a fan unit and a paper exit tray.
- In order to avoid toner adhesion to other things, three tucking fan motors installed in the fan unit send outside air to an ejected paper for cool it down.

PK THEORY OF OPERATION EK-606/EK-607/SC-508

1. EK-606

1.1 Configuration

[1]	USB terminal (extension)	[2]	USB terminal (standard)
[3]	Local Interface Kit EK-606	[4]	Voice guidance output terminal

1.2 Operation

- The document can be printed directly from, or saved in, the USB memory.
- Connecting the USB keyboard (dealer option: overseas market only) will permit keyboard input.
- To use the voice guidance function, i-Option LK-104 v3 and Upgrade Kit UK-204 are required.

2. EK-607

2.1 Configuration

[1]	USB terminal (extension)	[2]	USB terminal (standard)
[3]	Local Interface Kit EK-607	[4]	Voice guidance output terminal

2.2 Operation

- The document can be printed directly from, or saved in, the USB memory.
- Connecting the USB keyboard (dealer option: overseas market only) will permit keyboard input.
- The local interface kit is mounted when the voice guidance function and functions interacting with the portable phone or PDA (portable data terminal) compatible with Bluetooth are to be used. It has a built-in speaker and Bluetooth communication receiver.
- To use the voice guidance function, i-Option LK-104 v3 and Upgrade Kit UK-204 are required.
- Using Bluetooth, the user can print files directly from the portable phone, download and print PDF or other files from the portable phone, or save them in a box.
- If an XHTML file is downloaded from the portable phone, an image file can be downloaded from the URL described in XHTML and printed as an image onto a location specified in the XHTML document.

[1]	Portable phone, PDA	[2]	Local Interface Kit EK-607
-----	---------------------	-----	----------------------------

3. SC-508

3.1 Configuration

[1]	Security Kit SC-508 *	-	-
-----	-----------------------	---	---

- *: When DF-701 is mounted, it is necessary to install two security kits to the machine for each front side scanning and back side scanning.

3.2 Operation

- The security kit offers the copy guard (copy prohibited) and password copy functions in addition to the conventional copy protect function. The copy guard security pattern or password copy security pattern printed on the original is detected to thereby prevent unauthorized copies from being produced.
- The copy guard security pattern and password copy security pattern can be detected only by the Konica Minolta machine mounted with the copy guard and password copy functions.

PL THEORY OF OPERATION FK-511

1. COMMUNICATION CONTROL

1.1 FIF bits of DIS, DTC and DCS

NOTE

- Considered to be A4 width when the DIS recording paper width is invalid (1, 1).
Becomes a FIF error when the DCS recording paper width is invalid (1, 1).
- Considered to be unlimited when the DIS recording paper length is invalid (1, 1).
Considered to be unlimited when the DCS recording paper length is invalid (1, 1).
The DCS recording paper length in a machine is made to be of the same length as that in a remote station and is sent.
- Considered to be 2400bps when the DIS transmission speed is an undefined value.
Becomes a FIF error when the DCS transmission speed is an undefined value.
- Considered to be 40ms instruction when the MSLT of DCS is an undefined value.
- Considered to have mm ability when DIS inch ability and mm ability are both set to OFF.
Considered to be 200*100 pels/inch when the DCS resolution receives the inch instruction at 3.851/mm.
Becomes a FIF error when more than one of bit41, 42 and 43 are set to on in the resolution of DCS.
- Becomes a FIF error when DCS receives the MMR instruction without ECM.
- Becomes a FIF error when DCS receives the file transfer (BFT) instruction without ECM.
- Becomes a FIF error when DCS shows an instruction which exceeds the ability of the machine.
- FIF of DIS/DTC is not sent if last octet is 0.
DCS sends FIF whose length is the same as that of the machine.
- When undefined signals are received, they are received and ignored in consideration of the future expansion. (not an error)

1.2 Modem fallback sequence

- Fallback sequences of TCF and CTC are shown as follows:

1.2.1 V17, V29, and V27 ter

Ability of a remote station	TCF fallback sequence
V27 ter/V29	96/V.29 -> 72/V.29 -> 48/V.27 ter -> 24/V27 ter
V27 ter/V29/V33 V17	144/V.17 -> 120/V.17 -> 96/V.17 -> 72/V.17 -> 48/V.27 ter -> 24/V27 ter

- On the transmission side: If PPR is received four times, a modem is set in the fallback state.
- On the reception side: In case of sending PPR, when the number of error frames exceeds the FP value, a modem is set in the fallback state.

1.2.2 V34

- Line quality is always water by modem. Optimum speed is automatically selected on-the-fly.

1.3 V8/V34 sequence**1.3.1 V34****(1) Outline**

- The 33.6kbps data transmission method and protocol including the V8 protocol. As for each of full-duplex and half-duplex, startup handshake until data transmission starts is divided into four phases, phase1 to 4, and signals used in each phase are regulated.

(2) Features

- Full-duplex (echo canceler method) / Half-duplex method are regulated (for data / FAX respectively)
- 2400, 3000 and 3200 symbols / sec (mandatory) and 2743, 2800 and 3429 symbols / sec (option) QAM synchronous transmission at each symbol rate
- Communication at each signal rate of 33600, 31200, 28800, 26400, 24000, 21600, 19200, 16800, 14400, 12000, 9600, 7200, 4800 and 2400 bps
- Four-dimensional-symbol trellis coding
- A 200bps sub channel which can be used as an asynchronous second channel (option)
- Negotiation in which characteristics of a line is measured before transmission starts and the maximum communication speed is achieved by finely adjusting the transmission parameter, based on the result of measurement (carrier / frequency / equalizer / symbol rate / level, etc.)
- Data transmission in the super frame with the hierarchical structure

1.3.2 Sample of a signal procedure at sending two pages

(1) Beginning of communications to beginning of 1st page transmission

(2) Signals between pages

(3) 2nd page transmission termination to communication termination

1.3.3 Procedure details

(1) Phase 1 (V8)Beginning of connection between a calling modem and a called modem

- *1: One of no signals / C1 / CNG (T.30) / CT (V.25)
- *2: V.34 full-duplex ability in the modulation mode bit is ON.
- *3: ANSam of phase inversion is sent. Phase inversion is an option in case of supporting only half-duplex. When CM or valid signal from the calling side is not detected, the procedure is moved to T.30, etc. after 75 ± 5 ms interval.

(a) Signal Definition

Signal type	Meaning	Signal direction call called	Signal speed	Timing of transmission
CI (Call indicator)	Function display on the calling side	→	V21(L) (300 bps)	Start: after 0.4 seconds after line connection from ON condition (in the following format) Stop: when 3 period or more has passed after ANSam / ANS is detected 
	[Comments] - CI is a signal to carry call function. - The calling side send CI, CT (Call Tone - V25) or CNG. - CI transmission and detection are optional. - The ON minimum time (=3 Period) is of duration of three CI signals in the following format.			
ANSam (Modified Answer Tone)	V.8 procedure on the called side	←	-	When 0.2 seconds or more has passed after reception
	[Comments] - Essential for a called machine which supports the V8 procedure. 2100 Hz sinewave is phase-inverted by 400 +/-25 ms periods, then amplitude modulated by 15 +/-0.1 Hz sinewave - Average value of modulation factor (x) 0.8 +/- .01 < x < 1.2 +/- .01 - Average transmission power compliant to V2 2100 +/- 200 Hz external power is smaller than the average power by 24 dB or more.			
CM (Call Menu)	Modulation mode etc. on the calling side	→ (300 bps)	V.21(L)	Start: Te (0.5 sec. ≤ Te ≤ 1 sec.) has passed after CI transmission stops Stop: When two or more JM are detected
	[Comments] - CM is a signal which carries call function, modulation modes, protocols and GSTN access. - The first information category is call function. - Protocols and GSTN access category are added when the calling side has ability and when needed to inform to a remote station.			
CJ	CM termination	→ (300 bps)	V.21(L)	When CM is completed
	[Comments] - START bit (0) and STOP bit (1) are added to 1 octet of all bit 0. Signal format Start bit b0 b1 b2 b3 b4 b5 b6 b7 Stop bit 000000001			
JM (Joint Menu)	Display of common ability on both calling and called sides	← (300 bps)	V.21(H)	Start: When two or more same CM are received Stop: When CJ is received or receives a signal matching the selected Modulation Mode from the calling side
	[Comments] - JM is a response signal to CM and of the same format as the received CM. - The first information category is Call Function as same as CM. - Modulation mode sets the common bit on calling and called sides and sends by the same octet as received CM. - When there is no common ability, all bits are set to 0 and send by the same octet as received CM. - The minimum item No. is selected from the common bits to determine the actual Modulation Mode. - Protocol is added when it is included in received CM and needed to instruct. - GSTN access is added when it is included in received CM and needed to instruct. - Bit 6 is set to ON when needed to show ability. Bit 5 is set to the same one as received CM			

(b) Signal format

- Preamble: a signal added before each signal when CI, CM and JM signals are sent.
 - Format: 1111111111 +0000000001 (for CI)
 - Format: 1111111111 +0000001111 (for CM and JM)
- Common format among each signal CI, CM and JM
 - Start Bit (=0) is put at the top and Stop Bit (=1) is put at the end of each octet.

- (1): Category tag (tags which represent information types)

Bit assignment				Meaning (information type)		Included signal
b0	b1	b2	b3			
1	0	0	0	...	Call Func	Top of CM, JM / CI
1	0	1	0	...	Modulation Mode	CM / M
0	1	0	1	...	Protocols	CM / M
1	0	1	1	...	GSTN access	CM / M
0	1	1	0	...	PCM modem ability	CM / JM

- (2): Option bit (Differs depending on category tags. See "PL.1.3.4 Common signal bit definition".)
- (3): Additional option bit (Differs depending on category tags. See "PL.1.3.4 Common signal bit definition".)

1.3.4 Common signal bit definition

(1) Call function (1 octet)

Top octet

b0	b1	b2	b3	b4	b5	b6	b7	Meaning
1	0	0	0	0				(Call Function category tag)
					0	0	0	Defined by ITU-T
					1	0	0	PSTN multi-media terminal
					0	1	0	V18 text phone
					1	1	0	Video tex
					0	0	1	FAX transmission from the calling terminal
					1	0	1	FAX reception in the calling terminal
					0	1	1	Data transmission / reception
					1	1	1	Expansion octet = with call function represented by next octet

(Other than the above = Reserved)

(2) Modulation mode (3 octets)

1st octet

b0	b1	b2	b3	b4	b5	b6	b7	Meaning	Item No.
1	0	1	0	0				(Modulation mode category tag, b4 = 0 is first octet)	
					0/1			PCM modem ability disabled/enabled	
						0/1		V34 full-duplex ability disabled/enabled	1
							0/1	V34 half-duplex ability disabled/enabled	2

2nd octet

b0	b1	b2	b3	b4	b5	b6	b7	Meaning	Item No.
			0	1	0			(b3, 4 and 5=0, 1, 0 means expanded oct.)	
0/1								V32bis / V32 ability disabled / enabled	3
	0/1							V22bis / V22 ability disabled / enabled	4
		0/1						V17 ability disabled / enabled	5
						0/1		V29 half-duplex ability disabled / enabled (used in T.30)	6
							0/1	V27ter ability disabled / enabled	7

3rd octet

b0	b1	b2	b3	b4	b5	b6	b7	Meaning	Item No.
			0	1	0			(b3, 4 and 5=0, 1, 0 means expanded oct.)	
0/1								V26ter ability disabled / enabled	8
	0/1							V26bis ability disabled / enabled	9

b0	b1	b2	b3	b4	b5	b6	b7	Meaning	Item No.
		0/1						V23 full-duplex ability disabled / enabled	10
						0/1		V23 half-duplex ability disabled / enabled	11
							0/1	V21 ability disabled / enabled	12

(3) Protocols (1 octet)**Protocols (1 octet)**

b0	b1	b2	b3	b4	b5	b6	b7	Meaning
0	1	0	1	0				(Protocols category tag)
					1	0	0	V42 LAPM protocol
					1	1	1	Protocol represented by expanding octet

(4) GSTN access (1 octet)**GSTN access (1 octet)**

b0	b1	b2	b3	b4	b5	b6	b7	Meaning
1	0	1	1	0				(GSTN access category tag)
					0/1			Cellular connection in the calling side
						0/1		Cellular connection in the called side
							0/1	0: Analog network connection 1: Digital network connection

(5) PCM modem capability (1 octet)

b0	b1	b2	b3	b4	b5	b6	b7	Meaning
1	1	1	0	0				(PCM modem category tag)
					0/1			V.90 analog modem capability
						0/1		V.90 digital modem capability
							0/1	V.91 capability

1.3.5 Phase 2 (Probing) V.34 basic setting

- Exchange of modulation ability
- Measurement of line characteristics (bi-direction)
- Determination and exchange of compensation values to line characteristics (compensation values of maximum data rate, transmission level, pre-emphasis (*))
 - *: linear equalizer for compensating amplitude distortion

A	2400 Hz tone signal output from the called side (Level is a set value -1dB). 1800 Hz guard tone (Level is a set value -7dB) is output simultaneously from the called side.
$\bar{A}$	2400 Hz tone signal output from the called side (Phase inversion of A). 1800 Hz guard tone.
B	1200 Hz tone signal output from the called side
$\bar{B}$	1200 Hz tone signal output from the calling side (Phase inversion of B)
INFO 0x	Binary signal for indicating auto modulation option signal (x=a/c: a: called side, c: calling side)
L1, L2	Signal for conditioning line characteristics (tone synthesis at the interval of 150 Hz from 150 to 3750 Hz (except for 900, 1200, 1800 and 2400 Hz)) L1: 160ms, Level= Set value+6dB L2: Maximum 550ms+TRDEx, Level = Set value
INFO h	Binary signal for indicating parameters used in Phase 3 (training of main channel equalizer). This signal is sent from a modem receiving main channel data to a transmitting modem.

- *1: INFO 0c Bit28 OFF
- *2: INFO 0a Bit28 OFF

<INFO 0x Bit Assignment>

Bits (LSB-MSB)	Value	Meaning
0-3	1111	Fill Bits

Bits (LSB-MSB)	Value	Meaning
4-11	01110010	Bit string for frame synchronization
12	0/1	2743 symbol / sec support
13	0/1	2800 symbol / sec support
14	0/1	3429 symbol / sec support
15	0/1	Ability to transmit at low carrier frequency at 3000 symbol / sec
16	0/1	Ability to transmit at high carrier frequency at 3000 symbol / sec
17	0/1	Ability to transmit at low carrier frequency at 3200 symbol / sec
18	0/1	Ability to transmit at high carrier frequency at 3200 symbol / sec
19	0/1	3429 symbol / sec transmission
20	0/1	Ability to lower the transmission level than a preset value
21-23	0 to 5	Maximum tolerance of symbol rates between transmission and reception 0: 2400, 1:2743, 2:2800, 3:3000, 4:3200, 5:3429 symbol / sec
24	0/1	1=INFO 0 is sent from the CME modem
25	0/1	1664 signal point (33.6 K) ability
26-27	0 to 3	Clock source transmission 0: internal, 1: external, 2: synchronous to the reception clock, 3: Reserved
28	0/1	1=Correct INFO 0 frame is received during error recovery
29-44		CRC
45-48	1111	Fill Bits

<INFO h Bit Assignment>

Bits (LSB-MSB)	Value	Meaning
0-3	1111	Fill Bits
4-11	01110010	Bit string for frame synchronization (transmitted from the left side)
12-14	0 to 7	Output reduction width demanded by the reception modem (dB) When *the modem on the transmitting side can not reduce output* at INFO 0, the value is set to 0.
15-21	0 to 127	The length of TRN which the modem of the transmitting side send in the Phase 3 (x 35 ms)
22	0/1	High carrier is user for data mode Tx.
23-26	0-10	Pre-emphasis filter index No. which is used for data transmission
27-29	0-5	Symbol rate of data transmission 0: 2400 ... 5: 3429 (symbol / sec)
30	0/1	Selection of parameters used for TRN. 4 points / 16 points
31-46		CRC
47-50	1111	Fill Bits

1.3.6 Phase 3Training of the main channel equalizer

- Band division full-duplex method
- Transmission and reception of Phase 3 signals (S, S̄, PP, TRN) are executed by using parameter values which are determined by exchanging INF Oh. (symbol rate, carrier frequency, pre-emphasis filter and transmission level)

- The speed of the following signals (Phase 3) are determined by INFOh. (The following signals are used in the main channel in the half-duplex procedure.)

S	Signal which sends alternately 0 point and a point which rotated 0 point counterclockwise by 90 degrees
S̄	Signal which sends alternately a point which rotated 0 point counterclockwise by 180 degrees and a point which rotated 0 point counterclockwise by 270 degrees
PP	Special signal which is sent from a remote station for adjusting an equalizer
TRN	Training signal. (Symbol rate and duration are determined in INFOh.)

(1) Control channel signal

- The following signals are used for establishing the control channel or re-synchronization and retrain. (peculiar to half-duplex procedure)

Modulation method	1200 / 2400bps QAM modulation (600 ± 0.01 symbols / sec). However, training and synchronous signals are 1200bps. Calling modem: Carrier (=1200Hz ± 0.01% (level = set value)) Called modem: Carrier (=2400Hz ± 0.01% (level = set value-1dB)) + Guard tone (=1800Hz ± 0.01% (level = set value-7dB))
-------------------	--

Sh	Signal which sends alternately 0 point and a point which rotated 0 point counterclockwise by 90 degrees (the same as S)
$\bar{S}h$	Signal which sends alternately a point which rotated 0 point counterclockwise by 180 degrees and a point which rotated 0 point counterclockwise by 270 degrees (the same as S)
AC	Signal which send alternately 0 point and a point which rotated 0 point by 180 degrees
PPh	Special signal which is sent from a remote station for adjusting an equalizer (used when the initial of the control channel and re-synchronization are executed)
ALT	Signal which scrambled alternate signals of 0 and 1 (1200bps)
MPh	Binary signal used for exchanging parameters of the modulation method when data is actually sent and received by using the main channel (Both type 0 and type 1 (type 0+pre-recording coefficient) must be received.) (When type 0 is received, pre-recording coefficient is considered to be 0 and never functions.)
E	"1", binary of 20 bit, which represents the beginning of user data transmission on the control channel

(2) MPh (type 0) bit assignment

Bits (LSB-MSB)	Value	Meaning
0-16	All bit 1	Bit string for frame synchronization
17	0	Start bit
18	0	MP signal type
19	0	Reserved
20-23	1 to 14	Maximum transmission rate from the calling modem to the called modem (x 2400) *1
24-26	0,0,0	Reserved
27	0/1	Control channel data transmission rate which is selected by the opposed transmitter 1200bps / 2400 bps
28	0	Reserved
29-30		Trellis coding device selection *2 (00: 16 state, 10: 32 state, 01: 64 state and 11: Reserved)
31	0/1	Non-linear encoder parameter selection for the terminal transmitter of a remote station *2 (0: $\phi=0$, 1: $\phi 0.3125$)
32	0/1	Parameter (shaping) selection when the data rate is determined within each symbol rate *2 (0: Minimum, 1: Expanded)
33	0	Reserved
34	0	Start bit
35-49		Communication speed mask (0/1=Ability of both modems disabled / enabled) (Bit35=2400 bps ... Bit46=28.8 kbps, Bit47=31.2 kbps, Bit48=33.6 kbps and Bit49=Reserved)
50	0/1	Use of control channel imbalance data rate No / Yes
51	0	Start bit
52-67	0	Reserved
68	0	Start bit
69-84		CRC
85-87	0,0,0	Fill Bits

- *1: 13 and 14 are used when the opposed modem supports up to 1664 points
- *2: Set to 0 on the transmitting modem.

(3) MPh (type 1) bit assignment

Bits (LSB-MSB)	Value	Meaning
0-16	All bit 1	Bit string for frame synchronization
17	0	Start bit
18	1	MP signal type
19	0	Reserved
20-23	1 to 14	Maximum transmission rate from the calling modem to the called modem (x 2400) *1
24-26	0,0,0	Reserved
27	0/1	Control channel data transmission rate which is selected by the opposed transmitter 1200bps / 2400 bps
28	0	Reserved
29-30		Trellis coding device selection *2 (00: 16 state, 10: 32 state, 01: 64 state and 11: Reserved)
31	0/1	Non-linear encoder parameter selection for the terminal transmitter of a remote station *2 (0: $\phi=0$, 1: $\phi 0.3125$)
32	0/1	Parameter (shaping) selection when the data rate is determined within each symbol rate *2 (0: Minimum, 1: Expanded)
33	0	Reserved
34	0	Start bit

Bits (LSB-MSB)	Value	Meaning
35-49		Communication speed mask (0/1=Ability of both modems disabled / enabled) (Bit35=2400 bps ... Bit46=28.8 kbps, Bit47=31.2 kbps, Bit48=33.6 kbps and Bit49=Reserved)
50	0/1	Use of control channel imbalance data rate No / Yes
51	0	Start bit
52-67		Pre-coding coefficient h(1) Real
68	0	Start bit
69-84		Pre-coding coefficient h(1) Imaginary
85	0	Start bit
86-101		Pre-coding coefficient h(2) Real
102	0	Start bit
103-118		Pre-coding coefficient h(2)Imaginary
119	0	Start bit
120-135		Pre-coding coefficient h(3) Real
136	0	Start bit
137-152		Pre-coding coefficient h(3)Imaginary
153	0	Start bit
154-169		Reserved
170	0	Start bit
171-186		CRC
187	0	Fill Bits

- *1: 13 and 14 are used when the opposed modem supports up to 1664 points
- *2: Set to 0 on the transmitting modem.

1.3.7 Re-synchronization procedure / Startup procedure

- A procedure required to switch control channel and main channel in the half-duplex procedure
- A procedure which includes another modulation parameter exchanging is especially called the startup procedure. (used for changing the communication speed)

(1) Startup procedure

- [Control channel startup procedure](#) (By exchanging MPh, the communication speed is changed.)
- "Control channel re-synchronization procedure" is not used.

(2) Re-synchronization procedure

- Control channel re-synchronization.
- See [signals related to control channels](#) for signal names and change method.

Main channel re-synchronization procedure and Turn-off

- The receiving modem re-synchronizes the main channel by using the PP signal. After B1, starts receiving Primary Data.
- The transmitting modem sends the scrambled 1's for 35ms after Primary Data transmission has been completed.
- Both modems move to the control channel re-synchronization procedure or the control channel startup procedure.

S	Signal which sends alternately 0 point and a point which rotated 0 point counterclockwise by 90 degrees
$\bar{S}$	Signal which sends alternately a point which rotated 0 point counterclockwise by 180 degrees and a point which rotated 0 point counterclockwise by 270 degrees
PP	Special for adjusting an equalizer
B1	High-speed signal of one frame length which is sent at the end of a series of startup sequence in the selected modulation parameter.

1.3.8 Others

(1) Minimum reception signal level (RLSD) (half-duplex mode only)

- The reception circuit is turned to ON when the signal becomes 43 dBm or more.

- When the signal becomes 48 dBm or less, the reception circuit is turned OFF within 20 to 25ms after it has exceeded the thresh old.

(2) Data frame structure

- All data transmitted in V.34 (after the Phase 4) is treated in the following frame format.
 - J: The number of data frames within one super frame
 - P: The number of mapping frames within one data frame

Modulation Speed	J	P
2400 baud	7	12
2743 baud	8	12
2800 baud	7	14
3000 baud	7	15
3200 baud	7	16
3429 baud	8	15

2. FUNCTION

2.1 Telephone function

2.1.1 TEL/FAX switching

(1) Outline

- A function to switch telephone and FAX automatically after reception. Depends on Country spec.

(2) Operation

- When CNG is not detected for 2 seconds (or 4 seconds, following parameter) after line seizure, this function sends voice response message 1 and continues CNG detection.
- If voice response 1 is sent and CNG detection is continued for 4 seconds but could not be detected, external ringer is sent to the externally installed phone.
- When CNG is not detected for a given period (Default is 20 seconds. Changeable by address parameters), this function stops external ringer transmission and becomes fax reception after the voice response message 2 is sent.
- This function detects OFF-HOOK of the external telephone during external ringer transmission only.
- When OFF-HOOK of the external telephone is detected during external ringer transmission, the line is connected to the external telephone. Even if you use the telephone, you can manually switch to the fax reception after that.
- When CNG is detected during the above-mentioned external ringer transmission, External ringer transmission is stopped and the fax reception starts.

No.	FP	Meaning and purpose	Address	Value	Default	Note
1	Tel-Fax switching	External telephone off-book detection function	0x0e0095 bit5	0: No 1: Normal (RBT transmission)	0	Those with a Administrator Settings
2	RBT transmission time	External ringer transmission time (3) (in steps of 1 second)	0x0e00eb	unit: 1000 ms, HEX	0x14 (20 sec.)	A serviceman setting by address setting
3	Tel-Fax switching parameter	Time from vocal response to RBT transmission (CNG detection waiting time 2)	0x0e0095 bit7	0: 2 sec 1: 4 sec	0	Same as the above
4	Tel-Fax switching parameter	Time from reception to voice response transmission (CNG detection waiting time 1)	0x0e0095 bit6	0: 4 sec 1: 2 sec	0	Same as the above
5	Tel-Fax switching parameter	TEL/FAX switching ON response details	0x0e0095 bit3	0: Voice response + RBT transmission 1: RBT transmission only	0	Same as the above

2.2 F-code

- F-code is a function to realize confidential transmission / bulletin board polling / relay transmission by using SUB, SEP and SID signals.
- To be more specific, a machine which can open "a box" on the memory is called "a F code compliant center machine" and a machine which can access to a center machine by using the F code function is called "a F-code compliant machine." The center machine can have plural "boxes" and they are used as the confidential box, bulletin board box and relay box respectively.

Function	Outline	Signals to be used			Use (Meaning)	Required function	Remarks
		SUB	SEP	SID			
Confidential transmission	Sent to the center machine which opens a confidential box by appointing the confidential box No. (The center machine has memory reception to the confidential box.)	Used	Not	Optional	SUB = Appointment of a confidential box SID = Password	Registration = Message adding	Each box No. = Contents of a signal (20 digits or less)
Bulletin board polling	By appointing a box No. in the center machine which opens a bulletin board, contents are polled.	Not	Used	Not	SUB = Appointment of a bulletin board box	Registration = Message overwriting With a mode which is not deleted by polling	

Function	Outline	Signals to be used			Use (Meaning)	Required function	Remarks
		SUB	SEP	SID			
Relay transmission	Requesting relay to the relay machine which opens a relay box (No.) in which a broadcasting transmission remote station is registered.	Used	Not	Used	SUB = Appointment of a relay box (No.) SID = Password		

2.2.1 Signal format

(1) Contents of signals

Item / Signal Name	SUB/SEP	SID
Characters	0 to 9 only (* and # must not be used.)	0 to 9, * and #
Contents	Box No.	Password
No. of digits	Arbitrary between 1 and 20	
Space between digits	Prohibited	
Others	Impossible to designate more than one box	

(a) FIF (SUB/SEP/SID) common

- The last digit is left-justified. The remaining are filled with space (0x20)
eg.) 12345

(2) DIS/DTC/DCS bit condition

Bit No.	Meaning	DIS/DTC	DCS
47	Selective polling ability	DIS = ON when SEP reception is possible DTC = ON when SEP is transmitted	0: fixed
49	Sub address ability / function	ON when SUB reception is possible	ON when SUB transmission is possible
50	Password / sender ID	DIS = ON when SID reception is possible DTC = ON when SID is transmitted	ON when SID is transmitted

2.2.2 F-code confidential transmission

- The confidential box is registered in the center machine.
 - Registration of confidential box No. and name
 - Registration of communication password
 - Registration of box password
- Transmission operation on the transmitting side
 - Specification of confidential box No.
- Reception in the center machine
 - Automatic output of confidential communication report
- Printing in the center machine
 - Output by entering an access protect No.

(1) BOX specifications

Confidential box No.	Represented by a nine digit number. Operationally between 1 and 999999999. You can not open the same box number as the bulletin board No. which has been already opened.
Communication password	Possible to use.

Confidential BOX name	Possible to register up to 20 characters.
Erased at printing	Erased on every page after output.
Box password	Represented by eight digit number between 00000000 and 99999999.
No. of files in confidential box	100 files at the maximum including bulletin board.

(2) Example of the protocol sequence

2.2.3 F-code bulletin board polling

1. Registration of the bulletin board box in the center machine
 - Registration of the bulletin board No. and name
2. Storing documents in the bulletin board
3. Operations for polling reception on the compliant machine
 - Appointment of bulletin board No.

(1) BOX specifications

Bulletin board box No.	Represented by a nine digit number. Operationally between 1 and 999999999. You can not open the same box number as the confidential box which has been already opened.
Bulletin board password	No
Bulletin board box name	Yes 10 character max
Erased at printing	Not erased when printed.
Erased at polling	Not erased when polled.
Access protect No.	No
No. of document registration to the bulletin board box	Only once. If already exist, it is overwritten.

(2) Example of protocol sequence

2.2.4 F-code relay transmission

NOTE

- This machine is only relay requests and do not function as a relaying station.
1. The relay box is registered in the relaying station.
 - Registering relay box No., relay password and relay group No.
 2. Registration of group
 - Registering final destinations in the group No.
 3. Transmission operation in the relay requesting station
 - Instructs relay box no. and relay password.
 4. Transmission to the final remote stations registered in the group
 5. Possible to printed relayed documents on the relaying station (depends on the parameter setting)

(1) BOX specifications

Relay box	Possible to register up to 5.
Relay box No.	Any box number that can range between 1 and 999999999
Relay password	Any 8-digit number
Relay BOX name	To be assignable
Access protect No.	No
Final destination designation	Possible only to register in the relay box by appointing the group.
File erasure after transfer	Always erased
Conditions to erase box by operations	Only when there are no files of received messages in the relay box, box can be erased.

(2) Protocol sequence example

2.3 Transmission function

2.3.1 Original scan mode

- The original scan mode is roughly classified by the regular original scan and the irregular original scan.

Regular original	Irregular original	Mode selection
Normal mode	Irregular mode	Default setting
Mixed original mode		Scan setting

(1) Scan mode default setting

- The scan mode can be set by [\[Service Mode\] -> \[FAX\] -> \[Line1\] -> \[System\] -> \[Scan Setting\]](#). The default is the irregular mode.

	Paper size detection	Default	Frame erasure
Irregular mode	Trailing edge detection	Yes	Trailing edge erasure may not be done.
Normal mode	DF paper size sensor	Automatically selected when using the page related application function (book transmission, etc.).	Frame erasure of all sides

2.4 Reception function

2.4.1 Reduction / division of reception

- Parameters related to reduction / division are set on the [\[Utility\] -> \[Administrator Settings\] -> \[Fax Settings\] -> \[TX/RX Settings\]](#). There are two parameters as follows:
 - ["Min. Reduction for RX Print"](#): 96, 95, 94, ..., 87: a
 - ["Print Separate Fax Pages"](#): ON, OFF: b
- The reception recording mode is determined by the above-mentioned parameters, a and b.

(1) Auto reduction reception mode

- a = Don't care (except 100)
- b = OFF
- The received documents are automatically reduced in the range of 35 to 96 %.

(2) Page division recording reception mode

- a = 96, 95, ..., 87
- b = ON
- Documents are reduced to three reduction rate (90 %, 86 %, or 82 %) determined by the width of received documents and the selected recording paper. When they are still larger than a paper size, they are reduced to a value in "a" for the division recording.
 - 90% = Fixed value
 - 86%, 82% = Reduction rate determined by the main scanning direction
- The paper selection and division are determined in accordance with the following figure.

(3) Paper selected for division printing, magnification**(a) A4SEF width at reception**

Original length=Received original size*(1/a)	Optimum paper	Selected paper size / Division operation							
		Priority 1	Priority 2	Priority 3	Priority 4	Priority 5	Priority 6	Priority 7	Priority 8
152mm or less	A5LEF	A5LEF / a %	A5SEF / 69 %	A4SEF / a %	A4LEF / a %	B5SEF / 84 %	B5LEF / a %	B4SEF / a %	A3SEF / a %
153 to 311mm	A4SEF	A4SEF / a %	A4LEF / a %	B4SEF / a %	A3SEF / a %	-	-	-	-
312 to 384mm	B4SEF	B4SEF / a %	B5LEF / a %	B5SEF / 84 %	A3SEF / a %	A4LEF / a %	A4SEF / a %	-	-
Over 384mm	A3SEF	A3SEF / a %	A4LEF / a %	B5SEF / 84 %	-	-	-	-	-

- a : Set magnification

(b) B4SEF width at reception

Original length=Received original size*(1/a)	Optimum paper	Selected paper size / Division operation							
		Priority 1	Priority 2	Priority 3	Priority 4	Priority 5	Priority 6	Priority 7	Priority 8
189mm or less	B5LEF	B5LEF / a %	B5SEF / 71 %	B4SEF / a %	A4SEF / 82 %	A4LEF / a %	A3SEF / a %	-	-
189 to 384mm	B4SEF	B4SEF / a %	B5LEF / a %	B5SEF / 71 %	A3SEF / a %	A4LEF / a %	A4SEF / 82 %	-	-
Over 384mm	A3SEF	A3SEF / a %	A4LEF / a %	A4SEF / 82 %	-	-	-	-	-

- a : Set magnification

(c) A3SEF width at reception

Original length=Received original size*(1/a)	Optimum paper	Selected paper size / Division operation							
		Priority 1	Priority 2	Priority 3	Priority 4	Priority 5	Priority 6	Priority 7	Priority 8
219mm or less	A4LEF	A4LEF / a %	A4SEF / 69 %	B4SEF / 85 %	A3SEF / a %	-	-	-	-
Over 219mm	A3SEF	A3SEF / a %	A4LEF / a %	A4SEF / 69 %	-	-	-	-	-

- a : Set magnification

2.4.2 Cassette / paper selection

- The cassette and paper selection is performed by using two parameters of the [Utility] -> [Administrator Settings] -> [Fax Settings] -> [TX/RX Settings].
 - "Print Paper Selection": Auto Select, Fixed Size, Priority Size: a
 - "Tray Selection for RX Print": Auto, Tray 1, Tray 2, Tray 3 and Tray 4: b

NOTE

- When "b" is fixed to tray 1, 2, 3 or 4, "a" becomes invalid.
- Only when "b" is set to Auto, "a" becomes valid.
- Only A3, B4 and A4 sizes can be selected for the fixed size and preferential size modes.
- Bypass cannot be specified as fix-tray.
- Page dividing function becomes invalid when the tray is fixed.

2.4.3 Compulsory memory reception

- The function to enable to print out by operations without printing out documents at reception in the FAX communications.

(1) Related settings**(a) Compulsory memory reception function**

- Set in the [Service Mode] -> [FAX] > [Line1] -> [System] -> [Display Setting].
- When this setting is set to "OFF", display and actions related to the Compulsory memory reception are not performed. In addition, you can not perform operations. If this setting is not set, the following Compulsory memory reception function used is also set to disabled.

(b) Compulsory memory reception function use

- Set in the [Utility] -> [Administrator Settings] -> [Fax Settings] -> [Function Settings] -> [Memory RX Setting].
- When this setting is set to "NO", the compulsory memory reception actions are not performed at reception. In addition, you can not display, erase and print the compulsory memory reception documents. The compulsory memory reception documents are displayed on the main menu irrelevant to this setting.

(c) Compulsory memory reception password

- Within eight digits (eight-digit number)
- Set in the [\[Utility\]](#) -> [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[Memory RX Setting\]](#).
- This setting is required to display, delete or print the compulsory memory reception documents.

(2) Operation**(a) Necessary conditions for this function**

- When there is the compulsory memory reception function, and it is used, the compulsory memory reception action is performed.

(b) Line seizure

- It is possible to receive up to 500 compulsory memory reception jobs including the normal reception and the substitute reception. When 500 compulsory memory reception jobs are received, machine will not catch the line. (Except the case that the polled transmission documents and bulletin board documents are registered.)

(c) Reception

- When the reception is performed in the compulsory memory reception mode, printing is not performed even with recording paper and the reception is performed in memory as the compulsory memory reception documents.
- The same as in the polled reception and manual reception.
- The auto forwarding setting is neglected in this mode, and the compulsory memory reception is performed.
- When SUB is received, related applications will start.

(d) Setting change

- When there are received compulsory memory reception documents, even if the compulsory memory reception setting is set to invalid in the utility mode, the compulsory memory reception file is not printed.
- For printing, the compulsory memory reception setting is required to be set to "ON."

2.4.4 Closed reception (Junk FAX)

- The closed reception function used only at the time of the reception by using the F-code SID signal.

NOTE

- **You can not use this function with the F-code communications.**

(1) Closed reception function

- Set in the [\[Service Mode\]](#) -> [\[FAX\]](#) -> [\[Line1\]](#) -> [\[System\]](#) -> [\[Display Setting\]](#).

(2) Closed reception function use

- Set in the [\[Utility\]](#) -> [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[Closed Network RX\]](#).
- When this setting is set to "No", the closed reception actions are not performed at reception.

(3) Closed reception password

- Four digits (Utility Mode setting, 0 to 9)
- Set in the [\[Utility\]](#) -> [\[Administrator Settings\]](#) -> [\[Fax Settings\]](#) -> [\[Function Settings\]](#) -> [\[Closed Network RX\]](#).

QA PARTS GUIDE MANUAL bizhub C554 (1st Edition)

INFORMATION FOR PARTS GUIDE MANUAL

To find correct Parts No., refer to the ["HOW TO MAKE THE BEST USE OF THIS MANUAL"](#) in the following page.

NOTICE

- This parts guide manual is 1st edition and will not be updated. Please ask your parts administrator about the newest parts information.

HOW TO MAKE THE BEST USE OF THIS MANUAL

1. When you order, please check the proper figures beforehand that are on Our Parts Guide Manual, and order with the appropriate figures.
2. For screws, Nuts, Washers, retaining rings and Pins which are used in this model, one letter is shown on the Standard parts column of Parts list and exploded diagrams.
3. In order to maintain safety of the product, some specific parts composed of this product are set up as "essential safety parts".
4. The assigned parts number for the "essential safety parts" is indicated as "SP00-*****".
When replacing these parts, follow precautions for disassembling and installing which are listed in the Service Manual.
Do not use any parts that are not set up as
5. ♣ means that there are exclusive parts for each destination.
Please check the appropriate destination when you order.
6. Revision Mark
Marked as ▲ on the illustration shows that the revision has been made.
7. All rights reserved. (any reprints or quotations are prohibited.)
Use of this parts guide manual should be strictly supervised to avoid disclosure of confidential information.

- *1: The parts can be replaced either by user or service engineer.
- *2: Actual durable cycle (life counter value)
- *3: Field standard yield
- *4: Replace those three parts at the same time.
- *5: The ozone filter and the transfer roller unit are furnished with the transfer belt unit so that all of them are replaced at same time.
- *6: A waste toner full condition is detected with detecting the actual waste toner emissions.
- *7: Replace those parts at the same time.

QB PARTS GUIDE MANUAL bizhub C454 (1st Edition)

INFORMATION FOR PARTS GUIDE MANUAL

To find correct Parts No., refer to the ["HOW TO MAKE THE BEST USE OF THIS MANUAL"](#) in the following page.

NOTICE

- This parts guide manual is 1st edition and will not be updated. Please ask your parts administrator about the newest parts information.

HOW TO MAKE THE BEST USE OF THIS MANUAL

1. When you order, please check the proper figures beforehand that are on Our Parts Guide Manual, and order with the appropriate figures.
2. For screws, Nuts, Washers, retaining rings and Pins which are used in this model, one letter is shown on the Standard parts column of Parts list and exploded diagrams.
3. In order to maintain safety of the product, some specific parts composed of this product are set up as "essential safety parts".
4. The assigned parts number for the "essential safety parts" is indicated as "SP00-*****".
When replacing these parts, follow precautions for disassembling and installing which are listed in the Service Manual.
Do not use any parts that are not set up as
5. ♣ means that there are exclusive parts for each destination.
Please check the appropriate destination when you order.
6. Revision Mark
Marked as ▲ on the illustration shows that the revision has been made.
7. All rights reserved. (any reprints or quotations are prohibited.)
Use of this parts guide manual should be strictly supervised to avoid disclosure of confidential information.

11		Manual bypass tray separation roller assy	1	200k	4658015106		P48-30	*2, *4
12	Processing section	Toner cartridge/Y,M,C *1	1	26k	-		P58-5	*3
13		Toner cartridge/K *1	1	27.5k	-		P58-17	*3
14		Drum unit/Y,M,C *1	1	80k(JP)	-			*3
15		Drum unit/Y,M,C *1	1	95k(US/EU)	-			*3
16		Drum unit/K *1	1	130k	-			*3
17		Developing unit/Y,M,C,K	1	580k(JP)	-			*3
18		Developing unit/Y,M,C,K	1	590k(US)	-			*3, *5
19		Developing unit/Y,M,C,K	1	600k(EU)	-			*3, *5
20		Ozone filter	1	300k	A161R72700			
21		Toner filter		300k	A161R72800			
22	Image transfer section	Waste toner box *1	1	40k	A4NNWY1		P28-9	*6
23		Transfer belt unit	1	300k	A161R71300		P31-1	*3
24		Transfer roller unit	1	300k	A161R71400		P44-23	*3, *5
25	Fusing section	Fusing unit 100V	1	580k	A4FJR70200		P51-10	*3
26		Fusing unit 120V	1	590k	A4FJR70300		P51-10	*3
27		Fusing unit 230V	1	600k	A4FJR70400		P51-10	*3

- *1: The parts can be replaced either by user or service engineer.
- *2: Actual durable cycle (life counter value)
- *3: Field standard yield
- *4: Replace those three parts at the same time.
- *5: The ozone filter and the transfer roller unit are furnished with the transfer belt unit so that all of them are replaced at same time.
- *6: A waste toner full condition is detected with detecting the actual waste toner emissions.
- *7: Replace those parts at the same time.

R TROUBLESHOOTING GUIDE BASED ON REPORTS FROM THE FIELD

1. PAPER JAM

1.1 Main body

1.1.1 When the image stabilization setting is actuated, sometimes J99-01 occurs.

Symptom

- Change the service mode setting [Image Stabilization Setting] from [Standard] to [Black Priority] to display when the image stabilization is executed.

Cause

- Problem in the firmware

Countermeasures

- Set the other option than [Black Priority] to [Image Stabilization Setting], and turn the main power OFF and ON.
- Update the firmware to the following version (or a later version).
 - Maintenance program name: MFP Card version [G00-66]
 - Download file name: [A2XK0Y0-F000-G00-66.exe]

1.2 Optional finisher

1.2.1 In the condition that FS-534 has been attached, J72-19 (FS conveyance section JAM) occurs.

(1) Symptom

- When [One-sheet Sifting Eject] is set in the continuous copy mode, J72-19 (FS conveyance section JAM) occurs.
- The following conditions are the relevant occurrence status.
 - C554 + FS-534
 - Shift output each job : "yes"
 - Black mode only
 - Paper size : Large paper size of 300mm or more (8.5x14, 11x17, B4, A3 etc)

(2) Cause

- Problem in firmware (Firmware of FS-534)

(3) Countermeasures

- Update the firmware to the following version (or a later version).
 - Maintenance program name: MFP Card version [G00-66]
 - Download file name: [A2XK0Y0-F000-G00-66.exe]

1.2.2 In the condition that FS-535 has been attached, J72-19 or C1103 occurs.

(1) Symptom

- In the continuous copy mode, JAM (J72-19) is detected at the conveyance section of FS-535, and C1103 (Side stitching alignment motor/ Fr drive failure) occurs after jam treatment.

(2) Cause

- Damaged spring at the plunger part of the bypass switching gate solenoid (SD2)
- The following figure shows the rear view of the finisher.

[1]	Cause of this symptom (Damaged spring)	-	-
-----	--	---	---

(3) Countermeasures

- Replace the bypass switching gate solenoid (SD2) with a new one when the spring is damaged.
Part number: Bypass switching gate solenoid (SD2) [A11PR70211]

1.2.3 In the condition that SD-511/SD-512 has been attached, J72-86 (Saddle entrance JAM) occurs.**(1) Symptom**

- In the condition that SD-511/SD-512 has been installed, the combination of old SD-511/SD-512 firmware and new motor causes J72-86 (Saddle entrance JAM).

(2) Cause

- Reason: There is no compatibility between the new motor and the old SD-511/SD-512 firmware.

	Old motor (A3ERPPP4S00)	New motor (A3ERPP4S01)
Old SD-511/SD-512 firmware (A3ER-0Y0-0071-G00-03-00)	OK	NG
New SD-511/SD-512 firmware (A3ER-0Y0-0071-G00-04-00)	OK	OK

- Product combination
 - C554/C454 + FS-534 + SD-511
 - C554 + FS-535 + SD-512

(3) Countermeasures

- If attaching SD-511/SD-512 equipped with the new motor to the finisher, or replacing the old motor of SD-511/SD-512 with the new motor, update the firmware to the following version (or later version).
 - Maintenance program name: MFP Card version [G00-65]
Download file name: [A2XK0Y0-F000-G00-65.exe]
- The green labels are attached on the SD-511/SD-512 product equipped with the new motor.

[1]	SD-511/SD-512 package	[2]	SD-511/SD-512 product
[3]	Green labels	-	-

- Identify the new motor and the old motor from the capacitor position.
Part number: Center fold roller motor (M5) / Center fold knife motor (M9) [A3ERPP4S01]

[1]	Old motor	[2]	New motor
[3]	Capacitor	-	-

2. ERROR MESSAGE/ABNORMAL DISPLAY

2.1 Operation panel is not activated (1)

Symptom

- When turning the main power on, the operation panel is not activated and the start key lights up in orange.

Cause

- HDD failure

Countermeasures

- Disconnect the connector of HDD according to the following procedure to check whether the HDD is actuated normally.
 - Enter the Service Mode.
 - Touch the panel: [Service Mode] -> [System 2] -> [HDD] -> [Not Installed]
 - Touch [END].
 - Turn the main power switch off.
 - Disconnect the connector of HDD and turn the main power on again to check whether the operation panel is activated normally.
 - If the operation panel is activated normally, replace HDD with a new one.

2.2 Operation panel is not activated (2)

Symptom

- The body is activated but nothing is displayed on the operation panel.
- The body is activated but the start key does not lights up.

Cause

- Failure of the standard memory (DIMM0) implemented on the MFP board.
- Connection failure of the connector connected to the operation panel.

Countermeasures

- Check the connection of the connector connected to the operation panel or the connection of standard memory.
 - Connect and disconnect the connector connected to the operation panel. (In case of connection failure)
 - Insert and remove the standard memory (DIMM0). (In case of connection failure)
 - Replace the standard memory (DIMM0) with a new one.
Part number: MEMORY MODULE (V865300026)

2.3 In the condition that FS-534 and SD-511 have been installed, the front door open indicator is displayed.

Symptom

- In the condition that FS-534 + SD-511 have been installed, the front door open indicator is displayed.

Cause

- The front door of the FS-534 cannot be closed normally because the cushion materials (black) attached on SD-511 interferes with the front door.

Countermeasures

- Peel off two pieces of the cushion materials (black) attached to SD-511.

[1]	Cushion material (Black)	-	-
-----	--------------------------	---	---

2.4 Keep C4802 after replacing the PRCB when FS-533, FS-534, FS-535 or JS-506 is attached.

Symptom

- The machine keeps 'NG' on executing the [Engine Data Reflect Mode], therefore 'C4802' is displayed after replacing the PRCB, when FS-533, FS-534, FS-535 or JS-506 is attached.
- Condition
 - Replacing the PRCB on bizhub C554/C454 with FS-533/FS-534/FS-535/JS-506.
 - After turning ON the machine, the door(s) keep opening more than 5 seconds.

Cause

- Engine firmware

Countermeasures

- Follow the PRCB replacement procedure below.

NOTE

- **Do not replace the printer control board and the SSD board with new ones at the same time. The backup data is lost and image failure may be caused.**
- **Do not replace the printer control board and the MFP board with new ones at the same time.**

1. Remove the lower rear cover/1.

[G.5.2.23 Lower rear cover/1](#)

2. Remove the lower rear cover/2.

[G.5.2.24 Lower rear cover/2](#)

3. Remove the harness from six wire saddles [1].

[1]

[1]

4. Disconnect all connectors on the printer control board.

5. Remove eight screws [1], and remove the printer control board [2].

6. To reinstall, reverse the order of removal.
7. [Install the firmware.](#)
8. Turn OFF the main power switch.
9. Disconnect the finisher or job separator.
 - G.7.16.4 Finisher (FS-533)
 - G.7.13.4 Finisher (FS-534)
 - G.7.7.9 Finisher (FS-535)
 - G.7.6.3 Job Separator (JS-506)
10. Turn ON the main power switch.
11. C-4802 code will appear. (C-4802 is normal operation when replacing the PRCB.)
12. [Call the Service Mode to the screen.](#)
13. Select [Enhanced Security] -> [Engine Data Backup].
14. Select [Engine Data Reflect Mode] and press the Start key.
15. Select [Yes] and press the Start key again.
16. Turn OFF the main power switch after 'OK' status is appeared.
17. Connect the finisher or job separator. To reinstall, reverse the order of removal.
18. Turn ON the main power switch.

3. MALFUNCTION

3.1 Reading malfunction of scanner

Symptom

- When the document is read with ADF, whole of the document is read in black.

[1]	Image sample	-	-
-----	--------------	---	---

Cause

- This symptom appears because the scanner unit cannot move to the ADF reading position due to the following causes.
 - Insufficient tension of the scanner motor belt.
 - The scanner motor (M201) losses synchronization from insufficient grease application to the bearing or the wire pulley.

Countermeasures 1

- According to the following procedure, check whether the belt of the scanner motor steps out from the gear.
- Part number: Scanner motor belt [A161275600]
Part number: Scanner motor [A161M10A00]
Part number: Pulley [A161275500]
- Disconnect the connector of the scanner motor (M201). [G.5.5.1 Scanner motor \(M201\)](#)
 - Loosen the three fixed screws of scanner motor by rotating two revolutions from the fully tightened state.
 - Correct the scanner motor belt position appropriately if it steps out from the pulley or the gear of the scanner motor.
 - Rotate the gear of the scanner motor by hand to confirm that the scanner unit moves smoothly.
 - Secure the scanner motor tightening the screw 1, 2 and 3 in this order.

[1]	Scanner motor belt	[2]	Screw 2
[3]	Screw 1	[4]	Screw 3
[5]	Scanner motor (M201)	[6]	Pulley
[7]	NG status	[8]	OK status

Countermeasures 2

- When the following problem appears, apply DRYSURF (KD-453S) to all the bearings and the pulley.
 - D-1 banding detection (on the surface) has been counted 50 times or more.
 - Resin powder grinded from the resin of the bearing and/or the pulley appears under them.

[1]	Bearing	[2]	Pulley
-----	---------	-----	--------

- Apply to the following end surfaces of bearing hole section for each part with a brush soaked with DRYSURF (KD-453S).

4. FINISHING

4.1 In the condition that FS-534 is attached, the 2nd sheet is displaced at the stapling process.

4.1.1 Symptom

- In the condition that FS-534 is attached, the 2nd sheet is displaced and then stapled when they are stapled.

4.1.2 Cause

- When starting the main paddle rotation, the paper conveyance speed of main paddle is slower than that of lower belt. At the new FS-534 installation, the lower belt paper friction is slightly higher than standard, then misalignment occurs because 1st sheet feeding speed is slightly faster than 2nd sheet feeding speed.

[1]	1st sheet	[2]	2nd sheet
[3]	Misalignment (Approx. 1 mm to 5 mm.)	[4]	

4.1.3 Countermeasures

- Update the firmware to the following version (or a later version).
 - Maintenance program name: MFP Card version [G00-65]
Download file name: [A2XK0Y0-F000-G00-65.exe]

5. PARTS

5.1 Dual Scan Document Feeder left cover open indication does not disappear.

Symptom

- Even though the left cover is closed, the left cover open indication does not disappear.
- The hook of the left cover release lever on the front side is locked, but the hook on the rear side is not locked.

Cause

- Since the shaft of the left cover release lever (A143PP5R) is deformed and the hook of the left cover release lever is not engaged, the left cover cannot be locked completely.

[1] Left cover release lever (A143PP5R)	[2] Hook (rear side)
[3] Hook (front side)	

Countermeasures

- Replace the left cover release lever with a new one.
Parts number: Left cover release lever [A143PP5R04]

5.2 Operation panel is mounted at an angle.

Symptom

- The operation panel was mounted at an angle when unpacking and installing the product.
- When the operation panel is slid, the scanner cover has scratches due to interference with the operation panel.

Cause

- The mounted operation panel is to be adjusted.

Action

- Take actions according to the following procedure.
 1. Remove the left cover/1 on the operation panel.
 2. Remove the left cover/2 on the operation panel.
 3. Remove the right cover on the operation panel.
 4. Remove the front cover on the operation panel.
 5. Loosen the three screws shown in the following photos.

6. Move the operation panel as instructed by the arrows and correct the mounting posture to secure the horizontal posture as correctly as possible.

7. Tighten the two screws shown in the following photo.

8. Tighten the screw shown in the following photo.

9. Assemble the front cover on the operation panel.
10. Assemble the right cover on the operation panel.
11. Assemble the left cover/2 on the operation panel.
12. Assemble the left cover/1 on the operation panel.
